Hanger Maintenance (on Aircraft) & Material SupportIntroduction, organization of hanger maintenance, Non- routine item, parts availability, cannibalization, Types of shops- sheet metal shop, Aircraft interior shop, Engine shop, Avionics shop, ground support equipment, outsourcing of shop maintenance work, operation of overhaul shops, Material support, Material management inventory control, Support functions of material, Parts ordering, Storage, Issue, control and handling, Parts receiving quality control, calibration program, stock level adjustments, shelf life, exchanges, warranty & modifications of parts.

UNIT -5- (7 HOURS)

Maintenance Safety & Trouble shooting Safety regulations, occupational safety and health standards maintenance safety program, Airlines safety management, General safety rules, Accident & injury reporting, Hazardous materials storage and handling aircraft furnishing practices trouble shooting, Knowledge of malfunctions.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	2							3	2			2	2
CO2	3	2							3	2			2	2
CO3	3	2							3	2			2	2
CO4	3	2							3	2			2	2

INTRODUCTION TO ASTROPHYSICS AND SPACE ENVIRONMENT				
Course Code	18AEO763		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Open Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the basics of astrophysics and space environment.
2. Describe the relativistic quantum mechanics.
3. Understand sun and solar system.
4. Understand space environment

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction: Overview of major contents of universe, Black body radiation, specific intensity, flux density, luminosity, Basics of radiative transfer (Emission/absorption coefficients, source functions), Magnitudes, distance modulus, Color index, Extinction, Color temperature, effective temperature, Brightness temperature, bolometric magnitude/luminosity, Excitation temperature, kinetic temperature, Utility of stellar spectrum.

UNIT -2- (18 HOURS)

Basic knowledge of stellar atmospheres: Binaries, variable stars, clusters, open and globular clusters, Laws of planetary motion, Motions and Distances of Stars, Statistical and moving cluster parallax, Velocity Dispersion, Compact objects (BH-systems, Accretion rate/efficiency, Eddington luminosity), Shape, size and contents of our galaxy, Normal and active galaxies, High energy physics (introduction to X-ray and Gammaray radiation processes), Newtonian cosmology, microwave background, early universe

UNIT -3- (08 HOURS)

Relativistic Quantum Mechanics: Scattering, classical radiation field, creation, annihilation number operators. Quantized radiation field, unified approach to emission, absorption, and scatte of photons by atoms, radiation damping and resonance fluorescence, dispersion relations and causa relativistic wave equation (Klein- Gordon and Dirac equations),
basics of quantum electrodynamics.

UNIT -4- (08 HOURS)

Sun & Solar System: The sun, helioseismology, convection, solar magnetism: flux tubes, sun spots, dynamo, solar cycle, chromosphere, corona, solar wind, physical processes in the solar system; dynamics of the solar system; physics of planetary atmospheres; individual planets; comets, asteroids, and other constituents of the solar system; extra-solar planets; formation of the solar system, stars, and planets.

UNIT -5- (07 HOURS)

Space Environment: Introduction, Vacuum Environments and its effect, Neutral environment and its effects, Plasma environment, Radiation Environment and its effects, Debris Environment and its effects.

INTRODUCTION TO ROCKETS & MISSILES

Course Code	18AEO764		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Open Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Classify rockets and missiles
2. Describe rocket motion in free space and gravitational field
3. Apply aerodynamics for rocket and missiles
4. Explain staging and control of rockets and missiles
5. Identify rocket propulsion systems and materials for rockets and missiles

COURSE CONTENTS

UNIT -1- (08 HOURS)

CLASSIFICATION OF ROCKETS AND MISSILES

History of rockets and missiles, Various methods of classification of missiles and rockets – Basic aerodynamic characteristics of surface to surface, surface to air, air to surface and air to air missiles – Examples of various Indian space launch vehicles and missiles – Current status of Indian rocket and missile programme.

UNIT -2- (08 HOURS)

ROCKET MOTION IN FREE SPACE AND GRAVITATIONAL FIELD

One Dimensional and Two-Dimensional rocket Motions in Free Space and Homogeneous Gravitational Fields – description of Vertical, Inclined and Gravity Turn Trajectories – Determination of range and Altitude, Simple Approximations to Burnout Velocity and altitude estimation of culmination time and altitude.

UNIT -3- (08 HOURS)

AERODYNAMICS OF ROCKETS AND MISSILES

Airframe Components of Rockets and Missiles – Forces Acting on a Missile While Passing Thro Atmosphere – Classification of Missiles – methods of Describing Aerodynamic Forces and Momei Lateral Aerodynamic Moment – Lateral Damping Moment and Longitudinal Moment of a Rock lift and Drag Forces – Drag Estimation.

UNIT -4- (08 HOURS)

STAGING AND CONTROL OF ROCKETS AND MISSILES

Multistaging of rockets and ballistic missiles – Multistage Vehicle Optimization – Stage Separation Dynamics – Stage Separation Techniques in atmosphere and in space, Introduction to aerodynamic and jet control methods – various types of aerodynamic control methods for tactical and short-range missiles- aerodynamic characteristics - various types of rocket thrust vector control methods.

UNIT -5- (07 HOURS)

ROCKET PROPULSION SYSTEMS AND MATERIALS FOR ROCKETS AND MISSILES

Ignition System in rockets – types of Igniters– Design Consideration of liquid Rocket Combustion Chamber, Injector Propellant Feed Lines, Valves, Propellant Tanks Outlet and propellant feed Systems – Propellant Slash and Propellant Hammer – Elimination of Geysering Effect in Missiles – Selection of Materials – Special Requirements of Materials to Perform under Adverse Conditions.

AEROSPACE MATERIALS				
Course Code	18AEO765		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Open Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify appropriate aircraft materials for a given application.
2. Explain the properties of super alloys, ablative materials and high energy material.
3. Understand material corrosion process and apply prevention technique.
4. Identify Polymers, Polymeric Materials & Plastics and Ceramics & Glass for given application

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation

COURSE CONTENTS

UNIT -1- (8 HOURS)

Introduction to Aerospace Materials

General properties of materials, Definition of terms, Requirements of aircraft materials, Testing of aircraft materials, Inspection methods, Application and trends in usage in aircraft structures and engines, Selection of materials for use in aircraft.Aluminum alloys, Magnesium alloys, Titanium alloys, Plain carbon and Low carbon Steels, Corrosion and Heat resistant steels, Maraging steels, Copper alloys.

UNIT -2- (8 HOURS)

Super Alloys

General introduction to super alloys, Nickel based super alloys, Cobalt based super alloys, and Iron based super alloys, manufacturing processes associated with super alloys, Heat treatment and surface treatment of super alloys

Composite Materials:

Definition and comparison of composites with conventional monolithic materials, Reinforcing fibers and Matrix materials, Fabrication of composites and quality control aspects, Carbon-Carbon Composites production, properties and applications, inter metallic matrix composites, ablative composites based on polymers, ceramic matrix, metal matrix composites based on aluminum, magnesium, titanium and nickel based composites for engines.

UNIT -3- (8 HOURS)

Polymers, Polymeric Materials & Plastics and Ceramics & Glass

Knowledge and identification of physical characteristics of commonly used polymeric material: plastics and its categories, properties and applications; commonly used ceramic, glass and transparent plastics, properties and applications, adhesives and sealants and their applications in aircraft.

UNIT -4- (8 HOURS)

Ablative Materials

Ablation process, ablative materials and applications in aerospace.

Aircraft Wood, Rubber, Fabrics & Dope and Paint:

Classification and properties of wood, Seasoning of wood, Aircraft woods, their properties and applications, Joining processes for wood, Plywood; Characteristics and definition of terminologies pertaining to aircraft fabrics and their applications, Purpose of doping and commonly used dopes; Purpose of painting, Types of aircraft paints, Aircraft painting process.

UNIT -5- (7 HOURS)

Corrosion and its Prevention
Knowledge of the various methods used for removal of corrosion from common aircraft metals and methods employed to prevent corrosion.
High Energy Materials:
Materials for rockets and missiles. Types of propellants and its general and desirable properties, insulating materials for cryogenic engines. Types of solid propellants: Mechanical characterization of solid propellants using uni-axial, strip-biaxial and tubular tests.

INTRODUCTION TO AEROSPACE ENGINEERING				
Course Code	18AEO766		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Open Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the evolution of aerospace vehicles and identify the various components of such vehicles
2. Distinguish among various flight vehicle configurations and describe their features
3. Describe the properties and structure of atmosphere, and state the aerodynamic forces and moments acting on aircraft
4. Describe the aerodynamics of wings and aerofoils and express the performance equations
5. Outline the various aerospace power plants and discuss the structures and materials of aerospace structures

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation

COURSE CONTENTS

UNIT -1- (8 HOURS)

HISTORY AND FLIGHT VEHICLES COMPONENTS - Historical evolution of airplanes - Aircraft axes and attitude definitions - Different types of flight vehicles, Components and functions of an airplane and space vehicles, components of rocket and missiles. Parts of helicopter and their functions, Indian aerospace developments

UNIT -2- (8 HOURS)

FLIGHT VEHICLES CONFIGURATIONS- Different types of wing configurations of aircraft, Different types of tail configurations of aircraft, configurations based on speed and engines.

UNIT -3- (8 HOURS)

PRINCIPLES OF FLIGHT - Physical properties and structure of the atmosphere, Tempera Pressure and altitude relationships, stability of the atmosphere, Evolution of lift, drag and mom Different types of drag. Pressure and skin friction coefficient

UNIT -4- (8 HOURS)

AERODYNAMICS AND PERFORMANCE-Airfoil nomenclature, classification of NACA airfoils, Angle of attack, Mach number, pressure distribution over different aerodynamic profile, aero foil characteristics- lift, drag curves - Wing geometry -aspect ratio, wing loading, center of pressure and aerodynamic center - Aircraft Equation of Motions - Aircraft maneuvers..

UNIT -5- (7 HOURS)

PROPULSION AND AIRPLANE STRUCTURES -Basic ideas about piston, turboprop and jet engines, Use of propeller and jets for thrust production, Principle of operation of rocket, Rocket engines types, General types of construction, Monocoque, semi-monocoque. Typical wing and fuselage structure. Metallic and non-metallic materials, Use of aluminum alloy, titanium, stainless steel and composite materials.

INTRODUCTION TO AERIAL ROBOTICS				
Course Code	18AEO767		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Open Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the History and basic aerial robot flight concepts
2. Classification of unmanned systems, Parts and function of UAVs, UGV,UWV
3. Describe the applications and payloads of aerial robots
4. Demonstrate the design process of UAVs fixed wig multicopter and flapping wing
5. Describe the navigation and guidance of Aerial Robot

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation

COURSE CONTENTS

UNIT -1- (8 HOURS)

HISTORY AND BASIC AERIAL ROBOT FLIGHT CONCEPTS -History of Aerial Robotics-Taxonomy of unmanned aerial vehicles- Function of an Airplane – Structure of the atmosphere -Force acting on Airplane- Angle of attack –Lift and Drag –Airfoil nomenclature- Airfoil characteristics – Mach number –Propulsion system.

UNIT -2- (8 HOURS)

UNMANNED SYSTEMS Unmanned Aerial Vehicle - Classification of UAVs- Parts and function of fixed wing, Multicopter and flapping wing UAVs, Basics of UAV piloting - Unmanned ground vehicle-, Unmanned Water vehicle – Classificationof UGV and UWV- Parts and function of UGV And UWV- Launching and Recovery of US –Electronics components of US- Amphibious VehicleLighter-Than-Air Systems- Rules and Regulation of Aerial Robots.

UNIT -3- (8 HOURS)

APPLICATIONS AND PAYLOADS OF AERIAL ROBOTS - Applications of Aerial Rol Remote sensing, Aerial mapping, Disaster response, Surveillance Search and rescue, Transporta Payload delivery, Image acquisition for cinematography,Aerial Observations Military Operati Civilian and Private Applications-of Payload -Classification of payloads -Camera –sensors

UNIT -4- (8 HOURS)

DEVELOPMENT AND INTEGRATION OF AERIAL ROBOTS Fixed wing UAVs- Multicopter UAV- Flapping wing UAV- Swarm Robot, Integration of Aerial robot- IOT based Aerial robot- Safety procedure of Aerial Robot- Material for Aerial Robot.

UNIT -5- (7 HOURS)

NAVIGATION AND GUIDANCE SYSTEM OF AERIAL ROBOT Flight Control System – Path planning- Way point Navigation system-GPS – GCS-Telemetry – –Transmitter & Receiver.

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the Basic concepts, Scope and Method of Thermodynamics
2. Discuss the 1 D isentropic flows
3. Discuss the fundamental principle of working of rockets and missiles
4. Discuss the Classification of rockets

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation

COURSE CONTENTS

UNIT -1- (8 HOURS)

Introduction to Propulsion: Jet Propulsion, Turbojet, Turbofans, Turboprop, Turboshaft engine, Basic concepts, Scope and Method of Thermodynamics, Zeroth Law and Temperature, First Law and Internal Energy; Second Law – Entropy and Absolute Temperature; Third Law and Absolute Entropy; Thermodynamics of simple compressible systems, State postulate, Fundamental Representations

UNIT -2- (8 HOURS)

1 D isentropic flows, normal and oblique shocks, compressible flows, Rayleigh flow, Fanno flow, elements of combustion, thermochemistry , adiabatic flame temperature, premixed flames, diffusion flames

UNIT -3- (8 HOURS)

Introduction to Missiles and Rockets, fundamental principle of working of rockets and missiles Space propulsive devices and operating principles.

UNIT -4- (8 HOURS)

Classification of rockets: Introduction to chemical, electric, ion and nuclear powered rockets.

UNIT -5- (7 HOURS)

Chemical rockets: Solid and liquid propellant rockets, types of solid and liquid rocket motor propellants, rocket performance parameters, flow through nozzle, real nozzles, equilibrium and frozen flow

INTRODUCTION TO JET ENGINES				
Course Code	18AEO768		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Open Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the working principle of gas turbine engines
2. Understand fundamentals of real cycles and rotating components
3. Identify various combustion systems and nozzles
4. Classify ramjet, scramjet and pulsejet engines

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation

COURSE CONTENTS

UNIT -1- (8 HOURS)

Introduction to Aircraft Propulsion.
The Gas Turbine Engine development for Aircraft Propulsion. How the jet engines makes thrust conceptual basis. Jet engine performance parameters ; Thrust, SFC, Efficiencies, Simple Turbojet and Reheat engines: Low and High bypass Turbofan engines, Single and Multi-spool Gas Turbine based propulsive devices

UNIT -2- (8 HOURS)

Introduction to Real Cycles. Ideal and Real Brayton cycles. Jet engine cycles for aircraft propulsion. Cycle components and component performance: Intake, Compressors & Turbines , Combustion chamber, Afterburner, Nozzle. Analysis of engine real cycles: Turbojet cycle, Reheat engine cycle, Turbofan engine cycle, Turboprop Engines Advanced jet engine cycles: Variable cycle engines.

UNIT -3- (8 HOURS)

Fundamentals of Rotating components. Thermodynamics of Compressors and Turbines Development of parameters for compressor and Turbines.
Compressors and Turbines.
Axial and centrifugal Compressors: A simple two dimensional analytical model, 2-D (cascade) analysis; Loss and Blade performance estimation, Single and Multi-stage Axial compressor characteristics. Elements of centrifugal compressor. Centrifugal Compressor Characteristics: Surging and Choking.

UNIT -4- (8 HOURS)

Combustion Systems. Introduction : Various types of combustion chambers in aircraft engines. Combustion Mechanism and Important Combustion parameters. Development of a practical combustion system and design parameters. Pressure losses ; Combustion efficiency; Combustion intensity. uses and their properties and Fuel injection systems.
Intakes and Propelling Nozzles.
Requirements of an Intake for Powerplant: Transport, Military Aircraft.
Subsonic Intakes, Transonic and Supersonic Intakes. Axi-symmetric and Assymmetric Intakes. Aircraft Intake design considerations.
Propelling Nozzles, Nozzle design considerations: fixed and variable geometry nozzles, C-D nozzle and their use.

UNIT -5- (7 HOURS)

Ramjets, Pulsejets and Scramjets. Use of Ramjets and Pulsejets in Aircraft propulsion. Operating Principles, Thermodynamic Cycle. Design and Performance of a Ramjet. Flow in Diffusers, Combustors and Nozzles. Principles of Scramjet Engines. Future of Aircraft Propulsion

TEXT BOOKS

SL.NO	Title of the Book	Name of the author/s	Name of the publisher	Edition and year
1	Aircraft Powerplants	Kroes Michael J; Wild Thomas W;	Tata-Mcgraw-Hill.,	2010 7th Edition
2	Mechanics and Thermodynamics of Propulsion,	Hill Philip, Peterson Carl,	Addison Wesly	1992
3	Aircraft Propulsion,	Roy Bhaskar,	Elsevier (India)	2008

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	2												3
CO2	3	2												3
CO3	3	2												3
CO4	3	2												3

INTERNSHIP/SELF STUDY/MINOR PROJECT				
Course Code	18AEI/S/P79		**Credits**	1
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify and define the problem for the project work
2. Apply the knowledge acquired to analyze and estimate the cost and time
3. Examine and use appropriate tools to solve the defined problem in a team
4. prepare an end product and prepare a technical report/paper

INTERNSHIP

A 4-6 weeks' internship in any recognized industries/institutes can be carried out by the students after 2 nd year study of their engineering curriculum. The aim of the internship is to study and gain knowledge about various industrial departments and natures of work and processes. On completion of the internship, students shall prepare a report according to the guidelines and submit it to the authority concerned during their 7th semester. The students present the work through a seminar and performance will be evaluated by the project committee and marks will be awarded..

SELF STUDY

The students can take up self-study assignment under the guidance of a faculty. The topic and syllabus for self-study will be given by the faculty concerned. At the end of the study the student has to take up 3hours long exam. The performance will be evaluated and grades will be awarded for the same by considering the final and CIE marks.

MINOR PROJECT

The goal of the minor project is to learn and apply scientific methods to problems for solutions and prepare necessary documentation. The duration amounts to one semester. The characteristic phases of the scientific work are:

- Analyzing the defined problem
- Determining the existing solutions
- Proposing new solutions
- Evaluating all solutions and deciding on a reasonable solution
- Implementing the solution
- Writing an elaborate report, discussing the results achieved
- Making suggestions if any for further work

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

1. Regular follow-up in terms of presentations for internship and minor projects.
2. Mid semester exam will be conducted for self-study courses

Semester End Examination (SEE)

1. Presentation followed by report submission for internship and minor projects
2. Three hours examination for 100 marks

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3	3	3	3	2	2	3	3	3	3	3	3	3
CO2	3	3	3	3	3	2	2	3	3	3	3	3	3	3
CO3	3	3	3	3	3	2	2	3	3	3	3	3	3	3
CO4	3	3	3	3	3	2	2	3	3	3	3	3	3	3

MAJOR PROJECT PHASE-II				
Course Code	18AEP710		**Credits**	1
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify and define the problem for the project work
2. Apply the knowledge acquired to analyze and estimate the cost and time
3. Examine and use appropriate tools to solve the defined problem in a team
4. Develop an end product and prepare a technical report/paper

COURSE ASSESSMENT METHOD

Project work: Based on the ability/abilities of the student/s and recommendations of the mentor, a single discipline or a multi disciplinary project can be assigned to an individual student or to a group having not more than 4 students. In extraordinary cases, like the funded projects requiring students from different disciplines, the project student strength can be 5 or 6.

CIE procedure for Project Work Phase - 2:

The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and senior faculty members of the Department, one of whom shall be the Guide. The CIE marks awarded for the project work phase-2, shall be based on the evaluation of the project work phase -1 Report (covering Literature Survey, Problem identification, Objectives and Methodology), project presentation skill and question and answer session in the ratio 50:25:25..

SEE Procedure for project Work Phase-2

The SEE marks shall be awarded by senior examiners (internal & External). The students have to present/demonstrate the project work carried out. SEE marks awarded for the project work phase -2. The marks will be awarded for the students based on Report (covering Literature Survey, Problem identification, Objectives and Methodology), project presentation skill and question and answer session in the ratio 50:25:25.

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3	3	3	3	2	2	3	3	3	3	3	3	3
CO2	3	3	3	3	3	2	2	3	3	3	3	3	3	3
CO3	3	3	3	3	3	2	2	3	3	3	3	3	3	3
CO4	3	3	3	3	3	2	2	3	3	3	3	3	3	3

SEMESTER-VIII

AIRCRAFT DESIGN AND ANALYSIS

Course Code	18AE81		**Credits**	03
Hours/Week (L-T-P)	4+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03 Hours		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the conceptual design process of an aircraft, airfoil and wing geometry
2. Describe initial sizing and configuration layout.
3. Explain the application of aerodynamics, propulsion and aircraft structures in design.
4. Discuss the design aspects of sub systems in flight vehicles.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation
- Videos and animation

COURSE CONTENTS

UNIT -1 (08 HOURS)

Overview of Design Process: Introduction, Typical requirements for a civil transport and a military fighter aircraft, Phases of design, Aircraft conceptual design process, Take-off weight build up, Empty weight estimation, Fuel fraction estimation, Take- off weight calculation, Trade studies.

Airfoil Selection: Airfoil geometry, Airfoil lift and drag, Airfoil families, Airfoil design, Airfoil lift coefficient, Airfoil thickness, Camber, Stall, Reynolds number effects.

UNIT -2- (08 HOURS)

Geometry: Wing geometry, Aspect ratio, Sweep, Taper ratio, Twist, Incidence, Dihedral, Wing vertical location of wings, Wing tips, Biplane wings, Tail geometry and arrangement

Thrust to Weight Ratio & Wing Loading: Thrust to weight definitions, Power loading, Statistical estimate of T/W. Thrust matching, Wing Loading and its effect on Stall speed, Take-off Distance, Catapult take-off, and Landing Distance. Wing Loading for Cruise, Loiter, Endurance, Instantaneous Turn rate, Sustained Turn rate, Climb, & Glide, Maximum ceiling, Selection of Thrust to Weight Ratio & Wing Loading

UNIT -3- (08 HOURS)

Initial Sizing: Rubber engine sizing, Fixed engine sizing, Geometry sizing – Fuselage, Wing, Tail volume coefficient, and Control surface sizing,

Configuration Layout & loft: Conic lofting, Conic fuselage development, Conic shape parameter, Wing-tail layout & Loft. aerofoil linear interpolation. Aerofoil flat-wrap interpolation. Wing aerofoil layout-flap wrap. Wetted area determination. Special considerations in configuration layout: Aerodynamic, Structural, Detectability. Crew station, Passenger, and Payload arrangements.

UNIT -4- (08 HOURS)

Aerodynamics & Propulsion: A brief overview of aerodynamic coefficients and forces, Types of propulsion systems, Jet engine thrust considerations, Thrust-drag book keeping, Installed thrust methodology, Piston engine performance – propeller performance and piston-prop thrust correction, Turboprop performance

Structural Loads: Structures fundamentals, Loads categories, Air loads – maneuver loads, gust loads, air loads on lifting surface, air loads due to control deflection, Inertial loads, Power-plant loads, Landing gear loads.

UNIT -5- (07 HOURS)

Design Aspects of Subsystems: Flight Control system, Landing Gear and subsystem, Propulsion and Fuel System Integration, Air Pressurization and Air Conditioning System, Electrical & Avionic Systems, Safety constraints, Material selection criteria.

Lab Component: Demonstration of SDOF System & MDOF System &estimation of vibration responses

PROGRAM ELECTIVE-F

DESIGN OF GAS TURBINE				
Course Code	18AEE821		**Credits**	03
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03 Hours		**Course Type**	Program elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify the types of engines , parts, variations and applications of aircraft
2. Identify the criteria involved in selection of materials
3. Differentiate the design and off-design performance characteristics of aircraft engines.
4. Assess various component and engine level performance tests.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

Types, Variation & Applications: Types of engines showing arrangement of parts. Operating parameters. Energy distribution of turbojet, turboprop and turbofan engines. Comparison of thrust and specific fuel consumption. Thrust, pressure and velocity diagrams.

Engine Parts: Compressor assembly, types of burners: advantages and disadvantages. Influence of design factors on burner performance. Effect of operating variables on burner performance. Performance requirements of combustion chambers. Construction of nozzles. Impulse turbine and reaction turbine. Exhaust system, sound suppression. Thrust reversal: types, design & systems. Methods of thrust augmentation, afterburner systems.

UNIT -2 (08 HOURS)

Materials and Manufacturing: Criteria for selection of materials. Heat ranges of metals, high temperature strength. Surface finishing. Powder metallurgy. Use of composites and Ceramics. Super-alloys for Turbines. **Systems:** Fuel systems and components. Sensors and Controls. FADEC interface with engine. Typical fuel system. Oil system components. Typical oil system. Starting systems. Typical starting characteristics. Various gas turbine starters.

UNIT -3 (08 HOURS)

Engine Performance: Design & off-design Performance. Surge margin requirements, surge margin stack up. Transient performance. Qualitative characteristics quantities. Transient working lines. Starting process & Wind milling of Engines. Thrust engine start envelope. Starting torque and speed requirements Calculations for design and off-design performance from given test data – (case study for a single shaft Jet Engine). Engine performance monitoring.

UNIT -4 (08 HOURS)

Component Level Testing

Compressor: Compressor MAP. Surge margin, Inlet distortions. Testing and Performance Evaluation. **Combustor:** Combustor MAP, Pressure loss, combustion light up test. Testing and Performance Evaluation. **Turbines:** Turbine MAP. Turbine Testing and Performance Evaluation. **Inlet duct & nozzles:** Ram pressure recovery of inlet duct. Propelling nozzles, after burner, maximum mass flow conditions. Testing and Performance Evaluation.

UNIT -5 (07 HOURS)

Engine Testing: Proof of Concepts: Design Evaluation tests. Structural Integrity. Environmental Ingestion Capability. Preliminary Flight Rating Test, Qualification Test, Acceptance Test. Reliability figure of merit. Durability and Life Assessment Tests, Reliability Tests. Engine testing with simulated inlet distortions and, surge test. Estimating engine-operating limits. Methods of displacing equilibrium lines.

Types of engine testing: Normally Aspirated Testing, Open Air Test Bed ,Ram Air Testing, Altitude Testing, Altitude test facility, Flying Test Bed, Ground Testing of Engine Installed in Aircraft, Flight testing. Jet thrust measurements in flight. Test procedure: Test Schedule Preparation, Test Log Sheets, Test Documents. Type approval.

Exam Hrs	03 Hours		**Course Type**	Program elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the Space launch Vehicles and military missiles, function, types etc.
2. Explain the Solid and liquid Propellant Rocket Motor Systems,
3. Describe the aerodynamics of Rockets and Missiles
4. Explain the Launch Vehicle Dynamics and Rocket Testing

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction: Space launch Vehicles and military missiles, function, types, role, mission, mission profile, thrust profile, propulsion system, payload, staging, control and guidance requirements, performance measures, design, construction, operation, similarities and differences. Some famous space launch vehicles and strategic missiles.

UNIT -2 (10 HOURS)

Solid Propellant Rocket Motor Systems: Solid Propellant rocket motors, principal features, applications. Solid propellants, types, composition, properties, performance. Propellant grain, desirable properties, grain configuration, preparation, loading, structural design of grain. Liners, insulators and inhibitors, function, requirements, materials. Rocket motor casing – materials. Nozzles, types, design, construction, thermal protection. Igniters, types, construction. Description of modern solid boosters I Space Shuttle SRB, II the Arienne SRB

Liquid Propellant Rocket Motor Systems: Liquid propellants, types, composition, properties, performance. Propellant tanks feed systems, pressurization, turbo-pumps, valves and feed lines, injectors, starting and ignition. Engine cooling, support structure. Control of engine starting and thrust build up, system calibration, integration and optimization – safety and environmental concerns. Description of the space shuttle main engine. Propellant slosh, propellant hammer, geysering effect in cryogenic rocket engines.

UNIT -3 (08 HOURS)

Aerodynamics of Rockets And Missiles: Classification of missiles. Airframe components of rockets and missiles, Forces acting on a missile while passing through atmosphere, method of describing aerodynamic forces and moments, lateral aerodynamic moment, lateral damping moment, longitudinal moment of a rocket, lift and drag forces, drag estimation, body upwash and downwash in missiles. Rocket dispersion, re-entry body design considerations.

UNIT -4- (07 HOURS)

Launch Vehicle Dynamics: Tsiolskovsky's rocket equation, range in the absence of gravity, vertical motion in the earth's gravitational field, inclined motion, flight path at constant pitch angle, motion in the atmosphere, the gravity turn – the culmination altitude, multi staging. Earth launch trajectories – vertical segment, the gravity turn, constant pitch trajectory, orbital injection. Actual launch vehicle trajectories, types. Examples, the Mu 3-S-II, Ariane, Pegasus launchers. Reusable launch vehicles, future launchers, launch assist technologies. Attitude Control of Rockets And Missiles: Rocket Thrust Vector Control – Methods of Thrusts Vector Control for solid and liquid propulsion systems, thrust magnitude control, thrust termination; stage separation dynamics, separation techniques.

UNIT -5- (08 HOURS)

Rocket Testing: Ground Testing and Flight Testing, Types of Testsfacilities and safeguards, monitoring and control of toxic materials, instrumentation and data management. Ground Testing, Flight Testing, Trajectory monitoring, post -accident procedures. Description of a typical space launch vehicle launch procedure. Materials: Criteria for selection of materials for rockets and missiles, requirements for choice of materials for propellant tanks, liners, insulators, inhibitors, at cryogenic temperatures, requirements of materials at extremely high temperatures, requirements of materials for thermal protection and for pressure vessels.

HIGH TEMPERATURE MATERIALS				
Course Code	18AEE823		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03 Hours		**Course Type**	Program elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand creep behaviour, mechanisms and effect of different parameters like stress, temporary, strain rate on creep.
2. Apply laws that would be beneficial in determining the rupture life of a component
3. Identify various types of fracture and its occurrence.
4. Describe Oxidation and Corrosion phenomenon
5. Describe super alloys and other high temperature materials

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation lectures

COURSE CONTENTS

UNIT -1- (08 HOURS)

CREEP : Creep – Creep Strength, Creep Limit, Creep Curve - Stages of Creep, Creep Fracture, Factors influencing creep property of a material, Factors Affecting Creep – Temperature, Stress, Time, Grain Size, Mechanism of Creep – Diffusion Creep & Dislocation Creep, Metallurgical Factors Influencing Creep at High Temperature, Creep Test, Creep resistant materials.

UNIT -2- (10 HOURS)

LAWS TO DETERMINE CREEP: Laws of Creep- Andrade's law, Logarithmic Law, Hyperbolic Law of Transient creep, Secondary creep law,Laws to determine rupture life of component – Larson –Miller Parameter, Monkman Grant Relationship, Creep Mechanism Maps.

UNIT -3- (07 HOURS)

HIGH TEMPERATURE FRACTURE: Fracture – Types of Fracture –Ductile fracture, Brittle fracture, Shearing Fracture, Factors Affecting Fracture, Fracture toughness, Griffith Theory of Brittle Fracture, Blue Brittleness, Orange Peel Effect, Cleavage Fracture, Micro void Coalescence and Dominant Void Growth Modes, Ductile to Brittle Transition (DBT), Bauchinger's effect.

UNIT -4- (08 HOURS)

OXIDATION & CORROSION : Oxidation –Nature of Oxides formed on Metal Surface, Types of Corrosion, Kinetic laws of Oxidation – Parabolic rate law, Linear rate law and Logarithmic rate law, Pilling-Bedworth ratio, Corrosion – Types of Corrosion, Factors Influencing Corrosion, Fluxing Mechanisms – Acidic and Basic Fluxing, Effect of Alloying Element on Hot Corrosion, Corrosion Control - Methods to Combat Hot Corrosion.

UNIT -5- (10 HOURS)

HIGH TEMPERATURE RESISTANT MATERIALS: Super Alloys – Cobalt Base, Nickel base, Iron Base. Ultra High Temperature Ceramics, Inter- metallics, Thermal Barrier Coatings, Hydrogen Embrittlement, Refractory Metals, Structural Heat Resistant Composites.

AVIONICS AND INSTRUMENTATIONS				
Course Code	18AEE824		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03 Hours		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe modern Aviation and avionics architecture.
2. Explain the instrument landing systems and distance measuring equipment, the VHF OMNI range navigation
3. Explain the aircraft instruments.
4. Describe the inertial navigation system.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction to Avionics: History and Evolution of Avionics, Significance of Avionics in modern Aviation, what is Basic Six, List of Avionics system on-board a modern aircraft. Block diagram of avionics architecture, Role of individual sub-system in avionics architecture

UNIT -2- (08 HOURS)

Instrument landing systems and distance measuring equipment: Principles of Localizer (LOC) Operation, Principles of Glideslope (GS) Operation, Principles of Marker Beacon (MB) Operation, Navigation Receiver, Automated Test Equipment, Microwave Landing Systems, DME Navigation Concepts, Principles of DME System Operation, DME Transceiver Operation, DME Navigation Procedures

.

UNIT -3- (08 HOURS)

Introduction to Navigations Systems: What is Navigation? What are the types of Navigations? Principles of GPS? Definition associated with navigation (e.g. Lat, Long, GPS Coordinate system, Heading, Track, True/Magnetic North, Radial, Bearing, Heading and course etc.) Examples of Navigation systems used in fighters, Transport and Helicopters, VOR Navigation Concepts, Principles of COR, Operation, Receiver Operation, Performance Validation, Operation Procedures.

UNIT -4- (08 HOURS)

Aircraft Instruments. Introduction to Aircraft Instruments. Evolution of Cockpit Displays, Construction and Working Principle of - Air Data Reference System, Pressure Measurement, Pitot Static System, Altimeter, Air Speed Indicator, Rate of Climb Indicator, Mach Meter, Temperature Measurement, RPM Measurement, Fuel Gauge, Accelerometer and Fatigue Meter, Artificial Horizon, Turn and Slip Indicator, Compass and Directional Gyros Magnetic Heading Reference Systems and Introduction to Flight Data Recorder and Cockpit Voice Recorder.

UNIT -5- (07 HOURS)

Inertial Navigation System. Sensors in Inertial Navigational System (INS), Types of INS and Fundamentals of Stabilized Platform. Introduction to Strap-Down INS. Principles of Modern Gyros (Vibrating Mass, Optical Ring Laser Gyros, Fiber Optics Gyros, Solid State Gyros)

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)
1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3													2
CO2	3	2												2
CO3	3	2												2
CO4	3	2												2

SMART MATERIALS & NANO TECHNOLOGY				
Course Code	18AEE825		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03 Hours		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify the characteristics of various smart materials.
2. Explain the Optics and Electromagnetic principles
3. Apply principles of vibrations and perform modal analysis
4. Understand the importance of nanotechnology and quantum mechanics.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction: Characteristics of composites and ceramics materials, Electro-magnetic materials and shape memory alloys-processing and characteristics Sensing and Actuation Principles of electromagnetic, acoustics, chemical and mechanical sensing and actuation, Types of sensors and their applications..

UNIT -2- (08 HOURS)

Optics and Electromagnetic: Principles of optical fiber technology, characteristics of active and adaptive optical system and components Design and manufacturing principles. Structures: Principles of drag and turbulence control through smart skins, applications in environment such as aerospace and transportation vehicles, manufacturing, repair and maintainability aspects

UNIT -3- (08 HOURS)

Principles of Vibration and Modal Analysis: PZT Actuators, MEMS, Magnetic shape Memory Alloys, Characteristics and Applications.Principles of structural acoustic control

UNIT -4- (08 HOURS)

Introduction to Nanotechnology:
Importance of Nanotechnology-History of Nanotechnology-Opportunity at the nano scale-length and time scale in structures-energy landscapes-Interdynamic aspects of intermolecular forces -classification based on the dimensionality- nano particles nanoclusters-nanotubes-nanowires and nanodots- Semiconductor nanocrystals carbon nanotubes- Influence of Nano structuring on Mechanical, optical, electronic, magnetic and chemical properties.

UNIT -5- (07 HOURS)

Basics Of Quantum Mechanics: Introduction to Quantum Mechanics - Schrodinger equation time dependent and time independent equations Operators and observables - Commutation relations - Hermitian operators Expectation values of observables - Solutions of the Schrodinger equation free particle - particle in a box one and three dimensions - particle in a finite well - Penetration through a barrier Tunnel effect Single step barrier

HELICOPTER ENGINEERING				
Course Code	18AEE826		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03 Hours		**Course Type**	Program elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain the Configurations based on torque reaction and methods of control.
2. Describe the ideal rotor theory.
3. Explain the Induced, profile and parasite power requirements.
4. Describe the Lift, Propulsion and Control of VISTOL Aircraft and ground effect machines.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

ELEMENTS OF HELICOPTER AERODYNAMICS; Configurations based on torque reaction-Jet rotors and compound helicopters- Methods of control — Collective and cyclic pitch changes - Lead - Lag and flapping hinges.

UNIT -2- (08 HOURS)

IDEAL ROTOR THEORY: Hovering performance - Momentum and simple blade element theories - Figure of merit - Profile and induced power estimation - Constant chord and ideal twist rotors.

UNIT -3- (08 HOURS)

POWER ESTIMATES: Induced, profile and parasite power requirements in forward flight-Performance curves with effects of altitude- Preliminary ideas on helicopter stability

UNIT -4- (08 HOURS)

LIFT, PROPULSION AND CONTROL OF V/STOL AIRCRAFT: Various configuration - Propeller, rotor, ducted fan and jet lift - Tilt wing and vectored thrust - Performance of VTOL and STOL aircraft in hover, transition and forward motion.

UNIT -5- (07 HOURS)

GROUND EFFECT MACHINES: Types - Hover height, lift augmentation and power calculations for plenum chamber and peripheral jet machine - Drag of hovercraft on land and water. Applications of hovercraft.

WIND ENGINEERING

Course Code	18AEE827		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the atmospheric motion and classify terrains.
2. Compute properties of atmospheric boundary layer.
3. Examine oscillatory flow patterns and turbulent flow
4. Analyze the wind loading characteristics.
5. Analyze wind structure interaction

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Hands on sessions

COURSE CONTENTS

UNIT -1- (08 HOURS)

THE ATMOSPHERE

Atmospheric Circulation – Stability of atmospheres – definitions & implications – Effects of friction – Atmospheric motion – Local winds, Building codes, Terrains different types.

UNIT -2- (08 HOURS)

ATMOSPHERIC BOUNDARY LAYER

Governing Equations – Mean velocity profiles, Power law, logarithmic law wind speeds, Atmospheric turbulence profiles – Spectral density function – Length scale of turbulence, Roughness parameters simulation techniques in wind tunnels.

UNIT -3- (08 HOURS)

BLUFF BODY AERODYNAMICS

Governing Equations – Boundary layers and separations – Wake and Vortex formation two dimensional – Strouhal Numbers, Reynolds numbers – Separation and Reattachments Oscillatory Flow patterns Vortex sheding flow switching – Time varying forces to wind velocity in turbulent flow – Structures in three dimensional

UNIT -4- (08 HOURS)

WIND LOADING

Introduction, Analysis of loading coefficients, local & global coefficients pressure shear stress coefficients, force and moment coefficients – Assessment methods – Quasi steady method – Peak factor method – Extreme value method

UNIT -5- (07 HOURS)

AEROELASTIC PHENOMENA

Vortex shedding and lock in phenomena in turbulent flows, across wind galloping wake galloping - Torsional divergence, along wind galloping of circular cables, cross wind galloping of circular cables, Wind loads & their effects on tall structures – Launch vehicles.

FLIGHT TESTING				
Course Code	18AEE828		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify the purpose, scope and working of various instruments employed for flight-testing.
2. Examine the performance of flight at different operating conditions
3. Illustrate the stability and control aspects at various flight condition
4. Explain the various regulations and recovery techniques

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction: Purpose and scope of flight-testing, basic definition, types of flight tests, sequence of flight testing, planning the test program, governing regulations. Aircraft weight and center of gravity, flight testing tolerances. Method of reducing data uncertainty in flight test data -sources and magnitudes of error, avoiding and minimizing errors.

UNIT -2- (08 HOURS)

Flight Test Instrumentation: Planning flight test instrumentation, sensing and transducing techniques. Measurement of linear and angular displacements, velocities and accelerations, vibration, force, temperature - onboard and ground based data acquisition system. Radio telemetry

UNIT -3- (08 HOURS)

Performance Flight Testing - Range, Endurance and Climb: Airspeed – in flight calibration. Level flight performance for propeller driven aircraft and for Jet aircraft - Techniques and data reduction. Range and endurance estimation of propeller and jet aircraft. Climb performance methods.

Performance Flight Testing -Take-Off, Landing, Turning Flight: Turning performance limitati
Drag estimation. Take-off and landing - methods, procedures and data reduction

UNIT -4- (08 HOURS)

Stability and Control - Longitudinal and Manoeuvring: Flight test Methods: Static longitudinal stability; Dynamic longitudinal stability. Data reduction. Maneuvering stability methods & data reduction.

Stability and Control - Lateral & Directional: Flight Test methods: - Lateral and directional static stability: Lateral and directional dynamic stability. Regulations and data reduction.

UNIT -5- (07 HOURS)

Flying Qualities: MIL and FAR regulations. Cooper-Harper scale. Pilot rating .Flight test procedures.
Hazardous Flight Testing: Stall and spin- regulations, test and recovery techniques. Dive testing for flutter, vibration and buffeting.

MAJOR PROJECT WORK				
Course Code	18AEP83		**Credits**	10
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify and define the problem for the project work
2. Apply the knowledge acquired to analyze and estimate the cost and time
3. Examine and use appropriate tools to solve the defined problem in a team
4. Develop an end product and prepare a technical report/paper

COURSE CONTENTS

The goal of the project work is to learn and apply scientific methods to problems, including the necessary documentation. The duration amounts to one semester.
The characteristic phases of the scientific work are:

1. Analyzing the defined problem
2. Determining the existing solutions
3. Proposing new solutions
4. Arriving at for the best solution
5. Writing an elaborate report based on the results achieved
6. Making suggestions for further work

The project work shall be on a topic in the area specified by the guide and/or identified by the student. The students will be divided into different batches; each batch consisting of 2-4 students. The project work will be carried out under the supervision of an internal guide. On completion of the project work,
the batch will prepare a report as per the guidelines and submit to the authority concerned for evaluation and certification.
The students are supposed to finalize the topic of the project work at the beginning of the 6th semester.
The work will be done in different phases as follows:

1. Literature survey
2. Progress of the project
3. Final Presentation

Each phase of the work will be assessed by a project committee and suggestions called for if any will be advised.

COURSE ASSESSMENT METHOD

For the final year project and Viva – Voce end semester examination, the student shall submit a Project Report in the prescribed format issued by the Institute. The first three reviews will be conducted by a Committee constituted by the Head of the Department. The end – semester assessment will be based on the project report and a viva on the project conducted by a Committee constituted by the Registrar / Controller of examination. This may include an external expert.
For final year Project / Dissertation the assessment will be done on a continuous basis as given below table.

Sl No.	Review / Examination scheme	Weightage
1	First Review	10%
2	Second review	10%
3	Third review	20%
4	Project report and Viva – Voce	50%

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

(An Autonomous Institute, Affiliated to VTU, Belagavi)

DEPARTMENT OF MANAGEMENT STUDIES

Outcome Based Education Curriculum
(For the Academic year 2020 - 2022)

I to IV SEMESTER - MBA

Nitte Meenakshi Institute of Technology
Yelahanka, Bengaluru – 560 064.

Approved Scheme and Syllabus of I, II, III & IV Semester MBA

(2020-2022)

About the Institution:

Nitte Meenakshi Institute of Technology (NMIT) is an Autonomous Institution affiliated to the Visvesvaraya Technological University (VTU), with the approval of UGC
NMIT got accredited by the National Board of Accreditation [NBA] under Tier-1 status (for 4 Programs) and Grade-A status by National Assessment and Accreditation Council [NAAC - UGC].

It is the youngest engineering college in the country to be conferred the prestigious Autonomous Status by UGC/Govt. of Karnataka, New-Delhi in the year 2007 and the only unaided private engineering college in Karnataka State to be selected by the Govt. of India for World Bank Funding under TEQIP Phase II-Subcomponent 1.1 in the year 2011.

The institution has a strong focus on excellence in education, research and promotion of Innovation and entrepreneurship. Innovation and Entrepreneurship Development Centre was established in the year 2010 and funded (to the tune of Rs. 45 lakhs) by the Department of Science and Technology (NSTEDB), New Delhi.

NMIT has established Business Incubator supported by MSME (Micro, Small and Medium Enterprises), Govt. of India and also an Innovation Club supported by Visvesvaraya Technological University and Govt. of Karnataka with seed money of Rs 5Lakhs. Some of the prominent sponsored projects sanctioned by different reputed National Funding Agencies such as DST, DIT, AICTE, DRDO Labs, VGST, IEEE, VTU etc

NMIT is a unique institution which has established five multi-disciplinary research centres viz for Small Satellites, Robotics, Nanomaterial & MEMS, Computational Fluid Dynamics and Design Engineering & Process Simulation. It is also the first college in India to introduction of Robotics Engineering-Lego Mindstorms and TETRIX Course with Laboratory for II Year B.E Students in AY 2015-16. The course is on the lines of few US/European Universities.

It is recognised by ISRO as a Centre for Small Satellite Research (CSSR) for undertaking collaborative research on space technology and satellite development. NMIT has led a consortium that designed and built STUDSAT-1, a satellite of PICO category. Launched by ISROs PSLV-C15 on 12 July 2010. This success is listed in the Limca Book of records. NMIT has a unique Scheme of Deputing UG Students to Industry, R&D Organizations, IISc, IITs and NID for a minimum period of 6 weeks internship leading to academic credits.

NMIT offers wide range of academic programs comprising of seven UG and eight PG programs in Engineering besides MBA and MCA. Ten Departments of NMIT offer doctoral programs of VTU / Mysore University.

Highly qualified and experience faculty comprising 55+Ph.Ds primarily from IISc, IITs & NITs. An additional 60+ Faculty are pursuing Ph.Ds in different research centers of NMIT as well as in other Institutions of eminence.

NMIT has well equipped laboratories with more than 1600+ computers. NMIT has advanced software, library resources and high speed Internet connectivity 100 Mbps (leased line - 1:1).
NMIT is identified as Regional Nodal Centres of IIT-B/ IIT-KGP for faculty development programs under National Mission on Education through ICT (NMEICT), under MHRD, Govt. of India.

NMIT has an active and dynamic Training and Placement cell. The Placement cell successful attracted a large number of reputed well known organizations for on-campus placement. The Placement cell conducts programs to improve the background and competence of students by enhancing soft skills / analytical abilities / problem solving capabilities/ attitudinal and leadership qualities.

About the Department:

Having successfully launched its engineering programs in 2001, NMIT established its MBA program in 2004, affiliated to Visvesvaraya Technological University and approved by AICTE. The program became a notable success within a short span of time. Today NMIT's MBA program stands out amidst other MBA programs in quality of pedagogy, curriculum, learning environment, academic life, and infrastructure and placement results. What clearly distinguishes NMIT's program from others is the quality and diligence of faculty and administration in enhancing the students' learning experience. Starting with an intake of 40 students in 2004, the MBA program has now matured into a well-respected and well-received program with an approved intake of 120 students. We are proud of diversity in the student's enrolments and faculty recruitments.

During the first year of the MBA program, students learn the basic principles of business management and core courses in Marketing, Finance, and Human Resources as well as Quantitative Techniques. During the second year of the program, students specialize in two areas that include Finance, Human Resources, Marketing, Supply chain management and Business Analytics. Between the third and fourth semesters, students embark on a project in their area of specialization and complete it in the fourth semester. Placement interviews commence at the end of the third semester.

In addition to the MBA program, the Department of Management Studies offers several additional programs such as SPSS, ISO Certification programs (IRCA approved), Six Sigma Certification programs (Govt. Of .India, Ministry of MSME approved), Aptitude and Soft-Skills sessions from T.I.M.E.S, FDPs, MDPs, EDPs and Workshops on current management topics. A one day MDP on Case Analysis has been conducted during odd semester in addition to a two days workshop on management skills will be offered for our students in their even semester.
The department undertakes industry-sponsored research projects and consulting engagements. Very recently, the department has made an academic partnership with IIMBx, a MOOC offered by the prestigious Indian Institute of Management, Bangalore. MOOC on strategic management for sustainability and financial markets (beginning from the coming academic year) will be offered by IIMBx to the students for a duration of two months through proctored examinations.

The Department offers industry specific and function specific programs at various stages in their professional career. The Department is an approved/recognized centre by Visvesvaraya Technological University, Belagavi and University of Mysore, Mysore for guidance of Ph.D scholars.

Apart from regular class room teaching and continuous evaluation of students, our faculty members are actively engaged in a wide-spectrum of activities ranging from student's mentoring, administrative tasks at the Departmental, Institutional and University levels, guiding Project Works, advising students in the conduct of extra-curricular and co-curricular activities, being in touch with the industry, communicating with the alumni, attending conferences, workshops, seminars, MDPs and FDPs, conducting FDPs and pursuing research with focused goals. In-house training programs for faculty and "Research Colloquium Series" are conducted regularly to enhance analytical skills of faculty and research scholars.

BOARD OF STUDIES MEMBERS (2020-22)

Sl. No.	Name	Designation	Organization	Position
1	Dr. S Harish Babu	Professor & HoD	NMIT	ChairPerson
2	Dr. P.V Raveendra	Professor & HoD.	Ramaiah Institute of Technology, Bengaluru	VTU Nominee
3	Dr. DNS Kumar	Vice chancellor	Ansal University, Gurgaon	Member (Academician) Nominated by Academic Council
4	Dr.M.Jayadev	Professor	Indian Institute of Management Bangalore	Member (Academician) Nominated by Academic Council
5	Mr. Ravi Omkari	Former Associate Vice President	HSBC, Bangalore	Member (Industry) Nominated by Academic Council
6	Mr. Aditya Hegde	Head – Finance	Reliable Holdings Limited Bangalore	Member (Alumni) Nominated by the Principal
7	Dr. Shilpa Ajay	Associate Professor	NMIT	Member
8	Dr.Malini.T.N	Associate Professor	NMIT	Member
9	Dr. Eti Khatri	Associate Professor	NMIT	Member
10	Mr.Kiran Kumar.N	Associate Professor	NMIT	Member
11	Ms. Arpitha M.P	Assistant Professor	NMIT	Member Secretary

Vision, Mission and Quality Policy of NMIT:

Vision:
To excel in management education, research and engagement thereby developing ideas and leaders that transforms the society.

Mission:
To develop Nitte Meenakshi Institute of Technology through Quality, Innovative and State-of-art educational initiatives into a centre of academic excellence that will turn out youth with well-balanced personality & commitment to rich cultural heritage of India and who will successfully face the Scientific and Technological challenges in the fast-evolving Global scenario with a high degree of credibility, integrity and ethical standards.

Quality Policy:
To bring about constant and Continuous Improvement in the Quality of Education Imparted and Turning out High Quality Professionals with Balanced and Globally Competitive Personality through Regular Monitoring of the Academic/ Administrative Activities of the Institution and Implementing Corrective Actions in the Best Ethical and Transparent Traditions.

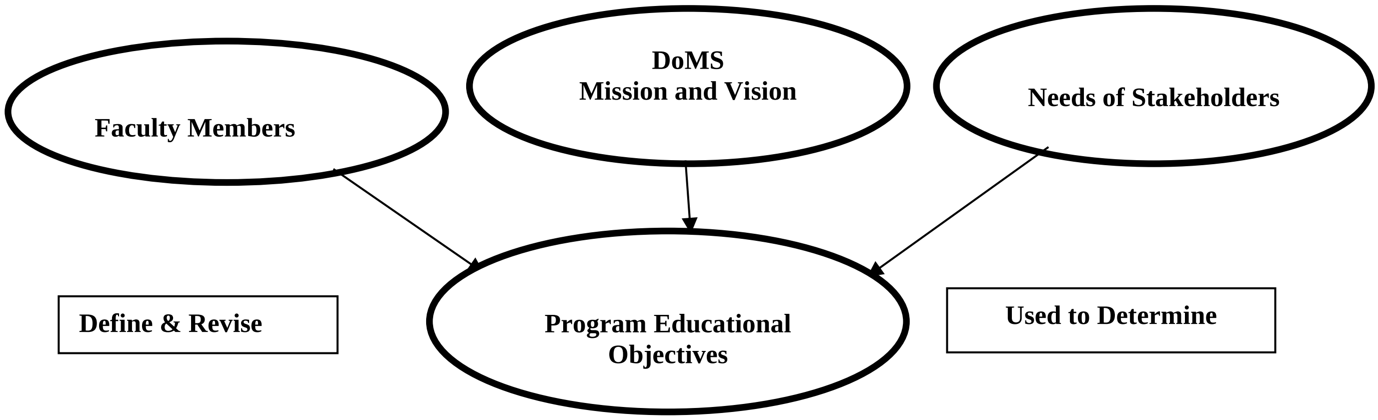
Vision and Mission of the Department of Management Studies (MBA):

Vision:
To become a top-notch management institute recognized internationally for its excellence in creation of an intellectual capital of high thinking management professionals, entrepreneurs and socially responsible citizens.

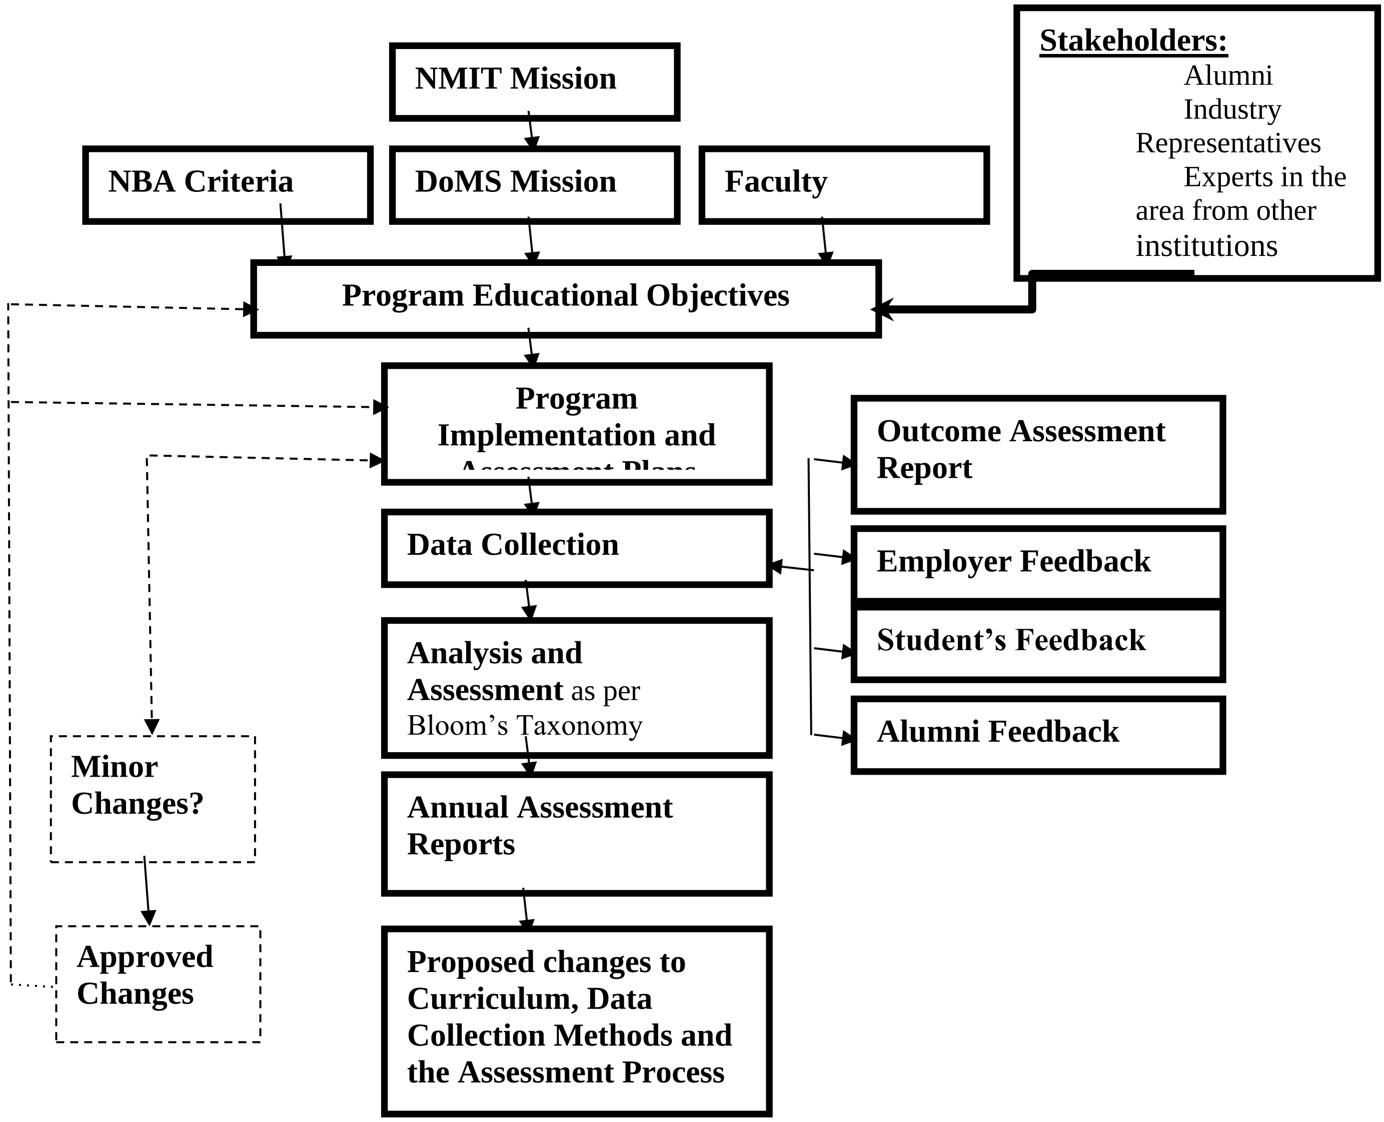
Mission:

- To nurture the future business leaders through imparting high quality value-based learning, research and practical based training that meets industry expectations.
- To foster a passion for learning and creative thinking among the student and teaching community.
- To prepare management professionals with global mindset having high professional competence, outstanding leadership qualities and impeccable personal integrity.

Development of Program Educational Objectives:



Process of Deriving the Program Educational Objectives (PEOs)



PEOs of the Program offered:

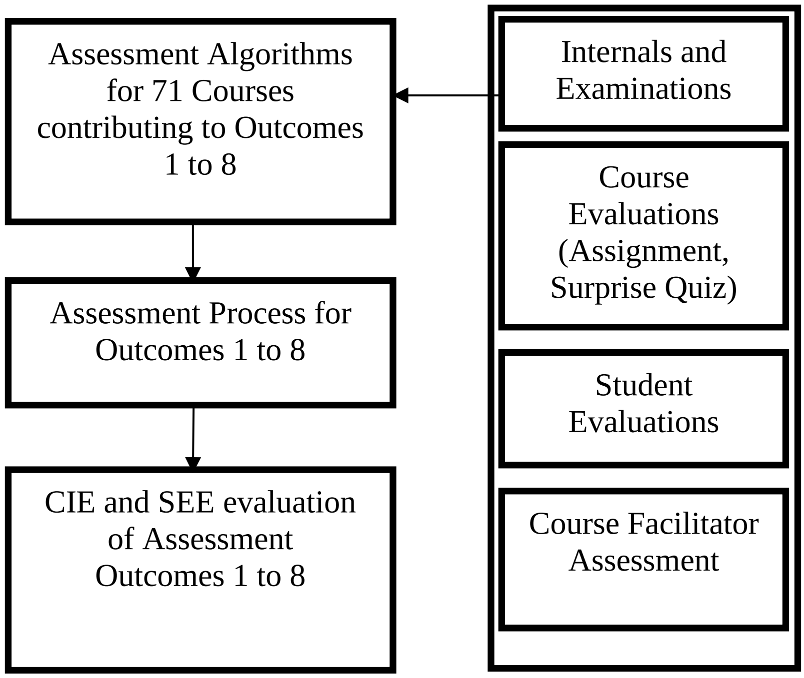
PEO-1: Post Graduate students of the program will contribute to the creation, transmission and application of knowledge in the field of management

PEO-2: Post Graduate students of the program will be equipped with quantitative and qualitative skills to identify, analyze, design and create business opportunities in a global dynamic environment.

PEO-3: Post Graduates of the program will acquire necessary managerial skills to think strategically and to lead, motivate and manage teams thereby enhancing managerial effectiveness.

PEO-4: Post Graduates of the program will be able to implement corporate governance and societal values in the real life situation with professional ethics.

Process of deriving the Program Outcomes (POs)



POs of the MBA Program offered:

PO.1: Apply knowledge of Management theories and practices to solve business problems.

PO.2: Foster Analytical and critical thinking abilities for data-based decision making.

PO.3: Ability to develop Value based Leadership.

PO.4: Ability to understand, analyze and communicate global, economic, legal, and ethical aspects of business.

PO.5: Ability to lead themselves and others in the achievement of organizational goals, contributing effectively to a team environment.

PO.6: Ability to showcase positive cognition during setbacks and crisis.

PO.7: Ability to promote research skills and their applications in the areas of Management.

PO.8: Promote self-confidence to build excellence in career and business of their choice.

PSOs of the MBA Program offered:

In addition to the above outcomes, the MBA program of NMIT shall demonstrate the following capability defined by the two PSO's.

PSO 1- Possess Skill Set to create, transmit and apply the knowledge in the field of Management through Multidisciplinary approach for societal benefits.

PSO 2- Acquire Managerial skills to successfully lead the organization towards the welfare of stakeholders by considering the current industry/business requirements through case studies, internships and capstone projects.

The correlation between the Program Outcomes and Program Educational objectives are mapped in the Table shown below:

Correlation between the POs and the PEOs

Sl.No	Program Educational Objectives	Program Outcomes							
		PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8
1	Post Graduates of the program will contribute to the creation, transmission and application of knowledge in the field of management	X					X	X	

2	Post Graduates of the program will be equipped with quantitative and qualitative skills to identify, analyze, design and create business opportunities in a global dynamic environment.		X		X	X			X
3	Post Graduates of the program will acquire necessary managerial skills to think strategically and to lead, motivate and manage teams thereby enhancing managerial effectiveness			X		X	X		X
4	Post Graduates of the program will be able to implement corporate governance and societal values in the real life situation with professional ethics.			X	X

Curriculum breakdown structure:

The curriculum of MBA is so structured to include all the courses and subjects to satisfy the requirements of a comparable MBA program at the National and International level. The course code, course title, the number of contact hours and number of credit for each course are given in the following table. The courses are grouped in the major components of the curriculum namely professional core courses, electives and specialization courses, Industry exposure and project work, seminar and soft skills for employability.

Break up of Credits for the MBA Degree Curriculum 2020 – 2022:

Sl. No.	**Sem**	**Total No of subjects**	**Core / Elective / Seminar / Lab / Project Work & Internship**	**Credit Distribution**		**Total Credits**	**Total Credits for Semester**
				Credits	**No. of Subjects**		
1	I	7	7 core	3	5	15	**25**
				4	2	8	
			Seminar-I	2		2	
2	II	7	7 Core	3	5	15	**25**
				4	2	8	
			Seminar-II	2		2	
3	III	6	6 Electives	3	6	18	**22**
			1 Organization Study and Internship Project	4		4	
4	IV	6	6 Electives	3	6	18	**28**
			1 Project Work	10		10	
TOTAL CREDITS							**100**

Note: *The student must earn a total of 100 credits for the award of MBA Degree. Hence, the student must choose electives for a total of 36 credits spread over semesters III and IV.*

Scheme of Teaching I Semester MBA 2020 – 2022:

Sl. No.	Subject code	Name of the subject	No. of Credits	Exam Duration Hours	Max Marks CIE	Max Marks SEE
1	20MBA101	Management and Organization Behavior	03	03	50	50
2	20MBA102	Economics for Managers	03	03	50	50
3	20MBA103	Accounting for Managers	04	03	50	50
4	20MBA104	Marketing Management	03	03	50	50
5	20MBA105	Statistics for Managers	04	03	50	50
6	20MBA106	Business Communication	03	03	50	50
7	20MBA107	Entrepreneurship development.	03	03	50	50
8	20MBA108	Seminar-I	02		50	50
		TOTAL	**25**			

Scheme of Teaching II Semester MBA 2020 – 2022:

Sl. No.:	Subject code	Name of the subject	No. of Credits	Exam Duration Hours	Max Marks CIE	Max Marks SEE
1	20MBA201	Business Research Methods	03	03	50	50
2	20MBA202	Financial Management	04	03	50	50

Economics for Managers	X	X		X				

Subject	**ACCOUNTING FOR MANAGERS**

Subject Code	20MBA103		
Credits	4:0:0	CIE Marks	50
Total No. of Lecture Hours	52	SEE Marks	50

Course Objectives:

1. To make students understand the need and types of Accounting
2. To help students understand the mechanisms involved in preparation of final accounts of companies.
3. To expose students to the tools and techniques of analyzing financial reports of companies.
4. To expose students to IFRS and to the emerging issues in Accounting.

Course Outcomes: At the end of the course, the students will be able to:

1. acquire in-depth knowledge of Accounting and prepare books of account such as journal, ledger for a set of business transactions.
2. prepare financial reports using financial statements which help in analyzing the financial position of the business.
3. use Ratio Analysis, Cash flow analysis in interpreting the financial reports of joint stock companies.
4. Study IFRS, its process and relevance to India.
5. study emerging issues in Accounting and apply concepts learnt to demonstrate the understanding of the published reports of business firms and companies and also demonstrate the ability to draw meaningful conclusions about the financial performance of business firms and companies.

Unit I **(14 Hours)**

Introduction to Accounting: Need and Types of Accounting, Users of Accounting, Concepts and Conventions of Accounting, Double entry book keeping - Classification of Accounts: Personal Accounts, Real Accounts and Nominal Accounts – Principles of Debit and Credit for these three categories - Passing of Journal entries – Writing narrations – Posting of Journal entries to ledger, Trial Balance – Purpose and Importance (Problems on Journal entries, ledger and Trial Balance)

Preparation of Subsidiary books: Maintaining Cash books – Sales books – Purchase Books – Sales Returns – Purchase Returns – Cash Transactions – Credit Transactions, three column cash book. (Problems on Three column cash book)

Unit II **(12 Hours)**

Preparation of Final Accounts: Understanding Trading Account – Profit and Loss Account – Balance sheet- Preparation of final accounts – both horizontal & vertical form of financial statements. (Theory and basic problems on Final accounts of companies)

Unit III **(10 Hours)**

Understanding financial statement: Comparative, common size, trend analysis, Ratio analysis, Preparation of financial statements using ratios, Preparation of cash flow statement (only indirect method). (Theory and problems)

Unit IV: **(10 Hours)**

Accounting Standards and IFRS: Meaning of IFRS -relevance of IFRS to India; merits and limitations of IFRS; process of setting IFRS-Practical challenges in implementing IFRS; a brief theoretical study of International financial reporting standards (IFRS) 1 –15 -List of International accounting standards issued by IASB, Elements of financial statements as per IFRS.

Emerging issues in Accounting: Corporate Governance and the clause 49 of the listing agreement, Human Resource Accounting, Forensic Accounting, Window Dressing – Sustainability Reporting. (Only theory)

UNIT V: (6 Hours)

Case Analysis - Compulsory question for 20 Marks. Review and recap of case studies and problems discussed from unit I to unit IV

TEXT BOOKS:

1. A Text book of Accounting for Management, Maheswari S. Maheswari Sharad K. Maheswari, 2/e, Vikas Publishing house ltd.
2. Accounting for managers, Venkataraman R, Krishnamurthy M. G, Dr. S. Harish Babu, Himalaya Publishing House,2/e, ISBN: 978-93-142-970-8

REFERENCE BOOKS:

1. Financial Accounting: A Managerial Perspective, Narayanaswamy R, 5/e, PHI, 2014
2. Introduction to Financial Statement Analysis, Ashish K Bhattacharya, Elsevier India.
3. Accounting for Management, Arora M.N, Himalaya Publishing House.
4. IFRS Guidebook: 2015 Edition-Kindle Edition by Steven M Bragg
5. IFRS concepts and applications by Kamal Garg, Bharath law house private limited.
6. IFRS: A quick reference guide by Robert J Kirk, Elsevier Ltd.

Subject	**MARKETING MANAGEMENT**		
Subject Code	**20MBA104**		
Credits	3:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To develop the modern marketing skills in the students so as to utilize effectively all marketing management tools and concepts in the present corporate world and its application in business organization.
2. To develop the students in understanding that the decision making for marketing managers requires in knowing about the buyers, the internal and external forces operating in the enterprise and in the environment that are relevant for decisions.
3. To familiarize the concepts in developing a Product and Product Life Cycle, Pricing, Promotion and Channel Decisions.
4. To prepare the students to understand and leverage on Integrated Marketing Communication and to develop skill sets for promoting sustainability causes.

Course Outcomes: At the end of the course, the students will be able to:

1. Demonstrate their conceptual understanding for analyzing and synthesizing marketing concepts in the present century of the corporate world.
2. Apply foster critical strategic thinking in marketing environment and to apply the same in the corporate.
3. Analyze marketing functions, Product Development, Pricing, Channel Decisions, Promotions
4. Evaluate, analyze and implement key performance indicators in Marketing Management at the corporate.

Unit I **(10 Hours)**

Introduction to Marketing Management: Definition of Marketing;
Understanding the market place & customer needs – Customer needs, wants & demands; Market offerings - Products, Services & Experiences; Customer value & Satisfaction; Exchanges & Relationship; Markets.

.

Analyzing Marketing Environment and Competition – Company's Micro-environment: Company's Macro Environment:
Consumer Market & Consumer Buyer Behavior:– Characteristics Affecting Consumer Behavior –Cultural Factors, Social Factors, Personal Factors, Psychological Factors

.

Unit II **(10 Hours)**

Market Segmentation, Targeting, Differentiation & Positioning:
Market segmentation –Concept of Market Segmentation, Benefits, Requisites of Effective Segmentation, Bases for Segmenting Consumer Markets; Requirements for Effective Segmentation
Market Targeting – Evaluating Market Segments; Selecting Target Market Segments
Differentiation & Positioning for competitive Advantage –Meaning, Positioning Maps, Choosing a Differentiation & Positioning Strategy
Product Management: Introduction to Product –Concept, Products Experience; Levels of products, Product classifications
Branding – Concept of Branding, Types, Brand Equity,.
Product Classification – Individual Product Decisions, Product Line Decisions,
New Product Development Strategy – New Product Development Strategies and Product Extension Strategies; Product Life Cycle Strategies
Packaging – Packing as a Marketing tool, Role of Labeling in packing.

Unit III **(08 Hours)**

Pricing; Understanding &, Pricing Strategies: Introduction to Pricing –Factors to consider while setting prices;; Other Internal & External Considerations Affecting Price Decisions

New product pricing Strategies – Market Skimming-Pricing, Market Penetration-Pricing

Place: (Marketing Channels) Nature & Importance of Marketing Channels – Meaning, Purpose, Factors Affecting Cannel Choice, Channel Design, Channel Management Decision, Channel Conflict and Management

Number of Channel Levels – Wholesaling and Retailing

Unit IV **(08 Hours)**

Integrated Marketing Communication and Marketing Planning: IMC – Meaning and importance of marketing communication

Advertising – Objectives, Ad Budget, AIDA Model, Advertising Copy, Deciding Media, Evaluating Advertising Effectiveness

Promotion Decisions – Kinds of Promotion, Tools and Techniques of Sales Promotion, Push and Pull Strategies

Sales and Personal Selling – Concept, Features, Functions and steps involved in Personal Selling

Publicity – Meaning, Objectives, Types,

Direct Marketing – Meaning, Features, Functions, Basic Concepts of E-Commerce, E- Business

Marketing Planning – Meaning, Concepts, and Steps involved in Marketing Planning

Marketing Audit – Meaning, Features, Various components of Marketing Audit

Green Marketing – Meaning and Features

Digital Marketing – Meaning and Features

Unit V **(03 Hours)**

Case Analysis - Compulsory question for 20 marks, Review and recap of case studies discussed from unit I to IV.

TEXT BOOKS:

1. *M*arketing Management: A South Asian Perspective – Kotler, Keller, Koshy & Jha, Pearson Education, 14/e, 2014
2. Marketing Management – Text and Cases – Tapan Panda 2/e Excel Books
3. Marketing Management: Indian Cases, Gupta Prachi and Ashita Aggarwal, 1/e

REFERENCE BOOKS:

1. Case studies in Markets - The Indian context, R Srinivasan, Prentice Hall of India Publications, Edition 2014.
2. Marketing Management – R S N Pillai and Bagavathi, S Chand, 1/e, 2017
3. Marketing Management – Ramaswamy V S & Namakumar S, McGraw Hill, 5/e, 2013.
4. Marketing Management – Rajan Saxena, Cengage Learning Publications, 4/e, 2010.

Subject	**STATISTICS FOR MANAGERS**		
Subject Code	**20MBA105**		
Credits	4:0:0	**CIE Marks**	50
Total No. of Lecture Hours	52	**SEE Marks**	50

Course Objectives:

1. To make the students learn about the applications of statistical tools and techniques in decision making.
2. To emphasize the need for statistics and decision models in solving business problems.
3. To enhance the knowledge on descriptive and inferential statistics.
4. To develop statistical literacy skills in students in order to comprehend and practice statistical ideas at many different levels.

Course Outcomes: At the end of the course, the students will be able to:

1. Facilitate objective solutions in business decision making under subjective conditions.
2. Demonstrate different statistical techniques in business/real-life situations.
3. Understand the importance of probability in decision making.
4. Understand and apply inferential statistical methods of estimation and testing of hypothesis

Unit I **(15 Hours)**

Introduction to Statistics: Meaning and Definition, functions, scope and limitations, Collection and presentation of data, frequency distribution, measures of central tendency - Mean, Median, Mode, Geometric mean, Harmonic mean, **Measures of dispersion:** Range – Quartile Deviation – Mean Deviation - Standard Deviation – Variance-Coefficient of Variance - Comparison of various measures of Dispersion

Unit II **(12 Hours)**

Correlation and regression: Scatter Diagram, Karl Pearson's coefficient of Correlation (One way table only), Rank Correlation, Concurrent Deviation - Regression: Method of Least Squares. Linear and Non-linear Regression equations.

Unit III **(10 Hours)**

Time Series Analysis: Introduction, Objectives of time series, identification of trend- variations in Time series: secular Variation, Cyclical variation, Seasonal variation, and Irregular Variation – Methods of estimating trends. Index Numbers: Definition; uses; types; Simple Aggregate Method and Weighted Aggregate Method – Laspeyre's, Paasche's, Fisher's and CPI. (Theory and problems)

Unit IV **(12 Hours)**

Formulation of Hypothesis: Testing of hypothesis and inferences: Procedure of testing hypothesis, Type I and Type II Errors.

Parametric tests: Z-Test, t-test, F-test, ANOVA (One way Only) Chi-Square test (Problems).

Unit V **(03 Hours)**

Case Analysis - Compulsory question for 20 marks, Review and recap of case studies discussed from unit I to IV.

TEXT BOOKS:

1. Fundamentals of Statistics, S. C. Gupta, Himalaya Publishing House, 7/e, 2012..
2. Business Research Methods–Donald R. Cooper & Pamela S Schindler, 9/e, TMH, 2007.

Subject	**BUSINESS COMMUNICATION**		
Subject Code	**20MBA106**		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To provide a fundamental understanding of communication, process, its functions and practices.
2. To enable the students to enhance their communication skills and sensitize their potential to become successful managers
3. To introduce them to some of the practices in managerial communication that are in vogue.
4. To help students of the course to acquire some of the necessary skills to handle day-to-day managerial responsibilities, such as controlling one-to-one communication, enriching group activities and processes, giving effective presentations, writing letters, memos, minutes, reports, advertising etc.
5. To build their confidence and to instill competitiveness by projecting a positive image of themselves and of their future.

Course Outcomes: At the end of the course, the students will be able to:

1. Demonstrate their fundamental skills, understanding and application of principles and functions of business communication.
2. Demonstrate an ability to transform their communication abilities by honing their oral, written and non-verbal communication skills imperative for modern organization.

3. Demonstrate an ability to hone interpersonal skills to lead and facilitate team work and to achieve organizational goals.
4. Demonstrate economic, political, legal, ethical, and socially aware strategies in their personal and professional communication styles with both local and global audiences.
5. Employ critical-thinking skills in selecting communication strategies that are appropriate considering the diversity of the audience.

Unit I **(8 Hours)**

Principles of Communication – Definition, Purpose of communication, Process of communication, Elements of communication, Components of communication, Communication structure in organization, Seven Cs of communication, Conditions for successful communication, Role of a manager in effective communication, Types of communication, Communication in conflict resolution, Communication in current global scenario.

Unit II **(9 Hours)**

Verbal Communication –Meaning, Principles of successful oral communication, Conversation control-Reflection and Empathy: Two sides of effective oral communication, communicating in a diverse environment, Barriers of Communication, Ethnic issues and gender issues in communication, listening as a communication skill, Process of Listening

Non Verbal Communication: Types of Non-verbal communication, communicating with people with disabilities.

Written Communication –Purpose of Writing, Principles of Effective writing, 3*3 Writing process, Writing Business Letters– Formats, Styles, Types – Request, Enquiry, Placing Order, Instruction, Action, Complaint, Adjustment, Sales, Reference, Good News & Bad News, Acknowledgement.

Unit III **(8 Hours)**

Internal and External Business Communication– Circulars, Memos, Agenda and Minutes, Resume/CV, Electronic Mail.

Report Writing – Purpose, Types of Reports, Objectives of Reports,-Organizing and Preparing Reports.

Presentation Skills: Meaning, Elements of Presentation, Designing and Delivering Business Presentations.

Unit IV **(10 Hours)**

Public Speaking: Meaning, Skills for effective speaking.
Interview: Types, Conducting oneself during Interview, Group discussion.
Business Networking: Meaning, Importance.
Business Etiquettes: Basic Business Etiquettes, Meeting Etiquettes, Dining Etiquettes, Social Media Etiquettes.
Communication in a virtual Team: Team, Virtual teams, Global teams, Communication challenge in a Virtual team, Toolkit for effective communication in a virtual team.
Cultural sensitivity: Meaning, Meetings and social visits, Group behavior, addressing others.
Intercultural communication Skills: Importance, Examples of cultural diversity: Japan, France, US, Guidelines for Intercultural Communication.

Unit V **(4 Hours)**

Case Analysis - Compulsory question for 20 marks. Review and recap of case studies discussed from unit I to IV.

TEXT BOOKS:

Subject	ENTREPRENEURSHIP DEVELOPMENT

Subject Code	20MBA107		
Credits	3:0:0:0	CIE Marks	50
Total No. of Lecture Hours	39	SEE Marks	50

Course Objectives:

1. To trigger an entrepreneurial culture and inculcate entrepreneurial values in society at large and influence the mind-set of people towards entrepreneurship.
2. To demystify the start up process by motivating educated youth, scientists, and technologists to consider entrepreneurship as a lucrative, preferred and viable career and build innovative business models.
3. To ensure adequate availability and flow of finance and flow of information to potential entrepreneurs, eliminate entry and exit barriers and create a business friendly environment.
4. To foster social enterprises to address the needs of the population at the 'bottom of the pyramid'.

Course Outcomes: At the end of the course, the students will be able to:

1. Demonstrate their conceptual understanding of basic aspects of entrepreneurial values in society at large and analyze the mind-set of people towards entrepreneurship so as to evaluate business opportunity from the perspective of an entrepreneur.
2. Demonstrate their conceptual understanding for executing a business model after applying their critical thinking skills necessary to make sound decisions in business and personal arenas.
3. Demonstrate their conceptual skills for analyzing to identify the most recognized sources of potential funding and financing for business start-ups from Government agencies.
4. Demonstrate their Family Business conceptual skills for analyzing to identify the source of Succession plan in global business firms.

Unit I **(8 Hours)**

Entrepreneurship: Introduction, Entrepreneurship, Entrepreneur, Types of Entrepreneur, Stages in Entrepreneurial Process, Role of Entrepreneurs in Economic development, Intrapreneur, Difference between Entrepreneur and Intrapreneur, Barriers in Entrepreneurship, Functions of an Entrepreneur.

Unit II **(7 Hours)**

Creativity and Innovation: Meaning, Techniques for fostering Creativity, Source of New Idea, Seven Principles of Small Innovations, Ideas into opportunities.

Creative problem solving: Heuristics, Brainstorming, Synectics, Value analysis.

Unit III **(10 Hours)**

Business Planning Process: Introduction, Business plan process, Types of Plan, Final project report with feasibility study, preparing a Model Report.

Institutions supporting Entrepreneurs: Role of SMEs in Economic Development, Government policy towards SME, KIADB, KSSIDC, NSIC, NABARD, NSIC, KSFC, DIC, Single window.

Unit IV **(10 Hours)**

Family Business: Importance, Types of Family business, Succession, Advantages and Pitfalls, Strategies for improving the capability of family business, Improving family business performance.

International Entrepreneurship Opportunities: FDI, Importance of International Business to the Firm, Barriers to International trade.

Informal risk capital and venture capital: Informal risk capital market, Venture capital, nature and overview, venture capital process, locating venture capitalists, approaching venture capitalists.

Unit V **(4 Hours)**

Case Study -Compulsory question for 20 marks. Review and recap of case studies discussed from Unit I to Unit IV.

TEXT BOOKS ENTREPRENEURSHIP:

1. Entrepreneurship Development, Hisrich, Manimala, Peters, Shepherd, McGraw Hill, 9/e – 2014.
2. Getting Beyond Better: How Social Entrepreneurship Works – Roger.L.Martin, Sally Osberg, Ariana Huffington, 2015

Subject	**SEMINAR- I**		
Subject Code	20MBA108		
Credits	2	**CIE Marks**	50
		SEE Marks	50

Course Objectives:

1. To enable the students in pooling knowledge and enhancing their oral communication skills, presentation skills, and leadership skills.
2. To make them confident to access to skills needed to accomplish goals more effectively and efficiently
3. To make them understand extensively with the methodology of their chosen topic and also to allow them to interact with examples of the practical problems that always occur during research work.
4. To make them aware about the creative approaches in designing and delivering the contents.
5. To help them in managing the time in their topic presentation.

Course Outcomes: At the end of the course, the students will be able to:

1. locate, gather, organize, summarize and present a body of work and gain practice in the art of presentation skills.
2. demonstrate their conceptual understanding of the subject knowledge and their presentation skills and leadership skills.
3. think and create using multiple thinking strategies to examine real business issues, explore creative avenues of expression, solve problems, and make consequential delivery.
4. Critique global and ethical aspects of business
5. learn time management skills in their seminar presentation and submitting the seminar report

Seminar Guidelines:

The topics for seminar will be on Business Ethics and Indian Ethos.

1. A Case study on Business Ethics and Indian Ethos will be valued for 20 marks.

2. A panel consisting of faculty members drawn from the faculty list along with the guide on a specified date.
3. The faculty member in the panel will value the seminar for a maximum of 50 marks jointly. This will be treated as external evaluation.
4. CIE marks will be given by the Guide and will be for 50 marks (20 marks for case study report and 30 marks for seminar presentation)
5. A faculty may not be required to guide more than 12 students for the purpose of seminar.
6. HOD Head of the Department will form a committee of faculty members for evaluating the seminar presentations which will form the external component (SEE)

I) Nature of Seminar Report:

A written seminar report of the presentation also needs to be prepared and submitted. This is an important part of the student's responsibility, and the quality of the seminar report is considered in determining the grade. A seminar report is a self-contained summary of the presentation. It should describe the important new observations, state how they were made, and summarize the conclusions drawn. Preparing the seminar report will also help in preparing the oral presentation by highlighting the important points of the presentation.

II)Choosing a Topic: The choice of topic is up to the students, with guidance from their supervisor.

III)Duration of Seminar- The seminar report shall be of 3 weeks in the I semester.

IV)Guide: Students must ensure that they maintain regular contact with their guide.

V)Submission of the Report- The students are expected to submit a spiral bound hard copy and soft copy of the report.

VI)Guidelines for preparing report:

The entire seminar report (headings, body and references) should be for 5 to 8 pages and a specific format is recommended .

The seminar report should include:

- Presenter's name
- University Seat No
- Heading of the Presentation
- Body of seminar report
- References

An index heading is a short phrase placed at the top which indicates the general subject of the paper.

The body of the seminar report should be a concise statement of the principal contents of the presentation. Students shall include the following concepts in main body of the report:

- The background (Reason)of the Study
- The aim and scope of the presentation
- Presentation subject
- Conclusions of the Presentation
- References- APA referencing styles can be used to write the Bibliography

CIE & SEE Components:

1. The marks given by guide will be considered as CIE component.
2. The marks given by Faculty Committee will be considered as SEE component.

Criteria for allotting marks by the guide:

Seminar Evaluation Form by the Internal Guide

Student Name: ________________________USN_________________

Topic: ____

S.No	Criteria	Level 1 (40-49)	Level 2 (50-69)	Level 3 (70-79)	Level 4 (80-100)
1	Knowledge and content (5 Marks)	limited knowledge of topic with little accuracy	some knowledge of topic with a degree of accuracy	standard knowledge of topic, usually accurate info	detailed knowledge of topic with consistently accurate info
2	Background of the seminar (5 marks)	Material not clearly related to topic	Material sufficient for clear understanding but not clearly presented	Material sufficient for clear understanding and effectively presented	Material sufficient for clear understanding and exceptionally presented
3	Relevance of the presentation (5 marks)	No Relevance	Moderate Relevance	Relevance	High Relevance
4	Logic and coherence of report (5 marks)	No logic and coherence	Some logic and coherence	Logical and coherent	Highly Logical and highly coherent
5	Clarity of the report (5 Marks)	Not clearly prepared	Moderately clear	Well prepared	Exceptionally prepared with all information
6	Timely submission (5 marks)	Submitted with a delay of 10 days	Submitted with a delay of 7 days	Submitted with a delay of 3 days	On time submission

Criteria for allotting marks by the faculty committee:

Presentation Evaluation Form

Student Name: ________________________USN_________________
Topic: ____

S.No	Criteria	Level 1 (40-49)	Level 2 (50-69)	Level 3 (70-79)	Level 4 (80-100)	Marks 5 each
1	Introduction	Topic is mentioned	Topic and some of the subtopics are stated	Topic and all subtopics are stated	Topic and all subtopics are stated in proper order	
2	Knowledge of Topic	Limited knowledge of topic with little accuracy	Some knowledge of topic with a degree of accuracy	Standard knowledge of topic, usually accurate info	Detailed knowledge of topic with consistently accurate info	
3	Connection to Chapter Topic & Theme	Limited connection made between evidence, subtopics, topic & theme	Some connection made between evidence, subtopics, topic & theme	Usually connection made between evidence, subtopics, topic & theme	Consistent connection made between evidence, subtopics, topic & theme	
4	Organization	Unclear agenda with illogical sequencing & unhelpful handout	Scant agenda & handout with somewhat useful handout	Clear, logical agenda is usually shown / followed with useful handout	Clear, logical, thorough agenda is shown & followed combined w/ very useful handout	
5	Conclusion	Little summary of subtopics	Topic and some subtopics summarized	Topic and all subtopics summarized	Topic all subtopics summarized in proper order	
6	Creativity / Enthusiasm	Little color or variety used & no smiles	Somewhat bored, with some variety & colour	Usually smiling, appropriately dressed, variety	Unique, colorful, stimulating presentation with extra effort	
7	Eye Contact	Little contact, dependent on notes	Some eye contact & dependence on notes	usually makes eye contact	consistent eye contact with little dependence on notes	
8	Voice Audibility	Monotone and too quiet	Some inflection and at times clear	Usually clear & inflects voice	Proper inflection, clarity and volume	
9	Use of Time / Pace	Seminar is too short/long and moves too quickly/slow	Sometimes seminar moves too quickly / slowly and at times is off topic	Starts / finishes on time covering relevant info	Starts / finishes on time covering relevant info in an interesting manner	
10	Discussion & Questions and Answers	Little discussion generated from closed-ended, repetitive questions	Some discussion generated from somewhat relevant questions that require superficial thought	Three relevant questions generate discussion that requires thought	Three relevant, open-ended questions generate much discussion, insight, analysis & evaluation	
	Total					50

II SEMESTER

Subject	**BUSINESS RESEARCH METHODS**		
Subject Code	**20MBA201**		
Credits	3:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To develop a research orientation among students and thereby making decision process scientific.
2. To expose the students to the principles of scientific methodology in business enquiry
3. To develop analytical skills of business research, also to develop the skills for scientific communications.
4. To provide a knowledge base on steps in a research process needed to conceptualize, define and execute a business research project.
5. To develop and make understand students with various data analysis techniques.

Course Outcomes: At the end of the course, the students will be able to:

1. Become aware of importance of research in business applications and acquaint with the scientific methodology in business research domain.
2. Understand different phases of a research process in a research project.
3. Develop appropriate data collection instruments and become analytically skillful
4. Enable students with data compilation, data preparation, data summary and appropriate analysis using descriptive and inferential statistical methods (univariate/ bivariate/multivariate).

UNIT I

(8 Hours)

Introduction to Management Research – Definition, Nature and role of Management Research, Types of Research based on Purpose, Process, Outcome, Nature, Action and Logic, Features of a good Research Study, Scientific approach of research, ethical issues in business research.-Steps involved in preparing business research process
Business Research Design: Exploratory, Descriptive, & Causal research

UNIT II

(8 Hours)

Research Problem, Research Hypothesis

Identification and Selection of the Problem, Definition and Statement of the Problem, Criteria and Sources for Identifying the Problem, Process of Defining the Problem, Characteristics of Good Hypothesis, Types of hypothesis, Hypothesis Formulation.
Sampling: Concept of Sample and Target Population, Sample frame, Sample unit and Sample size, Characteristics of a Good Sample, Steps in Sampling process, Types of Sampling - Probability and non probability Sampling Techniques. Sampling v/s Non probability sampling, Sampling Error.

UNIT III **(9 Hours)**

Scaling Techniques & Hypothesis Testing: Nominal Scale, Ordinal Scale, Interval Scale, Rating Scale, attitude measurement – Likert's Scale, Semantic Differential Scale, – Simple Attitude Scales, Category Scales, Method of Summated Ratings: The Likert Scale, Semantic Differential, Numerical Scales, Stapel Scale, Constant-Sum Scale, Graphic Rating Scales, Thurstone Interval Scale
Data Preparation- Field Validation, Data editing, Coding, Content Analysis, Classification and Tabulation of Data
Data collection: Primary and Secondary data – Sources –, Advantages & Disadvantages
Data collection Methods – **Observations-** Classification of Observation Methods, Advantages and Limitations of Observation Techniques , **Survey**- Classification of Survey methods, Evaluation Criteria for Survey Methods, and **Questionnaire**-Criteria for Questionnaire Designing; Types of Questionnaire, components of Questionnaire, Questionnaire Design Procedure, Merits & Demerits, **Interview**- Meaning & Types, **Schedule**- Meaning, & Types, **Qualitative Data Collection Techniques**- Meaning Types- In-depth interview, Focus groups, Ethnographic research, Content analysis, Case study research, Projective Analysis

UNIT IV

(8 Hours)

Descriptive & Inferential statistics (Theory only) :: Descriptive Statistics, Univariate Bivariate Analysis (Chi-square only), Multivariate Analysis - Factor Analysis, Cluster Analysis, ANOVA – One-way & Two-way classification (Conditions for applicability, Implementation and statistical Inferences).
Hypothesis Testing (Theory Only)- Parametric & Non-Parametric Tests; Null & Alternative Hypothesis, Error in Testing of Hypothesis, Critical Region, Degrees of Freedom, One Tailed & Two Tailed Tests Parametric and Nonparametric test: T-test, Z-test, F-test classification (Conditions for applicability, Implementation and statistical Inferences).
Research report: Oral report, Written reports, Advantages/Disadvantages of oral and written reports, Components of written research report.

UNIT V **(6 Hours)**
Case Study Compulsory question for 20 marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS:

1. Business Research Methods – William G Zikmund, Barry J.Babin, Jon C.Carr, Atanu Adhikari, Mitch Griffin- Cengage Learning, 8/e,2016

2. Business Research Methods–Donald R. Cooper & Pamela S Schindler,TMH,/9e/2007
3. Business Research Methods- S.N.Murthy/U.Bhojanna.0- Excel Books/2e/2007.

REFRENCE BOOKS:

1. Research Methodology- C R Kothari- Vishwa Prakashan, 2002
2. Research Methods – William M C Trochim-Biztantra,2/e, 2007
3. Marketing Research – A Parasuraman, Dhruv Grewal – Biztantra, 2004
4. Business Research Projects – Jimme Keizer, Piet Kempen, 2006
5. Methodology of Research in Social Sciences – O R Krishnaswami, M Ranganatham, HPH, 2007
6. Marketing Research – Naresh K Malhotra – Pearson Education /PHI/5e/2007

Subject	**FINANCIAL MANAGEMENT**		
Subject Code	**20MBA202**		
Credits	4:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	52	**SEE Marks**	50

Course Objectives:

1. To make students understand the nature of financial management, time value of money and cost of capital of the firm
2. To make students understand the nuances of
3. decision, project evaluation techniques and conceptual knowledge about capital structure
4. To apprise the students about the various sources of funds and leverage
5. To expose the students to working capital and dividend decisions
6. To appraise the students on the leading practical application oriented case studies – relevant and updated and doing case study analysis & arriving at conclusions facilitating business decisions

Course Outcomes: At the end of the course, the students will be able to :

1. Demonstrate ability to understand the Interface of Financial Management with other functional areas and conceptually understand the various steps involved in raising, allocation and sources of funds in the market.
2. Evaluate capital budgeting and capital structure decisions of the firm.
3. Determine the working capital requirements and the implications of dividend decisions.
4. Determine cost of capital of the firm and also understand about leverages.
5. Acquire knowledge on emerging issues in financial management with global perspective.

Unit I: **(10 Hours)**

Financial management – Introduction to financial management, objectives of financial management – profit maximization and wealth maximization. Changing role of finance managers. Interface of Financial Management with other functional areas, Organisation functions of finance Managers, and Functions of Financial Management **Indian financial system** – Primary market, Secondary market – stocks & commodities market, Difference between primary market and secondary market, Money market, Forex markets. (Theory Only). Sources of Financing: Shares, Debentures, Term loans, Lease financing, Hybrid financing, Venture Capital, Angel investing and private equity, Warrants and convertibles (Theory Only)

Unit II: **(12 Hours)**

Time value of money –Future value of single cash flow & annuity, present value of single cash flow, annuity &perpetuity. Simple interest & Compound interest, Capital recovery & loan amortization.**Cost of Capital**– basic concepts. Cost of debenture capital, cost of preferential capital, cost of term loans, cost of equity capital (Dividend discounting and CAPM model). Cost of retained earnings. Determination of Weighted average cost of capital (WACC) and Marginal cost of capital. (Problems & Theory)

Unit III: **(12 Hours)**

Investment decisions –Factors affecting Investment Decisions, Investment Decision Process, Investment evaluation techniques – Net present value, Internal rate of return, Modified internal rate of return, Profitability index, Payback period, discounted payback period, accounting rate of return. Estimation of cash flow for new project, replacement projects.

Capital structure and dividend decisions – Planning the capital structure. (No capital structure theories to be covered) Leverages – Determination of operating leverage, financial leverage and total leverage. Dividend policy – Factors affecting the dividend policy - dividend policies- stable dividend, stable payout. (No dividend theories to be covered). (Problems & Theory)

Unit IV: **(12 Hours)**

Working capital management – factors influencing working capital requirements. Types of Working Capital, Current asset policy and current asset finance policy. Determination of operating cycle and cash cycle. Estimation of working capital requirements of a firm, Cash, Inventory & Receivables Management (Problems & Theory)Emerging Issues in Financial management: Derivatives, Mergers and Acquisitions, Behavioral Finance, Financial Modeling, Financial engineering, risk management. (Theory Only).

Unit V: **(6 Hours)**

Case Analysis: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to Unit

IV

TEXT BOOKS:

1. Financial Management - Prasanna Chandra, 8/e, TMH, 2011.

Subject	**INFORMATION TECHNOLOGY FOR MANAGERS**		
Subject Code	**20MBA203**		
Credits	3:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To provide an introduction to the field of management of information systems (MIS).
2. To demonstrate the role of information systems in influencing decision making processes.
3. To familiarize students with the technical and managerial aspects related to the utilization of information technology in business organizations.
4. To identify the principal management challenges posed by the ethical and social impact of information systems and management solutions.

Course Outcomes: **At the end of the course, the students will be able to:**

1. develop an understanding of the role of computer applications for business purposes for sound decision making.
2. use MIS as a tool to implement business strategies and gain competitive advantage, not merely to support business operations.
3. understand the developments of electronic commerce and the role of Internet
4. become familiar with ethical and social issues related to information systems.

Unit I **(10 Hours)**

Foundation Concepts: Foundation of information system (IS) in business: Meaning of Data, Information and Knowledge. Information System- Activities of Information System - Benefits of Information System to Business ,Information as a Resource, Information in organizational functions - Information need at different level of Management , System concept, Types of Systems-Component of an IS resources-fundamental roles of IS application in business.

Kind of Information Systems: Operation Support System and Management Support System- Transaction Processing System(TPS)-Management Information System(MIS)-Decision Support System(DSS) , EIS.

Unit II **(8 Hours)**

Computer fundamentals, telecommunication and networks: Computer System- Introduction – Characteristics - Block Diagrams -Generation of Computers- - Types of Computers Systems- Latest Input and Output Devices - Software-System s/w and Application s/w , Communication Media, Modems & Channels – LAN, MAN & WAN-Network Topologies, Internet, Intranet and Extranet.

Unit III (**8 Hours)**

Systems analysis and development and models: Control System Model-Need for System analysis Structured SAD and tools like DFD, Context Diagram Decision Table and Structured Diagram. System Development Models: Water Flow, Prototype, Spiral, RAD –Roles and responsibilities of System Analyst, Database Administrator and Database Designer.

Unit IV **(8 Hours)**

Enterprise system: Introduction to Cross-Functional Business Process **-**Enterprise Resources Planning (ERP): Meaning, Features, selection criteria, challenges in Implementation, merits and demerits - Supply Chain Management (SCM): Features ,– Customer Relationship Management (CRM): Phases.

Security and ethical challenges: Security and ethical challenges: Ethical responsibilities of Business Professionals-, Computer crime – Hacking, cyber theft-Unauthorized Use at Work.

Unit V: **(5 Hours)**

Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to Unit IV.

TEXT BOOKS:

1. Management Information Systems by Obrien, Marakas and Ramesh Behl, TMGH
2. Management Information Systems by Jawadekar TMGH, 4 th Edition

REFERENCE BOOKS:

1. Management Information Systems By Bagchi Nirmalya Vikas Publishing House Pvt Ltd
2. Cases in Management Information Systems by Mohapatra, PHI Learning, 978-81-203-3614-8

Subject	**OPERATIONS RESEARCH**		
Subject Code	**20MBA204**		
Credits	4:0:0	**CIE Marks**	50
Total No. of Lecture Hours	52	**SEE Marks**	50

Course Objectives:

1. To equip the students with the various Operations Research Models
2. To facilitate the students to find out optimal solution for transportation and assignment problems
3. To empower with the knowledge of network analysis
4. To demonstrate the game theory and simulation technique

Course Outcomes: At the end of the course, the students will be able to,

1. understand the nature, models, benefits and limitations of Operations Research
2. Demonstrate the transportation and assignment models in business problems
3. Illustrate the use of network techniques for successful project implementation.
4. apply the concept of Game theory and simulation techniques in a business enterprise.

Unit I **(12 Hours)**

Introduction to Operations Research: Introduction to OR; Scope, Techniques, Characteristics and Limitations of Operation Research; Methodology and Models in OR (only theory)
Linear Programming Problem (LPP): Application of LPP in Management, Advantages of LPP. Formulation of LPP, Solution of LPP by Graphical method: Formulation of Dual of a LPP.

Unit II **(14 Hours)**
Transportation Models: General Structure; Various methods for finding initial solution: Maximization and Minimization problems North West Corner Method, Least Cost Method, Vogel's Approximation Method; Finding Optimal Solution: Modified Distribution method; Variations: Unbalanced Transportation Problem, Theoretical concept of Degeneracy only; Assignment problems; General Structure; Finding Optimal Solution; Maximization problem, Restrictions on Assignments.

Unit III **(14 Hours)**
Network Analysis: Terminology; Networking Concepts; Rules for drawing network diagram; CPM Computations: CPM Terminology, Finding critical path - Different Floats; PERT Computations: Computation of earliest and latest allowable times, Probability of meeting the scheduled dates; difference between PERT and CPM.

Unit IV **(12 Hours)**
Theory of Games: Terminology; Two person zero sum game; Solution to games: Saddle point, dominance rule, Value of the game, mixed strategy, Graphical method of solving a game – (2 x n) and (m x 2) games.
Sequence: Introduction-Definition: Terminology and Notations, Principal Assumptions,
Type I: Problems with n Jobs through Two Machines, Processing n jobs, through Three Machines.

Subject	**BUSINESS LAW**		
Subject Code	20MBA205		
Credits	3:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To trigger a Legal culture and inculcate legal and ethical values in society at large and influence the mind-set of people.
2. To demystify the start up process by motivating educated youth, scientists, and technologists to consider business law as a lucrative, preferred and viable career and build innovation.
3. To ensure adequate availability and flow of legal information to potential entrepreneurs, eliminate entry and exit barriers and create a business friendly environment.
4. To foster social legal enterprises to address the needs of the population.

Course Outcomes: At the end of the course, the students will be able to:

1. Demonstrate their conceptual understanding of basic aspects of Legal values in society at large and analyze the mind-set of people towards professional entrepreneurship so as to evaluate business opportunity from the perspective of an ethical entrepreneur.
2. Demonstrate their conceptual understanding for executing a legal business model after applying their critical thinking skills necessary to make sound decisions in business and personal arenas.
3. Demonstrate their legal conceptual skills for analyzing and to identify the most recognized sources of potential legal business start-ups.
4. Demonstrate their conceptual understanding about the relevance of business law to individuals and businesses and the role of law in an economic, political and social context.

Unit I **(12 Hours)**

Introduction to Business Law: Jurisprudence; Rule of the Law, structure of the Indian Legal System (Organs of the Government) – source of law

Fundamentals of Contract Laws – Meaning, agreement, essential elements of a valid contract, Consideration, performance of contract, Discharge of contract, breach of contract – Quasi Contracts.

Unit II **(10 Hours)**

Law of Agency – Meaning, Principal – Agent, creation and termination of agency, Bailment and Pledge – Meaning, rights and duties of Bailor and Bailee, Pledge, Guarantee and Indemnity.

Negotiable Instruments Act – Meaning, Kinds of Negotiable Instruments, Discharge and Dishonour of Negotiable Instrument

Unit III **(8 Hours)**

Sale of Goods Act – Principles of Sale of Goods Sales V/s Agreement to sell, Goods, Condition and warranties, express and implied condition, "Doctrine of Caveat Emptor", Rights and Duties of Unpaid Seller, Transfer of Ownership and Property.

Introduction to Companies Act, Introduction to Partnership Act and Introduction to Shops and Establishment Act.

Unit IV **(5Hours)**

Introduction to Intellectual Property Rights – Introduction to Trade Marks Act, 1999, Introduction to Patents Act, 1970, Introduction to Copyrights Act, 1957, Geographical Indications.

Unit V **(4 Hours)**

Case Study -Compulsory question for 20 marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS BUSINESS LAW:

Subject	**HUMAN RESOURCE MANAGEMENT**		
Subject Code	**20MBA206**		
Credits	3:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To familiarize students with the basic concepts and frameworks of human resource management (HRM), and understand the role that HRM has to play in effective business administration
2. To enhance students' effectiveness for optimizing the human resource potential of their organization in order to achieve business and strategic objectives.
3. To improve students' ability to think about how HRM should be used as a tool to execute strategies.

4. To enable students to demonstrate an ability to discuss how the external and internal elements in the organization relate to the various parts of HRM, such as HR policy, organizational structure, HR systems (recruitment, placement, evaluation, compensation and development) and organizational culture.

Course Outcomes: At the end of the course, the students will be able to:

1. Align HR systems with the strategic business objectives of a firm
2. Evaluate the context of workplace issues, policies, and management decisions.
3. Contribute to the development, implementation, and evaluation of employee recruitment, selection, and training and development of employees.
4. Exhibit the ability to make reasoned, ethical decisions based on professional standards and practices for ethical conduct, legal requirements, and regulatory guidelines in human resource management that are in the best interest of the individual, the organization, the environment, and society as a whole.

Unit I **(8 Hours)**
Introduction to Human Resource Management: Concept of HRM, Nature, Scope, Functions, Objectives, Processes, Importance and Evolution of HRM, Roles and Responsibilities of HR managers. Challenges and HRM

Unit II **(8 Hours)**
Job Analysis and Evaluation: Meaning, process of Job Analysis, methods of collecting job analysis data, Job Description and Job Specification,
Human Resource Planning: Objectives, Importance and process of Human Resource Planning.

Unit III **(10 Hours)**
Recruitment: Definition, Constraints and Challenges, Sources and Methods of Recruitment
Selection: Definition and Process of Selection, Interview and Test in selection
Placement: Meaning, Induction/Orientation, Internal Mobility, Employee Separation, Downsizing.
Training and development: Training process, Training Methods, Management Development, Career and Succession Planning.

Unit IV **(9 Hours)**
Performance Appraisal: Performance Appraisal Process, Methods of Performance Appraisal, problems
Compensation: Wage and Salary Administration, components, Factors Influencing Compensation Levels, job evaluation, Compensation Pay Structure in India,
Industrial Relation: Overview of industrial relation, approaches of industrial relation, factors affecting industrial relations, provisions regarding employee welfare

Unit V **(4 Hours)**
Case Analysis - Compulsory question for 20 marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS:

Subject	**STRATEGIC MANAGEMENT**		
Subject Code	20MBA207		
Credits	3:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To provide insights into the core concepts of strategic management.
2. To expose students to various perspectives and concepts in the field of Strategic Management
3. To evaluate various business strategies in dynamic market environments.
4. To gain insights into various strategic management models.
5. To help students develop skills for applying these concepts to the solution of business problems

Course Outcomes: At the end of the course, the students will be able to:

1. Students should get clear idea about the concept of Strategic Management, its relevance, Characteristics, process

nature and purpose.
2. Student to acquire an understanding of how firms successfully institutionalize a strategy and create an organizational structure for domestic and overseas operations and gain competitive advantage.
3. To give the students an insight on strategy at different levels of an organization to gain competitive advantage.
4. To help students understand the strategic drive in multinational firms and their decisions in different markets.
5. To enable the students to gain knowledge of strategy implementation and the control measures for effective decision-making.

Unit I **(08 Hours)**

Introduction to Strategic Management : Meaning and Nature of Strategic Management , Importance and relevance, Characteristics of Strategic Management, Importance of strategy in the success of organisation, Basic model of strategic management, , The strategy Making Process, Strategic Decision making, Strategic Leadership. Strategic Managers: Corporate level, Business Level and Functional Level, Roles and Responsibilities.

Unit II **(10 Hours)**

Strategy Formulation- Understand strategic management process business definition & Organization values that build mission statement. Describe strategic vision, mission, goals, and long term objectives. Strategy Implementation and control: Process of Implementation, Stages of corporate development, Staffing and Leading,. Organizational design, structures and controls. Importance of integrating strategy implementation and strategy formulation. Organizational structures used to implement different business level strategies. Organizational structures used to implement different corporate level strategy.

Unit III **(08 Hours)**

External Environmental Analysis: Meaning and Importance of External analysis, porters Five force Model, Competitors analysis, Assessing future conditions of Industry and environment, Competitive Environment Analysis ,Competitive intelligence , forecasting, Factors driving the Industry change, Key factors for future competitive success.

Unit IV: **(08 Hours)**

Analysing a company's resources and competitive position – Analysis of a Company's present strategies - SWOT Analysis – Value Chain Analysis - Benchmarking. Generic Competitive Strategic – Low cost provider Strategy - Differentiation Strategy - Best cost provider Strategy – Focused Strategy - Strategic Alliance and Collaborative Partnerships – Mergers and Acquisition Strategic - Outsourcing Strategic - International Business level.

Unit V **(05 Hours)**

Case Analysis - Compulsory question for 20 Marks. Review and recap of Industrial real time case studies related to topics discussed from unit I to IV

TEXT BOOKS:

- Crafting and executing Strategy. A Thompson Jr, Margaret A. and John E Gamble. Mc Graw Hill Publication, New Delhi.
- Essentials of strategic management: J David Hunger, Thomas L Wheelen
- Strategic Management – Dr K Govinda Bhat , N R Govinda sharma, (HPH)

Strategic management	X	X		X	X		X	

Subject	**SEMINAR- II**		
Subject Code	20MBA208		
Credits	2	**CIE Marks**	50
		SEE Marks	50

Course Objectives:

6. To enable the students in pooling knowledge and enhancing their oral communication skills, presentation skills, and leadership skills.
7. To make them confident to access to skills needed to accomplish goals more effectively and efficiently.
8. To make them understand extensively with the methodology of their chosen topic and also to allow them to interact with examples of the practical problems that always occur during research work.
9. To make them aware about the creative approaches in designing and delivering the contents.
10. To help them in managing the time in their topic presentation.

Course Outcomes: At the end of the course, the students will be able to:

6. locate, gather, organize, summarize and present a body of work and gain practice in the art of presentation skills.
7. demonstrate their conceptual understanding of the subject knowledge and their presentation skills and leadership skills.
8. Identify management theories and apply the same in contemporary issues
9. Critique global and ethical aspects of business
10. Utilize research skills in contemporary issues

Seminar Guidelines:

The topics for seminar will be on Leadership and Team Work.

7. A Case study on Leadership and Team Work will be valued for 20 marks.
8. A panel consisting of faculty members drawn from the faculty list along with the guide on a specified date.
9. The faculty member in the panel will value the seminar for a maximum of 50 marks jointly. This will be treated as external evaluation.
10. CIE marks will be given by the Guide and will be for 50 marks (20 marks for case study report and 30 marks for seminar presentation)
11. A faculty may not be required to guide more than 12 students for the purpose of seminar.
12. HOD Head of the Department will form a committee of faculty members for evaluating the seminar presentations which will form the external component (SEE)

I) Nature of Seminar Report:

A written seminar report of the presentation also needs to be prepared and submitted. This is an important part of the student's responsibility, and the quality of the seminar report is considered in determining the grade. A seminar report is a self-contained summary of the presentation. It should describe the important new observations, state how they were made, and summarize the conclusions drawn. Preparing the seminar report will also help in preparing the oral presentation by highlighting the important points of the presentation.

II)Topic Selection: The choice of topic is up to the students, with guidance from their supervisor. The area of seminar shall be related to Leadership and Team work.

III)Duration of Seminar- The seminar report shall be of 3 weeks in the I semester.

IV)Guide: Students must ensure that they maintain regular contact with their guide.

V)Submission of the Report- The students are expected to submit a spiral bound hard copy and soft copy of the report.

VI)Guidelines for preparing report:

The entire seminar report (headings, body and references) should be for 5 to 8 pages and a specific format is recommended .

The seminar report should include:

- Presenter's name
- University Seat No
- Heading of the Presentation
- Body of seminar report
- References

An index heading is a short phrase placed at the top which indicates the general subject of the paper.
The body of the seminar report should be a concise statement of the principal contents of the presentation. Students shall include the following concepts in main body of the report:

- The background (Reason)of the Study
- The aim and scope of the presentation
- Presentation subject
- Conclusions of the Presentation
- References- APA referencing styles can be used to write the Bibliography

CIE & SEE Components:

3. The marks given by guide will be considered as CIE component.

4. The marks given by Faculty Committee will be considered as SEE component.

Criteria for allotting marks by the guide:

Seminar Evaluation Form by the Internal Guide

III SEMESTER

Subject	**ORGANIZATION STUDY**

Subject Code	20MBA307		
Credits	4	**CIE Marks**	50
Duration	8 weeks	**SEE Marks**	100

GUIDELINES FOR ORGANIZATIONAL STUDY FOR MBA III SEMESTER STUDENTS

INTRODUCTION: The Organization Study is intended to facilitate better understanding of the area-wise subjects taught in their Business Management Program. This should also prepare the students with enough understanding about business organization so as to enable them to identify problems to be solved as 'Final Year Project' later in their course.

Course Objectives:

1. To familiarize the students with a business organization to relate theory with practice.
2. To familiarize the students with an organization structure and its functioning
3. To familiarize them with the different departments in the organization and their functions and activities.
4. To enable the students to understand how the key business processes are carried out in an Organization.
5. To study the financial performance of the organization by doing financial analysis
6. To understand the extent of technology adoption including ICT, in the organization for various functions/activities.

Course outcomes: At the end of this study, students should be able to

1. Broad understanding of working of an organization and its specific departments.
2. Identify the organizational processes discussed under Mc-Kinsey Framework
3. Carry out competitive environment analysis through SWOT.
4. Exhibit Identify problem to be solved as part of their Final Year project.
5. Demonstrate understanding of financial health of the organization.

How to Choose an Organization:

Students may do the organization study either by doing an internship or from secondary sources of data. The company should be listed in an Indian stock exchange. They should identify an organization with all functional departments, where they will be able to understand: Operations & Systems, Accounts & Finance, Personnel & HR, marketing Functions and their interactions with each other. The organization chosen should have all the above functional areas to study.

How to conduct the Study:

a) Data pertaining to Organization study can be collected by visiting the organization or by collecting secondary data.

b) Prior to gathering, information, a student should ideally make the organization chart for the organization and try to identify the key functions of each department and understand how it is carried out (the process).

c) Make records of the findings.

Guidelines for preparing report:

The procedure during the organization study and writing of report thereafter will have to be based on the

The information should be arranged sequentially as follows.–

- Cover page
- Certificate from the Organization (scanned copy)
- Certificate from the guide, HOD and Head of the Institution (scanned copy) indicating bonafide performance of Organisation study by the student.
- Declaration by the student (scanned copy)
- Acknowledgement
- Table of contents
- List of tables and graphs
- Executive Summary
- Main body of Report
- References –APA referencing styles.

The report should be well documented and supported by given detailed information-

PART-A

1. **INDUSTRY PROFILE:** Concise overview of the industry, nature, growth potential, influencing economic factors, competitors' analysis, market share, governmental regulations.

2. **COMPANY PROFILE**
   a. Background and inception of the company.
   b. Promoters information
   c. Nature of the business carried.
   d. Vision, Mission and Quality Policy
   e. Achievements/Awards if any
   f. Product/ Services Profile
   g. Area of Operation — Global / National / Regional
   h. Future growth and prospectus.

PART-B

McKinsey's 7S frame work with special reference organization under study

Structure:
Overall organizational structural details — Board of Directors/ Functional heads etc.
Sub structure detailing with each functional discipline. Detailed study of various departments & their function.

Skill:
Classification of skill or study of skill matrix: Detail the steps taken to impact necessary skills – on the job/off the job training.

Style:
Top down / Bottom up

Authoritarian / participative

Any one decision making parameter should be studied pertaining to day-to-day operation, to conclude the style of functioning.

Strategy:

Any one strategy adopted by the company should be considered to explain, "How it is implemented" e.g. — pricing/waste elimination etc.

System:

System followed in any one department in the organization should be detailed.

E.g: Inventory control system / order execution system / Merit rating system etc.

Staff:

Classification/Duties and responsibility of various groups of staff. E.g.: Technical / supervisory / Clerical.

Shared value:

Study of implementing shared value in the company by an illustration, where the company has implemented its stated objective.

PART - C

Internal and External Environment Analysis i.e. SWOC Analysis of the company

PART - D

Financial Statement with Ratio Analysis.

PART - E

Learning experience gained by the candidate during the organizational study.

The student shall seek the guidance of the internal guide on a continuous basis.

Format of the report:

On completion of the project work, student shall prepare a report with the following format:

i. The report shall be prepared using word processor.

ii. The letters should be Times New Roman font ,12" size with 1.15" space between lines.

iii. The major headings should be 16" size and sub headings 14" size. All subsection should be numbered like 1,1, 1,2,1.3 etc…..(for subsections of chapter 1).

iv. All the report shall be printed in the A4 size 1" margin on all side.

v. The report shall be hard-bound facing sheet (only white colour), indicating the title of the report., name and registration number of the student, name of the guide, name of the college and month & year of admission (Spiral binding not permitted)

vi. An undertaking by the student to the effect, that the work is independently carried out by him/her

vii. Acknowledgement.

The total number of pages of the organizational study report shall not exceed 50 pages.

PLAGIARISM: The report is checked for plagiarism using plagiarism software identified by the college from time to time. Plagiarism index should be < 25%.

Guideline for allocation of IA marks and valuation of the report.

SECTION	MARKS ALLOTTED
Overall presentation of the report, regarding understanding Various aspects of the Company	**05**
Industry Profile	**05**
Company Profile	**05**

HUMAN RESOURCE SPECIALIZATION

Subject	**EMPLOYEE STAFFING MANAGEMENT**		
Subject Code	**20MBAHR301**		
Credits	3:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To facilitate basic understanding of the theory, practice, principles, concepts of employee selection, recruitment, career management and succession management.
2. To develop an understanding of recruitment, staffing and career management processes and how these elements interrelate.
3. To enhance students' effectiveness for optimizing the human resource potential of their organization in order to achieve business and strategic objectives.
4. To enable students to develop an integrated recruitment and selection strategy in both traditional and new economy organizational environments.
5. To enable students to effectively develop a complete, professional hiring plan.

Course Outcomes: **At the end of the course, the student will be able to:**

1. Identify Knowledge, Skills, Abilities & Other (KSA&O) human qualities required to perform a job successfully, and develop sound job descriptions, job specifications.
2. Synthesize knowledge regarding the effectiveness of recruitment of employees
3. Identify legal and ethical concerns in selection of candidates and apply their knowledge to develop a complete, professional hiring plan

4. Acquire knowledge about induction, orientation, career and succession planning of employees in an organization.

Unit- I

(8 Hours)

Introduction to Staffing Management: Concepts of Staffing, Factors affecting Staffing, Staffing Process, Staffing models. Strategic staffing, how it is different from traditional staffing, components of strategic staffing.
Human resource planning; Concepts, process
Strategic job analysis and compentency modeling –Concepts of job analysis and strategy behind it, job description and personal specification, Process and Methods, competency modeling
Job Design – Introduction, Definition, Modern Techniques, Factors affecting Job Design, Contemporary Issues in Job Designing.

Unit-II

(9 Hours)

Recruitment -Meaning, Definition, Importance, Factors affecting Recruitment**, Source or Type of Recruitment** – a) Direct/Indirect, b) Internal/ External. **Internal** – Notification, Promotion – Types, Transfer – Types, Reference, **External** – Campus Recruitment, Advertisement, Job Boards – Website/Portals, Internship, Placement Consultancies. Traditional: In-House, Internal Recruitment, On Campus, Employment and Traditional Agency. Modern: Recruitment Books, Niche Recruitments, Internet Recruitment, Service Recruitment, Website and Job, Search Engine, Social Recruiting and Candidate Paid Recruiters, head hunting.
Techniques of Recruitment – Traditional Vs Modern – Recruitment. Recruitment outsourcing-Introduction, process.

Unit-III **(10 Hours)**

Selection – Concept of Selection, Criteria for Selection, Process, Application (Blank Format).Screening – Pre and Post Criteria for Selection, Steps of Selection Interviewing– Types and Guidelines for Interviewer& Interviewee, Types of Selection Tests, Effective Interviewing Techniques. Selection Hurdles and Ways to Overcome Them.
Current trends in Recruitment and Selection Strategies – with respect to Service, Finance, I.T., Law and Media Industry
Appointment and joining: Appointment - Meaning and significance, offer of appointment and acceptance, appointment order, contents of appointment order and its acceptance. Bond for minimum service, bond for good conduct.
Joining- Fixing a joining date. Joining day formalities, verification and collection of certificate copies, collecting photos, PAN number and passport copy. Providing access to enter and exit. Providing place to work, providing furniture, stationary, equipment, entering name in the muster roll, opening the personal file etc.

Unit-IV **(8 Hours)**

Induction – Concept, Types-Formal /Informal, Advantages of Induction, How to make Induction Effective
Orientation & On boarding- Designing orientation program, Types, Process, Difference between orientation and onboarding, Designing onboarding program, Socialization- Types and Tactics.
Career and Succession Management: Definition and Meaning, Need for Career and Succession Planning, Career and Succession Planning: Career Stage, Career Management, The 5-Stage Process of Succession Planning.

Unit-V **(4 Hours)**

Case analysis based on the concepts learnt from Unit-I through IV

Subject	**PERFORMANCE AND COMPENSATION MANAGEMENT**		
Subject Code	**20MBAHR302**		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To make the students identify the importance and the process of performance management.
2. To impart the different performance appraisal method and issues and problems associated with performance appraisal.
3. To educate the students about the concepts of ethical performance appraisal and strategic performance management.
4. To educate the students on the concepts of compensation and benefit system followed nationally as well as internationally.

Course Outcomes: At the end of the course, students will be able to:

1. Demonstrate an understanding of various concepts of performance management and their implications for organizational development
2. Apply Performance and Compensation management concepts in addressing organizational problems to come up with optimal, feasible solutions.
3. Demonstrate the concept on compensation and benefits from national and international context.
4. Analyze the compensation and benefit system of the industry and construct suitable compensation structure as per the organization requirement.

Unit I **(8 Hours)**

Performance Management: Meaning of performance, Definition of performance management, Objectives and benefits of performance management, Importance of performance management, Characteristics of performance management, and elements of effective Performance Management.
Performance counseling: Introduction, definition, performance counseling for higher job performance, Performance counseling skills.
Performance management process: Introduction, predictions for the successful Institution of performance, Performance management Process.

Unit II **(9 Hours)**

Performance Appraisal: Meaning, Objectives, barriers to performance appraisal, who can appraisal, when to appraise, performance appraisal process, traditional and Modern performance appraisal methods, Balance scorecard, Outcome merits- Economic value added, Other economic measures, Building a high performance culture
Performance consulting: concept, need & role, designing and using performance relationship map.
Ethics in Performance Management: Introduction, Meaning, Principles of ethics in performance management, objectives and significance of ethics in performance , ethical issues and dilemmas in performance management, Ethical strategies in Performance management.

Unit III **(9 Hours)**

Compensation: Meaning of compensation, contrasting perspectives of compensation, objectives of compensation planning, components of compensation, factors affecting compensation, compensation determination process, Forms of pay, Financial and non-financial pay, pay model, Internal and external equity in compensation systems, Similarities and differences in strategies, , strategic pay Decisions, team based reward
Designing pay levels, mix and pay structure: specify competitive pay policy, the purpose of a survey, design the survey, Interpret survey results and construct a market line.

Unit IV **(9 Hours)**

Incentives – Incentive Plan, individual incentives, Pay for performance, Pay Discrimination, compensation of special group.
Benefits: Benefit determination Process, Legally required benefits: Retirement, medical and other benefits, Employee profit sharing, employee stock option, gain sharing
International Compensation: challenges faced by international managers, Guide to international compensation, Recognizing variation, the social contract, Culture and pay, Preliminary considerations of international compensation, Strategic choice in global compensation, Expatriate pay, Repatriation Pay issues.

Unit V **(4 Hours)**

Case Analysis: Compulsory question for 20 marks. Review and recap of case studies discussed from unit 1 to unit 4.

2. To provide an understanding of the use of cost information in support of different strategies
3. To demonstrate costing methods and techniques appropriate to a variety of businesses
4. To prepare and interpret budgets and operating results through variance analysis

Course Outcomes: At the end of the course, students will be to:

1. Understand the cost concepts, cost behaviors and cost accounting techniques.
2. Make use of cost information and develop a report by using various costing techniques.
3. Use balanced scorecard and explain how the balanced scorecard supports strategic cost management.
4. Demonstrate the costing methods and techniques appropriate to a variety of businesses.

Unit I **(08 Hours)**

Introduction to Cost Management- Cost Accounting to Cost Management- Elements of costs Classification of costs-Methods of costing-Cost Management Tools- A Strategic View to Cost Management- Preparation of a cost sheet Overheads, Classification and Collection, Difference between Cost Allocation and Cost Apportionment, (Full fledged Problems on Primary and secondary distribution, Simultaneous equations, Absorption of Overhead, Theory on Under and Over absorption of Overhead)

Unit II **(10 Hours)**

Marginal Costing – Nature and Scope- Applications-Break even charts and Point, Decision Making (all types with full problems) Differential Cost Analysis, Advantages and Disadvantages of Marginal Costing.

Demerits of Traditional Costing, Activity Based Costing, Cost Drivers, Cost Analysis Under ABC (Unit level, Batch Level and Product Sustaining Activities), Benefits and weaknesses of ABC, (theory and problems)

Unit III **(09 Hours)**

Budgetary Control:- Objectives of Budgetary control, Functional Budgets, Master Budgets, Key Factor Problems on Production Budgets and Flexible Budgets. Standard Costing:- Comparison with Budgetary control, analysis of Variances, Simple Problems on Material and Labour variances only. (Theory and problems)

Unit IV **(08 Hours)**

Cost Audit,-objectives,, Advantages, Areas and Scope of Cost Audit , Cost Audit in India -- Practical—Read the contents of the report of Cost Audit and the annexure to the Cost Audit report.

Management Audit- Aims and the objectives, Scope of Management Audit. Reporting to Management – Purpose of reporting-Requisites of a good report.

Unit V **(04 Hours)**

Case Analysis: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to IV

TEXT BOOKS:

1. Cost Accounting – Khan M. Y and Jain P. K, TMH.
2. A Text book of Cost and Management Accounting – Arora M. N, 11/e, Vikas.

REFERENCE BOOKS:

1. Principles and Practice of Cost Accounting - Bhattacharyya, 3/e, PHI.
2. Cost and Management Accounting- Arora M. N, 3rd enlarged and Rev. ed., HPH.
3. Managerial Accounting- James Jiambalvo, 2/e, Wiley India Pvt. Ltd.

4. Management Accounting - Khan M. Y and Jain P. K, 6/e, McGraw Hill, 2012.
5. Advanced Cost Accounting – Madegowda J, HPH.
6. Cost and Management Accounting – Arora M. N, 3/e, HPH.

Subject	**MICROFINANCE**		
Subject Code	20MBAFM305		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:
1. To provide basic understanding of problems in credit markets, principles of Micro Finance products and services.

2. To provide an institutional structure of Micro Finance in India and emergence of private Micro Finance industry in India
3. To create an awareness about the regulatory framework affecting the functioning and consequences of delivery models in India
4. To impart the analytical tools for evaluating the performance of Micro Finance Institutions, measurement of credit risks and hedging credit risk through risk management tools and techniques in Micro Finance

Course Outcomes: At the end of the course, students will be able to:
1. Understand the Micro Finance products and services.
2. Understand regulatory framework of Micro Finances in India
3. Analyze the tools for evaluating the performance of Micro Finance Institutions.
4. Credit risks and hedging credit risk through risk management tools and techniques in Micro Finance

Unit I: (08 Hours)
Nature and Scope of Microfinance
Three classic problems in Credit Markets: Selection, Monitoring and Enforcement. The Rationale and genesis of micro credit/microfinance, the nature of microfinance: microcredit vs. microfinance, Principles of microfinance and role of microfinance in poverty alleviation and empowerment of the poor, The concept of Bottom of Pyramid.
Products and Services in Microfinance
Financial Services: Credit Products – Microcredit, Micro-leasing, Micro-venture capital. Savings, Payment Services and Insurance Products, New frontiers in Microfinance Services.
Unit II: (10 Hours)
Institutional Structure of Microfinance in India
NABARD and Microfinance: strategy, Capacity Building Support to Government, Bankers, MFI's ,NGOs,SHGs and Trainers Training. Microfinance Development and Equity Fund (MFDEF),SHG- Bank Linkages.
SIDBI and Microfinance: Approach, Capacity Building Support for Microfinance, on lending, Liquidity Management, Loan to Micro-enterprises, Rating of MFIs.
Role of RMK in Microfinance Development in India. Role of Commercial banks, RRBs, Cooperative banks, Private Banks, NBFCs, and MFIs in the Development of Microfinance.
Emergence of Private Microfinance Industry
Nature and features of MFIs. Market Size and Growth ; types and working of various MFIs in India- For profits MFIs , Cooperative MFIs model ,Not –for profit MFIs SKS, BASIX, SEWA,PRADAN, SKDRDP, Gramee Koota, Sanghamithra. Associations for Micro finance: Sa-Dhan,AKMI. SHPIs: Nature and features of SHPIs: Importance's of SHPIs in microfinance development.
Unit III: (10 Hours)
Regulatory Frameworks for MFIs
Principles of Regulation ,Regulations Vs Supervision ,Determinants for regulating microfinance ,Costs of regulation, Constraints to regulating ,Self –regulation in India: Concerns and Prospects, Objectives and benefits of self –regulation Need for microfinance regulation in India, Microfinance Bill.
Microfinance Delivery Models In India
The Grameen Model: Nature and features, Development of Grameen Model in Bangladesh and its replicators in India, Advantages and disadvantages.
Self-Help Groups (SHGs): Nature and features, Advantages and disadvantageous SHG clusters and Federations. India SHG : Problems and Issues ,Difference between SHG and JLG Model
SHG –Bank Linkages Program: Role of NABARD under SHG-Bank Linkage Programme. Role of Commercial banks, RRBs, DCCBs, NGO and Farmer's clubs. Status and Progress of Self-Help Groups in the country.
Unit IV: (07 Hours)
Accounting and Financial Aspects of Microfinance
Accounting for client transactions; Accrued loan interest revenue; Loan write-offs; Purchase, Depreciation, Sale or disposal of fixed assets; Grants and donations etc. Accounting procedures at SHGs/Clusters/Federations/MFIs, etc.
Financial Statements of MFIs; The portfolio and operational reports; Disclosure of financial information; consolidating financial statements of branches. Closing entries; Accounting systems/reporting formats etc. at Cooperatives/NGOs etc. Financial Statement Analysis; Financial ratios; Comparative analysis; Cash Flow Analysis.
Credits Planning, Appraisal, Deployment, Monitoring and Follow up Credits: Meaning and types of credits proposals, Lending norms and policies of micro financial Institutions, Documentation, Credit counseling and financial supervision.
Risk Management in Microfinance: types of risk in microfinance-strategy for risk minimization, Credit rating Models-GIRAFE,PEARLS,CAMEL,CRSIL.
Non –performing assets –Classification of over dues, recovery management.
Unit V: (04 Hours)
Case Study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS:

1. Rural Credit and Self-help Groups: Microfinance Needs and Concepts in India, K.G Karmakar, Sage Publications, New Delhi,2008
2. Indian Microfinance: The Challenges of rapid growth – Prabhu Ghate, Sage Publications, New Delhi,2007
3. The Economics of Microfinance, Beatriz Armendariz de Aghion, Jonathan Morduch (2005), The MIT Press, Cambridge.
4. Microfinance, Maro La Torre and Gianfranco A.Vento (2006), Palgrave Macmillan Publication, New York.

Subject	BUSINESS VALUATION ANALYSIS		
Subject Code	20MBAFM306		
Credits	3:0:0:0	CIE Marks	50
Total No. of Lecture Hours	39	SEE Marks	50

Course Objectives:

1. To make students understand the corporate merger and acquisition activity and restructurings
2. To help students understand the role that Mergers & Acquisitions.
3. plays in the contemporary corporate world, and its use as strategic tool to provide growth, enhance competitive position, transform a company and create shareholder value
4. To help students to understand the various forms of corporate restructuring

Course Outcomes: At the end of the course, students will be able to:

1. Understand theories of mergers, internal and external change forces contributing to Mergers & Acquisitions activities.
2. Assess human and cultural aspects of Mergers & Acquisitions.
3. Analyze the importance of due diligence and involve themselves in the acquisition and carryout the process
4. Understand about merger process, Takeovers and legal aspects of Mergers/amalgamations and acquisitions/takeovers.

Unit I **(08 Hours)**

Mergers – types of merger – theories of mergers – operational, financial and managerial synergy of mergers – value creation in horizontal, vertical and conglomerate mergers – internal and external change forces contributing to M & A activities –Impact of M & A on stakeholders, strategic approaches to M & A

Unit II **(08 Hours)**

Corporate restructuring – significance – forms of restructuring – joint ventures – sell off and spin off – divestitures – equity carve out – leveraged buy outs (LBO) – management buy outs – master limited partnerships – Limited liability partnership (LLP) in India – De merger – strategic alliance – buyback of shares – ESOP

Unit III **(10 Hours)**

Merger Process: Dynamics of M & A process – identification of targets – negotiation – closing the deal. Five-stage model- Due diligence - Types – due diligence strategy and process - due diligence challenges. Methods of financing mergers – cash offer, share exchange ratio – mergers as a capital budgeting decision

Takeovers – types, takeover strategies – Takeover defenses – financial defensive measures – methods of resistance – anti-takeover amendments – poison pills

Unit IV **(09 Hours)**

Accounting for amalgamation – amalgamation in the nature of merger and amalgamation in the nature of purchase – pooling of interest method, purchase method – procedure laid down under Indian companies act of 1956

Legal aspects of Mergers/amalgamations and acquisitions/takeovers-Combination and competitive Act – Competition Commission of India (CCI) – CCI procedure in regard to the transactions of Business relating to combination of Regulations 2011(theory and problems)

Unit V **(04 Hours)**

Case Analysis: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to IV

TEXT BOOKS:

1. Mergers, Restructuring and Corporate Control, Fred Weston, Kwang S Chung, Susan E Hoag, 4/e, Pearson Education.
2. Corporate Finance – Theory and Practice – Ashwath Damodaran – John Wiley and Sons.

REFERENCE BOOKS:

1. Mergers Acquisitions & Corporate Restructuring – Chandrashekar Krishna Murthy & Vishwanath S R – Sage publication.
2. Mergers, Ramanujam et al, TMH, 2003.
3. Handbook of International Mergers & Acquisitions, Gerard Picot, Palgrave Publishers Ltd.
4. Mergers, Acquisitions and Corporate Restructuring, Nishikant Jha, Himalaya Publishing House, 2011
5. Value Creation from Mergers and Acquisitions, Sudi Sudarsanam – 1/e, Pearson Education, 2003.

SUPPLY CHAIN SPECIALIZATION

Subject	**SUPPLY CHAIN AND LOGISTICS MANAGEMENT**		
Subject Code	**20MBASC301**		
Credits	3:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To introduce process and functions of supply chain management
2. Appreciate the design and network in supply chain management
3. To understand the role of coordination in supply chain management
4. To introduce process and functions of logistics system

Course Outcomes: **At the end of the course, students will be able to:**

1. Understand the fundamental Concepts of supply chain and logistics management.
2. Analyze the concepts on supply chain network design, demand forecasting and inventory management.
3. Identify the prominence of Logistic for the effective supply chain performance.
4. Apply the concepts of transportation, warehousing and Coordination in the corporate.

Unit I: (9 Hours)

Introduction to Supply Chain Management- Introduction to Supply chain, Logistics and supply chain management, objectives, importance, SCOR model of supply chain, decision phases, process view , competitive and supply chain strategies, achieving strategic fit, supply chain drivers, obstacles, framework, facilities, inventory, transportation, information, sourcing, pricingBusiness Environment and supply chain competencies, recent trends in Supply chain management- lean SC, Agile SC, Green SC, SC analytics, Digital SC.

Unit II: (9 Hours)

Designing the Supply Chain Network- Designing the distribution network – role of distribution – Factors influencing

distribution – design options – e-business and its impact – distribution networks in Practice – network design in the supply chain – role of network – factors affecting the network design Decisions.
Demand forecasting and planning- Meaning, Role of forecasting in supply chain, Steps in forecasting, forecasting error, Forecasting methods.
Planning and Managing Inventories- Introduction, Types of Inventory, role in supply chain, Factors affecting the level of safety inventory, Impact of supply Uncertainty.

Unit III: (9 Hours)
Introduction to logistics management- Definition, Importance of logistics management, Functions of logistic Management, Integrated logistics, Integrated logistics information system, Activities of integrated logistics system, barriers to logistic integration and Measures to overcome these barriers.
Procurement: Meaning, Role of Purchasing, Procurement process, Managing the procurement process, Supplier relationship. **Sourcing Decision In supply chain**– Role of Sourcing, In-house or Outsource – Supplier evaluation and selection, 3rd and 4th PLs. Ethical sourcing practices. make or buy decision.

Unit IV: (9 Hours)
Transportation Networks and Sourcing- Role of transportation – modes of transportation and their performance – transportation participants, transportation principle- design options and their trade-offs – Tailored transportation. **Ware housing:** Role, objectives, benefits ,types of warehousing, Warehouse strategies, Automation in warehousing.
Coordination in a Supply Chain-Introduction, Lack of supply chain coordination and the Bullwhip effect , Effect on the performance of Lack of Coordination, Obstacle to coordination – managerial levers to achieve coordination – building partnerships and trust.

Unit V: (3 Hours)
Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS:
1. Sunil Chopra, Peter Meindl & Dharam Vir Kalra, Supply Chain Management – strategy, planning and operation, PHI, 6th Edition, 2016
2. David J Closs, Donald J Bowersox & M Bixby Cooper, Supply chain Logistic Management, McGraw Hill 3rd Edition,2016.
3. K Shridhara Bhat, Logistic Management , Himalaya Publishing House, Second edition, 2018

REFERENCE BOOKS:
1. Essentials Of Logistic & supply chain Management, K Shridhara Bhat, Fourth edition, Himalaya Publishing House.
2. Wisner, Keong Leong and Keah-Choon Tan, principles of supply chain management a balanced approach, Thomson Press.
3. David Simchi-Levi et al, designing and managing the supply chain – concepts, strategies, and case studies, McGraw Hill International Edition
4. Coyle, Bardi, Longley, the management of business logistics – a supply chain perspective, Thomson Press, 2006
5. Robert B. Handfield, Ernest Nichols (2016), "Introduction to Supply Chain Management", 1st Edition, Pearson Education, New Delhi.
6. Michael H. Hugos (2011), "Essentials of Supply Chain Management", 3rd Edition, Wiley Publications, US.
7. Donal J Bowersox, David J Closs, M Bixby Cooper (2008), "Supply Chain Logistics Management", 2nd Edition, Tata McGraw Hill, New Delhi.

Subject	**INFORMATION SYSTEM IN SUPPLY CHAIN MANAGEMENT**		
Subject Code	**20MBASC302**		
Credits	3:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To enable students to learn the role of IT in supply chain
2. To provide conceptual and application of supply chain information system design
3. To analyze the various IT practices in supply chain.
4. To understand human aspects in technology management

Course Outcomes: **At the end of the course, students will be able to:**

1. Understand the importance of Information system in SCM.
2. Identify and evaluate the various applications of supply chain information system design.
3. Understand the various information technology practices in supply chain.
4. Enable the various aspects in technology management

Unit I: (9 Hours)

Introduction to SCM -The Concept of SCM- Value chain for Supply Chain Management - Integrated Supply Chain-Goals of Supply Chain informationTechnology- Role of IT in SCM- Impact of Internet on SCM - SCM Information System Classification: Supply Chain Planning Software Solutions - Supply Chain Collaboration Software Solutions - Supply Chain Execution Software Solutions– Challenges in implementing Supply Chain Information System - Benefits of supply chain information systems.

Unit II: (9Hours)

Application of IT in SCM –Application Areas in SCM- Supply Chain Process Automation -Technology Devices in SCM- Personal Computers -Bar coding and Scanning – RFID Introduction- RFID Applications-Business Benefits - Electronic Data Interchange standards – Benefits -Artificial Intelligence– Communications : RF-Satellite communication-E-Commerce–E-Business –Recent trends in SCM-Data Mining-Application areas of DM in supply chain-Machine Learning-Uses of ML in SC-E-procurement-benefits in SC.

Unit III: **(9Hours)**

ERP: Enterprise Resource Planning System–Development of ERPS- Planning -Growth-Implantation-Advantages and Disadvantages of ERPS– ERPS Applications-Software Providers- Importance of Business Processes –Components - Business Processes Reengineering- DSS - Structure of DSS
Information Forecasting: Introduction-Meaning –Process - Introduction to forecasting techniques-forecasting software- CPRF

Unit IV: **(7Hours)**

Logistics Information: LIS – Introduction - Information functionality - activities involved - Principles of designing or evaluating LIS applications.
LIS Architecture: Components - Two forms of activities - Planning and co-ordination flows and operating flows - Flow and use of integrated logistics information.

Unit V: **(5 Hours)**
Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit 1 to Unit 4

TEXT BOOKS:
1. David Simchi-Levi , Designing and Managing the Supply Chain , Tata McGraw-Hill , 2008
2. Dr. R.P Mohanty& Dr.S.G.Deshmukh, Essentials of Supply chain Management , Jaico Publishing House,2004

Course	Program Outcomes							
IS in Supply Chain Management	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8
	X	X	X	X	X	X	X	X

Subject	OPERATIONS MANAGEMENT		
Subject Code	20MBASC303		
Credits	3:0:0:0	CIE Marks	50
Total No. of Lecture Hours	39	SEE Marks	50

Course Objectives:

1. To understand how operations management helps companies create dramatic improvements in customer service and reductions in cost.
2. To gain an insight of process analysis- a basic skill needed to understand how a business operates.
3. To recognize the contributions of MRP based planning and control system from custom job shops to assembly-line production.
4. To recognize the contribution of inventory systems towards operations management in terms of meeting production and customer service requirements through cost reduction techniques.

Course Outcomes: At the end of the course, the students will be able to:

1. Articulate how operations management contributes to the achievement of an organization's strategic objectives.
2. Reinforce the process analysis skills in decision making tools for operations tasks.
3. Demonstrate the importance of MRPs in through its implementation in different operation management scenarios.
4. Apply various inventory control techniques in a value chain in order to make it robust.

Unit I **(8 Hours)**

Operations Management: Meaning, ten principles of operations management Input-Transformation-Output relationships for typical systems, Operations Management decisions at three levels of decision-making, Current issues in Operations Management, Recent trends of operations management, Operations strategy, Strategic Fit: Fitting operational activities to strategy, Operations Strategy framework: From customer needs to order fulfillment, Operations Strategy in Services-Business Process Reengineering (BPR) , Lean and agile manufacturing, Six Sigma, Reconfigurable manufacturing system (RMS) & Employee involvement, Productivity measurement.

Unit II **(10 Hours)**

Process Analysis: Types of Processes-Based on Stages, Based on Order, Buffering,blocking, starving, Measuring process performance, Process throughput time reduction.

Process Selection: Process flow structures- Job Shop, Batch Shop, Assembly Line, Continuous Flow, Product-Process matrix.

Facility Layout: Meaning, Objectives, Basic production layout formats, Process layout, Product layout, Group Technology (cellular) layout, Fixed-position layout, Computerized Layout Techniques- CRAFT

Unit III **(7 Hours)**

Materials Requirement Planning (MRP) I: Meaning, Objectives, MRP System Structure: (MPS, BoM, IRF), master Schedule

Manufacturing Resource Planning (MRP) II: Difference between MRP and MRP II,Industry Applications and Expected Benefits, ERP-Meaning purpose, features, Functions, ERP v/s MRP

Unit IV **(9 Hours)**

Inventory Control: Definition, Purposes of Inventory, Inventory Costs, Independent versus Dependent Demand, Inventory Systems: Single-period and Multiple-period inventory systems, Fixed-order quantity Models: Establishing Safety Stock Levels, Fixed-order Quantity Model with Safety Stock, Inventory Control and Supply Chain Management: Three Simple Inventory Systems, ABC Inventory Planning, Inventory on a Grand scale, Inventory Control in Services.

Unit V: **(5 Hours)**

Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS:

1. Chase, Richard & J. Aquilano, Nicholas & Jacobs, F.Agarwal,Nitin (2006). Operations Management for Competitive Advantage, McGraw-Hill, 11/e
2. Byron.J.Finch- Operations Now, TATA Mc-Graw Hill

Subject	**FREIGHT TRANSPORT SYSTEM**		
Subject Code	**20MBASC304**		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To give students an opportunity, both orally and in writing, to critically describe, analyze, and recommend improvements in Freight Transport system.
2. For students to analytically solve problems related to transportation management.
3. To discuss the case studies and show how the concepts can be applied.
4. To understand the methodology and impact of creating an integrated Freight transport system in the organisation.

Course Outcomes: Upon completion of this course, the student will be able to:

1. Understand the basic issues in Transportation management.
2. Understand the transport functionalities and the suitable modes of transports for different products.
3. Identify the different transportation formats for better operations.
4. Identify areas for improvement in freight transport system.

Unit I: **(10 Hours)**

Economic Factors of Transportation, Pricing Strategy in Transportation, Rating Systems-Class Rates, Commodity Rates, Special Rate, Freight – All kind Rates. Transport Documentation – Bill of Lading, Freight Bill, Shipping Manifest. Responsibilities of Traffic Department. Urban Travel Characteristics, Private and Public Behavior analysis, Transportation demand Surveys.

Unit II: **(8 Hours)**

Transport Functionality- Product Movement, Product Storage, Participants in Transportation Decision – Shippers, Carriers, Government, Public .Modes of Transport – Rail, Water, Pipeline, Air, Motor Carriers. Pros and cons and its implementation .Importance of transportation, transportation planning methodology, hierarchical levels of planning and its relation to rural, urban areas.

Unit III: **(7 Hours)**

Transportation Formats – Common Carriers, Contact Carriers, Private Carriers, Exempt Carriers. Suppliers of Transportation Services – Single Mode Operator, Specialized Carrier, Transportation Systems Multi modal transportation system; Characteristics of Mass Transit systems including technical, demand operational and economic problems, fixed Track Facility, Mass Rapid Transit System Elevated, Surface and Underground construction , Express Bus System, integrated Operating Characteristics of Terminal and Transfer facilities

Unit IV: **(9 Hours)**

Management, Organization and Information Systems - The Global Supply Chain Performance Cycle length, operations, system integration, Alliances, Views of Global Logistics –Importing & Exporting, Main force. Logistics Organizations – Traditional approaches, The Logistics Information System – Concepts, The Global Logistics Information Systems.

Unit V: **(5 Hours)**

Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to IV

TEXT BOOKS:

1. Philip.B.Schary, tageSkjott-Larsen, Managing the Global Supply Chain, Viva Publishing
2. Donald. J. Bowersox& Donald. J. Claoss, TATA Mc-Graw Hill
3. Supply Chain Management – Sunil Chapra& Peter Meindl, PHI

REFERENCE BOOKS:

1. Sunil Chopra & Peter Meindl, Supply Chain Management, PHI
2. Dr. R.P.Mohanty& Dr. S.G.Deshmukh, Essentials of Supply Chain Management, Jaico Student Edition.

Subject	**ENTERPRISE RESOURCE PLANNING**		
Subject Code	**20MBASC305**		
Credits	3:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To Introduce the concept of enterprise resource planning
2. To explain the different modules of ERP
3. To explain the issues in ERP implementation and maintenance
4. To explain the advantages and disadvantages of different ERP products available in the market.

Course Outcome: At the end of the course, students will be able to:

1. Understand the fundamentals of enterprise resource planning.

2. Demonstrate the importance of implementing ERP
3. Understand the advantages and disadvantages of different ERP products available in the market
4. Apply ERP Programs, map the ERP requirements with business process requirements, and understand outputs of ERP.

Unit I: **(10 Hours)**
INTRODUCTION TO ERP: Overview of ERP,MRP,MRPII and Evolution of ERP, BusinessFunctions and Business Process, Integrated Management Information, Reasons for the growth of ERP,Role of ERP in Business, Business Modelling, Integrated Data Model, Common ERP Myths, Systems Integration, Benefits of System Integration,Limitations of System Integration , Obstacles of applying IT , ERPMARKET.ERP & Competitive advantage, Basic Constituents of ERP.

Unit II: **(8 Hours)**
BUSINESS PROCESS RE-ENGINEERING (BPR): BPR Process, Characteristics of BRP, , Technology Enabled Reengineering, Myths regarding BPR.
Business Intelligence Systems-Data Mining, Data Warehousing, On-line Analytical Processing (OLAP).

Unit III: **(8Hours)**
ERP MODULES: Finance, Controlling, Accounting System, Manufacturing and Production Systems; Sales andDistribution Systems, Human Resource Systems; Plant Maintenance System, Material Management System, Quality Management System, ERP SystemOptions and Selection, ERP proposal Evaluation.

Unit IV: **(8Hours)**
ERP IMPLEMENTATION AND MAINTENANCE: Implementation Strategy Options, Features of Successful ERP Implementation, Strategies to Attain Success, User Training, Maintaining ERP and IS.
ERP PRODUCTS: SAP, Oracle, Microsoft Dynamic, People Soft.

ERP and E-business: Introduction, e-Business Process Model , ERP/e-Business Integration

Unit V: **(5 Hours)**
Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit 1 to Unit 4

TEXT BOOKS:
1. Motiwala, Enterprise Resource Systems,,Pearson,2009
2. Alexis Leon,Enterprise Resource Planning, TMH,2008
3. Enterprise Resource Planning and MIS,VenugopalRao, Excel,2009.

Subject	**RETAIL SUPPLY CHAIN MANAGEMENT**		
Subject Code	**20MBASC306**		
Credits	3:0:0:0	**CIE Marks**	50
Total No. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To enable the student to understand the basic concepts, processes and key elements of a supply chain and how they interact in supply chains.
2. To provides information regarding the strategies for establishing efficient, effective, and sustainable supply chains.
3. To explain the critical roles of technology in supply chain planning, visibility, and execution.

Course Outcomes: At the end of the course, students will be able to:

1. Exemplify the importance of the retail supply chain and the key drivers of retail supply chain management.
2. Apply the concept of assortment and space management for effective demand management for the better decision making.
3. Analyze the retail supply chain performance for better customer service.
4. Evaluate the logistic activities of the retail industry for preparing the effective strategies implementation.

Unit I: **(9 Hours)**

Introduction; More than Stores; Defining the terms: Supply Chain and Supply Chain Management; the Importance of Customer Segments; Adding Value along the Chain; Introduction to Retail Supply chain management:, How retail supply chain is different from manufacturing supply chain, Elements of retail supply chain, Drivers of Retail Supply Chain Change, Importance of Drivers; Innovation Driver; Strategic, tactical, operational and execution view of retail supply chain, Retail supply chain maturity.

Unit II: **(9 Hours)**

Assortment and space management: Introduction, Assortment management framework, Assortment selection and plan, space Management and its benefits, different stages of space planning, concept of plan grams,Retail product lifecycle management: Product design, Product label, Retail packaging, shelf ready packaging, green design and packaging.

Unit III: **(9 Hours)**

Retail Distribution and replenishment: Retail distribution, Retail replenishment, Retail packing, shelf ready packaging, Direct store delivery, Managing retail home delivery, measures for retail distribution and replenishment. Product Tracking Along Retail Supply Chains: Low-Tech Retailing, Beyond Basic Bar Codes, Radio Frequency Identification, Retail ERP, Retail analytics, Tracking in Transit, The Future of Product Tracking.
Retail Return Loops: Introduction, Types of Returns, Opportunities in Returns, Reduced Returns, Collaboration with Partners, Customer Feedback, Material Source. Environmental Mitigation, Cash-to-Cash Cycle Reduction, Process Standardization.

Unit IV: **(9 Hours)**

Retail logistics: Retail transport, retail warehousing, Managing retail shrinking, managing logistic service provider, , Green retailing. Green information system, Retail supplier relationship membership: Retail sourcing, Global sourcing, Green sourcing,. Retail customer relationship management: Introduction, order management, multi channel retailing, Retail Kiosk, Retail returns and reverse logistics, Recent trends in retail supply chain.

Unit V: **(3 Hours)**

Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS:

1. Retail Supply chain Management, James B. Ayers, Mary Ann Odegaard, Auerbach Publications, 2016.
2. Retail supply chain Management, Rajesh Ray, Tata McGraw Hill publications, 2011

REFERENCE BOOKS:

1. Retail Supply chain management, James B. Ayers, Mary Ann Odegaard,CRC Press, 2018.
2. Logistics and Retail Management: Emerging Issues and New Challenges in the Retail Supply Chain, John Fernie,Leigh Sparks, Kogan Page publication, 2014.

BUSINESS ANALYTICS SPECIALIZATION

Subject	**INTRODUCTION TO DATA MANAGEMENT**		
Subject Code	20MBABA301		
Credits	3:0:0:0	**CIE Marks**	50
Total No.: of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. This course will make the student to understand and learn foundational data skills, gain an understanding.

2. This course will enable the student to learn data management concepts and functions.

Course Outcomes: At the end of the course, the students will be able to:

1. In this course, student will learn about data analysis and types and concepts introduction.
2. In this course, student will learn the business analytics framework and its impact.
3. This course will enable the student to gain the knowledge on data management techniques.
4. In this course, student will learn what are the various types of data management analysis.

Unit I: **(13 Hours)**

Introduction to Data Analysis: Introduction – What is Analytics, Types of Analytics, need for Analytics in Specific Domain. Introduction to Data Management – Properties & Types of Data, Conceptual Models, Data Behavioral- Customer Relationship Management in Analytics, RFMPT - Recency, Frequency, Monitory, Price & Tenure, Short term data, Medium term data & Long term data, Psycho graphic Data, Social/Structural Data, Time series data, Sequence data, ER data model, Dimensional data model.

Unit II: **(10 Hours)**

Data Management : Data Collection- Through servers, excel files, big data technology, test files, Data Formats- CSV, Excel, Word, Image, Video, Audio, Text, Data base data, Data validation – Reading data, understanding the data, Writing the data, validating the data, Data Cleaning – Outline detection , missing values, invalid formats.

Unit III: **(08 Hours)**

Introduction to Business Analytics framework: CRISP DM for Analytics -- Business Objectives, Data Understanding, Data sources, Data mapping, Data preparation, Customer Analytics Data, Product Analytics Data mart, Social Analytics Data mart.

Unit IV: **(08 Hours)**

Data Management and Analysis: Customer Base Analysis, Performance Analysis, Contribution analysis, Migration Analysis, Domain based feature selection, Principal Component Analysis.

TEXT BOOKS:

1. A data structure for customer insights - Jim Porzak

REFERENCE BOOKS:

Subject	**DATA MINING TECHNIQUES WITH R**		
Subject Code	20MBABA302		
Credits	3:0:0:0	**CIE Marks**	50
Total No.: of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. This course will make the student to understand and learn data mining techniques with practical experience.
2. This course will enable the student to learn R tool to understand the statistical computing.

Course Outcomes: At the end of the course, the students will be able to:

5. In this course, student will learn about data analysis and types and concepts introduction.
6. In this course, student will learn the business analytics framework and its impact.
7. This course will enable the student to gain the knowledge on data management techniques.
8. In this course, student will learn what are the various types of data management analysis.

Unit I: **(08 Hours)**
Data Mining Methodology: Introduction to supervised, unsupervised and semi-supervised modeling/learning, Model Building – What is model building and its importance, Types of Data Mining Techniques – Clustering, Association, Sequencing, Classification

Unit II: **(12 Hours)**
Data Mining Techniques: Regression – Simple Liner Regression- Coefficient of determination, Significance tests, Residual analysis, Confidence and Prediction Intervals, Multiple Linear Regression- Coefficient of multiple coefficients of determination, Interpretation of regression coefficients, Categorical variables, Heteroscedasticity, Multicollinearity, Outliers, Auto regression and transformation of variables, Regression model building.

Unit III: **(08 Hours)**
Logistic and Multinomial Regression: Logistic function, Estimation of probability using logistic regression, Deviance, Wald Test, Hosmer Leme show Test, Classification table, Gini coefficient; Classification and Regression Tree (CART), Decision Tree modeling

Unit IV: **(11 Hours)**
Application of Predictive Analytics : Time Series Analysis – Forecasting, Moving Average, Exponential Smoothing, Casual Models, Auto-Regressive Integrated Moving Average (ARIMA), Holts Winter method, Application of predictive analytics in retail, direct marketing, health care, financial services, insurance, supply chain, etc.

TEXT BOOKS:

2. Data Mining Techniques, Gordon S. Linoff, Michael J.A. Berry, Third Edition
3. Introduction To Data Mining , Pang Ning Tan and Vipin Kumar and Michael Steinbach, Pearson, Latest Edition

REFERENCE BOOKS:

1. Data Mining For Business Intelligence, Galit Shmueli and Nitin R Patel and Peter C Bruce, John Wiley, Latest Edition

Subject	**APPLIED BUSINESS STATISTICS AND DATA VISUALIZATION**		
Subject Code	20MBABA303		
Credits	3:0:0:0	**CIE Marks**	50
Total No.: of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. This course will make the student to understand and learn basics of business statistics and probability techniques.
2. This course will enable the student to learn types of data visualization tools and its importance in business.

Course Outcomes: At the end of the course, the students will be able to:

1. Student will learn about basic statistics and its importance in the line of analytics business.
2. Student will understand the probability measures and different types of test and areas of usage in analytics.
3. This course will enable the student to gain the knowledge of probability distribution fitting procedures importance in business analytics.
4. In this course, student will learn end to end of tool utilization : Tableau & Excel Add-ins. Build practical hands on skill on all types of tables and charts and its area of importance in business
5. Student will build market demand skills like Dashboard & Reports preparation along with storytelling with the help of data.

Unit I: **(08 Hours)**

Introduction to Basic Statistics : Measures of Central Tendency– Mean, Median, Mode and their implications, Measure of Dispersion- Range, Mean deviation, Standard deviation, Coefficient of Variation, Skewness, Kurtosis.

Unit II: **(10 Hours)**

Introduction to Probability: Concept of probability and its uses in business decision-making, Introduction to sampling distributions- Sampling distribution of mean and proportion, Sampling techniques. Estimation Theory and Hypothesis Testing- Sampling theory; Formulation of Hypotheses; Application of Z-test, t-test, F-test, Chi-Square test, ANOVA one and two way.

Unit III: **(07 Hours)**

Probability Distribution : Fitting Probability Distribution, Plotting, Statistical Graphics, Box plots, Scatter plots, Heat map, Pivot Tables and Power Pivot.

Unit IV: **(14 Hours)**

Data Visualization with Tableau : Why Tableau? Why Visualization? - The Tableau Product Line, Things you should know about Tableau, Tables & Graphs- Horizontal / vertical bar charts, Multiple bar charts, Stacked bar charts, Histogram, Pie charts, Special Charts- Circular network diagram, Sunburst diagram, Tree Map, Streamgraph, Circle packing, Introduction of Infographic and examples. Dashboards and reports with storytelling.

TEXT BOOKS:

1. Statistics for Management , T N Srivastava, Shailaja Rego, Tata McGrawhill, Latest edition.
2. Statistical Methods, S P Gupta, Sultan Chand & Sons, Latest edition.
3. Business Statistics using Excel, Glynn Davis and Branko Pecar Oxford University press, Latest edition.
4. Fundamentals of Business Statistics, J. K. Sharma, Vikas Publication, Latest edition.

IV SEMESTER
HUMAN RESOURCE MANAGEMENT

Subject	**INDUSTRIAL RELATIONS AND LABOR LAWS**		
Subject Code	20MBAHR401		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To provide a conceptual basis of Industrial Relations.
2. To enable students to grasp and apply the principles of IR and develop an awareness of the significance of industrial peace.
3. To give an understanding of the components and meaning of sustaining Industrial peace anchored on harmonious Employee-Management relations.
4. To impart the legal provisions that governs labor– management issues.

Course Outcomes: At the end of the course, the students will be able to:

1. Demonstrate descriptive knowledge of the field of industrial relations.
2. Analyze and evaluate the key processes of industrial relations at the workplace level and their relationships to the institutions in a global, economic and social context.
3. Investigate solutions to industrial relations problems based on research and assessment of current practices
4. Familiarize with the legal requirements to maintain industrial relations.

Unit I: **(7 Hours)**

Introduction: Background of Industrial Relations - Changing Dimensions of IR in India Impact of globalization on IR, factors affecting IR, participants of IR, approaches to Industrial relations, forms of industrial relations, theories of industrial relations, Evoluation of industrial relations in India, International Labour Organization – objectives, principles, structure, and its influence on Legal enactments in India.

Unit II: **(7 Hours)**

Collective Bargaining in India: Definition, functions of collective bargaining, collective bargaining process, prerequisites for collective bargaining, Negotiation- types, process, techniques.

Trade Unions: Introduction, functions of trade unions, objectives of important trade unions, procedure for registration, rights and privileges of registered trade unions, problems of trade unions, measures to strengthen trade union movement in India, paradigm shift in Trade Union Environment in India.

Unit III: **(8 Hours)**

Grievance procedure and Discipline management: Grievance, meaning and forms, approaches to grievance machinery, model grievance procedure. Discipline - Judicial approach to discipline, Domestic enquiries, Disciplinary procedures, approaches to manage discipline in Industry, principle of Hot stove rule, Code of disciplines in industry.
Industrial Conflicts: Nature of conflicts and its manifestations causes and types of Industrial conflicts, prevention of Industrial conflicts and settlement of Industrial conflicts,

Unit IV: **(13 Hours)**

Industrial legislations: An overview of the following labor enactments covering the definitions, applicability, provisions, penalties:

- Factories Act 1948
- Industrial disputes act 1947.
- Industrial employment (standing order) Act 1946.
- Maternity Benefit Act, 1961
- Contract Labor Act, 1970
- Payment of Wages Act, 1936,

- Payment of Gratuity Act 1972
- Payment of Bonus Act, 1965.
- Employees provident fund act 1952.

Unit V: **(4 Hours)**

Case study – compulsory questions for 20 marks. Review and recap of case studies discussed from unit I to IV

TEXT BOOKS:

1. Dynamics of Industrial Relations, Mamoria & Mamoria, Himalaya Publications, 2012
2. Industrial Relations and Labor laws, 5th Edition, SC Srivatava, Vikas Publications

REFERENCE BOOKS:

1. Industrial Relations, Trade Unions & Labour Legislation, P R N Sinha Indu Bala Sinha, Seema, P.S, Pearson Education, 2013

Subject	**INTERNATIONAL HRM**		
Subject Code	20MBAHR402		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To enable the basic understanding of fundamental concepts of IHRM, its special features and emergence.
2. To make students aware about recruitment and selection processes in a global business corporation
3. To make students understand the training and development and compensation management practices in MNCs.
4. To make students aware about industrial relations issues and international HRM strategies.
5. To help the students on the application oriented case analysis on IHRM

Course Outcomes: At the end of the course, students will be to:

1. demonstrate their conceptual understanding of fundamental concepts of IHRM, its special features and emergence.
2. demonstrate their conceptual knowledge of the recruitment and selection processes in a global business corporation.
3. demonstrate their conceptual knowledge of and compensation management practices in MNCs.
4. demonstrate their conceptual skill of industrial relations issues and international HRM strategies.
5. apply their conceptual knowledge of the IHRM in real time problems

Unit I: **(8 Hours)**

Introduction to IHRM: Definition, The different setting of International Human Resource Management, Difference between IHRM and Domestic HRM. Models of IHRM, Approaches to IHRM, Socio-cultural context - Role of culture in International HRM, Culture and employee management issues, culture and specific HRM issues.

Unit II: **(10 Hours)**

Recruitment, Selection and staffing in International context: International Managers- PCN, HCN, AND TCN, , recruitment methods using head-hunters, cross-national advertising, e-recruitment; different selection methods, Selection criteria and techniques, different approaches to multinational staffing decisions international staffing issues, Current scenario in international training and development, expatriate training, repatriate training.

Unit III: **(10 Hours)**

Performance Management: A conceptual background, performance management cycle, models, performance and appraisal in IHRM appraisal of expatriate, third and host country employees, issues and challenges in international performance management, country specific performance management practices.

International Compensation: Forms of compensation and factors that influence compensation policy, key components of international compensation, Approaches to international compensation, compensation practices across the countries.

Unit IV: **(7 Hours)**

International labour relations and International HRIS: Key issues, response of labour unions to MNCs. Social dumping, IHRIS: Meaning, Role of IT in HR, Designing of HRIS, HRIS model, Applications of HRIS in Employee Management, Limitation of HRIS.

Unit V: **(4 Hours)**

Case study – compulsory questions for 20 marks. Review and recap of case studies discussed from unit I to IV

TEXT BOOKS:

1. International Human Resource Management-Peter J Dowling, Denice E Welch, Cengage Learning
2. International Human Resource Management - Monir H Tayeb – Oxford University Press - 2005.

1. To make the students identify the importance and benefits of training and development.
2. To impart the skill to identify the training need and designing the training programme.
3. To make the students to identify the required method for training and evaluating the training program.
4. To make the student to identify the significance of Managerial development.

Course Outcomes: At the end of the course, the students will be able to:

1. Demonstrate the understanding of scope, objectives and benefits of employee training and development for achieving organizational goal.
2. Identify the training need and design the suitable training and development methods to align with organizational goal.
3. Determine the training outcomes and evaluate the effectiveness of the training.
4. Demonstrate the importance, Need and Approaches to Management development.

Unit I: **(10 Hours)**

Introduction: Definition, Meaning, Need for training, Scope, Objectives of Training, Difference between training

and Development, Benefits of training, problems of training, designing effective training, Roles, competencies & positions of training professionals, Future trends in training.
Training Needs Analysis: Assessment of Training needs, Methods and Process of training need assessment, Approaches to TNA, Competency Model.

Unit II: **(10 Hours)**
Designing Training Programs: Organizational Constraints, Developing objectives, Budget for training, facilitation of learning, Facilitation of learning: focus on training design.
Learning And Training Methods: Overview of Training methodologies – Principles of learning, learning process, Learning Curve, Criteria for method selection, skills of an effective trainer, classification of training methods
Presentation Method – Lecture, Audio visual, Hands on Methods – On the job training, simulation, case study, Business games, Role play, behavior modeling ,In basket Techniques.Group Building Methods: Adventure learning, Team training, Action learning, E- learning-Computer based training, Developing effective online learning, Blended learning, mobile technology & Training Methods, Distance Learning.
Unit III: **(7 Hours)**
Evaluation of Training and Development: Introduction, Need for evaluating Training and development programs, Overview of the evaluation process, Evaluation planning and data collection, Outcomes used in the evaluation of training programs, Models of evaluating effectiveness of Training Efforts, Problems of Measurement and Evaluation,; Kirkpatrick Model of Training Effectiveness.
Unit IV: **(8 Hours)**
Management Development: Meaning, Need and Importance of Management development, process, methods of management development, Approaches to Management Development, Development planning process, Succession Planning: Introduction, Importance, Steps, Advantages of succession planning, Sources of Knowledge / Skill acquisition, Management Development implications. Increased use of new technologies for learning.
Unit V : **(4 Hours)**
Case Analysis: Compulsory question for 20 marks. Review and recap of case studies discussed from unit I to unit IV.

TEXT BOOKS:

1.Training and Development, Dr.B.Janakiraman, Biztantra publisher, 2011
2. Employee Training and Development, Noe A Raymond, Fifth edition, Mc Graw hill publication, 2012.

Subject	OD AND CHANGE MANAGEMENT		
Subject Code	20MBAHR406		
Credits	3:0:0:0	CIE Marks	50
Total no. of Lecture Hours	39	SEE Marks	50

Course Objectives:

1. To encourage an exploration of the concepts of organization development and change.
2. To articulate and discuss the history, main concepts, and theories of the field of Organization Development
3. Recognize common symptoms and reactions to change in the workplace and recommended interventions to address the reactions/resistance.
4. Develop an awareness and fundamental knowledge of the need for change, why organizations change or fail to change, and how to plan for, manage and measure change

Course outcomes: At the end of the course, students will be to:

1. apply key concepts and tools of organizational development and change management
2. develop basic understanding and appreciation for the issues and conditions creating the need for change in modern organizations.
3. explore some of the ethical issues associated with change and organizational development.
4. apply OD model to design a change strategy that will promote organizational effectiveness.
5. propose solutions to organizational issues using organizational development interventions

Unit I **(12Hours)**

Introduction to organizational Development: Conceptual frame work of OD, History of OD, Definition, characteristics of OD, First order and second order Change, Theories of planned change, general model of planned change, different types of panned change and critique of planned change,

Managing the OD Process: Components of OD Process, Diagnosis, Action & Program Management; Diagnosis: Diagnosing the System, its subunits and Processes, Diagnosis using the Six-box Organizational Model, Third Wave Consulting: The Action Component: nature of OD intervention, analyzing discrepancies: The Program Management Component: Phases of OD Programs, model for managing change, creating parallel learning structures

Unit II: **(11 Hours)**

Designing OD interventions: Human process interventions - coaching, training and development, process consultation, third part intervention, and team building. Organization confrontation meeting, intergroup relations intervention and large group intervention. Techno structural interventions:- Structural design , downsizing, reengineering, employee involvement, work design, socio technical systems approach.

The Future and OD: The changing environment, Fundamental strengths of OD, Implications of OD for the client, ethical standards in OD, OD's future. OD Consultant's role, issues in consultant-client relationship, Power, Politics & OD, Research on OD

Unit III: **(6 Hours)**

Organizational change- Introduction, nature of change, Internal & External changes, change need analysis, types and styles of change, Models of change- Lewis's Force field, Systems Model, Action research model

Unit IV: **(6 Hours)**

Organizational change management: Transformation planning, Resistance to change- reasons for the resistance, overcoming resistance for the change, cognitive dimension of managing change, affective dimensions of managing change, systematic approach to making change- factors for effective change, skills of leaders in change management, designing the change.

Unit V: **(4 Hours)**

Case study – compulsory questions for 20 marks. Review and recap of case studies discussed from unit I to IV

TEXT BOOKS:

1. Organization Development, behavioral science interventions for Organization Improvement, Wendell L.French, Cecil H.Bell, Veena,Jr, Pearson, PHI.
2. Organizational Development – C.G.C. Krishnamacharyulu & Lalitha Ramakrishnan, PHI 2013

MARKETING

Subject	INTEGRATED MARKETING COMMUNICATIONS

Subject Code	20MBAMM401		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To enable the students to build a comprehensive framework that fully integrates the various aspects of managerial decision making related to marketing communications strategy and tactics.
2. To provide the students to learn an integrative approach to the study of the promotion mix, including advertising, publicity, personal selling, and sales promotion.
3. To ensure students to increase knowledge in emerging trends in advertising in global environment.
4. To discuss the case studies and show how the concepts can be applied.

Course Outcomes: At the end of the course, students will be to:

1. Demonstrate and explain comprehensive framework that fully integrates the various aspects of managerial decision making related to marketing communications strategy and tactics.
2. Display the skills in analyzing an integrative approach to the study of the promotion mix, including advertising, publicity, personal selling, and sales promotion.
3. Contribute the concepts of IMC to the advertising in global environment.
4. Apply the IMC concepts to a given business communication.

Unit I: **(8Hours)**

Role of IMC in marketing process, IMC planning model, Marketing and promotion process model, steps involved in developing IMC program, Effectiveness of marketing communications, Purpose, Role, Functions, Types.

Advertising Agency: Type of agencies, Services offered by various agencies,

Advertising objectives and Budgeting: Goal setting – DAGMAR approach, various budgeting methods used.

Unit II: **(8Hours)**

Media Planning: Developing Media plan, Problems encountered, Media Evaluation – Print, Broadcast media, Support media in advertising.

Direct Marketing: Features, Functions, Growth, Advantages / Disadvantages, Direct Marketing Strategies.

Unit III: **(9Hours)**

Promotion: Meaning, Importance, tools used, Conventional/unconventional, drawbacks, push pull strategies, Integration with advertising and publicity

Public relation / Publicity: Meaning, Objectives, tools of public relations, Public relation strategies, Goals of publicity, Corporate Advertising – Role, Types, Limitations, PR Vs Publicity.

Monitoring, Evaluation and control: Measurement in advertising, various methods used for evaluation

Unit IV: **(9Hours)**

International Advertising: Global environment in advertising, Decision areas in international advertising

Internet advertising: Meaning, Components, Advantages and Limitations, Types of Internet advertising

Industrial advertising: B 2 B Communication, Special issues in Industrial selling.

Unit V: **(5 Hours)**

Course	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8
ADVANCED FINANCIAL MANAGEMENT	**X**	**X**		**X**		**X**		**X**

Subject	**STRATEGIC CREDIT MANAGEMENT**		
Subject Code	20MBAFM405		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To provide an overview of the sound lending decisions by a bank
2. To explain the process of evaluation of the loan proposal
3. To provide an insight into the different types of loans
4. To explain the process of financing small scale and large scale industries
5. To describe the aspects of NPA management

Course Outcomes: At the end of the course, students will be able to:

1. Understand the nature and rationale behind credit management in Banks.
2. Demonstrate the understanding of credit appraisal procedures in respect of different forms of lending by Banks.
3. Demonstrate the understanding of financing small and large scale industries.
4. Apply tools and techniques to measure financial performance of banks and their NPA management.

Unit I: **(08 Hours)**

Credit management in banks-Screening of applications-Appraisal of credit-Sanction limit Post sanction compliance – Monitoring supervision –Review- Government policies for credit extension- Credit institutions- Principles of good lending- Borrower study and bankers opinion- Credit policy by banks- Government regulation of credit -Prudential norms.

Over view of credit policy and loan characteristics-The credit process –Characteristics of different types of loans- Evaluating commercial loan requests – Financial statement analysis Cash flow analysis- Projections-Management of the firm and other factors –Feasibility study – Fundamental credit issues - Credit analysis-Different types of borrowers.

Unit II: **(10 Hours)**

Evaluating consumer loans – Types- Credit analysis of consumer loans- Risk–return analysis of consumer loans- Customer profitability analysis and loan pricing- Fixed Vs floating rates

Loan and advances against pledge- Hypothecation- Mortgage – Lien- Advances against goods- Document to title to goods – Life insurance policies – Stock exchange securities Fixed deposit receipts –Book debts- Supply bills- Real estates – Advance against collateral securities.

Unit III: **(09 Hours)**

Financing to small scale industries and large scale industries- Term lending- Syndicated loan system- Role of development banks in industrial finance- Working capital finance Turnover method – Modified version of MPBF Cash budget approach- Long term finance Project financing –Industrial sickness and BIFR. Agricultural finances and Retail lending- Crop loans- Crop insurance schemes- Dairy Sericulture- Poultry- Animal husbandry Horticulture –

Gobar gas – Kissan credit cards – NABARD initiatives – Lead bank schemes – Retail banking advances – Concept – Retail banking products – Consumer credit financing

Unit IV: **(08 Hours)**

NPA management – Introduction- Identification of NPAs- Asset classification- Prudential norms- Capital adequacy – International Banking Regulation-Basel II – asset classification provisioning – effect of NPA on profitability - Assessment procedure- Pre-sanction appraisal – Post sanction supervision- Monitoring systems for existing and likely NPAs—Tools to manage NPAs –Compromise scheme, Lok Adalats, Debt Recovery Tribunals, Corporate Debt Restructuring, Willful defaulters, SARFAESI Act, Asset Reconstruction Companies CIBIL

Unit V: **(04 Hours)**

Case Analysis: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS:

1. Strategic Credit Management in Banks, Popli.G.S. And Puri S. K., PHI, 2013
2. Bank Credit Management, G. Viajayaragavan, Himalaya Publishing House, 2009

REFERENCE BOOKS:

1.Industrial Finance - Vishwanathan R, Macmillan, New Delhi.
2.Banking and Financial System - Prasad K, Nirmala and Chandradas. Himalaya Publishing House, Mumbai.
3.Managing Banking Risks - Cade, Eddic, Woodhead Publishers, England.
4.Banking Theory and Practice - Shekar and Shekar, 19/e, Vikas Publishing House, 2009.

Subject	PROJECT APPRAISAL, PLANNING AND CONTROL		
Subject Code	20MBAFM406		
Credits	3:0:0:0	CIE Marks	50
Total no. of Lecture Hours	39	SEE Marks	50

Course Objectives:

1. To gain knowledge on the Generation of ideas, Market and demand analysis, Technical analysis and planning.
2. To make the students to predict cash flows using relevant techniques
3. To gain insights on the project cash flows, project management and review techniques and appraisal criteria.
4. To gain knowledge on the linear programming model, Network techniques for project management- PERT and CPM models

Course Outcomes: At the end of the course, students will be able to:

1. Demonstrate an understanding of various phases of project management.
2. To analyze & predict the cash flows to the firm
3. Demonstrate project implementation and review.
4. Apply techniques for project management using PERT and CPM models.

Unit I: **(09 Hours)**

Planning & Analysis Overview: Phases of capital budgeting – Levels of decision making – objective.

Resource Allocation Framework: Key criteria for allocation of resource –elementary investment strategies – portfolio planning tools – strategic position and action evaluation – aspects relating to conglomerate diversification – interface between strategic planning and capital budgeting.

Unit II: **(08 Hours)**

Project cash flows: Basic principles of measurement of cash flows –components of the cash flow streams – viewing a project from different points of view – definition of cash flows by financial institutions and planning commission – biases in cash flow estimation.

Appraisal criteria: Net Present Value – benefit cost ratio – internal rate of returns urgency – payback period – accounting rate of returns – investment appraisal in practice. (Theory and problems)

Unit III: **(10 Hours)**

Project financing in India: Means of finance – norms and policies of financial institutions – SEBI guidelines – Sample financing plans – structure of financial institutions in India – schemes of assistance – term loans procedures – project appraisal by financial institutions.

Project review and administrative aspects: Initial review – performance evaluation – abandonment analysis – administrative aspects of capital budgeting – evaluating the capital budgeting system of an organization.

Unit IV: **(08 Hours)**

Project Management: Forms of project organization – project planning – project control – human aspects of project management – prerequisites for successful project implementation.

Network techniques for project management – development of project network – time estimation – determination of critical path – scheduling when resources are limit – PERT and CPM models – Network cost system (Only problems on resources allocation and resources leveling)

Unit V **(04 Hours)**

Case Study: Compulsory question for 20 marks. Review and recap of case studies and problems discussed from unit I to unit IV.

TEXT BOOKS:

1. Prasanna Chandra – Project Planning: Analysis, Selection, Implementation and Review – TMH, 5/e
2. Narendra Singh – Project Management and Control – HPH, 2003

REFERENCE BOOKS:

SUPPLY CHAIN MANAGEMENT SPECIALIZATION

Subject	**GLOBAL SUPPLY CHAIN AND LOGISTICS MANAGEMENT**		
Subject Code	20MBASC401		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To understand supply chain and logistics management from the global prospective.
2. To analyze global market demand and manage the global logistics.
3. To demonstrate the concepts of key supply chain drivers from global scenario.
4. To learn the concepts of outsourcing and performance management in global scenario.

Course Outcomes: At the end of the course, the students will be able to:

1. Demonstrate the concepts of global supply chain management.
2. Apply the concepts of demand analysis and sustainability for the organizational growth.
3. Apply the concepts of International purchasing, operations management and transportation for taking better decision..
4. Analyze the outsourcing and performance of supply chain functions in the global business.

Unit I: (9 Hours)

Introduction: Role of the Supply Chain, Managing the Supply Pipeline for Global Trade Flows, Comparison between National (Domestic) and International Logistics, Factors Driving Global Supply Chain Management, Problems and Challenges facing global supply chain & logistic management, Customs and Global Supply Chain Management, , Advantages of globalized Supply chain, Forces of Global Supply chain, Factors Contributing to the Development of Logistics, Global Logistic Management process, Latest trend in global supply chain management.

Unit II: (9 Hours)

Demand analysis: The emergence of the value-conscious customer, Market Environment, Market Entry Strategy, Constituents of the Export Sales Contract, Market Development Strategy with Global Logistics Focus. Elements of logistics customer service; Strategies for logistics customer service,.

Delivering sustainability through supply chain management: Purchasing or procurement; Production or manufacturing; Distribution and ware housing ; Use and maintenance; Dispose or reuse and recycle? ; Managerial and financial sustainability.

Unit III: (9 Hours)

International Procurement Systems: Introduction, Procurement process , Types of purchasing., Just in time relationship management, Engineering Techniques, Levels in Global purchasing.

Operations Management: Supply chain globalization in manufacturing**,** Benchmarking – Supply Chain, Supply Chain Cycle Time Management Reduction. Supply chain globalization in service sector.

International Transport: Introduction, Trade-Offs Inherent in International Logistics – Multi-Modalism, Key Factors in a Transport Mode(s) Trade-Off, Speed, Frequency, Packing, Insurance, Warehousing, Assessing the utilization of vehicle fleets; Factors constraining vehicle utilization ; Measures to improve vehicle utilization

Unit IV: (9 Hours)

Outsourcing: Definition; Reasons for outsourcing the pitfalls in outsourcing; Global supply chains and the outsourcing risks, Risk management and the supply chain.

Coordination: Introduction, Coordination of supply chains with information technology, Stages and influential factors.

Software in the Supply Chain Process

Performance measurement and management in the supply chain: The balanced scorecard – the standard for goal setting and measurement; Fundamental concepts of supply chain management and measurement; mastering the complexity of supply chain and logistics performance management

Unit V: (3 Hours)

Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS:

1. Global Supply Chain Management and International Logistics, Alan E. Branch, Routledge Publisher.
2. Global Logistics – New direction in supply chain management, Donald waters, 6th edition, Kogan Page

REFERENCE BOOKS:

1. Supply chain management: A global Prospect, Nada R Sanders, Wiley publisher.
2. Global Supply Chain Management, Matt Drake, first edition,Business Express press.
3. Global supply chain Management: Leveraging processes, measurements and tools for strategic corporate advantage, G.Tomas M Hult, David Closs and David Frayer, Mc Graw Hill Publisher 2nd edition.

GLOBAL SUPPLY CHAIN AND LOGISTICS MANAGEMENT	3	2		3				

Subject	**LOGISTICS AND WAREHOUSE MANAGEMENT**		
Subject Code	20MBASC402		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To understand the role of logistics in competitive environment.
2. To enable students with outsourcing logistics and its modal characteristics.
3. To identify various applications in warehouse management system and its performance
4. To know importance of distribution channels for logistics management.

Course Outcomes: At the end of the course, the students will be able to:

1. understand the various roles of logistics in competitive strategy.
2. understand the transport functionalities and the suitable modal characteristics of logistics.
3. implement different applications in warehouse management for better operations.
4. identify areas for improvement and devise proper distribution channels.

Unit I: (**9Hours)**

INTRODUCTION TO LOGISTICS MANAGEMENT: Definition – Objectives of Logistics Management Types of Logistics, Scope of Logistics, Importance of Logistics Management, 7R's of Logistics Management, Need & Development, Functions, Role of logistics in Competitive strategy, Role of Logistics in the supply chain management – Role of Logistics in the Economy , Role of Logistics in the organization, E-Logistics-Components , advantages , Green Logistics

Unit II: **(8Hours)**

DISTRIBUTION CHANNELS, OUTSOURCING AND REVERSE LOGISTICS :

Distribution channel structure- channel members, channel strategy –Support in distribution channels - Logistics requirements of channel members – Distribution Requirement Planning, Benefits of DRP, Distribution Resource Planning-meaning & Components, Differentiated between DRP I and DRP II

Logistics outsourcing –Reasons, Pros & Cons of Outsourcing, Supply Chain Integration-Third Party Logistics, Fourth Party Logistics-Benefits & Functions.

Reverse Logistics: Types of reverse logistics

Unit III: **(9Hours)**

TRANSPORTATION, MATERIAL HANDING AND PACKAGING

Transportation Management– Transportation Infrastructure, Transport functionality and principles , Role of Transportation Logistics, Traffic and transportation strategy, Single mode operators – specialized carriers – Intermodal Operators – Non operating intermediaries.

Transportation Management – Basic Transport economics and pricing , Factors affect the Choice of Transportation Mode, Criteria for Carrier Selection. Carrier Selection Process, Carrier Selection Determinants

Material Handling – Objectives, Functions & Importance of Materials Handling, material handling principles, Managing the warehouse resource – Handling requirements – Storage requirements – Basic Handling considerations Packaging – Perspectives- Consumer Packaging- Industrial Packaging. Damage protection

Unit IV: **(8Hours)**

WAREHOUSE MANAGEMENT

Warehousing functions, Benefits of Warehousing, Warehousing Principles, Types, Importance , Relationship with other functions stores systems and procedures, incoming - materials control-stores accounting and stock verification, operational efficiency productivity- cost effectiveness-performance measurement, Factors Affecting WarehousingWarehouse facility development , kinds of storage, warehouse management systems

Unit V: **(5 Hours)**

Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to IV

Subject	STRATEGIC PROCUREMENTAND QUALITY MANAGEMENT		
Subject Code	20MBASC403		
Credits	3:0:0:0	CIE Marks	50
Total no. of Lecture Hours	39	SEE Marks	50

Course Objectives:

1. To develop competencies and excellence in procurement management
2. To explain how procurement is influenced by the business environmental factors and has increasingly become visible in a world where supply is a major determinant of corporate survival and success.
3. To provide a synopsis of the different quality management philosophies
4. To imbibe a culture of managing quality across the entire supply chain.
5. To have exposure to challenges in Quality Improvement Programs.

Course Outcomes: At the end of the course, students will be able to:

1. Examine the key processes of procurement management in order to assess their roles in a business system.
2. Apply the knowledge of procurement to make appropriate procurement decisions in different business situations
3. Recommend sourcing strategies through supplier evaluation systems for the acquisition of different products and services.
4. Apply key elements of quality management in areas of leadership, customer focus and satisfaction, supplier partnership, employee involvement, performance measures etc
5. Analyze the process of quality management and reduce variations thereby.

Unit I: **(8 Hours)**

Procurement Management: An overview, changing role of purchasing, Purchase orders(PO): Product PO and service PO, Procurement management process, Tools and techniques, Strategic purchasing, Globalization and strategic purchasing, Strategic purchasing process, Internal aspects, Vertical internal alignment, Horizontal internal alignment, Horizontal integration and the role of purchasing, Preventing a misalignment,Price cost Analysis in Purchasing,.

Unit II: **(10 Hours)**

Sourcing strategies: Traditional sourcing, Global sourcing, Elements of strategic outsourcing ,Category management, Portfolio models, Kraljic matrix, Effects of Globalization, Supplier Selection, Single vs multiple sourcing, Supplier relationship management, Supply chain networks, Supplier involvement, Contract management, Purchasing profession, Development of skills for a purchasing department, Importance of purchasing services, Ethical sourcing and corporate social responsibility.

Unit III: **(7 Hours)**

TQM Framework, benefits, awareness and obstacles, Quality- Vision, Mission and Policy statements, Customer Focus- Customer perception of quality, Customer Retention, Kano Model, Dimensions of product and service quality, Cost of quality.

Contributions of Deming, Juran, Crosby, Masaaki Imai, Feigenbaum, Ishikawa, Taguchi Loss Function,

Unit IV: **(9 Hours)**

Quality Requirements for suppliers, Quality Function Deployment, Process, benefits, Quality councils in TQM,Voice of Customer, FMEA, Seven Quality Control Tools – Old and New, Business Process Reengineering, Benchmarking, Supplier quality certifications : CSQP,CQPA, CQIA, Six sigma : Six sigma Green Belt and Six sigma Black Belt.

Unit V: **(05 Hours)**

Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to IV

Subject	**INTERNET TECHNOLOGY AND SCM**		
Subject Code	20MBASC404		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. To enable students to understand the impact of Internet Technology (IT) and Information Systems (IS) in international business operations.
2. To develop the students' ability to identify sources of information through decision-making process by leveraging IT and networking.
3. To learn the concept of System architecture, ERP and Decision support system.

4. To develop practical applications as well as the ability to recommend how IS and IT should be used in global business.

Course Outcomes:At the end of the course, students will be able to:

1. Understand the role and impact of IT in supply chain process..
2. Analyze the various tools and techniques useful in implementing new Internet technologies in the organizations
3. Understand the concept of System architecture, ERP and Decision Support System
4. Learn the various Technological Excellence tools to compete in global market.

Unit I: **(9Hours)**

The role of IT in Supply chain .Uses of IT in inventories, transportation & facilities within a supply chain .The Supply Chain IT frame Work-macro Processes

The future of IT in the Supply Chain. Internal Supply Chain management, Supply relationship management, The Transaction Management Foundation .Data mining

Unit II: **(7 Hours)**

Goals of Supply Chain information Technology, Supply chain Management System Components, Standardization, information Technology infrastructure – Presentation Devices, Communication Devices , System architecture.

Unit III: **(9 Hours)**

The Supply chain IT in Practice, Integrating Supply chain information Technology, Stage of Development, Implementation of ERP & DSS. Structure of DSS,Selection of Supply Chain DSS. Supply chain master Planning. Supply chain information System Design –Planning,Capacity, Performance requirement manufacturing requirement, Operation,Transportation, Inventory development, E-Business - Role in Supply chain, Framework, Impact on Cost.

Unit IV: **(9Hours)**

Technological Excellence - Technology and its importance in global manufacturing, manufacturing innovations: Productivity & Incremental Innovation. Crucial issues of Flexible Technology- Strategic Evaluation of Technological Investments

Unit V: **(5 Hours)**

Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to IV

Subject	**CUSTOMER RELATIONSHIP MANAGEMENT**		
Subject Code	20MBASC405		
Credits	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. The course provides the direct response perspectives on customer relationship and creates an awareness of interactive communication platforms.
2. It also seeks to assess the factors considered in, and procedures used for, buying direct mail assess and the strategies for delivering effective messages via direct-response techniques.
3. It provides the knowledge about the customer relationship management at national and global prospect.
4. To enable the students understand the technological and human issues relating to implementation of Customer Relationship Management in the organizations.

Course Outcomes: At the end of the course, students will be able to:

1. Understand the management components of Customer relationship management.
2. Apply the tools and techniques useful in implementing effective Customer relationship management system.
3. Analyze the advantages of promoting the products through Internet advertising.
4. Demonstrate the knowledge of the customer relationship management cycle from acquisition to retention.

Unit I: **(9 Hours)**

Customer Relationship Management (CRM) in B2B: Introduction, Strategic CRM, Relationship Marketing, Buyer – Seller, Connector, Managing Buyer – Seller Relationships, Customer Relationship Management, Advantages of gaining a Customer Relationship, CRM constituencies.

Customer relationship management value chain: Introduction, Primary stage of the CRM value chain, The supporting conditions of CRM value chain.

Unit II: **(9 Hours)**

Customer Relationship and Database Marketing: A Media Perspective - Customer Relationship Marketing- CRM Techniques- Database Marketing- Life Time Value Concept Behavioral Mapping- Customer Loyalty.
Information technology for CRM, Introduction to M Commerce and Blogging - Concept- Advantages- Challenges Mobile Mass Media concept- M Commerce as an advertising Medium- Interactive Media Concept- Blog as a communication Medium

Unit III: **(9 Hours)**

Direct response: Catalog Marketing- B2B and Consumer Magazines- Negative Option direct response - DRTV- Advantages- Challenges DRTV Formats- TV Shopping networks- Per Inquiry concept- Contemporary Market Scenario
Internet Advertising and E Commerce - Online advertising – Types of ads- Formats Cost and response rates- Integrating Internet with PR and Sponsorship Programs- Measuring Online Marco mm- Current Internet Scenario. Concept- Advantages- Internet barriers and concerns- Offline advertising in ecommerce- Contemporary E commerce advertising.

Unit IV: **(9 Hours)**

Managing the customer life cycle : customer acquisition, customer value estimates, key performance indicates of customer acquisition programs, Using customer data to guide customer acquisition. Economies of customer retention, Strategies for customer retention, Key performance indicators of customer retention programs.
Organizing for customer relationship management: introduction, strategic goals of CRM, conventional customer management structures, person to person contacts.

CRM Implementation: Choosing the right CRM Solution; Framework for Implementing CRM: a Step-by-Step Process: Five Phases of CRM Projects: Development Customizations; Beta Test and Data Import; Train and Retain; Roll out and System Hand-off; Support.

Unit V: **(3 Hours)**

Case study: Compulsory question for 20 Marks. Review and recap of case studies discussed from Unit I to Unit IV

TEXT BOOKS:

1. Integrated Marketing Communications by David Pickton, Amanda Broderick, pearson
2. Database Marketing- Analyzing and Managing Customers by Blattberg, Robert C., Kim, Byung, Springer.
3. Customer Relationship Management: concepts and tools, Francis Buttle, second edition, Elsevier Butterworth – Heinemann.

REFERENCE BOOKS:

1. Customer Relationship Management (Briefcase Books Series) by Kristin L. Anderson and Carol J. Kerr (1 October 2001), McGraw-Hill Professional
2. M-Commerce: Technologies, Services, and Business Models by Norman Sadeh, John Wiley & Sons
3. E-Commerce and Mobile Commerce Technologies by Rahul Srivastava, S. Chand Publisher.
4. Customer Relationship Management : A global prospect, Gerhard Raab, Riad. Ajami, Vidyaranya B, Jason Goddard,Routledge publisher, 2016.

Subject:	**E-MARKETING**		
Subject Code:	20MBASC306		
Credits:	3:0:0:0	**CIE Marks**	50
Total no. of Lecture Hours:	39	**SEE Marks**	50

Course Objectives:

1. To understand the important concepts related to e-marketing
2. To learn the use of different electronic media for constructing marketing activities.
3. To introduce to the students the current tools in e-marketing space.

Course Outcomes: At the end of the course, students will be able to:

1. appreciate the challenges required for effective E- Marketing Management.
2. understand and apply the tools and techniques used in E-Marketing.
3. anticipate E-Marketing problems and issues common in the modern workplace.
4. increase overall knowledge of creative e- marketing concepts and practices

Unit I: (8 Hours)

Introduction to E-Marketing: Landscape – Past – Today – Future – Internet Marketing Paradigm – Internet Infrastructure Stack Business Models & Strategies: Strategic Planning – Strategy to Electronic Planning – Strategic Drivers of the Internet Economy – Business Models to E-Business Models – E business Models – level of commitment to E-business Performance Metrics – The Balanced Scorecard

E-Marketing Plan: Overview of the E-Marketing Planning Process – Creating an E Marketing Plan – A Seven-Step E-Marketing Plan

Unit II: (10 Hours)

The E-Marketing Environment: Overview of Global E-Marketing Issues – Country and Market Opportunity Analysis – Technological Readiness Influences Marketing – Wireless, Internet Access – The Digital Divide Ethical and Legal Issues – Privacy – Digital Property – Online Expression

E-Marketing Research: Data Drive Strategy – Marketing Knowledge Management – Monitoring Social Media- Social media Measurement Pyramid-Awareness & Exposure, Brand health, Engagement, Action, Innovation- – Technology-Enabled Approaches – Real-Space Approaches – Marketing Databases and Data Warehouses – Data Analysis and Distribution – Knowledge Management Metrics - Consumer Behaviour Online – Segmentation-Important Geographic Segmentation of E-Marketing – Targeting – Differentiation – Positioning Strategies

Unit III: (9 Hours)

E-Marketing Management: Product – Products on Internet – Creating Customer Value Online – Product Benefits – E-Marketing Enhanced Product Development – Price – Pricing Objectives, Change in Pricing Strategies – Buyer and Seller Perspectives – Payment Options — Distribution – Online Channel Intermediaries – Distribution Channel Length and Functions — Distribution Channel Metrics – Promotion – Integrated Marketing Communication (IMC)-AIDA Model – Internet Advertising – Marketing Public Relations – Sales Promotion Offers – Direct Marketing – Personal Selling – IMC Metrics

Unit IV: (6 Hours)

Emerging Issues:- Online Governance and ICANN – Jurisdiction – Fraud – Consumer Loyalty of Website-Services – The Quadratic Effect of Flow – Role of Technology Readiness in Developing Trust and Loyalty for E-Services in Developing Countries.

BUSINESS ANALYTICS SPECIALIZATION

Subject	**ADVANCED ANALYTICS**		
Subject Code	20MBABA401		
Credits	3:0:0:0	**CIE Marks**	50
Total No.: of Lecture Hours	39	**SEE Marks**	50

Course Objectives:

1. Learn the advanced analytics across upcoming industries with real time case studies and understand it's applications.

Course Outcomes: At the end of the course, the students will be able to:

1. Gain Understanding of Strategic to Tactical application of Analytics. Applying Predictive and Prescriptive Analytics in advanced fields.

Unit I: **(13 Hours)**
Procurement and Logistics: Procurement -Category Management, Strategic Sourcing, Spend Analytics, Supplier Selection using AHP and ANP, Category Management with Case Study, Case Study - Spend Analytics, Exercise- Spend Analytics. Logistics and Warehouse management, Network Design, Case Study - Logistics Analytics. Exercise - Logistics Analytics, Basics of Inventory management.

Unit II: **(07 Hours)**
Project Case Study : A case study will be provided which the class needs to solve and present in groups.

Unit III: **(13 Hours)**
People Analytics : People Analytics and HR Analytics, Workforce Analytics, Talent Acquisition Analytics, Talent Retention Analytics, Performance Management Analytics,Disruption in HR, Future of Work, Engagement in the new era, Trends in HR functions, Coping with Pandemic and post, AI and Blockchain in HR, Social Media and HR.

Unit IV: **(06 Hours)**
Project Case Study : A case study will be provided which the class needs to solve and present in groups.
.

TEXT BOOKS:

1. Analytics 3.0 – Thomas Davenport – HBR.
2. A Marketing Analytics framework for CMOs – Gartner.
3. Advanced Analytics – Predictive, Collaborative and Pervasive – Gartner.
4. Gartner's Business Analytics Framework.

REFERENCE BOOKS:

1. People Styles at work…Beyond , Robert Bolton and Dorothy Grover Bolton, Latest Edition
2. The Employee Experience - How to attract talent, Retain top performers, and Drive Results, Tracy

Course Objectives:

1. To study the key concepts, tools, basic statistics & practical applications of all the knowledge.
2. This course should make the student to understand the importance of analytics in marketing department along with data skills, gain an in-depth understanding of Business Marketing Analytics.

Course Outcomes: At the end of the course, the students will be able to:

9. In this course, student will learn about CLV, CST, Positing and analyzing the customer need and satisfactions.
10. In this course, student will gain complete knowledge on management frameworks in business.
11. Student will gain hands on practice experience using statistical tool R Studio/Excel for end to end model building.
12. In this course, student will acquire individual capabilities and build Market Basket Analysis and Customer Churn Prediction in Telecom Industry.

Unit I: **(06 Hours)**

Introduction to Marketing Analytics: Introduction, Segmentation and Targeting, Positioning, Analyzing customer satisfaction, Customer lifetime value, Customer choice, Conjoint analysis.

Unit II: **(10 Hours)**

Management Framework: Structured Problem Solving, Find and Target Most Attractive Customer Segment, Evaluate Macro And Environment Factors, Evaluate Company's Competitive Position, Evaluate Industry's Attractiveness, Product & Market Expansion, Product Portfolio Management, Go To Market Strategy, Business Strategy Development, Organizational Analysis, Product Management, Purchase Funnel

Unit III: **(13 Hours)**

Data Mining Using RFM Analysis: Introduction, RFM analysis, Data mining + RFM - Clustering using RFM, Classification using RFM, Association rule mining using RFM, Case study – Data Preprocessing, RFM model, Customer segmentation, Customer behavior prediction, Product recommendation &Conclusion

Unit IV: **(10 Hours)**

Real Time Case Study: MBA- Market Basket Analysis and Predict the customer churn for a telecom company.

TEXT BOOKS:

1. An Introduction to Statistical Learning With Applications In R ,Gareth James, Daniela Witten, Trevor Hastie and Robert Tibshirani.
2. Reference material of Analytics Edge - Marketing Analytics and Marketing Mix Analysis Case Study.

Subject	**CAPSTONE PROJECT WORK**		
Subject Code	20MBA407		
Credits	10	**CIE Marks**	50
Duration	10 weeks	**SEE Marks**	100

Course Objectives:

1. To provide an opportunity for students to apply theoretical concepts in real life situations at the work place
2. To sensitize students to the nuances of corporate culture and familiarize them with the corporate code of behavior and in the process discover their professional strengths and weaknesses and align them with the changing business environment
3. To enable students to manage resources, work under deadlines, identify and carry out specific goal oriented tasks thereby imbibing traits of a manager.
4. To enhance the research and analytical skills of the students
5. To sharpen domain knowledge and provide cross functional skills
6. To explore real-time experience based on their theoretical concepts learnt in their course

Course Outcomes: At the end of the course, students will be able to:

1. demonstrate their fundamental skills, understanding and application of principles and functions of management in a corporate setting.
2. demonstrate managerial traits of working under uncertainty, optimum utilization of resources meeting deadlines.

3. demonstrate an ability to hone interpersonal skills to lead and facilitate team work and to achieve organizational goals.
4. demonstrate analytical and problem solving skills.
5. employ critical-thinking skills in selecting strategies that are appropriate in addressing organizational problems.
6. apply learning experience with their real-time work done in their organization

Introduction

All the students of Master of Business Administration (MBA) are required to undertake a major individual piece of project work the aim of which is to give students the opportunity to learn independently so that they can identify, define and analyse problems and issues and integrate knowledge in a business context.

The project should be an ordered critical exposition, which affords evidence of reasoning power and knowledge of the relevant literature in an approved field falling **within the subject matter of the programme - Management**. The emphasis should be on application of concepts and the investigation of some practical problem or issue related to the situation in which an organization or system operates.

General Guidelines

Unlike any other academic assignment, Project provides the opportunity to judge the student’s time and self-management skills and his/her ability to successfully undertake a long and in-depth study of an applied nature, synthesizing various elements, yet pursing one area of interest in depth. The report should highlight what the student has attempted and why; the methods used to collect, collate and analyze the information obtained; the mode of evaluation etc. Any suggestions made should be supported by the evidence presented and by logical argument using deductive and inductive reasoning.

A. Nature of Project Work:

The student will have to carry out their project work in their area of specialization. Project work is an In-plant where a student needs to give an in-depth portrayal of the issues or situations from the business environment.

B. Choosing a Topic:

The choice of topic is up to the students, with guidance from their supervisor. The ideas can come from personal experience, observation of events and issues of current interests. Initial ideas are likely to originate in a vague form and may lack a clear focus. These then need to be developed into something manageable and practical by consideration of available literature/ texts and discussion with project supervisors once allocated. Whatever the source of your project idea, familiarity with the area is imperative for the successful completion of the project.

B. Duration of the Project Work

The Project Work shall be for a period of 10 weeks between 3rd and 4th semester. Students are expected to take up the preliminary work such as identifying the organization, finalization of topic and review of literature before the commencement of the 4th semester.

C. Guide:

Students must ensure that they maintain regular contact with their guide and also that they provide the guide with drafts of their work at regular intervals.

Internal guide of the Project Work will be a fulltime faculty member from the department with minimum of three years of experience.

D. Students Capstone Project Work will be checked with Plagiarism Check, which should be less than the prescribed limit as per the course regulations.

E. Activity Chart for Preliminary Work:

ACTIVITY	**TIME LINE**	**REMARKS**
• Identifying the organization • Briefing about Industry and Company Profile	First two weeks of 3rd semester	Student individually identifies an organization
• McKinsey's 7S frame work with special reference organization under study • Problem Identification		Student identifies the problem according to his/her study based on his/her interest
• SWOT Analysis • Problem Statement	Third week of 3rd semester	His/her interests are discussed with selected guide(s)
Research Design	Fourth week of 3rd semester	Discussion with internal guide on suitable research design
Synopsis Preparation	Fifth and Sixth week of 3rd semester	Preparation of synopsis* with his/her objectives
Presentation of Synopsis	Seventh and Eighth week of 3rd semester	The student will present synopsis with the detailed execution plan to the project work committee* who will review and may: a) approve b) approve with modification c) Reject for fresh synopsis
Approval Status	Ninth and Tenth week of 3rd semester	The approval status is submitted to HoD who will officially give concurrence for execution of the project work

***Synopsis: It is a 3 page document / hard copy to be submitted to the HoD with the signatures of Guide and the Student.**

Page1	Title, contact addresses of student - with details of internal & External Guide
Page 2	Short Introduction with objectives and summary (300 words), Review of articles/literature about the topic with source of information.
Page 3	Time-Activity Chart

****Composition of the Project Work committee**

1. Director/HOD
2. Domain expert from the department
3. Internal Guide

F. Schedule to be followed during Project Work

Activity	Timeline	Remark
Briefing about Industry and Company Profile Understanding Structure, Culture and functioning of the organization	First 2 weeks of project work	Student should understand Products / services and the problems of the organization.
Preparation of Research instrument for data collection	3rd and 4th week of project work	Discussion with the guide for finalization of research instrument in his / her domain and present the same to the guide. **(First Presentation)**
Data collection	5th & 6th week of project work	Date collected to be edited, coded, tabulated and presented to the guide for suggestions for analysis. **(Second Presentation)**
Analysis and finalization of report	7th & 8th week of project work	Students must use appropriate and latest statistical tools and techniques for analyzing the data. (It is must to use Statistical Package whose result should be shown in the report) **(Third Presentation)**
Submission of Report	9th and 10th week of Capstone Project work	Final Report should be submitted to the University before one week of the commencement of theory examination

G. Evaluation:

- **Internal Evaluation:** Internal evaluation will be done by the internal guide.
- **External evaluation:** External evaluation shall be done by a faculty member of other institute with minimum of 05 years' of experience.
- **Viva-voce / Presentation**: The viva-voce examination will be conducted by the respective HOD / Professors of the department and an expert drawn from other institutions with minimum of 05 years of experience as appointed by the COE.
- **Capstone Project Work** carries 100 marks consisting of 50 marks for internal evaluation by the internal guide(CIE), And 100 marks for external evaluation (SEE) wherein 50 marks for viva-voce examination and 50 marks for project report is allocated which would be converted back together to 50 marks.
- **Format of the Capstone Project Work report**: The Project Work report shall be prepared using word processor, using Times New Roman font sized 12 for body text, 16/14 font size for heading and sub-heading respectively on a page layout of A4 size with 1" margin on all sides and 1.5 line spacing and paragraph spacing. The Project Work report shall not exceed 80 pages.

H. Submission of report: Students should submit 2 hard copies of the Project Work report (Royal Blue Color) and one in electronic data form, in PDF file (Un-editable format) to the Institute within 6 weeks of the commencement of 4th semester.

I. **Publication of research findings:** Students are expected to present their research findings in seminars / conferences / technical fests or publish their research work in journals in association with their internal guide. Appropriate weightage should be given to this in the internal evaluation of the project report

Contents of the Capstone Project Work (Project) Report

- Cover page
- A certificate from the Organization (Scanned copy of the certificate)
- A certificate from the guide, HOD and Head of the Institution (Scanned copy of the certificate) indicating the bonafide performance of Project Work by the student.
- Declaration (Scanned copy of the declaration) – An undertaking by the student to the effect that the work is independently carried out by him/her.
- Acknowledgement
- Table of contents
- List of Tables and Graphs
- Executive summary
- Main Body of the Report
- References
- Annexure

Report should be document and supported by given detail information-

3. **Chapter 1: Industry profile**-Introduction to the Industry, History and evolution of industry, nature, growth potential, influencing economic factors, competitors' analysis, market share, governmental regulations.

4. **Chapter 2: Company profile-** Introduction about the organization and Capstone elements, company profile: (Promoters, Vision, Mission & Quality Policy, Products / Services profile, Areas of Operation(Concepts Learnt in the Subject), Competitors' information, Future growth and prospects and Financial Statement

- McKinsey's 7S frame work with special reference organization under study: Structure: **Overall organizational structural details — Board of Directors/ Functional heads etc. Sub structure detailing with each functional discipline. Detailed study of various departments & their function.** Skill: **Classification of skill or study of skill matrix: Detail the steps taken to impact necessary skills – on the job/off the job training.** Style: **Top down / Bottom up Authoritarian / participative Any one decision making parameter should be studied pertaining to day-to-day operation, to conclude the style of functioning.** Strategy: Any one strategy adopted by the company should be considered to explain, "How it is implemented" e.g. — pricing/waste elimination etc. System: System followed in any one department in the organization should be detailed. E.g: Inventory control system / order execution system / Merit rating system etc. Staff: Classification/Duties and responsibility of various groups of staff. E.g.: Technical / supervisory / Clerical. Shared value: Study of implementing shared value in the company by an illustration, where the company has implemented its stated objective.

  Internal and External Environment Analysis i.e. SWOT Analysis of the company

- **Chapter 3: Research Methodology**-Introduction about the Capstone Project Work, Topic chosen for study, Need for the study, Detailed Literature Review, Research Gaps, Statement of the Problem, Objectives of the study, Hypothesis, Scope of the study, Methodology adopted, Limitations of the study.

- **Chapter 4**: **Data Analysis**- Analysis and interpretation of the data Collected with relevant tables and graphs. Results obtained by using statistical tools must be included.

- **Chapter 5:** Summary of Findings, Suggestions, Conclusion, Learning Experience

- **Bibliography:**APA referencing styles can be used to write the Bibliography.
- Annexure relevant to the project such as figures, graphs, photographs etc.

KNOWLEDGE ★ CHARACTER ★ UNITY

MCA SCHEME & SYLLABUS

2022-2024

VISION

To prepare students for challenging global careers with a focus on innovation and entrepreneurship to meet the demands of the ever-changing IT industry and for the development of society.

MISSION

- To provide quality and industry-oriented education in applied Computer Science through well-defined teaching learning process and best practices.
- To promote creativity among students through projects and practical perception
- To inculcate leadership and entrepreneurial skills through holistic development of students.

PROGRAM EDUCATIONAL OBJECTIVES (PEO'S)

- Design and develop the computer applications to meet the end customer end and also to adapt for ever changing IT technologies
- Effective and efficient leader of a team in IT/ITES industry and engage in lifelong learning.
- Develop a positive attitude towards social and cultural issues and imbibe integrity and ethical values.

PROGRAM OUTCOMES (PO’s)

1. **Computational Knowledge:** To equip students with core theoretical knowledge, technical, analytical, practical skills and managerial abilities to compete in a global environment
2. **Problem Analysis:** To equip students with the ability to analyze, design and assess software systems to meet users requirements
3. **Design / Development of Solutions:** To equip students with an ability to apply development principles in creating software systems for diverse customers
4. **Modern Tool Usage:** To equip students with the ability to use current techniques and tools for computing practices
5. **Conduct investigations of complex problems:** To equip students to with an ability to analyze and interpret data and provide valid conclusions.
6. **Project management and finance:** Students will have the ability to employ effective project management skills to develop a project plan, monitor and track development efforts
7. **Individual and team work:** Students will have an ability to work as members of multidisciplinary teams to achieve a common goal
8. **Communication:** To equip students with an ability to communicate effectively with a wide range of audiences
9. **Life-long learning:** Students will have the ability for self-improvement through continuous professional development and life-long learning
10. **Innovation and Entrepreneurship:** To equip students with leadership qualities and interpersonal skills through various co-curricular and extra-curricular activities
11. **Environment and sustainability:** An ability to analyze the local and global impact of computing on individuals, organizations, and society
12. **Ethics:** To mould students as ethical, socially-committed individuals who will act with honesty and integrity and contribute to the betterment of the society and nation

PROGRAM SPECIFIC OUTCOMES (PSO's)

1. The ability to analyse, design and develop computer applications using programming tools, algorithms and data structures.
2. The ability to apply standard tools, techniques and practices of software engineering, testing and project management to deliver efficient and quality applications

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

COURSE STRUCTURE

Course Category	Number of Credits
Core Courses	**54** Credits
Elective Courses	**18** Credits
Skill Enhancement Courses	**05** Credits [Mini Project + MOOC+ Technical Seminar + Aptitude & Soft skills]
Out Reach Programme: (Conferences / Symposiums / Technical Meets / Workshops / Etc.,)	**23** Credits [Internship + Project work]
Total	**100 Credits**

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY
Department of Master of Computer Applications

M.C.A.CURRICULUM- 202 2

BRIDGE COURSES

S. No.	Course Title	Total Hours*
1.	Fundamentals of Computers	12
2.	Introduction to Problem Solving	12
3.	Introduction to Computer Programming	12

***6 Days x 6 Hours per day of 03 subjects above = 36 Hours (Each Subject 02 hours per day)**

22MCA 001: FUNDAMENTALS OF COMPUTERS

Objectives:

- To get familiar with the fundamental concepts of Computers.

Outcomes:

- Ability to gain basic knowledge in computer science domain.

MODULE-I

Computer Basics: Simple Model of a Computer, Characteristics of Computers – Computer classifications and generations - Data Representation.

MODULE-II

Introduction to Microprocessor - Input / Output Units – Computer Memory – Storage – DatabaseManagement Systems - Binary Arithmetic – Logic Circuits.

MODULE-III

Introduction to Operating Systems – Programming languages – Multimedia - Computer Networks.

Text Book:

1. V. Rajaraman, Neeharika Adabala : Fundamentals of Computers, Prentice Hall India LearningPrivate Limited; 6th Revised Edition (2014)

22MCA 002: INTRODUCTION TO PROBLEM SOLVING

Objectives:

- To get familiar with various problem solving techniques.

Outcomes

- Ability to solve problems using various approaches.

MODULE-I

Introduction to problem solving – Top-down design – Implementation of algorithms – program verification – efficiency & analysis of algorithms.

MODULE-II

Basic problem solving approaches: Factoring methods – Array techniques – Merging, Sorting & Searching.

MODULE-III

Text processing - Pattern searching – Dynamic Data Structures - Recursive algorithms.

Text Book:

1. R. G. Dromey, How to Solve it by Computer, Pearson Education India; 1st edition (2006).

22MCA003: INTRODUCTION TO COMPUTER PROGRAMMING

Objectives:

- To develop C Programs using basic programming constructs
- To develop C programs using arrays, strings, functions, structures & Files.

Outcomes:

- Ability to code in C Language.

MODULE - I

Introduction to programming paradigms - Structure of C program - C programming: Data Types – Storage classes - Constants – Enumeration Constants - Keywords – Operators: Precedence and Associativity - Expressions - Input/Output statements, Assignment statements – Decision making statements - Switch statement - Looping statements – Pre-processor directives - Compilation process.

MODULE - II

Introduction to Arrays: Declaration, Initialization – One dimensional array – Two dimensional arrays

– String operations: length, compare, concatenate and copy – Introduction to functions: Function prototype, function definition, function call, Built-in functions (string functions, math functions) – Recursive function.

MODULE - III

Structure - Nested structures – Pointer and Structures – Array of structures – Files – Create, Open, Close, Processing of file content.

Text Book:

1. Reema Thareja, Programming in C, Oxford University Press, Second Edition, 2016.
2. Kernighan, B.W and Ritchie, D.M., The C Programming language, Pearson Education, Second Edition, 2006.

GENERAL GUIDELINES OF THE MCA COURSE

Course Title: Project Work, Course Code: 22MCA403P

Dissertation Work Guidelines

- The student shall carry out the project work in the same Institution or in any Industry / R&D labs based on software tools and technologies learnt in MCA Course/Internship for a minimum period of 16 weeks.
- The dissertation work shall be carried out by each candidate independently under the guidance of one of the faculty members of the Department.
- If dissertation is carried out in any Industry/R&D Labs, outside the campus, the name of external guide at the organization shall be intimated to the Head of the Department.
- Project work may be application oriented or research oriented as per student and guide‘s interest. Therefore the project reports will vary depending on whether it is application oriented project or research based project.
- Project work dairy should be maintained by the students, signed by the external guide and internal guide.
- At the end of the semester each candidate shall prepare a draft report of the dissertation work and submit it for plagiarism check (Plagiarism≤20%) using facility in NMIT library.
- The report shall be duly approved by the internal guide after the plagiarism check.
- The candidate shall submit two hard bound copies and the soft copy of the dissertation work to the Head of the Department.
- A separate calendar of events for submission of dissertation and viva-voce shall be fixed by the examination section and shall be notified.
- The candidates who fail to submit the dissertation work with in the stipulated time have to submit the same at the time of next ensuing examination.
- The internal examiners and the external examiners shall be appointed by the COE / Principal for the Final Evaluation of the project.
- A copy of the dissertation shall be sent to the external examiners by the Chairman of BOE.
- If there port is rejected, internal guide has to communicate to the candidate for modification as per the suggestions made by the External Examiner and resubmit.
- Internal guide and External Examiners shall carry out the evaluation of Dissertation reportfor50 marks individually.
- Dissertation assessment by the internal guide will be considered as **CIE** and dissertation assessment by the external examiner will be considered as **SEE.**
- The students shall give poster presentation of their project before the SEE.
- The students shall also prepare a research paper of their project in the prescribed format and submit it to their guides before SEE.

Internal Evaluation and Viva Voce Guidelines:

- Internal assessment (CIE) shall be evaluated by both the **internal and external guide** for 50 marks individually. The average of the marks allotted by the internal and external guides shall be the final marks for the Internal Evaluation.
- The project presentation and Viva-Voce (SEE) shall be evaluated jointly by both the **Internal and External examiners** for 50 marks.

Industry Internship Guidelines (Subject Code: 22MCA402I)

- All the students have to undergo mandatory internship of 06 weeks duration during the vacation of **III** semester.
- Students have to undergo the Internship in any Institute of National repute or any reputed / well-known Industry.
- The Industry Internship shall be carried out by each candidate independently under the guidance of one of the faculty members of the Department.
- On completion of Internship they shall submit a brief report to the department.
- Internship shall be considered as a head of passing and shall be considered for the award of degree.
- Those, who do not take-up/complete the internship shall be declared as **fail** in internship course and have to complete the same during the subsequent semester.
- After satisfying the internship requirements the degree will be awarded .However, student can carry out 4thsemester project without completing the internship.

MOOC COURSE Guidelines (Subject Code: 22MCA401C)

- A self-study certification course i.e. Massive Open Online Course (MOOC) of 02 credits shall be completed by all the students during the course for the award of the degree.
- The course duration for 02 credits shall be of 08 Weeks only.
- The students will have to register and take up proctored exam only through **NPTEL** under **SWAYAM** portal.
- **The certificate taken from any other online certification course other than NPTEL for MOOC is considered to be invalid.**
- The list of courses under computer Science will be recommended by the department after NPTEL has announced the list of upcoming courses in SWAYAM portal.
- The certificate obtained after taking up the proctored exam will be submitted and the marks obtained will be considered for CIE.
- However there will be no separate SEE for the MOOC course.
- The student can take up the MOOC course any time during the entire duration of the MCA course.
- The student will be considered as fail in MOOC Course in case he/she
  - Scores less than 50 out of 100 in the proctored examination.
  - Fails to submit the certificate in the IV semester.

Mini Project-IoT Guidelines (Subject Code: 22MCA310P)

A Mini Project based on IOT will be implemented and presented by a group of students (group size about Two to Six)

- The mini project will be carried out by the group of students under the guidance of one of the faculty members of the department.
- The team must submit a brief project report containing at-least (20-30 pages).
- An open house project exhibition will be conducted before SEE and the students shall give the demonstration of their working projects.
- The mini project examination will be conducted jointly by the internal and external examiners and marks shall be awarded jointly.

Technical Seminar Guidelines (Subject Code: 22MCA110S)

- Students should present the seminar on Cutting Edge/Emerging/State of the art technologies in the field of Computer Science and Applications.
- The seminar shall be carried out by each candidate independently under the guidance of one of the faculty members of the Department.
- The topic of the seminar shall be chosen by the candidate in consultation with the guide.
- Duration of the seminar should be approximately 30 minutes.
- At the end of the semester each candidate shall submit the report on the seminar title containing at-least 20 pages.
- The seminar examination will be conducted jointly by the internal and external examiners and marks shall be awarded jointly.

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY
Department of Master of Computer Applications
2022-SYLLABUS OF TEACHING AND EXAMINATION OF MCA FIRST SEMESTER

Object Oriented Programming using C++/JAVA
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	22MCA101	CIE Marks	50
Number of Lecture Hours/Week	04	SEE Marks	50
Total Number of Lecture Hours	50	SEE Hours	03

Credits – 04

COURSE DESCRIPTION

This course introduces computer programming using the JAVA programming language with object-oriented programming principles. Emphasis is placed on event-driven programming methods, including creating and manipulating objects, classes, and using object-oriented tools such as the class debugger.

PREREQUISITES

- Familiar with Object Oriented Principles.

COURSE OBJECTIVES

- To understand the basic concepts and fundamentals of platform independent object oriented language.
- To demonstrate skills in writing programs using exception handling techniques and Multithreading.
- To understand streams and efficient user interface design techniques.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**10 Hours**
Introduction To Java: How java changed the internet; Byte Code; Object oriented programming; First Simple Java program, Introducing Classes: Classes Fundamentals; Declaring Objects, Assigning Object Reference Variable; Introducing Methods; Inheritance Basics- using Super; Creating Multilevel Hierarchy**, Constructors:** When constructors are called?, method overloading, Dynamic Method Dispatch, Abstract classes, final with inheritance, method Overriding.	
Module 2	**10 Hours**
Packages and Interfaces, Exception handling in java: Packages, Access Protection, importing packages, interfaces. Exception Handling Fundamentals, Exception types, uncaught Exception, using try and catch, multi catch clause, nested try catch, throw, throws, finally, java’s built in exceptions, creating your own exception subclasses, chained exceptions, using exceptions.	
Module 3	**10 Hours**
Multi-Threaded Programming ; The java tread model, The main thread, Creating thread, creating multiple threads, Using isAlive() and join(), Thread priorities, Synchronization, Inter thread communication; Suspending , resuming and stopping threads. Introduction to I/O classes and class hierarchy.	

Module 4	10 Hours
Event Handling: Two event handling mechanisms; The delegation event model; Event classes; Sources of events; Event listener interfaces; Using the delegation event model; Adapter classes; Inner classes. Working with Windows, Graphics, and Text, Using AWT Controls, Layout Managers, and Menus. Swings: The origins of Swing; Two key Swing features; Components and Containers; The Swing Packages; A simple Swing Application;	
Module 5	**10 Hours**
Collections: The collection interfaces and classes, accessing collection via iterator, storing user defined classes in collections, the random access interface, working with maps, comparators, the collection algorithms, arrays, the generic collections, Introduction to client/server architecture, Java Servlets and JDBC with sample programs.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Java: The Complete Reference, Eleventh Edition, Herbert Schildt, McGrawHill, December 2018, ISBN: 9781260440249.

Reference Books:

1. Core Java Volume I Fundamentals, Eleventh Edition, Cay S. Horstmann, Pearson, August 2018, ISBN: 9780135167199.
2. Java: A Beginner's Guide, 8th Edition, Herbert Schildt, McGraw-Hill, November 2018, ISBN: 9781260440225.
3. Java Performance, 2nd Edition, Scott Oaks, O'Reilly Media, Inc., February 2020, ISBN: 9781492056119

TEACHING METHODS

- PPTs
- Blackboard
- Hands-On Sessions Based Teaching using Netbeans IDE

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation of Learning Activity based on Programming Assignments / Mini Projects for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks

Course Outcome (CO): At the end of this course, the students will be able to

CO1: Define the concepts of object oriented programming like Encapsulation, Abstraction and polymorphism to solve the real-life problems.
CO2: Demonstrate the usage of Interfaces, packages and Exception handling.
CO3: Apply the concepts event handling and applets for the internet programming.
CO4: Learn and apply the concepts of Collections and maps
CO5: Analyze the software requirements needed to develop an Enterprise Application.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	3							1	1				3	
CO2	2	2	2	2					1				3	
CO3		2	2	2					1				3	
CO4	3	2	2	1					1				3

Data Structures and Algorithms [As per Choice Based Credit System (CBCS) scheme] **SEMESTER – I**			
Subject Code	22MCA102	CIE Marks	50
Number of Lecture Hours/Week	04	SEE Marks	50
Total Number of Lecture Hours	50	SEE Hours	03
CREDITS – **04**			

COURSE DESCRIPTION

This course provides an in-depth knowledge of structures, pointers and dynamic memory allocation in C. The course also provides the knowledge of different data structures and their applications in solving real-world problems. This course introduces basic methods for the design and analysis of efficient algorithms emphasizing methods which are useful in practice. The computational problems for sorting, searching, Divide and Conquer, dynamic programming and greedy algorithms are discussed.

PREREQUISITES

- Computer Concepts and C Programming.
- Students should know data structures
- Students should know the usage of summation formulae and recurrences in mathematics

COURSE OBJECTIVES

- To understand the concept of pointers and, allocate and de allocate memory dynamically to pointers.
- To understand working principle of different types of data structures
- To identify and apply the appropriate data structure to solve a given problem.
- To understand the basic concepts and notations used in the design and analysis of algorithms.
- To solve problems using appropriate algorithms.
- To analyze and compare the performance of algorithms.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**8 Hours**
Classification of Data Structures: Primitive and Non- Primitive, Linear and Nonlinear; Data structure Operations, Stack: Definition, Representation, Operations and Applications: Polish and reverse polish expressions, Infix to postfix conversion, evaluation of postfix expression, infix to prefix, postfix to infix conversion.	
Module 2	**6 Hours**
Recursion - Factorial, GCD, Fibonacci Sequence, Tower of Hanoi. Queue: Definition, Representation, Queue Variants: Circular Queue, Priority Queue, Double Ended Queue; Applications of Queues. Programming Examples.	
Module 3	**10 Hours**
Linked List: Limitations of array implementation, Memory Management: Static (Stack) and Dynamic (Heap) Memory Allocation, Memory management functions. Definition, Representation, Operations: getnode() and Freenode() operations, Types: Singly Linked List. Linked list as a data Structure, Inserting and removing nodes from a list, Linked implementations of stacks, Header nodes, Array implementation of lists. **Double Linked List**: Inserting and Deleting	

Nodes, Queue as doubly linked lists, such as insert into position, Delete a specified element.	
Module 4	**6 Hours**
Introduction, Fundamentals of the Analysis of Algorithm Efficiency Notion of Algorithm, Fundamentals of Algorithmic Problem Solving, Important Problem Types, Analysis Framework, Asymptotic Notations and Basic efficiency classes, Mathematical analysis of Recursive and Non-recursive algorithms.	
Module 5	**12 Hours**
Brute Force: Selection Sort and Bubble Sort, Sequential Search, Exhaustive search and String Matching. Divide-and-Conquer Mergesort, Quicksort, Binary Search, Binary tree Traversals and related properties. Decrease-and-Conquer Insertion Sort, Depth First and Breadth First Search, Topological sorting. Greedy Technique Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Data Structures Using C and C++ by Yedidyah Langsam and Moshe J. Augenstein and Aaron M Tenanbanum, 2nd Edition, Pearson Education Asia,2002
2. Programming in ANSI C, Balaguruswamy, McGraw Hill Education.
3. Introduction to the Design and Analysis of Algorithms. Anany Levitin, Pearson Education, 2nd Edition.
4. Introduction to Data Structure and Algorithms with C++ by Glenn W.Rowe.

TEACHING METHODS

- PPTs
- Hands-On Sessions
- Blackboard

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation of Learning Activity based on Programming Assignments / Quiz / Mini Projects for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Demonstrate different data structures, its operations using C programming.
CO2: Analyze the performance of Stack, Queue, Lists, Searching and Sorting techniques.
CO3: Implement some applications of data structures in a high-level language such as C/C++
CO4: Design and apply appropriate data structures for solving computing problems.
CO5: Compute the efficiency of algorithms in terms of asymptotic notations for the given problem.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

Operating System with UNIX /LINUX [As per Choice Based Credit System (CBCS) scheme] SEMESTER – I			
Subject Code	22MCA103	CIE Marks	50
Number of Lecture Hours/Week	04	SEE Marks	50
Total Number of Lecture Hours	50	SEE Hours	03
CREDITS – 04			

COURSE DESCRIPTION

This course provides an in-depth knowledge of Process, Threads and resource management. This course gives the basic knowledge of Unix Operating System platform and API level introduction to concepts like files & directories in the Unix. The subject also introduces types of users and privileges supported to the users. Covers the different filters used in Unix.

PREREQUISITES

- Student should have some basic knowledge on Unix Shell Programming and Windows operating system.

COURSE OBJECTIVES

- To understand the basic functionalities of Operating System, Process and Threads.
- To understand the implementation of memory management and virtual memory.
- To understand the fundamental design of the UNIX operating system.
- To be able to design and build an application/service over the UNIX operating system

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**10 Hours**
Introduction to Operating System, Process Management What is an Operating System, Mainframe Systems, Desktop Systems, Multiprocessor Systems, Distributed Systems, Clustered Systems, Real- Time Systems, Handheld Systems, System Components, System Calls, System Programs, Operating System Structure, Virtual Machines. Process Concept; Process Scheduling; Operations on Processes; Cooperating Processes; Inter Process Communication.	
Module 2	**12 Hours**
Threads, Process Scheduling, Deadlocks: Multi – Threaded Programming: Overview, Multithreading Models, CPU Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms, Multiple Processor Scheduling, Mutual Exclusion, Hardware Support: Semaphores, Monitors, Readers/Writers Problem. System model; Deadlock Characterization, Methods for Handling Deadlocks; Deadlock Prevention; Deadlock Avoidance; Deadlock Detection and Recovery from Deadlock.	
Module 3	**8 Hours**
Memory Management, Virtual Memory Memory Management Memory Management Strategies: Background, Swapping; Contiguous Memory Allocation; Paging; Segmentation; Virtual Memory Management; Background; Demand Paging; Page Replacement; Allocation of Frames; Thrashing.	
Module 4	**12 Hours**
The File System: The File, What's in a File name? The Parent-Child Relationship,	

The HOME Variable: The Home Directory, pwd, cd, mkdir, rmdir, Absolute Pathnames, Relative Pathnames, The Unix File System. **Basic File Attributes:** ls options, File Ownership, File Permissions, chmod, Directory Permissions, Changing the File Ownership More File Attributes: File Systems and Inodes, Hard Links, Symbolic Links, The Directory, umask, Modification and Access Times, find. **Filters** Pr, head, tail, cut, paste, sort, uniq, tr commands, Filters using Regular Expression: grep & sedgrep, Regular Expression, egrep, fgrep, sed instruction, Line Addressing, Inserting and Changing Text, Context addressing, writing selected lines to a file, the –f option, Substitution, Prosperities of Regular Expressions Context addressing, writing selected lines to a file, the –f option, Substitution, Properties of Regular Expressions.	
Module 5	**8 Hours**
Essential Shell Programming: Shell Variables, Environment Variables, Shell Scripts, read, Using Command Line Arguments, exit and exit status of command, 16 The Logical Operators, The if Conditional, using test and [] to Evaluate Expression, The case Conditional, expr, while: looping, for: looping with a list, set and shift, trap, Debugging Shell Scripts with set – x Laboratory Students shall implement programs which supplement the theory concepts.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Silberschatz, Galvin, Gagne, "Operating System Concepts" John Wiley, Sixth Edition, 2004
2. William Stallings, "Operating System Internals and Design Principles" Pearson, 6th edition, 2012.
3. UNIX-The Ultimate Guide, Sumitabha Das, Tata Mc GrawHill,2001
4. The UNIX Programming Environment by Kernighan and pike, Pearson, 2005

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for learning activity based on Programming Assignments / Case studies/ Mini Projects for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understand the Basics of Computer and Operating System Structure

CO2: Realize the concept of Process Management and Mutual Exclusion

CO3: Understand the concepts of the Deadlock and different approaches to memory management

CO4: Demonstrate the working of basic commands of Unix environment including file processing, filters.

CO5: Demonstrate the usage of different shell commands, shell programming concepts.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

Database Management System
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER -I

Subject Code	22MCA104	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

Credits – 03

COURSE DESCRIPTION

This course provides an understanding of Database management systems. The course also provides the knowledge of ER-diagram design, Relational Algebra and RDBMS, SQL for querying the database and Normalization for the good database design.

PREREQUISITES

- Students should know basics of Discrete Mathematics.
- Students should know basic programming concepts.

COURSE OBJECTIVES

- To understand the fundamentals of Relational database management systems.
- To design database using ER-modeling, Normalization and querying the database using SQL.
- To understand the fundamentals of transactions, locking mechanisms, database recovery.

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**8 Hours**
Introduction: Introduction to DBMS, Characteristics of Database approach, Actors on the Scene, Workers behind the scene, Advantages of using DBMS approach, Data models, schemas and instances, Three –schema architecture and data independence, Database languages and interfaces. Entity-Relationship Model: Conceptual Database using high level conceptual data models for Database Design, A Sample Database Application, Entity types, Entity sets, Attributes and Relationship types, Relationship Sets, Role names and Structural Constraints and Weak Entity Types.	
Module 2	**8 Hours**
Relational Model: Relational Model Concepts and Constraints , Relational Database Schema Update Operations, Unary Relational operations, Relational Algebra Operations from Set Theory, Binary Relational Operations, JOIN and DIVISION, Additional Relational Operations, Relational Database Design Using ER-to-Relational Mapping(7step algorithm)	
Module 3	**8 Hours**
Introduction to SQL: SQL Data Types and Schemas, SQL Data Definition commands, SQL Data Manipulation commands, Basic structure of SQL Queries, Additional Basic Operations, Null values, Aggregate Functions, Nested and co-related nested quires , Join Expressions, Views in SQL.	

Module 4	8 Hours
Database Design: Informal Design Guidelines for Relation Schemas, Functional Dependencies, Closure of a functional dependency and canonical cover of functional dependency calculations and Armstrong (inference) Rules. Introduction to Normalization, Working of 1st Normal Form 2nd and 3rd Normal Forms, Boyce Codd Normal Forms, Multivalued Dependencies and IV Normal Forms, Join Dependencies and V Normal Forms	
Module 5	**8 Hours**
Transaction Management: Introduction to transaction processing, Transaction and system Concept, Transaction properties Atomicity and Durability, Serializability and isolation (ACID properties). Concurrency Control: Lock Based Protocols-Types of Locks, Simplistic Lock Protocol, Pre-claiming Lock Protocol, Two-Phase Locking (2PL) and Strict Two-Phase Locking. Deadlock Handling-deadlock prevention schemes, Deadlock Avoidance.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Elmasri and Navathe: Fundamentals of Database Systems, 5th Edition, Addison - Wesley, 2011.
2. Silberschatz, Korth and Sudharshan Data base System Concepts,6th Edition, Tata McGraw Hill, 2011.

Reference Books:

1. Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill, 2003
2. Database Principles Fundamentals of Design, Implementation and Management by Coronel, Morris, Rob- Cengage Learning 2012

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for learning activity based on Programming Assignments / Case studies/ Mini Projects for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks

COURSE OUTCOMES

At End of the Course Student will Be Able to

CO1: Apply the basic concepts of database management in designing the database for the given problem.

CO2: Design entity-relationship diagrams to the given problem to develop database application with appropriate fields and validations by using a Relational model. **CO3:** Formulate SQL queries in Oracle to the given problem. **CO4:** Illustrate concept of functional dependencies and determine normalization techniques to improve the database design to the given problem. **CO5**: Analyze and implement transaction processing, concurrency control and database recovery protocols in databases

CO-PO-PSO Mapping:

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	2	1	2					1	1				3	
CO2	1	2	2	2				1	1				3	
CO3	2	3	2	2				1	1				3	
CO4	1	2	2	2				1	1				3	
CO5		2	2	2				1	1				3	

Operations Research [As per Choice Based Credit System (CBCS) scheme] **SEMESTER – I**			
Subject Code	22MCA105	CIE Marks	50
Number of Lecture Hours/Week	03 + 01 Hr Tutorial	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03
CREDITS – 03			

COURSE DESCRIPTION

Operations research helps in solving problems in different environments that needs decisions. The module cover topics that include: linear programming, Transportation, Assignment, and sequencing problems.

PREREQUISITES

- **None**

COURSE OBJECTIVES

This course aims to introduce students to use quantitative methods and techniques for effective decisions–making; model formulation and applications that are used in solving business decision problems.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
Introduction: Definition of Operations research, Quantitative approach, Features of OR, problem solving Methodology of OR. **Linear programming Problem:** Introduction, Generalized LPP, Formulation of problems as L.P.P., Solutions to LPP by graphical method (Two Variables).	
Module 2	**08 Hours**
Linear programming Problem: Simplex method, Canonical and Standard form of LP problem, slack, surplus and artificial variables, Solutions to LPP by Simplex method, Big-M Method and Two Phase Simplex Method.	
Module 3	**08 Hours**
LPP: Duality in linear programming, Formulation of dual linear programming and examples. **Assignment problem:** Formulation, Solutions to assignment problems by Hungarian method.	
Module 4	**08 Hours**
Transportation problem: Formulation of transportation problem, types, initial basic feasible solution using North-West Corner rule, Least cost method, Vogel’s Approximation method. Optimality in Transportation problem by Modified Distribution (MODI) method.	
Module 5	**08 Hours**
Theory of games: Introduction, Two-person zero sum games, Pure strategies (Min-Max and Max-Min principles), Mixed strategies. The rules of principles of dominance, algebraic method to solve games without saddle point, graphical methods to solve games. **Sequencing problems:** Processing n-jobs through two machines (Johnson’s procedure).	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. J.K. Sharma, "Operations Research Theory and Applications", 5th edition, MacMillan publisher India.

Reference Books:

1. S.D Sharma, Himanshu Sharma, "Operations Research: Theory, Methods and Applications", Kedarnath Ramnath (Publisher).
2. H A Taha , "Operations Research An Introduction", Low price edition 7th edition, 2006.
3. Hiller and Liberman, "Introduction to operation Research", McGraw Hill, 5th edition, 2001.
4. Prem Kumar Gupta, D S Heera , "Operations Research", S Chand Pub., New Delhi, 2007.

TEACHING METHODS

- PPTs
- Black Board

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity based Assignments for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

COURSE OUTCOMES: At End of the Course Student will Be Able to

CO1: Understand the meaning, definitions, scope, phases and techniques of operations research.
CO2: Formulate as L.P.P and derive optimal solutions to linear programming problems by graphical method, Simplex method and Big-M method.
CO3: Formulate as Transportation and Assignment problems and derive optimum solutions for transportation, Assignment problems.
CO4: Solve problems on game theory for pure and mixed strategy under competitive environment.
CO5: Determine minimum processing times for sequencing of n jobs -2 machines using Johnson's algorithm.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	3			2	2				1					2
CO2	3			2	2				1					2
CO3	3			2	2				1					2
CO4	3			2	2				1					2
CO5	3			2	2				1					2

Research Methodology & Professional Ethics
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	22MCA106	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

Credits – 03

COURSE DESCRIPTION

This course provides an importance of Research, Intellectual Property Rights and Professional ethics. This course gives detailed knowledge of Defining the Research Problems, conducting detailed literature survey, Data Collection, Research Design, Drafting of Research Paper, Publication of papers in Journals, Impact factors. This Course also provides brief contents on Intellectual Property Rights and Professional ethics.

PREREQUISITES

- Students should have basic skill of English grammar and also should have interest in exploring & discovering the novel ideas.
- Students should know theoretical concepts of application development.

COURSE OBJECTIVES

- To understand the fundamentals of Research & Development activities.
- To write the research papers on specific areas.
- To understand the concepts of IPR and ethical issues.

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**08 Hours**
Introduction - Meaning of research, Objectives of Research, Types of research, Research Process, Criteria of Good Research. **Defining the research problem-** Selecting the problem, necessity of defining the problem, techniques involved in defining the problem.	
Module 2	**08 Hours**
Reviewing the literature: Collection of Primary data, Collection of Secondary Data, Review of the literature, searching the existing literature, writing about the literature reviewed. **Meaning of Research Design:** Need for Research Design, features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs.	
Module 3	**08 Hours**
Research Paper Writing - Interpretation of Data and Paper Writing – Layout of a Research Paper, Journals in Computer Science, Impact factor of Journals, When and where to publish? Ethical issues related to publishing, Plagiarism and Self-Plagiarism	
Module 4	**08 Hours**
Intellectual Property Rights: Patents, Designs, Trade and Copyright. Process of Patenting and Development: technological research, innovation, patenting, Procedure for grants of patents.	
Module 5	**08 Hours**
Ethics – An overview: Meaning of ethics, Ethics and morality, Principles of Professional ethics, what is corporate ethics	

Workplace Ethics: Introduction, Needs, Principles, Development of Personal Ethics, Workplace Ethics for Employees-Ethical behavior in workplace-Professionalism, Ethical violations by employees, Employee Attitude and Ethics, Employee Etiquettes. Ethics in Information Technology: Ethics for IT Professionals and IT users- The Ethical behavior of IT professionals**.**	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Kothari CR, "Research Methodology Methods and Techniques ", New Age International, 2014, 3rd. Edition, ISBN: 978-81-224-3623-5.
2. Business Ethics an Indian Perspective, A.C.Fernando, Pearson
3. Ethics in the work place, Craig E Johnson, Sage Publication, 2007
4. George Reynolds: Ethics in Information Technology, 2nd Edition, Thomson Course Technology, 2007

Reference Books:

1. Krishnaswami KN, Sivakuma AI and Mathiarajan, "Management Research Methodology", Pearson Education, 2009, ISBN.
2. DebiragE. Bouchoux: "Intellectual Property". Cengage learning, New Delhi, 2010

4. Ethics in the workplace, Dean A Bredeson and Keith Gorce, Cengage learning, 3rd edition, 2012.
5. Ethics in the workplace: A systems perspective, William F Roth, Pearson Publication

TEACHING METHODS

- ICT based Teaching Learning Methods.
- Presentation Methods.
- Self-Learning by assigned activities.

ASSESSMENT METHODS

- Three Internals, 30 Marks each will be conducted. 40% each of first two internals and 20% of third internals will be consolidated out of 30 marks.
- Case study / Research Paper is considered as a part of Learning Activity for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

COURSE OUTCOMES : At End of the Course Student will Be Able to

CO1: Understand and explain the underlying principles of quantitative and qualitative research and defining the research problem.

CO2: Choose the most appropriate references in the form of survey to address and design a particular research problem.

CO3: Applying the Principles of Research & drafting the research paper, identification of Journals for publication, ethical issues related to publication.

CO4: Understanding the concepts of Filing Patents, Designs, Trade and Copyright. Process of Patenting and Development.

CO5: To understand the basics of ethics and ethics for IT Professionals and its need for and importance at workplace.

Object Oriented Programming using C++/JAVA Laboratory
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	22MCA107L	CIE Marks	50
Number of Hours/Week	02 Hrs Laboratory	SEE Marks	50
		SEE Hours	03

CREDITS – 01

COURSE DESCRIPTION

To develop software development skills in java programming and Students will have the proficiency to develop projects in java programming. The course helps the students to solve the inter-disciplinary applications through java programming.
To write programs for solving real world problems using java collection frame work.

PREREQUISITES

- Basic understanding of Principles of Programming.

COURSE OBJECTIVES

- Practice object-oriented programs and build java applications.
- Implement java programs for establishing interfaces.
- Implement sample programs for developing reusable software components.
- Create database connectivity in java and implement GUI applications.

Laboratory Experiments:

1.	a. Write a JAVA Program to demonstrate Constructor Overloading and Method Overloading. b. Write a JAVA Program to implement Inner class and demonstrate its Access protection.
2	Write a program in Java for String handling which performs the following: i) Checks the capacity of String Buffer objects. ii) Reverses the contents of string given on console and converts the resultant string in upper case. iii) Reads a string from console and appends it to the resultant string
3	a. Write a JAVA Program to demonstrate Inheritance. b. Simple Program on Java for the implementation of Multiple inheritance using interfaces to calculate the area of a rectangle and triangle.
4	Write a JAVA program which has i) A Class called Account that creates account with 500Rs minimum balance, a deposit() method to deposit amount, a withdraw() method to withdraw amount and also throws LessBalanceException if an account holder tries to withdraw money which makes the balance become less than 500Rs. ii) A Class called LessBalanceException which returns the statement that says withdraw amount (Rs) is not valid. iii) A Class which creates 2 accounts, both account deposit money and one account tries to withdraw more money which generates a LessBalanceException take appropriate action for the same.
5	Write a JAVA program using Synchronized Threads, which demonstrates Producer Consumer concept.
6	Write a JAVA program to implement a Queue using user defined Exception Handling (also make use of throw, throws.).

7	Complete the following: i) Create a package named shape. ii) Create some classes in the package representing some common shapes like Square, Triangle, and Circle. iii) Import and compile these classes in other program.
8	Write a JAVA Program Create an enumeration Day of Week with seven values SUNDAY through SATURDAY. Add a method is Workday( ) to the DayofWeek class that returns true if the value on which it is called is MONDAY through FRIDAY. For example, the call DayOfWeek.SUNDAY.isWorkDay ( ) returns false.
9	Write a JAVA program which has i) A Interface class for Stack Operations ii) A Class that implements the Stack Interface and creates a fixed length Stack. iii) A Class that implements the Stack Interface and creates a Dynamic length Stack. iv) A Class that uses both the above Stacks through Interface reference and does the Stack operations that demonstrates the runtime binding.
10	Write a JAVA program to print a chessboard pattern.
11	Write a JAVA Program which uses FileInputStream / FileOutPutStream Classes.
12	Write JAVA programs which demonstrates utilities of LinkedList Class.
13	Write a JAVA program to implement JDBC operations.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

Experiment Write up + Execution + Viva	20
Lab Record Writing	15
Lab Internals Test	15
Total	50

- Final Exam will be conducted for 50 marks (SEE)

Course Outcomes(CO):

CO1: Understand Java programming language fundamentals and run time environment.
CO2: Gain knowledge and skill necessary to write java programs.
CO3: Learn the object oriented concepts and its implementation in Java.
CO4: Implement the multithreading and client side programming.
CO5: To understand the working procedure of JDBC

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

Data Structures and Algorithms Laboratory
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	22MCA108L	CIE Marks	50
Number of Hours/Week	02 Hrs Laboratory	SEE Marks	50
		SEE Hours	03

CREDITS – 1

COURSEDESCRIPTION

This course introduces students with various data structures and their implementation.

PREREQUISITES

Students should have basic knowledge of C programming constructs and should be able to write basic C programs

Course Objective:

- To understand working principle of different types of data structures
- To identify and apply the appropriate algorithms to solve a given problem.

Laboratory Experiments:

1	Write a C program to Implement the following searching techniques a. Linear Search b. Binary Search.
2	Write a C program to implement the following sorting algorithms using user defined functions: a. Bubble sort (Ascending order) b. Selection sort (Descending order).
3	Write a C Program implement STACK with the following operations a. Push an Element onto Stack b. Pop an Element from Stack
4	Implement a Program in C for converting an Infix Expression to Postfix Expression.
5	Implement a Program in C for evaluating an Postfix Expression.
6	Write a C program to simulate the working of a singly linked list providing the following operations: a. Display & Insert b. Delete from the beginning/end c. Delete a given element
7	Obtain the Topological ordering of vertices in a given graph with the help of a c Programming.
8	Check whether a given graph is connected or not using DFS method using C Programming.
9	From a given vertex in a weighted connected graph, find shortest paths to other vertices Using Dijkstra's algorithm (C programming)
10	Find Minimum Cost Spanning Tree of a given undirected graph using Kruskal's algorithm (C programming)

ASSESSMENT METHODS

Experiment Write up + Execution + Viva	20
Lab Record Writing	15
Lab Internals Test	15
Total	50

Final Exam will be conducted for 50 marks (SEE)

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Perform various sorting and searching techniques.
CO2: Implement various types of data structures, operations and algorithms.
CO3: Work with Stacks, Queues, Circular Queues, Linked Lists, and Trees.
CO4: Design and apply appropriate algorithms for solving computing problems
CO5: Analyze the efficiency of algorithms.

CO-PO-PSO Mapping

UNIX/LINUX Programming Laboratory [As per Choice Based Credit System (CBCS) scheme] **SEMESTER – I**			
Subject Code	22MCA109L	CIE Marks	50
Number of Hours/Week	02Hrs Laboratory	SEE Marks	50
		SEE Hours	03
CREDITS – 1			

COURSE DESCRIPTION:
This course introduces students with basic shell programming concepts.

PREREQUISITES

- Students should have knowledge of basic Unix commands.

Course Objective:

- To understand the fundamental design of the UNIX shell programming.
- To be able to design the shell scripts.

Laboratory Experiments:

Explore the Unix environment and Explore vi editor with vim tutor. Perform the following operations using vi editor, but not limited to:
1. Insert character, delete character, replace character
2. save the file and continue working
3. save the file and exit the editor
4. quit the editor
5. quit without saving the file
6. rename a file
7. insert lines, delete lines,
8. setline numbers
9. search for a pattern
10. move forward and backward

1	Develop a shell script that takes a valid directory name as an argument and recursively descend all the subdirectories, finds the maximum length of any file in that hierarchy and writes this maximum value to the standard output.
2	Develop shell script to implement terminal locking (similar to the lock command). It should prompt the user for a password. After accepting the password entered by the user, it must prompt again for the matching password as confirmation and if match occurs, it must lock the keyword until a matching password is entered again by the user, Note that the script must be written to disregard BREAK, control-D. No time limit needed to be implemented for the lock duration.
3	Develop a shell script that displays all the links to a file specified as the first argument to the script. The second argument, which is optional, it can be used to specify in which the search is to begin. If this second argument is not present, the search is to begin in current working directory. In either case, the starting directory as well as all of its sub directories at all levels must be searched. The script need not include any error checking.
4	Write a shell script that accept one or more file names as argument and convert all of them to uppercase, provided they exists in current directory.
5	Implement a shell script to list all the files in a directory whose filename is at least 10 characters. (us expr command to check the length)
6	Develop a shell script that accept a list of filenames as its argument, count and report occurrence of each word that is present in the first argument file on other Argument files.

7	Develop a shell script that reports the logging in of a specified user within one minute after he/she login. The script automatically terminate if specified user does not login during a specified period of time.
8	Develop a shell script that folds long lines into 40 columns. Thus any line that exceeds 40 characters must be broken after 40th, a “\” is to be appended as the indication of folding and the processing is to be continued with the residue. The input is to be supplied through a text file created by the user.
9	Write a shell script that accepts the filename, starting and ending line number as an argument and display all the lines between the given line number.
10	Write a shell script that accepts two file names as arguments, checks if the permissions or these files are identical and if the permissions are identical, output common permissions and otherwise output each file name followed by its permissions

ASSESSMENT METHODS

Experiment Write up + Execution + Viva	20
Lab Record Writing	15
Lab Internals Test	15
Total	50

- Final Exam will be conducted for 50 marks (SEE)

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understand the Unix programming environment.
CO2: Be fluent in the use of Vi editor.
CO3: Be able to design and implement shell scripts to manage users with different types of permission and file based applications.
CO4: Be fluent to write shell scripts.
CO5: Evaluate different commands with sample shell scripts

CO-PO-PSO Mapping

Database Management Systems Laboratory
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	22MCA110L	CIE Marks	50
Number of Hours/Week	02 Hrs Laboratory	SEE Marks	50
		SEE Hours	03

CREDITS – 1

COURSE DESCRIPTION

This lab course is to understand the practical applicability of database management system concepts. Working on existing database systems, designing of database, creating relational database, analysis of table design. To explain basic database concepts, applications, data models, schemas and instances.

PREREQUISITES

1. Students should know basics of Discrete Mathematics.
2. Students should know basic programming concepts.

COURSE OBJECTIVES

- Students get practical knowledge on designing and creating relational database systems. Understand various advanced queries execution such as relational constraints, joins, set operations, aggregate functions, trigger views and embedded SQL.
- To demonstrate the importance of normalization in databases.

DBMS Lab Experiments: Instructions for the Exercises:

1. Draw ER diagram based on given scenario with various Constraints.
2. Create Relational Database Schema based on the above scenario using Mapping Rules.
3. Perform the given queries using any RDBMS Environment.
4. Suitable tuples have to be entered so that queries are executed correctly
5. The results of the queries may be displayed directly

Laboratory Experiments:

1. Create the following tables with properly specifying Primary keys, Foreign keys and solve the following queries.

BRANCH(Branchid,Branchname,HOD)

STUDENT(USN,Name,Address,Branchid,sem)

BOOK(Bookid,Bookname,Authorid,Publisher,Branchid)

AUTHOR(Authorid,Authorname,Country,age)

BORROW(USN,Bookid,Borrowed_Date)

Queries:

1. List the details of Students who are all studying in 2nd sem MCA.
2. List the students who are not borrowed any books.
3. Display the USN, Student name, Branch_name, Book_name, Author_name, Books_Borrowed_Date of 2nd sem MCA Students who borrowed books.
4. Display the number of books written by each Author.
5. Display the student details who borrowed more than two books.
6. Display the student details who borrowed books of more than one Author.
7. Display the Book names in descending order of their names.
8. List the details of students who borrowed the books which are all published by the same Publisher.

2. Design an ER-diagram for the following scenario, Convert the same into a relational model and then solve the following queries.

Consider a Cricket Tournament "ABC CUP" organized by an organization. In the tournament there are many teams are contesting each having a Teamid, Team_Name, City, a coach. Each team is uniquely identified by using Teamid. A team can have many Players and a captain. Each player is uniquely identified by Playerid, having a Name, and multiple phone numbers, age. A player represents only one team. There are many Stadiums to conduct matches. Each stadium is identified using Stadiumid, having a stadium_name, Address (involves city, area_name, pincode).A team can play many matches. Each match played between the two teams in the scheduled date and time in the predefined Stadium. Each match is identified uniquely by using Matchid. Each match won by any of the one team that also wants to record in the database. For each match man_of_the match award given to a player.

Queries:

1. Display the youngest player (in terms of age) Name, Team name, age in which he belongs of the tournament.
2. List the details of the stadium where the maximum number of matches were played.
3. List the details of the player who is not a captain but got the man_of _match award at least in two matches.
4. Display the Team details who won the maximum matches.
5. Display the team name where all its won matches played in the same stadium.

3. Consider the following Scenario and design an ER-Diagram, map the designed ER-diagram into a Relational model.

Consider an organization "ABC" having many employees. An employee works for one department. Each employee identified by using Empid, having Name, address (described as House_no, city, district, state, pin code) and more than one phone numbers. Department identified by using Dno, having Dname, Dlocation. Each Department having a manager . Each department having many employees. There are many Projects, each project is controlled by the department. Each Project uniquely identified by Pno, having Project_name,Project_location. An employee works on many Projects. Number of hours per week worked on each project by an Employee also needs to be recorded in the database. A project is worked by many employees. Each employee supervised by the supervisor. Employee having many dependents. Dependents having the dependent_name, gender, age, address. Dependents are identified by Empid.

T1(Empid, Emp_Name,city, district, state, pin_code, phoneno, Dno,Dname,Dlocation, Dept_mgr_id, Pno, Project_name, Project_location, Number_of_Hours,Supervisor_Empid, Dependent_name, gender, address)

Deduce the above Relation T1 into the 3NF and then solve the following queries.

Queries:

1. Display the details of the employees who are working on both the projects having project_no 5 and 10.
2. Display the details of employees having atleast two dependents.
3. Display the project name on which more number of employees are working.
4. Retrieve the employees who do not have any dependents.

5. Display the Employee details whose total number of hours per week working on various projects is maximum than all other employees.
6. create a view to display the number of employees working in each department

4. Design an ER-diagram for the following scenario, Convert the same into a relational model, normalize Relations into a suitable Normal form and then solve the following queries.

A country can have many Tourist places. Each Tourist place is identified by using tourist_place_id, having a name, belongs to a state, Number of kilometers away from the capital city of that state, history. There are many Tourists visits tourist places every year. Each tourist is identified uniquely by using Tourist_id, having a Name, age, Country and multiple emailids. A tourist visits many Tourist places, it is also required to record the visted_date in the database. A tourist can visit a Tourist place many times at different dates. A Tourist place can be visited by many tourists either in the same date or at different dates.

Queries:

1. List the state name which is having maximum number of tourist places.
2. List details of Tourist place where maximum number of tourists visited.
3. List the details of tourists visited all tourist places of the state “KARNATAKA”.
4. Display the details of the tourists visited at least one tourist place of the state, but visited all states tourist places.
5. Display the details of the tourist place visited by the tourists of all country.

ASSESSMENT METHODS

Experiment Write up + Execution + Viva	20
Lab Record Writing	15
Lab Internals Test	15
Total	50

- Final Exam will be conducted for 50 marks (SEE)

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Apply the basic concepts of Database Systems and Applications.
CO2: Use the basics of SQL and construct queries using SQL in database creation and interaction.
CO3: Design a commercial relational database system (Oracle) by writing SQL using the system.
CO4: Perform embedded and nested queries and implement normal forms.
CO5: Take up real world problems independently

CO-PO-PSO Mapping

Principles of Programming (Bridge Course – Non-credit)
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – I

Subject Code	22MCA111B	CIE Marks	50
Number of Lecture Hours/Week	04	SEE Marks	50
Total Number of Lecture Hours	50	SEE Hours	03

Credits – 00

COURSE DESCRIPTION

This course provides an understanding C and C++. The course also provides about the structure of c programming with problems as case studies. The course also covers details on structures, unions and pointers in details with descriptive examples. A part of the course consists of C++ where concepts of object oriented programming like inheritance, classes, objects, standard IO operations, exception handling, and operator overloading.

PREREQUISITES

- Student should know the concepts of algorithms, computer basics, and computer architectures.
- Student should know about fundamentals of Data flow diagrams and pseudo codes.

COURSE OBJECTIVES

- To understand the fundamentals of C programming language.
- To understand the fundamentals of C++ programming language.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**10 Hours**
C Programming: decision making, control structures and arrays Decision making with if statement, simple if statement, the if..else statement, nesting of if..else statements, the else..if ladder, the switch statement, the ?: operator, the goto statement, the break statement, programming examples. The while statement, the do...while statement, the for statement, nested loops, jumps in loops, the continue statement, programming examples. one dimensional and two dimensional arrays, declaration and initialization of arrays, reading , writing and manipulation of above types of arrays.	
Module 2	**10 Hours**
Structures Defining a structure, declaring structure variables, accessing structure members, structure initialization, copying and comparing structure variables, operations on individual members, array of structures, structures within structures, structures and functions, Unions, size of structures.	
Module 3	**10 Hours**
Pointers Pointers in C, Declaring and accessing pointers in C, pointers in C++, Pointer as function arguments, Dynamic Allocation Operators new and delete, Initializing Allocated Memory, Allocating Arrays, Allocating Objects. Overloading, overloading operators.	
Module 4	**10 Hours**
Classes & Objects: Introduction, Class Specification, Class Objects, access members, defining member functions, data hiding, constructors, destructors, parameterized constructors, static data members, static member functions, scope resolution operator, Passing Objects to Functions, Returning Objects, Object	

Assignment. **Pointers and dynamic memory allocation:** Pointers, Pointer as function arguments, Dynamic Allocation Operators new and delete, Initializing Allocated Memory, Allocating Arrays, Allocating Objects **Operator overloading:** Operator overloading as member functions and using friend functions. Overloading of binary operators like +, -, *. Creating Prefix and Postfix forms of ++, -- Operators, Operator Overloading Restrictions, Operator Overloading Using a Friend Function to Overload ++ or – –, Overloading ( ). **Inheritance:** Base Class, Inheritance & protected members, protected base class inheritance, inheriting multiple base classes, Constructors, Destructors & Inheritance. Passing parameters to base Class Constructors, Granting access, Virtual base classes.	
Module 5	**10 Hours**
Standard C++ I/O Classes: Old vs. Modern C++ I/O, C++ Streams, The C++ Stream Classes, C++'s Predefined Streams, Formatted I/O, Formatting Using the ios Members, Setting the Format Flags, Clearing Format Flags, Overloading << and >>, manipulators. Exception Handling: Exception Handling, Fundamentals, Catching Class Types, Using Multiple catch Statements, Handling Derived- Class Exceptions, Exception Handling Options, Catching All Exceptions, Restricting Exceptions, Rethrowing an Exception, Understanding terminate( ) and unexpected( ), uncaught_exception( ) Function, The exception and bad_exception Classes, Applying Exception Handling	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Object oriented programming with C++, E. Balaguruswamy, Tata McGrawHill.
2. Herbert Schildt: C++ The Complete Reference, 4th Edition, Tata McGraw Hill,2014.
3. K R Venugopal, Rajkumar Buyya,T Ravishanker: Mastering C++

Reference Books:

1. Programming in ANSI C, E Balaguruswamy, 7th Edition, McGraw Hill.
2. The Complete Reference, Herbert Schild,4th Edition, MacGrawhill.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

- Three Internals are conducted for 30 Marks each and weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively are taken.
- Evaluation of learning activity based on Programming Assignments for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks

Course Outcome(CO):At end of this Course, student will be able to
CO1: Identify special features introduced in C++ when compared to C and illustrate the difference between structure and class using C++ program.
CO2: Apply the Concepts of inheritance, polymorphism for the given problem and develop the C++ program.
CO3: Implement the concept of overloading, default parameters, Constructors and destructors in a C++ program.
CO4: Analyse the working of I/O operations with C++ files.
CO5: Demonstrate the Exception handling and template for a given problem.
CO6: Demonstrate the concepts of data abstraction, information hiding and encapsulation by writing C++ program.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	2							1	1					
CO2	1	2		2			1	1	1					
CO3	2	2					1	1	1					
CO4	1	2		2			1	1	1					
CO5	2	2		2			1	1	1					
CO6	2	2		2			1	1	1					

Python Programming

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

Subject Code	22MCA201	CIE Marks	50
Number of Lecture Hours/Week	04	SEE Marks	50
Total Number of Lecture Hours	50	SEE Hours	03

CREDITS – 04

COURSE DESCRIPTION:

This course provides an in-depth knowledge of basic Python Programming Language and also provides an insight on Python data structures, working of and arrays, numerical analysis and data manipulation in python.

PREREQUISITES

- Students should have a basic knowledge of any programming language
- Students should know basic data visualization techniques**.**

Course Objective:

- To acquire programming skills in core Python.
- To acquire Object Oriented Skills in Python
- To develop the skill of designing Graphical user Interfaces in Python
- To develop the ability to write database applications in Python

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**10 Hours**
Python Basic Concepts and Programming: Program Structure, Identifiers, Keywords, Variables, Operators, Precedence and Associativity, Mutable and Immutable Data Types, Indentation, Comments, Reading Input, User Input, Print Output, the type () Function and Is Operator. **Statements:** Control flow statements, Iterative statements, Conditional statements, the continue and break Statements, Built-In Functions, Commonly Used Modules. **Function Definition and Calling** the Function, The return Statement and void Function, Scope and Lifetime of Variables, Positional Arguments, Keyword arguments, Variable length arguments Default Parameters, Command Line Arguments. Anonymous Functions, Generators and Decorators.	
Module 2	**10 Hours**
Data Structures: List, dictionary, set and generator-comprehensions. Basic List Operations, Indexing and Slicing in Lists, Built-In Functions Used on Lists, List Methods. Strings- Creating and Storing Strings, Basic String Operations, Accessing Characters in String by Index Number, String Slicing and Joining, String Methods, Formatting Strings, Creating Sets, Tuples and Dictionaries and basic methods. **File handling: Basic** file handling methods, reading and writing files, File Input/output, deleting and copy functions. **Exception Handling**: Errors, Python Try Except, finally. Rising of an exception, Many Exceptions, working of else with exception.	
Module 3	**10 Hours**
OOP's Programming with python: Classes, objects, Constructors and Destructors, self and del keywords, access to Attributes and Methods, geattr and hasattr attributes, Data abstraction, Encapsulation, Inheritance and types, Overloading, Polymorphism, Python	

Iterators. **Working with modules:** Creating and importing modules, Built-in modules, dir () function, RegEx module and function with metacharacters, Python JSON module, JSON string conversions. Introduction to Package and working of pip.	
Module 4	**10 Hours**
Numerical Analysis with Numpy Arrays: Introduction to Numpy, Array Creation with Numpy, Array Indexing, Array Slicing, A Multidimensional array objects, Computation on Numpy object. Numpy Data types, Numpy copy vs view, Array Iteration. Numpy Array Join, Split, Search and filter. **Universal functions in Numpy:** Introduction to ufunc, Creation, Arithmetic functions, Log, Trigonometric functions, Aggregate functions, Set operations with Numpy. **Web Scraping:** Data Acquisition by Scraping web applications –Submitting a form - Fetching web pages – Downloading web pages through form submission, Difference between Web scraping and Web crawling.	
Module 5	**10 Hours**
Data Manipulation with Pandas: Introduction to pandas, Panda's Series, creating a Series object with list, dictionary and ndarrays, indexing and Labeling. Introduction to pandas Dataframe, Load files in to Dataframe, Index objects. **Pandas Analyzing Data:** Reading of CSV files, Reading of JSON files. Viewing the data and info, head (), tail (), iloc () methods. **Data Cleaning with Pandas:** Handling Empty sets, Data in wrong format, Wrong data, Handling Duplicates. Data Correlations with Pandas and its types **Data Visualization with Pandas:** Matplotlib package – Plotting Graphs – Controlling Graph.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Introducing Python- Modern Computing in Simple Packages – Bill Lubanovic, O 'Reilly Publication
2. Wes Mc Kinney, "Python for Data Analysis", O'Reilly Media, 2012.
3. Jake Vander plas, "Python Data Science Handbook: Essential tools for working with data", O 'Reilly Publishers, I Edition.

Reference Books:

1. Learning Python, Mark Lutz, Fifth Edition, O'Reilly Publication,2017
2. Exploring Python, Timothy A. Budd, Mc Graw Hill Education, 2011
3. How to Think Like a Scientist –Learning with Python ", Allen Downey, Jeffrey Elkner, Chris Meyers, Green Tea Press, 2002, First Edition.
4. llen B. Downey, "Think Python: How to Think Like a Computer Scientist '', 2nd edition, Updated for Python 3, Shroff/O'Reilly Publishers, 2016 (http://greenteapress.com/wp/thinkpython/)

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS
• Three Internals, 30 Marks each will be conducted and the weightage of 40%, 40% and 20% from 1st, 2nd, and 3rd internals will be taken. • Evaluation for Learning Activity based on Programming Assignments for 20 Marks. • Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.
Course Outcome (CO): At the end of this course, the students will be able to: **CO1**: Understand and Comprehend the Basics Concepts of Python Programming. **CO2:** Understand the working of Python Data structures, File handling and Exception Handling. **CO3**: Apply Python Collection Objects, Object-Oriented Features, Python modules to develop Python Applications. **CO4**: Implement Numpy Arrays for Numerical Analysis and perform Data Scraping with Python. **CO5:** Implement Data Manipulation and Data Visualization with Pandas.

Modules	Teaching Hours
Module 1	**10 Hours**
Introduction to XHTML and CSS: Basic syntax, Standard structure, Basic text mark-up, Images, Hypertext Links. Lists, Tables, Forms, Frames, Syntactic differences between HTML and XHTML. **Cascading Style Sheets:** Introduction, Levels of style sheets, Style specification formats, Selector forms, Property value forms, Font properties, List properties, Colour, Alignment of text, The box model, Background images, The <span> and <div> tags, Conflict resolution.	
Module 2	**12 Hours**
The basics of JavaScript: Overview of JavaScript, Object orientation and JavaScript, general Syntactic Characteristics, Primitives, Operations and Expressions, Screen Output and Keyboard Input, Control Statements, Object Creation and Modification, Arrays, Functions, Constructors, Pattern matching using Regular Expressions, Errors in Scripts. **Java Script and XHTML Documents:** The JavaScript Execution Environment, The Document Object Model, Elements Access in Java Script, Events and Event Handling, Handling Events from Body Elements, Handling Events from Text Box and password Elements, The DOM2 Event Model, The navigator Object, Dom Tree Traversal and Modification.	
Module 3	**08 Hours**
Introduction to XML: Introduction, Syntax, Document Structure, Document type definitions, Namespaces, XML schemas, displaying raw XML documents, Displaying XML documents with CSS, XSLT style sheets, XML processors, Web services.	
Module 4	**10 Hours**
Introduction to PHP and Building Web applications with PHP: Origins and uses of PHP, Overview of PHP, General syntactic characteristics, Primitives, operations and expressions, Output, Control statements, Arrays, Functions, Pattern matching, Form handling, Files, Tracking users, cookies, sessions, Using Databases, Handling XML.	

Module 5	10 Hours
Introduction to Angular JS: Directives, Expressions, Directives, Controllers, Filters, Services, Events, Forms, Validations, Examples.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Robert W. Sebesta: Programming the World Wide Web, 4^{th} Edition, Pearson education, 2012.
2. Complete Angular Js Guide with Examples by Krishna Rungta

Reference Books:

1. Chris Bates: Web Programming Building Internet Applications, 3rd Edition, Wiley India, 2006.
2. M. Deitel, P. J. Deitel, A. B. Goldberg: "Internet & World Wide Web How to Program", 3^{rd} Edition, Pearson Education/PHI, 2004.
3. Jeffrey C. Jackson: Web Technologies-A Computer Science Perspective, Pearson Education, 7thImpression, 2012.

TEACHING METHODS

- PPTs
- Hands-On Sessions
- Black Board

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1^{st}, 2^{nd} and 3^{rd} internals respectively will be taken.
- Evaluation for Learning Activity based on Programming Assignments/ Mini Project for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Learn to write well-structured, easily maintained, standards-compliant, web pages using XHTML and CSS code.
CO2: Use JavaScript to add dynamic content to pages that meet specific needs and interests.
CO3: Use XML for enhanced web interaction and applications
CO4: Create dynamic web applications using PHP and MYSQL
CO5: Use AngularJS to create dynamic pages.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

Mobile Applications

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – II

Subject Code	22MCA203	CIE Marks	50
Number of Lecture Hours/Week	04	SEE Marks	50
Total Number of Lecture Hours	50	SEE Hours	03

CREDITS – 04

COURSE DESCRIPTION

This course is intended to provide students with the skills required to design software artifacts by using latest technologies, Android Frameworks for designing Mobile Apps, Flutter framework for Android and iOS Applications.

PREREQUISITES

- Students should know basics of XML.
- Students should know C, C++, and Java Programming Concepts.

COURSE OBJECTIVES

Android Application Development course is designed to quickly get you up to speed with writing apps for Android devices. The student will learn the basics of Android and Flutter Frameworks and get to understand the application lifecycle.

Modules	Teaching Hours
Module 1	**10 Hours**
Introduction Preliminary Considerations – Cost of Development, Importance of Mobile Strategies in the Business World, Effective use of Screen Real Estate, Understanding Mobile Applications Users, Understanding Mobile Information Design, Understanding Mobile Platforms, Using the Tools of Mobile Interface Design.	
Module 2	**10 Hours**
Getting Started with Android Programming What is Android? Obtaining the required tools, Anatomy of an Android Application, Components of Android Applications, Activities, Fragments, Utilizing the Action Bar.	
Module 3	**10 Hours**
Android UI Design and Location Based Services Views and View Groups, Basic Views, Displaying Maps, Getting Location Data, Preparing for Publishing, Deploying APK Files.	
Module 4	**10 Hours**
Android Messaging and Networking: SMS Messaging, Sending Email, Networking , Downloading Binary Data, Text files, Accessing Web Services, Performing Asynchronous Call, Creating your own services, Communicating between a service and an activity, Binding activities to services.	
Module 5	**10 Hours**
Flutter and IOS : Flutter: Introduction, Installation, Creating Simple Application in Android Studio, Architecture Application, Introduction to Dart Programming, Widgets, Layouts, Gestures.	

IOS: Obtaining the tools and SDK, Components of XCODE, Architecture of iOS, Objective C and Swift Programming Languages.

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Book:

1. Jeff McWherter and Scott Gowell, "Professional Mobile Application Development", 1st Edition, 2012.
2. Wei-Meng Lee, "Beginning Android Application Development", Wiley 2011.

Reference Books:

1. Reto Meier, "Professional Android 4 Application Development", Wrox Publications 2012.
2. Rap Payne, "Beginning App Development with Flutter: Create Cross-Platform Mobile Apps", 1st Edition, Publications 2019.

TEACHING METHODS

- PPTs
- Hands-On Sessions
- Black Board

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity based on Programming Assignments/ Mini Projects/ Case Studies for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

COURSE OUTCOMES

At End of the Course Student will Be Able to

CO1: Illustrate effective user interfaces that leverage evolving mobile device capabilities.
CO2: Develop applications using different SDK frameworks and toolkits.
CO3: Establish various methods to integrate database and server-side technologies.
CO4: Design and develop open source software based mobile applications.
CO5: Build and deploy competent mobile development solutions.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

Computer Networking & Communications [As per Choice Based Credit System (CBCS) scheme] **SEMESTER - II**			
Subject Code	22MCA2041E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03
CREDITS – 03			

COURSE DESCRIPTION

This course is aimed to introduce the modern network architectures, Layered models, IP addresses. It also covers all protocols, transmission media and Routing concepts.

PREREQUISITES

- Students should know Topologies of Network.
- Students should know basic knowledge of Computer Hardware and Networking Components.

COURSE OBJECTIVES

- To Develop An Understanding Of Modern Network Architectures From A Design And Performance Perspective.
- To Introduce The Student To The Major Concepts Involved In Wide-Area Networks (WANs), Local Area Networks (WLANs) And Wireless LANs (WLANs).
- To Provide An Opportunity To Do Network Programming
- To Provide A WLAN Measurement Ideas.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
Introduction: Network Applications, Network Hardware. Reference Models: OSI reference model, TCP/IP reference model. **The Physical Layer:** Guided Transmission Media, Wireless Transmission Media, Digital modulation and Multiplexing, Mobile telephone systems (1G, 2G, 3G and 4G).	
Module 2	**08 Hours**
Data Link layer: Data link layer design issues, Error Detection Schemes: Parity, Checksum, CRC. Data Link Protocols: Simplex, Simplex Stop and Wait for an error-free channel and Noisy channel, Sliding window protocols: one bit sliding window, Go Back N and Selective repeat.	
Module 3	**08 Hours**
Medium Access Control Sub Layer: The Channel Allocation Problem, Multiple access protocols: ALOHA, Collision free protocols: Bit Map and Token Passing; RFID: EPC Gen 2 Architecture, EPC Gen 2 Physical Layer, EPC Gen 2 Tag Identification Layer, Tag Identification Message Formats.	
Module 4	**08 Hours**
Network Layer: Network Layer Design issues, Routing algorithms: Optimality Principle, Shortest Path, Flooding, Distance Vector Link State; Internetworking, The Network Layer in the Internet: IPV4, IP addresses, IPV6.	
Module 5	**08 Hours**
The Transport Layer: Elements of Transport Protocols: Error Control and Flow Control, Multiplexing, Crash Recovery; Congestion Control; UDP: Remote Procedure Call Real-Time Transport Protocols; TCP: TCP Service Model, TCP Protocols.	

The application Layer: Introduction, DNS: Domain Name Space, Domain Name Records, Name Servers; The World Wide Web: web applications, HTTP, mobile web; Content Delivery: Server Farms and Web Proxies.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. "Computer Networks" by Andrew S Tanenbaum, David J Wetheral, 5th Edition, Pearson 2011
2. "Data and Computer Communications" by William Stallings , Above 7th Edition , 2004

Reference Books:

1. Behrouz A. Forouzan, Data Communications and Networking, Tata McGraw-Hill 5th Edition, 2017.
2. James F. Kurose and Keith W. Ross, Computer Networking- A Top-Down Approach featuring the Internet, 7th Edition, Pearson, 2016.

TEACHING METHODS

- Black Board –Microteaching Method
- Hands-On Sessions Based Teaching
- PowerPoint Presentation

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity is based on Seminars/ Case Studies for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

COURSE OUTCOMES: At End of the Course Student will Be Able to

CO1: Understand the various applications & Communication medias.

CO2: Compare various Error detection and Correction techniques, Understand Internet Control protocols and Internet transport protocols in computer network.

CO3: Comprehend different network layer functionalities. Compare various Routing and Congestion control algorithms.

CO4: Analyze the working of transport layer and application layer.

CO5: Understand the concept of packet tracer

Introduction to Data Science
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – II

Subject Code	22MCA2042E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

CREDITS – 03

COURSE DESCRIPTION

- This course provides an insight of Data Science and the data analysis process

PREREQUISITES

- Students should know basics terminology of Data Science
- Students should know basics of DBMS and ML concepts.

COURSE OBJECTIVES:

- Understand Data Science process
- Be aware of the Exploratory data analysis techniques
- Understand ML algorithms and its applications.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
Introduction: What is Data Science? Big Data and Data Science hype – and getting past the hype, why now? – Datafication, Current landscape of perspectives, Skill sets. Needed Statistical Inference: Populations and samples, Statistical modelling, probability distributions, fitting a model, - Introduction to R	
Module 2	**08 Hours**
Exploratory Data Analysis and the Data Science Process: Basic tools (plots, graphs and summary statistics) of EDA, Philosophy of EDA,The Data Science Process, Case Study: Real Direct (online real estate firm). Three Basic Machine Learning Algorithms: Linear Regression, k-Nearest Neighbours (kNN), k-means	
Module 3	**08 Hours**
One More Machine Learning Algorithm and Usage in Applications: Motivating application: Filtering Spam, Why Linear Regression and k-NN are poor choices for Filtering Spam, Naive Bayes and why it works for Filtering Spam, Data Wrangling: APIs and other tools for scrapping the Web	
Module 4	**08 Hours**
Feature Generation and Feature Selection (Extracting Meaning from Data): Motivating application: user (customer) retention. Feature Generation (brainstorming, role of domain expertise, and place for imagination), Feature Selection algorithms. Filters; Wrappers; Decision Trees; Random Forests. Recommendation Systems: Building a User-Facing Data Product, Algorithmic ingredients of a Recommendation Engine, Dimensionality Reduction, Singular Value Decomposition, Principal Component Analysis, Exercise: build your own recommendation system	
Module 5	**08 Hours**

Mining Social-Network Graphs: Social networks as graphs, Clustering of graphs, Direct discovery of communities in graphs, Partitioning of graphs, Neighborhood properties in graphs, Data Visualization: Basic principles, ideas and tools for data visualization. Data Science and Ethical Issues, Discussions on privacy, security, ethics, Next-generation data scientists	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Doing Data Science Cathy O'Neil and Rachel Schutt, Straight Talk from The Frontline O'Reilly 2014
2. Mining of Massive DatasetsV2.1 Jure Leskovek, Anand Rajaraman and Jeffrey Ullman Cambridge University Press, 2nd Edition 2014
3. Data Mining: Concepts and Techniques Jiawei Han, Micheline Kamber and Jian Pei Morgan Kauffman, Third Edition, 2012

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

- Three Internals, 30 Marks each will be conducted and the weightage of 40%, 40% and 20% from 1st, 2nd, and 3rd internals will be taken.
- Evaluation of Programming Assignments for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understand and explain the underlying principles of Data Science

CO2: Understand the Exploratory Data Analysis and Data Science Process

CO3: Impart knowledge about Machine Learning Algorithms and its tools

CO4: Understand the adequate knowledge of feature generation and feature extraction methods

CO5: Understand the basics of Social Mining

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	3							1	1				3	
CO2	3							1	1				3

CO4	3			2				1	1				3	
CO5	3							1	1				3	

Fundamentals of Cryptography and Network Security
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – II

Subject Code	22MCA2043E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

Credits – 03

COURSE DESCRIPTION

This course provides an in-depth knowledge of definitions of cryptography and network security, conventional cryptographic algorithms, block cipher cryptosystems, public cryptosystems, key management systems, authentication techniques to provide secure communication.

PREREQUISITES

- Students should have the knowledge of Computer Networks
- Students should have knowledge of Mathematics and Algorithm Concepts.

COURSE OBJECTIVES

- To Understand the basic concepts of cryptography and network security and classify attacks on a network.
- To Understand and analyze the different process for hiding the information with conventional cryptographic algorithms.
- To Understand various block cipher cryptosystems
- To Analyze public cryptosystems and key management Systems
- To Understand and apply authentication techniques to provide secure communication

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
Introduction: Service mechanisms and attacks, The OSI security architecture, A Model for Network Security. Symmetric Ciphers: Symmetric cipher model, substitution techniques.	
Module 2	**08 Hours**
Symmetric Ciphers: Transposition techniques, Steganography. Block Ciphers and DES: Simplified DES. Block cipher principles, DES, Strength of DES, Block cipher design principles.	
Module 3	**08 Hours**
Block cipher modes of operation. AES Cipher-Substitute Bytes Transformation, Shift Row Transformation, Mix Column Transformation, Add Round Key Transformation, AES key expansion.	
Module 4	**08 Hours**
Public key cryptography and RSA: Principles of public key cryptosystems, RSA algorithm. Other public key cryptosystems and key management: key management, Diffie-Hellman key exchange. Elliptic Curve Cryptography.	
Module 5	**08 Hours**
Network Security Applications: Authentication Applications: Kerberos, X.509 Authentication Service. Electronic Mail Security: PGP.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Cryptography and Network Security: William Stallings, Pearson Education, 2003
2. Behrouz A Forouzan, Debdeep Mukhopadhyay: Cryptography and Network Security, 2nd Edition, Special Indian edition, Tata McGraw-Hill, 2011.

Reference Books:

1. Network Security and Cryptography, Bernard Meneges, Cengage Learning
2. Cryptography and Network Security, Atul Kahate, TMH, 2003

TEACHING METHODS

- Black Board –Microteaching Method
- Hands-On Sessions Based Teaching
- PowerPoint Presentation

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Learning Activity will be based on Assignments/ Case Studies for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understand the basic concepts of cryptography and network security and classify attacks on a network, symmetric ciphers and substitution techniques.

CO2: Understand and Analyze the different process for hiding the information with Conventional cryptographic algorithms, transposition techniques and block ciphers.

CO3: Illustrate the various block cipher cryptosystems like DES and AES

CO4: Analyze public cryptosystems and key management Systems.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	3							1	1				3	
CO2	3	3	2	2			1	1	1				3	
CO3		3		2			1	1	1	1			3

Cloud Computing [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Subject Code	22MCA2051E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03
Credits – 03			

COURSE DESCRIPTION

This course provides a method to delivery different types of computing services—including servers, storage, databases, networking, software, analytics, and intelligence—over the Internet ("the cloud") to offer faster innovation, flexible resources, and economies of scale

PREREQUISITES

- Students should know basics of architecture and programming in cloud services.
- Students should know the Knowledge of Agile Development

COURSE OBJECTIVES

- To explain cloud computing, virtualization and classify services of cloud computing
- To analyze the components of cloud computing and its business perspective.
- To Demonstrate different features of cloud platforms used in Industry
- To describe the platforms for development of cloud applications and List the application of cloud.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
Introduction. Overview of Computing Paradigm - Recent trends in Computing - Grid Computing, Cluster Computing, Distributed Computing, Utility Computing, Cloud Computing - Evolution of cloud computing - Cloud Computing (NIST Model). High-performance computing, Introduction to GreenCloud.	
Module 2	**08 Hours**
Introduction to virtualization Definition, virtualization, Different approaches to virtualization. Hypervisors, Basics of VMWare, advantages of VMware virtualization, using VMware workstation, creating virtual machines-understanding virtual machines, create a new virtual machine on local host, cloning virtual machines, virtualize a physical machine, starting and stopping a virtual machine.	
Module 3	**08 Hours**
Infrastructure as a Service (IaaS). Introduction- IaaS, Machine Image, Virtual Machine(VM) - Resource Virtualization – Server, Storage, Network, Virtual Machine(resource) provisioning and manageability, storage as a service, Data storage in cloud computing (storage as a service) - Examples - Amazon EC2 - Renting, EC2 Compute Unit, Platform and Storage, pricing, customers – Eucalyptus	
Module 4	**08 Hours**
Platform as a Service (PaaS) & Software as a Service (SaaS) Introduction, Service Oriented Architecture (SOA) - Cloud Platform and Management – Computation, Storage – Examples - Google App Engine,	

Microsoft Azure, SalesForce.com, Force.complatform-Software as a Service (PaaS)-Introduction to SaaS-Webservices-Web2.0- WebOS-Case Study on SaaS.	
Module 5	**08 Hours**
Cloud Simulators- CloudSim and GreenCloud. Introduction to Simulator, understanding CloudSim simulator, CloudSim Architecture(User code, CloudSim, GridSim, SimJava) Understanding Working platform for CloudSim, Introduction to IoT cloud platforms like Open Shift, KaaS.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Rajkumar Buyya, James Broberg, Andrzej M. Goscinski, Cloud Computing: Principles and Paradigms, Wiley, 2011.
2. Ronald L.Krutz, Russell Dean Vines, Cloud Security: A Comprehensive Guide to Secure Cloud Computing, Wiley- India, 2010.

Reference Books:

1. Rajkumar Buyya, Christian Vecchiola, S. Thamarai Selvi, Mastering Cloud Computing, Mc Graw Hill Education, 2013.
2. Nikos Antonopoulos, Lee Gillam, Cloud Computing: Principles, Systems and Applications, Springer, 2012.
3. Barrie Sosinsky, Cloud Computing Bible, Wiley-India, 2010.

TEACHING METHODS

- Black Board –Microteaching Method
- Hands-On Sessions Based Teaching
- PowerPoint Presentation

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity based on Case Studies for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understand the cloud computing delivery model and the enabling technologies.

CO2: Explain and cloud computing platforms, key technology drivers and cloud programming/software environments

CO3: Identify the need for cloud computing model and compare various key enabling Technologies.

CO4: Analyze and choose an appropriate programming environment for building cloud Applications

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	3							1	1					3
CO2	3							1	1					3

Artificial Intelligence & Expert Systems [As per Choice Based Credit System (CBCS) scheme] **SEMESTER – II**			
Subject Code	22MCA2052E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03
Credits – 03			

COURSE DESCRIPTION

This course provides an understanding of Artificial Intelligence Systems, and its Applications. The course also provides the knowledge of Knowledge representation, Problems, Logic, Statistical Reasoning, Symbolic Reasoning and Expert Systems for the development of AI Systems.

PREREQUISITES

- Students should know basics of Mathematical Structures, basics of Statistics and basic models.
- Students should know theoretical concepts of application development.

COURSE OBJECTIVES

- To understand the fundamentals of Artificial Intelligence systems.
- To design AI applications using Algorithms and Intelligent Systems.
- To understand the logic, reasoning and theories of AI & Expert Systems.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
What is Artificial Intelligence: The AI Problems, The Underlyingassumption, AI Technique, The Level of the model, Criteria for Success **Problems, problem spaces, and search**: Defining, the problem as a statespace search, Production systems, Problem characteristics, Production system characteristics, Issues in the design of search programs, Additional Problems.	
Module 2	**12 Hours**
Knowledge representation issues: Representations and mappings, Approaches to knowledge representation, Issues in knowledge representation, The frame problem. **Inference** – Backward chaining, forward chaining, Rule value approach, Fuzzy reasoning. **Using predicate logic**: Representing simple facts in logic, representing instance and ISA relationships, Computable functions and predicates, Resolution, Natural Deduction.	
Module 3	**08 Hours**
Expert Systems: Expert Systems – Architecture of Expert Systems, Roles of Expert Systems – Knowledge Acquisition – Meta Knowledge, Heuristics. Typical Expert Systems – MYCIN, DART, XCON, Expert Systems Shells.	
Module 4	**12 Hours**
Learning in Neural Networks: Fundamentals of neural networks – model of an artificial neuron – neural network architectures – Learning methods – Taxonomy of Neural network architectures – Standard back propagation algorithms – selection of various parameters – variations Applications of back propagation algorithms.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Elaine Rich, Kevin Knight, Shivashankar B Nair: Artificial Intelligence, Tata McGraw Hill 3rd edition. 2013.
2. Dan W. Patterson, “Introduction to AI and ES”, Pearson Education, 2007.

Reference Books:

1. Nils J. Nilsson: “Principles of Artificial Intelligence”, Elsevier, ISBN-13:9780934613101.
2. Stuart Russel, Peter Norvig: Artificial Intelligence A Modern Approach, Pearson 3rd edition 2013.
3. Peter Jackson, “Introduction to Expert Systems”, 3rd Edition, Pearson Education, 2007.
4. http://nptel.ac.in (Web Reference)

TEACHING METHODS

- ICT based Teaching Learning Methods.
- Presentation Methods.
- Self-Learning by assigned activities.

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Learning Activity will be based on Case study for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Identify problems that are amenable to solution by AI methods.

CO2: Identify Issues and Approaches for Knowledge representation.

CO3: Applying the Principles of Probabilistic methods for solving AI Problems.

CO4: Using Expert Systems for Knowledge Representation and Heuristics.

CO5: Apply Learning Methods to Solve AI Problems.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	3							1	1				3	
CO2	3							1	1				3	
CO3		2		2			1	1	1	1		1	3	
CO4		2		2			1	1	1	1	1	1	3	
CO5		2		2			1	1	1	1	1	1	3	

Cyber Security
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – II

Subject Code	20MCA2053E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

CREDITS – 03

COURSE DESCRIPTION

Cyber security is the practice of protecting networks, computer systems, and data from malicious attacks. This course helps students develop a deeper understanding of modern information and cyber security challenges, mitigation techniques and tools.

PREREQUISITES

- Basics of computer networks
- Basic unix/linux commands

COURSE OBJECTIVES

- The courses presents the basic cyber security concepts and security tools used.
- Students will learn how to defend against cyber threats and attacks and study existing techniques for managing security issues and maintaining the working environment.

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**08 Hours**
Introduction to Cybercrime and Laws Introduction, Cybercrime: Definition and Origins of the word, Cybercrime and information Security, Who are Cybercriminals? Classifications of Cybercrimes. How Criminals Plan Them – Introduction, How Criminals Plan the Attacks, Cybercafé and Cybercrimes, Botnets, Attack Vector, The Indian IT ACT 2000 and amendments.	
Module 2	**08 Hours**
Tools and Methods used in Cybercrime Introduction, Proxy Server and Anonymizers, Password Cracking, Key loggers and Spyware, Virus and Warms, Trojan and backdoors, Steganography, DOS and DDOS attack, SQL injection, Buffer Overflow.	
Module 3	**08 Hours**
Systems Vulnerability Scanning Overview, Open Port/Service Identification, Banner/Version Check, Traffic Probe, Vulnerability Probe, Vulnerability Examples, OpenVAS, Metasploit. File System Monitoring: File System Metadata	
Module 4	**08 Hours**
Command-Line Environments: Unix Command Lines, Windows Power Shell Netcat: Net Cat Commands, Net Cat Uses, Port Forwarding and Redirection: SSH, Data Pipe, Fpipe, Network Reconnaissance – Nmap, Network Snifers and Injectors: Tcpdump and winDump	
Module 5	**08 Hours**
Network Defense tools Firewalls and Packet Filters: Firewall Basics, Packet Filter Vs Firewall, How a Firewall Protects a Network, Packet Characteristic to Filter, Stateless Vs	

Stateful Firewalls, Network Address Translation (NAT) and Port Forwarding, the basic of Virtual Private Networks, Linux Firewall, Windows Firewall, Snort: Intrusion Detection System,	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Book:

1. Mike Shema, "Anti-Hacker Tool Kit (Indian Edition)", McGraw Hill Education.
2. Nina Godbole, Sunit Belpure, "Cyber Security: Understanding Cyber Crimes, Computer Forensics and Legal Perspectives", Publication Wiley.

Reference Books:

1. Marjie T. Britz, "Computer Forensics and Cyber Crime: An Introduction", Pearson.
2. Chwan-Hwa Wu and J. David Irwin, "Introduction to Computer Networks and Cyber security", CRC Press.
3. Amelia Phillips, Bill Nelson, Christopher Steuart, "Guide to Computer Forensics and Investigations", Cengage Learning.

TEACHING METHODS

- PPTs
- Black Board

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity is based on Quiz/ Case studies/ Seminars for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Know the source of information on cyber-crimes.

CO2: Describe Information Technology act and Related Legislation.

CO3: Describe typical threats to modern digital systems, and to outline techniques of defense against each threat

CO4: Learn the vulnerability exploits.

CO5: Learn the usage of tools for everything from improving command-line skills to testing the security of operating systems, networks, and applications.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

IOT System Design and Development
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER –II

Subject Code	22MCA2061E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

Credits – 03

COURSE DESCRIPTION

This Course focuses on IoT concepts such as sensing, actuation and communication. It covers the development of Internet of Things (IoT) prototypes—including devices for sensing, actuation, processing, and communication—to help you develop skills and experiences. .

PREREQUISITES

- Basic knowledge of C or C++ or any programming language or programming fundamentals. Familiarity with command-line interface.
- Basic knowledge of Operating system concepts.

COURSE OBJECTIVES

- After the completion of the course, the students will be able design some IOT based prototypes

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**08 Hours**
Introduction to IOT IOT Architecture and protocols, Real time Examples of IoT, Microprocessor, Types of Processors, Architecture Types. CISC & RISC. Sensors & Actuators.	
Module 2	**08 Hours**
Hardware componenets of IoT Microcontroller, Simulators, Emulators, Choosing Microcontroller, Analog and Digital Sensors, Interfacing of Temperature, Humidity and Motion Sensor with Arduino. Interfacing of Relay Switch and Servo Motor with Arduino	
Module 3	**08 Hours**
INTRODUCTION TO RTOS: Introduction to Operating System: Computer Hardware Organization, BIOS and Boot Process, Multi-threading concepts, Processes, Threads and Scheduling.	
Module 4	**08 Hours**
Working with Arduino Arduino Uno Architecture, Setup the IDE, Writing Arduino Software Arduino Libraries, Basics of Embedded C programming for Arduino Interfacing LED, push button and buzzer with Arduino, Interfacing Arduino with LCD	
Module 5	**08 Hours**
Cloud Platforms for IOT Virtualization concepts and Cloud Architecture, Cloud computing, benefits Cloud services -- SaaS, PaaS, IaaS, Cloud providers & offerings, Study of IOT Cloud platforms, ThingSpeak API and MQTT, Interfacing ESP8266 with Web services	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

2. Peter Friess,'Internet of Things – From Research and Innovation to Market Deployment',
3. River Publishers, 2014
4. N. Ida, Sensors, Actuators and Their Interfaces, SciTech Publishers, 2014.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity based on Case Studies/ Seminars for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understanding of IoT value chain structure (device, data cloud), application areas and technologies involved.

CO2: Understand IoT sensors and technological challenges faced by IoT devices, with a focus on wireless, energy, power, and sensing modules

CO3: Market forecast for IoT devices with a focus on sensors

CO4: Understanding the implementation of web-based services on IoT devices

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

Machine Learning [As per Choice Based Credit System (CBCS) scheme] **SEMESTER – II**			
Subject Code	22MCA2062E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03
Credits – 03			

COURSE DESCRIPTION

This course provides an understanding of various algorithms of Machine Learning models. The course also provides how models are evaluated and selected.

PREREQUISITES

- Students should know basics of Statistics and Mathematical Models.
- Students should know programming in Python or R

COURSE OBJECTIVES

- To understand the fundamentals of learning for data
- To understand predictive and classification model.
- To learn how to assess quality of model, model bias and variance and select appropriate right model for the use case.
- To learn how to combine two or more models to improve prediction

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
Introduction: Well posed learning problems, Designing a Learning system, Perspective and Issues in Machine Learning. Supervised and Unsupervised Learning **Concept Learning:** Concept learning task, Concept learning as search, Find-S algorithm, Version space and Candidate Elimination algorithm, Inductive Bias. **Data Types**: Nominal, Ordinal, Interval, Ratio	
Module 2	**08 Hours**
Regressions: Linear regression models and least squares, Multiple regression, Multiple outputs, Subset selection, Ridge regression, Linear Discriminant Analysis, Logistic regression	
Module 3	**08 Hours**
Classification Models: Decision tree representation, Appropriate problems for decision tree learning, Basic decision tree learning algorithm, hypothesis space search in decision tree learning, Inductive bias in decision tree learning, Issues in decision tree learning, **Random forests,** Association rules **Bayesian Learning:** Introduction, Bayes theorem, Bayes theorem and concept learning, ML and LS error hypothesis, Naive Bayes classifier, \	
Module 4	**08 Hours**
Model Assessment and Selection: Bias, Variance, and model complexity, Bias-variance trade off, Optimism of the training error rate, Estimate of In-sample prediction error, Effective number of parameters, Bayesian approach and BIC, Cross- validation, Boot strap methods.	
Module 5	**08 Hours**
Additive Models, Trees, and Boosting: Generalized additive models, Regression and classification trees, Boosting methods-exponential loss and	

Ada-Boost, Numerical Optimization via gradient boosting, Examples (California housing, New Zealand fish, Demographic data)	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

2. T. Hastie, R. Tibshirani, J. H. Friedman, “The Elements of Statistical Learning”, Springer; 1st edition, 2001.
3. C.M. Bishop, “Pattern Recognition and Machine Learning”, Springer, 2011
4. L.Wasserman, “All of Statistics: A Concise Course in Statistical Inference”, Springer

TEACHING METHODS

- ICT based Teaching Learning Methods.
- Presentation Methods.
- Self-Learning by assigned activities.

ASSESSMENT METHODS

- Three Internals, 30 Marks each will be conducted. 40% each of first two internals and 20% of third internals will be consolidated out of 30 marks.
- Case study is considered as a part of Learning Activity for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Choose the learning techniques and investigate concept learning

CO2: Learn how to predict using regression techniques

CO3: Identify the concepts of decision trees and solve problems associated with it

CO4: Select and Evaluate the predictive performance of all kinds of models

CO5: Learn how to generalize and combine models.

Mobile and Digital Forensics [As per Choice Based Credit System (CBCS) scheme] SEMESTER –II			
Subject Code	22MCA2063E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	42	SEE Hours	03
Credits – 03			

COURSE DESCRIPTION

This course helps to understand the processes involved in mobile and digital forensics.
And to Understand the Basics of wireless technologies and security

PREREQUISITES

- Knowledge of Computer Networks and information security

COURSE OBJECTIVES

- Understand the Basics of wireless technologies and security
- Become Knowledgeable in mobile phone forensics and Android Forensics
- Learn the methods of investigation using Digital Forensic techniques

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**8 Hours**
Introduction to Wireless Technologies Overview of wireless technologies and security: Personal Area Networks, Wireless Local Area Networks, Metropolitan Area Networks, Wide Area Networks. Wireless threats, vulnerabilities and security: Wireless LANs, War Driving, War Chalking, War Flying, Common Wi-Fi security recommendations, PDA Security, Cell Phones and Security, Wireless DoS attacks, GPS Jamming, Identity theft.	
Module 2	**10 Hours**
Security Framework for Mobile Systems CIA triad in mobile Phones-Voice, SMS and Identification data interception in GSM: Introduction, practical setup and tools, implementation- Software and Hardware Mobile phone tricks: Netmonitor, GSM network service codes, mobile phone codes, catalog tricks and AT command set- SMS security issues.	
Module 3	**8 Hours**
Mobile Phone Forensics Crime and mobile phones, evidences, forensic procedures, files present in SIM card, device data, external memory dump, evidences in memory card, operators systems- Android forensics: Procedures for handling an android device, imaging android USB mass storage devices, logical and physical techniques.	
Module 4	**8 Hours**
Introduction to Digital Forensics Digital forensics: Introduction – Evidential potential of digital devices: closed vs. open systems, evaluating digital evidence potential- Device handling: seizure issues, device identification, networked devices and contamination.	
Module 5	**10 Hours**
Analysis of Digital Forensic Techniques	

Digital forensics examination principles: Previewing, imaging, continuity, hashing and evidence locations- Seven element security model- developmental model of digital systems- audit and logs- Evidence interpretation: Data content and context.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.

The students will have to answer 5 full questions, selecting one full question from each module

Text Books

1. Iosif I. Androulidakis, "Mobile phone security and forensics: A practical approach", Springer publications, 2012.
2. Andrew Hoog, "Android Forensics: Investigation, Analysis and Mobile Security for Google Android", Elsevier publications, 2011.

Reference Books:

1. Angus M. Marshall, "Digital forensics: Digital evidence in criminal investigation", John – Wiley and Sons, 2008
2. Gregory Kipper, "Wireless Crime and Forensic Investigation", Auerbach Publications.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching
- Arduino IDE

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Rubrics for the Evaluation of Case studies for 20 Marks.

Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks..

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Ability to understand the processes involved in mobile and digital forensics.

CO2: Acquiring skills to analyse mobile and digital forensics techniques.

CO3: Understanding the implementation of web-based services on Forensic devices

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

CO5	2	2	2	1									3	2	

Python Programming Laboratory [As per Choice Based Credit System (CBCS) scheme] **SEMESTER –II**			
Subject Code	22MCA207L	CIE Marks	50
Number of Hours/ Week	02 Hrs Laboratory	SEE Marks	50
		SEE Hours	03
CREDITS – 01			

COURSE DESCRIPTION

This course is intended to provide students with the skills required to understand the basic working of Python Programming. It demonstrates the Real-time Object-oriented programming concepts with respect to handling database and Data Frames with panda's library.

PREREQUISITES

- Students should know basics of Programming.
- Students should know C, C++, and Java Programming Concepts.

Course Objectives:

- To be able to introduce core programming basics and program design with functions using Python programming language.
- To understand a range of Object-Oriented Programming, as well as in-depth data and information processing techniques.

PART A - Laboratory Experiments

1	a. Implement a python program to search an element using linear search. b. Implement a python program to search an element using binary search.
2	a. Implement a python program to insert an element into a sorted list. b. Implement a python program to simulate stack.
3	Write a python program using object-oriented programming to demonstrate a. encapsulation b. overloading c. inheritance.
4	a. Implement a Python Program for file operations. b. Implement a python program to demonstrate data wrangling functions.
5	a. Implement a python program to Importing Datasets and demonstrate the basic operations on them w.r.t Pandas. b. Implement a Python program to demonstrate the working of DataFrames using Pandas.
6	a. Implement a python program to demonstrate the following using NumPy: a) Array manipulation, Searching, Sorting and splitting. b. Broadcasting and Plotting NumPy arrays using matplotlib library.

PART B - MINI PROJECT

Develop a mini project using the python programming using the concepts learning during the theory class.

Note:

1. *In the examination each student should pick one program from Part-A,*
2. *A team of two or three students must develop the mini project. However during the examination, each student must demonstrate the project individually.*
3. *The team must submit a brief project report (15-20 pages)*

ASSESSMENT METHODS	
Experiment Write up + Execution + Viva	20
Lab Record Writing	10
Lab Internals Test	10
Mini Project	10
Total	50

Final Exam will be conducted for 50 marks (SEE)

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Develop python program to perform search/sort on a given data set.
CO2: Demonstrate object-oriented Programming, File handling and exception handling in Python.
CO3: Demonstrate Data Cleaning and Data Manipulation using Numpy and Pandas.
CO4: Demonstrate data visualization using Numpy
CO5: Perform array broadcasting using Numpy.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	2	1	2						1				3	
CO2	2	2	1						1				3	
CO3	2	2	1						1				3	
CO4	2	2	2	1					1				3	
CO5	2	2	2	1					1				3	

Web Programming Laboratory
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – II

Subject Code	20MCA208L	CIE Marks	50
Number of Hours/Week	02 Hrs. Laboratory	SEE Marks	50
		SEE Hours	03

CREDITS – 01

1	Write a HTML Page to create a Student registration form that collects various student information such as first name, last name, Roll No., email id, mobile number, etc and a two buttons: submit and reset. Apply different CSS properties
2	a. Develop and demonstrate a XHTML file that includes JavaScript script for the following problems: i) Accept a number n obtained using prompt and display the first n Fibonacci numbers using alert ii) Accept a number n obtained using prompt, and display a table of numbers from 1 to n and their squares using alert() b. Develop and demonstrate using JavaScript, a XHTML document that displays random numbers (integers).
3	Write a JavaScript program to generate n number of random numbers and store them in an array. Sort the generated numbers in ascending order using array sort method. Develop separate functions to find mean and median of numbers that are in the array. Display the results with appropriate messages.
4	a. Develop and demonstrate, using JavaScript script, a XHTML document that collects the USN (the valid format is: A digit from 1 to 4 followed by two uppercase characters followed by two digits followed by two uppercase characters followed by three digits; No embedded spaces allowed) of the user. Event handler must be included for the Form element that collects this information to validate the input. Messages in the alert windows must be produced when errors are detected. b. Modify the above program to get the current semester also (restricted to be a number from 1 to 6).
5	Develop using JavaScript script, an XHTML document that use of onload and onfocus events.
6	a. Design an XML document to store information about a student in an engineering college affiliated to VTU. The information must include USN, Name, Name of the College, Brach, Year of Joining, and e-mail id. Make up sample data for 3 students. Create a CSS style sheet and use it to display the document. b. Create an XSLT style sheet for one student element of the above document and use it to create a display of that element.
7	a. Create XHTML forms with Name, address line1, address line2 and email text fields. On submitting, store the values in MySQL table. Retrieve and display the data based on name. b. Implement a PHP program to read student data from an XML file and store into the MySQL database. Retrieve and display using SEARCH function.
8	Implement the following web applications using AngularJS: A simple calculator web application that takes two numbers and an operator (+, -, /, * and %) from an HTML page and returns the result page with the operation performed on the operands
9	Implement the following web applications using AngularJS: A user validation web application, where the user submits the login name and password to the server. The name

	and password are checked if the data matches, a successful login page is returned. Otherwise a failure message is shown to the user.
10	Implement the following web applications using PHP: A user validation web application, where the user submits the login name and password to the server. The name and password are checked against the data already available in Database and if the data matches, a successful login page is returned. Otherwise a failure message is shown to the user.

ASSESSMENT METHODS

Experiment Write up + Execution + Viva	20
Lab Record Writing	10
Lab Internals Test	10
Mini Project	10
Total	50

- Final Exam will be conducted for 50 marks (SEE)

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Use HTML and CSS to design web pages.
CO2: Infer the role of XML in web applications and use them.
CO3: Apply the concepts of JavaScript to perform client side validation and create dynamic web pages.
CO4: Create server side applications using PHP.
CO5: Create web application using AngularJS.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

Mobile Application in Android Laboratory [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Subject Code	20MCA209L	CIE Marks	50
Number of Hours/Week	02 Hrs Laboratory	SEE Marks	50
		SEE Hours	03
CREDITS – 01			

COURSE DESCRIPTION

Covers introductory mobile application development for the Android and iOS Operating System using XML, C, C++, and Java. Includes developing simple applications that could run on Android and Apple phones and tablets. Covers Android and iOS application development phases, terminologies, application design, and coding.

PREREQUISITES

- Students should know basics of XML.
- Students should know C, C++, and Java Programming Concepts.

COURSE OBJECTIVES

Mobile Application Development course is designed to quickly get you up to speed with writing apps for Android and iOS devices. The student will learn the basics of Android and Flutter Frameworks and get to understand the application lifecycle.

Part-A

Sl. No.	Laboratory Experiments
1	Develop a mobile application to display user profile with 3 UI activities using intents.
2	Design an application that contains Phone Contacts in vertical linear manner. Selected contact appears at the top of the list with a large italicized font and a blue background
3	Create an application that uses Layout Managers and Event Listeners
4	Develop a mobile application to list the tourist places of Karnataka using List View.
5	Develop a mobile application to register a form in first activity and display the registered information in second activity using intents.
6	Develop a standard calculator application to perform basic calculations like addition, subtraction, multiplication and division
7	Devise an application that draws basic graphical primitives (rectangle, circle) on the screen
8	Build an mobile application that create, save, update and delete data in a database
9	Devise an application that implements Multi-threading
10	Develop a mobile application that uses GPS location information
11	Create an application that writes data to the SD card.
12	Implement an application that creates an alert upon receiving a message.
13	Devise a mobile application that creates alarm clock

Part-B

Develop a Mini Project on Flutter Framework

Note:

1. *In the examination each student should pick one program from Part-A,*
2. *A team of two or three students must develop the mini project. However during the examination, each student must demonstrate the project individually.*
3. *The team must submit a brief project report (15-20 pages)*

ASSESSMENT METHODS	
Experiment Write up + Execution + Viva	20
Lab Record Writing	10
Lab Internals Test	10
Mini Project	10
Total	50

Final Exam will be conducted for 50 marks (SEE)

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Illustrate effective user interfaces that leverage evolving mobile device capabilities.
CO2: Develop applications using software development kits (SDKs), frameworks and toolkits.
CO3: Establish various methods to integrate database and server-side technologies.
CO4: Design and develop open source software based mobile applications.
CO5: Build and deploy competent mobile development solutions.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	2	1	2	1			1	1	1				3	
CO2	2	2	1				1	1	1				3	
CO3	2	2	1				1	1	1				3	
CO4	2	2	2	2			1	1	1				3	
CO5	2	2	2	2			1	1	1				3	

Technical Seminar [As per Choice Based Credit System (CBCS) scheme] SEMESTER – II			
Subject Code	22MCA210S	CIE Marks	50
Number of Hours/Week	02 Hrs	SEE Marks	50
		SEE Hours	03
CREDITS – 01			

Course outcomes:

CO 1: The students will be able to recall existing technologies in the area of computer science.
CO 2: The students will be able to describe, compare and evaluate different technologies.
CO 3: The students will be able to decide the area of interest
CO 4: The students will be able to develop their communication skills.
CO 5: The students will be able to write technical reports.

General Guidelines

- Students should present the seminar on cutting edge/emerging/state of the art technologies in the field of Computer Science and Applications.
- Duration of the seminar should be approximately 45 minutes.
- Student should submit the write up on seminar topic containing at least 10 pages

Report format:

1. **Cover Page**
2. **Acknowledgement**
3. **Abstract**

Table of Contents:

Sl. No	Description	Page No.
1.	Introduction	
2.	Literature Survey	
3	Topic Specific Description	
4	Conclusions	
5	Bibliography	

Guidelines for Report Writing:

1) Put page borders
2) Main Heading font size 17pt (Times New Roman)
3) Subheading : font size 14pt (Times New Roman)
4) Text: font size 12pt (Times New Roman)
5) Figures should have Fig numbers at the bottom of the figure e.g. Fig 3.2 is second figure in 3rd chapter
6) Tables should have table numbers at the top example Table 5.1 i.e, 1st table in 5th chapter
7) Paragraph spacing 1.5

CO-PO-PSO Mapping

CO1	3						1	2	1	1		2		3
CO2	3						1	2	1	1		1		3
CO3	3						1	2	1	2				3
CO4							1	2	1	2				3
CO5							1	2	1			1		3

Programming Using C# and .NET [As per Choice Based Credit System (CBCS) scheme] SEMESTER –III			
Subject Code	22MCA301	CIE Marks	50
Number of Lecture Hours/Week	04	SEE Marks	50
Total Number of Lecture Hours	50	SEE Hours	03
Credits – 04			

COURSE DESCRIPTION

This course is an introduction to computer programming for Windows. Emphasis will be on the fundamentals of structured design, development and implementation, including C# programming language syntax, data and file structures, input/output devices, files, and databases

PREREQUISITES

- Basic knowledge of C or C++ or any programming language or programming fundamentals. Familiarity with command-line interface.
- The OOP concept makes for a short learning curve of C#

COURSE OBJECTIVES

- Recognize, diagram, and implement introductory programming concepts using C#
- Determine logical alternatives with C# decision structures utilizing iteration, class methods, fields, and properties.
- Assemble forms, classes, and controls into C# solutions utilizing arrays and file/database access methods

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**10 Hours**
Introducing C#: Creating a Simple C# Console Application, Identifiers and Keywords. System Data Types, Variables and Constants: Value Types, Reference Types, Understanding Type Conversions, Boxing and UnBoxing. Namespaces, The System namespace, .NET Array Types	
Module 2	**10 Hours**
Classes, Objects and Object Oriented Programming: Classes and Objects: Creating a Class, Creating an Object, Using this Keyword, Creating an Array of Objects, Using the Nested Classes, Defining Partial Classes and Method, Returning a Value from a Method and Describing Access Modifiers. Static Classes and Static Members, Properties: Read-only Property, Static Property, Indexers, Structs: Syntax of a struct and Access Modifiers for structs, System.Object Class. **Encapsulation:** Encapsulation using accessors and mutators, Encapsulation using Properties. Inheritance: Inheritance and Constructors, Sealed Classes and Sealed Methods, Extension methods. **Polymorphism:** Compile time Polymorphism/ Overloading, Runtime Polymorphism/ Overriding. Abstraction: Abstract classes, Abstract methods. Interfaces: Syntax of Interfaces, Implementation of Interfaces and Inheritance.	
Module 3	**10 Hours**
Delegates, Events, Exception Handling and ADO.NET **Delegates:** Creating and using Delegates, Muticasting with Delegates. Events: Event Sources, Event Handlers, Events and Delegates, Multiple Event Handlers.	

Exception Handling: The try/catch/throw/finally statement, Custom Exception. System.Exception, Handling Multiple Exception **Data Access with ADO.NET:** Understanding ADO.NET: Describing the Architecture of ADO.NET, ADO.NET,ADO.NET Entity Framework. Creating Connection Strings: Syntax for Connection Strings. Creating a Connection to a Database: SQL Server Database. Working with Data Adapters: Creating DataSet from DataAdapter.	
Module 4	**10 Hours**
Graphical User Interface with Windows Forms and WPF **Windows Forms:** Introduction, Windows Forms, Event Handling: A Simple Event- Driven GUI, Control Properties and Layout, Labels, Text Boxes and Buttons, Group Boxes and Panels, Check Boxes and Radio Buttons, ToolTips, Mouse-Event Handling, Keyboard-Event Handling. Menus, Month Calendar Control, Link Label Control, List Box Control, Combo Box Control, Tree View Control, List View Control, Tab Control and Multiple Document Interface (MDI) Windows.	
Module 5	**10 Hours**
Web App Development and Data Access using ADO.NET: Introduction, Web Basics, Multitier Application Architecture, Your First Web Application: Building Web-Time Application, Examining Web-Time.aspx's Code- Behind File, Understanding Master pages, Standard Web Controls: Designing a Form, Validation Controls, Grid View Control, Drop Down List, Session Tracking, ASP.NET	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books

1. .NET 4.0 Programming (6-in-1), Black Book, Kogent Learning Solutions Inc., Wiley-Dream Tech Press. (Chapters: 1,10,11,12,13,14 and 19).
2. Paul Deitel and Harvey Deitel: C# 2010 for Programmers, 4th Edition, Pearson Education. (Chapters: 14,15,19 and 27.3)

Reference Books:

1. Andrew Trolsen: Pro C# 5.0 and the .NET 4.5 Framework, 6th Edition, Wiley-Appress.
2. Bart De Smet: C# 4.0 Unleashed, Pearson Education- SAMS Series.
3. Herbert Schildt: Complete Reference C# 4.0, Tata McGraw Hill, 2010.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity is based on Assignments, Case studies, Mini Projects for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks

Course Outcome (CO): At the end of this course, the students will be able to:
CO1: Understand C# and client-server concepts using .Net Frame Work Components.
CO2: Apply delegates, event and exception handling to incorporate with ASP, Win Form, ADO.NET.
CO3: Analyze the use of .Net Components depending on the problem statement.
CO4: Implement & develop a web based and Console based application with Database connectivity

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

FULL STACK WEB Development [As per Choice Based Credit System (CBCS) scheme] SEMESTER – III			
Subject Code	22MCA302	CIE Marks	50
Number of Lecture Hours/Week	04	SEE Marks	50
Total Number of Lecture Hours	50	SEE Hours	03
Credits – 04			

COURSE DESCRIPTION:

This course prepares the learner for creating single-page or mobile applications and creates reusable components for web pages and mobile applications. It also covers building RESTful APIs, MongoDB, and React Router. Basic elements include introduction, JSX overview, environmental setup, real-time applications, forms and UI, Component Lifecycle, Event Handling, and Styles.

PREREQUISITES:

- The student should be acquainted about programming terms such functions, objects, arrays, and to a lesser extent classes.
- Students should be familiar with HTML, CSS, and JavaScript on a basic level.

COURSE OBJECTIVES

- Recognize the new classes, modules, and arrow functions in the JavaScript language.
- Articulate what React is and why it is useful.
- Making use of controlled components, create and verify forms.
- Use a JavaScript package manager (either npm or Yarn).s
- Making HTTP requests to read or modify data.
- Students can understand how callbacks and MongoDB function.
- Students able to create CRUD operations, routing mechanisms, and UI components.

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**08 Hours**
Introduction to the MERN stack: Introduction, The MVC architectural Pattern, MERN Components React, Node.js, Express, MongoDB, Advantages of MERN, Isomorphic. **Welcome to React**- Obstacles and Roadblocks, Reacts Future	
Module 2	**10 Hours**
Understanding React and Web Server: Server setup, NVM, Node Js, Project, NPM, Express, Build time JSX compilation- Separate Script File, Transform, Automate, React Library, React Components-React classes, Composing components, passing data- using properties ,property validation, using children’s Dynamic composition.	
Module 3	**10 Hours**

Understanding React State: React State – Setting state, Event handling, communicating from child to parent, Stateless components, Designing Components-state vs props, component hierarchy communication, Stateless components.	
Module 4	**12 Hours**
Building RESTful APIs and Mongo DB: REST , HTTP method as Actions, JSON, Express, Routing Hander function , Request Object, Response objects, Middleware, The list API , The create API, Using the LIST API, Using the Create API, Error Handling. **Mongo DB:** Basics, Schema initialization , MongoDB Node.JS Driver, callbacks, promises, Reading from MongoDB, Writing to MongoDB	
Module 5	**10 Hours**
Working with React Router and forms: Routing Techniques, Simple Routing, Route parameters, Route Query String, Programmatic Routing, Nested Routes, Browser history, Forms, Filter form, Get API, Edit page, UI Components, update API, Delete API.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- Here will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

2. Pro MERN Stack, Vasan Subramanian, 2019, ISBN-13(pbk):978-1-4842-2653-7
3. MERN Quick Start Guide, Eddy Wilson Iriarte Koroloiva, 2018, PACKT Publication, ISBN 978-1-78728-108-0

Reference Books:

1. Full stack React, Anthony Accomazzo, Ari Lerner, Nate Murray, Clay Allsopp, David Gutman, and Tyler McGinnis, 2017.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based on Concepts.

ASSESSMENT METHODS

- Three Internals are conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity is be based on Assignments, Case studies, Mini Projects for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understand the concepts of MVC components and architecture and Implement node js, Express and MongoDB.
CO2: Understand difference between SPA and server side rendering using React.
CO3: Understand the need of JSX transformations and importance of recompiling code automatically.

CO4: Understand the concept of using React classes instead of simple elements or placeholders.
CO5: Understand how to use state and make changes to it on user interactions and how child can communicate with its parent via callbacks.
CO6: Understand routing mechanisms and Implementations of CRUD operations and UI Components.

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

Software Engineering & Software Testing
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – III

Subject Code	22MCA303	CIE Marks	50
Number of Lecture Hours/Week	04 + 02 Hrs Lab	SEE Marks	50
Total Number of Lecture Hours	50	SEE Hours	03

CREDITS – 04

COURSE DESCRIPTION

To acquaint the students with the basic and advanced concepts of Software Engineering and Software testing. The course also gives a fair idea about the Automation tool Selenium and running test scripts written in Java language.

PREREQUISITES

- Students should have a basic understanding of the software development life cycle (SDLC).
- Students should know basic programming in Java for executing the automation lab programs

COURSE OBJECTIVES

- To study fundamental concepts in software testing
- To discuss various types and techniques of software testing.
- To expose the automation tool Selenium & execution of test scripts
- To develop the interest among students to pursue Software testing as a career

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**08 Hours**
Software Engineering: Introduction: Professional Software Development Attributes of good software, IEEE/ ACM code of software engineering ethics. Software Process models: Software Development Life Cycle, waterfall model, Incremental development **Agile Software Development**: Agile methods, Plan-driven and Agile Development, Extreme Programming, Rapid Application Development.	
Module 2	**08 Hours**
Requirements Engineering: Functional and non-functional requirements, The software requirements document, Requirements specification, Requirements engineering processes, Requirement elicitation and analysis, Requirements validation. **System Modeling**: Context models, Interaction models, Structural models, Behavioral models, Model-driven engineering Design and implementation: Design: Design concepts, Function oriented design, detailed design	

Software Quality Concepts: Software quality assurance, Software reviews, SEI Capability Maturity Model	
Module 3:	**10 Hours**
Introduction to Testing: Humans, Errors and Testing, Software Quality; Fundamentals of Testing, Requirements, Testing and Debugging; Software Test Life Cycle, Test Planning, Test cases, Identifying test cases, Levels of Testing. Defect Management: Defect Management Process, Defect Life Cycle. **INTRODUCTION TO AUTOMATION TESTING – SELENIUM:** Software Test Automation: Fundamentals of Test Automation, Manual Testing Vs Test Automation. Introduction to Selenium, Installation and configuration of Eclipse, Java and Selenium Learning, Introduction to Webdriver, How to run tests in IE, Firefox and Google Chrome. Introduction to Locators and object finding: Importance of Locator Identifiers in Selenium, Identifying locators(ID, Name, ClassName, LinkText) with developer tools	
Module 4	**08 Hours**
White box testing, Black box testing, Functional, Integration Testing, System testing, CSS locators, Selenium Webdriver, End to End Automation using Selenium Web Elements :Types of Testing- White Box testing, Black Box Testing, Integration Testing, Regression Testing, Validation Testing, Alpha Testing, Beta Testing, Acceptance Testing, Static testing. White box testing: Loop Testing, Basis path testing, Condition Testing, Role of testing in Agile, Types of testing, Introduction to Functional testing, separating integration and system testing. Identifying CSS locators and xpath in chrome and Firefox Browsers, Generating customized xpath from html attributes. Selenium Webdriver->Techniques to automate Web elements: End to End Automation using all UI Elements with selenium	
Module 5	**08 Hours**
CSS locators, Selenium Webdriver, End to End Automation using Selenium Web Elements , Testing in Agile, Introduction to Smoke, Regression, Exploratory testing, Compatibility: Identifying CSS locators and xpath in chrome and Firefox Browsers, Generating customized xpath from html attributes. Selenium Webdriver->Techniques to automate Web elements: End to End Automation using all UI Elements with selenium. Testing in Agile, Introduction to Smoke, Regression, Exploratory testing, Compatibility, Database Testing, Security Testing, UAT, Ad-hoc testing, API testing. Examples: Design test scenarios and test cases for a Web/Mobile application.	
Question paper pattern: • The question paper will have ten questions. • Each full question consists of 20 marks. • There will be 2 full questions from each module. • Each question will have questions covering all the topics under a module. • The students will have to answer 5 full questions, selecting one full question from each module	
Text Books: 1. Ian Sommerville : Software Engineering, 9th edition, Person Education Ltd, 2011. 2. Pankaj Jalote: Software Engineering, Wiley India Pvt Ltd, 2010	

3. Rex Black, Erik Van Veenendaal, Dorothy Graham"Foundations of Software Testing – ISQTB Certification", Third Edition
4. Paul C Jorgensen, "Software Testing A Craftsman's Approach", Aueredach publications, 3rd edition, 2011

Reference Books:

1. Roger S Pressman: Software Engineering-A Practitioners approach, 6th Edition, McGraw-Hill, 2010.
2. Hans Van Vliet: Software Engineering Principles and Practices, 3rd Edition, Wiley–India, 2010
3. Rex Black: Advanced Software Testing—Vol. 2, Shroff Publishers, Gundecha Unmesh: Selenium Testing Tools Cook Book, PACKT PUBLISHING, 2012.

TEACHING METHODS:

- Black-board teaching
- PPT
- Demonstration based teaching

ASSESSMENT METHODS:

- Three Mid-Semester examinations (MSE) will be conducted for 30 Marks each. The weightage of MSE-1, 2 & 3 will be 40%, 40% and 20% respectively.
- Evaluation for Learning Activity will be based on Programming Assignments, Case studies and Viva.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understand the various software development process models and their suitability along with professional ethics and responsibilities.

CO2: Understand and evaluate the requirements for a software system and applying the techniques of software engineering in the design and implementation of software applications.

CO3: Analyze the process of Software Testing Life Cycle, the various types of testing, Test Case design techniques.

CO4: Design Test Cases using the testing tool Selenium IDE and Web Driver and understand and analyze the difference between functional testing and structural testing.

CO5: Understand and analyze the process of Database testing, API testing and documentation testing.

Laboratory Experiments:

1	Design and develop a script in any language of your choice and run it using Selenium: Open google.com in Chrome Browser and verify that title is Google and verify that it is redirected to google.co.in
2	Design and develop a script in any language of your choice and run it using Selenium: Open Google in multiple browser(Chrome/Firefox/IE) and click on Gmail
3	Design and develop a script in any language of your choice and run it using Selenium: Search of 'Software Testing' key word in Google and click on the first link visible
4	Design and develop a script in any language of your choice and run it using Selenium: Login to Gmail application with valid Username and Password and Logout
5	Design and develop a script in any language of your choice and run it using Selenium: Identify 'Price' of any mobile present in Flipkart.com using Xpath
6	Design and develop a script in any language of your choice and run it using Selenium: • Login to Amazon.in • Add multiple products to Shopping Cart

	• Cancel and Logout of the web page

Module 3	08 Hours
Brief Over View of XML – XML Document structure, XML namespaces, Defining structure in XML documents, Reuse of XML schemes, Document navigation and transformation. SOAP : Simple Object Access Protocol, Inter-application communication and wire protocols, SOAP as a messaging protocol, Structure of a SOAP message, SOAP envelope, Encoding, Service Oriented Architectures, SOA revisited, Service roles in a SOA, Reliable messaging,	
Module 4	**08 Hours**
Describing Web Services – WSDL introduction, non functional service description, WSDL1.1 Vs WSDL 2.0, WSDL document, WSDL elements, WSDL binding, WSDL tools, WSDL port type, limitations of WSDL.	
Module 5	**08 Hours**
Cloud Platforms for IOT Registering and Discovering Services : The role of service registries, Service discovery, Universal Description, Discovery, and Integration, UDDI Architecture, UDDI Data Model, Interfaces, UDDI Implementation	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books

1. Web Services & SOA Principles and Technology, Second Edition, Michael P Papazoglou.
2. Developing Java Web Services, R. Nagappan, R. Skoczylas, R.P. Sriganesh, Wiley India.
3. Developing Enterprise Web Services, S. Chatterjee, J. Webber, Pearson Education.

Reference Books:

1. XML, Web Services, and the Data Revolution, F.P.Coyle, Pearson Education.
2. Building web Services with Java, 2nd Edition, S. Graham and others, Pearson Education.
3. Java Web Services, D.A. Chappell & T. Jewell, O‟Reilly, SPD.
4. McGovern, et al., "Java web Services Architecture", Morgan Kaufmann Publishers, 2005.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

- Three Mid-Semester examinations (MSE) will be conducted for 30 Marks each. The weightage of MSE-1, 2 & 3 will be 40%, 40% and 20% respectively.
- Evaluation of Learning Activity based on Case study, Mini Project for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:
CO1: Understand the principles of SOA
CO2: Efficiently use market leading environment tools to create and consume web services
CO3: Identify and select the appropriate framework components in creation of webservice solution

CO4: Apply OOP principles to creation of webservice solutions.

Data Mining & Business Intelligence

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III

Subject Code	22MCA3042E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

CREDITS – 03

Course Description:

This course is designed to introduce students to business intelligence concepts and provide students with an understanding of data mining along with associated techniques and their benefits to organizations of all sizes.

PREREQUISITES

- Knowledge of statistics
- Basic programming language

Course Objectives:

- To introduce the concept of data Mining as an important tool for enterprise data management and as a cutting edge technology for building competitive advantage.
- To enable students to effectively identify sources of data and process it for data mining.
- To make students well versed in all data mining algorithms, methods, and tools.
- Learning how to gather and analyze large sets of data to gain useful business understanding.
- To impart skills that can enable students to approach business problems analytically by identifying opportunities to derive business value from data.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
Introduction to Data Mining What Is Data Mining, Kinds of Data Can Be Mined, Kinds of Patterns Can Be Mined, Technologies Used, Kinds of Applications Are Targeted, Major Issues in Data Mining, KDD Process, Types of Attribute Types, Measuring Data Similarity and Dissimilarity. **Data Pre-processing:** Why preprocessing, Data cleaning: Missing Values, Noisy Data; Data Integration, Data Reduction: Attribute Subset Selection; Data Transformation and Data Discretization: Normalization, Binning, Histogram Analysis, Concept Hierarchy Generation.	
Module 2	**08 Hours**
Classification Basic Concepts; Decision Tree Induction: Decision Tree Induction, Attribute Selection Measures, Tree Pruning; Bayes Classification Methods: Bayes' Theorem, Naive Bayesian Classification; Model Evaluation and Selection: Metrics for Evaluating Classifier Performance	

Module 3	08 Hours
Clustering Techniques Cluster analysis: Basic Concepts; Partitional Methods: K-Means; Hierarchical Methods: Agglomerative, Divisive, BIRCH; Density-Based Methods: DBSCAN.	
Module 4	**08 Hours**
Association Analysis: Basic Concepts and Algorithms **Basic Concepts:** Frequent Itemsets, Closed Itemsets, and Association Rules; Frequent Itemset Mining Methods: Apriori Algorithm - Finding Frequent Itemsets by Confined Candidate Generation, Generating Association Rules from Frequent Itemsets	
Module 5	**08 Hours**
Data Mining for Business Intelligence Applications: What is BI? Business intelligence architectures; Definition of decision support system; Development of a business intelligence system using Data Mining for business Applications like Fraud Detection, Clickstream Mining, Market Segmentation, retail industry, telecommunications industry, banking & finance CRM etc.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Jiawei Han, Micheline Kamber, Jian Pei "Data Mining Concepts and Techniques", 3rd Edition, Morgan Kaufmann Publisher.
2. Pang-Ning Tan, Michael Steinbach, Vipin Kumar " Introduction to Data Mining", Pearson, First impression.
3. G. Shmueli, N.R. Patel, P.C. Bruce, "Data Mining for Business Intelligence: Concepts, Techniques, and Applications in Microsoft Office Excel with XLMiner", 1st Edition, Wiley India.
4. Carlo Vercellis, "Business Intelligence: Data Mining and Optimization for Decision Making", Wiley India Publications

Reference Books:

1. Paulraj Ponnian, "Data Warehousing Fundamentals", John Willey.
2. M. Dunham, "Data Mining: Introductory and Advanced Topics", Pearson Education.

TEACHING METHODS

- PPT
- Black Board

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Learning Activity will be based on Assignments / Case Studies/ Seminars for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: To understand of the concepts of importance of data mining, and the principles of business intelligence

CO2: To Organize and Prepare the data needed for data mining using pre preprocessing techniques

CO3: To Implement the appropriate data mining methods like classification, clustering, or Frequent Pattern mining on data sets.
CO4: To Define and apply metrics to measure the performance of various data mining algorithms.
CO5: Analyze data mining for various business intelligence applications for the given problem

Block Chain Technology [As per Choice Based Credit System (CBCS) scheme] **SEMESTER – III**			
Subject Code	22MCA3043E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03
CREDITS – 03			

COURSE DESCRIPTION

Blockchain is an emerging technology platform for developing decentralized applications and data storage. This course introduces the fundamentals of blockchain technology, distributed systems, cryptography and how it keeps data secure.

PREREQUISITES

- Data Structures and Algorithms
- Object-Oriented Programming

COURSE OBJECTIVES

- This course enables the students to familiarize the various aspects of blockchain, bitcoins, smart contracts and ethereum.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
Blockchain 101: The growth of blockchain technology, Distributed systems History of blockchain and Bitcoin, types of blockchain, Benefits and limitations of blockchain.	
Module 2	**08 Hours**
Decentralization and Cryptography: Decentralization using blockchain, Methods of decentralization, Routes to decentralization: Cryptographic primitives, Asymmetric cryptography, Public and private keys	
Module 3	**08 Hours**
Bitcoin and Alternative Coins : Bitcoin, Transactions, Blockchain, Bitcoin payments, Alternative Coins, Theoretical foundations, Bitcoin limitations, Namecoin, Litecoin, Primecoin, Zcash	
Module 4	**08 Hours**
Smart Contracts and Ethereum 101: Smart Contracts: Definition, Ricardian contracts. Ethereum 101: Introduction, Ethereum blockchain, Elements of the Ethereum blockchain	
Module 5	**08 Hours**

Alternative Blockchains:
Blockchains, Blockchain-Outside of Currencies: Internet of Things, Government, Health, Finance, Media

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Book:

1. "Mastering Blockchain - Distributed ledgers, decentralization and smart contracts", Imran Bashir, Packt Publishing Ltd, Second Edition, ISBN 978-1- 78712-544-5, 2017

Reference Books:

- Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller and Steven Goldfeder, "Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction", Princeton University Press (2016)
- "Blockchain Basics: A Non-Technical Introduction in 25 Steps", Author- Daniel Drescher, Apress, First Edition, 2017

TEACHING METHODS

- PPTs
- Black Board

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation based on case study/ seminar for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

COURSE OUTCOMES: At End of the Course Student will Be Able to
CO1: Understand the types, benefits and limitation of blockchain.
CO2: Explore the blockchain decentralization and cryptography concepts.
CO3: Enumerate the Bitcoin features and its alternative options.
CO4: Describe and deploy the smart contracts
CO5: Summarize the blockchain features outside of currencies.

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2
CO1	3							1	1					2
CO2	3							1	1					2

CO4	3			1				1	1					2
CO5	3			1				1	1					2

AWS Cloud Computing [As per Choice Based Credit System (CBCS) scheme] SEMESTER –III			
Subject Code	22MCA3051E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03
Credits – 03			

COURSE DESCRIPTION

AWS Academy Cloud Developing is designed to help students gain technical expertise in development using cloud technologies and prepare them to take the AWS Certified Developer – Associate level AWS Certification exam.

PREREQUISITES

- Cloud Basics.
- System and Network Architecture.

COURSE OBJECTIVES

- Understanding fundamentals of Cloud and its basic infrastructure
- Learn about account management, billing and pricing
- Acquire knowledge on security model and compliance concepts
- Learn how to use different core services of Cloud

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**08 Hours**
Introduction to Cloud Computing & AWS What is Cloud Computing, Cloud Service & Deployment Models, How AWS is the leader in the cloud domain, Various cloud computing products offered by AWS, Introduction to AWS S, EC, VPC, EBS, ELB, AMI., AWS architecture and the AWS Management Console, virtualization in AWS (Xen hypervisor) What is auto-scaling, AWS EC best practices and cost involved.	
Module 2	**08 Hours**
Elastic Compute and Storage Volumes Introduction to EC, Regions & Availability Zones(AZs), Pre-EC, EC instance types, Comparing Public IP and Elastic IP, Demonstrating how to launch an AWS EC instance, Introduction to AMIs, Creating and Copying an AMI Introduction to EBS, EBS volume types, EBS Snapshots.	
Module 3	**08 Hours**
Load Balancing, Auto scaling and DNS Introduction to Elastic Load Balancer, Types of ELB – Classic, Network and Application, Load balancer architecture, Cross-zone load balancing, Introduction to Auto Scaling, vertical and horizontal scaling, the lifecycle of Auto Scaling	

Components of Auto Scaling, scaling options and policy, instance termination Using load balancer with Auto Scaling,	
Module 4	**08 Hours**
Virtual Private Cloud What is Amazon VPC, VPC as a networking layer for EC, IP address and CIDR notations, Components of VPC – network interfaces, route tables, internet gateway, NAT, Security in VPC – security groups and NACL, types of VPC,	
Module 5	**08 Hours**
Storage – Simple Storage Service (S) Introduction to AWS storage, Pre-S – online cloud storage, API, S consistency models, Storage hierarchy, buckets in S, Objects in S, metadata and storage classes, object versioning, object lifecycle management, S pricing.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books:

1. Amazon Web Services in Action. Michael Wittig and Andreas Wittig Foreword by Ben Whaley September 2015 ISBN 9781617292880
2. Learning Amazon Web Services (AWS): A Hands-On Guide to the Fundamentals of AWS Cloud | First Edition | By Pearson Paperback – 1 November 2019

Reference Books:

2. by John Culkin, Mike Zazon. Serverless Architectures on AWS. Peter Sbarski, Yan Cui, Ajay Nair. February 2022 ISBN 9781617295423

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching
- AWS Web

ASSESSMENT METHODS

- Three Mid-Semester examinations (MSE) will be conducted for 30 Marks each. The weightage of MSE-1, 2 & 3 will be 40%, 40% and 20% respectively.
- Evaluation of learning activity based on Programming Assignments, Case studies, Mini Projects for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: AWS cloud values and Implement different policies using its services
CO2: Analyze and manage billing and pricing used for the resources
CO3: Design and deployment of different applications using its services
CO4: Leads to the next level of preparation i.e. Associate and Professional level

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

Robotic Process Automation

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III

Subject Code	20MCA3052E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

CREDITS – 03

COURSE DESCRIPTION

Robotic Process Automation (RPA) is software technology that’s easy for anyone to use to automate digital tasks. RPA Course Syllabus is enhancing the students to perform the robotic process automation jobs using various tools like Blue Prism, UiPath, or Automation Anywhere. The course covers key important concepts such as Introduction to RPA, RPA platforms, Advanced RPA concepts, Deploying and maintain the bot.

PREREQUISITES

- Basic Programming Concepts

COURSE OBJECTIVES

This course enables the students to:

- Outline the benefits of RPA and various platforms available on the market.
- Understand to store and manipulate data in a more persistent way
- Understand Image, Text and Data Tables Automation
- Make use of exception handling techniques to handle the log errors
- Experiment with workflow in a manner to get the optimized output from a Bot

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
INTRODUCTION TO ROBOTIC PROCESS AUTOMATION: Scope and techniques of automation, Robotic process automation - What can RPA do? Benefits of RPA, Componentsof RPA, RPA platforms, The future of automation. **RPA BASICS:** History of Automation - What is RPA - RPA vs Automation - Processes & Flowcharts - Programming Constructs in RPA - What Processes can be Automated - Types of Bots - Workloads which can be automated - RPA Advanced Concepts - Standardization of processes - RPA Development methodologies - Difference from SDLC - Robotic controlflow architecture - RPA business case - RPA Team - Process Design Document/Solution Design Document - Industriesbest suited for RPA - Risks & Challenges with RPA - RPA and emerging ecosystem.	
Module 2	**08 Hours**

RPA Platforms- Components of RPA- RPA Platforms-About Ui Path- About UiPath - The future of automation - Record and Play - Downloading and installing UiPath Studio -Learning Ui Path Studio- - Task recorder - Step-by step examples using the recorder.	
Module 3	**08 Hours**
ADVANCED AUTOMATION CONCEPTS & TECHNIQUES: RPA Challenge - Image, Text & Advanced Citrix Automation – Introduction to Image & Text Automation - Image based automation - Keyboard based automation - Information Retrieval - Advanced Citrix Automation challenges - Best Practices - Using tab for Images - Starting Apps - Excel Data Tables & PDF - Data Tables in RPA - Excel and Data Table basics - Data Manipulation in excel – Extracting, Data from PDF - Extracting a single piece of data - Anchors - Using anchors in PDF	
Module 4	**08 Hours**
HANDLING USER EVENTS & ASSISTANT BOTS, EXCEPTION HANDLING: What are assistant bots? - Monitoring system event triggers - Hotkey trigger - Mouse trigger - System trigger - Monitoring image and element triggers - An example of monitoring email - Example of monitoring a copying event andblocking it - Launching an assistant bot on a keyboard event. **EXCEPTION HANDLING:** Debugging and Exception Handling - Debugging Tools - Strategies for solving issues - Catching errors.	
Module 5	**08 Hours**
DEPLOYING AND MAINTAINING THE BOT: Publishing using publish utility - Creation of Server - Using Server to control the bots - Creating a provision Robotfrom the Server - Connecting a Robot to Server - Deploy the Robot to Server - Publishing and managing updates - Managing packages - Uploading packages - Deleting packages.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

TEACHING METHODS

- PPTs
- Black Board

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity will be based on Case studies for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Describe RPA, where it can be applied and how it's implemented.

CO2: Describe the different types of variables, Control Flow and data manipulation techniques.

CO3: Identify and understand Image, Text and Data Tables Automation.

CO4: Describe how to handle the User Events and various types of Exceptions and strategies.

CO5: Understand the Deployment of the Robot and to maintain the connection.

[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – III

Subject Name	22MCA3053E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

Credits – 03

COURSE DESCRIPTION

This course is designed to offer deep insights and knowledge into various tools such as Ansible, Puppet, Nagios, Jenkins and Docker. With the a depth learning of DevOps course a student will be able to become a trained practitioner in the integration and monitoring of software throughout their development cycle.

PREREQUISITES

- Basic understanding of Linux/Unix system concepts and administration.
- Familiarity with command-line interface.
- Knowing how build and deployment process works.

COURSE OBJECTIVES

- The objectives of the DevOps methodology are to speed up the time to market, apply incremental improvements in response to the changing environment, and create a more streamlined development process.

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**08 Hours**
Introduction to Devops- What Is Devops, History of Devops, Devops definition, DevOps Main Objectives, DevOps and Software Development Life Cycle- Waterfall Model and Agile Model **Continuous Integration & Deployment-** Jenkins, Containers and Virtual Development- Docker and Vagrant **Configuration Management Tools**-Ansible, Puppet and Chef.	
Module 2	**08 Hours**
Cloud Computing- What is Cloud?, Evolution of Cloud Computing, IAAS (Infrastructure as a Service), SAAS (Software as a Service), PAAS (Platform as a Service), Private, Public and Hybrid Cloud, Public Clouds- Amazon Web Services, Microsoft Azure and Google Cloud Services. **LINUX Basic and Admin-** Linux OS Introduction, Importance of Linux in DevOps, Linux Basic Command Utilities, Linux Administration and Environment Variables	
Module 3	**08 Hours**
Shell Scripting - Introduction, Variables, Flow Controls, Loops, Functions, Lists, Manipulating Strings, Reading and Writing Files and Positional Parameters.	

Version Control- Overview of SVN, GIT Features, 3-Tree Architecture, GIT – Clone /Commit / Push, GIT Hub Projects, GIT Hub Management, GIT Rebase & Merge, Reset, Checkout ,GIT Clone, Fetch and Pull .	
Module 4	**08 Hours**
Continuous Integration – Jenkins- Introduction to Jenkins , Continuous Integration with Jenkins , Configure Jenkins, Jenkins Management , Scheduling build Jobs - POLL SCM and Build Periodically **ANSIBLE** - Introduction to Ansible, Infrastructure Management , SSH Connection in Ansible Master	
Module 5	**08 Hours**
Playbooks- Variables, Conditionals, Loops, Blocks, Handlers and Templates **Docker**- How to get Docker Image? , What is Docker Image, Working with Docker Containers- What is Container, Docker Engine, Creating Containers with an Image, Working with Images and Docker Command Line Interphase	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Let's Get Started to DevOps- Hary Cahyono
2. Practical DevOps – Joakim Verona, PACKT Publisher
3. DevOps for Developers – Michael Huttermann, APress

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1^{st}, 2^{nd} and 3^{rd} internals respectively will be taken.
- Evaluation for Learning Activity is based on Assignments/ Case studies for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understand overall structure of Devops with its Lifecycle
CO2: Understand the different application managed service options in the cloud using LINUX
CO3: Demonstrate DevOps workflow with GitLab learning Shell Script
CO4: Discover practical skills of Continuous Integration to improve the speed, stability, availability and security for software delivery capability
CO5: Apply practical skills needed for integrating container

IOT Data Analytics

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER –III

Subject Code	22MCA3061E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

Credits – 03

COURSE DESCRIPTION

This Course focuses on IoT concepts such as sensing, actuation and communication. It covers the development of Internet of Things (IoT) prototypes—including devices for sensing, actuation, processing, and communication—to help you develop skills and experiences.

PREREQUISITES

- Basic knowledge of C or C++ or any programming language or programming fundamentals. Familiarity with command-line interface.
- Basic knowledge of Operating system concepts.

COURSE OBJECTIVES

- After the completion of the course, the students will be able design some IOT based prototypes

COURSE CONTENTS

Modules	Teaching Hours
Module 1	**08 Hours**
Fundamentals of IoT Introduction to Internet of Things- The Internet of Things Today, Towards the IoT Universe, Internet of Things Vision, IoT Concepts, IoT Standards, Components of IoT System, Domain Specific IoTs –IoT Applications-Home, Cities, Environment, Energy Systems, Retail, Logistics, Industry, Agriculture, Health and Lifestyle.	
Module 2	**08 Hours**
IoT Design Methodology IoT design system management-On-chip communications Protocols - USART, I2C, SPI. Industrial Networking - RS482 and MODBUS, Vehicle Networking Standards, NodeMCU (ESP8266 based IoT Board), Arduino Programming. Introduction to MATLAB	
Module 3	**08 Hours**
Building IoT With Microcontroller Various Real time applications of IoT – Connecting IoT to cloud – CLOUD STORAGE FORIOT – Data Analytics for IoT – Software & Management Tools for IoT, Multimedia Technology and Industrial IoT Implementations. Building IoT With Microcontroller	

Various Real time applications of IoT – Connecting IoT to cloud – CLOUD STORAGE FORIOT – Data Analytics for IoT – Software & Management Tools for IoT, Multimedia Technology and Industrial IoT Implementations**.**	
Module 4	**08 Hours**
IoT Analytics Models -Collect, Process, Store, Analyse, Build, Private and Public Data Channels, Data- Sensor Data, Machine Data, Master Data, Data Analysis and Data Visualization, Event scheduling, Alerts, Actions, App integrations, Introduction MATLAB ,Real time analytics Use cases Smart agriculture Proactive replenishing of supplies Process efficiency scoring	
Module 5	**08 Hours**
Case Studies and Advanced Topics Case Study on: Home, Cities, Environment ,Energy Systems, Retail, Logistics, Industry, Agriculture, Health and Lifestyle. Project: Smart-home Industrial IoT Implementation.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module

Text Books

1. IoT Fundamentals - Networking Technologies, Protocols and Use Cases for the Internet of Things (English, Paperback, Rowan Trollope, David Hanes, Patrick Grossetete, Jerome Henry, Rob Barton, Gonzalo Salgueiro)
2. Arshdeep Bahgaand Vijay Madisetti, “Internet of Things - A Hands on Approach”, Universities Press, 2015.
3. Foundational Elements of an IoT Solutions : The Edge, The Cloud Application Development, Joe Bironand Jonathan Follett..

Reference Books:

1. Rethinking the Internet of Things: A Scalable Approach to Connecting Everything, by Francis daCosta, ISBN: 978-1-4302-5740-0, 2013
2. Architecting the Internet of Things, by Dieter Uckelmann, Mark Harrison and Florian Michahelles, ISBN: 978-3-642-19157-2, 2011.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

- Three Mid-Semester examinations (MSE) will be conducted for 30 Marks each. The weightage of MSE-1, 2 & 3 will be 40%, 40% and 20% respectively.
- Evaluation of learning activity based on Case studies/ Mini Projects for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understanding of IoT value chain structure (device, data cloud), application areas and technologies involved.

CO2: Understand IoT sensors and technological challenges faced by IoT devices, with a focus on wireless, energy, power, and sensing modules

CO3: Market forecast for IoT devices with a focus on sensors

CO4: Understanding the implementation of web-based services on IoT devices

CO-PO-PSO Mapping

CO4	2	2	2	1									3	2

Big Data Analytics

[As per Choice Based Credit System (CBCS) scheme]

SEMESTER – III

Subject Code	22MCA3062E	CIE Marks	50
Number of Lecture Hours/Week	03	SEE Marks	50
Total Number of Lecture Hours	40	SEE Hours	03

Credits – 03

COURSE DESCRIPTION

This course provides an understanding of Big Data Analytics. The course also provides details about the structure and magnitude of the big data, sources of bigdata. The course comprises of operating big data with algorithms and various methods, and descriptions of tool Hadoop and its uses. The course highlights the techniques involved in Hadoop like HDFS and Map Reduce techniques.

PREREQUISITES

- Student should know the concepts DBMS, Algorithms and applied mathematical concepts.
- Students should know basic programming concepts.
- Student should know about distributed systems and basic programming concepts.

COURSE OBJECTIVES

- To understand the fundamentals Big data concepts.
- To understand various operations involved in big data analysis.
- To understand the fundamentals of Hadoop concepts.
- To understand the basic working of HDFS and Map Reduce techniques.

COURSE CONTENTS

Modules	**Teaching Hours**
Module 1	**08 Hours**
Big Data and Analytics: Example Applications, Basic Nomenclature, Analysis Process Model, Analytical Model Requirements , Types of Data Sources, Sampling, Types of Data Elements, Data Exploration, Exploratory Statistical Analysis, Missing Values, Outlier Detection and Treatment, Standardizing Data Labels, Categorization	
Module 2	**08 Hours**
Big Data Technology: Hadoop's Parallel World, Data discovery, Open source technology for Big Data Analytics, Cloud and Big Data, Predictive Analytics, Mobile Business Intelligence and Big Data, Crowd Sourcing Analytics, Inter- and Trans-Firewall Analytics.	
Module 3	**08 Hours**

Meet Hadoop: Data, Data Storage and Analysis, Comparison with Other Systems, RDBMS, Grid Computing, Volunteer Computing, A Brief History of Hadoop, Apache Hadoop and the Hadoop Ecosystem Hadoop Releases Response.	
Module 4	**08 Hours**
The Hadoop Distributed File system: Design of HDFS; HDFS Concepts; The Command-Line Interface; Basic Filesystem Operations; Hadoop File systems Interfaces; The Java Interface: Reading Data, Writing Data, Querying the File system, Deleting Data; Anatomy of a File Read, Anatomy of a File Write; Parallel Copying with distcp; Keeping HDFS Cluster Balanced; Hadoop Archives.	
Module 5	**08 Hours**
MAPREDUCE APPLICATIONS : Writing a Unit Test; Running locally on Test data; MapReduce workflows; Anatomy of MapReduce job run: Classic Map-reduce, YARN; Failures in classic Map-reduce and YARN; Job scheduling; Shuffle and sort; Task execution; MapReduce types and formats: MapReduce types, Input formats, Output formats.	

Question paper pattern:

- The question paper will have ten questions.
- Each full question consists of 20 marks.
- There will be 2 full questions from each module.
- Each question will have questions covering all the topics under a module.
- The students will have to answer 5 full questions, selecting one full question from each module.

Text Books:

1. Bart Baesens, "Analytics in a Big Data World: The Essential Guide to Data Science and its Applications", Wiley.
2. Michele Chambers, AmbigaDhiraj, and Michael Minelli, "Big Data, Big Analytics: Emerging Business Intelligence and Analytic Trends for Today's Businesses", 1st Edition, Wiley CIO Series, 2013.
3. Tom White, "Hadoop: The Definitive Guide", 3rd Edition, O'Reilly, 2012

Reference Books:

1. 1. Boris Lublinsky, Kevin T. Smith, Alexey Yakubovich, "Professional Hadoop Solutions", Wiley, ISBN: 9788126551071, 2015.
2. Chris Eaton, Dirk deroos et al., "Understanding Big data: Analytics for Enterprise Class Hadoop and Streaming Data", McGraw Hill, 2012.
3. VigneshPrajapati, "Big Data Analytics with R and Hadoop", Packet Publishing.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS:

- Three Internals will be conducted for 30 Marks each and Weightage of 40%, 40% and 20% from 1st, 2nd and 3rd internals respectively will be taken.
- Evaluation for Learning Activity is based on Seminar/ Quiz / Case Studies for 20 Marks.
- Final Examination will be conducted for 100 Marks and Evaluated for 50 Marks.

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: To Identify the business problem for a given context and frame the objectives to solve it through data analytics tools.
CO2: To Apply various algorithms for handling large volumes of data..
CO3: To Understand the usage of Hadoop for big data management.
CO4: To Illustrate the architecture of HDFS and explain functioning of HDFS clusters
CO5: To Analyze the usage of Map-Reduce techniques for solving big data problems

CO-PO-PSO Mapping

Programming Using C# and .NET Laboratory
[As per Choice Based Credit System (CBCS) scheme]
SEMESTER – III

Subject Code	22MCA307L	CIE Marks	50
Number of Hours/Week	02 Hrs Laboratory	SEE Marks	50
		SEE Hours	03

CREDITS – 01

COURSE DESCRIPTION

To develop software development skills in C# programming and Students will have the proficiency to develop projects in C# programming. The course helps the students to solve the interdisciplinary applications through C# programming.
To write programs for solving real world problems using .NETcollection framework.

PREREQUISITES

- Basic understanding of Principles of Programming.
- Basic understanding of Operating System, Networking, RDBMS and Files

COURSE OBJECTIVES

- Practice object-oriented programs and build .NET applications.
- Implement C# programs for establishing interfaces.
- Implement sample programs for developing reusable software components.
- Create database connectivity in C# and implement GUI applications.

Laboratory Experiments:

SECTION A

1.Write a Program in C# to demonstrate Command line arguments processing for
the following.
a) To find the square root of a given number.
b) To find the sum & average of three numbers.

2.Write a Program in C# to demonstrate the following
a) Boxing and Unboxing b) Invalid Unboxing.

3. Write a program in C# to add Two complex numbers using Operator overloading .

4. Write a Program in C# to find the sum of each row of given jagged array of 3 inner arrays.

5. Write a Program in C# to demonstrate Array Out of Bound Exception using Try, Catch and Finally blocks.

6.Write a Program to Demonstrate Use of Virtual and override key words in C# with a simple program.

7. Write a Program in C# to create and implement a Delegate for any two arithmetic operations

8. Write a Program in C# to demonstrate abstract class and abstract methods in C#.

9. Write a program to Set & Get the Name & Age of a person using Properties of C# to illustrate the use of different properties in C#.

10. Write a Program in C# Demonstrate arrays of interface types (for runtime polymorphism).

11. Consider the Database db_EMS (Employee Management System) consisting of the following tables :
tbl_Designations (IdDesignation: int, Designation: string)
tbl_EmployeeDetails (IdEmployee: int, Employee Name: string, Contact Number: string, Id Designation: int, IdReportingTo: int)
Develop a suitable window application using C#.NET having following options.
1. Enter new Employee details with designation & Reporting Manager.
2. Display all the Project Leaders (In a Grid) reporting to selected Project Managers (In a Combo box).
3. Display all the Engineers (In a Grid) reporting to selected Project Leader (In a Combo box).
4. Display all the Employees (In a Grid) with their reporting Manager (No Value for PM).

12.Consider the Database db_LSA (Lecturer Subject Allocation) consisting of the following tables:

tbl_Subjects(IdSubject: int, SubjectCode: string, SubjectName: string)
tbl_Lecturers(IdLecturer: int, LecturerName: string, ContactNumber: string)
tbl_LecturerSubjects(IdSubject: int, SubjectCode: string, IdLecturer: int)
Develop a suitable window application using C#.NET having following options.
1. Enter new Subject Details.
2. Enter New Lecturer Details.
3. Subject Allocation with Lecturer Name in a Combo box and subjects to be allocated in Grid with checkbox Column.
4. Display all the subjects allocated (In a Grid) to the selected Lecturer (In a Combo Box).

13. Consider the database db_VSS (Vehicle Service Station) consisting of the following tables:

tbl_VehicleTypes(IdVehicleType: int, VehicleType: string, ServiceCharge: int)
tbl_ServiceDetails(IdService: int, VehicleNumber: string, ServiceDetails: string, IdVehicleType: int)
Develop a suitable window application using C#.NET having following options.
1. Enter new Service Details for the Selected Vehicle Type (In a Combo Box).
2. Update the Existing Service Charges to Database.
3. Total Service Charges Collected for the Selected Vehicle (In a Combo box) with total amount displayed in a text box.

TEACHING METHODS

- PPTs
- Hands-On Sessions Based Teaching
- Visual Studio 2008 and above

ASSESSMENT METHODS

Experiment Write up + Execution + Viva	20
Lab Record Writing	15
Lab Internals Test	15
Total	50

Final Exam will be conducted for 50 marks (SEE).

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: Understand C# and client-server concepts using .Net Frame Work Components

CO2: Apply delegates, event and exception handling to incorporate with ASP, Win Form, ADO.NET

CO3: Analyze the use of .Net Components depending on the problem statement

CO4: Implement & develop a web based and Console based application with Database connectivity

CO-PO-PSO Mapping

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2

FULL STACK WEB DEVELOPMENT LABORATORY [As per Choice Based Credit System (CBCS) scheme] SEMESTER III			
Subject Code	22MCA308L	CIE Marks	50
Number of Lecture Hours/Week	02 Hrs Laboratory	SEE Marks	50
		SEE Hours	03

CREDITS – 01

COURSE DESCRIPTION: This course prepares the students to create single-page or mobile applications and also creates reusable components for web pages and mobile applications. They also get knowledge on Basic elements include JSX overview, environmental setup, real-time applications, forms and UI, Component Lifecycle, Event Handling, and Styles.

PREREQUISITES:

- The student should be acquainted about programming terms such functions, objects, arrays, and to a lesser extent classes.
- Students should be familiar with HTML, CSS, and JavaScript on a basic level.

COURSE OBJECTIVES

- Understand the need for server side rendered apps.
- Use a JavaScript package manager (either npm or Yarn).
- Making HTTP requests to read or modify data.
- Students can understand how callbacks and MongoDB function.
- Students able to create CRUD operations, routing mechanisms, and UI components.

Laboratory Experiments:

1	Design a resume of a job aspirant using React components like Classes and Functions. Style the resume by applying CSS
2	Build Student Registration Portal using entities like component, State and Props
3	Demonstrate Node Js Application to perform CRUD operation for online Book Cart.
4	Design an employee Management system using RESTFULL APIs in React.
5	Deploy connectivity between React and Node Application for Inventory Management system
6	Development of an application using RESTFULL API’s

ASSESSMENT METHODS

Experiment Write up + Execution + Viva	20
Lab Record Writing	15
Lab Internals Test	15

Total	50

Final Exam will be conducted for 50 marks (SEE)

Course Outcome (CO): At the end of this course, the students will be able to:
CO1: Understand the concepts of Model, view and controller for developing applications using ReactJS.
CO2: Able to develop various types of React Js Components.
CO3: Design web application using MERN Framework.
CO4: Understand and design MongoDB model and view.
CO5: Demonstrate MVC Framework for real application.

MINI PROJECT - IOT [As per Choice Based Credit System (CBCS) scheme] SEMESTER III			
Subject Code	22MCA309P	CIE Marks	50
Number of Lecture Hours/Week	02 Hrs Laboratory	SEE Marks	50
Tutorials	02 Hrs	SEE Hours	03
CREDITS – 02			

COURSE OBJECTIVES

- To select a problem which addresses some basic home, office or other real life applications.
- To Apply new technologies & design techniques concerned for devising a solution for a given problem statement
- To Gain project management skill
- Work with teammates, sharing due and fair credits and collectively apply effort for making project successful.
- To Develop skill at conveying activities and achievements

Guidelines:

- A team of five to six students must develop the mini project. Each team shall carry out the project under the guidance of one of the faculty members of the Department.
- At the end of the Semester, the team must submit a brief report (15-20 pages spiral bound) on the work they have pursued through the Semester.
- During the examination, each group must demonstrate the project.

ASSESSMENT METHODS

- Evaluation will be done based on Synopsis Submission, Reviews and final Demonstration of the working project for 50 marks.
- Final Exam will be conducted for 50 marks (SEE)

Course Outcome (CO): At the end of this course, the students will be able to:

CO1: To identify a problem in the real world that needs to be addressed.
CO2: To review the literature and carry out the design.
CO3: To apply current technologies, create systems and solve problems.
CO4: To Show an attitude of team work and independent working on problems.
CO5: To demonstrate the project with effective writing and communication skills.

Total			**3**	**100**	**200**	**300**	**25**
Grand Total (I to IV Semesters): 3300 Marks : 100 Credits							

Massive Open Online Course (MOOC) [As per Choice Based Credit System (CBCS) scheme] **SEMESTER – IV**			
Subject Code	22MCA401C	CIE Marks	50
CREDITS – 02			

Guidelines for MOOC:

- A self-study certification course (MOOC) of 02 credits shall be completed by all the students during the course for the award of the degree.
- The course duration for 02 credits shall be of 08 Weeks only.
- The students will have to register and take up proctored exam only through NPTEL under SWAYAM portal.
- The certificate taken from any other online certification course other than NPTEL for MOOC is considered to be invalid.
- The list of courses under computer Science will be recommended by the department after NPTEL has announced the list of upcoming courses in SWAYAM portal.
- The certificate obtained after taking up the proctored exam will be submitted and the marks obtained will be considered for CIE.
- However there will be no separate SEE for the MOOC course.
- The student can take up the MOOC course any time during the entire duration of the MCA course.
- The student will be considered as fail in MOOC Course in case he/she
    - Scores less than 50 out of 100 in the proctored examination.
    - Fails to submit the certificate in the semester.

Course Outcomes (COs):

CO1: Identify the course/technology to learn.
CO2: Demonstrate the concepts/technology learnt.
CO3: Apply the concepts in solving real world problems.

Industry Internship [As per Choice Based Credit System (CBCS) scheme] SEMESTER – IV			
Subject Code	22MCA402I	CIE Marks	50
CREDITS – 03			

Guidelines for Industry Internship:

- All the students have to undergo mandatory internship of 06 weeks duration during the vacation of III semester.
- Students have to undergo the Internship in any Institute of National repute or any reputed / well-known industry.
- The Industry Internship shall be carried out by each candidate independently under the guidance of one of the faculty members of the Department.
- On completion of Internship they shall submit a brief report to the department.
- Internship shall be considered as a head of passing and shall be considered for the award of degree.
- Those, who do not take-up/complete the internship shall be declared as fail in internship course and have to complete the same during the subsequent semester.
- After satisfying the internship requirements the degree will be awarded. However, student can carry out 4thsemester project without completing the internship.

Course Outcomes: After completing this course, students will able to:

CO 1: Understand the process of applying the knowledge related to IT in order to solve industrial problems.
CO 2: Develop skills through relevant training to industrial requirement
CO 3: Communicate effectively and work in teams.
CO 4: Ability to write technical documents
CO 5: Imbibe ethical practices and develop it as a life skill

<u>Dissertation Work Guidelines:</u>

- The student shall carry out the project work in the same institution or in industry / R&D labs based on software tools and technologies learnt in MCA course / Internship for a minimum period of 16 weeks.
- The dissertation work shall be carried out by each candidate independently under the guidance of one of the faculty members of the Department.
- If dissertation is carried out in any industry/ R&D Labs, outside the campus, the name of external guide at the organization shall be intimated to the head of the department.
- Project work may be application oriented or research oriented as per student and guide‘s interest. Therefore, the project reports will vary depending on whether it is application-oriented project or research based project.
- The students, signed by the external guide and internal guide, should maintain project work dairy.
- At the end of the semester, each candidate shall prepare a draft report of the dissertation work and submit it for plagiarism check (Plagiarism ≤ 20%) using facility in NMIT library.
- The internal guide shall duly approve the report after the plagiarism check.
- The candidate shall submit two hard-bound copies and the soft copy of the dissertation work to the head of the Department.
- A separate calendar of events for submission of dissertation and viva-voce shall be fixed by the examination section and shall be notified.
- The candidates who fail to submit the dissertation work with in the stipulated time have to submit the same at the time of next ensuing examination.
- The COE / Principal shall appoint both the internal examiners and External examiners for the Final Evaluation of the project.
- A copy of the dissertation will be sent to the external examiners by the chairperson of BOE.

- If the report is rejected, internal guide has to communicate to the candidate for modification as per the suggestions made by the External Examiner and resubmit.
- Internal guide and External Examiners shall carry out the evaluation of Dissertation report for 50 marks individually.
- Dissertation assessment by the internal guide will be considered as CIE and dissertation assessment by the external examiner will be considered as SEE**.**
- The students shall give poster presentation of their project before the SEE.
- The students shall also prepare a research paper of their project in the prescribed format and submit it to their guides before SEE. However, it is not mandatory requirement for the student to publish the research paper in the indexed journal / conference by the student for taking up the SEE.

Internal Evaluation and Viva Voce Guidelines:

- Internal assessment (CIE) shall be evaluated by both the **internal and external guide** for 50 marks individually. The average of the marks allotted by the internal and external guides shall be the final marks for the Internal Evaluation.
- The project presentation and Viva-voce (SEE) shall be evaluated jointly by both the **Internal and external examiners** for 50 marks.

Course Outcomes: After completing this course, students will able to
CO 1: Identify and finalize the problem relevant to Computer Applications with an attention to real life problems faced by the society
CO 2: Review the literature, Model and design the solution for framed problem statement.
CO 3: Implement the design, verify, validate and analyze the results.
CO 4: Document and communicate the project work efficiently
CO 5: Manage as an individual or in a team in development of technical projects.

DEPARTMENT OF AERONAUTICAL ENGINEERING

KNOWLEDGE • CHARACTER • UNITY

SYLLABUS, SCHEME OF TEACHING AND EXAMINATION

M.Tech., in AEROSPACE ENGINEERING

2022-2024

VISION AND MISSION

INSTITUTION

VISION

To provide India and the World, Technical Manpower of Highest Academic Excellence by Shaping Our Youth through Holistic and Integrated Education of the Highest Quality.

MISSION

To develop Nitte Meenakshi Institute of Technology through Quality, Innovative and State-of-art educational initiatives into a center of academic excellence that will turn out youth with well- balanced personality & commitment to rich cultural heritage of India and who will successfully face the Scientific and Technological challenges in the fast-evolving Global scenario with a high degree of credibility, integrity and ethical standards.

DEPARTMENT

VISION

To see the students of this department, excel in research, design and innovation in the field of Aeronautical Engineering, thereby contributing to meet the evolving global needs and to be professional and well-balanced Aeronautical Engineers exhibiting moral and ethical values.

MISSION

The department of Aeronautical Engineering strives for excellence by applying and imparting knowledge in the field of Aeronautical Engineering through comprehensive educational program, industrial visits, interaction with experts from industry and similar co-curricular activities coupled with leadership qualities.

PROGRAM EDUCATIONAL OBJECTIVES (PEOS)

PEO 1: To develop strong foundation in students to understand and analyses advance research problems in Aerospace Engineering.

PEO 2: Nurture professional graduates to develop ability in analyzing real life problems of Space Technology.

PEO 3: To foster attitude towards continuous learning for developmental activities in research, academia and industry.

PEO 4: To improve professional skills for teamwork with ethical awareness and practice in achieving goal.

PROGRAM OUTCOMES OF M. Tech. AEROSPACE ENGINEERING

PO1- Acquire technical competence, comprehensive knowledge and understanding the methodologies and technologies of industrial / process automation, principles and practices of energy management.

PO2- Ability to apply the knowledge of mathematics, science, engineering and technology. Understand in detail, analyze, formulate and solve the issues pertaining to the application of automation technologies in a range of industrial settings.

PO3- Acquiring the ability to identify, investigate, understand and analyze complex problems pertaining to power management and automation in industries and identify effective solution strategies for implementation.

PO4- Inculcate the role of research in developing and maintaining knowledge of the state-of-the- art in various technologies and automation in industries. Acquire the skill to design, develop and modify systems in hardware and software platforms to meet desired needs within realistic constraints

PO5- Create, select and apply appropriate techniques, resources, modern engineering and IT tools to complex engineering activities in the field of automation, control and energy management.

PO6-Acquire the capacity to understand and summarize complex information pertaining to various fields of engineering in industries. Function effectively as an individual, and as a member or leader in a team.

PO7 -Acquire the skill to develop specifications, implement and critically assess projects and their outcomes. Demonstrate management, leadership and entrepreneurial skills, and apply these to one’s own work, as a member and a leader in a team to manage projects in multidisciplinary environments.

PO8-Ability to communicate effectively in both oral and written contexts in the form of technical papers, project reports, design documents and seminar presentations.

PO9- Recognize the need for, and acquire the ability to engage in self-improvement through continuous professional development and life-long learning to maintain an up-to-date knowledge of contemporary issues in various fields of engineering.

PO10- Apply and commit to professional ethics and responsibilities of engineering practice. Understand the importance of sustainability and cost effectiveness in design and development of engineering solutions for industries and their impacts in societal and environmental context. Demonstrate awareness of societal, safety, health, legal and cultural issues relevant to professional engineering practice.

PO11- Impart an eagerness to conduct investigation and research on chosen field of study and thus keep moving towards being adaptive, self-reliant and self-evaluative.

PROGRAM SPECIFIC OUTCOMES

PSO1. Professional skills: Able to utilize the knowledge of aerospace engineering in innovative, dynamic and challenging environment for design and development of new products

PSO2. Professional skills: Imparted through simulation language skills and general-purpose CAE packages to solve practical, design and analysis problems of components to complete the challenge of airworthiness for flight vehicles.

PSO3. Practical implementation and testing skills: Providing different types of in house and training and industry practice to fabricate and test and develop the products with more innovative technologies.

PSO4. Successful career and entrepreneurship: To prepare the students with broad aerospace knowledge to design and develop systems and subsystems of aerospace and allied systems and become technocrats.

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply the concepts of Fourier analysis, Integral transforms and Series solution techniques for problem solving
2. Apply the numerical techniques to solve complex problems
3. Apply the concept of Probability sampling and estimation for solving problems.
4. Use the concepts of Transforms, ODE, PDE, probability to model problems arising in defence and Aerospace.
5. Apply the concept of optimization and game theory.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Numerical Methods for Differential equations: RK 4^{th} order methods for IVP, Simultaneous equations. Adam-Bashforth multi step methods. Explicit Schmidt, Dufort-Franknel methods, Crank Nicholson method for 1-D Diffusion and Convection equations Series solution, Frobenious method, Bessel Equation

UNIT-2-(08 HOURS)

Fourier Series expansion of periodic functions, Fitting Harmonics for given data, Fourier Complex, Sine and Cosine transforms
Laplace transform and Inverse Laplace transform for Standard functions. Solution of IVP

UNIT-3-(08 HOURS)

Solution of system of Equation-Gauss elimination, LU decomposition Eigen values and Eigen vectors- Power method, Jacobi, Rutishauser method Interpolation using Lagrangian and Newton's Formulae, Cubic spline.
Numerical integration using Simpson's $1/3^{rd}$ and $3/8^{th}$ Rule

UNIT-4-(08 HOURS)

Random variables- Discrete and continuous, Probability distribution, probability density function, mean, variance, Joint Distribution (Discrete and Continuous) Binomial, Poisson, Normal Distribution. Sampling Distribution, Confidence Interval for estimation of mean, Testing of Hypothesis for Large and small samples, ANOVA

UNIT-5-(08 HOURS)

Testing of Hypothesis for Large and small samples, ANOVA, Randomized Block Design Game theory, principle of dominance, Graphical method, Linear programming method, Applications to Defence and Aerospace

TEXT BOOKS

1. Applied statistics and Probability for Engg. Douglas C montgomery, George C Runger, Sixth edition, Wiley, 2016
2. Numerical Algorithms EV Krishna Murthy and SK Sen East west press 2007

Hours/Week (L-T-P)	**3-0-2**		**CIE Marks**	**50**
Total Hrs	**50**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**IPCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyze the airfoil characteristics.
2. Analyze the incompressible inviscid flows and their combinations.
3. Analyze the incompressible inviscid flow over airfoil and finite wing.
4. Analyze the subsonic linearized flow over airfoil and effect of compressibility.
5. Analyze the features of viscous flow and discuss the aerodynamic testing.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (10 HOURS)

Governing equations: Euler and Lagrangian descriptions, Control volume approach to continuity and momentum equations, Path lines, Streamlines and Streak lines, Stream function, Velocity potential. Types of flow.

Airfoil Characteristics: Airfoil section geometry and wing plan form geometry, aerodynamic forces and moment and pressure coefficient. Centre of pressure, calculation of airfoil lift and drag from measured surface pressure distributions, typical airfoil aerodynamic characteristics at low speeds. High lift Devices.

UNIT-2 - (10 HOURS)

Two-Dimensional Inviscid Incompressible Flows: Bernoulli's equation and applications. Condition on velocity for incompressible flow. Laplace equation and boundary conditions. Two-dimensional source, sink and doublet flows and vortex flow and combinations of elementary flows.

Flow over Circular Cylinders: Non-lifting flow over a two-dimensional circular cylinder, Lifting flow over a two-dimensional circular cylinder, Kutta-Joukowski theorem and generation of lift, D'Alembert's paradox.

UNIT-3 - (10 HOURS)

Incompressible Flow over Airfoils: Kelvin's circulation theorem and the starting vortex, Kutta condition, Classical thin airfoil theory for symmetric and cambered airfoils.

Incompressible Flows over Finite Wings: Downwash, Induced drag, vortex filament, the Biot-Savart Law, Prandtl's lifting line theory and its limitations, Elliptic lift distribution. Simplified horse-shoe vortex model, formation flight, influence of downwash on tail plane, ground effects.

UNIT-4 - (08 HOURS)

Subsonic linearized flow over airfoils: Full velocity potential equation, linearized velocity potential equation and boundary condition, Prandtl-Glauert compressibility correction.

Effects of Compressibility: Basics of speed of sound, Mach waves, Normal shock waves, Oblique shock waves, Expansion fan, Prandtl – Meyer expansion, Critical Mach number; Drag- divergence Mach number, Sound Barrier, Transonic area rule. Swept wing.

UNIT-5 - (10 HOURS)

Viscous Flows: Derivation of Navier-Stokes equation for two-dimensional flows, boundary approximations, laminar boundary equations and boundary conditions, Blasius solution, qualitative features of boundary layer flow under pressure gradients, aspects of transition to turbulence, turbulent boundary layer properties over a flat plate at low speeds.

Introduction to Aerodynamic Testing: Principles of wind tunnel flow simulation, Classification and Major features of subsonic, supersonic and hypersonic wind tunnels. Flow visualization techniques. Measurement of pressure, velocity and Aerodynamic load measurements on a model.

TEXT BOOKS

1.

1. J.D. Anderson, Fundamentals of Aerodynamics, McGraw-Hill Education, 6th edition, 2017.

AERODYNAMICS LABORATORY

List of Experiments

1. Calibration of a subsonic wind tunnel
2. Smoke flow visualization studies
   i. On a two-dimensional circular cylinder at low speeds.
   ii. On a two dimensional airfoil at different angles of incidence at low speeds.
3. Tuft flow visualization on a wing model at different angles of incidence at low speeds.
4. Surface pressure distributions and calculation of aerodynamic coefficients.
   i. On a two-dimensional circular cylinder at low speeds
   ii. On a two-dimensional symmetric airfoil at different angles of incidence.
   iii. On a two-dimensional cambered airfoil at different angles of incidence.
5. Measurement of a typical boundary layer velocity profile on the tunnel wall
6. Measurement of Aerodynamic Loads and Moment using three-component balance.
   i. Over a rectangular wing with symmetrical airfoil
   ii. Over a rectangular wing with cambered airfoil
7. Calculation of total drag using Pitot-static probe wake survey
   i. Of a two-dimensional circular cylinder at low speeds.
   ii. Of total drag of a two-dimensional airfoil at low speeds.
8. Measurement of Aerodynamic Loads and Moments using six-component balance.

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply the fundamentals of thermodynamics to compressible flows
2. Understand the working principle of air breathing propulsion systems.
3. Use cycle analysis and assess performance of air breathing engines
4. Analyze the performance parameters of various rocket propulsion systems.
5. Understand the concepts of advanced propulsion systems.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (10 HOURS)

Review of thermodynamics: Work and energy interactions, Representation of isothermal, isentropic, isobaric and isochoric processes on P-V and T-S diagrams, Classical thermodynamics, conservation equations for systems and control volumes, one dimensional flow of a compressible perfect gas – isentropic and non-isentropic flows. Propulsion system performance, the gas generator Brayton cycle, zero dimensional analysis of ideal ramjet, turbojet and turbofan cycles, non-ideality and isentropic efficiencies. Performance analysis of inlets and nozzles, gas turbine combustors, compressors and turbines and discussion of factors limiting performance.

UNIT -2- (10 HOURS)

Basics of Air breathing Propulsion: Introduction to various air breathing and non-air breathing engines. Principle of thrust generation, Brayton cycle, types of air-breathing propulsion systems, components of jet engine and their functions, diffuser design for subsonic and supersonic flights, preliminary aspects of axial flow compressor and turbines, types of combustors, convergent nozzle, CD Nozzle, flow through nozzles – optimal, under and over expanded nozzles.

UNIT -3- (10 HOURS)

Performance of Air breathing engines: Ideal cycle analysis, efficiencies of components and non-ideal cycle analysis, engine performance analysis – specific thrust, specific fuel consumption, propulsive, thermal and overall efficiencies. Efficiencies of air breathing and non-air breathing engines.

UNIT -4- (10 HOURS)

Rocket Propulsion: Classification based on energy system, nozzle and Thrust Equation; Specific Impulse, Thrust Coefficient, Characteristic Velocity and other Performance Parameters; liquid rocket engine, components and propellants, solid rocket propellants, performance parameters and motor design, hybrid rocket propulsion systems, selection of rocket propulsion systems, thrust vector control methods, rocket exhaust plumes, rocket testing.

UNIT -5- (10 HOURS)

Advanced Propulsion: Scramjet and pulse jet engines - principle of operation. Electric propulsion thrusters: classification, principle and application. nuclear propulsion system, concepts, design and application, Recent Micro Spacecraft Developments; Micro-propulsion Options; Primary Set of Micro-propulsion Requirements

COURSE CONTENTS

UNIT -1- (07 HOURS)

Material physics, properties and Environment & durability: Stress-strain, Loading modes, Engineering terminology, Engineering terminology, Shear stress, Bi-axial loading, Stiffness and apparent stiffness, Isotropic and anisotropic sheet deformation, Toughness, Environment & durability, The effect of ambient temperature, The effect of humidity, Environmental aspects.

UNIT -2- (08 HOURS)

Material types and Manufacturing: Introduction, Metal alloys, Polymers, Ceramic materials, Composite materials, Composite materials, Manufacturing, Metals, Composites,
Thermoset versus thermoplastic

UNIT -3- (08 HOURS)

Aircraft & spacecraft structures and loads: Airframe, Structural concepts, Fuselage structures, Wing structures, Torsion box, Structural details, Typical launch vehicle structures, Externally loaded airframe, Load path, Loads and load paths in an airframe, Complex load cases, Load and load cases for spacecraft structures.

UNIT -4- (08 HOURS)

Translating loads to stresses and Consideration of strength & stiffness: Pressurization of a fuselage structure, Torsional loading of a fuselage structure, Bending of a wing structure, Structural performance, Geometrical aspects, Geometrical aspects, Geometrical aspects, Material selection criteria, Structural sizing for natural frequency Structural sizing for quasi-static loads.

UNIT -5- (08 HOURS)

Design & certification, Fatigue & durability and Structural joints: Safety, regulations and specifications, Requirements for aeronautical structures, Structural design philosophies, Design approach, Fatigue & durability, Stress and strain concentrations, Fatigue, Damage tolerance, Structural joints, mechanically fastened joints, mechanically fastening in composites, mechanically fastening in sandwich composites, Welded joints, Adhesive bonding.

FLIGHT MECHANICS				
Course Code	**22MAS15**		**Credits**	**3**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the basics of aircraft performance
2. Understand about aircraft maneuvering performance
3. Understand the fundamentals of aircraft static stability
4. Understand the basic ideas of aircraft dynamic stability
5. Understand the basic ideas of space dynamics

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Introduction to Aircraft Performance: Definition And Subdivisions of Flight Dynamics, Forces and Moments Acting on Vehicles In Flight., Equations of Motion And Simplification for Performance Analysis., Earth's Atmosphere and International Standard Atmosphere, Drag Polar, Various Types of Drags, Methods of Estimating Drag Polar, Variation of Thrust, Power With Velocity and Altitudes for Air Breathing Engines, Performance of Airplane in Level Flight, Thrust Required and Thrust Available, Power Available and Power Required Curves. Maximum Speed in Level Flight, Conditions for Minimum Drag and Power Required

UNIT -2- (08 HOURS)

More on Aircraft Performance: Climbing and gliding flight (Maximum rate of climb), Service and Absolute Ceilings, Range and Endurance, Level Turn, the pull up and pull down maneuvers, Bank angle and load factor, limitations on Turn, V-n Diagram and Load Factor.

UNIT -3- (08 HOURS)

Static Stability: Introduction to Static Stability, Stability and Trim, Criteria for Longitudinal Static Stability, Static Longitudinal Control, Elevator effectiveness, Elevator angle to trim. Directional Static Stability, Directional Control, Control in Asymmetric Power, Rudder Lock.

UNIT -4- (08 HOURS)

Static Lateral Stability and Control: Introduction, definition of Roll stability. Estimation of dihedral effect, Effect of wing sweep, flaps, and power, Lateral control, Estimation of lateral control power, Aileron control forces, Balancing the aileron. Adverse yaw effects. Aileron reversal

UNIT -5- (08 HOURS)

Dynamic Stability: Introduction to Dynamic Stability, Forces and Moments, Longitudinal Dynamic Stability, Modes of Stability, Short Period and Phugoid Approximations, Brief Description of Lateral and Directional Dynamic Stability, Spiral Divergence, Dutch Roll, Auto Rotation and Spin.

RESEARCH METHODOLOGY AND IPR				
Course Code	**22RMI16**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**MCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand research methodology and the technique of defining a research problem.
2. Understand the process and method of the literature review in research, carrying out a literature search and writing a review.
3. Collect and designing the sampling data for research work.
4. Verify the Test data and report writing research reports.
5. Understand the concepts of intellectual property rights.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Research Methodology: Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India. Defining the Research Problem: Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration.

UNIT -2- (08 HOURS)

Reviewing the literature: Place of the literature review in research, bringing clarity and focus to your research problem, improving research methodology, broadening knowledge base in research area, enabling contextual findings, how to review the literature, searching the existing literature, reviewing the selected literature, developing a theoretical framework, developing a conceptual framework, writing about the literature reviewed. Research Design: Meaning of Research Design, need for Research Design, features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic
Principles of Experimental Designs, Important Experimental Designs.

UNIT -3- (08 HOURS)

Design of Sampling: Introduction, Sample Design, Sampling and Non sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs. Measurement and Scaling: Qualitative and Quantitative Data, Classifications of Measurement Scales, Goodness of Measurement Scales, Sources of Error in Measurement Tools, Scaling, Scale Classification Bases, Scaling Technics, Multidimensional Scaling, Deciding the Scale. Data Collection: Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data,
Selection of Appropriate Method for Data Collection, Case Study Method

UNIT -4- (08 HOURS)

Testing of Hypotheses: Hypothesis, Basic Concepts Concerning Testing of Hypotheses, Testing of Hypothesis, Test Statistics and Critical Region, Critical Value and Decision Rule, Procedure for Hypothesis Testing, Hypothesis Testing for Mean, Proportion, Variance, for Difference of Two Mean, for Difference of Two Proportions, for Difference of Two Variances, P-Value approach, Power of Test, Limitations of the Tests of Hypothesis. Chi-square Test: Test of Difference of more than Two Proportions, Test of Independence of Attributes, Test of Goodness of Fit, Cautions in Using Chi Square Tests.

Interpretation and Report Writing: Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.

UNIT -5- (08 HOURS)
Intellectual Property: The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, Patents Act, 1970, Trade Mark Act, 1999,The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act1999, Copyright Act,1957,The Protection of Plant Varieties and Farmers' Rights Act, 2001,The Semi-Conductor Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity, The Convention on Biological Diversity (CBD) 1992, Competing Rationales for Protection of IPRs, Leading International Instruments Concerning IPR, World Intellectual Property Organisation (WIPO),WIPO and WTO, Paris Convention for the Protection of Industrial Property, National Treatment, Right of Priority, Common Rules, Patents, Marks, Industrial Designs, Trade Names, Indications of Source, Unfair Competition, Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Berne Convention for the Protection of Literary and Artistic Works, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights(TRIPS) Agreement, Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Copyright and Related Rights, Trademarks, Geographical indications, Industrial Designs, Patents, Patentable Subject Matter, Rights Conferred, Exceptions, Term of protection, Conditions on Patent Applicants, Process Patents, Other Use without Authorization of the Right Holder, Layout Designs of Integrated Circuits, Protection of Undisclosed Information, Enforcement of Intellectual Property

Total Hrs	**30**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PCCL**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyse the flow over turbine and compressor cascades.
2. Analyse forced convective heat transfer over flat plate, developing theoretical and conceptual frameworks and writing a review.
3. Examine the nozzle flow and fuel injection characteristics
4. Predict the performance of a propeller and determine heat release by combustion of fuel Sketch the velocity profile of free jet at variable positions of pitot tube

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

EXPERIMENTS

1. Cascade testing of a model of turbine and compressor blade row and study of wake survey.
2. Estimation of propeller performance
3. Forced Convective heat transfer on a flat surface
4. Measurement of Burning Velocity of a Premixed Flame
5. Determination of heat of combustion of aviation fuels
6. Fuel - injection characteristics (spray cone geometry; spray speed etc. for various types of injectors)
7. Measurement of nozzle flow.
8. Study of free jet
9. Study of wall jet
10. Forced Convective heat transfer through non circular duct
11. Gas Turbine Parameters Calculation by Simulator.
12. Rocket Propulsion Performance Parameters by Simulator
13. Calorific Values of Different Fuels by Using Bomb Calorimeter.
14. Chemical Kinetic Study of the Fuels by Using Ansys Chemkin Pro

COURSE ASSESSMENT METHOD

Record: 30 marks
Internal Test: 15 marks
Viva-voce: 05 marks
Semester End Examination: 50 Marks
Scheme of Examination: Student will be asked to conduct any one experiment from Part A & B

Program Outcomes – Articulation matrix

Hours/Week (L-T-P)			**CIE Marks**	
Total Hrs			**SEE Marks**	
Exam Hrs			**Course Type**	**AUD/AEC**
COURSE ASSESSMENT METHOD				

1. Board of studies Recommended Online Courses
2. Classes and evaluation procedures are as per the policy of the online course providers.
3. A pass in AUD/AEC is mandatory for the award of the degree

SEMESTER – II

COMPUTATIONAL METHODS IN AEROSPACE				
Course Code	**22MAS21**		**Credits**	**3**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. To arrive at the numerical solutions to boundary layer equations.
2. To perform numerical grid generation and have knowledge about the mapping techniques.
3. To familiarise himself/herself with high performance computing for CFD applications.
4. To implement the explicit time dependent methods and their factorization schemes.
5. To do the stability analysis and linearization of the implicit methods.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Introduction: CFD definition and application, Parallel and vector computer in CFD, Models of flows, Continuity, Momentum, and Energy Equations-Derivation in various forms, Physical boundary condition, Shock capturing and shock fitting.

UNIT -2- (08 HOURS)

Behaviors of Partial Differential Equations: Classification of partial differential equations and their nature, Discuss Hyperbolic, parabolic, and elliptic forms of equations, Finite difference approximation- Forward, backward, central, second order central difference. Explicit and Implicit approaches, Time marching and Space marching, Errors-Truncation error and Round off error.

UNIT -3- (08 HOURS)

Grid generation Techniques: Introduction- Definition, Classification of grids- Surface grid, Complex grid. Structured grid, Unstructured grid, Body fitted grid, Grid Quality, Various structured and unstructured grid generation Techniques, Multi block grid generation, Mesh free method, Adaptive grid.

UNIT -4- (08 HOURS)

CFD Techniques: The Lax-Wendroff technique, The Mac Cormack’s technique, The relaxation technique, Alternating Direction Implicit technique (ADI), Collocated grid, Staggered grid, Semi-Collocated grid, The Pressure correction technique, upwind scheme.

UNIT -5- (08 HOURS)

Transformation: Transformation of governing partial differential equations from physical domain to computational domain.

Introduction to finite volume method: Introduction to FVM, Spatial discretization- cell centered and cell vertex techniques (overlapping control volume, duel control volume), Boundary triangle and interior triangle, Flux vector splitting Scheme.

MINI PROJECT WITH SEMINAR				
Course Code	**22MAS25**		**Credits**	**3**
Hours/Week (L-T-P)	**0-4-2**		**CIE Marks**	**100**
Total Hrs	**36**		**SEE Marks**	**100**
Exam Hrs	**3**		**Course Type**	**MPS**

Seminar is to be given by the student after the completion of a mini project chosen by the student. Topics for the mini projects can be from the aeronautical engineering and allied fields. The mini project can be based on either numerical or analytical solution or design or fully experimental; or a combination of these tasks.

COURSE ASSESSMENT METHOD

1. Internal Examiner shall carry out the evaluation for 100 marks.
2. External Examiner shall carry out the evaluation for 100 marks.
3. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
4. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

Program Outcomes – Articulation matrix

Total Hrs	**30**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PCCL**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Model airfoils and perform meshing for symmetric and cambered airfoils Using advanced software tools.
2. Perform flow analysis using advanced software tools.
3. Carry out structural analysis for wing and fuselage of aircraft.
4. Analyse the stresses in rectangular plate with different geometry and Boundary conditions.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

1. Modeling of Symmetric Aerofoil Geometry, and Generation of Body Fitting Mesh.
2. Modeling of Cambered Aerofoil Geometry, And Generation of Body Fitting Mesh.
3. Modeling of 2-D Incompressible and Inviscid Flow over an Aerofoil.
4. Computations and Analysis for Velocity Vectors and Pressures Distributions.
5. Modeling of 2-D Incompressible and Viscous Flow over an Aerofoil.
6. Structural Modeling of Sandwich Beam of Rectangular Cross-Section and Analyses for Stresses.
7. Structural Modeling of a Three Dimensional Wing.
8. Structural Modeling and Stress Analysis of a Fuselage Bulk Head.
9. Structural Modeling and Stress Analysis of a Simply Supported Rectangular Plate Uniformly Compressed in one Direction.
10. Structural Modeling and Stress Analysis of a Simply Supported Rectangular Plate Uniformly Compressed in one Direction with a Cut-Out in Center.
11. Structural Modeling of Sandwich Beam of Rectangular Cross-Section and Analyses for Stresses.
12. Structural Modeling of a Three Dimensional Wing.

COURSE ASSESSMENT METHOD

Record: 30 marks
Internal Test: 15 marks
Viva-voce: 05 marks
Semester End Examination: 50 Marks
Scheme of Examination: Student will be asked to conduct any one experiment from Part A & B

BOS RECOMMENDED ONLINE COURSES				
Course Code	**22AUD27**		**Credits**	**PP**
Hours/Week (L-T-P)			**CIE Marks**	
Total Hrs			**SEE Marks**	
Exam Hrs			**Course Type**	**AUD/AEC**

COURSE ASSESSMENT METHOD

1. Board of studies Recommended Online Courses
2. Classes and evaluation procedures are as per the policy of the online course providers.
3. A pass in AUD/AEC is mandatory for the award of the degree

PROFESSIONAL ELECTIVE I

EXPERIMENTAL AERODYNAMICS				
Course Code	**22MAS231**		**Credits**	**3**
Hours/Week (L-T-P)	**2-2-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the scaling effects.
2. Describe the wind tunnels layouts and design.
3. Describe the instrumentation for calibration of wind tunnel.
4. Analyze the measurement technique in wind tunnel.
5. Analyze flow using visualization techniques in the wind tunnel.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Principles of Model Testing: Buckingham Theorem. Examples. Non-dimensional numbers. Scale effect. Geometric Kinematic and Dynamic similarities.

UNIT-2-(08 HOURS)

Wind Tunnels: Classification. Special features and problems of testing in subsonic, supersonic and hypersonic speed regions. Layouts. Sizing and design parameters. Losses in the wind tunnel circuit.

UNIT-3-(08 HOURS)

Calibration of Wind Tunnels: Calibration techniques for subsonic and supersonic wind tunnels. Test section speed. Horizontal buoyancy, Flow angularities. Turbulence measurements. Associated instrumentation.

UNIT-4-(08 HOURS)

Wind Tunnel Measurements: Wind Tunnel Balance. Force balance Co-ordinates. Force measurements. Internal and external balances. Three component and six component balances. Steady and Unsteady Pressure and velocity measurements. Principles of Hotwire Anemometer.

UNIT-5-(07 HOURS)

Flow Visualization: Surface flow visualization and Fluid flow visualization. Optical methods: Shadowgraphy, Schlieren Method, Interferometry, Laser Doppler anemometry. Trace methods: Smoke flow visualization, Tuft flow visualization, Visualization by dye. Surface flow visualization: Surface oil film visualization, Liquid crystals visualization. Special methods

ADVANCED LIGHT WEIGHT COMPOSITE MATERIALS AND STRUCTURES

Course Code	**22MAS232**		**Credits**	**3**
Hours/Week (L-T-P)	**2-2-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand characteristics of composite materials for various applications.
2. Apply Hooke's law for orthotropic and anisotropic materials.
3. Carryout analysis of laminated composites
4. Develop composite materials
5. Apply failure theories and NDE for composite materials.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Introduction: Classification and characteristics of composite materials - Types of fiber and resin materials, functions and their properties – Application of composite to aircraft structures-Micromechanics-Mechanics of materials, Elasticity approaches-Mass and volume fraction of fibers and resins-Effect of voids, Effect of temperature and moisture

UNIT-2-(07 HOURS)

Macro mechanics: Hooke's law for orthotropic and anisotropic materials-Lamina stress strain relations referred to natural axes and arbitrary axes.

UNIT-3-(08 HOURS)

Analysis of laminated composites: Governing equations for anisotropic and orthotropic plates- angle-ply and cross ply laminates- analysis for simpler cases of composite plates and beams – inter laminar stresses- netting analysis.

UNIT-4-(08 HOURS)

Manufacturing & fabrication processes: Manufacture of glass, boron and carbon fibers Manufacture of FRP components- Open mould and closed mould processes. Properties and functions of resins

UNIT-5-(08 HOURS)

Failure theory and NDE: Failure criteria- Flexural rigidity of Sandwich beams and plates – composite repair- Ultra Sonic Technique - AE technique, Analysis through FEM and Meshless technique.

Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand solar system, Kepler's, Newton's law of motion, escape velocity, Geosynchronous, geostationary satellites
2. Understand principle of rocket and its stages, thrust equation, one and two dimensional rocket motions
3. Understand the loads, drag, performances at different altitudes, types of nozzles and launching problems
4. Understand materials used and special coatings and ablative materials
5. Understand Satellite injections, orbit transfer, orbit deviation due to injection error, general perturbation approach

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Description of solar system – Kepler's Laws of planetary motion – Newton's Law of Universal gravitation – Two body and Three-body problems – Jacobi's Integral, Librations points – Estimator of orbital and escape velocities – geosynchronous and geostationary satellites life time – satellite perturbations – Hohmann orbits – calculation of orbit parameters.

UNIT-2-(08 HOURS)

Principle of operation of rocket motor - thrust equation – one dimensional and two dimensional rocket motions in free space and homogeneous gravitational fields – Description of vertical, inclined and gravity turn trajectories determinations of range and altitude – simple approximations to burnout velocity – staging of rockets.

UNIT-3-(08 HOURS)

Description of various loads experienced by a rocket passing through atmosphere – drag estimation – wave drag, skin friction drag, and base pressure drag – Boat-tailing in missiles – performance at various altitudes – conical and bell shaped nozzles – adapted nozzles – rocket dispersion – launching problems.

UNIT-4-(07 HOURS)

Selections of materials for spacecraft and missiles – special requirements of materials to perform under adverse conditions – ablative materials.

UNIT-5-(08 HOURS)

General Aspects of satellite Injections – Satellite Orbit Transfer –Various Cases – Orbit Deviations Due to Injection Errors – Special and General Perturbations – Cowell's Method – Encke's Method – Method of vibrations of Orbital Elements – General Perturbations Approach.

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Learn the fundamentals of avionics system used in civil and military aircraft.
2. Students will be able to illustrate the navigation system involved in avionics.
3. Students will be able to illustrate the Communication system involved in avionics.
4. Software Assessment and Validation for Civil and Military standards .
5. Learn to analyze the various electronic systems/subsystems involved in an aircraft.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

History and Evolution of Avionics, Significance of Avionics in modern Aviation, List of Avionics system on-board a modern aircraft. Block diagram of avionics architecture, Role of individual sub-system in avionics architecture

UNIT-2-(08 HOURS)

Surveillance Systems: Air traffic control, Primary radar, Secondary radar, Replies, Various system modes, error checking, Transponders of ATCCRB & Mode S, Collision avoidance, Lightning detection, Weather radar. Telemetry. Fiber Optic Comm., FMS, FBW, Autopilot, LRU, IMA & Mission Systems, Inertial Sensors

UNIT-3-(08 HOURS)

Airborne Communications Systems: VHF AM Communications, VHF Communications hardware, High frequency communications, ACARS, SELCAL, Digital Communications and Networking, VHF Digital communications, Data link Modes.

UNIT-4-(08 HOURS)

MIL-STD-1553B, ARINC-429, ARINC-629, AFDX, D0-178B and its Elements, Avionics system design,

UNIT-5-(08 HOURS)

Avionic Systems Integration: Data bus systems, integrated modular avionics, and commercial off-the shelf (COTS).

HYPERSONIC AERODYNAMICS				
Course Code	**22MAS241**		**Credits**	**3**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Be able to arrive at the solution for problems involving inviscid and viscous hypersonic flows.
2. Have thorough knowledge on high temperature effects in hypersonic aerodynamics.
3. Be able to arrive at various solution methods to overcome aerodynamic heating problem on hypersonic vehicles.
4. To gain ideas on the design issues associated with hypersonic vehicles.
5. Able to realize the importance and use of the relevant equations for viscous hypersonic flows.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Introduction to hypersonic aerodynamics: Peculiarities of Hypersonic flows - Thin shock layers – entropy layers – low density and high density flows – hypersonic flight similarity parameters – shock wave and expansion wave relations of inviscid hypersonic flows – velocity vs altitude map for hypersonic vehicles.

UNIT -2- (08 HOURS)

Surface inclination methods for hypersonic inviscid flows: Local surface inclination methods – modified Newtonian Law – Newtonian theory – tangent wedge tangent cone and shock expansion methods – Calculation of surface flow properties – practical application of surface inclination methods – hypersonic independence principle.

UNIT -3- (08 HOURS)

Approximate methods for inviscid hypersonic flows: Assumptions in approximate methods hypersonic small disturbance equation and theory – Maslen''s theory– blast wave theory – hypersonic equivalence principle- entropy effects - rotational method of characteristics - hypersonic shock wave shapes and correlations.

UNIT -4- (08 HOURS)

Viscous hypersonic flow theory: Peculiarities of hypersonic boundary layers - boundary layer equations – hypersonic boundary layer theory and non-similar hypersonic boundary layers – hypersonic aerodynamic heating and entropy layers effects on aerodynamic heating – heat flux and skin friction estimation.

UNIT -5- (08 HOURS)

Viscous interactions and transition: Strong and weak viscous interactions – hypersonic shockwaves and boundary layer interactions – Parameters affecting hypersonic boundary layer transition - Estimation of hypersonic boundary layer transition- Role of similarity parameter for laminar viscous interactions in hypersonic viscous flow.

Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the system design requirements, architecture, functional requirements.
2. Generate the system requirements documents as per the requirement analysis.
3. Understand the techniques of system design
4. Carry out the Supportability and producibility
5. Carry out the system reliability analysis.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Fundamentals of systems engineering: Fundamentals of systems engineering and system architecting of weapon system, system engineering. standards 15288, requirements analysis, functional analysis and allocation, preliminary system architecture.

UNIT-2-(08 HOURS)

Systems design and analysis: systems analysis, system design, and the basics of test and evaluation, Introduction to combat systems, System development phases (Conceiving, Designing, Implementing, and Operating)

UNIT-3-(08 HOURS)

Techniques of system design: Techniques of system design and assessment for operational feasibility, including reliability, maintainability, usability (including human factors and human performance).

UNIT-4-(08 HOURS)

More on system analysis: Various ways of evaluating system performance, Supportability and producibility, System cost assessment and effectiveness estimation, certification methods, Case studies.

UNIT-5-(08 HOURS)

Reliability analysis and management (basic tools and methods of reliability for developing complex systems including electronic components, mechanical components, and software), redundancy, graceful degradation, fault tolerance, MTBF.

Total Hrs	**3**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Familiarize students with the preliminary design and analysis of turbomachinery components found in conventional aircraft engines: compressors and turbines.
2. Evaluate various space missions, parameters to be considered for designing trajectories and rocket mission profiles
3. Relate the significance of test facilities and their associated parameters.
4. Acquire knowledge on orbit mechanics and satellite dynamics
5. Illustrate electric propulsion techniques, ion, and nuclear rocket and the performances of different advanced propulsion systems.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1- (07 HOURS)

Engine Design Parameters: Turbomachinery and combustor design, compressor-turbine matching and off-design engine performance. Introduction to advanced propulsion architectures including scramjets, pressure gain combustion, and electric/hybrid-electric.

UNIT-2- (08 HOURS)

Principles of rocket propulsion: History of rockets, Newton's third law, orbits and space flight, types of orbits, basic orbital equations, elliptical transfer orbits, launch trajectories, the velocity increment needed for launch, the thermal rocket engine, concepts of vertical takeoff and landing, SSTO and TSTO, launch assists.

UNIT-3- (08 HOURS)

Rocket Testing: Types of Tests; Test Facilities and Safeguards; Safety and Environmental Concerns; Monitoring and Control of Toxic Materials and Exhaust Gases; Instrumentation and Data Management; Reliability and Quality Control; Flight Testing.

UNIT-4- (08 HOURS)

Satellite Attitude Dynamics: Torque free Axi-symmetric rigid body-Attitude Control for Spining Spacecraft - Attitude Control for Non-spinning Spacecraft - The Yo-Yo Mechanism - Gravity - Gradient Satellite-Dual Spin Spacecraft- Attitude Determination.

UNIT-5- (08 HOURS)

Advanced propulsion techniques: Electric rocket propulsion, types of electric propulsion techniques, Ion propulsion, Nuclear rocket, comparison of performance of these propulsion systems with chemical rocket propulsion systems, future applications of electric propulsion systems, Solar sail.

ORBITAL MECHANICS AND SPACE FLIGHT				
Course Code	**22MAS244**		**Credits**	**3**
Hours/Week (L-T-P)	**2-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. To acquire knowledge on the peculiarities of space environment and its effect on spacecraft materials.
2. To estimate the time and position of an object in various orbits.
3. To acquire knowledge on the basic concepts of satellite injection and satellite perturbations.
4. To calculate orbital parameters and to perform conceptual trajectory designs for geocentric or interplanetary missions.
5. To estimate the time of flight and the position of impact point of ballistic missiles.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Space Environment: Peculiarities of space environment and its description– effect of space environment on materials of spacecraft structure and astronauts- manned space missions – effect on satellite life time.

UNIT -2- (08 HOURS)

Characteristics of various orbits: Properties of elliptic, Parabolic and hyperbolic properties in terms of orbital elements – relations between position and time – Barker's theorem – Whittaker's theory – Sphere of influence.

UNIT -3- (08 HOURS)

Satellite injection and satellite perturbations: General aspects of satellite injection – satellite orbit transfer – various cases – orbit deviations due to injection errors – special and general perturbations – Cowell's method and Enake's method – method of variations of orbital elements – general perturbations approach.

UNIT -4- (08 HOURS)

Interplanetary trajectories: Two-dimensional interplanetary trajectories – fast interplanetary trajectories – three dimensional interplanetary trajectories – launch of interplanetary spacecraft – trajectory estimation about the target planet – concept of sphere of influence – Lambert's theorem.

UNIT -5- (08 HOURS)

Ballistic missile trajectories: Introduction to ballistic missile trajectories – boost phase – the ballistic phase – trajectory geometry – optimal flights – time of flight – re-entry phase – the position of impact point – influence coefficients.

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the controls and operation of an aircraft.
2. Understand the aircraft systems are maintained.
3. Understand the systems available in the aircraft engines.
4. Know the systems available in a missile.
5. Know the basics of systems available in a spacecraft.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1- (07 HOURS)

Flight control systems: Conventional Systems – Power assisted and fully powered flight controls – Power actuated systems – Engine control systems – Push pull rod system – flexible push full rod system – Components – Modern control systems – Digital fly by wire systems – Auto pilot system active control Technology – Communication and Navigation systems – Instrument landing systems.

UNIT-2-(08 HOURS)

Flight systems: Hydraulic systems, Components – Hydraulic system controllers – Modes of operation – Pneumatic systems – Working principles – Typical Air pressure system – Brake system – Typical Pneumatic power system, Components – Landing Gear systems – Classification – Shock absorbers – Retractive mechanism – Rocket Separation mechanism.

UNIT-3-(08 HOURS)

Engine systems: Fuel systems for Piston and jet engines – Components of multi engines – Lubricating systems for piston and jet engines – Starting and Ignition systems – Typical examples for piston and jet engines.

UNIT-4-(08 HOURS)

Guided missile systems: Introduction – Airframe – Propulsion System – Types of Control Systems – Gyroscope and its types – Roll and Lateral Control System – Fin Actuation Servos – Roll and Lateral Autopilot – Guidance System.

UNIT-5-(08 HOURS)

Spacecraft systems: Basics: Structure – Power – Thermal - Communications and Data Handling - Propulsion System-Attitude Stabilisation and Control.

SEMESTER – III

FINITE ELEMENT METHODS				
Course Code	**22MAS31**		**Credits**	**4**
Hours/Week (L-T-P)	**3-0-2**		**CIE Marks**	**50**
Total Hrs	**50**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. An ability to frame governing equations involving different type of finite elements.
2. Knowledge on the general finite element methodology for a variety of practical problems.
3. An ability to solve simple 1-D and 2-D problems using the finite element method.
4. Knowledge on how to apply numerical integration techniques effectively in finite elements solutions.
5. An ability to frame and solve heat transfer and fluid mechanics problems using the FE method.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (10 HOURS)

Introduction: Review of various approximate methods – Rayleigh-Ritz, Galerkin and Finite Difference Methods – Problem Formulation – Application to Structural Elements & Practical Problems – Derivation of Stiffness and Flexibility Matrices – Spring Systems – Role of Energy Principles – Basic Concepts of Finite Element Method – Interpolation, Nodes, Degrees of Freedom – Solution Schemes.

UNIT -2- (10 HOURS)

Discrete elements: Finite Element Structural Analysis Involving 1-D Bar and Beam Elements – Tapered Bar – Temperature Effects – Static Loading – Formulation of the Load Vector for 1-D Elements – Methods of Stiffness Matrix Formulation – Interpolation & Shape Functions – Boundary Conditions – Determination of Displacements & Reactions – Constitutive Relations – Determination of Nodal Loads & Stresses.

UNIT -3- (10 HOURS)

Continuum elements: Plane Stress & Plane strain Loading – CST Element – LST Element – Element Characteristics – Problem Formulation & Solution Using Finite Elements – Axisymmetric Bodies & Axisymmetric Loading – Consistent and Lumped Load Vectors – Use of Local, Area and Volume Co-ordinates – Isoparametric Formulation – Shape Functions – Role of Numerical Integration – Load Consideration – Complete FE Solution.

UNIT -4- (10 HOURS)

Vibration & buckling: Formulation of the Mass and Stiffness Element Matrices for Vibration Problems – Bar and Beam Elements – Derivation of the Governing Equation – Natural Frequencies and Modes – Damping Considerations –Harmonic Response – Response Calculation Using Numerical Integration – Buckling of Columns – Problem Formulation – Solution – Determination of Buckling Loads and Modes.

UNIT -5- (10 HOURS)

Heat transfer & fluid mechanics problems: One Dimensional Heat Transfer Analysis – Formulation of the Governing Equations in Finite Element Form – Equivalent Load Vector – Solution & Temperature Distribution – Finite Element Formulation & Solution for Sample Problems Involving Fluid Mechanics .

PROJECT WORK PHASE -1				
Course Code	**22MAS34**		**Credits**	**3**
Hours/Week (L-T-P)	**0-6-0**		**CIE Marks**	**100**
Total Hrs	**-**		**SEE Marks**	**-**
Exam Hrs	**3**		**Course Type**	**PROJ**

COURSE OUTCOMES

The individual student must identify a project Advisor in the third semester. The student, in consultation with their Advisor, will form a Thesis Committee that includes head of the department and domain expert. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

SOCIETAL PROJECT				
Course Code	**22MAS35**		**Credits**	**3**
Hours/Week (L-T-P)	**0-6-0**		**CIE Marks**	**100**
Total Hrs	**-**		**SEE Marks**	**-**
Exam Hrs	**3**		**Course Type**	**SP**

Seminar is to be given by the student after the completion of a societal project chosen by the student. Topics for the projects can be from the aeronautical engineering and allied fields. The project can be based on either numerical or analytical solution or design or fully experimental; or a combination of these tasks.

COURSE ASSESSMENT METHOD

1. Internal Examiner shall carry out the evaluation for 100 marks.
2. External Examiner shall carry out the evaluation for 100 marks.
3. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
4. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	2						3	3			3	3	3

CO5	3	2						3	3			3	3	3

INTERNSHIP				
Course Code	**22MASI36**		**Credits**	**6**
Hours/Week (L-T-P)	**6 Weeks**		**CIE Marks**	**50**
Total Hrs	**6 Weeks**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**INT**

COURSE OUTCOMES

1. Identify and define the problem for the project work
2. Apply the knowledge acquired to analyze and estimate the cost and time
3. Examine and use appropriate tools to solve the defined problem in a team
4. Develop an end product and prepare a technical report/paper

COURSE CONTENTS

A 6 weeks long internship course is to be carried out by the students. On completion of the internship, students shall prepare a report according to the guidelines and submit it to the concerned authority during their 3rd semester. The students should present their work and performance will be evaluated by the project committee and marks will be awarded.

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

PROFESSIONAL ELECTIVE III

GAS DYNAMICS				
Course Code	**22MAS321**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Be able to solve the steady one dimensional compressible fluid flow problems.
2. Be provided with the knowledge on thermodynamic state of the gas behind normal shock waves.
3. Be provided with the knowledge on thermodynamic state of the gas behind oblique shock waves and expansion waves.
4. Be provided with the adequate knowledge on compressible flow measurements.
5. Be provided with the basic knowledge on rarefied and high temperature gas dynamics.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Steady one-dimensional flow: Thermodynamics of Fluid Flow – First Law of Thermodynamics - The Second Law of Thermodynamics - Thermal and Calorical Properties – Perfect Gas - Wave Propagation – Velocity of Sound - Subsonic and Supersonic Flows – Fundamental Equations - Discharge from a Reservoir – Stream tube Area-Velocity Relation - De Laval Nozzle – Supersonic Flow Generation – Diffusers - Dynamic Head Measurement in Compressible Flow - Pressure Coefficient.

UNIT-2-(10 HOURS)

Normal shock waves: Introduction – Equations of Motion for a Normal Shock Wave - The Normal Shock Relations for a Perfect Gas - Change of Stagnation or Total Pressure across the Shock- Hugoniot Equation - The Propagating Shock Wave - Reflected Shock Wave - Centered Expansion Wave - Shock Tube.

UNIT-3-(10 HOURS)

Oblique shock and expansion waves: Introduction – Oblique Shock Relations - Relation between θ and β- Shock Polar – Supersonic Flow over a Wedge - Weak Oblique Shocks – Supersonic Compression - Supersonic Expansion by Turning - The Prandtl-Meyer Expansion - Simple and Non-simple Regions.

UNIT-4-(10 HOURS)

Measurements in compressible flow: Introduction - Pressure Measurements – Temperature Measurements - Velocity and Direction - Density Problems - Compressible Flow Visualization - High-Speed Wind Tunnels - Instrumentation and Calibration of Wind Tunnels.

UNIT-5-(10 HOURS)

Introduction to rarefied and high temperature gas dynamics: Knudsen Number - Slip Flow Transition and Free Molecule Flow - Importance of High- Temperature Flows - Nature of High-Temperature Flows.

CHEMICAL ROCKET TECHNOLOGY				
Course Code	**22MAS322**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**3**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. To identify the rocket propulsion system and its applications.
2. Analyze the performance of thrust chambers.
3. Describe and classify solid propellant rocket motors and its components.
4. Analyse propellants properties and associated physical and chemical processes.
5. Describe and classify liquid propellant rocket motors, its components and various associated systems.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Rocket performance: Classification of Rockets - Propellants classification -Thrust equation, specific impulses, total impulse, characteristic velocity – Thrust coefficient – Efficiency: Real and ideal nozzle characteristic, Adiabatic flame temperature and its calculation, Criterion for Choice of propellants.

UNIT -2- (08 HOURS)

Solid rocket motors: Viscous subsystems of solid rocket motor and their function – Igniters - Type of igniters – Internal ballistics properties– Burning rate - Factor affecting burning rate - Equilibrium Chamber pressure– Propellant grain geometry design, Erosive burning – Pressure vs Time curve- thrust vs time curve – Special problems of solid rocket nozzle – Combustion mechanism of solid propellants – Solid rocket motor design.

UNIT -3- (08 HOURS)

Liquid rocket engines: Classification of liquid rocket engine — Injectors and its types - various of types of feeding system - performance and choice of feed system cycle – Propellants tank and propellant slosh - Gas requirement for propellant draining - Thrust chamber – Thrust chamber cooling – Cryogenic propellants – Problems peculiar to cryogenic engine -– Turbo pumps – Ignition system - Combustion of liquid rocket – Thrust chamber design.

UNIT -4- (08 HOURS)

Hybrid propulsion system: Standard and reverse hybrid rocket – Application – Limitation - Advance fuel – Combustion mechanism of hybrid rocket – Regression rate measurement – Methods for improving regression rate.

UNIT -5- (08 HOURS)

Rocket testing and combustion instabilities: Burning rate measurement techniques - Rocket testing – Static testing of rockets – Instrumentation and safety procedures – Ignition delay testing – Combustion instability - L* instability – different modes of combustion instability – Bulk and wave mode of combustion instability in solid and liquid rockets – Pogo instability.

MISSILE GUIDANCE AND CONTROL				
Course Code	**22MAS323**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Have through knowledge with the advanced concepts of missile guidance and control to the engineers.
2. Provide the necessary mathematical knowledge that is needed in understanding the physical processes.
3. Derive fundamental guidance equations and to compare guidance system performance.
4. Explain the importance of strategic missiles and tracking equation of motions.
5. Provide concepts on weapon delivery systems and also the factors influences weapon delivery system.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Missile systems introduction: History of guided missile for defence applications- Classification of missiles– The Generalized Missile Equations of Motion- Coordinate Systems- Lagrange's Equations for Rotating Coordinate Systems-Rigid-Body Equations of Motion-missile system elements, missile ground systems.

UNIT -2- (08 HOURS)

Missile airframes, autopilots and control: Missile aerodynamics- Force Equations, Moment Equations, Phases of missile flight. Missile control configurations. Missile Mathematical Model. Autopilots — Definitions, Types of Autopilots, Example Applications. Open-loop autopilots. Inertial instruments and feedback. Autopilot response, stability, and agility- Pitch Autopilot Design, Pitch-Yaw-Roll Autopilot Design.

UNIT -3- (08 HOURS)

Missile guidance laws: Tactical Guidance Intercept Techniques, Derivation of the Fundamental Guidance Equations, explicit, Proportional Navigation, Augmented Proportional Navigation, beam riding, bank to turn missile guidance, Three-Dimensional Proportional Navigation, comparison of guidance system performance, Application of Optimal Control of Linear Feedback Systems.

UNIT -4- (08 HOURS)

Strategic missiles: Introduction, The Two-Body Problem, Lambert's Theorem, First-Order Motion of a Ballistic Missile-Correlated Velocity and Velocity- to-Be-Gained Concepts, Derivation of the Force Equation for Ballistic Missiles, Atmospheric Reentry, Ballistic Missile Intercept, Missile Tracking Equations of Motion, Introduction to Cruise Missiles , The Terrain-Contour Matching (TERCOM) Concept.

UNIT -5- (08 HOURS)

Weapon delivery systems: Weapon Delivery Requirements, Factors Influencing Weapon Delivery Accuracy, Unguided Weapons, The Bombing Problem, Guided Weapons, Integrated Flight Control in Weapon Delivery, Missile Launch Envelope, Mathematical Considerations Pertaining to the Accuracy of Weapon Delivery Computations

AIRPORT PLANNING AND OPERATIONS				
Course Code	**22MAS324**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain the typical operations of airports from a management perspective
2. Identify the economic, political and social role of airports
3. Discuss the airport operations management
4. Discuss the airport financial management
5. Explain and defining capacity, factors affecting capacity and delay

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Airports and Airport Systems: Introduction: Airport management on an international level; The national plan of integrated airport systems; The nation's airport system plan; The rules that govern airport management; Organizations that influence airport regulatory policies. A historical and legislative perspective: Introduction the formative period of aviation and airports, Airport growth: World War-II and the postwar period airport modernization: The early jet age

UNIT -2- (08 HOURS)

Components of the airport: The components of an airport, the airfield. Navigational aids (NAVAIDS) located on airfields; Air traffic control and surveillance facilities located on the airfield; Weather reporting facilities located on airfields; Security infrastructure on airfields. Airspace and air traffic control: Brief history of air traffic control; The basics of air traffic control; Current and future enhancements to air traffic control; Airport terminals and ground access: The historical development of airport terminals; Components of the airport terminal; Airport ground access.

UNIT -3- (08 HOURS)

Airport operations management: Introduction, pavement management, aircraft rescue and firefighting (ARFF); Snow and ice control, safety inspection programs. Bird and wildlife hazard management; Airport security: Security at commercial service airports, security at general aviation airports; the future of airport security.

UNIT -4- (08 HOURS)

Airport financial management: Airport financial accounting, revenue strategies at commercial airports, pricing of airport facilities and services, variation in the sources of operating revenues, rise in airport financial burdens, airport funding, grant programs, airport financing, private investment sale of the airport.

UNIT -5- (08 HOURS)

Airport capacity and delay Defining capacity, factors affecting capacity and delay, estimating capacity, analytical estimates of delay: The queuing diagram. The future of airport management: Introduction, restructuring of commercial air carriers, new large aircraft and small aircraft transportation systems.

STRUCTURAL DYNAMICS AND AEROELASTICITY				
Course Code	**22MAS326**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Have knowledge of the role of aeroelasticity in aircraft design.
2. Interpret the use of semi-rigid body assumptions and numerical methods in airplane design.
3. Arrive at the solutions for steady state aeroelastic problem.
4. Be knowledge with the concept of flutter analysis of aircraft wings.
5. Have knowledge on practical examples of aeroelastic problems.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Aeroelastic phenomena: Stability versus response problems – introduction to aeroelasticity and aeroelastic phenomena – Examples of aeroelastic phenomena – Galloping of transmission lines – Flow induced vibrations of tall slender structures – Instability of suspension bridges – Fluid structure interaction – The aero-elastic triangle of forces – Prevention of aeroelastic instabilities

UNIT -2- (08 HOURS)

Modelling of aeroelastic phenomena: Influence and stiffness co-efficients – illustration of aeroelastic phenomena using simplified aerodynamic and structural models – different subsonic and supersonic aerodynamic models for aeroelastic analysis – modelling techniques – aeroelastic models in state-space format Flexure – torsional oscillations of beams – Governing differential equation of motion and its solution

UNIT -3- (08 HOURS)

Static aeroelastic phenomena: Simple two dimensional idealisation – Strip theory – Exact solutions for simple rectangular wings – 'Semirigid' assumption and approximate solutions – Successive approximation method – Numerical approximations using matrix equations – Divergence of 2-D airfoil and Straight Wing – Aileron efficiency & reversal – Control Effectiveness – Wing deformations of swept wings

UNIT -4- (08 HOURS)

Flutter calculations: Flutter analysis – Two dimensional thin airfoils in steady incompressible flow –Quasi-steady aerodynamic derivatives – Galerkin method for critical flutter speed – Stability of disturbed motion – Solution of the flutter determinant – Methods of determining the critical flutter speeds – Flutter Calculation – U-g Method – P-k Method – Exact Treatment of Bending –Torsion Flutter of a Uniform Wing – Flutter Analysis by Assumed Mode Method

UNIT -5- (08 HOURS)

Prevention and control: Stiffness criteria – dynamic mass balancing – dimensional similarity – effect of elastic deformation on static longitudinal stability – introduction to aeroelastic control – aeroelastic aspects in the design of aircraft – Panel flutter and its control – Prevention of tail buffeting – Aeroelastic instabilities in helicopter and engine blades and prevention methods

OPEN ELECTIVE COURSES-I

INTRODUCTION TO AEROSPACE ENGINEERING				
Course Code	**22MAS331**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Ability to understand the standard atmosphere.
2. Ability to understand aerodynamics, lift, drag.
3. Ability to understand the Aircraft performance, propulsion and structures.
4. Ability to understand the aircraft stability, and control.
5. Ability to understand the rocket and spacecraft trajectories and orbits.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (08 HOURS)

Standard atmosphere: History of aviation – standard atmosphere - pressure, temperature and density altitude.

UNIT -2- (YY HOURS)

Aerodynamics: Aerodynamic forces – Lift generation Viscosity and its implications - Shear stress in a velocity profile - Lagrangian and Eulerian flow field - Concept of a streamline - Aircraft terminology and geometry - Aircraft types - Lift and drag coefficients using NACA data.

UNIT -3- (YY HOURS)

Performance and propulsion: Viscous and pressure drag - flow separation - aerodynamic drag - thrust calculations - thrust/power available and thrust/power required.

UNIT -4- (YY HOURS)

Aircraft stability and structural theory: Degrees of freedom of aircraft motions - stable, unstable and neutral stability - concept of static stability - Hooke’s Law- brittle and ductile materials - moment of inertia - section modulus.

UNIT -5- (YY HOURS)

Space applications: History of space research - spacecraft trajectories and basic orbital manoeuvres - six orbital elements - Kepler’s laws of orbits - Newtons law of gravitation.

PRINCIPLES OF AIRCRAFT DESIGN				
Course Code	**22MAS332**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Conceptual designs of aerospace vehicles, components, missions, or systems that incorporate realistic constraints/applicable engineering standards.
2. Describes the terminology and definitions used in the design.
3. Explains the propulsion sizing estimates to meet specified operational and performance requirements
4. Illustrate the performance of a conceptual airplane and its propulsion system.
5. To calculate jet and propeller-driven airplane performance (takeoff/landing distance, range, endurance, climb, maneuver)

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(8 HOURS)

Phases of the design process: Conceptual Design, Preliminary Design, and Detailed Design. Typical program organization and personnel responsibilities. Role of the aircraft designer - you are a key member of the design team. Major differences between manned and unmanned air vehicle design.

UNIT-2-(6 HOURS)

Basic aircraft terminology and conventions, Coordinate systems, forces and moments, and aerodynamic coefficients. Aircraft weight breakdown and definitions, Basic aircraft performance terminology (flight in the horizontal and vertical planes).

UNIT-3-(6 HOURS)

Aircraft sizing, Factors influencing aircraft configuration, size and weight. Weight breakdown, Historical weight data. Sizing with a “rubber” engine .The lift curve and parabolic drag polar.

UNIT-4-(8 HOURS)

Aircraft Performance and Fuel Fraction Estimates: Range, Endurance, Maneuvering Flight in the vertical and horizontal planes, Climbing Flight, Descent/Glide, Field Performance – Takeoff and Landing, Special performance requirements. Propulsion System Selection: Flight regimes, Refined performance estimating methods, Installation factors.

UNIT-5-(8 HOURS)

Configuration trade studies: Configuration type (tailless, canard, conventional), Wing location, Empennage configurations (cruciform, T, H, V, cathedral), Engine placement (single and multi-engine), Landing gear type and placement (tail dragger, tricycle, tandem), Airfoil selection, Packaging for storage/transport.

INTRODUCTION TO AEROSPACE PROPULSION				
Course Code	**22MAS333**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. To carryout engine cycle analysis by considering component losses
2. To understand the basic design features of aircraft inlets and nozzles and their performance evaluation methods
3. To understand the basic aspects of combustion systems used in aircraft engines
4. To understand the working principle and performance of axial flow compressors.
5. To understand the working principle and performance of axial flow turbines and centrifugal compressors

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Introduction: Introduction to jet aircraft propulsion, Classifications of Aerospace Engines, Classification of Jet Engines, Classification of gas turbine engines, Performance Parameters of Jet Engines, Thrust Force, Factors Affecting Thrust, Engine Performance Parameters, Efficiencies, Takeoff Thrust, Specific Fuel Consumption, Aircraft Range, Specific Impulse, Cycle components and component performance, Real cycle analysis, Effect of losses on engine component performance, Real cycle analysis of turbojet, ramjet, turbofan, turboprop and turbo shaft engines, Role of afterburner on engine performance, Single and multispool arrangements

UNIT -2- (08 HOURS)

Diffusers and nozzles: Power Plant Installation. Intakes for transport and military aircrafts, Subsonic intakes, Flow patterns, Internal and external flow, Performance of intakes, Supersonic intakes, The starting problem, The shock boundary layer problem, External deceleration, The flow stability problem, Typical modes of inlet operation Working of nozzles, Nozzle types, Subsonic and supersonic nozzles, Convergent Nozzle, Convergent–Divergent Nozzle, Variable Geometry Nozzles, Afterburning Nozzles, Performance parameters for nozzles, Under and over expanded nozzles, Thrust Reversal, Noise

UNIT -3- (08 HOURS)

Aircraft Combustion Systems: Subsonic Combustion Chambers, Tubular (or Multiple) Combustion Chambers , Tubo Annular Combustion Chambers, Annular Combustion Chambers, Combustion Process, Chemistry of Combustion, Combustion Chamber Performance, Pressure Losses, Combustion Efficiency, Combustion Stability, Combustion Intensity, Development of a practical combustion system, Fuel Injectors, Simplex injectors, Stability limits, Flame Stabilization, Combustion Instability, Cooling, Material, Aircraft Fuels, Emissions and Pollutants, The Afterburner, Supersonic Combustion System.

UNIT -4- (08 HOURS)

Axial flow compressors: Classification of compressors and turbines, Comparison of Compressors and Turbines, Euler's Equation, Basic operation of an axial flow compressor, Elementary theory, Factors affecting pressure ratio, degree of reaction, Design steps of an axial flow compressor, Basic aspects of Blade design, Calculation of stage performance, compressibility effects, off-design performance, Compressor characteristics.

UNIT -5- (08 HOURS)

Axial Flow turbines and Centrifugal flow compressors: Axial Flow turbines: Elementary theory, Degree of reaction, Fifty percent reaction designs, Loss coefficients for the nozzle and rotor blades, vortex theory, Choice of blade profile, pitch and chord, stage performance, Turbine materials, Methods of blade cooling, Centrifugal flow compressors: Basic layout and operations, work done and pressure rise, losses and efficiency; Slip factor and power input factor, Flow in the diffuser, Accounting compressibility effects, Compressor characteristics

Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. To classify UAVs based on different parameters.
2. To demonstrate ability to design an efficient structure for an UAV of specific application.
3. To perform ground testing of UAVs.
4. To apply the knowledge gained on electronic intelligence and target designation for successful development of UAS.
5. To understand the basic concepts in the different types of navigation schemes for UAS.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Introduction to uav: History of UAV –classification –basic terminology-models and prototypes –applications

UNIT -2- (08 HOURS)

Basics of airframe: Airframe –dynamics –modeling- structures –wing design- engines and its types-equipment, maintenance and management-control surfaces-specifications.

UNIT -3- (08 HOURS)

Development of uas system: System Development- Ground Testing-UAV component testing-Uav Sub-assembly and Sub- System Testing- Testing Complete UAV, Environmental testing – Testing Complete UAV-Control Station testing-Catapult Launch systems -System In flight Testing- Test sites-Test Crew training-Onsite preparation - System Certification.

UNIT -4- (08 HOURS)

Deployment of unmanned aerial system: Operational trails-network centric operations-Radar confusion-Missile Decoy-radio relay- Electronic Intelligence-Covert Reconnaissance and surveillance Target designation by laser, NBC contamination Monitoring-Long Range reconnaissance and strike- Aerial photography- Information services-communication relay- landmine detection and Destruction-other applications

UNIT -5- (08 HOURS)

Communication payloads and path planning: Payloads-Telemetry-tracking-Aerial photography, Frequency range – Commands- Control, FPV videos - Flight computer sensor-displays, RF modems, Simulation and ground testing, Trouble shooting, waypoints navigation and ground control software.

SEMESTER – IV

PROJECT WORK PHASE-II				
Course Code	**22MAS41**		**Credits**	**18**
Hours/Week (L-T-P)	**0-8-0**		**CIE Marks**	**100**
Total Hrs	**50**		**SEE Marks**	**100**
Exam Hrs	**3**		**Course Type**	**Project**

COURSE OUTCOMES

1. Project work phase-II: 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.
2. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall conducted
3. Project evaluation:
   a. Internal Examiner shall carry out the evaluation for 50 marks.
   b. External Examiner shall carry out the evaluation for 50 marks.
   c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
   d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

An Autonomous Institution With A+ Grade By NAAC UGC | Approved By UGC / AICTE / Govt. of Karnataka | Bengaluru

DEPARTMENT OF AERONAUTICAL ENGINEERING

KNOWLEDGE • CHARACTER • UNITY

SYLLABUS, SCHEME OF TEACHING AND EXAMINATION

M.Tech., in DEFENCE TECHNOLOGY

2022-2024

VISION AND MISSION

INSTITUTION

VISION

To provide India and the World, Technical Manpower of Highest Academic Excellence by Shaping Our Youth through Holistic and Integrated Education of the Highest Quality.

MISSION

To develop Nitte Meenakshi Institute of Technology through Quality, Innovative and State-of-art educational initiatives into a center of academic excellence that will turn out youth with well- balanced personality & commitment to rich cultural heritage of India and who will successfully face the Scientific and Technological challenges in the fast-evolving Global scenario with a high degree of credibility, integrity and ethical standards.

DEPARTMENT

VISION

To see the students of this department, excel in research, design and innovation in the field of Aeronautical Engineering, thereby contributing to meet the evolving global needs and to be professional and well-balanced Aeronautical Engineers exhibiting moral and ethical values.

MISSION

The department of Aeronautical Engineering strives for excellence by applying and imparting knowledge in the field of Aeronautical Engineering through comprehensive educational program, industrial visits, interaction with experts from industry and similar co-curricular activities coupled with leadership qualities.

PROGRAM EDUCATIONAL OBJECTIVES (PEOS)

PEO 1: To develop strong foundation in students to understand and analyses advance research problems in Defence Technology.

PEO 2: Nurture professional graduates to develop ability in analyzing real life problems of Space Technology.

PEO 3: To foster attitude towards continuous learning for developmental activities in research, academia and industry.

PEO 4: To improve professional skills for teamwork with ethical awareness and practice in achieving goal.

PROGRAM OUTCOMES OF M. Tech. DEFENCE TECHNOLOGY

PO1- Acquire technical competence, comprehensive knowledge and understanding the methodologies and technologies of industrial / process automation, principles and practices of energy management.

PO2- Ability to apply the knowledge of mathematics, science, engineering and technology. Understand in detail, analyze, formulate and solve the issues pertaining to the application of automation technologies in a range of industrial settings.

PO3- Acquiring the ability to identify, investigate, understand and analyze complex problems pertaining to power management and automation in industries and identify effective solution strategies for implementation.

PO4- Inculcate the role of research in developing and maintaining knowledge of the state-of-the- art in various technologies and automation in industries. Acquire the skill to design, develop and modify systems in hardware and software platforms to meet desired needs within realistic constraints

PO5- Create, select and apply appropriate techniques, resources, modern engineering and IT tools to complex engineering activities in the field of automation, control and energy management.

PO6-Acquire the capacity to understand and summarize complex information pertaining to various fields of engineering in industries. Function effectively as an individual, and as a member or leader in a team.

PO7 -Acquire the skill to develop specifications, implement and critically assess projects and their outcomes. Demonstrate management, leadership and entrepreneurial skills, and apply these to one’s own work, as a member and a leader in a team to manage projects in multidisciplinary environments.

PO8-Ability to communicate effectively in both oral and written contexts in the form of technical papers, project reports, design documents and seminar presentations.

PO9- Recognize the need for, and acquire the ability to engage in self-improvement through continuous professional development and life-long learning to maintain an up-to-date knowledge of contemporary issues in various fields of engineering.

PO10- Apply and commit to professional ethics and responsibilities of engineering practice. Understand the importance of sustainability and cost effectiveness in design and development of engineering solutions for industries and their impacts in societal and environmental context. Demonstrate awareness of societal, safety, health, legal and cultural issues relevant to professional engineering practice.

PO11- Impart an eagerness to conduct investigation and research on chosen field of study and thus keep moving towards being adaptive, self-reliant and self-evaluative.

PROGRAM SPECIFIC OUTCOMES

PSO1. Professional skills: Able to utilize the knowledge of Defence Technology in innovative, dynamic and challenging environment for design and development of new products

PSO2. Professional skills: Imparted through simulation language skills and general-purpose CAE packages to solve practical, design and analysis problems of components to complete the challenge of airworthiness for flight vehicles.

PSO3. Practical implementation and testing skills: Providing different types of in house and training and industry practice to fabricate and test and develop the products with more innovative technologies.

PSO4. Successful career and entrepreneurship: To prepare the students with broad aerospace knowledge to design and develop systems and subsystems of aerospace and allied systems and become technocrats.

ADVANCED ENGINEERING MATHEMATICS				
Course Code	**22AEM11**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**BSC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply the concepts of Fourier analysis, Integral transforms and Series solution techniques for problem solving
2. Apply the numerical techniques to solve complex problems
3. Apply the concept of Probability sampling and estimation for solving problems.
4. Use the concepts of Transforms, ODE, PDE, probability to model problems arising in defence and Aerospace.
5. Apply the concept of optimization and game theory.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(10 HOURS)

Numerical Methods for Differential equations: RK 4th order methods for IVP, Simultaneous equations. Adam-Bashforth multi step methods. Explicit Schmidt, Dufort-Franknel methods, Crank Nicholson method for 1-D Diffusion and Convection equations Series solution, Frobenious method, Bessel Equation

UNIT-2-(10 HOURS)

Fourier Series expansion of periodic functions, Fitting Harmonics for given data, Fourier Complex, Sine and Cosine transforms Laplace transform and Inverse Laplace transform for Standard functions. Solution of IVP

UNIT-3-(10 HOURS)

Solution of system of Equation-Gauss elimination, LU decomposition Eigen values and Eigen vectors- Power method, Jacobi, Rutisha user method Interpolation using Lagrangian and Newton's Formulae, Cubic spline. Numerical integration using Simpson's 1/3rd and 3/8th Rule

UNIT-4-(10 HOURS)

Random variables- Discrete and continuous, Probability distribution, probability density function, mean, variance, Joint Distribution (Discrete and Continuous) Binomial, Poisson, Normal Distribution. Sampling Distribution, Confidence Interval for estimation of mean, Testing of Hypothesis for Large and small samples, ANOVA

UNIT-5-(10 HOURS)

Testing of Hypothesis for Large and small samples, ANOVA, Randomized Block Design Game theory, principle of dominance, Graphical method, Linear programming method, Applications to Defence and Aerospace

TEXT BOOKS

1. Applied statistics and Probability for Engg. Douglas C montgomery, George C Runger, Sixth edition, Wiley, 2016
2. Numerical Algorithms EV Krishna Murthy and SK Sen East west press 2007
3. Kreyszig: Advanced engineering mathematics, Publisher: Wiley, 10th edition 2016

REFERENCE BOOKS

1. Probability and Stastistics MR Speigen, JJ schiller, R A Srinivasan and D Goswami. Sachaum's outline Mcgraw Hill 3rd edition 2010.
2. Operation research VK Kapoor, S Chand & sons
3. Theory and Analysis of Experimental Designs B L Agarwal, CBS publisher 2010

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internal assessments for **30** Marks each.
Two Learning Activities for **10** Marks each.
Semester End Examination (SEE)
Semester end examination for 100 Marks
Program Outcomes – Articulation matrix

PO	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PSO2**

CO5	3	3	3						3	3				3

SYSTEMS AND WARFARE PLATFORMS

Course Code	**22DTX12**		**Credits**	**04**
Hours/Week (L-T-P)	**3-2-0**		**CIE Marks**	**50**
Total Hrs	**50**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**IPCC**

COURSE OUTCOMES

Course outcomes: At the end of the course the student will be able to:

1. Understand types of warfare platform used for Army, Air and Marine and their design fundamentals.
2. Understand the weapon systems like guns, ordnance, missiles projectiles, mines/ countermines, lasers, undersea weapons, air-launched weapons, anti-aircraft, anti-ship and anti-submarine
3. Understand the Mechanics of flight
4. Understand the Weapon systems
5. Understand the Self defence and Protection systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1- (10 HOURS)

Types of platforms: land, sea and air; Lifecycle: concept, design, pre-production, production, operations, support, major aspects of different platforms, qualitative and quantitative treatment of major aspects

UNIT- 2 - (10 HOURS)

Ship design fundamentals: buoyancy, stability, ship resistance, survivability; damage control, NBCD, crew numbers, power requirements. Submarine design: buoyancy, stability, hull/tank design, air interdependence

UNIT-3-(10 HOURS)

Mechanics of flight: fixed and rotary wing, straight and level flight of aircraft, aircraft control and movement, aircraft control surfaces, aerodynamics, power requirements, range; speed, ceiling, survivability, payload.
Military vehicle fundamentals: tracked, wheeled, A, B and C vehicles

UNIT-4-(10 HOURS)

Weapon systems: guns, ordnance, missiles, rockets, bombs, sub- munitions, projectiles, mines/ countermines, lasers, undersea weapons, air-launched weapons, anti-aircraft, anti-personnel, anti-ship, anti-submarine

UNIT-5-(10 HOURS)

Self defence and Protection systems: Armour, smoke, chaff, decoys; Introduction to instrumentation, lab tests and flight trials, Other protection systems, unconventional and innovative concepts.

TEXT BOOKS

WARFARE SIMULATIONS & STRATEGIES				
Course Code	**22DTX13**		**Credits**	**04**
Hours/Week (L-T-P)	**3-0-2**		**CIE Marks**	**50**
Total Hrs	**50**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PCC**

COURSE OUTCOMES

Course outcomes: At the end of the course the student will be able to:

1. Understand the systems used in warfare scenario.
2. Understand the military capabilities during the warfare
3. Understand combat simulation & modelling
4. Understand the mathematical models in designing the simulations.
5. Understand the war gaming simulation & modelling and human factor representation.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(10 HOURS)

Introduction to Warfare systems: Tactical mission support system, mission planning: air, surface, naval vessels, subsurface, littoral, electronic, command and control, aviation support systems.

UNIT-2-(10 HOURS)

Military capabilities: air warfare, surface warfare, subsurface warfare, littoral warfare, surveillance and reconnaissance, interior and exterior communications, top side design, weapons, sensors, navigation.

UNIT-3-(10 HOURS)

Combat strategies: Introduction to the methods used in modeling combat and their application in support of defence decision making and training, Combat simulation: dog fighting, interception.

UNIT-4-(10 HOURS)

War simulation: Wargaming/interactive simulation, war strategies, Lanchester's equations, Mathematical models of combat, Relation to the salvo combat model, Lotka -Volterra equations, scoring systems.

UNIT-5-(10 HOURS)

Applications to real world: War gaming and combat modeling in practice, manual wargaming, Human factors representation in war gaming and combat modeling, Network and Non-network.

TEXT BOOKS

1. Defense Modeling, Simulation, and Analysis: Meeting the Challenge", Publisher: National Academies Press, October 22, 2006

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyze the airfoil characteristics.
2. Analyze the incompressible inviscid flows and their combinations.
3. Analyze the incompressible inviscid flow over airfoil and finite wing.
4. Analyze the subsonic linearized flow over airfoil and effect of compressibility.
5. Analyze the features of viscous flow and discuss the aerodynamic testing.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (07 HOURS)

Governing equations: Euler and Lagrangian descriptions, Control volume approach to continuity and momentum equations, Path lines, Streamlines and Streak lines, Stream function, Velocity potential. Types of flow.

Airfoil Characteristics: Airfoil section geometry and wing plan form geometry, aerodynamic forces and moment and pressure coefficient. Centre of pressure, calculation of airfoil lift and drag from measured surface pressure distributions, typical airfoil aerodynamic characteristics at low speeds. High lift Devices.

UNIT-2 - (08 HOURS)

Two-Dimensional Inviscid Incompressible Flows: Bernoulli’s equation and applications. Condition on velocity for incompressible flow. Laplace equation and boundary conditions. Two-dimensional source, sink and doublet flows and vortex flow and combinations of elementary flows.

Flow over Circular Cylinders: Non-lifting flow over a two-dimensional circular cylinder, Lifting flow over a two-dimensional circular cylinder, Kutta-Joukowski theorem and generation of lift, D’Alembert’s paradox.

UNIT-3 - (08 HOURS)

Incompressible Flow over Airfoils: Kelvin’s circulation theorem and the starting vortex, Kutta condition, Classical thin airfoil theory for symmetric and cambered airfoils.

Incompressible Flows over Finite Wings: Downwash, Induced drag, vortex filament, the Biot-Savart Law, Prandtl’s lifting line theory and its limitations, Elliptic lift distribution. Simplified horse-shoe vortex model, formation flight, influence of downwash on tail plane, ground effects.

UNIT-4 - (08 HOURS)

Subsonic linearized flow over airfoils: Full velocity potential equation, linearized velocity potential equation and boundary condition, Prandtl-Glauert compressibility correction.

Effects of Compressibility: Basics of speed of sound, Mach waves, Normal shock waves, Oblique shock waves, Expansion fan, Prandtl – Meyer expansion, Critical Mach number; Drag- divergence Mach number, Sound Barrier, Transonic area rule. Swept wing.

UNIT-5 - (08 HOURS)

Viscous Flows: Derivation of Navier-Stokes equation for two-dimensional flows, boundary approximations, laminar boundary equations and boundary conditions, Blasius solution, qualitative features of boundary layer flow under pressure gradients, aspects of transition to turbulence, turbulent boundary layer properties over a flat plate at low speeds.

Introduction to Aerodynamic Testing: Principles of wind tunnel flow simulation, Classification and Major features of subsonic, supersonic and hypersonic wind tunnels. Flow visualization techniques. Measurement of pressure, velocity and Aerodynamic load measurements on a model.

TEXT BOOKS

1.
1. J.D. Anderson, Fundamentals of Aerodynamics, McGraw-Hill Education, 6th edition, 2017.
2. Rathakrishnan.E., Gas Dynamics, Prentice Hall of India, 7th edition, 2020.
3. Shapiro, AH, “Dynamics & Thermodynamics of Compressible Fluid Flow”, Ronald Press, 1982.

REFERENCE BOOKS
1. Houghton, EL and Caruthers, NB,"Aerodynamics for Engineering Students", Butterworth- Heinemann series, 7th edition 2017. 2. Zucrow, M.J, and Anderson, J.D, "Elements of gas dynamics" McGraw-Hill Book Co., New York, 1989. 3. Rae, WH and Pope, A, "Low speed Wind Tunnel Testing", John Wiley Publications, 3rd edition, 1999.
COURSE ASSESSMENT METHOD
Continuous Internal Evaluation (CIE)
Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.
1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.
Semester End Examination (SEE)
1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit
Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3								3	3				3
CO2	3	3	3						3	3				3
CO3	3	2	3						3	2				2
CO4	3	3	3						3	3				3
CO5	3	3	3						3	3				3

AEROSPACE PROPULSION				
Course Code	**22DTX15**		**Credits**	**3**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply the fundamentals of thermodynamics to compressible flows
2. Understand the working principle of air breathing propulsion systems.
3. Use cycle analysis and assess performance of air breathing engines
4. Analyze the performance parameters of various rocket propulsion systems.
5. Understand the concepts of advanced propulsion systems.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Review of thermodynamics: Work and energy interactions, Representation of isothermal, isentropic, isobaric and isochoric processes on P-V and T-S diagrams, Classical thermodynamics, conservation equations for systems and control volumes, one dimensional flow of a compressible perfect gas – isentropic and non-isentropic flows. Propulsion system performance, the gas generator Brayton cycle, zero dimensional analysis of ideal ramjet, turbojet and turbofan cycles, non-ideality and isentropic efficiencies. Performance analysis of inlets and nozzles, gas turbine combustors, compressors and turbines and discussion of factors limiting performance.

UNIT -2- (08 HOURS)

Basics of Air breathing Propulsion: Introduction to various air breathing and non-air breathing engines. Principle of thrust generation, Brayton cycle, types of air-breathing propulsion systems, components of jet engine and their functions, diffuser design for subsonic and supersonic flights, preliminary aspects of axial flow compressor and turbines, types of combustors, convergent nozzle, CD Nozzle, flow through nozzles – optimal, under and over expanded nozzles.

UNIT -3- (08 HOURS)

Performance of Air breathing engines: Ideal cycle analysis, efficiencies of components and non-ideal cycle analysis, engine performance analysis – specific thrust, specific fuel consumption, propulsive, thermal and overall efficiencies. Efficiencies of air breathing and non-air breathing engines.

UNIT -4- (08 HOURS)

Rocket Propulsion: Classification based on energy system, nozzle and Thrust Equation; Specific Impulse, Thrust Coefficient, Characteristic Velocity and other Performance Parameters; liquid rocket engine, components and propellants, solid rocket propellants, performance parameters and motor design, hybrid rocket propulsion systems, selection of rocket propulsion systems, thrust vector control methods, rocket exhaust plumes, rocket testing.

UNIT -5- (08 HOURS)

Advanced Propulsion: Scramjet and pulse jet engines - principle of operation. Electric propulsion thrusters: classification, principle and application. nuclear propulsion system, concepts, design and application, Recent Micro Spacecraft Developments; Micro-propulsion Options; Primary Set of Micro-propulsion Requirements

RESEARCH METHODOLOGY AND IPR				
Course Code	**22RMI16**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**MCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand research methodology and the technique of defining a research problem.
2. Understand the process and method of the literature review in research, carrying out a literature search and writing a review.
3. Collect and designing the sampling data for research work.
4. Verify the Test data and report writing research reports.
5. Understand the concepts of intellectual property rights.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Research Methodology: Introduction, Meaning of Research, Objectives of Research, Motivation in Research, Types of Research, Research Approaches, Significance of Research, Research Methods versus Methodology, Research and Scientific Method, Importance of Knowing How Research is Done, Research Process, Criteria of Good Research, and Problems Encountered by Researchers in India. Defining the Research Problem: Research Problem, Selecting the Problem, Necessity of Defining the Problem, Technique Involved in Defining a Problem, An Illustration.

UNIT -2- (08 HOURS)

Reviewing the literature: Place of the literature review in research, bringing clarity and focus to your research problem, improving research methodology, broadening knowledge base in research area, enabling contextual findings, how to review the literature, searching the existing literature, reviewing the selected literature, developing a theoretical framework, developing a conceptual framework, writing about the literature reviewed. Research Design: Meaning of Research Design, need for Research Design, features of a Good Design, Important Concepts Relating to Research Design, Different Research Designs, Basic
Principles of Experimental Designs, Important Experimental Designs.

UNIT -3- (08 HOURS)

Design of Sampling: Introduction, Sample Design, Sampling and Non sampling Errors, Sample Survey versus Census Survey, Types of Sampling Designs. Measurement and Scaling: Qualitative and Quantitative Data, Classifications of Measurement Scales, Goodness of Measurement Scales, Sources of Error in Measurement Tools, Scaling, Scale Classification Bases, Scaling Technics, Multidimensional Scaling, Deciding the Scale. Data Collection: Experimental and Surveys, Collection of Primary Data, Collection of Secondary Data,
Selection of Appropriate Method for Data Collection, Case Study Method

UNIT -4- (08 HOURS)

Testing of Hypotheses: Hypothesis, Basic Concepts Concerning Testing of Hypotheses, Testing of Hypothesis, Test Statistics and Critical Region, Critical Value and Decision Rule, Procedure for Hypothesis Testing, Hypothesis Testing for Mean, Proportion, Variance, for Difference of Two Mean, for Difference of Two Proportions, for Difference of Two Variances, P-Value approach, Power of Test, Limitations of the Tests of Hypothesis. Chi-square Test: Test of Difference of more than Two Proportions, Test of Independence of Attributes, Test of Goodness of Fit, Cautions in Using Chi Square Tests.

Interpretation and Report Writing: Meaning of Interpretation, Technique of Interpretation, Precaution in Interpretation, Significance of Report Writing, Different Steps in Writing Report, Layout of the Research Report, Types of Reports, Oral Presentation, Mechanics of Writing a Research Report, Precautions for Writing Research Reports.

UNIT -5- (08 HOURS)

Intellectual Property: The Concept, Intellectual Property System in India, Development of TRIPS Complied Regime in India, Patents Act, 1970, Trade Mark Act, 1999,The Designs Act, 2000, The Geographical Indications of Goods (Registration and Protection) Act1999, Copyright Act,1957,The Protection of Plant Varieties and Farmers' Rights Act, 2001,The Semi-Conductor Integrated Circuits Layout Design Act, 2000, Trade Secrets, Utility Models, IPR and Biodiversity, The Convention on Biological Diversity (CBD) 1992, Competing Rationales for Protection of IPRs, Leading International Instruments Concerning IPR, World Intellectual Property Organisation (WIPO),WIPO and WTO, Paris Convention for the Protection of Industrial Property, National Treatment, Right of Priority, Common Rules, Patents, Marks, Industrial Designs, Trade Names, Indications of Source, Unfair Competition, Patent Cooperation Treaty (PCT), Advantages of PCT Filing, Berne Convention for the Protection of Literary and Artistic Works, Basic Principles, Duration of Protection, Trade Related Aspects of Intellectual Property Rights(TRIPS) Agreement, Covered under TRIPS Agreement, Features of the Agreement, Protection of Intellectual Property under TRIPS, Copyright and Related Rights, Trademarks, Geographical indications, Industrial Designs, Patents, Patentable Subject Matter, Rights Conferred, Exceptions, Term of protection, Conditions on Patent Applicants, Process Patents, Other Use without Authorization of the Right Holder, Layout Designs of Integrated Circuits, Protection of Undisclosed Information, Enforcement of Intellectual Property

TEXT BOOKS

1. Research methodology: Methods and Techniques, C.R. Kothari, Gaurav Garg, New Age International,4th Edition, 2018.
2. Research Methodology a step-by-step guide for beginners. (For the topic Reviewing the literature under module 2) , Ranjit Kumar, SAGE Publications Ltd.,3rd Edition, 2011
3. Ralph D Kimberlin: Flight Testing of Fixed wing Aircraft, AIAA Education Series, 2003
4. Study Material (For the topic Intellectual Property under module 5), Professional Programme Intellectual Property Rights, Law and Practice, The Institute of Company Secretaries of India, Statutory Body Under an Act of Parliament, September 2013.

REFERENCE BOOKS

1. An introduction to Research Methodology, Garg B.L et al ,RBSA Publishers 2002
2. Research Methodology, Sinha, S.C, Dhiman ,EssEss Publications2002
3. Research Methods: the concise knowledge base ,Trochim ,Atomic Dog Publishing ,2005
4. How to Write and Publish a Scientific Paper, Day R.A ,Cambridge University Press,1992
5. Conducting Research Literature Reviews: From the Internet to Paper ,Fink A Sage Publications,2009

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internal assessments for 30 Marks each.

Two Learning Activities for 10 Marks each.

Semester End Examination (SEE)

Semester end examination for 100 Marks

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

CO5	2									1		2		

BOS RECOMMENDED ONLINE COURSES				
Course Code	**22AUD18/22AEC18**		**Credits**	**PP**
Hours/Week (L-T-P)			**CIE Marks**	
Total Hrs			**SEE Marks**	
Exam Hrs			**Course Type**	**AUD/AEC**

COURSE ASSESSMENT METHOD

1. Board of studies Recommended Online Courses
2. Classes and evaluation procedures are as per the policy of the online course providers.
3. A pass in AUD/AEC is mandatory for the award of the degree

SEMESTER II

AEROSPACE SYSTEM CONFIGURATION, DESIGN & SIMULATION				
Course Code	**22DTA21**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**CPP**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the concept of the missile system and its design requirements and process.
2. Understand the basic concepts of structural analysis.
3. Understand the methods for aero-elastic analysis, computational fluid analysis and advances in aero-dynamics.
4. Understand the basics of airplane performance.
5. Understand the concepts of stability and control and air to air, ground to air, air to ground weapon system, UAV mounted GW and UCAVs.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Missiles and Systems: Introduction (aero-elastic phenomena and design requirements), Introduction to missiles & systems, basic aspects of missiles and systems, classification, conceptual and detailed design process.

UNIT-2-(08 HOURS)

Structural Analysis: A review of basic structures, Structural requirement, Structural and aerodynamic stiffness, Coupling between aerodynamics and structures, Static aero-elasticity: torsional divergence, Structural vibration and modal analysis.

UNIT-3-(08 HOURS)

Aero-elasticity And Advanced Aerodynamics: Aerodynamic loads on an oscillating lifting surface, Characteristics of flutter and important design parameters, Methods for aero-elastic analysis, Computational fluid dynamics, advances in aerodynamics (Hypersonic Flows and Aerodynamic Heating).

UNIT-4-(08 HOURS)

Aircraft Performance: Equations of motion, cruising, climb, descent, takeoff, landing, maneuver, flight path, expressions for range and endurance of propeller driven and jet driven aircrafts, v-n diagram and flight envelope

UNIT-5-(08 HOURS)

Stability and Control System's stability & control, aerodynamics control, Introduction to dynamic stability, first and second order responses, Equations of motion and modal characteristics.
Introduction to air to air, ground to air, air to ground weapon systems, UAV mounted GW and UCAVs

TEXT BOOKS

1. D. Raymer, Aircraft design a conceptual approach, Sixth Edition, September 30th 2018.
2. Michael V. Cook, Flight Dynamics Principles, Elsevier Science & Technology, Third Edition ,2013
3. Dewey H. Hodges, G. Alvin Pierce, Introduction to Structural Dynamics and Aero-elasticity, Cambridge University Press, June 2012

REFERENCE BOOKS

GUIDANCE AND CONTROL				
Course Code	**22TDA22**		**Credits**	**04**
Hours/Week (L-T-P)	**3-2-0**		**CIE Marks**	**50**
Total Hrs	**50**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**CPP**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the principles of satellite navigation, inertial navigation, radio positioning.
2. Understand various aspects of designing a navigation system
3. Develop mathematical model of missile dynamics
4. Understand methods of thrust vector control
5. Carry out simulation for aircraft/missile using mathematical tools like MATLAB

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(10 HOURS)

Introduction: Introduction to Navigation, General principles of early conventional navigation systems. Geometric concepts of navigation. sensors used in navigation systems, Navigation Mathematics.

UNIT-2-(10 HOURS)

Global Navigation Satellite System: Fundamentals, Signals, and Satellites: Fundamentals of Satellite Navigation, Inertial Navigation, Advanced satellite Navigation, Principles of radio Positioning, Terrestrial radio Navigation, Short-Range Positioning, Satellite Navigation Processing

UNIT-3-(10 HOURS)

Instrumentation : Errors and Geometry, Dead Reckoning, Attitude, and Height Measurement, Feature matching, Integration of Inertial Navigation System / Global Navigation Satellite System.

UNIT-4-(10 HOURS)

Missile Control Methods: Elements of flight control system, Aerodynamic and Thrust Vector Control, Engine gimbal control and Secondary injection thrust vector control, Polar and Cartesian Control

UNIT-5-(10 HOURS)

Modeling, Design and Analysis: Mathematical Modeling of Missile Dynamics; Missile Actuators and Sensors. Roll and Roll Rate Stabilization. Design and Analysis of Lateral Autopilots, 6 degree of freedom trajectory simulation for aircraft / missile using MATLAB

TEXT BOOKS

MINI PROJECT WITH SEMINAR				
Course Code	**22DTA25**		**Credits**	**3**
Hours/Week (L-T-P)	**0-4-2**		**CIE Marks**	**100**
Total Hrs	**36**		**SEE Marks**	**100**
Exam Hrs	**3**		**Course Type**	**MPS**

Seminar is to be given by the student after the completion of a mini project chosen by the student. Topics for the mini projects can be from the aeronautical engineering and allied fields. The mini project can be based on either numerical or analytical solution or design or fully experimental; or a combination of these tasks.

COURSE ASSESSMENT METHOD

1. Internal Examiner shall carry out the evaluation for 100 marks.
2. External Examiner shall carry out the evaluation for 100 marks.
3. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
4. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	2						3	3			3	3	3
CO2	3	2						3	3			3	3	3

CO4	2	2						3	3			3	3	2
CO5	3	2						3	3			3	3	3

AEROSPACE SYSTEM CONFIGURATION DESIGN & SIMULATION & GUIDANCE & CONTROL				
Course Code	**22DTAL26**		**Credits**	**2**
Hours/Week (L-T-P)	**1-2-0**		**CIE Marks**	**50**
Total Hrs	**30**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PCCL**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Flight dynamics and control
2. Autopilot structures
3. Various Guidance Algorithms
4. Navigation components

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Lap practical

COURSE CONTENTS

Basics of flight dynamics and control. Autopilot structures for aerospace vehicles (aircraft, missiles, launch vehicles). Equilibrium glide trajectories for atmospheric flight. Discussion of the various guidance algorithms used in aircraft/missiles/launch vehicles. Basics of Kalman filtering, sensor and data fusion. Selection and trade-off between various navigation components such as the IMU, GPS and other navigation components. Integration of the guidance, navigation and control components in aerospace vehicles.

COURSE ASSESSMENT METHOD

Record: 30 marks
Internal Test: 15 marks
Viva-voce: 05 marks
Semester End Examination: 50 Marks
Scheme of Examination: Student will be asked to conduct any one experiment from Part A & B

Program Outcomes – Articulation matrix

PROFESSIONAL ELECTIVE I

COMMUNICATION TECHNOLOGY				
Course Code	**22DTA231**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand communication system design methodologies, communication system architecture, analogue & digital modulation techniques.
2. Computation of data rates, band width ,BER
3. To carry out the link budget analysis.
4. Analyze voice coding techniques
5. Study the performance of communication system architecture

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction to Communication Systems, Digital Communication System, Communication Channels and Their Characteristics, Mathematical Models for Communication Channels, Design challenges, message sources, Channel effect, signal to noise ratio and capacity.

UNIT-2-(08 HOURS)

Digital data communication systems, digital signaling techniques, Link budget calculations telemetry and control and IO/IW implications, Antenna types –wire antennas, Horn Antennas, Reflector Antennas, phased array antennas

UNIT-3-(08 HOURS)

Data rates and bandwidth calculation in digital data communication systems: Pulse Code Modulation, ASK, FSK, Time Division Multiple Access, Frequency Division multiple Access, Direct Sequence spread spectrum, Frequency Hopping spread spectrum.

UNIT-4-(08 HOURS)

Probability of error and BER calculation, Modulation technologies (analogue & digital), Amplitude Modulation, Angle Modulation, ASK, FSK, BPSK, transmitter and receiver Block diagram, Expression for Bit Error Rate. Voice source coding, PCM, transmitter and receiver systems.

UNIT-5-(08 HOURS)

Communication system architectures, public switched Telephone network, First Generation wireless networks, Second Generation, Third Generation Wireless Network, Cellular packet switched Architecture, GSM system Architecture, terminal design and performance, associated information systems

TEXT BOOKS

1. Proakis and Salehi, Fundamentals of communication systems.
2. Simon Haykin and Michael Moher, Communication Systems, Wiley.
3. Theodore S Rappaport, Wireless Communication, Prentice Hall

REFERENCE BOOKS

1. B.P. Lathi and Zhi Ding, Modern digital and analog communication systems Oxford UniversityPress.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internal assessments for 30 Marks each.

Two Learning Activities for **10** Marks each.

Semester End Examination (SEE)

Semester end examination for 100 Marks														
Program Outcomes – Articulation matrix

ADVANCED LIGHT WEIGHT COMPOSITE MATERIALS AND STRUCTURES				
Course Code	**22DTA232**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand characteristics of composite materials for various applications.
2. Apply Hooke's law for orthotropic and anisotropic materials.
3. Carryout analysis of laminated composites
4. Develop composite materials
5. Apply failure theories and NDE for composite materials.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction: Classification and characteristics of composite materials - Types of fiber and resin materials, functions and their properties – Application of composite to aircraft structures-Micromechanics-Mechanics of materials, Elasticity approaches-Mass and volume fraction of fibers and resins-Effect of voids, Effect of temperature and moisture

UNIT-2-(08 HOURS)

Macro mechanics: Hooke's law for orthotropic and anisotropic materials-Lamina stress strain relations referred to natural axes and arbitrary axes.

UNIT-3-(08HOURS)

Analysis of laminated composites: Governing equations for anisotropic and orthotropic plates- angle-ply and cross ply laminates- analysis for simpler cases of composite plates and beams – inter laminar stresses- netting analysis.

UNIT-4-(08 HOURS)

Manufacturing & fabrication processes: Manufacture of glass, boron and carbon fibers Manufacture of FRP components- Open mould and closed mould processes. Properties and functions of resins

UNIT-5-(08 HOURS)

Failure theory and NDE: Failure criteria- Flexural rigidity of Sandwich beams and plates – composite repair- Ultra Sonic Technique - AE technique, Analysis through FEM and Meshless technique.

Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand thermal design and simulations for system design
2. Carry out CFD simulations
3. Understand the design of heat exchangers, refrigeration
4. Understand the concept of thermal management requirement & design
5. Understand thermal design for defence systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Basics Of Thermal Design: System thermal design & Analysis, Tools for thermal design and simulation, Heat transfer analysis (conduction, convection & radiation), analysis of elementary systems

UNIT-2-(08 HOURS)

Computational Techniques: Review of Computational fluid dynamics (CFD), CFD applied to refrigerator and heat exchanger design, Basics of finite element analysis, Thermal Finite Element Analysis

UNIT-3-(08 HOURS)

Some Thermal Devices: Heat Exchangers, Heat Exchanger Network Design, Refrigeration, Humidifiers, Air Washers and Cooling Towers, Numerical problems related to different thermal devices

UNIT-4-(08 HOURS)

Thermal Management: Basic aspects of thermal management, Thermal management design of defence systems (combat vehicles, missiles, aerial vehicles etc.), Illustrate examples of thermal management in defense systems

UNIT-5-(08 HOURS)

Defense Thermal Design: Basic requirements for a defense environment, Thermal testing, thermal operation, and integration of thermal design into the defence systems, Tested design examples

TEXT BOOKS

1. Incropera and Dewitt, Fundamentals of Heat and Mass Transfer, John Wiley.
2. W M Kays and M E Crawford, Convective Heat and Mass Transfer, McGraw-Hill publishing Company.
3. J Siegel and R Howell, Thermal Radiation Heat Transfer, Elsevier.
4. Manohar Prasad, Refrigeration and Air Conditioning, New Age International, 3rd Edition, 2015

REFERENCE BOOKS

1. John D Anderson, Computational Fluid Dynamics – The Basics with Applications, McGraw Hill, 1st Edition,2012.
2. P.L. Dhar, Thermal System Design and Simulation, 1st Edition.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internal assessments for **30** Marks each.

Two Learning Activities for **10** Marks each.

Semester End Examination (SEE)

Semester end examination for 100 Marks

Program Outcomes – Articulation matrix

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand thermal design and simulations for system design
2. Carry out CFD simulations
3. Understand the design of heat exchangers, refrigeration
4. Understand the concept of thermal management requirement & design
5. Understand thermal design for defence systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Mechanical design & analysis: Introduction to tools for mechanical design & analysis - software's to generate precision 3D models of parts, components, and assemblies to aid in engineering, manufacturing, and design processes in product design, automotive, and aerospace applications.

UNIT-2-(08 HOURS)

Stress engineering – theory & simulation, mechanics of solids Concepts of simple and compound stresses and related strain in structural members, Bending stresses and shear stress in beams, Deflection of beams, Torsion of Shafts, Column and struts, Theory of Failures.

UNIT-3-(08 HOURS)

Finite element methods in structural dynamics and Structural integrity Shapes and frequencies, Natural modes and frequencies by energy methods, Natural mode shapes and frequencies derived from the integral equation, Natural mode shapes and frequencies derived from the differential equation, Solution of characteristic equations, Approximate methods - Rayleigh's method - Dunkerlay's method – Rayleigh-Ritz method, matrix iteration method

UNIT-4-(08 HOURS)

Fluid mechanics and Computational fluid dynamics Governing equations: Mass, momentum and energy conservation in integral form, differential form and using index notation. Difference between conservative and non-conservative forms. Classification and nature of PDEs, finite difference and finite volume techniques.

UNIT-5-(08 HOURS)

Component design, Applied materials and corrosion Recognize the design considerations for various mechanical metal forming processes and machine elements, shafts, springs, riveted joints, welded joints, helical gears, worm gears, sliding contact bearings, rolling contact bearings. Applications of engineering materials in structural, thermal, electronics and other industries.

TEXT BOOKS

1. H. Versteeg, An Introduction to Computational Fluid Dynamics: The Finite Volume Method.
2. John D. Ander Jr, "Computational Fluid Dynamics the Basics with Applications", McGraw Hill Education, 1 July 2017.
3. C. S. Jog, "Fluid Mechanics: Volume 2: Foundations and Applications of Mechanics, Cambridge University Press.
4. Robert C. Juvinall, Kurt M. Marshek, "Fundamentals of Machine Component Design", John Wiley & SonS.

AUTONOMY AND NAVIGATION TECHNOLOGY				
Course Code	**22DTA235**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: At the end of the course the student will be able to:-

1. Describe the basic principle of operation of a global navigation satellite system
2. Understand the navigation systems and derive the navigation equations
3. Carry out path planning the UGV /UAV
4. Solve the equations for calculating a position estimate from a given satellite constellation.
5. Understand the working of GPS, GNSS and SLAM.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction: Introduction to the concepts of navigation and guidance systems, General principles of early conventional navigation systems. Guidance approaches: conventional guidance such as PN (Proportional Navigation).

UNIT-2-(08 HOURS)

Fundamentals of navigation: Geodetic fundamentals of navigation, positioning, reference- and coordinate systems and computational methods for navigation and positioning on the surface of the earth. Direction cosine matrix, Euler angles, Transformation of angular velocities, Quaternion representation in coordinate transformation. Comparison of transformation methods.

UNIT-3-(08 HOURS)

Geometric guidance: Geometric guidance, path planning and following, and optimal guidance; path planning for UGV/UAV guidance systems. Navigation approaches: navigation systems, Understanding the Global Positioning System (GPS)

UNIT-4-(08 HOURS)

Satellite Navigation : GNSS (Global Navigation Satellite System) - Applications in Tracking / Mapping Devices, Industrial Machinery, Sea vessels, Air Navigation, and Automobiles, terrain based navigation.

UNIT-5-(08 HOURS)

Simultaneous Localization and Mapping : Introduction to SLAM (Simultaneous Localization and Mapping); essential algorithms for SLAM, models for Cooperative guidance and collision avoidance system.

TEXT BOOKS

1. Bhatta, B., Glonass, Galileo, Compass, and Others, Global Navigation Satellite Systems Insights Into GPS, BS Publications, New Delhi, 2010.
2. Grewal, M. S., Weill, L. R., Andrews, A. P, Global Positioning Systems, Inertial Navigation, and Integration, John Wiley & Sons, New York, 2006.

PROFESSIONAL ELECTIVE II

COMPUTATIONAL METHODS IN AEROSPACE				
Course Code	**22DTA241**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. To arrive at the numerical solutions to boundary layer equations.
2. To perform numerical grid generation and have knowledge about the mapping techniques.
3. To familiarise himself/herself with high performance computing for CFD applications.
4. To implement the explicit time dependent methods and their factorization schemes.
5. To do the stability analysis and linearization of the implicit methods.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Introduction: CFD definition and application, Parallel and vector computer in CFD, Models of flows, Continuity, Momentum, and Energy Equations-Derivation in various forms, Physical boundary condition, Shock capturing and shock fitting.

UNIT -2- (08 HOURS)

Behaviors of Partial Differential Equations: Classification of partial differential equations and their nature, Discuss Hyperbolic, parabolic, and elliptic forms of equations, Finite difference approximation- Forward, backward, central, second order central difference. Explicit and Implicit approaches, Time marching and Space marching, Errors- Truncation error and Round off error.

UNIT -3- (08 HOURS)

Grid generation Techniques: Introduction- Definition, Classification of grids- Surface grid, Complex grid. Structured grid, Unstructured grid, Body fitted grid, Grid Quality, Various structured and unstructured grid generation Techniques, Multi block grid generation, Mesh free method, Adaptive grid.

UNIT -4- (08 HOURS)

CFD Techniques: The Lax-Wendroff technique, The Mac Cormack's technique, The relaxation technique, Alternating Direction Implicit technique (ADI), Collocated grid, Staggered grid, Semi-Collocated grid, The Pressure correction technique, upwind scheme.

UNIT -5- (08 HOURS)

Transformation: Transformation of governing partial differential equations from physical domain to computational domain.

Introduction to finite volume method: Introduction to FVM, Spatial discretization- cell centered and cell vertex techniques (overlapping control volume, duel control volume), Boundary triangle and interior triangle, Flux vector splitting Scheme.

HYPERSONIC AERODYNAMICS				
Course Code	**22DTA242**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Be able to arrive at the solution for problems involving inviscid and viscous hypersonic flows.
2. Have thorough knowledge on high temperature effects in hypersonic aerodynamics.
3. Be able to arrive at various solution methods to overcome aerodynamic heating problem on hypersonic vehicles.
4. To gain ideas on the design issues associated with hypersonic vehicles.
5. Able to realize the importance and use of the relevant equations for viscous hypersonic flows.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Introduction to hypersonic aerodynamics: Peculiarities of Hypersonic flows - Thin shock layers – entropy layers – low density and high density flows – hypersonic flight similarity parameters – shock wave and expansion wave relations of inviscid hypersonic flows – velocity vs altitude map for hypersonic vehicles.

UNIT -2- (08 HOURS)

Surface inclination methods for hypersonic inviscid flows: Local surface inclination methods – modified Newtonian Law – Newtonian theory – tangent wedge tangent cone and shock expansion methods – Calculation of surface flow properties – practical application of surface inclination methods – hypersonic independence principle.

UNIT -3- (08 HOURS)

Approximate methods for inviscid hypersonic flows: Assumptions in approximate methods hypersonic small disturbance equation and theory – Maslen’’s theory– blast wave theory – hypersonic equivalence principle- entropy effects - rotational method of characteristics - hypersonic shock wave shapes and correlations.

UNIT -4- (08 HOURS)

Viscous hypersonic flow theory: Peculiarities of hypersonic boundary layers - boundary layer equations – hypersonic boundary layer theory and non-similar hypersonic boundary layers – hypersonic aerodynamic heating and entropy layers effects on aerodynamic heating – heat flux and skin friction estimation.

UNIT -5- (08 HOURS)

Viscous interactions and transition: Strong and weak viscous interactions – hypersonic shockwaves and boundary layer interactions – Parameters affecting hypersonic boundary layer transition - Estimation of hypersonic boundary layer transition- Role of similarity parameter for laminar viscous interactions in hypersonic viscous flow.

MILITARY ELECTRONICS SYSTEM ENGINEERING				
Course Code	**22DTA243**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the military electronics systems
2. Generate system design requirements as per mission needs &operational requirements
3. To create digital simulation models
4. Understand the limitations of the COTS available electronics systems
5. Evaluate the radiation effects on the performance of electronics systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Fundamentals of electronics: Introduction to electronics engineering concepts, additional requirements for a defense environment, methods for the design and integration of complex defense systems.

UNIT-2-(08 HOURS)

Case studies: Familiarity with the systems engineering process through case studies of representative defense systems, simple to detailed design examples, defense related case studies.

UNIT-3-(08 HOURS)

Methods: Introduction to methods used for determination of system requirements from mission needs and operational requirements, principles used in different methods, advantages and disadvantages of each method.

UNIT-4-(08 HOURS)

Digital simulation models and ICs: Digital simulation models, including those currently used in defence for determining engineering and performance trade-offs. Limitations of commercial-off-the-shelf (COTS) integrated circuits, thermal failure, electrostatic breakdown, noise in solid state devices, packaging reliability issues.

UNIT-5-(08 HOURS)

Effect of ambient environment: The defense environment, Systematic way to account different aspects, Radiation effects due to space and nuclear environments, and the limited availability of military integrated circuit suppliers.

TEXT BOOKS

1. Neri Filippo, Introduction to Electronic Defense Systems, Artech House Publishers.
2. US Department of Defence, Military Handbook of Electronic Reliability design, US Department of Defence.
3. Ray Tricker, Electronics Standards and Quality Assurance, Elsevier.

CO5	3	2	3					-	3	-	-			

ORBITAL MECHANICS AND SPACE FLIGHT				
Course Code	**22DTA244**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. To acquire knowledge on the peculiarities of space environment and its effect on spacecraft materials.
2. To estimate the time and position of an object in various orbits.
3. To acquire knowledge on the basic concepts of satellite injection and satellite perturbations.
4. To calculate orbital parameters and to perform conceptual trajectory designs for geocentric or interplanetary missions.
5. To estimate the time of flight and the position of impact point of ballistic missiles.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Space Environment: Peculiarities of space environment and its description– effect of space environment on materials of spacecraft structure and astronauts- manned space missions – effect on satellite life time.

UNIT -2- (08 HOURS)

Characteristics of various orbits: Properties of elliptic, Parabolic and hyperbolic properties in terms of orbital elements – relations between position and time – Barker's theorem – Whittaker's theory – Sphere of influence.

UNIT -3- (08 HOURS)

Satellite injection and satellite perturbations: General aspects of satellite injection – satellite orbit transfer – various cases – orbit deviations due to injection errors – special and general perturbations – Cowell's method and Enake's method – method of variations of orbital elements – general perturbations approach.

UNIT -4- (08 HOURS)

Interplanetary trajectories: Two-dimensional interplanetary trajectories – fast interplanetary trajectories – three dimensional interplanetary trajectories – launch of interplanetary spacecraft – trajectory estimation about the target planet – concept of sphere of influence – Lambert's theorem.

UNIT -5- (08 HOURS)

Ballistic missile trajectories: Introduction to ballistic missile trajectories – boost phase – the ballistic phase – trajectory geometry – optimal flights – time of flight – re-entry phase – the position of impact point – influence coefficients.

TEXT BOOKS

AIR INDEPENDENT PROPULTION AND BATTERIES				
Course Code	**22DTA245**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand hybrid concepts
2. Understand hybrid vehicle control and analysis
3. Understand electric vehicle control and analysis
4. Understand electric propulsion components
5. Understand advanced storage devices

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Hybrid Concepts: Introduction to Hybrid Electric Vehicles, basic requirements, advantages and disadvantages, Impact of modern drive-trains on energy supplies, performance evaluation methods

UNIT-2-(08 HOURS)

Hybrid Vehicle Control And Analysis: Hybrid Electric Drive-trains: hybrid traction, various hybrid drive-train topologies, power flow control, fuel efficiency analysis, differences from the conventional types.

UNIT-3-(08 HOURS)

Electric Vehicle Control And Analysis: Electric Drive-trains: electric traction, electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis

UNIT-4-(08 HOURS)

Electric Propulsion Components: Electric Propulsion unit: electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Induction Motor drives, Permanent Magnet Motor drives, Switch Reluctance Motor drives, drive system efficiency

UNIT-5-(08 HOURS)

Advanced Storage Devices: Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices

TEXT BOOKS

1. Chris Mi, M. AbulMasrur, Hybrid Electric Vehicles: Principles and Applications with Practical Perspectives, Wiley
2. Literature / books suggested by respective course Lecturers

SEMESTER III

SYSTEM ENGINEERING AND ANALYSIS

Course Code	**22DTA31**		**Credits**	**04**
Hours/Week (L-T-P)	**3-0-2**		**CIE Marks**	**50**
Total Hrs	**50**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the system design requirements, architecture, functional requirements.
2. Generate the system requirements documents as per the requirement analysis.
3. Understand the techniques of system design
4. Carry out the Supportability and producibility
5. Carry out the system reliability analysis.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(10 HOURS)

Fundamentals of systems engineering: Fundamentals of systems engineering and system architecting of weapon system, system engineering. standards 15288, requirements analysis, functional analysis and allocation, preliminary system architecture.

UNIT-2-(10 HOURS)

Systems design and analysis: systems analysis, system design, and the basics of test and evaluation, Introduction to combat systems, System development phases (Conceiving, Designing, Implementing, and Operating)

UNIT-3-(10 HOURS)

Techniques of system design: Techniques of system design and assessment for operational feasibility, including reliability, maintainability, usability (including human factors and human performance).

UNIT-4-(10 HOURS)

More on system analysis: Various ways of evaluating system performance, Supportability and producibility, System cost assessment and effectiveness estimation, certification methods, Case studies.

UNIT-5-(10 HOURS)

Reliability analysis and management (basic tools and methods of reliability for developing complex systems including electronic components, mechanical components, and software), redundancy, graceful degradation, fault tolerance, MTBF.

Hours/Week (L-T-P)	**0-6-0**		**CIE Marks**	**100**
Total Hrs	**39**		**SEE Marks**	**-**
Exam Hrs	**3**		**Course Type**	**PROJ**

COURSE OUTCOMES

The individual student must identify a project Advisor in the third semester. The student, in consultation with their Advisor, will form a Thesis Committee that includes head of the department and domain expert. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

Program Outcomes – Articulation matrix

PO	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PSO2**

SOCIETAL PROJECT				
Course Code	**22DTA35**		**Credits**	**3**
Hours/Week (L-T-P)	**0-6-0**		**CIE Marks**	**100**
Total Hrs	**-**		**SEE Marks**	**-**
Exam Hrs	**3**		**Course Type**	**SP**

Seminar is to be given by the student after the completion of a societal project chosen by the student. Topics for the projects can be from the aeronautical engineering and allied fields. The project can be based on either numerical or analytical solution or design or fully experimental; or a combination of these tasks.

COURSE ASSESSMENT METHOD

1. Internal Examiner shall carry out the evaluation for 100 marks.
2. External Examiner shall carry out the evaluation for 100 marks.
3. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
4. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

INTERNSHIP				
Course Code	**22DTAI36**		**Credits**	**6**
Hours/Week (L-T-P)	**6 Weeks**		**CIE Marks**	**50**
Total Hrs	**6 Weeks**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**INT**

COURSE OUTCOMES
1. Identify and define the problem for the project work
2. Apply the knowledge acquired to analyze and estimate the cost and time
3. Examine and use appropriate tools to solve the defined problem in a team
4. Develop an end product and prepare a technical report/paper

COURSE CONTENTS

A 6 weeks long internship course is to be carried out by the students. On completion of the internship, students shall prepare a report according to the guidelines and submit it to the concerned authority during their 3^{rd} semester. The students should present their work and performance will be evaluated by the project committee and marks will be awarded.

Program Outcomes – Articulation matrix

PROFESSIONAL ELECTIVE III

STRUCTURAL DYNAMICS AND AEROELASTICITY				
Course Code	**22DTA321**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Have knowledge of the role of aeroelasticity in aircraft design.
2. Interpret the use of semi-rigid body assumptions and numerical methods in airplane design.
3. Arrive at the solutions for steady state aeroelastic problem.
4. Be knowledge with the concept of flutter analysis of aircraft wings.
5. Have knowledge on practical examples of aeroelastic problems.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Aeroelastic phenomena: Stability versus response problems – introduction to aeroelasticity and aeroelastic phenomena – Examples of aeroelastic phenomena – Galloping of transmission lines – Flow induced vibrations of tall slender structures – Instability of suspension bridges – Fluid structure interaction – The aero-elastic triangle of forces – Prevention of aeroelastic instabilities

UNIT -2- (08 HOURS)

Modelling of aeroelastic phenomena: Influence and stiffness co-efficients – illustration of aeroelastic phenomena using simplified aerodynamic and structural models – different subsonic and supersonic aerodynamic models for aeroelastic analysis – modelling techniques – aeroelastic models in state-space format Flexure – torsional oscillations of beams – Governing differential equation of motion and its solution

UNIT -3- (08 HOURS)

Static aeroelastic phenomena: Simple two dimensional idealisation – Strip theory – Exact solutions for simple rectangular wings – ‘Semirigid’ assumption and approximate solutions – Successive approximation method – Numerical approximations using matrix equations – Divergence of 2-D airfoil and Straight Wing – Aileron efficiency & reversal – Control Effectiveness – Wing deformations of swept wings

UNIT -4- (08 HOURS)

Flutter calculations: Flutter analysis – Two dimensional thin airfoils in steady incompressible flow –Quasi-steady aerodynamic derivatives – Galerkin method for critical flutter speed – Stability of disturbed motion – Solution of the flutter determinant – Methods of determining the critical flutter speeds – Flutter Calculation – U-g Method – P-k Method – Exact Treatment of Bending –Torsion Flutter of a Uniform Wing – Flutter Analysis by Assumed Mode Method

UNIT -5- (08 HOURS)

Prevention and control: Stiffness criteria – dynamic mass balancing – dimensional similarity – effect of elastic deformation on static longitudinal stability – introduction to aeroelastic control – aeroelastic aspects in the design of aircraft – Panel flutter and its control – Prevention of tail buffeting – Aeroelastic instabilities in helicopter and engine blades and prevention methods

SAFETY, HEALTH AND HAZARD MANAGEMENT				
Course Code	**22DTA322**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand chemical safety standards, fire safety.
2. Handle toxic liquids & gases, explosives.
3. Understand the hazard management.
4. Understand warfare safety.
5. Understand health & environment safety.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Chemical Safety: Standards and regulations of chemical safety in Industries or Laboratories, Storage of hazardous chemicals, Compatibility and classification codes, Chemical risk analysis and Management.

UNIT-2-(08 HOURS)

Toxic and explosive handling: Fire triangle and Handling of Toxic materials, Industrial Gases and other gases, instructions for handling toxic materials, industrial standards, accident protocols, emergency measures.

UNIT-3-(08 HOURS)

Hazard Management: HAZOP and HAZAN techniques, Hazard in manufacture, Hazard prevention measures, Disposal of hazardous materials, segregation of solid, liquid and gaseous materials.

UNIT-4-(08 HOURS)

Warfare safety: Basic understanding of the warfare environment, Classifications of explosives based on hazards, Nuclear,biological and chemical warfare safety, various protocols, accident and emergency protocols at the warfare.

UNIT-5-(08 HOURS)

Health and environment safety: Need of awareness about human health and environment safety, assessment of human factors, Health & Environment safety, Nano materials safety (Toxicology study), radiation related safety protocols, case studies.

TEXT BOOKS

1. "Occupational Health and Safety Management A Practical Approach", by Charles D. Reese. Publisher: CRC Press.
2. "Occupational and Environmental Safety and Health", Arezes, P.M., Baptista, J.S., Barroso, M.P., Carneiro, P., Cordeiro, P., Costa, N., Melo, R.B., Abreu dos Santos Baptista, J.M., Perestrelo, G. (Eds.). Publisher: Springers, 2019
3. "Handbook of Occupational Safety and Health", by S. Z. Mansdorf. Publisher: Wiley.
4. "Institution of Chemical Engineers", by Trevor Kletz"Hazop and Hazan

ADVANCED ANALYTICAL TECHNIQUES / LAB TESTING				
Course Code	**22DTA323**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand different characterization techniques.
2. Apply appropriate analytical technique for a particular material organic/inorganic/ nanomaterial/ polymer etc.
3. Understand the principle and working of chromatography.
4. Understand the principle and working of spectroscopy
5. Understand the principle and working of XRD and SEM.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Instrumental Analysis: Qualitative analysis, predictive analytics, spatial data processing, text analytics, text search, streaming analytics, graph data processing, network analysis techniques and specialized analytical tools.

UNIT-2-(08 HOURS)

Various techniques in instrumental analysis: Genesis of instrumental analysis, hyphenated techniques, Polymeric Techniques, Rheology Techniques, Molecular weight determination; Thermal Techniques: Thermo Gravimetry (TG), Differential Thermal Analysis (DTA), and Differential Scanning Calorimetry (DSC).

UNIT-3-(08 HOURS)

Chromatographic Techniques: Gas Chromatography (GC), High Performance Liquid Chromatography (HPLC), Thin Layer Chromatography (TLC), Ion chromatography, column chromatography, planar chromatography.

UNIT-4-(08 HOURS)

Spectroscopy: Ultra Violet-Visible Spectroscopy UV-VIS, Infra-Red spectroscopy (IR), Nuclear Magnetic Resonance (NMR), Mass spectroscopy, Atomic Absorption Spectroscopy (AAS), Atomic Emission Spectroscopy (AES) Acoustic spectroscopy, Glow Discharge Spectroscopy (GDS).

UNIT-5-(08 HOURS)

X-Ray Diffraction (XRD) and Scanning Electron Microscope techniques(SEM), Inverse reconstruction using electron-material interactive models, Photometric 3D SEM reconstruction from a four-quadrant detector, Sensitivity studies.

DEFENCE ELECTRO-OPTICS AND IMAGING SYSTEMS				
Course Code	**22DTA324**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the technology and principles underpinning electro-optic devices and systems
2. Understand Camera systems
3. Understand Image processing
4. Understand EO sensors and Laser DEW
5. Understand Electro-optic protection measures

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Optical sighting systems: Principles of radiometry, The human eye, insight into the optical, Visible band optical sighting systems, qualitative and quantitative aspects, detailed investigation.

UNIT-2-(08 HOURS)

Camera systems: Camera systems, basic components and their functions, Image intensifiers, Missile seekers, tracking principles, Electro-optic countermeasures, various counter measure techniques.

UNIT-3-(08 HOURS)

Image processing: Thermal imagers, II cameras, Hyper-spectral imaging, Digital image processing, different methodologies, challenges associated, tools for processing different categories of images.

UNIT-4-(08 HOURS)

EO sensors and Laser DEW: Basics of EO sensors, principles and techniques, EO sensors for lasers, Laser DEW, Challenges associated, counter measures, Other techniques, sizing and other aspects

UNIT-5-(08 HOURS)

Electro-optic protection measures: Introduction, basic aspects of electro optic techniques,

FUNDAMENTAL OF TELEMETRY, TELECOMMAND AND TRANSPONDER				
Course Code	**22DTA325**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Satellite communication and related technologies.
2. Overall control of satellites through collection, processing, and transmission of data.
3. Determination of the satellite's exact location through the reception, processing, and transmitting of ranging signals.
4. Understanding the basics of signal processing.
5. Proper control of satellite through the reception, processing, and implementation of commands transmitted from the ground.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction: Fundamental of satellite communication, Mathematical Models for Communication Channels, Digital Communication System, Communication Channels and Their Characteristics, different modulation and multiplexing schemes.

UNIT-2-(08 HOURS)

Telemetry process: Satellite Telemetry, Tracking and Tele-command, Multiple Access Techniques Telemetry, Data Transmission, Methods of Modulation, Time Division and Frequency Division Multiplexing, FDMA, TDMA, CDMA and DAMA, Coding Schemes.

UNIT-3-(08 HOURS)

Communications and Telemetry: Satellite Packet Communications, Tracking and Telemetry. Doppler and Electro-Optical methods of tracking, Airborne Missile, Surface to air missile, missile tracking.

UNIT-4-(08 HOURS)

Signal Processing: Processing of Signal, Analog, continuous time, discrete time, non-linear, statistical signal processing, Data Acquisition and Reduction, Audio signal processing, Array processing, Feature extraction and image understanding.

UNIT-5-(08 HOURS)

Satellite communication: Introduction to satellite communication, low earth orbit, satellite constellation, medium earth orbit, Geostationary orbit, Molniya orbit, Frequency allocation for satellite systems: Radio Navigation satellite service, Meteorological satellite services, transponders.

JAMMING AND ELECTRONIC COUNTER MEASURE / ELECTRONIC COUNTER-COUNTERMEASURE				
Course Code	**22DTA326**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the concept of electronic attacks.
2. Understand the principles of electronic jamming technology.
3. Understand the practical applications of current and evolving electronic jamming technology.
4. Understand the different types of electronic counter measures.
5. Understand the different types of electronics counter – counter measures.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Principles of Electronic Attack (EA): Identifying and managing security risks, Implementing security controls to reduce security risks, Detecting and understanding cyber security events, Jamming-to-Signal Ratio, Jamming Types Burn-Through, Cover Jamming, Range Deceptive Jamming, Inverse Gain Jamming.

UNIT-2-(08 HOURS)

Radar Jamming and deception: Repeater Jamming Equations, Noise Jamming - noise jamming are spot, sweep, and barrage. Noise Jamming versus Deception, Repeater versus Transponder, Side lobe Jamming versus Main Lobe Jamming.

UNIT-3-(08 HOURS)

Electronic counter measure Techniques : Stand-Off Jamming, Escort Jamming, Self-Protection Jamming, Electronic counter measure techniques, On-Board Electronic counter measure Systems, Off-Board Electronic counter measure Systems.

UNIT-4-(08 HOURS)

Advanced counter measure Techniques: Infrared Countermeasures (IRCM), Off-Board Electronic counter measure Systems, Communications Countermeasures (COM-ECM), Electro-Optic Counter Measure (EOCM) Systems.

UNIT-5-(08 HOURS)

Electronic counter- counter measure Techniques: Airborne Tactical Jamming System, Shipboard Self-Defense System, EA/Susceptibility against Weapon Systems. Search Radar Counter- Countermeasures, Tracking Radar. Counter- Countermeasures, Infrared Counter-Countermeasures, Communications Counter-Countermeasures.

TEXT BOOKS

1. "Electronic Countermeasure and Electronic Counter-Countermeasure", by Bahman Zohuri.
2. "Fundamentals of Electronic Warfare 2001", by S.A. Vakin , L.N. Shustov, R.H. Dunwell.
3. "Communications, Radar and Electronic Warfare by Adrian Graham 2010

SOFTWARE DEFINED RADIOS				
Course Code	**21DTA247**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the concept, application of SDRs.
2. Understanding of analog RF components as front end block in implementation of SDR.
3. Gain knowledge of digital hardware architectures and its development techniques.
4. Gain knowledge of software development for embedded wireless systems.
5. Learn design aspects of software defined radio.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction: SDR introduction, major standards, SDR architecture, SDR enablers, advantage / disadvantages, Applications. SDR Hardware, super-heterodyne architecture, homodyne architecture, advantages & disadvantages, Software for SDR, Processing architecture for SDR.

UNIT-2-(08 HOURS)

Digital modulation: Waveform platform bifurcation, red – black separation, digital modulation- advanced linear and non-linear bandwidth efficient modulations. Bandwidth and power efficiency, peak to average power, error vector magnitude and error probability.

UNIT-3-(08 HOURS)

Radio frequency: RF channels, receiver channel equalization, multiple access techniques Frequency, time and code division techniques as well as carrier sensing, Wireless sensor networks and beam steering in azimuth and elevation, receiver analogue signal processing, receiver digital signal processing.

UNIT-4-(08 HOURS)

Source and channel coding: Source and channel coding, sampling, entropy, data compression, voice coding, block and convolution coding, turbo coding, space-time coding and trellis coding.

UNIT-5-(08 HOURS)

Aspects of Software radio design: Case studies associated with the design of software radio, Introduction and a Historical perspective of software defined radio. Applications of software-defined radios.

TEXT BOOKS

1. Jeffrey H.Reed, Software Radio, (A modern approach to radio engineering), Prentice Hall (20 May 2002)
2. John J. Rouphael, RF and Digital Signal Processing for Software Defined Radio,Newnes; Illustrated edition (19 November 2008)

ELECTROMAGNETIC INTERFERENCE / ELECTROMAGNETIC COMPATIBILITY IN MILITARY				
Course Code	**21DTA328**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the concept of EMI / EMC protection of equipment.
2. Identify and prevent the common EMI/EMC problems in military systems.
3. Understand the Design impact (by requirement) of military EMC specifications.
4. Understand EMI/EMC troubleshooting tips and techniques.
5. Learn generate EMI/EMC requirements document.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Basic Concepts: Definition of Electromagnetic interference (EMI) / Electromagnetic compatibility (EMC) and Electromagnetic pulse, Classification of EMI/EMC, Sources of EMI, EMI coupling modes, ESD Phenomena and effects, Transient phenomena and suppression.

UNIT-2-(08 HOURS)

EMC requirements : EMC requirements for electronic systems, Non-ideal Behaviors of Components; EMI Measurements: Basic principles of EMI measurements, EMI measuring instruments;

UNIT-3-(08 HOURS)

EMI Control Methods : EMI Control Methods for Conducted and radiated emissions and susceptibility, Crosstalk and shielding, Grounding, Bonding, Filtering, EMI gasket, Isolation transformer, Opto-isolator; Faraday cage, isolation of shelters.

UNIT-4-(08 HOURS)

EMC Standard and Regulations: National and Intentional standardizing organizations, Frequency assignment, Spectrum conversation; EMC Design and Interconnection Techniques: Cable routing and connection, Component selection and mounting, PCB design (Trace routing, Impedance control, decoupling, Zoning and grounding).

UNIT-5-(07 HOURS)

EMC analysis and detection techniques: Using tools for electromagnetic signal integrity analysis, studying eye diagrams or eye patterns for communication system and analyzing signals using eye diagram.

TEST METHODOLOGIES FOR DEW SYSTEMS (LASERS & MICROWAVE)

Course Code	**21DTA329**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the characterization and testing requirements of DEW systems.
2. Carry out the indoors & outdoors system performance testing.
3. Understand the safety issues, safety standards, handling high power sources.
4. Analyze and study the S parameters and impedance measurement, power measurement and phase noise measurement of microwave systems.
5. Analyze and study the system characterization techniques, HPM safety tools and safety standards.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Testing requirements of DEW system, types of testing, laser effect testing on target, system output testing.

UNIT-2-(08 HOURS)

System performance testing, System outdoor test & measurement instruments.

UNIT-3-(08 HOURS)

Laser testing issues, Laser safety, Laser safety standards, laser safety tools.

UNIT-4-(08 HOURS)

Microwave system testing Impedance measurement, S-Parameters and the Smith Chart.

UNIT-5-(08 HOURS)

Power Measurement, Noise Figure and Phase Noise measurement, Frequency measurements (Spectrum Analysis), Gain Compression and Intermodulation, Network Analysis,
Microwave subsystem / system characterization techniques. HPM safety tools, safety standards.

SENSOR TECHNOLOGY				
Course Code	**22DTA331**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the basic principles of sensor systems required for satellites and tactical aircraft.
2. Understand the atmospheric propagation and its impact on the performance of sensors.
3. Analyze the Phased array and pulsed compressed radars.
4. Troubleshoot, repair/replace a faulty sensor.
5. Analyze Optical and infrared imaging detector systems.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction : Physical principles underlying the sensor systems needed for satellites and tactical aircraft, as well as limitations imposed by the atmosphere and operating environment on the system and their communication links.

UNIT-2-(08 HOURS)

Radars: Phased array and pulsed compressed radars, imaging synthetic aperture and inverse synthetic aperture radars, Pulse Compression for Phased Array Weather Radars.

UNIT-3-(08 HOURS)

Signals and detectors: Atmospheric propagation of signal. Noise resources and thermal radiation, Principles of semiconductor devices. Optical and infrared imaging detector systems.

UNIT-4-(08 HOURS)

Signal and noise : Detector resolution limitations and bandwidth requirements, Relationship between signals and noise.

UNIT-5-(08 HOURS)

Sensor functions: The characteristics of critical sensor functions - including detection, estimation, imaging, and tracking.

Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the launch vehicle requirements, its functioning.
2. Performance analysis of propulsion systems.
3. Design and analysis of launch vehicles.
4. Understand the propellant requirement for launch vehicles.
5. Analysis of rocket engines for structural integrity.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction: Introduction to propulsion systems for launch vehicles, beginning with mission energy requirements and an overview of current and proposed launch propulsion devices and its limitations.

UNIT-2-(08 HOURS)

Rocket Fundamentals Performance analysis, parameters, operating characteristics and propellant selection criteria for air breathing and solid, liquid and cryogenic rocket engines, staging of rockets. Tsiolkov sky rocket equation.

UNIT-3-(08 HOURS)

Design Concepts and Techniques Advanced cycles and concepts are presented. Design of components and subsystems like aerodynamics, propulsion, payload, structural and control systems. stage separation techniques

UNIT-4-(08 HOURS)

Dynamic Analysis: elements of structural dynamics and aero-elasticity, structural dynamics analysis of rocket engines for structural integrity, Nonlinear analysis in Finite element methods, Launch dynamic analysis. Tracking and controlling errors.

UNIT-5-(08 HOURS)

Finite element modelling: Idealization, Discretization, Meshing, Analysis and Post Processing of the data. Structural dynamic analysis of components - Turbomachinery and nozzles. Frequency response of systems.

Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the interfaces used in data acquisition and standalone instruments to real-world signals.
2. Understand the Sensors and transducers, Data acquisition hardware and data acquisition software.
3. Analyze Static and Dynamic Characteristics of instruments.
4. Understand the uses of active and passive types in measurement of acceleration and other parameters.
5. Carry out post flight analysis.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Importance of Flight Trials: in Missile Development, Facilities, Safety, Requirements The goal of production flight trials is to ensure individual aircraft are manufactured properly and is in a condition for safe operations. It is the final stage of the production process and is a prerequisite to each aircraft being issued a Certificate of Airworthiness and released to the customer.

UNIT-2-(08 HOURS)

Methods of Measurement, Introduction to Measuring Instruments: Functional elements of an instrument Variables may be classified in many ways, but generally, most experts prefer two classifications: by characteristic and by type of measurement signal. Variables classified by characteristic include thermal, radiation, force, rate, quantity, time, geometric, physical properties, chemical composition, and electrical. Those classified by measurement signal include motion, force, electrical, and time-modulated. Measurement signals for variables often are hard to differentiate from the measuring system. Four factors require close consideration for measurement signals and systems: the types of transducers available for converting variables to measurement signals, transmission characteristics, data acquisition system input matching, and transducers available to convert from one type of measurement signal to another measurement signal.

UNIT-3-(08 HOURS)

Static and Dynamic Characteristics: Zero, First and Second order of Instruments and their response The characteristics of the one group may well influence the characteristics of the other. In order to access overall instrument performance, however, the two groups of characteristics are normally studied separately and then a semi-quantitative superposition is carried out.

UNIT-4-(08 HOURS)

Sensors and Transducers: Passive and Active types, their uses in measurement of acceleration, angle, vibration, pressure, flow and temperature, strain etc., Data acquisition systems measure, store, display, and analyze information collected from a variety of devices. Most measurements require a transducer or a sensor, a device that converts a measurable physical quantity into an electrical signal.

UNIT-5-(08 HOURS)

Methods: for post flight data analysis. Calibration of Instruments Air data are vital to successfully complete an aircraft's mission and are derived from the air surrounding the aircraft. References 1–4 supply pertinent information regarding air data measurement and calibration. These air data encompass indicated and true airspeed, pressure altitude, ambient air temperature, angles of attack and sideslip, Mach number, and rate of climb. Typically, pitot and static pressures are sensed and converted (by mechanical means in the instruments themselves) into indications on the altimeter, vertical speed indicator, airspeed indicator, and Machmeter. Similarly, measured local flow angles establish angles of attack and sideslip, and the outside air temperature is measured and indicated in the cockpit.

(Instruments that can perform the conversion, such as airspeed indicators, altimeters, and Machmeters, do not correct for errors in the input values.) These measured parameters are commonly input to the airdata computer, which, using appropriate algorithms and correction factors (or calibrations, as discussed later), can provide other parameters, such as true airspeed, required by the aircraft's avionics or flight control system.

Course Code	**22DTA334**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. To classify UAVs based on different parameters.
2. To demonstrate ability to design an efficient structure for an UAV of specific application.
3. To perform ground testing of UAVs.
4. To apply the knowledge gained on electronic intelligence and target designation for successful development of UAS.
5. To understand the basic concepts in the different types of navigation schemes for UAS.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Introduction to uav: History of UAV –classification –basic terminology-models and prototypes –applications

UNIT -2- (08 HOURS)

Basics of airframe: Airframe –dynamics –modeling- structures –wing design- engines and its types-equipment, maintenance and management-control surfaces-specifications.

UNIT -3- (08 HOURS)

Development of uas system: System Development- Ground Testing-UAV component testing-Uav Sub-assembly and Sub- System Testing- Testing Complete UAV, Environmental testing – Testing Complete UAV-Control Station testing-Catapult Launch systems -System In flight Testing- Test sites-Test Crew training-Onsite preparation - System Certification.

UNIT -4- (08 HOURS)

Deployment of unmanned aerial system: Operational trails-network centric operations-Radar confusion-Missile Decoy-radio relay- Electronic Intelligence-Covert Reconnaissance and surveillance Target designation by laser, NBC contamination Monitoring-Long Range reconnaissance and strike- Aerial photography- Information services-communication relay- landmine detection and Destruction-other applications

UNIT -5- (08 HOURS)

Communication payloads and path planning: Payloads-Telemetry-tracking-Aerial photography, Frequency range – Commands- Control, FPV videos - Flight computer sensor-displays, RF modems, Simulation and ground testing, Trouble shooting, waypoints navigation and ground control software.

ROCKETS AND MISSILES				
Course Code	**22DTA335**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Design Consideration of liquid Rocket Combustion Chamber and Design Considerations of Igniter and types of igniters.
2. Describing Aerodynamic Forces and Moments. Lateral Damping Moment and Longitudinal Moment of a Rocket
3. Explain the One Dimensional and Two Dimensional rocket Motions in Free Space and Homogeneous Gravitational Fields.
4. Understand various methods of thrust determinations and thrust vector control. It will also describe the rockets Separation Techniques.
5. Understanding of selection criteria for materials and Special Requirements of Materials to Perform under Adverse Conditions.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Ignition System in rockets - types of Igniters - Igniter Design Considerations - Design Consideration of liquid Rocket Combustion Chamber, Injector Propellant Feed Lines, Valves, Propellant Tanks Outlet and Helium Pressurized and Turbine feed Systems - Propellant Slosh and Propellant Hammer - Elimination of Geysering Effect in Missiles - Combustion System of Solid Rockets.

UNIT-2-(08 HOURS)

Airframe Components of Rockets and Missiles - Forces Acting on a Missile While Passing Through Atmosphere - Classification of Missiles - methods of Describing Aerodynamic Forces and Moments- Lateral Aerodynamic Moment - Lateral Damping Moment and Longitudinal Moment of a Rocket - lift and Drag Forces - Drag Estimation - Body Upwash and Downwash in Missiles - Rocket Dispersion

UNIT-3-(08 HOURS)

One Dimensional and Two Dimensional rocket Motions in Free Space and Homogeneous Gravitational Fields - description of Vertical, Inclined and Gravity Turn Trajectories - Determination of range and Altitude Simple Approximations to Burnout Velocity.

UNIT-4-(08 HOURS)

Rocket Vector Control - Methods - Thrust determination - SITVC - Multistaging of rockets -Vehicle Optimization - Stage Separation Dynamics - Separation Techniques.

UNIT-5-(07 HOURS)

Selection of Materials - Special Requirements of Materials to Perform under Adverse Conditions.

TRAJECTORIES MODELLING & SIMULATION

Course Code	**22DTA336**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the flight trajectories design requirements.
2. Evaluate and predict the flight performance for different trajectories.
3. Understand the practical implications while trajectory design.
4. Carry out MATLAB based simulation for trajectory modelling

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Elements of trajectory design: Flight Dynamics, Flight envelope limitations. Aerodynamic sizing- equations of motion. Accuracy of simplified equations of motion, escape velocity and elements of orbital mechanics.

UNIT-2-(08 HOURS)

Trajectories and maneuvers: Role of rocket propulsion in orbital trajectories and maneuvers, Ideal velocity attainment from Rocket equation, Maximizing missile flight performance. Benefits of flight trajectory shaping.

UNIT-3-(08 HOURS)

Flight performance: Flight performance prediction of different phases of flight trajectory - boost phase, climb, cruise, coast, steady descent, ballistic, maneuvering, divert, and homing flight.

UNIT-4-(08 HOURS)

Trajectory planning and implementation : Practical implementation of integrated trajectory planning, Agility in maneuvering trajectories, Extensive MATLAB-based mini-projects on trajectory planning and design.

UNIT-5-(08 HOURS)

Multiplier theory and mathematical formulations: Multiplier theory and its use in solving practical Problems covered from a real-time computational viewpoint, No-fly zones and engineering requirements, Formulation as a mathematical mixture of state and decision-variable constraints.

Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the concepts and basic systems requirements tracking systems.
2. Understand the system configurations and critical component characteristics required in the design of stabilized pointing and tracking systems, along with an introduction to some more advanced concepts.
3. Understand the control system and algorithm techniques and practices commonly utilized in the design of tracking systems.
4. Understand counter measures.
5. Understand about Doppler and Electro-Optical methods of tracking.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Basics: Basic aspects of acquisition, fundamental concepts of tracking, pointing technology details, Military system requirements, Acquisition, tracking, and pointing (ATP) design for military systems.

UNIT-2-(08 HOURS)

Mathematical aspects: Review of mathematical techniques, Target tracking and related mathematics, SNR requirement, the Johnson criteria, probability of estimation, detection criteria, examples.

UNIT-3-(08 HOURS)

Algorithms: Need of algorithms, Tracking algorithms, track filters, multi target tracking, example problems, Algorithms for simple cases, methods to incorporate additional requirements to algorithms.

UNIT-4-(08 HOURS)

Counter measures: Various aspects of counter measures, need for counter measures, Electronic countermeasures against modern target tracking radars multiplatform-multi-sensor-multi target tracking.

UNIT-5-(08 HOURS)

Tracking methods: Different principles used in tracking methods, Doppler and Electro-Optical methods of tracking, other tracking methods, un conventional methods used and their advantages.

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the design of digital communication systems.
2. Understand the transmitter, receiver communications system models, voice source coding– pulse code modulation, delta modulation and vocoders.
3. Understand the requirement of cellular communication.
4. Apply the different communication models to optimize
5. Apply the signal analysing techniques

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction: Design of digital communication system, transmitter and receiver communications system model, Radar Block diagram, Radar frequencies, Link budget calculations telemetry.

UNIT-2-(08 HOURS)

Modulation and its standards: Voice source coding–pulse code modulation, delta modulation, vocoders Introduction to cellular communication – CDMA, OFDM, MIMO, Introduction to digital modulation standards.

UNIT-3-(08 HOURS)

Digital signal modulation: Digital modulation – Amplitude-shift, Frequency-shift, Phase-shift, differential phase-shift, Quadrature phase-shift, Quadrature phase-shift, and Minimum-shift keying, Quadrature amplitude modulation.

UNIT-4-(08 HOURS)

Communication models: Communications channel and their Characteristics – Multipath effects, fading and diversity, models of Egli and Murphy, Time Division Multiple Access, Frequency Hopping spread spectrum.

UNIT-5-(08 HOURS)

Signal analysis: Receivers – super heterodyne systems, balanced and unbalanced mixers, frequency synthesizers, Link budget analysis, Expression for Bit Error Rate, analysis of repeater and transponder.

TEXT BOOKS

1. Haykin, S. Communication Systems, Publisher: John Wiley &Sons.
2. Lathi, B.P. and Ding, Z, Modern Digital and Analog Communication Systems, Publisher: Oxford University Press

REFERENCE BOOKS

MODELING & SIMULATION OF LASER MATTER INTERACTION

Course Code	**21DTA339**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the fundamentals of laser matter interaction.
2. Develop physics-based model for evaluation of effect of laser on metals and composites.
3. Understand about damage characterization.
4. Understand the laser parameter measurement techniques.
5. Analyze the performance of high-power laser systems.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction: Laser beam characteristics, different types and classes of lasers, applications of lasers, laser matter interaction, Laser lethality modeling & simulation with metal targets & composite materials.

UNIT-2-(08 HOURS)

Laser matter interaction: Basic ideas, Physics based models for vulnerability assessment, Effect of laser on metals & composite materials, methods of evaluation, effect of material properties.

UNIT-3-(08 HOURS)

Damage characterization: Terminologies used, Measurement and Characterization of Damage Thresholds, charts used, Mechanisms of Damage, Exposure Limits and Their Interpretation.

UNIT-4-(08 HOURS)

Measurement techniques: Terminologies used, Laser parameters, analysis Tools for the Estimation of Hazards, laser parameters, Laser parameters measurement techniques, examples.

UNIT-5-(08 HOURS)

Laser system performance: Tools to analyze and predict Laser System performance under different conditions like land, sea air, etc. Introduction of full scale end to end modeling of laser system performance.

TEXT BOOKS

1. Mulser, Peter, Bauer, Dieter. High Power Laser-Matter Interaction, Publisher: Springer.

REFERENCE BOOKS

SEMESTER IV

PROJECT WORK PHASE-II				
Course Code	**22DTA41**		**Credits**	**18**
Hours/Week (L-T-P)	**0-8-0**		**CIE Marks**	**100**
Total Hrs	**50**		**SEE Marks**	**100**
Exam Hrs	**3**		**Course Type**	**Project**

COURSE OUTCOMES

1. Project work phase-II: 16-week duration during 4th semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.
2. Project Evaluation: Evaluation shall be taken up at the end of 4th semester. Project work evaluation and Viva-Voce examination shall conducted
3. Project evaluation:
    a. Internal Examiner shall carry out the evaluation for 50 marks.
    b. External Examiner shall carry out the evaluation for 50 marks.
    c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
    d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

Program Outcomes – Articulation matrix

M.Tech. in DEFENCE TECHNOLOGY
(COMMUNICATION SYSTEMS AND SENSORS - SPECIALIZATION)
SEMESTER – II

DIGITAL & SATELLITE COMMUNICATION AND NAVIGATION FROM SPACE				
Course Code	**22DTC21**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**50**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the Communication Techniques.
2. Evaluate the Performance of Communication Systems.
3. Design the Analogue and Digital Communication Systems.
4. Understand and Analyze the Signal Transmission Effects.
5. Understand the Different types of Navigation Techniques.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1 (8 HRS)

Introduction: Elements of a communications system and their relationship to system performance. Digital Communication System , Communication Channels and their Characteristics, Mathematical Models for Communication Channels, Design challenges, message sources, Channel effect, signal to noise ratio and capacity.

UNIT -2 (8 HRS)

Digital Data Communication Systems, digital signaling techniques, Link budget calculations telemetry and control and IO/IW implications, Antenna types –wire antennas, Horn Antennas, Reflector Antennas, phased array antennas. Free space optical communication, Fiber optics communication, Wireless/cellular communications.

UNIT -3 (8 HRS)

More on Fundamentals : Fundamental concepts such as current/voltage relationships, time and frequency domains, power spectral density, random signals, Communications system components and functions, analog and digital communications systems.

UNIT -4 (8 HRS)

Modulation Transmission and Reception: baseband and passband digital modulation; system noise, transmission lines, waveguides and antennas, FEC techniques for mitigating channel errors.

UNIT -5 (7 HRS)

Propagation effects on signal transmission; end-to-end path calculations for wire/coax, and RF systems including terrestrial ground links and satellite communications, Spread spectrum, concept of frequency hopping. Navigation techniques from space regarding functioning of GPS, GLONASS, IRNSS & Galileo.

TEXT BOOKS

RADAR TECHNOLOGIES				
Course Code	**22DTC22**		**Credits**	**04**
Hours/Week (L-T-P)	**3-2-0**		**CIE Marks**	**50**
Total Hrs	**50**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**IPCC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the design of radar systems, solve range equations.
2. Apply appropriate mathematical and computer models relevant to radar systems to calculate system performance, and assess the limitations of particular cases
3. Analyze the major components of a modern radar system
4. Learn basic radar clutter and radar antenna
5. Understand radar tracking applications

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1 (10 HRS)

Introduction to Radar and Radar Equation: Basic Radar, Simple form of radar equation, Radar Block diagram, Radar frequencies, radar cross section of targets, Radar cross section fluctuations, Transmitter power.

UNIT -2 (10 HRS)

Tracking RADARS: Tracking with radar, Monopulse tracking, Conical Scan and sequential lobing. Limitations to tracking accuracy, Low angle tracking, tracking in range, Other tracking radar topics.

UNIT -3 (10 HRS)

RADAR Clutter and RADAR Antenna: Introduction to Radar Clutter, Surface clutter radar equation, Land clutter, Sea Clutter, Functions of Radar antenna, Antenna Parameters, Antenna radiation pattern and aperture illumination, reflector antenna, Radiators for phased arrays.

UNIT -4 (10 HRS)

Tracking Radar Applications of Monopulse: Surface -Based Monopulse Tracking RADARS, airborne monopulse tracking radars, monopulse homing seekers.

UNIT -5 (10 HRS)

Non tracking Radar Applications of Monopulse: Monopulse 3-d surveillance radar, Monopulse secondary surveillance radar, other radar applications.

MINI PROJECT WITH SEMINAR				
Course Code	**22DTC25**		**Credits**	**3**
Hours/Week (L-T-P)	**0-4-2**		**CIE Marks**	**100**
Total Hrs	**36**		**SEE Marks**	**100**
Exam Hrs	**3**		**Course Type**	**MPS**

Seminar is to be given by the student after the completion of a mini project chosen by the student. Topics for the mini projects can be from the aeronautical engineering and allied fields. The mini project can be based on either numerical or analytical solution or design or fully experimental; or a combination of these tasks.

COURSE ASSESSMENT METHOD

1. Internal Examiner shall carry out the evaluation for 100 marks.
2. External Examiner shall carry out the evaluation for 100 marks.
3. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
4. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

Program Outcomes – Articulation matrix

Course Code	**22AUD27/22AEC27**		**Credits**	**PP**
Hours/Week (L-T-P)			**CIE Marks**	
Total Hrs			**SEE Marks**	
Exam Hrs			**Course Type**	**AUD/AEC**
COURSE ASSESSMENT METHOD				

1. Board of studies Recommended Online Courses
2. Classes and evaluation procedures are as per the policy of the online course providers.
3. A pass in AUD/AEC is mandatory for the award of the degree

PROFESSIONAL ELECTIVE I

ELECTROMAGNETIC INTERFERENCE / ELECTROMAGNETIC COMPATIBILITY IN MILITARY				
Course Code	**22DTC231**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the concept of EMI / EMC protection of equipment.
2. Identify and prevent the common EMI/EMC problems in military systems.
3. Understand the Design impact (by requirement) of military EMC specifications.
4. Understand EMI/EMC troubleshooting tips and techniques.
5. Learn generate EMI/EMC requirements document.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Basic Concepts: Definition of Electromagnetic interference (EMI) / Electromagnetic compatibility (EMC) and Electromagnetic pulse, Classification of EMI/EMC, Sources of EMI, EMI coupling modes, ESD Phenomena and effects, Transient phenomena and suppression.

UNIT-2-(08 HOURS)

EMC requirements : EMC requirements for electronic systems, Non-ideal Behaviors of Components; EMI Measurements: Basic principles of EMI measurements, EMI measuring instruments;

UNIT-3-(08 HOURS)

EMI Control Methods : EMI Control Methods for Conducted and radiated emissions and susceptibility, Crosstalk and shielding, Grounding, Bonding, Filtering, EMI gasket, Isolation transformer, Opto-isolator; Faraday cage, isolation of shelters.

UNIT-4-(08 HOURS)

EMC Standard and Regulations: National and Intentional standardizing organizations, Frequency assignment, Spectrum conversation; EMC Design and Interconnection Techniques: Cable routing and connection, Component selection and mounting, PCB design (Trace routing, Impedance control, decoupling, Zoning and grounding).

UNIT-5-(07 HOURS)

EMC analysis and detection techniques: Using tools for electromagnetic signal integrity analysis, studying eye diagrams or eye patterns for communication system and analyzing signals using eye diagram.

TEXT BOOKS

1. Bruce R. Archambeault, Omar M. Ramahi, etal. , EMI/EMC Computational Modeling Handbook: The Springer International Series in Engineering and Computer Science), 31 August 2001

REFERENCE BOOKS

DEFENCE ELECTRO-OPTICS AND IMAGING SYSTEMS				
Course Code	**22DTC232**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the technology and principles underpinning electro-optic devices and systems
2. Understand Camera systems
3. Understand Image processing
4. Understand EO sensors and Laser DEW
5. Understand Electro-optic protection measures

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Optical sighting systems: Principles of radiometry, The human eye, insight into the optical, Visible band optical sighting systems, qualitative and quantitative aspects, detailed investigation.

UNIT-2-(08 HOURS)

Camera systems: Camera systems, basic components and their functions, Image intensifiers, Missile seekers, tracking principles, Electro-optic countermeasures, various counter measure techniques.

UNIT-3-(08 HOURS)

Image processing: Thermal imagers, II cameras, Hyper-spectral imaging, Digital image processing, different methodologies, challenges associated, tools for processing different categories of images.

UNIT-4-(08 HOURS)

EO sensors and Laser DEW: Basics of EO sensors, principles and techniques, EO sensors for lasers, Laser DEW, Challenges associated, counter measures, Other techniques, sizing and other aspects

UNIT-5-(08 HOURS)

Electro-optic protection measures: Introduction, basic aspects of electro optic techniques,

JAMMING AND ELECTRONIC COUNTER MEASURE / ELECTRONIC COUNTER-COUNTERMEASURE				
Course Code	**22DTC233**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the concept of electronic attacks.
2. Understand the principles of electronic jamming technology.
3. Understand the practical applications of current and evolving electronic jamming technology.
4. Understand the different types of electronic counter measures.
5. Understand the different types of electronics counter – counter measures.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Principles of Electronic Attack (EA): Identifying and managing security risks, Implementing security controls to reduce security risks, Detecting and understanding cyber security events, Jamming-to-Signal Ratio, Jamming Types Burn-Through, Cover Jamming, Range Deceptive Jamming, Inverse Gain Jamming.

UNIT-2-(08 HOURS)

Radar Jamming and deception: Repeater Jamming Equations, Noise Jamming - noise jamming are spot, sweep, and barrage. Noise Jamming versus Deception, Repeater versus Transponder, Side lobe Jamming versus Main Lobe Jamming.

UNIT-3-(08 HOURS)

Electronic counter measure Techniques : Stand-Off Jamming, Escort Jamming, Self-Protection Jamming, Electronic counter measure techniques, On-Board Electronic counter measure Systems, Off-Board Electronic counter measure Systems.

UNIT-4-(08 HOURS)

Advanced counter measure Techniques: Infrared Countermeasures (IRCM), Off-Board Electronic counter measure Systems, Communications Countermeasures (COM-ECM), Electro-Optic Counter Measure (EOCM) Systems.

UNIT-5-(07 HOURS)

Electronic counter- counter measure Techniques: Airborne Tactical Jamming System, Shipboard Self-Defense System, EA/Susceptibility against Weapon Systems. Search Radar Counter- Countermeasures, Tracking Radar. Counter- Countermeasures, Infrared Counter-Countermeasures, Communications Counter-Countermeasures.

TEXT BOOKS

1. “Electronic Countermeasure and Electronic Counter-Countermeasure”, by Bahman Zohuri.
2. “Fundamentals of Electronic Warfare 2001”, by S.A. Vakin , L.N. Shustov, R.H. Dunwell.
3. “Communications, Radar and Electronic Warfare by Adrian Graham 2010

REFERENCE BOOKS

1. “Electronic Warfare & Radar Systems Engineering Handbook” 2013, Naval Air Warfare Center Weapons Division.

Course Code	**22DTC234**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand communication system design methodologies, communication system architecture, analogue & digital modulation techniques.
2. Computation of data rates, band width ,BER
3. To carry out the link budget analysis.
4. Analyze voice coding techniques
5. Study the performance of communication system architecture

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Introduction to Communication Systems, Digital Communication System, Communication Channels and Their Characteristics, Mathematical Models for Communication Channels, Design challenges, message sources, Channel effect, signal to noise ratio and capacity.

UNIT-2-(08 HOURS)

Digital data communication systems, digital signaling techniques, Link budget calculations telemetry and control and IO/IW implications, Antenna types –wire antennas, Horn Antennas, Reflector Antennas, phased array antennas

UNIT-3-(08 HOURS)

Data rates and bandwidth calculation in digital data communication systems: Pulse Code Modulation, ASK, FSK, Time Division Multiple Access, Frequency Division multiple Access, Direct Sequence spread spectrum, Frequency Hopping spread spectrum.

UNIT-4-(08 HOURS)

Probability of error and BER calculation, Modulation technologies (analogue & digital), Amplitude Modulation, Angle Modulation, ASK, FSK, BPSK, transmitter and receiver Block diagram, Expression for Bit Error Rate. Voice source coding, PCM, transmitter and receiver systems.

UNIT-5-(07 HOURS)

Communication system architectures, public switched Telephone network, First Generation wireless networks, Second Generation, Third Generation Wireless Network, Cellular packet switched Architecture, GSM system Architecture, terminal design and performance, associated information systems

TEXT BOOKS

1. Proakis and Salehi, Fundamentals of communication systems.
2. Simon Haykin and Michael Moher, Communication Systems, Wiley.
3. Theodore S Rappaport, Wireless Communication, Prentice Hall

AUTONOMY AND NAVIGATION TECHNOLOGY				
Course Code	**22DTC235**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: At the end of the course the student will be able to:-

1. Describe the basic principle of operation of a global navigation satellite system
2. Understand the navigation systems and derive the navigation equations
3. Carry out path planning the UGV /UAV
4. Solve the equations for calculating a position estimate from a given satellite constellation.
5. Understand the working of GPS, GNSS and SLAM.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction: Introduction to the concepts of navigation and guidance systems, General principles of early conventional navigation systems. Guidance approaches: conventional guidance such as PN (Proportional Navigation).

UNIT-2-(08 HOURS)

Fundamentals of navigation: Geodetic fundamentals of navigation, positioning, reference- and coordinate systems and computational methods for navigation and positioning on the surface of the earth. Direction cosine matrix, Euler angles, Transformation of angular velocities, Quaternion representation in coordinate transformation. Comparison of transformation methods.

UNIT-3-(08 HOURS)

Geometric guidance: Geometric guidance, path planning and following, and optimal guidance; path planning for UGV/UAV guidance systems. Navigation approaches: navigation systems, Understanding the Global Positioning System (GPS)

UNIT-4-(08 HOURS)

Satellite Navigation : GNSS (Global Navigation Satellite System) - Applications in Tracking / Mapping Devices, Industrial Machinery, Sea vessels, Air Navigation, and Automobiles, terrain based navigation.

UNIT-5-(08 HOURS)

Simultaneous Localization and Mapping : Introduction to SLAM (Simultaneous Localization and Mapping); essential algorithms for SLAM, models for Cooperative guidance and collision avoidance system.

SOFTWARE DEFINED RADIOS				
Course Code	**22DTC241**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the concept, application of SDRs.
2. Understanding of analog RF components as front end block in implementation of SDR.
3. Gain knowledge of digital hardware architectures and its development techniques.
4. Gain knowledge of software development for embedded wireless systems.
5. Learn design aspects of software defined radio.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Introduction: SDR introduction, major standards, SDR architecture, SDR enablers, advantage / disadvantages, Applications. SDR Hardware, super-heterodyne architecture, homodyne architecture, advantages & disadvantages, Software for SDR, Processing architecture for SDR.

UNIT-2-(08 HOURS)

Digital modulation: Waveform platform bifurcation, red – black separation, digital modulation- advanced linear and non-linear bandwidth efficient modulations. Bandwidth and power efficiency, peak to average power, error vector magnitude and error probability.

UNIT-3-(08 HOURS)

Radio frequency: RF channels, receiver channel equalization, multiple access techniques Frequency, time and code division techniques as well as carrier sensing, Wireless sensor networks and beam steering in azimuth and elevation, receiver analogue signal processing, receiver digital signal processing.

UNIT-4-(08 HOURS)

Source and channel coding: Source and channel coding, sampling, entropy, data compression, voice coding, block and convolution coding, turbo coding, space-time coding and trellis coding.

UNIT-5-(07 HOURS)

Aspects of Software radio design: Case studies associated with the design of software radio, Introduction and a Historical perspective of software defined radio. Applications of software-defined radios.

TEXT BOOKS

1. Jeffrey H.Reed, Software Radio, (A modern approach to radio engineering), Prentice Hall (20 May 2002)

SENSOR TECHNOLOGY				
Course Code	**22DTC242**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the basic principles of sensor systems required for satellites and tactical aircraft.
2. Understand the atmospheric propagation and its impact on the performance of sensors.
3. Analyze the Phased array and pulsed compressed radars.
4. Troubleshoot, repair/replace a faulty sensor.
5. Analyze Optical and infrared imaging detector systems.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(07 HOURS)

Introduction : Physical principles underlying the sensor systems needed for satellites and tactical aircraft, as well as limitations imposed by the atmosphere and operating environment on the system and their communication links.

UNIT-2-(08 HOURS)

Radars: Phased array and pulsed compressed radars, imaging synthetic aperture and inverse synthetic aperture radars, Pulse Compression for Phased Array Weather Radars.

UNIT-3-(08 HOURS)

Signals and detectors: Atmospheric propagation of signal. Noise resources and thermal radiation, Principles of semiconductor devices. Optical and infrared imaging detector systems.

UNIT-4-(08 HOURS)

Signal and noise : Detector resolution limitations and bandwidth requirements, Relationship between signals and noise.

UNIT-5-(08 HOURS)

Sensor functions: The characteristics of critical sensor functions - including detection, estimation, imaging, and tracking.

TEST METHODOLOGIES FOR DEW SYSTEMS (LASERS & MICROWAVE)				
Course Code	**22DTC243**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1.
2. Understand the characterization and testing requirements of DEW systems.
3. Carry out the indoors & outdoors system performance testing.
4. Understand the safety issues, safety standards, handling high power sources.
5. Analyze and study the S parameters and impedance measurement, power measurement and phase noise measurement of microwave systems.
6. Analyze and study the system characterization techniques, HPM safety tools and safety standards.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Testing requirements of DEW system, types of testing, laser effect testing on target, system output testing.

UNIT-2-(08 HOURS)

System performance testing, System outdoor test & measurement instruments.

UNIT-3-(08 HOURS)

Laser testing issues, Laser safety, Laser safety standards, laser safety tools.

UNIT-4-(08 HOURS)

Microwave system testing Impedance measurement, S-Parameters and the Smith Chart.

UNIT-5-(07 HOURS)

Power Measurement, Noise Figure and Phase Noise measurement, Frequency measurements (Spectrum Analysis), Gain Compression and Intermodulation, Network Analysis,
Microwave subsystem / system characterization techniques. HPM safety tools, safety standards.

MODELING & SIMULATION OF LASER MATTER INTERACTION				
Course Code	22DTC244		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the fundamentals of laser matter interaction.
2. Develop physics-based model for evaluation of effect of laser on metals and composites.
3. Understand about damage characterization
4. Understand the laser parameter measurement techniques.
5. Analyze the performance of high-power laser systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Introduction: Laser beam characteristics, different types and classes of lasers, applications of lasers, laser matter interaction, Laser lethality modelling & simulation with metal targets & composite materials.

UNIT-2-(08 HOURS)

Laser matter interaction: Basic ideas, Physics based models for vulnerability assessment, Effect of laser on metals & composite materials, methods of evaluation, effect of material properties.

UNIT-3-(08 HOURS)

Damage characterization: Terminologies used, Measurement and Characterization of Damage Thresholds, charts used, Mechanisms of Damage, Exposure Limits and Their Interpretation.

UNIT-4-(07 HOURS)

Measurement techniques: Terminologies used, Laser parameters, analysis Tools for the Estimation of Hazards, laser parameters, Laser parameters measurement techniques, examples.

UNIT-5-(08 HOURS)

Laser system performance: Tools to analyze and predict Laser System performance under different conditions like land, sea air, etc. Introduction of full scale end to end modelling of laser system performance.

MILITARY ELECTRONICS SYSTEM ENGINEERING				
Course Code	22DTC245		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the military electronic systems.
2. Generate system design requirements as per mission needs &operational requirements.
3. To create digital simulation models.
4. Understand the limitations of the COTS available electronics systems
5. Evaluate the radiation effects on the performance of electronics systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Fundamentals of electronics: Introduction to electronics engineering concepts, additional requirements for a defence environment, methods for the design and integration of complex defence systems.

UNIT-2-(08 HOURS)

Case studies: Familiarity with the systems engineering process through case studies of representative defence systems, simple to detailed design examples, defence related case studies.

UNIT-3-(08 HOURS)

Methods: Introduction to methods used for determination of system requirements from mission needs and operational requirements, principles used in different methods, advantages and disadvantages of each method.

UNIT-4-(07 HOURS)

Digital simulation models and ICs: Digital simulation models, including those currently used in defence for determining engineering and performance trade-offs. Limitations of commercial-off-the-shelf (COTS) integrated circuits, thermal failure, electrostatic breakdown, noise in solid state devices, packaging reliability issues.

UNIT-5-(08 HOURS)

Effect of ambient environment: The defence environment, Systematic way to account different aspects, Radiation effects due to space and nuclear environments, and the limited availability of military integrated circuit suppliers.

SEMESTER III

ADVANCED DIGITAL MODULATION TECHNOLOGIES & STANDARDS				
Course Code	**22DTC31**		**Credits**	**04**
Hours/Week (L-T-P)	**3-0-2**		**CIE Marks**	**50**
Total Hrs	**50**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

7. Understand the design of digital communication systems.
8. Understand the transmitter, receiver communications system models, voice source coding– pulse code modulation, delta modulation and vocoders.
9. Understand the requirement of cellular communication.
10. Apply the different communication models to optimize
11. Apply the signal analysing techniques

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(10 HOURS)

Introduction: Design of digital communication system, transmitter and receiver communications system model, Radar Block diagram, Radar frequencies, Link budget calculations telemetry.

UNIT-2-(10 HOURS)

Modulation and its standards: Voice source coding–pulse code modulation, delta modulation, vocoders Introduction to cellular communication – CDMA, OFDM, MIMO, Introduction to digital modulation standards.

UNIT-3-(10 HOURS)

Digital signal modulation: Digital modulation – Amplitude-shift, Frequency-shift, Phase-shift, differential phase-shift, Quadrature phase-shift, Quadrature phase-shift, and Minimum-shift keying, Quadrature amplitude modulation.

UNIT-4-(10 HOURS)

Communication models: Communications channel and their Characteristics – Multipath effects, fading and diversity, models of Egli and Murphy, Time Division Multiple Access, Frequency Hopping spread spectrum.

UNIT-5-(10 HOURS)

Signal analysis: Receivers – super heterodyne systems, balanced and unbalanced mixers, frequency synthesizers, Link budget analysis, Expression for Bit Error Rate, analysis of repeater and transponder.

PROJECT WORK PHASE -I				
Course Code	**22DTC34**		**Credits**	**3**
Hours/Week (L-T-P)	**0-6-0**		**CIE Marks**	**100**
Total Hrs	**39**		**SEE Marks**	**-**
Exam Hrs	**3**		**Course Type**	**PROJ**

COURSE OUTCOMES

The individual student must identify a project Advisor in the third semester. The student, in consultation with their Advisor, will form a Thesis Committee that includes head of the department and domain expert. The progress of the project is evaluated based on a minimum of three reviews. The review committee may be constituted by the Head of the Department. A project report is required at the end of the semester. The project work is evaluated based on oral presentation and the project report jointly by external and internal examiners constituted by the Head of the Department.

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

SOCIETAL PROJECT				
Course Code	**22DTC35**		**Credits**	**3**
Hours/Week (L-T-P)	**0-6-0**		**CIE Marks**	**100**
Total Hrs	**-**		**SEE Marks**	**-**
Exam Hrs	**3**		**Course Type**	**SP**

Seminar is to be given by the student after the completion of a societal project chosen by the student. Topics for the projects can be from the aeronautical engineering and allied fields. The project can be based on either numerical or analytical solution or design or fully experimental; or a combination of these tasks.

COURSE ASSESSMENT METHOD

1. Internal Examiner shall carry out the evaluation for 100 marks.
2. External Examiner shall carry out the evaluation for 100 marks.
3. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
4. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

INTERNSHIP				
Course Code	**22DTCI36**		**Credits**	**6**
Hours/Week (L-T-P)	**6 Weeks**		**CIE Marks**	**50**
Total Hrs	**6 Weeks**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**INT**

COURSE OUTCOMES

1. Identify and define the problem for the project work
2. Apply the knowledge acquired to analyze and estimate the cost and time
3. Examine and use appropriate tools to solve the defined problem in a team
4. Develop an end product and prepare a technical report/paper

COURSE CONTENTS

A 6 weeks long internship course is to be carried out by the students. On completion of the internship, students shall prepare a report according to the guidelines and submit it to the concerned authority during their 3rd semester. The students should present their work and performance will be evaluated by the project committee and marks will be awarded.

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	2						3	3			3	3	3

PROFESSIONAL ELECTIVE III

FUNDAMENTAL OF TELEMETRY, TELECOMMAND AND TRANSPONDER				
Course Code	**22DTC321**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

12. Satellite communication and related technologies.
13. Overall control of satellites through collection, processing, and transmission of data.
14. Determination of the satellite's exact location through the reception, processing, and transmitting of ranging signals.
15. Understanding the basics of signal processing.
16. Proper control of satellite through the reception, processing, and implementation of commands transmitted from the ground.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Introduction: Fundamental of satellite communication, Mathematical Models for Communication Channels, Digital Communication System, Communication Channels and Their Characteristics, different modulation and multiplexing schemes.

UNIT-2-(08 HOURS)

Telemetry process: Satellite Telemetry, Tracking and Tele-command, Multiple Access Techniques Telemetry, Data Transmission, Methods of Modulation, Time Division and Frequency Division Multiplexing, FDMA, TDMA, CDMA and DAMA, Coding Schemes.

UNIT-3-(08 HOURS)

Communications and Telemetry: Satellite Packet Communications, Tracking and Telemetry. Doppler and Electro-Optical methods of tracking, Airborne Missile, Surface to air missile, missile tracking.

UNIT-4-(08 HOURS)

Signal Processing: Processing of Signal, Analog, continuous time, discrete time, non-linear, statistical signal processing, Data Acquisition and Reduction, Audio signal processing, Array processing, Feature extraction and image understanding.

UNIT-5-(08 HOURS)

Satellite communication: Introduction to satellite communication, low earth orbit, satellite constellation, medium earth orbit, Geostationary orbit, Molniya orbit, Frequency allocation for satellite systems: Radio Navigation satellite service, Meteorological satellite services, transponders.

SAFETY, HEALTH AND HAZARD MANAGEMENT				
Course Code	**22DTC322**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

17. Understand chemical safety standards, fire safety.
18. Handle toxic liquids & gases, explosives.
19. Understand the hazard management.
20. Understand warfare safety.
21. Understand health & environment safety.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Chemical Safety: Standards and regulations of chemical safety in Industries or Laboratories, Storage of hazardous chemicals, Compatibility and classification codes, Chemical risk analysis and Management.

UNIT-2-(08 HOURS)

Toxic and explosive handling: Fire triangle and Handling of Toxic materials, Industrial Gases and other gases, instructions for handling toxic materials, industrial standards, accident protocols, emergency measures.

UNIT-3-(08 HOURS)

Hazard Management: HAZOP and HAZAN techniques, Hazard in manufacture, Hazard prevention measures, Disposal of hazardous materials, segregation of solid, liquid and gaseous materials.

UNIT-4-(08 HOURS)

Warfare safety: Basic understanding of the warfare environment, Classifications of explosives based on hazards, Nuclear,biological and chemical warfare safety, various protocols, accident and emergency protocols at the warfare.

UNIT-5-(08 HOURS)

Health and environment safety: Need of awareness about human health and environment safety, assessment of human factors, Health & Environment safety, Nano materials safety (Toxicology study), radiation related safety protocols, case studies.

SYSTEM ENGINEERING AND ANALYSIS				
Course Code	**22DTC323**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

22. Understand the system design requirements, architecture, functional requirements.
23. Generate the system requirements documents as per the requirement analysis.
24. Understand the techniques of system design
25. Carry out the Supportability and producibility
26. Carry out the system reliability analysis.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Fundamentals of systems engineering: Fundamentals of systems engineering and system architecting of weapon system, system engineering. standards 15288, requirements analysis, functional analysis and allocation, preliminary system architecture.

UNIT-2-(08 HOURS)

Systems design and analysis: systems analysis, system design, and the basics of test and evaluation, Introduction to combat systems, System development phases (Conceiving, Designing, Implementing, and Operating)

UNIT-3-(08 HOURS)

Techniques of system design: Techniques of system design and assessment for operational feasibility, including reliability, maintainability, usability (including human factors and human performance).

UNIT-4-(08 HOURS)

More on system analysis: Various ways of evaluating system performance, Supportability and producibility, System cost assessment and effectiveness estimation, certification methods, Case studies.

UNIT-5-(07 HOURS)

Reliability analysis and management (basic tools and methods of reliability for developing complex systems including electronic components, mechanical components, and software), redundancy, graceful degradation, fault tolerance, MTBF.

TEXT BOOKS

5. Buede D.M.2: The Engineering Design of Systems: Models and Methods, Publisher: John Wiley & Sons Inc.
6. Defense Acquisition University Press fort Belvoir, Virginia:" Systems engineering fundamentals"
7. Charles S. Wasson: System Analysis Design and Development, Publisher: Wiley Series in System Engineering and Management.
8. Clifton R H: Principles of Planned Maintenance, Publisher: McGraw Hill, New York.

REFERENCE BOOKS

4. Clifton R H: Principles of Planned Maintenance, Publisher: McGraw Hill, New York.
5. Srinath L S: Reliability Engineering, Publisher: Affiliated East-West Press Limited, New Delhi,2002.
6. Dhillon B S: Engineering Maintainability, Publisher: Prentice Hall of India.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internal assessments for **30** Marks each.

Two Learning Activities for **10** Marks each.

Semester End Examination (SEE)

Semester end examination for 100 Marks

Program Outcomes – Articulation matrix														
PO	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PSO2**

TACTICAL BATTLEFIELD COMMUNICATION & ELECTRONIC

Course Code	22DTC324		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the nature of tactical battlefield communication
2. Calculate communication link performance
3. Calculate the requirements for interception of tactical communication
4. Calculate the requirements for emitter location, intercept and jamming of tactical comm. signals including weapon control link, UAV links, Cell phone links.
5. Use various tools to perform electronic warfare calculations

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Radiometry and Power Calculation : Signature generation, atmospheric effects. Radar ES operational use, radar/ Electronic support detection battle, quiet radar, jamming techniques & strategies, jamming of Synthetic aperture radar systems.

UNIT-2-(08 HOURS)

Introduction to Radar Waveform : Interception, Technology and operational characteristics of electronic warfare, Signal processing statics & analysis, statistics & noise, analogue & digital signal processing.

UNIT-3-(08 HOURS)

Decision Theory- Hypothesis testing, probabilities of false alarm and detection, Bayesian network and systems, differences between error probability and bit error rate, receiver operating.

UNIT-4-(07 HOURS)

Network Issues: UAV Payload/link Issues, cell phone issues, Intercept links, Frequency hopping and other LPI threats; Special techniques for jamming LPI signals

UNIT-5-(08 HOURS)

ECM / ECCM : Introduction to electronic counter measures and electronic counter-counter measures. Various aspects of counter measures, need for countermeasures, Electronic countermeasures against modern target tracking radars multiplatform-multisensor-multitarget tracking

ADVANCED ANALYTICAL TECHNIQUES				
Course Code	**22DTC325**		**Credits**	**03**
Hours/Week (L-T-P)	**2-0-2**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**PEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand different characterization techniques.
2. Apply appropriate analytical technique for a particular material organic/ inorganic/ nanomaterial/ polymer etc.
3. Understand the principle and working of chromatography.
4. Understand the principle and working of spectroscopy.
5. Understand the principle and working of XRD and SEM.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Instrumental Analysis: Qualitative analysis, predictive analytics, spatial data processing, text analytics, text search, streaming analytics, graph data processing, network analysis techniques and specialized analytical tools

UNIT-2-(08 HOURS)

Various techniques in instrumental analysis: Genesis of instrumental analysis, hyphenated techniques**,** Polymeric Techniques, Rheology Techniques, Molecular weight determination; Thermal Techniques: Thermo Gravimetry (TG), Differential Thermal Analysis (DTA), and Differential Scanning Calorimetry (DSC)

UNIT-3-(08 HOURS)

Chromatographic Techniques: Gas Chromatography (GC), High Performance Liquid Chromatography (HPLC), Thin Layer Chromatography (TLC), Ion chromatography, column chromatography, planar chromatography.

UNIT-4-(07 HOURS)

Spectroscopy: Ultra Violet-Visible Spectroscopy UV-VIS, Infra-Red spectroscopy (IR), Nuclear Magnetic Resonance (NMR), Mass spectroscopy, Atomic Absorption Spectroscopy (AAS), Atomic Emission Spectroscopy (AES) Acoustic spectroscopy, Glow Discharge Spectroscopy (GDS).

UNIT-5-(08 HOURS)

X-Ray Diffraction (XRD) and Scanning Electron Microscope techniques(SEM), Inverse reconstruction using electron-material interactive models, Photometric 3D SEM reconstruction from a four-quadrant detector, Sensitivity studies.

TEXT BOOKS

OPEN ELECTIVE I

SONAR SYSTEM ENGINEERING				
Course Code	**22DTC331**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Know the basic building blocks of a SONAR based system.
2. Have an in-depth knowledge on different types of signals that are used.
3. Know about the ambiguity function and its significance in radar signal processing.
4. Know the physics behind sound propagation in water and principle of operation of sonar.
5. Apply the knowledge acquired in this course in real time applications.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1 (8 HRS)

Introduction: Mathematical development and discussion of fundamental principles that pertain to the design and operation of passive and active sonar systems critical to naval operation. Sound propagation, target characteristics, counter measures.

UNIT -2 (8 HRS)

Theories of Sonar systems: Topics from complex aperture theory, array theory. Signal processing, Audio signal processing, Array processing, Feature extraction and image understanding, Data Transmission, Methods of Modulation.8 HRS

UNIT -3 (8 HRS)

Introduction to undersea warfare: Conventional and unconventional Seabed warfare, non-kinetic approaches such as law fare, unmanned underwater vehicles. **Engineering acoustics:** Underwater acoustics, ultrasonic, vibrations and dynamics.8 HRS

UNIT -4 (8 HRS)

Statistical techniques: Multiple Sinusoids Model, two-dimensional sinusoids model, Principles of optimal signal processing techniques for detecting signals in noise, maximum likelihood, Bayes risk.

UNIT -5 (7 HRS)

Probabilities and errors: Neyman-Pearson: errors of the second kind, power function and inductive behaviour, rate of missed detections, minimizing the rate of false alarms, min-max criteria and calculations of their associated error probabilities (ROC curves)

AIR INDEPENDENT PROPULTION AND BATTERIES				
Course Code	**22DTC332**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

27. Understand hybrid concepts
28. Understand hybrid vehicle control and analysis
29. Understand electric vehicle control and analysis
30. Understand electric propulsion components
31. Understand advanced storage devices

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Hybrid Concepts: Introduction to Hybrid Electric Vehicles, basic requirements, advantages and disadvantages, Impact of modern drive-trains on energy supplies, performance evaluation methods

UNIT-2-(08 HOURS)

Hybrid Vehicle Control And Analysis: Hybrid Electric Drive-trains: hybrid traction, various hybrid drive-train topologies, power flow control, fuel efficiency analysis, differences from the conventional types.

UNIT-3-(08 HOURS)

Electric Vehicle Control And Analysis: Electric Drive-trains: electric traction, electric drive-train topologies, power flow control in electric drive-train topologies, fuel efficiency analysis

UNIT-4-(08 HOURS)

Electric Propulsion Components: Electric Propulsion unit: electric components used in hybrid and electric vehicles, Configuration and control of DC Motor drives, Induction Motor drives, Permanent Magnet Motor drives, Switch Reluctance Motor drives, drive system efficiency

UNIT-5-(08 HOURS)

Advanced Storage Devices: Battery based energy storage and its analysis, Fuel Cell based energy storage and its analysis, Super Capacitor based energy storage and its analysis, Flywheel based energy storage and its analysis, Hybridization of different energy storage devices

TEXT BOOKS

3. Chris Mi, M. AbulMasrur, Hybrid Electric Vehicles: Principles and Applications with Practical Perspectives, Wiley
4. Literature / books suggested by respective course Lecturers

ACQUISITION, TRACKING & POINTING TECHNOLOGY				
Course Code	**22DTC333**		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

32. Understand the concepts and basic systems requirements tracking systems.
33. Understand the system configurations and critical component characteristics required in the design of stabilized pointing and tracking systems, along with an introduction to some more advanced concepts.
34. Understand the control system and algorithm techniques and practices commonly utilized in the design of tracking systems.
35. Understand counter measures.
36. Understand about Doppler and Electro-Optical methods of tracking.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Basics: Basic aspects of acquisition, fundamental concepts of tracking, pointing technology details, Military system requirements, Acquisition, tracking, and pointing (ATP) design for military systems.

UNIT-2-(08 HOURS)

Mathematical aspects: Review of mathematical techniques, Target tracking and related mathematics, SNR requirement, the Johnson criteria, probability of estimation, detection criteria, examples.

UNIT-3-(08 HOURS)

Algorithms: Need of algorithms, Tracking algorithms, track filters, multi target tracking, example problems, Algorithms for simple cases, methods to incorporate additional requirements to algorithms.

UNIT-4-(08 HOURS)

Counter measures: Various aspects of counter measures, need for counter measures, Electronic countermeasures against modern target tracking radars multiplatform-multi-sensor-multi target tracking.

UNIT-5-(08 HOURS)

Tracking methods: Different principles used in tracking methods, Doppler and Electro-Optical methods of tracking, other tracking methods, un conventional methods used and their advantages.

NAVAL OCEAN ANALYSIS AND PREDICTION				
Course Code	22DTC334		**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**03**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand and develop the Navy Ocean modeling and prediction program.
2. Understand the need to evaluate ocean models and prediction systems for operational and tactical applications.
3. Understand and predict environmental conditions in the coastal ocean.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1-(08 HOURS)

Introduction: Advanced knowledge of the Indian Navy ocean analysis, territory analysis, ocean currents, wind currents, effect of climatic changes on the oceans, prediction systems: NRL stennis, NOAA/NCEP

UNIT-2-(08 HOURS)

Modelling and data systems: Naval Ocean Modeling Program (NOMP), Ocean model evolution, Description of the Modelling and Prediction Capabilities, Shipboard model, acoustic model, Naval ocean data systems. anthropogenic climate drivers.

UNIT-3-(08 HOURS)

Assimilation of atmosphere: Atmospheric forcing systems, anthropogenic climate drivers, radiative forcing, data assimilation systems, cost function, 3D- Var, 4D-Var, Bayesian estimate, Analysis of data, numerical forecast model.

UNIT-4-(07 HOURS)

Interpolation and prediction: Collection of thermal currents data, Optimal Thermal Interpolation System (OTIS), Model assessments and verification, Ocean monitoring based on observing systems, Thermal Ocean Prediction Systems (TOPS).

UNIT-5-(08 HOURS)

Advanced concepts of atmosphere: Fundamental concepts in turbulence. The atmospheric planetary boundary layer, including surface layer, and bulk formula for estimating air-sea fluxes. The global ocean circulation prediction system, Shallow Water Analysis and Forecast System (SWAFS), Knowledge of ocean eddies.

TEXT BOOKS

1. Indian Navy: Ocean of opportunities (Defence Series Books), PRANAV ZOPE

UNMANNED AERIAL VEHICLE				
Course Code	**22DTC335**		**Credits**	**3**
Hours/Week (L-T-P)	**3-0-0**		**CIE Marks**	**50**
Total Hrs	**39**		**SEE Marks**	**50**
Exam Hrs	**3**		**Course Type**	**OEC**

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

6. To classify UAVs based on different parameters.
7. To demonstrate ability to design an efficient structure for an UAV of specific application.
8. To perform ground testing of UAVs.
9. To apply the knowledge gained on electronic intelligence and target designation for successful development of UAS.
10. To understand the basic concepts in the different types of navigation schemes for UAS.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics.
- Tutorial classes on topics covered.
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Introduction to uav: History of UAV –classification –basic terminology-models and prototypes –applications

UNIT -2- (08 HOURS)

Basics of airframe: Airframe –dynamics –modeling- structures –wing design- engines and its types-equipment, maintenance and management-control surfaces-specifications.

UNIT -3- (08 HOURS)

Development of uas system: System Development- Ground Testing-UAV component testing-Uav Sub-assembly and Sub- System Testing- Testing Complete UAV, Environmental testing – Testing Complete UAV-Control Station testing-Catapult Launch systems -System In flight Testing- Test sites-Test Crew training-Onsite preparation - System Certification.

UNIT -4- (08 HOURS)

Deployment of unmanned aerial system: Operational trails-network centric operations-Radar confusion-Missile Decoy-radio relay- Electronic Intelligence-Covert Reconnaissance and surveillance Target designation by laser, NBC contamination Monitoring-Long Range reconnaissance and strike- Aerial photography- Information services-communication relay- landmine detection and Destruction-other applications

UNIT -5- (08 HOURS)

Communication payloads and path planning: Payloads-Telemetry-tracking-Aerial photography, Frequency range – Commands- Control, FPV videos - Flight computer sensor-displays, RF modems, Simulation and ground testing, Trouble shooting, waypoints navigation and ground control software.

SEMESTER IV

PROJECT WORK PHASE-II				
Course Code	**22DTC41**		**Credits**	**18**
Hours/Week (L-T-P)	**0-8-0**		**CIE Marks**	**100**
Total Hrs	**50**		**SEE Marks**	**100**
Exam Hrs	**3**		**Course Type**	**Project**

COURSE OUTCOMES

1. Project work phase-II: 16-week duration during 4^{th} semester. Evaluation shall be done by the committee constituted comprising of HoD as Chairman, Guide and Senior faculty of the department.
2. Project Evaluation: Evaluation shall be taken up at the end of 4^{th} semester. Project work evaluation and Viva-Voce examination shall conducted
3. Project evaluation:
    a. Internal Examiner shall carry out the evaluation for 50 marks.
    b. External Examiner shall carry out the evaluation for 50 marks.
    c. The average of marks allotted by the internal and external examiner shall be the final marks of the project evaluation.
    d. Viva-Voce examination of Project work shall be conducted jointly by Internal and External examiner for 100 marks.

An Autonomous Institution

Department of Information Science and Engineering

Curriculum Handbook for M.Tech – Data Science

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Vision

To build a strong research and teaching environment in the field of Information Technology to meet the ever evolving global needs and to equip students with the latest knowledge, skills and practical orientation to face challenges in IT profession.

Mission

1. To offer comprehensive educational programs in the field of Information Technology producing highly accomplished graduates.
2. To inculcate among the students, the culture of research and innovation.
3. To encourage students to participate in co-curricular and extra-curricular activities leading to enhancement of their social and professional skills.

Programme Education Objectives (PEOs)

PEO-1. Graduate will have successful professional career in data science and allied fields with in-depth knowledge and practical/interpersonal skills.

PEO-2. Graduate undertakes research work or pursues higher studies by acquiring in depth knowledge in data engineering and allied fields.

Programme Outcomes (POs)

PO-1	An ability to independently carry out research /investigation and development work to solve practical problems
PO-2	An ability to write and present a substantial technical report/document
PO-3	Students should be able to demonstrate a degree of mastery over the area as per thespecialization of the program. The mastery should be at a level higher than therequirements in the appropriate bachelor program
PO-4	Conceptualize and solve data engineering problems using Mathematical, Statistical and Machine Learning concepts to arrive at feasible and optimal solutions for societal benefits.
PO-5	Use data analytics tool and technologies to analyze business models and solve real world problems.
PO-6	Inculcate professional ethics, intellectual integrity, understanding problems of others and contribution to the development of the society.

Process of Defining Vision and Mission of the Department

Developing strong vision and mission statements will help stakeholders of the college to attain their respective goals.

The process of defining vision and mission statements for department was started with formation of Program Assessment Committee with Head of the Department, being the chair person for the entire process.

Committee comprises of

- All faculty members.
- Distinguished students of 1nd &2nd years.

Functionality

- Formulate few Vision & Mission Statements
- Refine selected Vision and Mission statement according to the suggestions of Departmental Advisory Committee

Department Advisory Committee comprising of

- Distinguished academicians
- Experts from industry
- Alumni
- Dean- Academic
- Senior faculty members
- Distinguished students from final year

Department Advisory Committee Functionalities

- Formulate few Vision & Mission Statements by program assessment committee.
- Presented in the advisory committee for suggestions.
- Refine selected Vision and Mission according to the suggestions of advisory committee.
- Finalize the Vision & Mission statements in consultation with departmental advisory committee.

Process used for establishing the PEOs

Program Coordinator, PAC and DAC are involved in establishing the PEOs.

The process of establishing PEOs are as follows:

- PAC will refer the guidelines of NBA while establishing PEOs.
- PAC will formulate few PEOs which are in line with departmental mission statement.
- PAC will discuss about the attainment levels in terms of percentage.
- PAC will refer NASCOM and Government reports for further refinement of PEOs
- Formulated PEOs are Presented to DAC
- DAC will go through the PEO Statements, approve/suggest modifications.
- PAC will refine the selected PEOs according to the suggestions given by the DAC.
- Finalized PEOs with their target attainment level are presented to IQAC
- PAC will publish finalized PEO statements.

Establish consistency of the PEOs with the Mission of the department.

Mission **PEO**	**Comprehensive Educational Programs**	**Research and Innovation**	**Co-curricular and Extra-curricular Activities**
PEO1	**X**		**X**
PEO2	**X**	**X**	**X**

Our Mission statement can be disseminated into three parts. They are Comprehensive Educational Programs, Research/Innovation and Co-curricular activities.

PEO 1 is about professional career which can be accomplished through comprehensive education programs.

PEO 2 is about higher studies and research, which can be accomplished through comprehensive education and research& innovation.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Department of Information Science and Engineering
M. Tech Data Science
SEMESTER I

Bridge Course: (Two weeks from the commencement of the semester)

1. Probability Theory
2. Calculus
3. Data Mining
4. Python Programming
5. Essential Computer Science concepts

Sl. no.	Subject Code	Subject Name	Teaching Hours/Week			Credits
			L	T	P/S	
1	20DS11	Introduction to Data Management	4	0	0	4
2	20DS12	Statistics for Data Science	4	0	0	4
3	20DS13	Machine Learning- I	4	0	0	4
4	20DS14	Neural Networks	3	0	0	3
5	20DSE15X	Programme Elective- A	4	0	0	4
6	20DSL16	Data Analytics Lab	0	0	4	2
7	20DS17	Linear Algebra and Optimization	4	0	0	4
					Total	25

Program Elective- A

	Subject Code	Subject
Elective - A	20DSE151	IoT Analytics
	20DSE152	Time Series Analysis and Forecasting
	20DSE153	Computer Vision

			L	T	P/S	
1	20DSP41	Project Phase 2	0	0	40	20
					Total	20

SEMESTER I

Semester: I Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Introduction to Data Management	**Course Code:20DS11**
L-T-P:4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Database Management Systems
- Good programming skills

Course Outcomes:

Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Describe the need for managing/storing data and identify the value and relative importance of data management.	**L2**
CO2	Describe fundamentals of Data Management techniques suitable for Enterprise Applications.	**L2**
CO3	Apply Data Management Solution for Internet Applications.	**L3**
CO4	Describe various data analysis techniques in the internet Context.	**L2**

Teaching Methodology:

- Blackboard teaching and PPT
- Programming Assignment

Assessment Methods

- Open Book Test for 10 Marks.
- Assignment evaluation for 10 Marks on basis of Rubrics
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping

	PO1	PO2	PO3	PO4	PO5	PO6
CO1	1		3		1	
CO2	1		2		3	
CO3	2		2	1	2	2
CO4	1		2		2	
20DS11	1		2	1	2	2

COURSE CONTENT

Unit – I	10 Hrs
Introduction to Data Science and Class Logistics/Overview, Statistical Inference and Exploratory Data Analysis, Principles of Data Management, SQL for Data Science: SQL Basics, SQL Joins and aggregates, Grouping and query evaluation, SQL Sub-queries, Key Principles of RDBMS	
Unit – II	**10 Hrs**
Data Models, Data Warehousing, OLAP, Data Storage and Indexing , Query Optimization and Cost Estimation, Datalog, E/R Diagrams and Constraints, Design Theory, BCNF	
Unit – III	**8 Hrs**
Data Management Solutions for Enterprise Applications: Introduction to Transactions, Transaction Implementations, Transaction Model, Database Concurrency Control Protocols, Transaction Failures and Recovery, Database Recovery Protocols.	
Unit – IV	**12 Hrs**
Parallel Databases: Introduction to NoSQL databases, comparison of Apache Cassandra, MongoDB, Apache Hive . Fundamentals of MongoDB: connecting to a MongoDB Cluster, using MongoDB Compass, MongoDB's document storage model and principles of flexible schema design, basic architecture of MongoDB clusters, CRUD operations. (Text Book-3- Chapter1, 2, 5))	
Unit – V	**12 Hrs**
Data Management Solution for Internet Applications: Google's Application Stack: Chubby Lock Service, BigTable Data Store, and Google File System; Yahoo's key-value store: PNUTS; Amazon's key-value store: Dynamo;	

Text Books:

1. Database Systems: the Complete Handbook, by Hector Garcia-Molina, Jennifer Widom, and Jeffrey Ullman. Second edition.
2. Fundamentals of database systems by Elsmasri and Navathe
3. Seven NoSQL Databases in a Week: Get up and running with the fundamentals, By Xun (Brian) Wu, Sudarshan Kadambi, Devram Kandhare, Aaron Ploetz, Packt Publishers

Reference Books/resources:

1. Database management systems by Raghu Ramakrishnan and Johannes Gehrke.
2. Foundations of database systems by Abiteboul, Hull and Vianu
3. “Transactional Information Systems” by Gerhard WEIKUM and Gottfried VOSSEN, publisher Morgan Kaufmann.
4. Programming Hive: Data Warehouse and Query Language for Hadoop By Edward Capriolo, Dean Wampler, Jason Rutherglen, O’Reilly
5. https://ai.google/research/pubs/pub27897
6. Fay Chang, Jeffrey Dean, Sanjay Ghemawat, Wilson C. Hsieh, Deborah A. Wallach Mike Burrows, Tushar Chandra, Andrew Fikes, Robert E. Gruber, Bigtable: A Distributed Storage System for Structured Data, Google, Inc. OSDI 2006
7. Brian F. Cooper et al., “ PNUTS: Yahoo!'s hosted data serving platform”, Journal Proceedings of the VLDB Endowment VLDB Endowment Hompage archive Volume 1 Issue 2, August 2008 Pages 1277-1288
8. Giuseppe DeCandia et al. , “Dynamo: Amazon’s Highly Available Key-value Store”, Proceeding SOSP '07 Proceedings of twenty-first ACM SIGOPS symposium on Operating systems principles,Pages 205-220 Stevenson, Washington, USA — October 14 - 17, 2007

Semester: I Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Statistics for Data Science	**Course Code:20DS12**
L-T-P: 4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Good understanding of engineering mathematics (especially Algebra and Arithmetic).
- Inferring conclusions from two dimensional graphs.

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
CO1	Describe the basic and intermediate concepts of probability, statistics, and distributions.	**L2**
CO2	Apply the applications of discrete probability distributions.	**L3**
CO3	Analyze the inference about population statistic based on the parameters of sample population.	**L3**
CO4	Analyse hypothesis to accept/reject alternative hypothesis based on statistical evidence available.	**L3**
CO5	Apply ANOVA and distribution-free procedures on population of any size	**L3**

Teaching Methodology:

- Black Board Teaching / Power Point Presentation.
- Seminar

Assessment Methods:

- Rubrics to evaluate Seminar
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping

	PO1	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**
CO1	1		2	2		
CO2	2			2		1
CO3	2		2	3		
CO4	3		3	3		2
CO5	2		3	3		2
20DS12	2		2	3		2

COURSE CONTENT

UNIT – I **Probability theory**	**10 hours**
Why Study Statistics?, Modern Statistics, Statistics and Engineering, two Basic Concepts—Population and Sample, A Case Study: Visually Inspecting Data to Improve Product Quality, Pareto Diagrams and Dot Diagrams, Frequency Distributions, Graphs of Frequency Distributions, Stem-and-Leaf Displays, Descriptive Measures, Quartiles and Percentiles, calculation of X bar and S, Problems with aggregating data, Sample Spaces and Events, Counting, Probability, The Axioms of Probability, Some Elementary Theorems, Conditional Probability, Bayes' Theorem.	
UNIT – II **Distributions/ Bootstrap**	**10 hours**
Random Variables, The Binomial Distribution, The Hypergeometric Distribution, The Mean and the Variance of a Probability Distribution, Chebyshev's Theorem, The Poisson Distribution and Rare Events, Poisson Processes, The Geometric and Negative, Binomial Distribution, The Multinomial Distribution, Simulation, Bootstrap: Introduction and the idea, Theoretical Support, Primary applications of bootstrap, Some real data Example (Text 1 and Text 3)	
UNIT – III **Probability Densities and Sampling Distributions**	**12 hours**
Continuous Random Variables, The Normal Distribution, The Normal Approximation to the Binomial Distribution, Other Probability Densities, The Uniform Distribution, The Log-Normal Distribution, The Gamma Distribution, The Beta Distribution, The Weibull Distribution, Continuous Random Variables, The Normal Approximation to the Binomial Distribution (Text 1)	
UNIT – IV **Inferences concerning mean and variance**	**10 hours**
Statistical Approaches to Making, Generalizations, Point Estimation, Interval Estimation, Maximum Likelihood Estimation, Tests of Hypotheses, Null Hypotheses and Tests of Hypotheses, Hypotheses Concerning One Mean, The Relation between Tests and Confidence Intervals, Power, Sample Size, and Operating Characteristic Curve, The Estimation of Variances, Hypotheses Concerning One Variance, Hypotheses Concerning Two Variances. (Text 1)	
UNIT – V **Analysis of Variance/ Distribution free procedures**	**10 hours**
Single-Factor ANOVA, Multiple Comparisons in ANOVA, More on Single-Factor ANOVA, Introduction Two-Factor ANOVA with Kij=1, Two-Factor ANOVA with Kij>1, Three-Factor ANOVA. Distribution free procedures: Wilcoxon single rank test, distribution-free confidence intervals, distribution-free ANOVA (Text 2)

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Semester: I Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Machine Learning-I	**Course Code:20DS13**
L-T-P:4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Prerequisite:

Basics of probability, Engineering Mathematics

Course Outcomes:

Students will be able to

CO's	**Course Learning Outcomes**	**BL**
CO1	Explain concept learning and Feature engineering.	**L2**
CO2	Preprocess the input data to make it suitable for machine learning algorithms to consume.	**L3**
CO3	Construct a decision tree classifier to classify unknown instances.	**L3**
CO4	Apply conditional probability and Bayes theorem to analyze dependent events.	**L3**
CO5	Apply regression analysis to analyze/draw inferences from time series data	**L3**

Teaching Methodology:

- Black board teaching and Power Point presentations
- Programming Assignment
- Open Book Test

Assessment Methods:

- Open Book Test for 10 Marks.
- Assignment (10M), evaluated on the basis of Rubrics.
- Three internals, 30Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of100 Marks will be conducted and will be evaluatedfor50Marks.

Course Content

Unit – I	08 Hrs
Concept Learning: Learning problems, Designing a learning system, perspectives and issues in Machine Learning. Concept Learning Task, Concept Learning as search. (TextBook-1) **Feature Engineering for Machine Learning:** Machine Learning Pipeline, Binarization, Quantization/Binning, Log Transformation, Feature Scaling/Normalization, Interaction features, and feature selection	
Unit – II	**10 Hrs**
Text Data: Flattening, Filtering and chunking: Bag-of-X: Turning Natural Text into Flat Vectors, Filtering for cleaner features, Atoms of Meaning: From words to n-Grams to Phrases. (TextBook3) **Categorical variables:** Encoding categorical variables, dealing with large categorical variables: feature hashing, Bin counting **Dimensionality reduction:** Intuition, Derivation, PCA in Action, Whitening and ZCA, Considerations and limitations of PCA, Singular value decomposition, PCA as special case for SVD (TextBook3, Notes)	
Unit – III	**12 Hrs**
Decision Tree Learning: Decision Trees- Basic algorithm (ID3), Hypothesis search and Inductive bias, Entropy and Gain calculations, Issues in Decision Tree Learning – Overfitting, Solutions to overfitting, Dealing with continuous values, Improving performance: Bagging and Boosting, Adaboost - combining weak learners, Adaboost - simple problems. Random Forests: Methods for Growing the Trees, Choose m attributes randomly, compute their information gains, and choose the attribute with the largest gain to split, Generalization Error of Random Forests, Random Forest Regression	
Unit – IV	**12 Hrs**
Bayesian Learning: Bayes theorem – An Example; Bayes theorem and concept learning: Brute-Force Bayes Concept Learning, MAP Learning and Consistent Learners , Maximum Likelihood Estimation, Bayes optimal classifier, Naive Bayes classifier and Bayesian Belief Network- Conditional Independence, Representation, Inference, Learning Bayesian Belief Networks	
Unit – V	**10 Hrs**
Regression Analysis: Linear Regression, Multiple Linear Regression, Logistic Regression, Hypothesis space and logistic regression, Bias-Variance trade-offs in Regression, Case study-Boston Housing dataset	

Text Books:

1. Tom M. Mitchell, "Machine Learning", McGraw-Hill Education (INDIAN EDITION), 2013.
2. Introduction to Data Mining-Pang-NingTan, Michael Steinbach,Vipin Kumar, Pearson Education, 2007.
3. Amanda Casari, Alice Zheng, "Feature Engineering for Machine Learning", O'Reilly, 2018.

Additional Reference Book:

1. Gareth James, Daniela Witten, Trevor Hastie and Robert Tibshirani, "An Introduction to Statistical Learning: with Applications in R", Springer, 2016.
2. Trevor Hastie, Robert Tibshirani and Jerome Friedman, "The Elements of Statistical Learning: Data Mining, Inference, and Prediction", Springer, 2016
3. Andreas Muller, "Introduction to Machine Learning with Python: A Guide for Data Scientists", Shroff/O'Reilly; First edition (2016)
4. Introduction to Data Mining-Pang-NingTan, Michael Steinbach,Vipin Kumar, Pearson Education, 2007.

Online Materials:

1. https://nptel.ac.in/courses/106106139/
2. Andrew NG's online Course

Programming Assignments: (Sample)

1) Implement the CANDIDATE – ELIMINATION algorithm. Show how it is used to learn from training examples and hypothesize new instances in Version Space.
2) Implement the FIND–S algorithm. Show how it can be used to classify new instances of target concepts. Run the experiments to deduce instances and hypothesis consistently.
3) Implement the ID3 algorithm for learning Boolean–valued functions for classifying the training examples by searching through the space of a Decision Tree.
4) Design and implement the Back-propagation algorithm by applying it to a learning task involving an application like FACE RECOGNITION.
5) Design and implement Naïve Bayes Algorithm for learning and classifying TEXT DOCUMENTS.

Semester: I Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Neural Networks	**Course Code:20DS14**
L-T-P:3-0-0	**Credits:** 03
Total Contact Hours:39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Data mining

Course Outcomes:

Students will be able to

CO's	**Course Learning Outcomes**	**BL**
CO1	Understand the biological structure of brain and neuron	**L2**
CO2	Understand the learning process and analyse the working of single layer perceptron mode	**L2**
CO3	Explore and Analyse the functioning of Single layer perceptron with single category and multi category models.	**L3**
CO4	Understand Multilayer feed-forward network, the back propagation algorithm and explore hyper-parameters for analysing performance of NN	**L3**

Teaching Methodology:

- Blackboard teaching and PPT
- Executable Codes/ Live Demonstration
- Programming Assignment

Assessment Methods

- Online certification from Course-era/Edx, etc. for 10 marks
- Programming assignments evaluated using rubrics for 10 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

COURSE CONTENT

Unit – I	08 Hrs
Artificial Neural Systems: Preliminaries, Neural Computation: Some Examples and Applications,Classifiers, Approximators, and Autonomous Drivers, Simple Memory and Restoration of Patterns, Optimizing , NetworksClustering and Feature Detecting Networks **Fundamental Concepts and Models of Artificial:** Neural Systems, Biological Neurons and Their Artificial Models, Biological Neuron, McCulloch-Pitts Neuron Model, Neuron Modeling for Artificial Neural Systems, Models of Artificial Neural Networks, Feedforward Network, Feedback Network	
Unit – II	**08 Hrs**
Fundamental Concepts and Models of Artificial: Neural Processing, Learning and Adaptation, Learning as Approximation or Equilibria Encoding, Supervised and Unsupervised Learning, Neural Network Learning Rules, Hebbian Learning Rule, Perceptron Learning Rule, Delta Learning Rule, Widrow-Hoff Learning Rule, Correlation Learning Rule, Winner-Take-All Learning Rule, Outstar Learning Rule **Single-Layer Perceptron Classifiers:** Classification Model, Features, and Decision Regions, Discriminant Functions	
Unit – III	**08 Hrs**
Linear Machine and Minimum Distance Classification, Nonparametric Training Concept, Training and Classification Using the Discrete Perceptron, Algorithm and Example, Single-Layer Continuous Perceptron Networks for Linearly Separable Classifications, Multicategory Single-Layer Perceptron Networks	
Unit – IV	**08 Hrs**
Multilayer Feedforward Networks: Linearly Nonseparable Pattern Classification, Delta Learning Rule for Multiperceptron Layer, Generalized Delta Learning Rule, Feedforward Recall and Error Back-Propagation Training, Feedforward Recall, Error Back-Propagation Training, Example of Error Back-Propagation Training, Training Errors, Multilayer Feedforward Networks as Universal Approximators	
Unit – V	**07 Hrs**
Learning Factors: Initial Weights, Cumulative Weight Adjustment versus, Incremental Updating, Steepness of the Activation Function, Learning Constant, Momentum Method, Network Architectures Versus Data Representation, Necessary Number of Hidden Neurons, Classifying and Expert Layered Networks, Character Recognition Application, Expert Systems Applications, Learning Time Sequences, Functional Link Networks

20DSE151	1	1	2	3	3	1

COURSE CONTENT

Unit – I	10 Hrs
Defining IoT Analytics and Challenges, The situation, Defining IoT analytics, IoT analytics challenges, Business value concerns, IoT Devices and Networking Protocols, IoT devices, The wild world of IoT devices, Sensor types, Networking basics, IoT networking connectivity protocols, Connectivity protocols (when the available power is limited- Bluetooth Low Energy, 6LoWPAN, ZigBee, NFC, Sigfox), Connectivity protocols (when power is not a problem- Wi-Fi	
Unit – II	**14 Hrs**
IoT networking data messaging protocols, Message Queue Telemetry Transport (MQTT), Hyper-Text Transport Protocol (HTTP), Constrained Application Protocol (CoAP), Data Distribution Service (DDS), Hands-on on CoAP, MQTT, and HTTP, Websocket, Building elastic analytics, Elastic analytics concepts, Designing for scale, Cloud security and analytics, The AWS overview, AWS key concepts, AWS key core services, AWS key services for IoT analytics, The AWS CloudFormation overview, The AWS Virtual Private Cloud (VPC) setup walk-through, Creating a key pair for the NAT and bastion instances, Creating an S3 bucket to store data, Creating a VPC for IoT Analytics, How to terminate and clean up the environment, Collecting All That Data - Strategies and Techniques, Designing data processing for analytics	
Unit – III	**11 Hrs**
Microsoft Azure overview, Azure Data Lake Store, Azure Analysis Services, HDInsight, The ThingWorx overview, ThingWorx Core, ThingWorx Connection Services, ThingWorx Edge, ThingWorx concepts, Hadoop, Amazon S3, Apache Spark for data processing, Lambda Architectures, Handling change, Exploring and visualizing data	
Unit – IV	**7 Hrs**
The Tableau overview, Techniques to understand data quality, Basic time series analysis, Get to know categories in the data, Solving industry-specific analysis problems, Decorating Your Data - Adding External Datasets to Innovate, Adding internal datasets, Adding external datasets, External datasets - geography, External datasets - demographic, External datasets - economic, Communicating with Others - Visualization and Dashboarding, Common mistakes when designing visuals, The Hierarchy of Questions method, Designing visual analysis for IoT data, Creating a dashboard with Tableau, Creating and visualizing alerts, Applying Geospatial Analytics to IoT Data, Why do you need geospatial analytics for IoT?, The basics of geospatial analysis, Vector-based methods, Raster-based methods, Storing geospatial data, Processing geospatial data, Forecasting, Edge computing, Fogg Computing	
Unit – V	**10 Hrs**
Security for IoT , Common challenges in OT security, formal risk analysis structures: OTAVE and FAIR, Hands on - Open source IoT Platforms: - Zetta, Kaa, Node-RED, Thinger

20DSE152	2	1	2	3	1	1

COURSE CONTENT

Unit – I	10 Hrs
An Introduction to Forecasting: Forecasting and Data. Forecasting Methods. Errors in Forecasting. Choosing a Forecasting Technique. An Overview of Quantitative Forecasting Techniques. **REGRESSION ANALYSIS:** The Simple Linear Regression Model. The Least Squares Point Estimates. Point Estimates and Point Predictions. Model Assumptions and the Standard Error. Testing the Significance of the Slope and y Intercept. Confidence and Prediction Intervals. Simple Coefficients of Determination and Correlation. An F Test for the Model.	
Unit – II	**10 Hrs**
Multiple Linear Regressions: The Linear Regression Model. The Least Squares Estimates, and Point Estimation and Prediction. The Mean Square Error and the Standard Error. Model Utility: R2, Adjusted R2, and the Overall F Test. **Model Building and Residual Analysis:** Model Building and the Effects of Multicollinearity. Residual Analysis in Simple Regression. Residual Analysis in Multiple Regressions. Diagnostics for Detecting Outlying and Influential Observations.	
Unit – III	**12 Hrs**
Time Series Regression: Modelling Trend by Using Polynomial Functions. Detecting Autocorrelation. Types of Seasonal Variation. Modelling Seasonal Variation by Using Dummy Variables and Trigonometric Functions. Growth Curves. Handling First-Order Autocorrelation. **Decomposition Methods:** Multiplicative Decomposition. Additive Decomposition. The X-12-ARIMA Seasonal Adjustment Method. **Exponential Smoothing:** Simple Exponential Smoothing. Tracking Signals. Holt's Trend Corrected Exponential Smoothing. Holt-Winters Methods. Damped Trends and Other Exponential	
Unit – IV	**10 Hrs**
Non-seasonal Box-Jenkins Modelling and Their Tentative Identification: Stationary and Nonstationary Time Series. The Sample Autocorrelation and Partial Autocorrelation Functions: The SAC and SPAC. An Introduction to Non-seasonal Modelling and Forecasting. Tentative Identification of Non-seasonal Box-Jenkins Models. **Estimation, Diagnostic Checking, and Forecasting for Non-seasonal Box-Jenkins Models:** Estimation. Diagnostic Checking. Forecasting. A Case Study. Box-Jenkins Implementation of Exponential Smoothing.	
Unit – V	**10 Hrs**
Box-Jenkins Seasonal Modelling: Transforming a Seasonal Time Series into a Stationary Time Series. Examples of Seasonal Modelling and Forecasting. Box-Jenkins Error Term Models in Time Series Regression. **Advanced Box-Jenkins Modelling:** The General Seasonal Model and Guidelines for Tentative Identification. Intervention Models. A Procedure for Building a Transfer Function Model **Causality in time series:** Granger causality. Hypothesis testing on rational expectations. Hypothesis testing on market efficiency.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Semester: I Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Elective
Course Title: Computer Vision	**Course Code:20DSE153**
L-T-P: 4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Linear Algebra
- Basic Python programming

Course Outcomes:
Students will be able to:

Cos	Course Learning Outcomes	BL
CO1	Identify image processing techniques to solve real world applications	**L2**
CO2	Apply deep learning methods on images to solve high complexity problems	**L3**
CO3	Develop a technique for image feature extraction	**L3**
CO4	Design techniques for image analysis and classification	**L3**

Teaching Methodology:

- Black Board Teaching / Power Point Presentation
- Mini-projects using the concepts of deep learning

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for Min-Project for 20 marks.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Cos	PO1	PO2	PO3	PO4	PO5	PO6
CO1	**2**		**2**	**1**	**1**	
CO2	**2**		**3**	**3**	**1**	
CO3	**3**		**3**	**2**		
CO4	**2**	**2**	**3**	**3**		
20DSE153	**2**	**2**	**3**	**2**	**1**	

COURSE CONTENT

UNIT – I	10hrs
Introduction to Computer Vision: Image Formation and Radiometry, Geometric Transformation, Geometric Camera Models, Image Reconstruction from a Series of Projections	
UNIT – II	11 hrs
Image Processing Concepts: Fundamentals of Image Processing, Image Transforms, Image Filtering, Colour Image Processing, Mathematical Morphology, Image Segmentation	
UNIT – III	10 hrs
Image Descriptors and Features: Texture Descriptors, Colour Feature, Edge Detection, Object Boundary and Shape Representations, Interest or Corner Point Detectors, Histogram of Oriented Gradients (HOG), Scale Invariant Feature Transform (SIFT), Speeded up Robust Features (SURF), Saliency	
UNIT – IV	11 hrs
Recognition: Fundamental Pattern Recognition Concepts: Introduction to Pattern Recognition, Linear Regression, Basic Concepts of Decision Functions, Elementary Statistical Decision Theory, Gaussian Classifier, Parameter Estimation, Clustering for Knowledge Representation, Dimension Reduction, Template Matching, Artificial Neural Network (ANN) for Pattern Classification, Convolutional Neural Networks (CNNs), Autoencoder	
UNIT – V	10 hrs
Applications of Computer Vision: Machine Learning Algorithms and their Applications in Medical Image Segmentation, Motion Estimation and Object Tracking, Face and Facial Expression Recognition, Gesture Recognition, Image Fusion, Programming Examples	

Text books:

1. **Computer Vision and Image Processing, Fundamentals and Applications, By Manas Kamal Bhuyan**
2. **Computer Vision: Algorithms and Applications, Richard Szeliski**
3. **Handbook of Image and video processing by A L Bovik**

Reference book:

1. **Image processing and computer vision by Milan Sonka**
2. **Digital image processing by Chanda and Dutta Majumdar**

Semester: I Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Data Analytics Lab	**Course Code:20DSL16**
L-T-P:0-0-4	**Credits:** 02
Total Contact Hours:26hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Basic Python Programming,
- Machine learning
- Fundamentals of Probability and Statistics

Course Outcomes:

Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Describe the commands and set up the programming environment of Python, Numpy and Pandas	**L2**
CO2	Apply machine learning concepts to analyze real world problems using Data Analysis.	**L3**
CO3	Apply probability and statistical techniques to solve problems of moderate complexity.	**L3**
CO4	Analyze large data sets to derive interesting inferences.	**L4**

Teaching Methodology:

- Blackboard teaching and PPT
- Executables
- Programming Assignment

Assessment Methods

- Program Evaluation on the basis of Rubrics.
- Two internals, 20 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 50 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping

	PO1	PO2	PO3	PO4	PO5	PO6

CO3	3	2	2	3	1	2
CO4	3	1	3	2	3	2
20DSL16	3	2	2	3	1	2

COURSE CONTENT

Program No.	Domain	Assignment
1	Basic Python	The number of birds banded at a series of sampling sites has been counted by your field crew and entered into the following list. The first item in each sublist is an alphanumeric code for the site and the second value is the number of birds banded. Cut and paste the list into your assignment and then answer the following questions by printing them to the screen. **data = [['A1', 28], ['A2', 32], ['A3', 1], ['A4', 0], ['A5', 10], ['A6', 22], ['A7', 30], ['A8', 19], ['B1', 145], ['B2', 27], ['B3', 36], ['B4', 25], ['B5', 9], ['B6', 38], ['B7', 21], ['B8', 12], ['C1', 122], ['C2', 87], ['C3', 36], ['C4', 3], ['D1', 0], ['D2', 5], ['D3', 55], ['D4', 62], ['D5', 98], ['D6', 32]]** 1. How many sites are there? 2. How many birds were counted at the 7th site? 3. How many birds were counted at the last site? 4. What is the total number of birds counted across all sites? 5. What is the average number of birds seen on a site? 6. What is the total number of birds counted on sites with codes beginning with C?
2.	Basic Python	Dr. Granger is interested in studying the relationship between the length of house-elves' ears and aspects of their DNA. She has obtained DNA samples and ear measurements from a small group of house-elves to conduct a preliminary analysis. You are supposed to conduct the analysis for her. She has placed the file on the web for you to download. Write a Python script that: 1. Imports the data into a data structure of your choice 2. Loops over the rows in the dataset 3. For each row in the dataset checks to see if the ear length is large (>10 cm) or small (<=10 cm) and determines the GC-content of the DNA sequence (i.e., the percentage of bases that are either G or C) 4. Stores this information in a table where the first column has the ID for the individual, the second column contains the string 'large' or the string 'small' depending on the size of the individuals ears, and the third column contains the GC content of the DNA sequence. 5. Prints the average GC-content for both large-eared elves and small-eared elves to the screen. 6. Exports the table of individual level GC values to a CSV (comma delimited text) file titled grangers_analysis.csv.
3.	Basic Exploratory Data Analysis	Measurements of electric power consumption in one household with a one-minute sampling rate over a period of almost 4 years. Different electrical quantities and some sub-metering values are available. Dataset: Individual household electric power consumption Data SetElectric power consumption https://github.com/mGalarnyk/datasciencecoursera/blob/master/4_Exploratory_Data_Analysis/project1/README.md Perform the following: 1. Load the data 2. Subset the data from the dates 2007-02-01 and 2007-02-02. 3. Create a histogram 4. Create a Time series 5. Create a plot for sub metering 6. Create multiple plot

4.	**Decision Tree**	Binary Decision Trees: One very interesting application area of machine learning is in making medical diagnoses. **Objective: To train and test a binary decision using zoo data available at** UCI Zoo Data Set **DataSet:** UCI Zoo Data Set. Information about the algorithm is available at https://www.python-course.eu/Decision_Trees.php
5	Linear Regression with One variable	**Objective: Implement linear regression with one variable to predict profits for a food truck.** Data Set: https://searchcode.com/codesearch/view/5404318/# Suppose you are the CEO of a restaurant franchise and are considering different cities for opening a new outlet. The chain already has trucks in various cities and you have data for profits and populations from the cities.You would like to use this data to help you select which city to expand to next.The file ex1data1.txt contains the dataset for our linear regression problem. The first column is the population of a city and the second column isthe profitt of a food truck in that city. A negative value for profitt indicates aloss.
6	**linear regression with multiple variables**	**Objective: Implement linear regression with multiple variables to predict the prices of houses.** Data Set: https://searchcode.com/codesearch/view/6577026/ Suppose you are selling your house and you want to know what a good market price would be. One way to do this is to first collect information on recent houses sold and make a model of housing prices. Thefile ex1data2.txt contains a training set of housing prices in Port-land, Oregon. The first column is the size of the house (in square feet), the second column is the number of bedrooms, and the third column is the price of the house.
7	**Logistic Regression**	**Objective: Build a logistic regression model to predict whether a student gets admitted into a university.** Dataset: http://en.pudn.com/Download/item/id/2546378.html Suppose that you are the administrator of a university department and you want to determine each applicant's chance of admission based on their results on two exams. You have historical data from previous applicants that you can use as a training set for logistic regression. For each training example, you have the applicant's scores on two exams and the admissions decision. Your task is to build a classification model that estimates an applicant's probability of admission based the scores from those two exams. Implement the following: 1. **Visualize the data.** 2. **Implement Sigmoid function** 3. Implement the cost function and gradient for logistic regression 4. Evaluate Logistic Regression 5. Predict the results
8	**Support Vector Machine**	**Objective:** To model a classifier for predicting whether a patient is suffering from any heart disease or not. **Data Set:**https://archive.ics.uci.edu/ml/datasets/heart+Disease Hint: https://dataaspirant.com/2017/01/19/support-vector-machine-classifier-implementation-r-caret-package/
9	**K Means**	Given the matrix X whose rows represent different data points, you are asked to perform a k-means clustering on this dataset using the Euclidean distance as the distance function. Here k is chosen as 3. The Euclidean distance d between a vector x

		and a vector y both in Rp is defined as d = pPp i=1(xi − yi) 2. All data in X were plotted in Figure 1. The centres of 3 clusters were initialized as μ1 = (6.2, 3.2) (red), μ2 = (6.6, 3.7) (green), μ3 = (6.5, 3.0) (blue). 1. What's the centre of the first cluster (red) after one iteration? (Answer in the format of [x1, x2], round your results to three decimal places, same as problems 2 and 3) 2. What's the centre of the second cluster (green) after two iteration? 3. What's the centre of the third cluster (blue) when the clustering converges? 4. How many iterations are required for the clusters to converge?
<u>10</u>	Hierarchical Clustering Multivariate Analysis	In Figure, there are two clusters A (red) and B (blue), each has four members and plotted in Figure . The coordinates of each member are labeled in the figure. Compute the distance between two clusters using Euclidean distance. 1. What is the distance between the two farthest members? (complete link) (round to four decimal places here, and next 2 problems); 2. What is the distance between the two closest members? (single link) 3. What is the average distance between all pairs? 4. Among all three distances above, which one is robust to noise? Answer either "complete", "single", or "average".  Figure 3: Scatter plot samples in two clusters

Semester: I Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Linear Algebra and Optimization	**Course Code: 20DS17**
L-T-P: 4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Knowledge of Mathematics, Fundamentals of Matrix and statistics.

Course Outcomes:

Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Understanding of basic Linear algebra concepts with respect to Machine Learning tasks	**L2**
CO2	Understand and explore concepts of Vector spaces, linear transformations and Matrix operations	**L3**
CO3	Analyse diagonalizability of Matrices and explore concepts of triangulations	**L3**
CO4	Understand and analyse different optimization techniques	**L2**

Teaching Methodology:

- Black Board Teaching / Power Point Presentation
- Assignment
- Case- study

Assessment Methods:

- Rubrics to evaluate Case Study
- Solution and Scheme of assignment evaluation
- Three mid-session examinations for 30 Marks each, and average of best of two is taken.
- Semester end examination of 100 Marks, calculated for 50 Marks.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

COURSE CONTENT

UNIT – I:	10 Hrs
Linear Algebra and Optimization: An Introduction, Scalars, Vectors, and Matrices, Basic Operations with Scalars and Vectors, Basic Operations with Vectors and Matrices,Special Classes of Matrices,Matrix Powers, Polynomials, and the Inverse ,The Matrix Inversion Lemma: Inverting the Sum of Matrices, Matrix Multiplication as a Decomposable Operator, Matrix Multiplication as Decomposable Row and Column Operators, Matrix Multiplication as Decomposable Geometric Operators, Basic Problems in Machine Learning, Matrix Factorization, Clustering, Classification and Regression Modeling,Outlier Detection , Optimization for Machine Learning, The Taylor Expansion for Function Simplification , Example of Optimization in Machine Learning , Optimization in Computational Graphs	
UNIT – II:	**10** Hrs
Linear Transformations and Linear Systems: What Is a Linear Transform? The Geometry of Matrix Multiplication Vector Spaces and Their Geometry, Coordinates in a Basis System, Coordinate Transformations Between Basis Sets , Span of a Set of Vectors , Machine Learning Example: Discrete Wavelet Transform, Relationships Among Subspaces of a Vector Space, The Linear Algebra of Matrix Rows and Columns, The Row Echelon Form of a Matrix, LU Decomposition, Application: Finding a Basis Set, Application: Matrix Inversion, Application: Solving a System of Linear Equation, Generating Orthogonal Basis Sets, Gram-Schmidt Orthogonalization and QR Decomposition	
UNIT – III:	**12** Hrs
Eigenvectors and Diagonalizable Matrices, Introduction, Determinants, Diagonalizable Transformations and Eigenvectors, Complex Eigenvalues, Left Eigenvectors and Right Eigenvectors, Existence and Uniqueness of Diagonalization , Existence and Uniqueness of Triangulation, Similar Matrix Families Sharing Eigenvalues, Diagonalizable Matrix Families Sharing Eigenvectors , Symmetric Matrices, Positive Semidefinite Matrices, Cholesky Factorization: Symmetric LU Decomposition, Machine Learning and Optimization Applications, Fast Matrix Operations in Machine Learning, Examples of Diagonalizable Matrices in Machine Learning, Symmetric Matrices in Quadratic Optimization, Diagonalization Application: Variable Separation for Optimization . Singular Value Decomposition- SVD of a square matrix.	
UNIT – IV:	10 Hrs
Optimization Basics: A Machine Learning View, Introduction, The Basics of Optimization, Univariate Optimization , Why We Need Gradient Descent, Convergence of Gradient Descent, The Divergence Problem, Bivariate Optimization , Multivariate Optimization, Convex Objective Functions, The Minutiae of Gradient Descent , Checking Gradient Correctness with Finite Differences, Learning Rate Decay and Bold Driver, Line Search, Binary Search Properties of Optimization in Machine Learning, Typical Objective Functions and Additive Separability, Stochastic Gradient Descent, How Optimization in Machine Learning Is Different, Tuning Hyperparameters, The Importance of Feature Preprocessing	
UNIT – V: Symmetric matrices and quadratic forms	10 Hrs
Computing Derivatives with Respect to Vectors - Matrix Calculus Notation, Useful Matrix Calculus Identities , Application: Unconstrained Quadratic Programming , Application: Derivative of Squared Norm, The Chain Rule of Calculus for Vectored Derivatives, Useful Examples of Vectored Derivatives, Linear Regression: Optimization with Numerical Targets, Tikhonov Regularization, Pseudoinverse and Connections to Regularization, Stochastic Gradient Descent, The Use of Bias, Heuristic Initialization, Optimization Models for Binary Targets, Least-Squares Classification: Regression on Binary Targets, Why Least-Squares Classification Loss Needs Repair

2) Introductory Linear Algebra, an applied first course, Bernard Kolman and David R.Hill, Pearson, Eigth Edition, 2009.
3) Linear Algebra, Seymour Lipschutz and Marc Lipson, Schaum's Outline Series, McGraw Hill, Third Edition, 2005.
4) Matrix and Linear Algebra, K.B.Datta, PHI, 2003.

SEMESTER II

Semester: II Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Scalable Computing	**Course Code:20DS21**
L-T-P:3-0-0	**Credits:** 03
Total Contact Hours:39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:
- Software systems, programming, data structures and algorithms.
- Good programming skills (preferably in Java) Operating Systems,
- Distributed Computing Systems,
- Introduction to Cloud Computing,
- Design and Analysis of Algorithms.

Course Outcomes:
Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Illustrate the requirements and challenges when designing, building and managing distributed systems.	**L2**
CO2	Describe the basic concepts of Kubernets, creating and running containers	**L2**
CO3	Analyze different scalable distributed system designs.	**L4**
CO4	Analyze use cases for managing distributed file system	**L4**
CO5	Implement the scalable distributed databases and its analysis.	**L3**

Teaching Methodology:
- Blackboard teaching and PPT
- Assignment

Assessment Methods
- Open Book Test for 10 Marks.
- Assignment evaluation for 10 Marks.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping

CO5	3	2	3	1	2	2
20DS21	2	2	2	1	2	2

COURSE CONTENT

Unit – I	09 Hrs
Virtual Machines and Virtualization of Clusters and Data Centres.: Implementation Levels of Virtualization, Levels of Virtualization Implementation, Design Requirements and Providers, Virtualization Support at the OS Level, Middleware Support for Virtualization, Virtualization Structures/Tools and Mechanisms, Hypervisor and Xen Architecture ,Binary Translation with Full Virtualization, Para-Virtualization with Compiler Support, Virtualization of CPU, Memory, and I/O Devices, Hardware Support for Virtualization, CPU Virtualization, Memory Virtualization, I/O Virtualization, Virtualization in Multi-Core Processors, Virtual Clusters and Resource Management, Physical versus Virtual Clusters, Live VM Migration Steps and Performance Effects, Migration of Memory, Files, and Network Resources, Dynamic Deployment of Virtual Clusters.	
Unit – II	**09 Hrs**
Introduction: Velocity, The Value of Immutability Declarative Configuration, Self-Healing Systems, Scaling Your Service and Your Teams, Decoupling, Easy Scaling for Applications and Clusters, Scaling Development Teams with Micro services, Separation of Concerns for Consistency and Scaling, Abstracting Your Infrastructure, Efficiency. **Creating and Running Containers:** Container Images, The Docker Image Format, Building Application Images with Docker, Docker files, Optimizing Image Sizes, Image Security, Multistage Image Builds, Storing Images in a Remote Registry, The Docker Container Runtime, Running Containers with Docker, Exploring the kuard Application	
Unit – III	**07 Hrs**
Cloud Platform Architecture over Virtualized Data Centres. Cloud Computing and Service Models, Public, Private, and Hybrid Clouds, Cloud Ecosystem and Enabling Technologies, Infrastructure-as-a-Service (IaaS), Platform-as-a-Service (PaaS) and Software-as-a-Service (SaaS). Public Cloud Platforms: GAE, AWS, and Azure. **Data Science in cloud**: AWS machine learning, Azure Machine Learning, IBM BlueMix	
Unit – IV	**07 Hrs**
MapReduce and the New Software Stack: Distributed File Systems, MapReduce, Algorithms Using MapReduce, Extensions to MapReduce, The Communication Cost Model, Complexity Theory for MapReduce	
Unit – V	**08 Hrs**
Analysing Big Data: The Challenges of Data Science, Introducing Apache Spark. Introduction to Data Analysis with Scala and Spark :Scala for Data Scientists, The Spark Programming Model, Record Linkage, Getting Started: The Spark Shell and Spark Context, Bringing Data from the Cluster to the Client, Shipping Code from the Client to the Cluster, Structuring Data with Tuples and Case Classes, Aggregations, Creating Histograms, Summary Statistics for Continuous Variables, Creating Reusable Code for Computing Summary Statistics, Simple Variable Selection and Scoring

SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Machine learning-I, Data mining, Neural Networks

Course Outcomes:

Students will be able to

CO's	**Course Learning Outcomes**	**BL**
CO1	Understand the basic concepts of artificial neural networks	**L2**
CO2	Analyze deep neural network architectures for Autoencoders.	**L4**
CO3	Analyze the problems with shallow architectures and build Restricted Boltzmann machine	**L3**
CO4	Understand and Build architectures for Recurrent Neural Networks and CNN	**L3**
CO5	Understand and build framework for Reinforcement Learning	**L3**

Teaching Methodology:

- Blackboard teaching and PPT
- Executable Codes/ Live Demonstration
- Programming Assignment

Assessment Methods

- Online certification from Course-era/Edx, etc. for 10 marks
- Programming assignments evaluated using rubrics for 10 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

COURSE CONTENT

Unit – I	10 Hrs
An Introduction to Neural Networks: Introduction, Humans Versus Computers: Stretching the Limits of Artificial Intelligence, The Basic Architecture of Neural Networks, Single Computational Layer: The Perceptron, What Objective Function Is the Perceptron Optimizing? Relationship with Support Vector Machines, Choice of Activation and Loss Functions, Choice and Number of Output Nodes, Multilayer Neural Networks	
Unit – II	**10 Hrs**
Machine Learning with Shallow Neural Networks: Introduction, Neural Architectures for Binary Classification Models, Revisiting the Perceptron, Least-Squares Regression, Widrow-Hoff Learning, Logistic Regression, Neural Architectures for Multiclass Models, Multinomial Logistic Regression (Softmax Classifier), Matrix Factorization with Autoencoders, Autoencoder: Basic Principles, Autoencoder with a Single Hidden Layer, Sharing Weights in Encoder and Decoder	
Unit – III	**12 Hrs**
Training Deep Neural Networks: Introduction, Backpropagation: The Gory Details, Backpropagation with the Computational Graph Abstraction, Setup and Initialization Issues, Tuning Hyperparameters, Feature Preprocessing, Initialization, The Vanishing and Exploding Gradient Problems, The Boltzmann Machine, How a Boltzmann Machine Generates Data, Restricted Boltzmann Machines, Training the RBM, Contrastive Divergence Algorithm	
Unit – IV	**10 Hrs**
Recurrent Neural Networks: The Architecture of Recurrent Neural Networks, Language Modeling Example of RNN, Backpropagation Through Time, Multilayer Recurrent Networks, Long Short-Term Memory (LSTM) **Convolutional Neural Networks:** The Basic Structure of a Convolutional Network, Padding, Strides, The ReLU Layer, Pooling, Fully Connected Layers, The Interleaving Between Layers, Backpropagating Through Convolutions	
Unit – V	**10 Hrs**
Deep Reinforcement Learning: The Basic Framework of Reinforcement Learning, Challenges of Reinforcement Learning, Simple Reinforcement Learning for Tic-Tac-Toe

Semester: II Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Exploratory Data Analysis	**Course Code:20DS23**
L-T-P:3-0-2	**Credits:** 04
Total Contact Hours:39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Graduate Mathematics.
- Basic understanding of Probability Statistics and Linear Algebra.
- Ability to comprehend and understand relational, and unstructured datasets.

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	BL
CO1	Describe the philosophy of exploratory data analysis	**L2**
CO2	Visualize discrete and continuous data distributions using Pandas	**L3**
CO3	Describe visualizing, and estimating the relation between variables.	**L2**
CO4	Apply linear and nonlinear models in Matplotlib.	**L3**
CO5	Describe the visualization and analysis of data using Scikit-learn.	**L2**

Teaching Methodology:

- Black Board Teaching
- Power Point Presentation.
- Seminar

Assessment Methods:

- Rubrics to evaluate Seminar
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

20DS14	2	2	2	2		1

COURSE CONTENT

UNIT – I **Introduction to Exploratory data analysis and IPython**	**8hrs**
IPython: Beyond Normal Python, IPython Magic Commands, Input and Output History, IPython and Shell Commands, Errors and Debugging, Understanding Data Types in Python, Aggregations: Min, Max, and Everything in Between, Computation on Arrays: Broadcasting, Comparisons, Masks, and Boolean Logic, Fancy Indexing, Sorting Arrays, Structured Data: NumPy's Structured Arrays	
UNIT – II **Introduction to Pandas and Data Manipulations**	**8hrs**
Introducing Pandas Objects, Data Indexing and Selection, Operating on Data in Pandas, Combining Datasets: Merge and Join, Aggregation and Grouping, Pivot Tables, Vectorized String Operations, Working with Time Series, Dates and Times in Python, Pandas Time Series: Indexing by Time, Pandas Time Series Data Structures	
UNIT – III **Visualization with Matplotlib**	**8hrs**
General Matplotlib Tips, Two Interfaces for the Price of One, Simple Line Plots, Simple Scatter Plots, Visualizing Errors, Density and Contour Plots, Histograms, Binnings, and Density, Customizing Plot Legends, Customizing Colorbars, Multiple Subplots, Three-Dimensional Plotting in Matplotlib, Visualization with Seaborn	
UNIT – IV **Visualizations using Scikit-Learn for Machine Learning**	**8hrs**
Introducing Scikit-Learn, Hyper parameters and Model Validation, Feature Engineering, In Depth: Naive Bayes Classification, Bayesian Classification, Gaussian Naive Bayes, When to Use Naive Bayes, In Depth: Linear Regression, Simple Linear Regression, Basis Function Regression, Regularization, In Depth: Principal Component Analysis, PCA as Noise Filtering, Example: Eigenfaces	
UNIT – V **Visualizations using Scikit-Learn for Machine Learning II**	**7hrs**
In Depth: k-Means Clustering, k-Means Algorithm: Expectation–Maximization, In Depth: Gaussian Mixture Models, Motivating GMM: Weaknesses of k-Means, Generalizing E–M: Gaussian Mixture Models, GMM as Density Estimation, In-Depth: Decision Trees and Random Forests, Motivating Random Forests: Decision Trees, Ensembles of Estimators: Random Forests	

Text books:

1. Python Data Science Handbook: Essential Tools for Working with Data, by Jake VanderPlas

Reference books:

1. Making sense of Data: A practical Guide to Exploratory Data Analysis and Data Mining, by Glenn J. Myatt.
2. Making Sense of Data II: A Practical Guide to Data Visualization, Advanced Data Mining Methods, and Applications, Glenn J. Myatt, and Wayne P. Johnson. Print ISBN:9780470222805 |Online ISBN:9780470417409 |DOI:10.1002/9780470417409.

Semester: II   Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Machine Learning- II	**Course Code:20DS24**
L-T-P:3-0-2	**Credits:** 04
Total Contact Hours:39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Prerequisite:

- Machine learning-I, , Engineering Mathematics, Algorithms

Course Outcomes:

Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Understand the fundamentals of instance space learning.	**L2**
CO2	Use the different ensemble methods on the given dataset	**L3**
CO3	Describe analytical learning	**L2**
CO4	Apply the Support Vector Machine algorithm on the given dataset	**L3**
CO5	Comprehend the Markov Birth-death process	**L2**
CO6	Apply the concepts of unsupervised learning on the given dataset	**L3**

Teaching Methodology:

- Black board teaching / Power Point presentations
- Executable Codes/ Live Demonstration
- Programming Assignment

Assessment Methods:

- Online certification from NPTEL/course-era for 10 marks
- Programming assignments evaluated using rubrics for 10 marks
- Three internals, 30Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of100 Marks will be conducted and will be evaluatedfor50Marks.

Course Outcome to Programme Outcome Mapping:

PO	PO1	PO2	PO3	PO4	PO5	PO6
CO1	3					
CO2	3			2	1	
CO3	3					
CO4	3			2	1	
CO5	3					
CO6	3			2	1	
20DS24	3			2	1	

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

COURSE CONTENT

Unit – I	07 Hrs
Instance space learning: K- Nearest Neighbour Learning Choosing K, Error Analysis of KNN, comparing KNN error with Bayesian error, – Locally Weighted Regression – Radial Basis Functions – Case Based Reasoning – Sequential Covering Algorithms. (Textbook1)	
Unit – II	**08 Hrs**
Learning Rule Sets – Learning First Order Rules – Learning Sets of First Order Rules – Induction as Inverted Deduction – Inverting Resolution (Textbook1) **Ensemble Methods:** Rationale for ensemble method, methods for constructing an Ensemble classifier, Bias-Variance decomposition, Bagging, Boosting, Random forests, Empirical comparison among Ensemble methods. (TextBook3)	
Unit – III	**08 Hrs**
Analytical learning: Introduction, Learning with Perfect domain theories, Remarks on Explanation based learning; Explanation based learning of search control knowledge (Textbook 1) **Support Vector machine:** Introduction (Textbook-4), Maximum Margin Hyperplane, Linear SVM: Separable Case, Soft Margins, Linear SVM: Non-Separable Case, Nonlinear SVM, Characteristics of SVM , Kernel SVM, (Textbook 3)	
Unit – IV	**08 Hrs**
Markov Birth-death process, Hidden Markov models – discrete Markov processes, Hidden Markov models – 3 basic problems, Learning the state sequence, Markov chains, Learning the parameters, Baum-Welch Algorithm, Monte Carlo Simulation, Markov Chain Monte Carlo	
Unit – V	**08 Hrs**
Un-supervised Learning: Hierarchical vs non-hierarchical clustering, Agglomerative and divisive clustering, Expectation Maximization, Gaussian Mixtures, EM Clustering, K-means clustering, Simple problems, Bisecting k-means, issues with k-means. K Means as special case of Expectation Maximization

2. Pang-Ning Tan, Michael Steinbach, Vipin Kumar, “Introduction to Data Mining” Pearson, 4th edition, ISBN: 978-81-717-1472-0, 2009.
3. Corrina cortes, Valdimir Vapnik, “Support Vector Networks” Kluwer Academic Publishers, 1995.

Reference Books:

1. Hands-On Machine Learning with Scikit-Learn and Tensor Flow: Concepts, Tools, and Techniques to Build Intelligent Systems
2. Text: Introduction to Machine Learning – Ethem Alpaydin

Online Materials:

1. Machine Learning by Stanford University-Coursera
2. Machine Learning with TensorFlow on Google Cloud Platform Specialization-Coursera
3. Become a Machine Learning Engineer – Udacity.

Semester: II Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Elective
Course Title: Data Security and Privacy	**Course Code:20DS25**
L-T-P: 4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Knowledge of databases and how they are managed.
- Fundamentals of algorithm design techniques.

.

Course Outcomes:

Students will be able to

CO's	**Course Learning Outcomes**	**BL**
CO1	Analyze the vulnerabilities in any computing system and hence be able to design a security solution	**L4**
CO2	Identify the security issues in the data network and resolve it.	**L2**
CO3	Evaluate security mechanisms using rigorous approaches.	**L4**
CO4	Understand the privacy and anonymization	**L2**

Teaching Methodology:

- Black Board Teaching / Power Point Presentation

Assessment Methods:

- Seminar on data security for 10 marks
- Assignment based on data security and access control problems for 10 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping

	PO1	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**
CO1	2		2	1		
CO2	2		2	1	1	
CO3	3	2	3	2		
CO4	2	2	2			2
20DS25	2	2	2	1	1	1

COURSE CONTENT

UNIT – I : DATA SECURITY FUNDAMENTALS	**10** hrs
Computer Security Concepts,IntrusionDetection,Firewalls: Characteristics,Types.Classical Encryption Techniques Symmetric Cipher Model, Cryptography, Cryptanalysis and Brute-Force Attack,Substitution Techniques, Caesar Cipher, Monoalphabetic Cipher, Polyalphabetic Cipher, One Time Pad.Block Ciphers and the data encryption standard: Traditional block Cipher structure, stream Ciphers and block Ciphers, Motivation for the Feistel Cipher structure, the Feistel Cipher.	
UNIT – II: Public-Key Cryptography	10 hrs
Principles of Public-key Cryptosystems, Public-Key Cryptosystems, Applications for Public-Key Cryptosystems, Requirements for Public-Key Cryptosystems.Public-Key Cryptanalysis. The RSA Algorithm, Description of the Algorithm,Computational Aspects, the Security of RSA. Other Public-Key Cryptosystems:Diffe-Hellman Key Exchange, The Algorithm, Key exchange protocols, Man-in-the-Middle Attack, Simple secret key distribution, Secretkey distribution with confidentiality and authentication, A hybrid scheme.Public keys certificates, X.509certificates. Public key infrastructure, PKIXManagement Functions, PKIX Management Protocols.	
UNIT – III : Authentication and Authorization	10 hrs
Authentication Vs Authorization, Authentication Methods –Password authentication, Public Key Cryptography, Biometric authentication, Out of band, Authentication Protocols – SSL, Password Authentication Protocol (PAP), Kerberos, Email authentication,- PGP, Database authentication, Message authentication; secure hash functions and Authorization Approaches to hmac; publickey cryptography principles; public-key cryptography algorithms, digitalsignatures, key management. Kerberos, x.509 directory authentication service. Authorization Definition, Multilayer authorization,	
UNIT – IV: DATA PRIVACY AND ANONYMIZATION	12 hrs
Understanding Privacy: Social Aspects of Privacy, Legal Aspects of Privacy and Privacy Regulations Effect of Database and Data Mining technologies on privacy challenges raised by new emerging technologies such RFID, biometrics, etc., Privacy Models **Introduction to Anonymization**, Anonymization models: K-anonymity, l-diversity, t-closeness, differential privacy, Database as a service	
UNIT – V : DATA PRIVACY FOR DATA SCIENCE	10 hrs
Using technology for preserving privacy. Statistical Database security, Inference Control, Inference Control with Semantic Web, Homomorphic Encryption, Secure Multi-party computation and Cryptography Privacy-preserving Data mining Hippocratic databases, Hippocratic databases privacy preservation. **Emerging Applications:** Social Network Privacy, Location Privacy, Query Log Privacy, Biomedical Privacy	

Text books:

1. Cryptography and Network Security Principles and Practice William Stallings, 6th edition, Pearson Education
2. The Algorithmic Foundations of DifferentialPrivacy, Cynthia Dwork and Aaron Roth. DOI: 10.1561/0400000042.

Reference books:

1. https://s3.amazonaws.com/assets.datacamp.com/production/course_6412/slides/chapter1.pdf
2. Privacy-Preserving Data Mining- Models and Algorithms, Charu C Aggarwal, Yu Philips, S., Springer
3. Principles of Information Security, Information SecurityProfessional - Michael E. Whitman and Herbert J. Mattord,4th Edition, Thompson.

Semester: II Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Elective
Course Title: Big Data Analytics	**Course Code:20DSE261**
L-T-P: 4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Prerequisite:

- Database Management Systems

Course Outcomes:

Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Describe Big Data and its importance with its applications	**L2**
CO2	Differentiate various big data technologies like Hadoop MapReduce, Pig, Hive, Hbase and No-SQL.	**L4**
CO3	Apply tools and techniques to analyze Big Data.	**L3**
CO4	Design a solution for a given problem using suitable Big Data Techniques	**L4**

Teaching Methodology:

- Black board teaching/ Power Point presentations
- Executable Codes/ Live Demonstration
- Programming Assignment

Assessment Methods:

- Online certification for 10 marks
- Programming assignments evaluated using rubrics for 10 marks
- Three internals, 30Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of100 Marks will be conducted and will be evaluatedfor50Marks.

Course Outcome to Programme Outcome Mapping

	PO1	PO2	PO3	PO4	PO5	PO6
CO1	3			3	2	
CO2	3			2	3	1
CO3	3			2	3	1
CO4	3			2	3	1
20DSE261	3			2	3	1

COURSE CONTENT

Unit – I	10 Hrs
Types of Digital data: Classification of Digital data: Structured Data, Semi Structured Data, Unstructured Data; Introduction to Big Data : Characteristics of Data, Evolution of Big Data, Definition of Big Data, Challenges of Big Data, What is Big Data?, Why Big Data? Traditional Business Intelligence versus Big Data, A Typical Data Warehouse Environment, A Typical Hadoop Environment, Coexistence of Big Data and Data Warehouse.	
Unit – II	**12Hrs**
Hadoop: Features, Advantages of Hadoop, Versions of Hadoop, Hadoop ecosystem, Hadoop distributions, Hadoop Vs SQL. Introduction to Hadoop: Why Hadoop? RDBMS Vs Hadoop, Distributed computing challenges, History of Hadoop, Hadoop overview, use case of Hadoop, HDFS, Processing data with Hadoop, Managing resources and applications with Hadoop YARN.	
Unit – III	**10 Hrs**
Introduction to Map Reduce Programming: Introduction, Mapper, Reducer, Combiner, Partitioner, Searching, sorting, compression Big Data Analytics: Big Data Analytics. Classification of Analytics, Greatest challenges on Big Data, Big Data Analytics importance, Data Science, Terminologies in Big Data.	
Unit – IV	**10 Hrs**
Introduction to HIVE: Introduction, HIVE architecture, HIVE data types, HIVE file formats, HIVE query language, RCFile implementation, SerDe, User Defined Functions (UDF) Introduction to PIG: Anatomy of PIG, PIG on Hadoop, PIG philosophy, overview of PIG, Data types in PIG, Running and execution modes of PIG, HDFS commands, Relational operators, Eval function, Complex Data types.	
Unit – V	**10 Hrs**
Spark Overview: Spark versus MapReduce. Advantages of Spark, Spark Ecosystem. Spark Core: Installing Spark in standalone mode, Spark shell, Spark Context, RDD's: Actions and Transformations, Lineage Graphs, Lazy evaluation, Persistence, Immutability, Fault Tolerance. Pair RDD's: Transformations and Actions, Partitioning.	

Text Books:

Semester: II

Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Elective
Course Title: Business Analytics	**Course Code:20DSE262**
L-T-P: 4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Course Outcomes:

Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Describing the significance of global platform for data retrieval/process among different business cultures of the world.	**L2**
CO2	Develop domain knowledge of various technology and its application to facilitates managerial decision /MIS	**L2**
CO3	Enable communication for data driven decision making	**L3**
CO4	Implement cross functional collaboration to enhance efficiency and productivity.	**L3**

Teaching Methodology:

- ICT enabled Classroom teaching
- Case study
- Practical / live assignment
- Interactive class room discussions

Assessment Methods

- Group Discussion for 10 Marks.
- Assignment evaluation for 10 Marks.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping

20DSE262	3	2	2	1	2	1

COURSE CONTENT

Unit – I	12 Hrs
Introduction to Business Analytics: Why Analytics, Business Analytics: the Science of data driven decision making, Descriptive Analysis, Predictive Analytics, Prescriptive Analytics, Big Data Analytics, Web and Social media Analytics, Machine Learning Algorithms, Framework for data driven decision making, Analytics Capability Building, Roadmap, Challenges, Types (Descriptive, Predictive and Prescriptive), Business Intelligence versus Business Analytics, Transaction Processing v/s Analytic Processing, OLTP v/s OLAP, OLAP Operations, Data models for OLTP	
Unit – II	**10Hrs**
Descriptive Analytics: Introduction, Data Types and Scales, Types of Data Measurement Scale, Population and Sample, Types of Data Measurement Scale **Data Warehouse:** Definition, characteristics, framework Data lake Business Reporting, Visual Analytics: Definition, concepts, Different types of charts and graphs, Emergence of data visualization and visual analytics	
Unit – III	**10 Hrs**
Data Mining: Concepts and applications, Data mining process Text & Web Analytics, Text analytics and text mining overview, Text mining applications, Web mining overview, Sentiment analysis overview, Supply Chain and Operations Analytics, Customer Analytics, Project Management, Decision Analysis, Process Analytics, Market Intelligence	
Unit – IV	**12 Hrs**
Social Network Analysis: Overview of SNA, history and resources, Mathematical foundations, matrices and graph theory, Whole versus personal networks, one-mode versus two-mode network data, Collecting network data, Informant accuracy, Network visualizations, Cohesive subgroups, bottom-up and top-down approaches, Block models, Egocentric SNA, design and applications	
Unit – V	**8 Hrs**
Business Performance Management: Business performance management cycle, KPI, Dashboard Analytics in Business Support Functions, Sales & Marketing Analytics, HR Analytics, Financial Analytics, Production and operations analytics, Analytics in Industries: Telecom, Retail, Healthcare, Financial Services	

Text Books:

1. U. Dinesh Kumar, "Business Analytics – The Science of Data Driven Decision Making", Wiley 2017.
2. Ramesh Sharda, DursunDelen, Efraim Turban, "Business Intelligence: A Managerial Perspective on Analytics", Pearson, 3e.
3. Wasserman, S., & Faust, K. (1994). Social Network Analysis: Methods and Applications. A classic, essential textbook on SNA.

- International Journal of Business Analytics
- International Journal of Business Analytics and intelligence
- International Journal on Consumer and Business Analytics
- Analytics India – Magazine

Semester: II Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Elective
Course Title: Social Network Analysis	**Course Code:20DSE263**
L-T-P: 4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Prerequisite:
- Fundamental of Network, Data Mining, Graph theory
- Advanced Algorithms

Course Outcomes:
Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Understand the basics of Social Network Models and analysis.	**L2**
CO2	Analysesocial network models for community detection.	**L4**
CO3	Implement link prediction and event detection	**L3**
CO4	Analyse social influence and contributing factors.	**L4**

Teaching Methodology:
- Black board teaching
- Power Point presentations

Assessment Methods:
- Rubrics for evaluation of case study 20 Marks
- Three internals, 30Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of100 Marks will be conducted and will be evaluatedfor50Marks.

Course Outcome to Programme Outcome Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6
CO1	2		2		2	
CO2	2				1	
CO3	3		2	1	2	
CO4	3		2		3	
20DSE263	2		2	1	2	

COURSE CONTENT

Unit – I	10 Hrs
Social Networks : An Introduction; **Types of Networks:** General Random Networks, Small World Networks, Scale-Free Networks; Examples of Information Networks; Network Centrality Measures; Strong and Weak ties; Homophily **Walks:** Random walk-based proximity measures, Other graph-based proximity measures. Clustering with random-walk based measures	
Unit – II	**12 Hrs**
Community Detection Algorithms for Community Detection: The Kernighan-Lin algorithm, Agglomerative/Divisive algorithms, Spectral Algorithms, Multi-level Graph partitioning, Markov Clustering; Community Discovery in Directed Networks , Community Discovery in Dynamic Networks, Community Discovery in Heterogeneous Networks, Evolution of Community.	
Unit – III	**12 Hrs**
Link Prediction: Feature based Link Prediction, Bayesian Probabilistic Models, Probabilistic Relational Models, Linear Algebraic Methods: Network Evolution based Probabilistic Model, Hierarchical Probabilistic Model, Relational Bayesian Network. Relational Markov Network.	
Unit – IV	**10 Hrs**
Event Detection: Classification of Text Streams, Event Detection and Tracking: Bag of Words, Temporal, location, ontology based algorithms. Evolution Analysis in Text Streams, Sentiment analysis.	
Unit – V	**8 Hrs**
Social Influence Analysis: Influence measures, Social Similarity - Measuring Influence, Influencing actions and interactions. Influence maximization.	

Text Books:

1. David Easley, Jon Kleinberg: Networks, Crowds and Markets: Reasoning about a highly connected world, Cambridge Univ Press 2010
2. S.Wasserman, K.Faust: Social Network Analysis: Methods and Applications, Cambridge Univ Press, 1994

Semester: II Year: 2020-2021

Department: Information Science and Engineering	**Course Type:** Elective
Course Title: Natural Language & Text Mining	**Course Code:** 20DSE264
L-T-P:4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Prerequisites:

- Fundamental of Language Processing.

Course outcomes:

Students will be able to:

CO's	Course Learning Outcomes	BL
CO1	Describe the basics of Natural Language Processing.	**L2**
CO2	Analyze syntactic and semantic parsing techniques.	**L2**
CO3	Implement a rule-based system to tackle morphology/syntax of a Language	**L3**
CO4	Describe the various issues of Natural Language of Processing.	**L2**

Teaching Methodology:

- Blackboard teaching
- PowerPoint presentations

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for evaluation of case study 20 Marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

COURSE CONTENT

Unit – I	12 Hrs
Classical Approaches to Natural Language Processing: context, **Classical Toolkit** Text Preprocessing Lexical Analysis, Syntactic Parsing, Semantic Analysis , Natural Language Generation **Text Preprocessing :**Introduction Challenges of Text Preprocessing , Character-Set Dependence , Language Dependence , Corpus Dependence , Application Dependence ,Tokenization ,Tokenization in Space-Delimited Languages , Tokenization in Un segmented Languages , Sentence Segmentation ,Sentence Boundary Punctuation , The Importance of Context , Traditional Rule-Based Approaches. **Lexical Analysis**: Introduction ,Finite State Morphonology ,Closing Remarks on Finite State Morphonology , Finite State Morphology , Disjunctive Affixes, Inflectional Classes, and Exceptionality , Further Remarks on Finite State Lexical Analysis , “Difficult” Morphology and Lexical Analysis ,Isomorphism Problems , Contiguity Problems , Paradigm-Based Lexical Analysis, Paradigmatic Relations and Generalization..	
Unit – II	**12 Hrs**
Syntactic Parsing: Introduction ,Background ,Context-Free Grammars , Example Grammar , Syntax Trees , Other Grammar Formalisms , Basic Concepts in Parsing , Parsing as Deduction ,Deduction Systems , The CKY Algorithm , Chart Parsing , Bottom-Up Left-Corner Parsing , Top-Down Earley-Style Parsing , Example Session.**Semantic Analysis** : Basic Concepts and Issues in Natural Language Semantics ,Theories and Approaches to Semantic Representation , Logical Approaches , Discourse Representation Theory , Pustejovsky’s Generative Lexicon , Natural Semantic Meta language , Object-Oriented Semantics , Relational Issues in Lexical Semantics , Sense Relations and Ontologies , Roles , Fine-Grained Lexical-Semantic Analysis: Three Case Studies , Emotional Meanings: “Sadness” and “Worry” in English, Ethno geographical Categories: “Rivers” and “Creeks” , Functional Macro-Categories . Prospectus and “Hard Problems”	
Unit – III	**08 Hrs**
Natural Language Generation: Introduction ,Generation Compared to Comprehension, The Components of a Generator, Components and Levels of Representation , Approaches to Text Planning ,The Function of the Speaker , Desiderata for Text Planning , Pushing vs. Pulling , Planning by Progressive Refinement of the Speaker’s Message , Planning Using Rhetorical Operators , Text Schemas , The Linguistic Component, Surface Realization Components , Relationship to Linguistic Theory , Chunk Size , Assembling vs. Navigating , Systemic Grammars , Functional Unification Grammars The Cutting Edge Story Generation , Personality-Sensitive Generation Conclusions.	
Unit – IV	**10 Hrs**
Corpus Creation: Introduction, Corpus Size, Balance, Representativeness, and Sampling Data Capture and Copyright Corpus Markup and Annotation Multilingual Corpora Multimodal Corpora. **Part-of-Speech Tagging Tunga:** Introduction, Parts of Speech , Part-of-Speech Problem , The General Framework, Part-of-Speech Tagging Approaches , Rule-Based Approaches , Markov Model Approaches , Maximum Entropy Approaches ,Other Statistical and Machine Learning Approaches , Methods and Relevant Work , Combining Taggers	
Unit – V	**10 Hrs**
Information Retrieval: Introduction, Indexing, Indexing Dimensions • Indexing Process, IR Models Classical Boolean Model , Vector-Space Models , Probabilistic Models , Query Expansion and Relevance Feedback , Advanced Models , Evaluation and Failure Analysis , Evaluation Campaigns , Evaluation Measures , Failure Analysis , Natural Language Processing and Information Retrieval, Morphology , Orthographic Variation and Spelling Errors , Syntax , Semantics , Related Applications **Text Analytics:** text analytics systems, Named entity recognition Disambiguation, Document clustering: identification of sets of similar text documents, Term frequency-inverse document frequency- TFIDF, Analysis and Evaluation of Current Graph-Based Text Mining Researches, Coreference: Relationship, Case study on Biomedical text mining,

Nitte Meenakshi Institute of Technology

(An Autonomous Institution under Visvesvaraya Technological University, Belagavi)

YELAHANKA, BENGALURU – 560064

Department of Electrical and Electronics Engineering

Curriculum
For
Post Graduate Engineering
M.Tech in Renewable Energy

(2021-2022)

VISION, MISSION, OBJECTIVE & OUTCOMES

Vision

To build a strong research and teaching environment in the field of electrical engineering to meet the ever evolving global needs and to equip students with the latest knowledge, skills and practical orientation to face challenges in electrical professions.

Mission

1. To offer comprehensive educational programs in the field of electrical engineering producing highly accomplished graduates.

2. To inculcate among the students, the culture of research and innovation.

3. To encourage students to participate in co-curricular and extra-curricular activities leading to enhancement of their social and professional skills.

Programme Education Objectives (PEOs)

1. Graduate will have a sufficient depth of understanding in renewable energy in electrical engineering and the skills, confidence, professionalism, and experience necessary for successful careers in renewable energy and related fields.

2 .Graduate will work with the latest technological topics, to find opportunities to engage in advanced studies, to conduct research, and develop skills for professionally communicating their work**.**

Programme Specific Outcomes (PSO)

1.PSO 1: Aptitude to handle complex problems in the area of Renewable Energy relevant to industry and society by applying latest technologies.

2. PSO2: Ability to optimize non-conventional energy sources for the holistic benefit of society and carryout research combined with innovation.

Programme Outcomes (POs)

PO-1	Students will have the ability to acquire and apply knowledge of renewable energy and electrical engineering to evaluate, analyse and synthesize existing and new complex electrical problems.
PO-2	Problem analysis: Identify ,formulate, review research literature and analyze complex problems
PO-3	Students will have the ability to apply independent judgment for critical appraisal skills – planning, organizing, problem solving and decision making which helps in conducting research in a wider theoretical, practical and policy context.
PO-4	Students will have the ability to Conceptualize and solve renewable energy based problems, evaluate a feasible and optimal solution for those problems by assessing the impact of global, social and cultural changes on electrical field.
PO-5	Students will have the ability to recognize the research problem; apply appropriate research methodologies, techniques and tools, design, conduct experiments, critical reviewing, documenting and reporting in the development of scientific or technological knowledge in one or more domains of renewable energy in electrical engineering
PO-6	Students will have the ability to use current technology, skills and modern tools for renewable energy practices
PO-7	Students will have the ability to possess knowledge and understanding of group dynamics, recognize opportunities for collaboration/ multidisciplinary work and relating energy issues with other disciplines to improve the outcomes.
PO-8	Students will have the ability to demonstrate knowledge and understanding of several method of renewable energy for projects. To manage projects efficiently after considering the economical and financial issues
PO-9	Students will have the ability to effectively communicate with the engineering community and with the society at large and capable of presenting reports and design documentation by adhering to appropriate standards.
PO-10	Students will have the ability to engage in lifelong learning independently, with the high level of enthusiasm and commitment to improve knowledge and competence continuously.
PO-11	Students will have the ability to acquire professional and intellectual integrity, code of conduct, ethics and professional practices and responsible to contribute to the community for sustainable development of the society.
PO-12	Students will have the ability to observe and examine the outcomes of one's actions periodically and make corrective measures subsequently, and learn from mistakes without depending on external feedback

About the Department

The department of Electrical and Electronics Engineering was started in the year 2001 with a sanctioned intake of 60 students. The department has been accredited in 2009, 2014 and 2018. The main areas of learning in this program pertain to principles and analysis of equipment and systems used in the generation, transmission, distribution and utilization of electrical energy. Other areas of learning pertain to electronic devices and circuits used in the measurement, instrumentation, control and protection of electrical equipment and conversion systems. Students also learn concepts related to computers and applications for computer based systems used in the design, analysis and operation of power system. The faculty members always strive to impart knowledge in the best possible manner to the students. Quality and standard of teaching is always a priority for the faculty members.

The department offers a UG (B.E) program in Electrical & Electronics Engineering and a PG (M.Tech) program in Renewable Energy. The department is recognized as a research center by VTU and offers M.Sc (by research) and Ph.D programs.

The laboratories in the department are well equipped for the experiments and for research work. The department has also received Rs. 10 Lacs from AICTE, New Delhi, under 'MODROBS' scheme for upgrading the Power Electronics Laboratory, Power system protection Laboratory lab and Advanced Electrical Machines Laboratory. The department regularly organizes industrial visits. Experts from industries and institutes enhance the students' knowledge through technical lectures on contemporary subjects in the field of Electrical and Electronics Engineering.

Objectives of the Programme

Energy is vital for improving the quality of human life of every nation. The growing scarcity of conventional fuels and their adverse ecological and environmental impacts have raised global interest in harnessing various renewable energy sources. Renewable Energy Technologies are emerging as the source of sustainable energy, which will be very important for future energy supply strategies of the entire world. Availability of adequate manpower and appropriate resources is crucial for success in this endeavor. Providing renewable energy education at all the required levels in an efficient and effective manner is a challenging task.

There are very few institutes in India and First in Karnataka that offer a structured programme to cover the diverse range of issues to meet this demand. The program at NMIT is intended to fill the gap and provide the much needed human resource capacity in renewable energy technology and management. The program is designed to train students not only in renewable energy technology and implementation but also in equally important synergetic areas of energy infrastructure, energy economics, and energy conversion technologies. The program will lead to a specialization in renewable energy.

Bearing this in mind, NMIT offers M.Tech. course in Renewable Energy.

This M.Tech. Program provides an opportunity to specialize in the field of renewable energy. The course covers wide range of topics in renewable energy, energy efficiency and renewable energy technology, energy demand and energy economics.

The programme consists of core and elective courses taught during the first, second semester, during third & fourth semester, the student is required to take up an Internship and major project either in an industrial establishment or a research/ consultancy organization dealing with renewable energy, as an independent study under the supervision of a faculty member at NMIT and a working professional of that organization.

Semester I

Department: Basic Science	**Course Type:** Core
Course Title: Advanced Mathematics	**Course Code:** 19ERE11
L-T-P:4-0-0	**Credits:**04
Total Contact Hours:52hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Identify and analyse different situations where stochastic processes can be used.
2. Identify and analyse situations where Fourier transforms are used.
3. Use basic concepts of linear algebra to Engineering problems.
4. Use process of orthogonalisation and diagonalisation to different engineering problems.
5. Apply the concepts of optimization to engineering problems.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1		3	2	2	3	1	1						1	
CO2		3	2	2	3	1	1						1	
CO3		3	3	2	3	1	1							2
CO4		3		2	1	1	1							2
CO5		3		2	1	1	1							2

UNIT-I

Stochastic process: Definition, classification, stationary and ergodic random process, auto-correlation, Cross correlation, Gauss random process, Poisson process. Definition and examples of Markov processes, states and transition probability, **Queuing theory**:- Pure birth and death models, Poisson queues, single and multiple server models, queuing decision models, M/M/1 and M/G/1 queues **12Hours**

UNIT-II

Fourier Transforms: Fourier complex transforms, sine and cosine transforms, inverse Fourier transforms, DFT, FFT. Engineering applications. **10Hours**

UNIT-III

Linear Algebra: Vector spaces, Linear combinations, spanning sets, subspaces, linear dependence and independence. Basis and dimension, linear transformation. Kernel and image. Singular and non-singular linear mapping, matrix representation of a linear operator, change of basis. **10Hours**

UNIT-IV

Inner product spaces, orthogonality, orthogonal sets and basis, Gram-Schmidt orthogonalisation process. Block matrices, eigen values and eigen vectors, diagonalisation. Characteristic and minimal polynomial. Nilpotent operators, Jordan canonical form, Quadratic and bilinear forms, Applications. **10Hours**

UNIT-V

Optimization: Linear programming- Basic concepts, Simplex and dual simplex method, revised simplex method, Big M- method Nonlinear programming Single variable problems, local and global optima, sequential search, three point interval search, Fibonacci search. **10Hours**

TEXT BOOKS:

1. "Linear Algebra and its applications", David. C.Lay, Pearson, 3rd edition, 2014.
2. "Probability and Random process with application to signal processing and communication. Scott L Miller and Donald G Childers, Elsevier, 2010.
3. "Operations research", Hamdy A Taha, Pearson education, 7th edition, 2006
4. "Advanced Engg. Mathematics", Erwin E Kreyszig,Wiley, 9th edition, 2011

Department: Electrical and Electronics Engineering	**Course Type:** Core
Course Title: Energy Sources and Conversion Technologies	**Course Code:**19ERE12
L-T-P:4-0-0	**Credits:**04
Total Contact Hours:52 hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand and apply the knowledge on solar system.
2. Understand fundamentals of design calculations and analysis of wind energy systems.
3. Understand and apply the knowledge on Biomass system.
4. The students will be able to understand and apply the knowledge on Ocean & Geothermal Energy system.
5. The students will be able to understand and apply the knowledge on Geothermal Energy System.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3												2	
CO2	3	2	2		2									2
CO3	3	2												2
CO4	3													
CO5	3												2	2

UNIT-I

Solar Energy: Solar radiation: measurements and prediction. Solar Photovoltaic systems: Principle of photovoltaic conversion of solar energy, types of solar cells and fabrication. Solar thermal systems: collectors- flat plate collectors, concentrating collectors. Basic theory of flat plate collectors, solar heating of buildings, solar still, solar water heaters, solar driers; conversion of heat energy in to mechanical energy, solar thermal power generation systems. Applications: battery charger, domestic lighting, street lighting, water pumping, power generation schemes. **12Hours**

UNIT-II

Wind Energy: Atmospheric circulations, classification, factors influencing wind, wind shear, turbulence, wind speed monitoring, Betz limit, WECS: classification, characteristics, and applications. Principles of Aerodynamics of wind turbine blade, various aspects of wind turbine design, Wind Turbine Generators: Induction, Synchronous machine, constant V & F and variable V & F generations. Wind Farms. **Hybrid wind energy systems** - wind with diesel power, wind with conventional grid, wind with Photovoltaic system etc. **10Hours**

UNIT-III

Biomass Energy: Introduction, Photosynthesis process, Biomass fuels, Biomass conversion technologies, Urban waste to Energy Conversion, Biomass Gasification, Biomass to Ethanol Production, Bio-gas production from waste biomass, factors affecting biogas generation, types of biogas plants. Application of Biogas in domestic, industry and vehicles. **10Hours**

UNIT-IV

Ocean Energy: Ocean energy resources-ocean energy routes - Principles of ocean thermal energy conversion systems- ocean thermal power plants- Principles of ocean wave energy conversion and tidal energy conversion. **10Hours**

UNIT-V

Alternative Source of Energy: Geothermal energy: Origin and Distribution of Geothermal energy, types of geothermal energy sites, site selection, geothermal power plants; Analysis of Geothermal resources **10Hours**

TEXT BOOKS:

1. "Renewal Energy Resources", John Twideu and Tony Weir, BSP Publications, 2006.
2. "Renewable Energy Sources And Emerging Technologies", Kothari Et Al PHI,2012 edition.

REFERENCE BOOKS:

4. "Sustainable Energy Technologies: Options and Prospects", (Google eBook) Kemal Hanjalić, R. van de Krol, A. Lekić, Springer Science & Business Media, 2007.
5. "Biomass Regenerable Energy" edited by D.O. Hall and R.P. Overend, John Wiley & Sons, New York, NY, 1987 .
6. "Renewable Energy Sources and Conversion Technology" NK Bansal,TataMcGraw-Hill, 1990.

Department: Electrical and Electronics Engineering	**Course Type:** Core
Course Title: Materials for Energy Applications	**Course Code:**19ERE13
L-T-P:4-0-0	**Credits:**04
Total Contact Hours:52hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand the properties, composition of materials used in hydro power generation.
2. Understand the properties, composition of materials used in thermal power generation.
3. Understand the working of different types of Batteries and Super capacitors for electrochemical energy storage.
4. Understand the synthesis and fabrication of different Materials for energy storage.
5. Understand the basics, types, characteristics and applications of fuel cells.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3						3						1	
CO2	3						3							2
CO3	3												1	
CO4	3													2
CO5	3													2

UNIT-I

Materials for hydro power generation: Introduction: India' vast potential of hydro power; problem of high silt content of Himalayan rivers and its associated erosion damage, and high velocity streaming water causing cavitation. Size and shape of particles, hardness of particles and its concentration in water. Chemical composition, microstructure, mechanical properties like hardness, ductility, tensile strength, work-hardening rate and toughness **10Hours**

UNIT-II

Materials for thermal power generation: Introduction to the constraints that are currently placed on power generation plant in terms of environmental impact and developing of high efficiency, low emission systems. Measures to improve the efficiency of a power plant- Increasing the temperature and the pressure of the steam entering the turbine. **10Hours**

Unit-III

Batteries and Super capacitors for electrochemical energy storage: Batteries – primary and secondary batteries, Lithium, Solid-state and molten solvent batteries; Lead acid batteries; Nickel Cadmium Batteries; Advanced Batteries, Super capacitors for energy storage. Role of carbon nanomaterials as electrodes in batteries and super capacitors. **11Hours**

Unit-IV

Materials for energy storage: Synthesis of nanomaterials, top-down and bottom-up approaches, mechanical milling, solgel method, chemical vapour deposition (CVD), Carbon Nano-Tubes (CNT), Carbon Nano-Fibres (CNF), graphene, preparation of graphene. Fabrication of CNTs and CNFs, CNTs and CNFs for hydrogen storage. **10Hours**

Unit-V

Fuel Cells and its applications: Fuel Cells, components of fuel cells, Types of fuel cells, Acid/alkaline fuel cells, polymer electrolyte fuel cell, phosphoric acid fuel cell, molten carbonate fuel cell, solid oxide fuel cell, Types of solid oxide fuel cells: High temperature, intermediate temperature Single chamber solid oxide fuel cells, Problems with fuel cells, applications of fuel cells, difference between batteries and fuel cells, principle of working of fuel cell, performance characteristics of fuel cells, efficiency of fuel cell, fuel cell stack, description of some commercially available fuel cell stacks, fuel cell cars and buses, overview on research activities. **11Hours**

UNIT-I

Solar Cells and Arrays: Introduction: General Photovoltaic System, The Solar Radiation, and The Incident Solar Radiation "Insolation". Properties of Semiconductors for Solar Cells, The Dark pen Junction Diode, The Solar Cells, and The PV Arrays and Example modules. **10Hours**

UNIT-II

Design and Modelling of Solar Energy: F-Chart method and program, performance and design of liquid based solar heating systems, performance and design of air based solar heating systems, solar service water systems. Utilizability method, the Φ, f- chart method, storage tank losses correction, heat exchange correction. Un utilizability method.

Solar PV Power Plants Site Selection: Introduction to Solar Photovoltaic Land Suitability: Multi criteria Decision-Making Techniques for Photovoltaic Site Selection, Geographical Information System and Dealing With Uncertainties in Photovoltaic Site Selection. Criteria for Site Selection and Restriction Factors and Unsuitable Sites. **11Hours**

UNIT-III

Forecasting of Intermittent Solar Energy Resource: Introduction, Intermittent and Stochastic Renewable Energy Production in an Electrical Grid: The Production/Consumption Balance, Intermittence of Renewable Production and Impact on the Electrical Grid Management. Cost of Intermittence and Benefit of Forecasting and Forecasting Methods for Different Forecast Horizons. **10Hours**

UNIT-IV

MPPT Techniques: Performance of MPPT Techniques of Photovoltaic Systems Under Normal and Partial Shading Conditions. MPPT Techniques, PV System Under Non shading Conditions and Smart Maximum Power Point Tracker Under Partial Shading Conditions.	**11Hours**

UNIT-V

Hybrid PV/Batteries Bank/Diesel Generator Solar-Renewable Energy System Design, Energy Management, and Economics: Hybrid Renewable Energy System Modelling: Photovoltaic Cell Model, Lead-Acid Battery Model and Diesel Generator Model. Sizing of Hybrid Photovoltaic/Batteries Bank/Diesel Generator System, Energy Management and Economics of Hybrid Photovoltaic/Batteries Bank/Diesel Generator System.	**10Hours**

CO1	3												1	
CO2	3	2	2		2									2
CO3	3	2											1	
CO4	3												1	
CO5	3													2

UNIT-I

Fundamentals of Electrical Power Systems Energy and Power, definitions of operational factors, Tariffs, Power system representation: One-line diagrams, Impedance and Reactance diagrams, Per-Unit Representation, Summary of Three – phase circuits relationships.

10Hours

UNIT-II

Transmission line parameters: Resistance, Inductance and Capacitance. Transmission line Representation: Short transmission line, Medium-length transmission line, Long transmission line. Surge impedance loading, Corona, ACSR conductors, Bundled conductors, Types of faults. Underground cables: Grading of Cables, Cable Capacitance, Cable Inductance, Dielectric loss and Heating, power flow studies: Power flow in a short transmission line, an iterative procedure and the power flow equations.

12Hours

UNIT-III

Power system operation and control- Economic distribution of load between generators, Effect of transmission line loss, Power system control. Power system protection: Components of a power system, circuit breakers, transducers and relays, relay types, protection of lines, transformers and generators.

10Hours

UNIT-IV

Power distribution systems-General aspects, DC distribution, AC distribution
Sub-station – Functions of substation, Classification of sub-stations, Indoor sub-stations, Outdoor sub-stations, Transformer Sub-stations, Symbols for circuit elements in sub-stations, Key diagram of 11kV/400V Indoor Sub-station. **10Hours**

UNIT-V

Control of reactive power, voltage and load frequency- Generation and absorption of reactive power, the effect of reactive power on voltage and voltage regulation, reactive power compensation in power system, methods of voltage control in the transmission system, the relation between voltage and reactive power, frequency and active power, control of load frequency. Static compensators. Introduction to Flexible AC transmission System (FACTS). **10Hours**

TEXT BOOKS:

1. "Electric Power Systems", Nasar A. S. and K.Umarao, TMH, Indian Adapted edition, 2006.
2. "Power System Engineering", R. K. Rajuput,Laxmi Publications, New Delhi, 4th edition.

1. "Elements of Power system analysis", Stevenson W , McGraw Hill Higher Education, 4th edition, 1982.
2. "Power System Engineering", D P Kothari and I J Nagrath, TMH, 2nd edition.

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective
Course Title: Thermal Systems for Renewable Energy	**Course Code:**19ERE152
L-T-P: 4-0-0	**Credits:**04
Total Contact Hours: 52 hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand basic terminologies of thermal systems and heat transfer.
2. Identify the working of Heat transfer equipment.
3. Analyse the working of single phase and multiphase electronics cooling.

Teaching Methodology:

- Lectures, Power Point Presentation and Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3												1	
CO2	3	2	2		2								1	2
CO3	3	2												2

UNIT-I

Macroscopic Heat Conduction formulation- Numerical methods for conduction type phenomena-Design of thermal systems-Thermal transports in micro and nano scale systems. **11 Hours**

UNIT-II

Single phase convective heat transfer -Enhancement convective heart transfer -free convection – natural convection – visualization of convective heat transfer

11 Hours

UNIT-III

Radiative heat transfers -Near field thermal radiation – design of optical and radiative properties of surfaces- radiative properties of gases and particles - Radiative transfers in combustion systems- inverse problem in radiative transfer

10 Hours

UNIT-IV

Heat transfer equipment – single phase heat exchanger – two phase heat exchangers-compact heat exchangers- evaporative heat exchangers energy efficiency and advanced heat recovery technologies-heat exchangers fouling cleaning and maintenance. **10 Hours**

UNIT-V

Single phase and multiphase flow for electronic cooling -film and dropwise condensa pipes and thermosyphons – phase change materials – heat transfer in biology and systems **10 Hours**

1.Fancis A Kulachki editor-in-chief, Hand book of thermal science and engineering, spinger,2018

Department: Electrical and Electronics Engineering	**Course Type:** Laboratory
Course Title: Energy Laboratory-1	**Course Code:** 19EREL16
L-T-P:0-0-4	**Credits:**02
Total Contact Hours: 36	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. I-V and P-V characteristics, Fill factor, Impact of tilt and shading and MPPT of PV panel.
2. Evaluate cut-in speed and cut-off speed, I-V characteristics of wind turbine, P, V and F measurement of output of wind generator.

Teaching Methodology:

Practical sessions

Assessment Methods:

- Observation – 20 Marks
- Record - 20 Marks
- Internal lab test - 10 Marks
- Semester end examination - 50 Marks

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1				3									2	
CO2				3										2

List of Experiments

1) I-V and P-V characteristics of Series and Parallel combination of PV modules and calculation of Fill factor.
2) Impact of tilt angle and shading of solar panel on PV power.
3) Perform the experiment of manually finding the MPP by varying the resistive load across the PV panel.
4) Perform the experiment of finding the MPP by varying the duty cycle of DC-DC converter.
5) Performance study of Wind Energy Systems.
6) Evaluation of cut-in speed and cut-off speed of Wind Energy Systems.
7) I-V characteristics of wind turbine at different wind speed of Wind Energy Systems.
8) P, V and F measurement of output of wind generator of Wind Energy Systems.
9) Demonstration of system with charge controller and inverter of Wind Energy Systems.

II Semester

Course Title: Instrumentation and control in Energy Systems	Course Code:19ERE21
L-T-P:4-0-0	**Credits:**04
Total Contact Hours:52 hrs.	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand the functional descriptions and performance characteristics of Transducers and their Industrial applications.
2. Be acquainted with the types and principle of operation of Mechanical transducers.
3. Comprehend the types and principle of operation of Electrical transducers (passive and active).
4. Be familiar with the Instruments for monitoring electrical parameters and developments in sensor technology.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	1	1							1	1			1	
CO2	1	1				1	1		1	1				2
CO3	1	1				1	1		1	1			1	
CO4	1	1				1	1		1	1				2

UNIT-I

Generalized configuration, performance characteristics of instruments:
Generalized configurations and functional descriptions of measuring instruments. Measurement Errors for mechanical instruments. Transducer classification. Generalized performance characteristics of instruments, Static and dynamic characteristics of transducers.
Mechanical transducers: Temperature measurement- Introduction, Basics of temperature measurement, bimetallic element. Basics of force measurements-Helical spiral springs, cantilever beams.

11Hours

UNIT-II

Mechanical and Electrical transducers: Basics of pressure measurement-Manometers, Diaphragms, Membranes, Bourdon tube elements.
Basics of torque measurement: Torsion bar, Flat spiral spring, Basics of flow measurement- Rota meter floats system. **Passive electrical transducers:** Introduction, Resistive Transducers.

11Hours

UNIT-III

Passive electrical transducers: inductive and capacitive transducers. **Active electrical transducers:** Introduction, Thermoelectric, Piezoelectric, hall effect, electromechanical, photoelectric transducers.

10Hours

UNIT-IV

Active electrical transducers: Ionization, digital and electrochemical transducers. **Instruments for monitoring electrical parameters**: Moving Iron/coil, Energy measurement, power factor meter. Analog signal conditioning, Amplifiers, Instrumentation amplifier, A/D and D/A Converters, Data acquisition system. **10Hours**

UNIT-V

MICROPROCESSORS: Microprocessor based temperature control system – Introduction to microcontrollers – Process control system – Pneumatic control systems - Simple circuits. **10Hours**

TEXT BOOKS:

1. "Transducers and Instrumentation", D. V. S. Murthy, PHI, India.
2. George C .Barney, "Intelligent Instrumentation Microprocessor and Applications in Measurements and Control", Prentice Hall, New Delhi, 2008.
3. "A course in Mechanical Measurements and Instrumentation ",A.K. Sawhney. Puneet Sawney, Dhanpat Rai &Co 2002.

REFERENCE BOOKS:

1. "Measurement Systems-Application and Design", Doeblin E.O,TMH International edition, New York, 5th edition.
2. "Hand book of Modern Sensors: Physics, Design and applications ",Jacob Fraden, publication by Springer, 4th edition.
3. "Principle of measurement systems", John P. Bentley, Third edition, Wesley, Longman Ltd, UK.
4. "Industrial Instruments and Controls handbook", Gregory K. McMillan and Doughlas M. Considine, TMH.

Department: Electrical and Electronics Engineering	**Course Type:** Core
Course Title: Wind Energy Technology	**Course Code:**19EREE152
L-T-P:4-0-0	**Credits:**04
Total Contact Hours:52hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand the Advances in Renewable Energies and Power Technologies.
2. Understand the Wind Energy: Principles, Analysis, and Design.
3. Understand the Performance of Doubly Fed Induction Generator in Wind Energy Conversion Systems.
4. Understand the Wind Farm Configuration.
5. The students will be able to understand Modelling and Characterization of a Wind Turbine Emulator.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3												1	2
CO2	3	2	2		2								2	2
CO3	3	2											2	2
CO4	3												2	2
CO5	3												2	2

UNIT-I

Electric Power from the Wind: Introduction, Basic concepts of Wind Energy Converters: Rotor with a Vertical Axis of rotation, Horizontal Axis Rotors, Wind Energy Concentrators and Terms and Expression. Physical Principle of wind energy conversion. **10Hours**

UNIT-II

Wind Energy FACTS Applications and Stabilization Schemes: Wind Farm Configuration, Issues of Integrating Wind Energy into the Grid: An Overview, Different FACTS Schemes and Applications, Wind Energy in Egypt and Simple example on Wind Turbine Modelling with characteristic results. **10Hours**

UNIT-III

Wind Power Variability and impacts on power systems: Understanding Variable Output Characteristics of Wind Power: Variability and Predictability, Wind Power: A Variable Output Source Embedded in a Variable Electricity System, Short-Term Variability, Long-Term Variability, Effects of Aggregation and Geographical Dispersion, Load Duration Curve and The Need for Interconnection. Variability Versus Predictability of Wind Power Production and Impacts of Wind Power on Power Systems. **11Hours**

UNIT-IV

Modelling and Characterization of a Wind Turbine Emulator: Modelling: Doubly Fed Induction Machine, The Static Model, The Dynamic Modelling and Model for Grid Disturbances. Control System: Vector Control, Control of Grid Side Converter and Control of Rotor Side Converter. Power Electronic Converters, Low-Voltage Ride-Through, Grid Code Requirements, Crowbar Protection, Types of Wind Turbines and Modelling of the Wind Turbine. **11Hours**

UNIT-V

Grid Infrastructure Upgrade for Large-Scale Integration: European Transmission and Distribution Networks, Network Planning for Wind Power: Benefits of and Options for Increasing Transmission Capacity, Grid Connection Requirements: Regulatory and Legal Background, Wind Power Plant Capabilities and Grid Codes and Essential Requirements for Wind Power Plants. **10Hours**

TEXT BOOKS:

1. "Wind Energy – The Facts A guide to the technology, economics and future of wind power", European Wind Energy Association (EWEA), 2009.
2. Wind Turbines: Fundamentals, Technologies, Application, Economics", Technique\\Energy, Erich Hau, 2014.

REFERENCE BOOKS:

1. "Advances in Renewable Energies and Power Technologies", TNQ Books and Journals, Imene Yahyaoui, 2018.

Department: Electrical and Electronics Engineering	**Course Type:** Core
Course Title: Machine Learning in Renewable Energy	**Course Code:**19ERE23
L-T-P:4-0-0	**Credits:**04
Total Contact Hours:52hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand Supervised and Unsupervised Learning.
2. Understand the machine learning algorithms.
3. Understand Online and Distributed Learning
4. Understand the Forecasting Renewable Energy Generation using ML.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3												1	
CO2	3												1	
CO3	3												1	2
CO4	3												1	

UNIT-I

Supervised Learning (Regression/Classification) Basic methods: Distance-based methods, Nearest-Neighbours, Decision Trees, Naive Bayes, Linear models: Linear Regression, Logistic Regression, Generalized Linear Models Support Vector Machines, Nonlinearity and Kernel Methods Beyond Binary Classification: Multi-class/Structured Outputs, Ranking. **10Hours**

UNIT-II

Unsupervised Learning: Clustering: K-means/Kernel K-means, Dimensionality Reduction: PCA and kernel PCA, Matrix Factorization and Matrix Completion, Generative Models (mixture models and latent factor models) **10Hours**

UNIT-III

Evaluating Machine Learning algorithms and Model Selection, Introduction to Statistical Learning Theory, Ensemble Methods (Boosting, Bagging, and Random Forests), Sparse Modelling and Estimation, Modelling Sequence/Time-Series Data, Deep Learning and Feature Representation Learning. **10Hours**

UNIT-IV

Scalable Machine Learning (Online and Distributed Learning) A selection from some other advanced topics, e.g., Semi-supervised Learning, Active Learning, Reinforcement Learning, Inference in Graphical Models, Introduction to Bayesian Learning and Inference **11Hours**

UNIT-V

Forecasting Renewable Energy Generation- Wind Power Generation, Solar Energy Generation, Hydro Power Generation, Biogas Generation. **11Hours**

TEXT BOOKS/REFERENCE BOOKS:

1. Machine Learning: A Probabilistic Perspective, Kevin Murphy, MIT Press, 2012
2. The Elements of Statistical Learning, Trevor Hastie, Robert Tibshirani, Jerome Friedman, Springer 2009 (freely available online)
3. Pattern Recognition and Machine Learning, Christopher Bishop, Springer, 2007.

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective-A
Course Title: Energy Systems Modelling and Analysis	**Course Code:**19EREE241
L-T-P: 3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Student will be able to :

1. Perform Simulation and Modelling of typical energy system
2. Analyse effect of constraints on the performance of energy systems
3. Perform Energy-Economic Analysis for typical applications

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internals, 30Marks each will be conducted and the Average of best of two will be taken, Assignment 10 marks and seminar 10 marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3	3										1	2
CO2	3	3	3										1	2
CO3	3	3												2

UNIT-I

Primary energy analysis - energy balance for closed and control volume systems - applications of energy analysis for selected energy system design - modelling overview - levels and steps in model development - Examples of models – curve fitting and regression analysis. **8Hours**

UNIT-II

Modelling of energy systems – heat exchanger - solar collectors – distillation -rectification turbo machinery components - refrigeration systems - information flow diagram - solution of set of non-linear algebraic equations - successive substitution - Newton Raphson method- examples of energy systems simulation **8Hours**

UNIT-III

Objectives - constraints, problem formulation - unconstrained problems - necessary and sufficiency conditions. Constrained optimization - Lagrange multipliers, constrained variations, Linear Programming - Simplex tableau, pivoting, sensitivity analysis - New generation optimization techniques – Genetic algorithm and simulated annealing – examples. **8Hours**

UNIT-IV

Multiplier Analysis - Energy and Environmental Input / Output Analysis - Energy Aggregation – Econometric Energy Demand Modelling - Overview of Econometric Methods - Dynamic programming - Search Techniques - Univariate / Multivariate **8Hours**

UNIT-V

Case studies of optimization in Energy systems problems- Dealing with uncertainty- probabilistic techniques – Trade-offs between capital and energy using Pinch analysis. **7 Hours**

TEXT BOOKS:

1. Thermal Design and Optimization ,Bejan, A, Tsatsaronis, G and Moran, M., , John Wiley & Sons 1996
2. Design of Thermal Systems, Stoecker, W.F., McGraw Hill, 2011.

REFERENCE BOOKS

1. Design and Optimization of Thermal Systems, Yogesh Jaluria, CRC Press INC, 2008
2. Essentials of Thermal System Design and Optimization, C. Balaji, Aue Books, 2011

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective-A
Course Title: Computational Fluid Dynamics for Energy Systems	**Course Code:**19EREE242
L-T-P:3-0-0	**Credits:**03
Total Contact Hours:52 hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand the method of modelling the flow and heat transfer phenomenon.
2. Develop finite difference and finite volume discretized forms of the CFD equations.
3. Understand the various numerical schemes to solve convection and diffusion equations
4. Understand the method of modelling the flow and heat transfer phenomenon.
5. Develop finite difference and finite volume discretized forms of the CFD equations.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3												1	
CO2	3	2	2		2								1	
CO3	3	2											1	
CO4	3												2	
CO5	3												1	

UNIT-I
INTRODUCTION

Numerical simulation – Advantages, Methods of classification of PDE's, Elliptic, parabolic and hyperbolic equations, Initial and boundary conditions, Discretisation Methods, Finite Difference Expressions from Taylor's series, Uniform and non-uniform Grids - Numerical Errors, Grid Independence Test.

12 HOURS

UNIT-II
CONSERVATION EQUATION:

Mass, Momentum and Energy Equation three dimensions, Eulerian and Lagrangian Approach, Equation of State, Navier's Strokes equation, Differential and Integral form of general transport equations. **Hybrid wind energy systems** - wind with diesel power, wind with conventional grid, wind with Photovoltaic system etc.

10 HOURS

UNIT-III
CONDUCTION HEAT TRANSFER: Steady one-dimensional conduction, Two and three dimensional steady state problems, Transient one-dimensional problem, Two-dimensional Transient Problems - Finite difference and Finite Volume approach

10 HOURS

UNIT-IV

INCOMPRESSIBLE FLUID FLOW: Stream Function – Vorticity methods, Finite volume methods for Convection and diffusion problem –Central difference scheme, Upwind scheme, Hybrid scheme – Assessment of each scheme -Solution algorithm for pressure – velocity – coupling in steady flows - SIMPLE Procedure of Patankar and Spalding, SIMPLER and PISO Algorithm.. **10 HOURS**

UNIT-V

TURBULENCE MODELS: Algebraic Models – One equation model, K – ϵ Models, Standard and High and Low Reynolds number models, Prediction of fluid flow and heat transfer using standard codes **10 HOURS**

Course Title: Sensors for Renewable Energy	**Course Code:**19EREE243
L-T-P:3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand about different sensor technologies.
2. Understand different types of Sensors and its classification
3. Understand the concept of MEMS and NEMS.
4. Understand types of sensor materials.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3												1	2
CO2	3													2
CO3	3													2
CO4	3												1	2

UNIT-I **8Hours**

Introduction to sensor technologies-sensor characteristics-Physical principles of sensing – Optical components of sensors –Interface Electronic Circuits -sensor performance parameters-contemporary technologies for preparation of sensors-sensor data acquisition and Evaluation.

UNIT-II **8Hours**

Occupancy and Motion detectors-Displacement Position and Level sensors-Velocity and acceleration sensing -Surface Temperature sensor, Energy sensor Variable Load Sensor - Anemometer.

UNIT-III **8Hours**

Hydrogen sensor and its classification- Oxygen sensing technologies- Sensors for gaseous trace components - Humidity sensing technologies - Sensors for temperature, Pressure, Gas Flow and fire detection.

UNIT-IV **7Hours**

MEMS – NEMS – Nano robotics Based Sensors- TDS Meter- Radiation sensors-chemical sensors-Acoustic Sensors-Light detectors

UNIT-V

Sensor Materials and Technology - Sensor deployment- Regulations, codes and standards-
Sensor testing calibration and validation. **8Hours**

Text Books

1. "Sensors for Safety and Process Control in Hydrogen Technologies", Thomas Hübert, Lois Boon-Brett, Paperback.
2. "Hand Book of Modern Sensors", Jacob Fraden, Springer Third Edition,2004

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective-B
Course Title: Large Scale Grid Integration of Renewable Energy Sources	**Course Code:** 18ERE244
L-T-P: 3-0-0	**Credits:**03
Total Contact Hours:39 hrs	**Duration of SEE:**3hrs
SEEMarks:50	**CIEMarks:**50

Course Outcomes:

Students will be able to understand

1. Status, trends in international requirement for large integration of renewable energy sources.
2. Wind forecasting methods and wind power integration-solutions and measures.
3. Grid integration of large-scale PV plants and issues, needs, conditions and enabling technologies.
4. DC distribution systems and micro grids, demand prediction.

   Distributed micro-storage system with high penetration of PV generation

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3												2	1
CO2	3												2	
CO3	3												2	
CO4	3												2	1

UNIT-I

The power grid as part of a 100% renewable energy system:
Introduction, status and trends in the voluntary use of renewable energy, flexibility, role of the electricity transport, role of energy storage, Reliability in the complete renewable energy system- view of electricity consumer, view of electricity producer, view of system operator, The transition stage, renewable energy integration issues. **08 HOURS**

UNIT-II

International requirements for large integration of renewable energy sources: General overview, ancillary services in RES: Comparisons among different countries.- Active power reserves and frequency control, Reactive power control/ voltage control, RES under disturbances-fault ride through capability, renewable energy curtailment. Wind forecasting in grid and market operations, Uncertainty in wind energy production and effects of wind forecast uncertainty in the power system. Wind power forecasting systems. **08 HOURS**

UNIT-III

Grid Integration of large scale PV plants: Introduction, photoelectric observatory, Irradiance and power output fluctuations in large PV plants-at PV pant level **08 HOURS**

,smoothing power output fluctuations by using energy storage measurement and assessment of renewable generation, interconnection between renewable generation and electricity grid. Wide area network: data model with the IEC 61850 standard for smart grid.

UNIT-IV

DC distribution systems and microgrids: DC microgrid system overview, Operation and control of DC microgrids, application of DC microgrids to future smart grids, Distributed energy resources integration and demand response, Overview of modeling techniques for energy demand prediction, time of use-based bottom-up models.

08 HOURS

UNIT-V

Distributed micro-storage system with high penetration of PV generation

Overview of microgrid storage technologies-Conventional batteries, Flow batteries, super capacitors, superconducting magnetic energy storage, flywheels, comparison of characteristics of micro storage system technologies, Topologies of bidirectional electronic converter, control strategies for the ESMs of the storage devices.

07 HOURS

3. "Impact of widespread photovoltaic generation on distribution systems", M. Thomson and D.G. Infield, IET Renew. Power Generation, Vol. 1, No.1, pp. 33–40,2007.

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective-A
Course Title: Bio Energy Conversion Techniques	**Course Code:**19EREE245
L-T-P:3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand the concept of biomass Technologies.
2. Understand the biomass: resources and potentials.
3. Understand the Performance of Doubly Fed Induction Generator in Wind Energy Conversion Systems.
4. Understand the Wind Farm Configuration.
5. The students will be able to understand Modelling and Characterization of a Wind Turbine Emulator.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

CO2	3	2	2		2									3
CO3	3	2											1	3
CO4	3													3
CO5	3												1	3

UNIT-I

Executive Summary on Biomass: Introduction, Biomass Resources, Biomass Conversion Technologies, Bioenergy Markets, Interactions with other markets, Bioenergy and Policy Objectives.

08 HOURS

UNIT-II

Biomass Resources and Potentials: Overview of Biomass Feedstocks and Global Technical Potentials: Technical biomass potential, Key factors influencing technical biomass potential, Biomass potential taking into account several sustainability constraints, Regional and Short-term Biomass Utilization Scenarios, Environmental and Other Aspects of Energy Crop Production, Biomass Supply Chains and Logistics.

08 HOURS

UNIT-III

Bioenergy Routes and Conversion Technologies: Biomass – A Unique Renewable Resource, Characteristics of Bioenergy Routes, Biomass Pre-treatment and Upgrading Technologies, Biomass for Heat Applications, Biomass for Power and CHP Applications, Bio fuels for Transport Applications and Bio refineries.

08 HOURS

UNIT-IV

Biomass Trade and Bio Energy Markets: Bioenergy Markets and Opportunities, Trade in Biomass Energy Carriers, Bioenergy and Commodity Markets and Barriers to Deployment and Market Risks.

08 HOURS

UNIT-V

Bioenergy and Policy Objectives: The Role of Bioenergy in the Stationary and Transport Energy Systems, Bioenergy and Climate Change Mitigation, Bioenergy and Energy Security, Other Environmental and Socioeconomic Aspects and making policy for bioenergy deployment **07 HOURS**

TEXT BOOKS:

1. "Bioenergy – a Sustainable and Reliable Energy Source MAIN REPORT", IEA 2009 Bioenergy 2009.

REFERENCE BOOKS:

1. "Introduction to Biomass Energy Conversions", by Dr.Salim Mokraoui, King Saud University STE, Bio Mass Group.

2. "Biomass Conversion Technologies for Renewable Energy and Fuels: A Review Note", by Summit Sharma IOSR Journal of Mechanical and Civil Engineering (IOSR-JMCE).

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective -A
Course Title: Power Electronics for Renewable Energy Systems	**Course Code:** 19EREE246
L-T-P: 3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand the stand alone and grid connected renewable energy systems.
2. Understand the design of power converters for renewable energy applications.
3. Understand the various operating modes of wind electrical generators and solar energy systems.
4. Understand the maximum power point tracking algorithms

Teaching Methodology:

Lectures

Power Point Presentation

Case Study

Assessment Methods:

- Three internals, 30Markseachwill be conducted and the Average of best of two will be taken, Assignment 10 marks and seminar 10 marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PSO2**

CO4	3												1	1

UNIT-I

Environmental aspects of electric energy conversion: impacts of renewable energy generation on environment (cost-GHG Emission) - Qualitative study of different renewable energy resources ocean, Biomass, Hydrogen energy systems: operating principles and characteristics of: Solar PV, Fuel cells, wind electrical systems-control strategy, operating area. **08Hours**

UNIT-II

Electrical machines for renewable energy conversion **07Hours**

Review of reference theory fundamentals-principle of operation and analysis: IG, PMSG, SCIG and DFIG.

UNIT-III

Power Converters: Solar: Block diagram of solar photo voltaic system: line commutated converters (inversion-mode) - Boost and buck-boost converters- selection Of inverter, battery sizing, and array sizing. Wind: three phase AC voltage controllers- AC-DC-AC converters: uncontrolled rectifiers, PWM Inverters, Grid Interactive Inverters-matrix converters. **08Hours**

UNIT-IV

Stand-alone operation of fixed and variable speed wind energy conversion systems and solar system-Grid connection Issues -Grid integrated PMSG and SCIG Based WECS-Grid Integrated solar system. **08Hours**

UNIT-V

Hybrid renewable energy systems: Need for Hybrid Systems- Range and type of Hybrid systems- Case studies of Wind-PV- Maximum Power Point Tracking (MPPT). **08Hours**

TEXT BOOKS:

1. "Wind Electrical Systems", S.N.Bhadra, D. Kastha, & S. Banerjee Oxford University Press, 2009

2. " Solar energy utilization", Rai. G.DKhanna publishes, 1993.
3. "Wind energy system", Gray, L. Johnson, prentice hall linc, 1995.
4. Non-conventional Energy sources B.H.Khan Tata McGraw-hill Publishing Company, New Delhi.

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective-A
Course Title: Energy Conservation in Electrical Systems	**Course Code:**19EREE247
L-T-P:3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Study the concepts of power factor, load management
2. Understand the concept of Transformers & Motors
3. Understand the basics, types, characteristics and applications of fuel cells.
4. Study the Scope for energy conservation and its methods
5. Understand case studies for typical sectors

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3						3						1	2
CO2	3						3							2
CO3	3												1	2
CO4	3												1	2
CO5	3													2

UNIT-I

Basics of Electrical Energy usage

Fuel to Power : Cascade Efficiency – Electricity Billing : Components & Costs – kVA – Need & Control – Determination of kVA demand & Consumption – Time of Day Tariff – Power Factor Basics – Penalty Concept for PF – PF Correction – Demand Side Management (a brief) **08Hours**

UNIT-II

Transformers & Motors

Transformer – Basics & Types – AVR & OLTC Concepts – Selection of Transformers – Performance Prediction - Energy Efficient Transformers - Motors: Specification & Selection – Efficiency / Load Curve – Load Estimation – Assessment of Motor Efficiency under operating conditions – Factors affecting performance – ill effects of Rewinding & Oversizing - Energy Efficient Motors – ENCON Scope. **08Hours**

UNIT-III

Fans / Pumps / Compressors

Basics – Selection – Performance Evaluation – Cause for inefficient operation – scope for energy conservation – methods (General & Latest) adopted for effecting ENCON – Economics of ENCON adoption in all the 3 utilities. **08Hours**

UNIT-IV

Illumination & Energy Efficiency Devices

Specification of Luminaries – Types – Efficacy – Selection & Application – ENCON Avenues &Economic Proposition - New Generation Luminaries (LED / Induction Lighting) -Soft Starters / Auto Star – Delta – Star Starters / APFC / Variable Speed & Frequency Drives –Time Sensors – Occupancy Sensors. **08Hours**

UNIT-V **07Hours**

Case Studies & CO_2 Mitigation

Case Study Evaluation for 3 / 4 Typical Sectors – PAT Scheme (an introduction) – CO2 Mitigation &Energy Conservation & Cost Factor.

TEXT BOOKS

1. Hamies, Energy Auditing and Conservation ; Methods Measurements, management and Case Study, Hemisphere, Washington, 1980
2. Energy Management, Trivedi, PR and Jolka KR, Commonwealth Publication, New Delhi, 1997
3. Handbook on Energy Efficiency, TERI, New Delhi, 2001

REFERENCE BOOKS

1. Peters et al. Sustainable Energy, beta – test – draft
2. Kraushaar and Ristenen, Energy and Problems of a Technical
3. Society, 1993
4. Guide book for National Certification Examination for Energy
5. Managers and Energy Auditors (Could be downloaded from
6. www.energymanagertraining.com)

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective-B
Course Title: Predictive Analytics in Energy Management	**Course Code:** 19ERE251
L-T-P: 3-0-0	**Credits:** 03
Total Contact Hours: 39hrs	**Duration of SEE:** 3hrs
SEE Marks: 50	**CIE Marks:** 50

Course Outcomes:

Students will be able to

1. Understand predictive modeling process.
2. Understand Regression Modeling, Regression Trees and Rule Based Models.
3. Understand the concept of Non Linear Classification Models.
4. Analyze different case studies.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO 1	PSO 2
CO1	3												1	2
CO2	3										2		1	2
CO3	3												1	2
CO4	3												1	2

UNIT-I

Introduction – A short Tour of predictive modeling process-Data Pre-processing – Over-fitting and model tuning. **08Hours**

UNIT-II

Regression Modeling – Measuring performance in Regression Models –Linear Regression and its cousins – Non Linear Regression Models. **08Hours**

UNIT-III

Regression Trees and Rule Based Models – Solubility Models – Case study in Energy Management – Classification Models – Measuring Performance in Classification Models **07Hours**

UNIT-IV

Discriminant Analysis and other Classification Models –Non Linear Classification Models-Classification Trees and Rule based Models –Grant Application Models. **08Hours**

UNIT-V

Remedies for severe class imbalance – Case Study: Job Scheduling –Measuring Predictor

Importance- Feature Selection – Factors affecting Model Performance

08Hours

TEXT BOOKS:

1. Applied Predictive Modeling, Max Kuhn, Kjell Johnson, Springer,2013
2. Modeling Techniques in Predictive Analytics, Thomas W Miller Pearson,2013

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective
Course Title: Design of Solar Energy Systems	**Course Code:**19EREE252
L-T-P:3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to:

1. Understand the design concepts of solar systems.
2. Design and development of solar thermal systems.
3. Design of photovoltaic system and its components.
4. Analyze the performance of solar energy systems

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3												2	2
CO2	3	2	2		2								2	2
CO3	3	2											2	2
CO4	3												2	2

UNIT-I

Design Concepts of Solar Systems

System conceptual design, design of major components, overall system, design of physical principles to the solar system based on application. The process includes idea generation, concepts election and estimation, design of major components, and overall system design, solar radiation data.

08 Hours

UNIT-II

Solar Heating and Cooling Systems

Design of solar thermal systems for water, space heating, cooling and power generation. f-Chart calculation method for sizing solar water and space heating systems. Design of non-focusing and focusing collectors.

08 Hours

UNIT-III

Solar Thermal Energy Storage

Design aspects of solar thermal energy storage systems. Selection criteria of storage materials for heating and cooling applications, selection of heat transfer fluid for heating and cooling applications. Design of LHTES for solar process heating and power generation applications.

08 Hours

UNIT-IV

Solar Photovoltaic System

Design of photovoltaic off-grid and grid- connected power systems. Design of system components - PV modules, batteries, charge controllers, inverters, auxiliaries. Performance analysis of a photovoltaic system. Using software codes for design of solar thermal and photovoltaic systems. **08 Hours**

UNIT-V

Performance Analysis

Performance analysis of various solar thermal systems, PV system and evaluation of solar thermal energy storage system, selection of components and materials, estimation of economics. Using software tools for design of solar thermal and photovoltaic systems, case studies. **07 Hours**

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective-B
Course Title: Micro and Smart Grid	**Course Code:**18ERE253
L-T-P: 3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEEMarks:50	**CIEMarks:**50

Course Outcomes:

The students are able to understand

1. The current power system scenario and the existing challenges in India.
2. The various communication protocols related power system and their characteristics
3. The basic concepts of smart grid and its architecture
4. Technical and economical constraints of smart grid mechanism
5. Transmission and distribution challenges in smart grid systems

Teaching Methodology:

Lectures

Power Point Presentation

Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	2											1	
CO2	2	1											1	
CO3	3	1											1	
CO4	3	3											1	
CO5	3	3											1	2

UNIT-I

Introduction: Driving the move towards Smart Grids globally and in India Smart Grid. Overview of how Indian power market is organized operated and challenges being faced. Overview of how the Indian GENERATION, TRANSMISSION and DISTRIBUTION business is operated and controlled and some of the challenges being faced, software management of generation and optimize generator performance, Software to support integration of renewables, System planning & condition monitoring based maintenance, Forecasting & basic trading, Demand response, Performance management. **08Hours**

UNIT-II

Communications in Power Systems: Overview of power sector communications, Generic model of communication network needed for Smart-grid, Introduction to different communication technologies available in the market (Latest standards. Emphasis on importance of inoperability and standardization of communication protocols), Matrix of different technologies against the smart-grid communication needs in a given utility environment, AMI, AMR & MDA: How it works and how it will help to; reduce peaks manage networks more efficiently and contribute towards **08Hours**

smarter grids, Communication Standards IEC6150, Wide Area Situation Awareness (WASA), Network stability and Phasor Measurement Unit (PMU), 6Automation and Integration of Distributed Generation / Renewable Energy, Automation and Micro-grids.

UNIT-III

Smart Grid Technologies: Distribution Management Systems (DMS) and Meter Data Management (MDM) are improving energy efficiency and security of supply in Distribution Systems, Overview of Power Electronics in Electrical T&D Systems, Power Electronics in emerging Smart Grids, Transmission (DC Super Grids) , Distribution (PE facilitating the integration of, (Distributed Generation, Renewables, Microgrids, Virtual Power Plants (VPP), Storage, Fault Current Limitation, Power Electronics, Super Conducting and Magnetic types). **08Hours**

UNIT-IV

Developing technology and systems that will enable grids to work smarter in the future: Storage: Organic and Inorganic Salts & Synthetic Heat Storage, Developing technology and systems that will enable grids to work smarter in the future (Smart Meters, Recording consumption, Advanced payback options for load-management, Communication between the utility and customer's home (for home automation)), In-home controls, Demand Side Management (DSM).Power Trading & the India Energy Exchange : Encouraging Markets, Regulation enabling grids to work smarter in India, Project Financing: Financial Incentives to Enable Smart Grids in India, Smart Grid Economics: Making Smarter Grids Financially Viable, Planning for Smarter Grids. **08Hours**

UNIT-V

Transmission and Distribution challenges in Smart Grids: Challenges faced by the Transmission System Developing technology and systems that will enable smarter transmission of bulk energy (Metering, Trading mechanisms, AC – FACTS (Statcom) DC – HVDC, Fault Current Limiters), Challenges faced by the Distribution Networks:(**07Hours**

How to be more energy efficient, stable, reliable and environmentally friendly, Reducing losses, Integration of renewable Connecting/disconnecting micro-grids and virtual power plants, manage bi-directional energy flows), Developing technology and systems that will enable smarter distribution networks (DC – MVDC, Fault Current Limiters, Others (AC/DC TXs etc).

Department: Electrical and Electronics Engineering	**Course Type:** Program Elective-B
Course Title: Energy Forecasting, Modelling and Project Management	**Course Code:**19EREE254
L-T-P:3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand the Role of energy in economic development and social transformation.
2. To develop forecasting models and optimization models for energy planning.
3. To equip the students in writing project proposals and making project cost estimation
4. To evaluate the limit cost of energy for various renewable energy systems.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

CO1	3						1						1	2
CO2	3		2										1	1
CO3	3												1	1
CO4	3												1	1

UNIT-I **08Hours**

ENERGY SCENARIO: Role of energy in economic development and social transformation: Energy & GDP, GNP and its dynamics - Energy Sources and Overall Energy demand and Availability - Energy Consumption in various sectors and its changing pattern - Status of Nuclear and Renewable Energy: Present status and future promise.

UNIT-II **08Hours**

FORECASTING MODEL: Forecasting Techniques - Regression Analysis - Double Moving Average - Double Experimental smoothing - Triple Exponential Smoothing – ARIMA model - Validation techniques – Qualitative forecasting – Delphi technique - Concept of Neural Net Works.

UNIT-III **08Hours**

OPTIMIZATION MODEL: Principles of Optimization - Formulation of Objective Function - Constraints - Multi Objective Optimization – Mathematical Optimization Software – Development of Energy Optimization Model -Development of Scenarios – Sensitivity Analysis - Concept of Fuzzy Logic.

UNIT-IV **07Hours**

PROJECT MANAGEMENT: Project Preparation – Feasibility Study – Detailed Project Report - Project Appraisal – Social-cost benefit Analysis - Project Cost Estimation – Project Risk Analysis - Project Financing – Financial Evaluation.

UNIT-V **08Hours**

ENERGY POLICY: National & State Level Energy Issues - National & State Energy Policy - Energy Security – National solar mission - state solar energy policy - Framework of Central Electricity Authority (CEA), Central& States Electricity Regulatory Commissions (CERC & ERCs).

L-T-P:3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand the concept and use of Energy Storage Systems.
2. Understand the different types of Energy storage techniques.
3. Understand the Future of Energy Storage Systems.
4. Understand the Cost Models and Economic Analysis.
5. The students will be able to understand Modeling and control the Energy Storage Systems.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3													1
CO2	3	2	2		2									1
CO3	3	2												1
CO4	3													1
CO5	3													1

UNIT-I

The Use of Energy Storage: Trends in power system development: Demand side characteristics and Supply side characteristics, Energy storage as a structural unit of a power system: Energy and power balance in a storage unit and Mathematical and Economical model of storage and Storage applications. **08 Hours**

UNIT-II

Energy Storage Techniques: Thermal energy storage, Flywheel storage, Pumped hydro storage, Compressed air energy storage, Hydrogen and other synthetic fuels, Electrochemical energy storage, Capacitor bank storage, Superconducting magnetic energy storage, Energy storage in the power system itself, Considerations on the choice of a storage system. **08 Hours**

UNIT-III

The Future of Energy Storage Systems: Introduction: Nanotechnologies for energy related issues, Current state of the art: Batteries, Fuel cells, Micro engines and micro turbines, Super capacitors: Electric double layer capacitors, Electrochemical pseudo super capacitors, and Hybrid super capacitors. **08Hours**

UNIT-IV

Cost Models and Economic Analysis: Introduction, A Cost Model for Storage Technologies: The Capital Costs, Operating and Maintenance Costs, Replacement Costs, End-of-Life Costs, The Synthesis of a Cost Model. Mid- and Long-Term Applications of Energy Storage Installations in the Power System. **08 Hours**

UNIT-V

Modelling, Control, and Simulation: Introduction, Modelling of Storage Technologies: A General Approach Orientated to Simulation Objectives, The Modelling and Control of the Grid-Side Converter: Modelling, Control. The Modelling and Control of Storage-Side Converters and Storage Containers: Supercapacitors and DC–DC Converters, Secondary Batteries and DC–DC Converters and Flywheels and AC–DC Converters. **07 Hours**

L-T-P:3-0-0	**Credits:**03
Total Contact Hours:39hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to

1. Understand the basics of waste management System
2. To familiarize students with recent energy generation techniques
3. Provide information on various methods of waste management.
4. make student realize on the importance of healthy environment

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3													2
CO2	3													2
CO3	3						2							2
CO4	3						2							2

UNIT-I **07Hours**

CHARACTERISTICS AND PERSPECTIVES: Sources – Types – Composition – Generation – Estimation Techniques – Characterization – Types of Collection System – Transfer Stations – Transfer Operations – Material Recycle / Recovery Facilities.

UNIT-II **08Hours**

UNIT OPERATIONS & TRANSFORMATION TECHNOLOGIES: Separation & Processing: Size Reduction – Separation through Density Variation, Magnetic / Electric Field: Densification - Physical, Chemical and Biological Properties and Transformation Technologies – Selection of Proper Mix of Technologies.

UNIT-III **08Hours**

WASTE DISPOSAL: Landfill Classification – Types – Siting Considerations – Landfill Gas (Generation, Extraction, Gas Usage Techniques) – Leachates Formation, Movement, Control Techniques Environmental Quality Monitoring – Layout, Closure & Post Closure Operation – Reclamation.

UNIT-IV **08Hours**

TRANSFORMATION TECHNOLOGIES AND VALUE ADDITION: Physical Transformation : Component Separation & Volume Reduction : Chemical Transformation –Combustion / Gasification / Pyrolysis : Energy Recovery - Biological Transformation – Aerobic Composting – Anaerobic Digestion

UNIT-V **08Hours**

HAZARDOUS WASTE MANAGEMENT & WASTE RECYCLING: Definition – Sources – Classification – Incineration Technology - Incineration vs Combustion Technology – RDF / Mass Firing – Material Recycling : Paper / Glass / Plastics etc., - Disposal of White Goods & E-Wastes

L-T-P:3-0-0	**Credits:**03
Total Contact Hours:52hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Course Outcomes:

Students will be able to:

1. Understand the traditional silicon material cell structure.
2. Understand characteristics and Efficient Light-Trapping Structures of silicon cell.
3. Understand different types of nano cells solar cells and its working principle.
4. Understand different types of advancement in solar cells.

Teaching Methodology:

Lectures
Power Point Presentation
Case Study

Assessment Methods:

- Three internal tests for 30 Marks each – average of best two will be considered.
- Assignment based tests/ subject seminars/ mini projects for 20 marks.
- Final Examination will be conducted for 100 Marks and evaluated for 50 Marks.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3												1	1
CO2	3	2	2		2								1	1
CO3	3	2											1	1
CO4	3												1	1

UNIT-I **08 Hours**

Traditional silicon material, cell structure and processes for silicon based solar cell, New developing silicon crystals and their challenges to the traditional silicon based solar cell processes, Immerging architectures of high efficiency silicon based solar cells and their realization processes. Effective light management in thin silicon wafers, Optoelectronic Characteristics of Passivated and Non-passivated Silicon Quantum Dot.

UNIT-II **08 Hours**

Absorption by Particulate Silicon Layer: Theoretical Treatment to Enhance Efficiency of Solar Cells Modeling and Simulation of New Generation of Thin-Film Silicon Solar Cells Using Efficient Light-Trapping Structures.

UNIT-III **08 Hours s**

Optical Anisotropy and Compositional Ratio of Conductive Polymer PEDOT: PSS and Their Effect on Photovoltaic Performance of Crystalline Silicon/Organic Heterojunction Solar Cells, Flexible, Stretchable, and Biodegradable Thin-Film Silicon Photovoltaics, Silicon Nano crystal-Based Organic/Inorganic Hybrid Solar Cells.

UNIT-IV **08 Hours**

Organic–Inorganic Hybrid Silicon Solar: Recent Advances in the Use of Silicon-

Based Photocathodes for Solar Fuel Production.

UNIT-V

Silicon Nanowire Solar Cells, Si Nanowire Solar Cells: Principles, Device Types, Future Aspects, and Challenges. **07 Hours**

TEXT BOOKS

1. Christoph Grimm, Peter Neumann, Embedded Systems for Smart Appliances and Energy Management, springer, 2013

Department: Electrical and Electronics Engineering	**Course Type:** Core
Course Title: Simulation Lab	**Course Code:**19EREL26
L-T-P:0-0-4	**Credits:02**
Total Contact Hours:36	**Duration of SEE:**3hrs
SEE Marks: 50	**CIE Marks:**50

Course Outcomes:

Students will be able to understand :

1. Load forecasting, yield optimization, predictive maintenance, demand management, energy theft and customer insights using AI techniques
2. Energy trading, virtual agents, suppliers selection, consumption insights using machine learning

Practical sessions

Assessment Methods:

1. 20 marks for observation, 20 marks for record and 10 marks for internal test.
2. 50 marks external examination.

Course Outcomes and their mapping with POs and PSOs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PSO2**
CO1	3			3									1	
CO2	3			3									1	1

List of experiments

1. Load Forecasting : Use machine learning to forecast supply and demand in real time and optimize economic load despatch

2. Yield Optimization: Using AI optimize generation efficiency with real time adjustments across assets

3. Predictive Maintenance: Deep learning algorithms to automatically identify defects and predict failures without interrupting operations

4. Demand Management: machine learning algorithm implementation to help unlock demand-side flexibility which can be shifted during the evening peak without affecting end users.

5. Energy Theft: AI can be used to detect usage patterns, payment history, and other customer data that may signal irregular behaviour.

6. Customer Insights: Machine learning applications could allow utilities to craft electricity prices that maximize their margins while minimizing customer churn. AI could be used to create individual offers and services to help utilities retain their most profitable customers.

7. Energy Trading: In this era of the prosumer generating their own renewable energy and sending the excess back into the grid, platforms are emerging to allow peer-to-peer trading between producers and consumers. As supply and demand continuously fluctuates, AI can be used to more quickly match producers with consumers.

8. Virtual Agents: will revolutionize call centres, being able to respond to consumer queries and provide instant assistance. They will be able to automatically segment consumers based on service history and provide early warning of bad debts. The development of natural language technologies will eventually unlock the capacity to fully automate customer service.

9. Supplier Selection: Machine learning can help customers choose their energy retailer by learning about their preferences – such as energy generation type, how much they're willing to pay and their consumption patterns – and then scanning the market for the most suitable offers

10. Consumption Insights: Meter data can be analysed to extract the consumption profiles of a household's hungriest appliances and see how much each contributes to the energy bill. Universal disaggregation algorithm uses machine learning and a database of over 50 billion meter readings from smart meters to extend the appliance profiling to homes without smart meters.

Department: Electrical and Electronics Engineering	**Course Type: Core**
Course Title: Energy Laboratory-2	**Course Code:18EREL17**
L-T-P:0-0-4	**Credits:02**
Total Contact Hours: 36	**Duration of SEE:3hrs**
SEE Marks: 50	**CIE Marks:50**

Course Outcomes:

Students will be able to understand

1. The concept of virtual grid and comparison with actual grid in terms of voltage regulation and THD at PCC and Observation of current for linear & nonlinear loads and voltage waveform at PCC and Power factor improvement using capacitor bank and its impact on power quality at PCC
2. Synchronization of grid tied inverter, observation of current waveform and calculations for distortion, displacement and power factor of grid tied inverter, evaluation of the active, reactive power and net energy flow between grid tied inverter, artificial grid & load and understanding islanding protection for sudden failure of grid.
3. Evaluation of different parameters U_L, F_R and η in thermos phonic mode and forced mode for Solar thermal system.

Teaching Methodology:

Practical sessions

Assessment Methods:

3. 20 marks for observation, 20 marks for record and 10 marks for internal test.
4. 50 marks external examination.

Course Outcomes and their mapping with POs (1: SLIGHT; 2: MODERATE; 3: SUBSTANTIAL)

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3			3									1	
CO2	3			3									1	
CO3	3			3									2	1

List of experiments

1) Set-up for virtual grid and comparison with actual grid in terms of voltage regulation and THD at PCC
2) Observation of current for linear & nonlinear loads and voltage waveform at PCC
3) Power factor improvement using capacitor bank and its impact on power quality at PCC
4) Synchronization of grid tied inverter, observation of current waveform and calculations for distortion, displacement and power factor of grid tied inverter
5) Evaluation of the active, reactive power and net energy flow between grid tied inverter, artificial grid & load
6) Demonstration of islanding protection for sudden failure of grid.
7) Evaluation of different parameters (U_L, F_R and η) in thermos phonic mode of flow with fixed input parameters, different radiation level/ inlet water temperature/ wind speed/ tilt angle
8) Evaluation of different parameters (U_L, F_R and η) in forced mode of flow with fixed input parameters/ different flow rate.9) Evaluation of different parameters (U_L, F_R and η) in forced mode of flow at different radiation level/ inlet water temperature/ wind speed/ incident angle.

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

(An Autonomous Institution)

Affiliated to Visvesvaraya Technological University, Belgaum.

Yelahanka, Bangalore - 560 064

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

M.Tech in Computer Science & Engineering

SCHEME AND SYLLABUS

(21 SCHEME)

.

Vision

To impart technical education of a very high quality to the post graduate students of Computer Science and Engineering which will empower them to be technically adept and agile, innovative, self-motivated, ethical and responsible global citizens who can contribute significantly to the industrial development, pursue higher education with focus on blue-sky and application oriented research, in order to improve the quality of life of all citizens in this ever changing world.

Mission

The M.Tech in Computer Science and Engineering strives to prepare students

- For a challenging professional career and nurture entrepreneurship by grooming their leadership skills and innovative ability, thereby enabling them to serve the engineering profession and society.
- To gain proficiency in specific domains by adopting conducive teaching–learning processes and providing them a highly challenging research environment.

PROGRAMME EDUCATIONAL OBJECTIVES (PEOs)

1. Excel in Professional career by acquiring knowledge in multi-disciplinary advanced algorithms, development methodologies and their applications to industrial research.
2. Graduates will pursue higher education and research in state-of-the-art technical areas of Computer Science & Engineering.
3. Graduates will adapt to technological advancements by engaging in lifelong learning with leadership qualities, professional ethics and soft skills.

PROGRAM SPECIFIC OUTCOMES (PSOs)

By the completion of M. Tech in Computer Science and Engineering program, the student will have the ability to

PSO1: Professional Skills

The ability to analyze, design, implement and conduct Advanced Research in the domain of Machine Learning, Big Data Analytics, Data Mining, Cloud Computing, Wireless Sensor Networking, Web Mining and Web Development, IOT, Android Application etc.

PSO2: Problem Solving Skills

Ability to apply the technologies learnt including additional Hands-on Training programs to solve the practical problems of Industry and take part in conducting Workshops and Hands-on
Training program.

PSO3: Ethics and Career Development

Ability to adopt professional skills, intellectual integrity, ethics of research and soft skills to nurture the quest for higher levels of knowledge.

PROGRAMME OUTCOMES (PO's)

1. Scholarship of Knowledge
Graduates will acquire in-depth knowledge of Computer Science & Engineering and able to discriminate, evaluate, analyse and synthesis the existing and new technology in the emerging areas considering wider and global perspective.

2. Critical Thinking
Graduates will be able to analyse the complex Computer Science & engineering problems critically, apply independent judgement for synthesis information to make intellectual and creative advances for conducting research in a wider theoretical, practical and policy context.

3. Problem Solving
Graduates will be able to conceptualize and solve Computer Science & Engineering problems, formulate alternate design solutions and arrive at feasible and optimal solutions considering public health, safety and societal factors.

4. Research Skill
Graduates will be able to apply appropriate research methodologies through literature survey, techniques and conduct experiments, analyse and interpret data to demonstrate higher order skills in a broader perspective to contribute for the development of technological knowledge in Computer Science Engineering Domain.

5. Usage of modern tools
Graduates will be able to understand the limitations of complex Computer Science & Engineering problems by applying appropriate techniques, resources and modern Software tools.

6. Collaborative and Multidisciplinary work
Graduates will be in a position to understand the advantages of group activities and contribute positively to collaborative-multidisciplinary research.

7. Project Management and Finance
Graduates will be able to manage the knowledge of Computer Science & Engineering effectively within given financial and time constraints, which leads to the larger multidisciplinary projects.

8. Communication

Graduates will be able to write effective reports and design documentation as per the required standards and communicate effectively with the Computer Science & Engineering community and society.

9. Life-long Learning

Graduates will recognize the technological advancement and upgrade their knowledge, skills and ability to engage in independent and life-long learning.

10. Ethical Practices and Social Responsibility

Graduates will have professional and intellectual integrity, ethics of research and scholarship by considering sustainable development of society.

11. Independent and Reflective Learning

Graduates will observe and examine critically the impact of one's actions and make corrective measures subsequently.

Course Type: *Programme Elective*
Course Title*: Mathematical foundations of Computer Science*
Course Code: *21CSE101*
L-T-P: *3-1-0*
Credits: *4*
Total Contact Hours: *50 Hours*
Duration of SEE: *3 Hours*
SEE Marks*: 50*
CIE Marks: *50*

COURSE DESCRIPTION

This is a foundation course which imparts basic knowledge of various topics requested in computer science field such as linear Algebra, Graph theory, Fuzzy logic, Probability and Fourier analysis.

PREREQUISITES

Integral calculus, Matrices, Set theory, Basic Probability theory

COURSE OBJECTIVES

To impart fundamental concepts and techniques related to Graph theory, Fuzzy logic, Linear algebra through problem solving and applications

COURSE CONTENTS

UNIT 1 **12 Hours**

Linear Algebra: Vector space and sub spaces, Linear dependence, Basis, dimension, change of basis Linear Transformations, Matrix representation, Eigen values and Eigen vectors, diagonalization, inner product, Orthogonality, Gram Schmidt process

Numerical Methods: Forward, backward and central differences, NEWTON'S forward and backward interpolation formula, Lagrange's interpolation, Newton's divided difference formula, cubic spline.

UNIT 2 **8 Hours**

Graph Theory: - Graphs, graph models, special types of graphs, graph isomorphism, connectivity, Euler and Hamilton paths, shortest path problems, planar graphs, trees, application of trees, spanning trees, minimum spanning tree.

UNIT 3 **10 Hours**

Linear Programming: Simplex, Big M and Dual Simplex methods,

Non-Linear Programming: Local and Global optima, Golden mean search and Fibonocci search

Fourier Transforms: Complex, Sine and Cosine transforms, Inverse transforms, DFT, FFT

UNIT 4	10 Hours

Fuzzy set theory: - Basic definitions, set operations, properties of Fuzzy sets, alternative fuzzy set operations, problems, Fuzzy relations, tolerance and equivalence relations, λ-cuts for fuzzy relations, fuzzy logic, decision making with fuzzy information

UNIT 5	10 Hours

Probability theory: Random variable, Probability distribution, Discrete and continuous, probability density function and cumulative density functions, binomial, Poisson, Normal, uniform, Gamma, Weibull distributions, Joint distribution, Expectation, variance, co-variance, Estimation, Testing of hypothesis, Test for goodness of fit using chi square test, Baye's rule, Random process, stationary process, autocorrelation and covariance.

TEXT BOOKS

1. Discrete mathematics and its applications with combinatorics and graph theory, by Kenneth H Rossen, 7th edition
2. Linear algebra by S Lipschutz and M Lipson, 3rd edition
3. Probability and Statistics for Science and Engg. , G Shanker Rao
4. Fuzzy Logic with engg. Applications, T J Ross, 3rd edition
5. Operation research, Hamdy Taha, 7th edition, Pearson education
6. Numerical Methods for Scientific and Engg. Computation, M K Jain, S R K Iyengar, R K Jain, 6th edition

TEACHING METHODOLOGY

- Black Board Teaching
- Tutorials
- Problem solving
- Power Point presentation

ASSESSMENT METHODS

1. Three internals – 30 marks each will be conducted and the average of best of two will be considered
2. Assignment – 10 marks, Quiz- 10 marks
3. Final Examination –Conducted for 100 and evaluated for 50 marks

Course Outcomes:

After completion of the course, the student will be able to:

CO	Description
CO1	Analyze the problems arising in computer science, model using Techniques of Linear algebra and graph theory
CO2	Obtain reasonable solutions using appropriate techniques of graph theory, linear algebra.
CO3	Interpret data using probability theory, and implement concept of estimation, testing and Fuzzy logic
CO4	Analyze and draw useful conclusions using concepts of probability Fuzzy logic.
CO5	Model problems arising in computer science and solve using Fourier trans forms and numerical techniques

Mapping of Course outcomes (COs) to Program outcomes (POs)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO 1	PSO 2	PSO 3
CO1	3	2	3											
CO2	3	2	3											
CO3	3	2	3											
CO4	3	2	3											
CO5	3	3	3											

I SEMESTER

Department: Computer Science and Engineering (PG)	***Course Type:*** *Programme Core*
Course Title*: Machine Learning and Intelligent Data Analytics*	***Course Code:*** *21CSE102*
L-T-P: *3-1-1*	***Credits:*** *4*
Total Contact Hours: *50 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course focuses on the theory of learning machines and intelligent data analytics (IDA), which are important techniques underlying data mining and many AI applications. The topics include concepts of Machine Learning, types, supervised learning, ubiquitous learning machines such as support vector machines; unsupervised learning,Evolutionary learning, visualization techniques and IDA applications.

PREREQUISITES

Probability, Statistics, Data structures

COURSE OBJECTIVES

To introduce the basic concepts and techniques of Machine Learning and Intelligent Data Analysis.

- To be familiar with a set of well-known supervised,semi-supervised and unsupervised learning algorithms
- To develop the skills in using recent machine learning software for solving practical problems.
- To build the intelligent data analysis solutions

COURSE CONTENTS

UNIT 1 **10 Hours**

Introduction: Machine Learning, Types of Machine Learning, Machine Learning Process, Machine Learning Applications. Machine Learning Preliminaries, Basic Statistics, Neurons and Neural Networks.

UNIT 2 **10 Hours**

Intelligent Data Analysis (IDA): Introduction, Statistical concepts and methods, Bayesian methods, Support Vector Machines: Optimal Separation, Kernels, SVM Algorithm, Multiclass Classification, SVM Regression. Kernel PCA, CCA.

UNIT 3 **10 Hours**

Bayesian Learning: Introduction, Classification, Losses and Risks, Discriminant Functions, Utility Theory, Association Rules, Bayes Optimal Classifier, Naïve Bayes Classifier, Bayesian Belief

Networks. Nearest Neighbor Methods: K-nearest Neighbor Learning, Distance – Weighted Nearest Neighbor Algorithm, Examples. Decision Trees: Learning with Trees, Using Decision Trees, Univariate Trees, Classification Trees, Regression Trees, Pruning, Rule Extraction from Trees,

UNIT 4	10 Hours

Learning Rules from Data, Multivariate Trees, ID3, Examples.

Stochastic Search Methods: Introduction, Simulated Annealing, Stochastic, Adaptive Search by Evolution. Evolutionary Learning: The Genetic Algorithm, Genetic Operators, Using Genetic Algorithms, Genetic Programming, combining sampling with Evolutionary learning.

UNIT 5	10 Hours

Unsupervised Learning-Clustering: Introduction, Mixture Densities, K-means Clustering, Expectation-Maximization Algorithm, Mixtures of Latent Variable Models, Supervised Learning after Clustering, Hierarchical Clustering, Choosing the Number of Clusters. Visualization: Introduction, Classification of Visual Data Analysis Techniques, Data types to be visualized, Visualization Techniques, Interaction Techniques, Specific Visual Data Analysis Techniques. Intelligent Data Analysis Applications.

TEXT BOOKS

2. Ethem Alpaydin, Introduction to Machine Learning, 2nd Ed., PHI Learning Pvt. Ltd., 2013.
3. Michael Berthold, David J.Hand, Intelligent Data Analysis, Springer,2007.

REFERENCE BOOKS

1. Tom M. Mitchell, Machine Learning, McGraw-Hill Education (INDIAN EDITION), 2013
2. T. Hastie, R. Tibshirani, J. H. Friedman, The Elements of Statistical Learning, Springer, First Edition, 2001.
3. K.Murphy, Machine Learning: A Probabilistic Perspective, MIT Press,2012.
4. Wes McKinney, Python for Data Analysis, O'Reilly Media, Inc., First Edition,2013.
5. Ian H. Witten,Eibe Frank, Mark A. Hall, Data Mining Practical Machine Learning Tools and Techniques, Morgan Kaufmann, Third Edition,2011.

TEACHING METHODOLOGY

- Black board teaching
- Lectures
- Power Point Presentation
- Problem based learning
- Demonstration

ASSESSMENT METHODS

- Total - 50 marks include
    a. Three internals for 30 Marks each will be conducted and the Average of best of two will be taken
    b. Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
    c. Mini project / Case study based on practical application for 10 marks.
- Final SEE Examination of 100 Marks will be conducted and will be evaluated for 50 Marks

COURSE OUTCOMES

After completion of the course, the students will be able to:

CO	DESCRIPTION	Bloom's Level
CO1	Describe the concepts related to machine learning and intelligent data analytics	L2
CO2	Recognize the characteristics of machine learning techniques that are useful to solve real-world problems	L2
CO3	Implement and apply machine learning algorithms	L3
CO4	Examine a complete intelligent data analytics solution	L4
CO5	Select appropriate algorithms for solving a particular group of real-world problems	L5

Course Outcome to Programme Outcome Mapping

COURSE DESCRIPTION

This course covers the theoretical principles of massively parallel approach to high- performance computing using multiprocessing systems and/or combination of GPU hardware. Knowledge on basics of Computer Organization

PREREQUISITES

COURSE OBJECTIVES

- Provide an overview of existing High-Performance Computing (HPC) software and hardware
- Present basic software design patterns for high performance parallel computing
- Introduce CUDA for parallel computing on the Graphics Processing Unit (GPU)

COURSE CONTENTS

UNIT 1 — 10 Hours

Introduction to High Performance Computers: Memory Hierarchy, CPU Design: Reduced Instruction Set Computers, Multiple Core Processors, Vector Processors.

Programming Shared Address Space Platforms: Thread Basics, the POSIX Thread API, Thread Creation and Termination, Thread Cancellation

UNIT 2 — 10 Hours

Shared-memory parallel programming with OpenMP: Introduction to OpenMP, Parallel execution, Data scoping , OpenMP work-sharing for loops , Reductions , Loop scheduling , Tasking , Efficient OpenMP programming :Profiling OpenMP programs , Performance pitfalls: Ameliorating the impact of OpenMP work sharing constructs , Serialization , False sharing.

UNIT 3 — 10 Hours

Programming using the Message-Passing Paradigm: Principles of Message-Passing Programming, The Building Blocks: Send and Receive Operations, MPI: The Message Passing Interface, Topologies and Embedding, Overlapping Communication with Computation, Collective Communication and Computation Operations.

UNIT 4	12 Hours

GPUs as Parallel Computers: Architecture of a Model GPU, Why More Speed or Parallelism? GPU Computing. Introduction to CUDA: Data Parallelism, CUDA Program Structure, A Vector Addition Kernel , Device Global Memory And Data Transfer, Kernel Functions and Threading.

UNIT 5	12 Hours

CUDA Threads: CUDA Thread Organization, Mapping Threads To Multidimensional Data, Synchronization and Transparent Scalability, Assigning Resources to Blocks, Thread Scheduling and Latency Tolerance

TEXT BOOKS

1. Ananth Grama,Anshul Gupta,Vipin kumar, George Karypis, Introduction to parallel computing, second edition, 2003, Pearson education publishers.
2. David B Reference Books: Wen-mei W. Hwu, "Programming Massively Parallel Processors on Approach", First edition, Elsevier and nvidia publishers 2010.
3. Georg Hager, Gerhard Wellein, Introduction to High Performance Computing for Scientists and Engineers, Taylor and Francis Group, LLC, CRC Press, 2011

- Rubin H Landau, Oregon State University, http://science.oregonstate.edu/ rubin/.

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Mini project / Case study based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

After completion of the course, the students will be able to:

CO	DESCRIPTION	Bloom's Level
CO1	Explain the technologies and architectures used for parallel computing	L1
CO2	Design and develop parallel programs using Open-MP programming interface	L3
CO3	Elaborate the principles and architecture of message-passing programming paradigm for solving real world problems	L2
CO4	Provide an understanding of Graphical Processing Units and their architecture	L1
CO5	Analyze the features of GPUs, their functionalities and also Design parallel applications using CUDA-C	L3

COURSE DESCRIPTION

This course focuses on the introduction to Wirelss and Mobile Networks, Wireless Medium Access Control, Wireless Telecommunication Systems, Satellite Systems, Broadcast Systems and Mobile Networks

PREREQUISITES

Basics of Computer Networks

COURSE OBJECTIVES

- To introduce the basic concepts and techniques of Wireless and Mobile Networks
- To be familiar with a set of well-known wireless telecommunication Systems
- To be familiar with Satellite Syetsm and Broadcast systems
- To get the knowledge on Mobile Network Layers

COURSE CONTENTS

UNIT 1 — 10 Hours

Introduction to Wireless and Mobile Networks: Applications**,** A short history of wireless communication, a short history of wireless communication**,** some open research topics, a simplified reference model.

Wireless Transmission: Signals, Antennas, Signal Propagation, Multiplexing, Modulation, Spread Spectrum

UNIT 2 — 10 Hours

Wireless Medium Access Control: Common Problems, SDMA, FDMA, TDMA, CDMA

Wireless Telecommunications Systems: GSM, DECT, TETRA, UMTS, IMT-2000, LTE

UNIT 3 — 10 Hours

Satellite Systems: Introduction, Deficiencies of existing GEO/MEO/LEO Satellite Systems, Satellite Architectures, Satellite Routing, Satellite Channel Access, Satellite Handover, High Altitude Platforms, and Applications.

UNIT 4 **12 Hours**

Broadcast systems: Overview, Cyclical repetition of data**,** Digital audio broadcasting, Digital video broadcasting, Convergence of broadcasting and mobile communications

Wireless LAN: IEEE 802.11, Bluetooth, RFID, Security issues.

Mobile Network Layer I: Problems of IP in Wireless, Principles behind Mobile IP, Problems, Security issues, DHCP.

Mobile Network Layer II: Routing in Ad-hoc Networks, Wireless Sensor Networks

UNIT 5 **12 Hours**

Mobile Transport Layer: Effects of mobility and wireless transmissions on reliable transport protocols such as TCP.

Support for Mobility: File Systems, databases, WWW and Mobility, WAP, Application layer for mobile networks.

TEXT BOOKS

1. J. Schiller, Mobile Communications, 2nd edition, Addison Wesley.
2. Wireless Communications and Networks, William Stallings, 2nd edition, Prentice Hall.

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Mini project / Case study based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

After completion of the course, the students will be able to:

CO	DESCRIPTION	Bloom's Level
CO1	Describe the concepts related to Wireless and Mobile Networks and Wireless Transmission	L2
CO2	Recognize the problems of and usage of Wireless Medium Access Control	L2

CO3	Describe the Concepts of Satellite and Broadcast Systems	L2
CO4	Recognize the Problems of IP in Wireless and usage of Mobile IP and support for mobility	L2

COURSE DESCRIPTION

Reinforcement learning is an area of machine learning where an agent learns how to behave in an environment by performing actions and assessing the result.

PREREQUISITES

Basics of machine learning, deep learning and Python programming and mathematical models.

COURSE OBJECTIVES

- To learn the basics of reinforcement learning (RL) and methods & algorithms used in RL like Markov decision process, dynamic programming etc.
- To practice implementing reinforcement techniques using Python, for gaming and other application.
- To get knowledge of Monte Carlo method, Deep Q learning and advanced techniques for reinforcement learning.

COURSE CONTENTS

UNIT 1 **11 Hours**

Reinforcement Learning problem: Reinforcement learning (RL), examples, elements, Multi-arm Bandits : basics & theory, An n-Armed Bandit Problem, Action value methods, incremental implementation.

UNIT 2 **11 Hours**

Markov decision processes: The Agent–Environment Interface, Goals and Rewards, returns, The Markov property, Markov decision process, optimality & approximation, Dynamic programming basics.

UNIT 3 **10 Hours**

RL with Python: RL algorithm, RL applications, RL VS ML, RL environment &

platforms, RL applications, Getting started with OpenAI and TensorFlow

UNIT 4	09 Hours

Gaming with Monte Carlo methods: Monte Carlo methods, Monte Carlo prediction, Monte Carlo control. Examples and programs.

UNIT 5	09 Hours

Q Learning, Deep Q network (DQN), DQN Architecture, Gaming using DQN – Atari & Doom examples.
Recent advancements: Overview, Hierarchical reinforcement learning, inverse reinforcement learning.

TEACHING METHODOLOGY

- Black Board Teaching
- Tutorials
- Problem solving
- Power Point presentation

ASSESSMENT METHODS

1. Three internal assessment exams – 30 marks each will be conducted and the average of best of two will be considered
2. Course project – 10 marks, Seminar - 10 marks
3. Final Examination –Conducted for 100 and evaluated for 50 marks

Course Outcomes:

After completion of the course, the student will be able to:

CO	Description	BL
CO1	Explain basics of reinforcement learning and the techniques used.	L2
CO2	Illustrate Markov decision processes and dynamic programming methods used commonly for RL.	L2
CO3	Demonstrate the RL development skills with Python.	L2
CO4	Apply Montel Carlo methods for RL gaming applications.	L3
CO5	Analyse & implement Q learning methods deep queue network and recent advancements in RL.	L4

COURSE DESCRIPTION & OBJECTIVES

This course provides an introduction to information systems for business and management. It is designed to familiarize students with organizational and managerial foundations of E-commerce and security issues that araises

PREREQUISITES

COURSE CONTENTS

UNIT 1

Electronic Commerce Environment and Opportunities:
Background, The Electronic Commerce Environment, Electronic Marketplace Technologies. Modes of Electronic Commerce: Electronic Data Interchange, Migration to Open EDI, Electronic Commerce with www/Internet, Commerce Net Advocacy, web Commerce Going Forward.

UNIT 2

Approaches to Safe Electronic Commerce:

Secure Transport Protocols, Secure Transactions, Secure Electronic Payment Protocol (SEPP), Secure Electronic Transaction (SET), Certificates for authentication Security on web Servers and Enterprise Networks. Electronic Cash and Electronic Payment Schemes: Internet Monetary Payment & Security Requirements. Payment and Purchase Order Process, On-line Electronic cash.

UNIT 3

Internet/Intranet Security Issues and Solutions:
The need for Computer Security, Specific Intruder Approaches, Security Strategies, Security Tools, Encryption, Enterprise Networking and Access to the Internet, Antivirus Programs, Security Teams.

UNIT 4

Master Card/Visa Secure Electronic Transaction:
Introduction, Business Requirements, Concepts, payment Processing. E-Mail and Secure E- mail Technologies for Electronic Commerce: Introduction, The Means of Distribution, A model for Message Handling, E-mail working, Multipurpose Internet Mail Extensions, Message Object

Security Services, Comparisons of Security Methods, MIME and Related Facilities for EDI over the Internet.

UNIT 5

Internet Resources for Commerce:
Introduction, Technologies for web Servers, Internet Tools Relevant to Commerce, Internet Applications for Commerce, Internet Charges, Internet Access and Architecture, Searching the Internet. Advertising on Internet: Issues and Technologies. Introduction, Advertising on the Web, Marketing creating web site, Electronic Publishing Issues, Approaches and Technologies: EP and web based EP.

Text Books:

1.Web Commerce Technology Handbook, by Daniel Minoli, Emma Minoli, McGraw-Hill
2.Frontiers of electronic commerce by Galgotia.

Reference Books:

1. E-Commerce fundamentals and applications Hendry Chan, Raymond Lee, Tharam Dillon, Ellizabeth Chang, John Wiley.

Course Outcomes:

After Completion of the subject student should able to

- Understand the basic concepts and technologies used in the field of E-commerce.
- Analyze the concepts of the different Approaches to Safe Electronic Commerce and security issues;
- Understand the processes of developing and implementing information systems with different internet and intranet security Strategies;
- Understanding and implementing the ethical, social, and security issues in E-commerce;
- Students are able to develop E-commerce website and deploy in web servers, with publishing and marketing.

Course Outcomes:

At the end of the course student will be able to

CO	Description
CO 1	Understand the basic concepts and technologies used in the field of E-commerce.
CO 2	Understand and analyse the concepts of the different Approaches to Safe Electronic Commerce and security issues.
CO 3	Understand the processes of developing and implementing information systems with different internet and intranet security Strategies;
CO 4	Understand the E-Mail and Secure E- mail Technologies for Electronic Commerce

CO 5	Understand and analyse the Internet Resources for Commerce.

COURSE DESCRIPTION

PREREQUISITES

Fundamentals of Compute Graphics, c,c++,Java. Python

COURSE OBJECTIVES

COURSE CONTENTS

UNIT 1 — 10 Hours

Review of Two and Three -dimensional graphics

Review of two-dimensional graphics Transformations Windowing Clipping. Three Dimensions 3D geometry, primitives and transformations. Rotation about an arbitrary axis Parallel and perspective projection Viewing parameters 3D clipping and viewing transformation

UNIT 2 — 10 Hours

Curves and Fractals and Solid Modeling Representing:

Curves and Fractals: Polygon Meshes Parametric Cubic curves: B-spline, Bezier, Hermite. Parametric

Bicubic Surfaces Quadric surfaces Fractals: fractal lines and surfaces Applications

Solid Modeling Representing solids : Regularized Boolean Set Operations Primitive Instancing Sweep and Boundary Representations Spatial-partitioning Representations Constructive Solid Geometry User Interface for Solid Modeling

UNIT 3 — 10 Hours

Hidden Lines and Surfaces:

Algorithms for Visible-Line and Surface determination: zbuffer, List priority, Scan line, Area Subdivision, Ray Tracing

Hidden Lines and Surfaces and Image based Rendering

UNIT 4	09 Hours

Hidden Lines and Surfaces Algorithms for Visible-Line and Surface determination: zbuffer, List priority, Scan line, Area Subdivision, Ray Tracing Image based Rendering Introduction

UNIT 5	09 Hours

comparison with geometry
Animation Introduction morphing character animation and facial animation Graphics Hardware Special-purpose computer graphics processors and accelerators

TEXT BOOKS

1. Computer Graphics: principals and practice Foley, vanDam, Feiner Hughes Addision Wesley
2. Mathematical Elements of Graphics Roges Tata McGrow Hill
3. Computer Graphics Donald Hearn and M.Pauline Baker Prentice Hall
4. Procedural Elements-Computer Graphics, David Rogers, TMH
5. Principals of Computer graphics, Shalini Govil-pal, springer

TEACHING METHODOLOGY

- Black Board Teaching
- Tutorials
- Problem solving
- Power Point presentation

ASSESSMENT METHODS

1. Three internal assessment exams – 30 marks each will be conducted and the average of best of two will be considered
2. Assignment – 10 marks, Quiz- 10 marks
3. Final Examination –Conducted for 100 and evaluated for 50 marks

Course Outcomes:
After completion of the course, the student will be able to:

CO	Description	BL
CO1	Learn more about 2D, 3D and Curve applications	
CO2	Understand ,identify and apply graphics algorithms and functions	
CO3	Applying efficient graphics technique to solve engineering problems	
CO4	Understand image fundamentals and animations	
CO5	To Introduce various Graphics Applications in real world scenario.

COURSE DESCRIPTION

This course focuses on the Operating system overview, Threads, SMP, and Microkernel, Multiprocessor and Real-Time Scheduling Virtual Memory, Multiprocessor and Real-Time Scheduling, Embedded Operating Systems and Kernel Organization.

PREREQUISITES

NA

COURSE OBJECTIVES

- Provides the overview of Operating Systems.
- Study of Threads, SMP, and Microkernel, Virtual Memory
- To work on Multiprocessor and Real-Time Scheduling
- Overview of Embedded Operating Systems and Kernel Organization

COURSE CONTENTS

UNIT 1 — 10 Hours

Operating System Overview, Process description & Control: Operating System Objectives and Functions, The Evolution of Operating Systems, Major Achievements, Developments Leading to Modern Operating Systems, Microsoft Windows Overview, Traditional UNIX Systems, Modern UNIX Systems, What is a Process? Process States, Process Description, Process Control, Execution of the Operating System, Security Issues.

UNIT 2 — 10 Hours

Threads, SMP, and Microkernel, Virtual Memory: Processes and Threads, Symmetric Multiprocessing (SMP), Micro Kernels, Windows Vista Thread and SMP Hours Management, Linux Process and Thread Management. Hardware and Control Structures, Operating System Software, UNIX Memory Management, Windows Vista Memory Management, Summary

UNIT 3	10 Hours

Multiprocessor and Real-Time Scheduling: Multiprocessor Scheduling, Real-Time Scheduling, Linux Scheduling, Windows Vista Hours Scheduling, Process Migration, Distributed Global States, Distributed Mutual Exclusion, Distributed Deadlock

UNIT 4	10 Hours

Embedded Operating Systems: Embedded Systems, Characteristics of Embedded Operating Systems, eCOS, TinyOS, Computer Security Concepts, Threats, Attacks, and Assets, Intruders, Malicious Software Overview, Viruses, Worms, and Bots, Rootkits.

UNIT 5	10 Hours

Kernel Organization: Using Kernel Services, Daemons, Starting the Kernel, Control in the Machine, Modules and Device Management, MODULE Organization, MODULE Installation and Removal, Process and Resource Management, Running Process Manager, Creating a new Task, IPC and Synchronization, The Scheduler, Memory Manager, The Virtual Address Space, The Page Fault Handler, File Management.

TEXT BOOKS

William Stallings: Operating Systems: Internals and Design Principles, 6th Edition, Prentice Hall, 2013.

1. Gary Nutt: Operating Systems, 3rd Edition, Pearson, 2014.

2. Andrew S. Tanenbaum, Albert S. Woodhull: Operating Systems, Design and Implementation, 3rd Edition, Prentice Hall, 2006.
3. Pradeep K Sinha: Distribute Operating Systems, Concept and Design, PHI, 2007.

TEACHING METHODOLOGY

- Black board teaching
- Lectures
- Power Point Presentation

ASSESSMENT METHODS

Total - 50 marks include

a. Three internals for 30 Marks each will be conducted and the Average of best of two will be taken
b. Surprise Test – 10 Marks
c. Assignment – 10 Marks

- Final SEE Examination of 100 Marks will be conducted and will be evaluated for 50 Marks

COURSE OUTCOMES

After completion of the course, the students will be able to:

CO	DESCRIPTION
CO1	Analyze and demonstrate the Mutual exclusion, Deadlock detection and agreement protocols of Distributed operating system.
CO2	Describe the various resource management techniques for distributed systems.
CO3	Identify and analyze the different features of real time and mobile operating system.
CO4	Illustrate and modify existing open source kernels in terms of functionality or features used.

Course Title*: Natural Language Processing*	***Course Code:*** *21CSE106E1*
L-T-P: *3-1-1*	***Credits:*** *4*
Total Contact Hours: *52 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

Regular Expressions, Automata, Similarity Computation, Computational Phonology, Text-to-Speech, Probabilistic Models of Pronunciation and Spelling, Speech Recognition, Parsing with Context-Free Grammars, Features, Unification, Lexical Semantics, Information Retrieval, Text Sequence Modeling and Deep Learning are introduced in this course contains.

PREREQUISITES

Data Structure, Theory of Computation and Compiler Design.

COURSE OBJECTIVES

Students will learn how to process written text from basic of fundamental knowledge starts with Finite automata, Regular expression and probabilistic model with n-grams. Recognizing Speech and parsing with grammar. This course also covers basis of semantic analysis and discourse analysis and drives it to machine translation. This NLP course will boost student knowledge to research level where they can conduct new level of research.

COURSE CONTENTS

UNIT 1 — 8 Hours

Introduction of NLP: Knowledge in Speech and Language processing, ambiguity, models and algorithms, language and understanding.

Regular Expressions, Automata, Similarity Computation: Regular Expressions, patterns, Formal Language, NFSA, Regular Language and FSAs, Text normalization, Minimum edit distance & similarity computation in text.

Morphology and Finite-State Transducers: Inflection, Derivational Morphology, Finite-State Morphological Parsing, The Lexicon and Morphotactics, Morphological Parsing with Finite State Transducers, Combining FST Lexicon and Rules, Lexicon-free FSTs: The Porter Stemmer, Human Morphological Processing.

UNIT 2	10 Hours

N-grams: Counting Words in Corpora, Simple (Unsmoothed) N-grams, Smoothing, Backoff, and Interpolation, N-grams for Spelling and Pronunciation, Entropy.

Matrix Factorization and Topic Modeling: Introduction, Singular Value Decomposition, Nonnegative Matrix Factorization, Probabilistic Latent Semantic Analysis, Latent Dirichlet Allocation.

UNIT 3	10 Hours

HMMs and Speech Recognition: Overview of Hidden Markov Models, The Viterbi Algorithm, Training HMMs: The forward backward algorithm, Maximum entropy models.

Automatic speech recognition: Speech recognition Architecture, Applying HMM to speech.

Word Classes and Part-of-Speech Tagging: Tag-sets for English, Part of Speech Tagging, Rule-based Part-of-speech Tagging, HMM Part-of-speech Tagging, Transformation-Based Tagging.

UNIT 4	12 Hours

Context-Free Grammars for English: Context-Free grammars, Sentence-Level Constructions, The Noun Phrase, Agreement, The Verb Phrase and Sub categorization, Auxiliaries, Coordination, Grammar Equivalence & Normal Form, Finite State & Context-Free Grammars, Dependency Grammars, Spoken Language Syntax, Grammars & Human Processing.

Parsing with Context-Free Grammars: Parsing as Search, A Basic Top-down Parser, The Earley Algorithm, Partial parsing methods.

Features & unification: Feature Structures, Unification of Feature Structures, Features Structures in the Grammar, Implementing Unification, Parsing with Unification Constraints, Types and Inheritance.

Statistical Parsing: Probabilistic Context-Free Grammars, Problems with PCFGs, Probabilistic Lexicalized CFGs, Human Parsing. The Chomsky Hierarchy.

UNIT 5	12 Hours

Representing Meaning and Semantic Analysis: Computational Desiderata for Representations, First Order logic, Representing events & states, Alternative Approaches to Meaning,

Computational Semantics: Syntax-Driven Semantic Analysis, Semantic attachments for a Fragment of English, Integrating Semantic Analysis into the Earley Parser, Idioms and Compositionality.

Lexical Semantics and Information Retrieval: Word senses, Relation between Senses, WordNet: A Database of Lexical Relations, **Word sense Disambiguation** (WSD), Supervised, minimally supervised & unsupervised WSD, **Information extraction**: Named Entity recognition, **Information Retrieval** overview. Machine translation – overview.

Computational Discourse: Text Coherence, Reference Resolution, Discourse Structure, Psycholinguistic Studies of Reference and Coherence.

TEXT BOOKS

1. Daniel Jurafsky and James H. Martin Speech and Language Processing (2nd Edition), Prentice Hall, 2nd edition,2008.
2. Machine Learning for Text by Charu C. Aggarwal, Springer, 2018 edition
3. Foundations of Statistical Natural Language Processing by Christopher D. Manning and Hinrich Schuetze, MITpress, 1999

REFERENCE BOOKS

1. Steven Bird, Ewan Klein and Edward Loper Natural Language Processing with Python, O'Reilly Media;1 edition,2009
2. Roland R. Hausser, Foundations of Computational Linguistics: Human Computer Communication in Natural Language, Paperback, MIT press,2011

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Mini project / Case study - based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

CO	Description	BL
1.	Explain Natural language & speech processing basics and the techniques involved.	2
2.	Develop general models for natural language processing (NLP).	4
3.	Apply HMM models & other techniques in speech & language processing.	3

4.	Implement various grammars and parsing techniques for language processing.	4
5.	Illustrate semantics and related analysis and also different applications of NLP.	2

SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course covers the introduction to Information System Security. It highlights the need for security against threats and attacks in the network. The security models, cryptographic protocols, intrusion detection and prevention systems are also discussed in the course

PREREQUISITES

Internetworking with TCP/IP , Cryptography and Network Security

COURSE OBJECTIVES

1. The course will incorporate the foundational understanding of Information Security.
2. The course will incorporate the threats and network perimeter security design principles and provide abilities to review procedures for installation, troubleshooting and monitoring of network devices to maintain integrity, confidentiality and availability of data and devices

COURSE CONTENTS

UNIT 1 — 08 Hours

Introduction: Computer Security Concepts, The OSI Security Architecture, Security Attacks, Security Services, Security Mechanisms, Fundamental Security Design Principles, Attack Surfaces and Attack Trees, A Model for Network Security, **Standards**.

UNIT 2 — 10 Hours

Cryptography: Symmetric Encryption and Message Confidentiality: Symmetric Encryption Principles, Symmetric Block Encryption Algorithms, Random and Pseudorandom Numbers, Stream Ciphers and RC4, Cipher Block Modes of Operation. **Public-Key Cryptography and Message Authentication:** Approaches to Message Authentication, Secure Hash Functions, Message Authentication Codes, Public-Key Cryptography Principles, Public-Key Cryptography Algorithms, Digital Signatures.

UNIT 3 — 12 Hours

Network Security Applications: Key Distribution and User Authentication: Remote User Authentication Principles, Symmetric Key Distribution Using Symmetric Encryption, Kerberos, Key Distribution Using Asymmetric Encryption, X.509 Certificates, Public-Key Infrastructure, Federated Identity Management.

Wireless Network Security: Wireless Security, Mobile Device Security, IEEE 802.11 Wireless LAN Overview, IEEE 802.11i Wireless LAN Security. **Electronic Mail Security:** Internet Mail Architecture, E-mail Formats, E-mail Threats and Comprehensive E-mail Security, S/MIME, Pretty Good Privacy, DNSSEC, DNS-Based Authentication of Named Entities, Sender Policy Framework, DomainKeys Identified Mail, Domain-Based Message Authentication, Reporting, and Conformance.

UNIT 4	12 Hours

IP Security: IP Security Overview, IP Security Policy, Encapsulating Security Payload, Combining Security Associations, **Internet** Key Exchange, Cryptographic Suites.

System Security: Malicious Software: Types of Malicious Software (Malware), Advanced Persistent Threat, Propagation—Infected Content—Viruses, Propagation—Vulnerability Exploit—Worms, Propagation—Social Engineering—Spam E-mail, Trojans, Payload—System Corruption, Payload—Attack Agent—Zombie, Bots, Payload—Information Theft—Keyloggers, Phishing, Spyware, Payload—Stealthing—Backdoors, Rootkits, Counter measures, Distributed Denial of Service Attacks.

UNIT 5	08 Hours

Intruders: Intruders, Intrusion Detection, Password Management. **Firewalls:** The Need for Firewalls, Firewall Characteristics and Access Policy, Types of Firewalls, Firewall Basing, Firewall Location and Configurations.

TEXT BOOKS

1. W. Stallings, Network Security Essentials (6th Edition), Prentice Hall, 2018

REFERENCE BOOKS

1. Principles of Information Security, 6th edition, Michael E Whittman, Herbert J Mattord, CENGAGE Learning, 2018

TEACHING METHODOLOGY

- Black Board Teaching
- Tutorials
- Problem solving
- Power Point presentation

ASSESSMENT METHODS

1. Three internals – 30 marks each will be conducted and the average of best of two will be considered
2. Assignment – 10 marks, Seminar- 10 marks
3. Final Examination –Conducted for 100 and evaluated for 50 marks

Course Outcomes:

After completion of the course, the student will be able to:

CO	Description	BL
CO1	Explain the core concepts of Fundamental Security Design Principles.	L1
CO2	Apply fundamental concepts Cryptography to adopt right security measures and design real time scenarios using algorithms.	L3
CO3	Implement Network Security Applications using Key Distribution and User Authentication	L4
CO4	Design/develop/ implement the IP security solution for a given malicious software/application.	L4
CO5	Using the concept of intruders and firewall design/develop an application.	L3

SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course provides the fundamental knowledge of computer vision, computer graphics and human-computer interaction techniques related to VR/AR, knowledge of geometric modeling and Virtual environment, Knowledge to relate and differentiate VR/AR technology, ability to use various types of Hardware and software in virtual Reality systems and the ability to implement Virtual/Augmented Reality applications.

PREREQUISITES

NA

COURSE OBJECTIVES

The objective of the course is to establish and cultivate a broad and comprehensive understanding of this rapidly evolving technology of VR and AR. Integrating AR/VR in development can provide improved experience for learning in sectors like education, Increased efficiency in Business, Unmatchable Virtual Experience, Increase In User Engagement, Boost In Brand Loyalty, Mobility, Better Advertising of products and many more.

COURSE CONTENTS

UNIT 1 — 10 Hours

Introduction to Virtual Reality:
Virtual Reality and Virtual Environment: Introduction, Computer graphics, Real time computer graphics, Flight Simulation, Virtual environment requirement, benefits of virtual reality, Historical development of VR, Scientific Landmark.

Computer Graphics And Geometric Modelling:
Introduction, The Virtual world space, positioning the virtual observer, the perspective projection, human vision, stereo perspective projection, Colour theory, Conversion From 2D to 3D, 3D space curves, 3D boundary representation, Simple 3D modelling, 3D clipping.

UNIT 2	10 Hours

Computer Graphics And Geometric Modelling Contd…

Illumination models, Reflection models, Shading algorithms. Geometrical Transformations: Introduction, Frames of reference, Modelling.

Virtual Environment:

Input: Tracker, Sensor, Digital Gloves, Movement Capture, Video-based Input, 3D Menus & 3D Scanner etc.

Output: Visual /Auditory / Haptic Devices.

Generic VR system: Introduction, Virtualenvironment, Computer environment, VR technology, Model of interaction, VR Systems.

UNIT 3	12 Hours

Virtual Environment Contd…

Animating the Virtual Environment: Introduction, The dynamics of numbers, Linear and Nonlinear interpolation, the animation of objects, linear and non-linear translation, shape & object in between, free from deformation, particle system.

Physical Simulation: Introduction, Objects falling in a gravitational field, Rotating wheels, Elastic collisions, projectiles, simple pendulum, springs, Flight dynamics of an aircraft.

Augmented Reality:

Taxonomy, technology and features of augmented reality, difference between AR and VR, Challenges with AR, AR systems and functionality, Augmented reality methods, visualization techniques for augmented reality, enhancing interactivity in AR environments, evaluating AR systems.

UNIT 4	10 Hours

Development Tools and Frameworks:

Human factors: Introduction, the eye, the ear, the somatic senses.

Hardware: Introduction, sensor hardware, Head-coupled displays, Acoustic hardware, Integrated VR systems.

Software: Introduction, Modelling virtual world, Physical simulation, VR toolkits, Introduction to VRML

UNIT 5	10 Hours

AR / VR Applications:

Introduction, Engineering, Entertainment, Science, Training.

COURSE DESCRIPTION

This course imparts the concepts of advanced database management concepts which is the necessity in today's versatile and heterogeneous data processing applications. It includes the concepts of storage, indexing techniques, object oriented databases, parallel and distributed databases and emerging trends in data.

PREREQUISITES

- Students should have knowledge of database.
- Students should have knowledge of SQL queries

COURSE OBJECTIVES

- To understand and describe the need of storage and indexing, indexing methods and data storage formats.
- To describe object oriented databases, parallel and distributed databases.
- To understand emerging database technologies and applications.

COURSE CONTENTS

UNIT 1 — 10 Hours

Overview of Storage and Indexing, Disks and files: Data on external storage; File organizations and Indexing, Index data structures; Comparison of file organizations, Indexes and performance tuning.

Storing Data : Disks and Files: Memory hierarchy: RAID; Disk space management; Buffer manager: Files of records; Page formats and record format.

UNIT 2 — 10 Hours

Tree Structured Indexing: Intuition for tree indexes; Indexed sequential access method; B+ trees, Search, Insert, Delete, Duplicates, B+ trees in practice

Hash-Based Indexing: Static hashing; Extendible hashing, Linear hashing, Comparisons.

UNIT 3 **10 Hours**

Object Database Systems : Structured Data Types, Operations on Structured Data, Encapsulation and ADT, Inheritance, Overview of Object-Oriented Concepts – Objects, Encapsulation, Inheritance, Objects, OID and Reference Types, Database Design for ORDBMS, ORDBMS Implementation Challenges, OODBMS, Comparison of RDBMS, OODBMS, ORDBMS.

UNIT 4 **10 Hours**

Parallel and Distributed Databases: Architectures for parallel databases; Parallel query evaluation; Parallelizing individual operations; Parallel query optimizations; Introduction to distributed databases; Distributed DBMS architectures; Storing data in a Distributed DBMS; Distributed catalog management; Distributed Query processing; Updating distributed data; Distributed transactions; Distributed Concurrency control and Recovery.

UNIT 5 **8 Hours**

Enhanced Data Models for Advanced Applications: Active database concepts; Temporal, Spatial, and Multimedia

Emerging Database Technologies and Applications: Databases on WWW, Multimedia databases, Mobile databases, Geographic Information systems, Genome Data Management

TEXT BOOKS

1. Raghu Ramakrishnan and Johannes Gehrke; Database Management Systems.3rd Edition McGraw-Hill, 2003
2. Elmasri and Navathe: Fundamentals of Database Systems 5th Edition, Pearson Education, 2007

REFERENCE BOOKS:

1. Connolly and begg: Database Systems, 4th Edition Pearson Education 2002.

TEACHING METHODOLOGY

- Chalk and Talk
- Problem solving
- Power Point presentation

ASSESSMENT METHODS

Midterm Test (Avg. of 2 Tests)	30 Marks
Surprise Test	10 Marks
Lab based Assignment	10 Marks

Course Outcomes:

After completion of the course, the student will be able to:

CO	Description
CO1	Identify and compare various file organizations and indexes, Describe and analyze data storage in disks and files, Identify and Analyze the need of RAID and RAID levels
CO2	Design and Analyze tree indexes and Hash based indexes
CO3	Appraise the purpose of Object Database systems to support complex data types.
CO4	Quote the implication of Parallel and distributed databases for improved performance.
CO5	Recognize the various emerging database technologies and applications including mobile, www, spatial, genome databases

Mapping of Course outcomes (COs) to Program outcomes (POs)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO 1	PSO 2	PSO 3

CO3	3	2	2									3	2	1
CO4	3	2	2									3	2	1
CO5	3	2										3	2	1

I SEMESTER

Department: *Computer Science and Engineering (PG)*	***Course Type:*** *Programme Lab*
Course Title*: Applications of Machine Learning Laboratory*	***Course Code:*** *21CSE107L*
L-T-P: *0-0-4*	***Credits:*** *1*
Total Contact Hours: *50 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course provides an in-depth knowledge of applying machine learning techniques to real-world problems in various domains using python/R programming languages and ML-HPC services available in different platforms

PREREQUISITES

Probability, Statistics, Data structures

COURSE OBJECTIVES

To implement various machine learning techniques.

To solve machine learning problems using recent machine learning software in high-performance computing environment.

To apply appropriate supervised, semi-supervised or unsupervised learning algorithms for solving practical problems.

LABORATORY EXERCISES

1. Exercises to solve the real-world problems using the following machine learning methods:
    a. Regression(Linear,Logistic)
    b. SVM
    c. Neural Networks (MLP, Gradient variants, different activation functions etc.,)
    d. Bayesian classifiers(Naïve, optimal and BBF)
    e. Decision Tree Classifiers (CART, ID3, C4.5 etc.,)
    f. KNN (simple, weighted)
    g. Perceptron
    h. Multi-Class Classification
    i. PCA & CCA
    j. Genetic Algorithms
    k. Clustering (K-Means, Hierarchical etc.,)
2. Implement Anomaly Detection & Recommendation Systems.
3. Implement GPU computing models to solve some of the problems chosen in 1.

ASSESSMENT METHODS

- Total - 50 marks include
  a. Exercises write up, execution, analysis and inference, viva and report writing for 30 marks
  b. 2 Lab Internal tests for 10 marks each will be conducted

- Final SEE Examination will be conducted for 100 Marks and evaluated for 50 marks

COURSE OUTCOMES

After completion of the course, the students will be able to:

CO	DESCRIPTION	Bloom's Level
CO1	Build various machine learning algorithms using python	L3
CO2	Solve real-world problems using recent machine learning software in high-performance computing environment	L3
CO3	Apply appropriate machine learning techniques to solve practical problems	L3
CO4	Analyse the performance of different machine learning algorithms used to solve the practical problems	L4
CO5	Evaluate the performance of different machine learning algorithms in solving chosen problems	L5

Course Outcome to Programme Outcome Mapping

COURSE DESCRIPTION

This Course focuses on Blockchain Technologies, smart Contracts, Hyperledger and alternative blockchains, cryptography and cryptocurrency, how bitcoin achieves decentralization, mechanics of bitcoin, how to store and use bitcoin and bitcoin mining.

PREREQUISITES

Basics of Cryptography

COURSE OBJECTIVES

The Blockchain technology course helps students to explore the driving force behind the blockchain technologies and Bitcoin and other crypto currencies along with concepts like smart contracts, Hyperledger and alternative Blockchains and Bitcoin mining.

UNIT 1 — 10 Hours

Blockchain: Distributed Systems, The history of blockchain, Introduction to blockchain, Types of Blockchain, CAP Theorem and Blockchain, Benefits and limitations of blockchain. Decentralization, blockchain and full ecosystem decentralization, Smart Contract, Platforms for decentralization.

UNIT 2 — 10 Hours

Smart Contracts and Ethereum 101- History, definition, Ricardian contracts, Ethereum clients and releases, the Ethereum stack, Ethereum blockchain, elements of the Ethereum blockchain, precompiled contracts, Accounts, Block, Ether, Messages, Mining, Clients, and Wallets, The Ethereum network.

UNIT 3 — 10 Hours

Hyperledger and Alternative Blockchains-Projects, Hyperledger as a Protocol, Fabric, Hyperledger Fabric, sawtooth lake, Corda, Architecture, Components, Kadena, Platforms, blockApps, Eris. **Introduction to Cryptography and Cryptocurrencies-** Cryptographic hash Functions, Hash Pointers and data structures, Digital Signatures, Public Keys as Identities, Two Simple Cryptocurrencies.

UNIT 4	10 Hours

How Bit Coin achieves decentralization-Centralization versus decentralization, Distributed Consensus, Consensus without identity using a blockchain, Incentives and Proof of work. Putting it all together. **Mechanics of Bitcoin**-Bitcoin Transactions, Bitcoin scripts, Applications of Bitcoin scripts, Bitcoin Blocks, The bitcoin network.

UNIT 5	10 Hours

How to store and use Bitcoins-Simple Local Storage, Hot and Cold Storage, Splitting and sharing keys, Online Wallets and Exchanges, Payment services, Transaction fees, Currency exchange markets. Bitcoin Mining-The task of bitcoin miners, mining hardware, energy consumption and ecology, mining pools, mining incentives and strategies.

TEXT BOOKS

1. Imran Bashir-Mastering Blockchain, Packt Publishing Ltd, 2017. (Unit 1 to Unit 3 till Kadena, Platforms, blockApps, Eris)
2. Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller, Steven Goldfeder-Bit Coin and Cryptocurrency Technologies-A Comprehensive Introduction, Princeton University Press, Princeton and Oxford, 2016. (Unit 3 from Introduction to Cryptography… till Unit 5)

REFERENCE BOOKS

1. Elad Elrom-The Blockchain Developer: A Practical Guide for Designing, Implementing, Publishing, Testing, and Securing Distributed Blockchain-based Projects 1st ed. Edition, Apress, ISBN-13: 978-1484248461
2. Chriss Danen-Introducing Ethereum and Solidity-Foundations of Cryptocurrency and Blockchain Programming for Begineers, Apress, 2017

TEACHING METHODS

- Blackboard Teaching
- Power point Presentation
- Case Study Discussion

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- MINI Project based on Block Chain Technology using current/Modern Tools – 20 Marks
- Three Mid Semester Examinations with weightages given CIE Evaluated for 30 Marks

Semester End Examination (SEE) for 50 Marks

Final Examination for 100 Marks will be conducted and will be evaluated for 50 marks

COURSE OUTCOMES

After completion of the course, the student will be able to:

CO	Description	Blooms' Level
CO1	Understand and Analyse **Types of Blockchain, CAP Theorem, Benefits, and limitations of blockchain. Decentralization, Smart Contract, Platforms for decentralization.**	BL2 and BL4
CO2	Understand and Analyse the **Smart Contracts and Ethereum.**	BL2 and BL4
CO3	Understand and Analyse Hyperledger **and Alternative Blockchains and Cryptography and Cryptocurrencies**	BL2 and BL4
CO4	Understand and Analyse **How Bit Coin achieves decentralization and Mechanics of Bitcoin**	BL2 and BL4
CO5	Understand and Analyse **How to store and use Bitcoins and mine the bitcoins**	BL2 and BL4

Mapping of Course outcomes (COs) to Program outcomes (POs)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO 1	PSO 2	PSO 3
CO1	3				3	2							3	
CO2	3				3	2							3	
CO3	3	3			3	2		2					3	2
CO4	3	3			3	2		2					3	2
CO5	3	3			3	2		2					3	2

II SEMESTER

Department: *Computer Science and Engineering (PG)*	***Course Type:*** *Programme Core*
Course Title: *Image Processing and Computer Vision*	***Course Code:*** *21CSE202*
L-T-P: *3-0-1*	***Credits:*** *3*
Total Contact Hours: *42 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks: *50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course focuses on Introduction to image processing, Image Enhancement, Image Restoration, Image Segmentation and Morphological Image Processing, Object Representation, and description and Mid and High-Level Computer Vision Techniques.

PREREQUISITES

Calculus and probability

COURSE OBJECTIVES

To introduce the basic concepts in Digital Image Processing and understand the steps in fundamental digital image processing
To apply Image Enhancement and Image Restoration techniques
To become familiar with the techniques used in Image Segmention, morphological operations, object representation and description
To understand and apply computer vision techniques.

COURSE CONTENTS

UNIT 1 — 6 Hours

Introduction and Digital Image Fundamentals

Motivation & Perspective, Applications, Components of Image Processing System, Fundamentals Steps in Image Processing, Image Sampling and Quantization, Some basic relationships like Neighbours, Connectivity, Distance Measures between pixels

UNIT 2 — 10 Hours

Image Enhancement in the Spatial and Frequency Domain

Image Enhancement in the Spatial Domain: Image enhancement by point processing, Image enhancement by neighbourhood processing, Basic Grey Level Transformations, Histogram Processing, Enhancement Using Arithmetic and Logic operations, Zooming, Basics of Spatial Filters, Smoothening and Sharpening Spatial Filters, Combining Spatial

Enhancement Methods. Image Enhancement in the Frequency Domain: Introduction to Fourier Transform and the frequency Domain, Smoothing and Sharpening Frequency Domain Filters, Homomorphic Filtering

UNIT 3	10 Hours

Image Restoration and Morphological Image Processing

Image Restoration: Model of The Image Degradation / Restoration Process, Noise Models, Restoration in the presence of Noise Only Spatial Filtering, Periodic Noise Reduction by Frequency Domain Filtering, Linear Position Invariant Degradations, Estimation of Degradation Function, Inverse filtering, Wiener filtering, Constrained Least Square Filtering, Geometric Mean Filter, Geometric Transformations.

Morphological Image Processing: Introduction to Morphology, Dilation, Erosion, and Some basic Morphological Algorithm.

UNIT 4	8 Hours

Image Segmentation, Representation and Description

Segmentation: Fundamentals, Point, Line and Edge Detection, Thresholding,Region based Segmentation, Segmentation using morphological watersheds, The use of motion in segementation. Representation and Description: Boundary Descriptors, Regional Descriptors, Object Recognition: Chain Code, Structural Methods

UNIT 5	8 Hours

Mid-Level & High-Level Vision

Segmentation by Clustering, Grouping and Model Fitting:The Hough Transfrom ,Tracking: Simple Tracking strategies, Tracking using matching, Tracking Linear Dynamic Models with Kalman Filters. Detecting Objects in Images.

TEXT BOOKS

1. Rafael C. Gonzalez & Richard E. Woods, "Digital Image Processing", Pearson Education (3rd Edition).
2. David A. Forsyth, Jean Ponce , "Computer Vision: A Modern Approach", Prentice Hall
3. A.K. Jain, "Fundamental of Digital Image Processing", PHI.

REFERENCE BOOKS

1. B. Chanda, D Dutta Majumder, "Digital Image Processing and Analysis'', Prentice-Hall, India, 2002

TEACHING METHODS

- Black Board Teaching.

- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Mini project / Case study based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

After completion of the course, the student will be able to:

CO	Description
CO1	Understanding the fundamentals of image processing and computer vision. (Understand)
CO2	Able to understand and apply the image enhancement techniques.(Apply)
CO3	Able to understand the Image restoration techniques, representation & description, and object recognition (Understand)
CO4	Apply the image segmentation and morphological image processing on images. (Apply)
CO5	Apply computer vision techniques. (Apply)

Mapping of Course outcomes (COs) to Program outcomes (POs)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO 1	PSO 2	PSO 3
CO1	3													
CO2	3	2	3	2	2							3		
CO3	2	3	3									3		
CO4	2	2	3	2	2							3		
CO5	2	2	3	2	2							3		

II SEMESTER

Department: *Computer Science and Engineering (PG)*	***Course Type:*** *Programme Elective*
Course Title*: Big Data Analytics*	***Course Code:*** *21CSE203*
L-T-P: *3-0-1*	***Credits:*** *3*
Total Contact Hours: *52 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course provides knowledge on definitions of big data and big data analytics, comparison of conventional data warehouse and big data environment, big data frame works like Hadoop and SPARK frame works, data storage mechanisms for big data.

PREREQUISITES

- Students should have the knowledge of Distributed Systems and Parallel Processing
- Students should have knowledge object oriented and functional programming.

COURSE OBJECTIVES

- Understand the data and categories of the data.
- Understand the data analytic techniques.
- Study the big data framework Hadoop and SPARK
- Analyze the difference between Hadoop and SPARK environments
- Study the NOSQL databases.

UNIT 1 — 10 Hours

Introduction to Big Data: Types of Digital Data, Characteristics of Big Data, Evolution of Big Data, Definition of Big Data, Challenges of Big Data, Significance of Big Data, Trends in Big data, Introduction to Big Data Analytics, Technologies for Big data.
Hadoop / HDFS Overview: Hadoop Overview: Hadoop Distributed File System (HDFS), HDFS Daemons, File Read, File Write, Replica Placement Strategy, HDFS commands. YARN and MapReduce. Execution of MR Applications using YARN and HDFS.
Spark Overview: Spark versus MapReduce. Advantages of Spark, Spark Ecosystem.

UNIT 2 — 10 Hours

Introduction to Scala: Scala Overview, Vals and Variables, basic types, operators, control structures, functions, functions as a parameter. Tuples, Basic collections – Lists, Arrays, Maps. Common methods for collections – map, reduce, Iterators, comprehensions. Classes and objects. Pattern matching.

UNIT 3 **10 Hours**

Spark Core: Installing Spark in standalone mode, Spark shell, Spark Context, RDD's: Actions and Transformations, Lineage Graphs, Lazy evaluation, Persistence, Immutability, Fault Tolerance, Performance (Pipelining, Shuffle). Pair RDD's: Transformations and Actions, Partitioning. Broadcasting. Page Ranking Algorithm. Using sbt to compile spark programs for cluster execution.

UNIT 4 **12 Hours**

Spark SQL: Rows, Data frames, Tables and SQL operations on Tables. Partitioning and Bucketing for performance. Interfacing with Hive. Refreshing Table metadata. Loading and Saving Data: Parquet Files.

Spark Streaming: Introduction to Stream Processing – Micro batching, structured streaming, Event time versus Processing time, Time windows, Out of order events, Sliding versus overlapping windows, Sources and Sinks. Transformation and Actions. Caching, Persistence, Check pointing.

UNIT 5 **10 Hours**

Spark MLlib (Machine Learning Library): ML data types in Spark, ML Algorithms in Spark: scaling, normalization, word2vec, statistical, classification and regression, clustering, collaborative filtering, dimensionality reduction, pipelines.

TEXT BOOKS

1. Seema Acharya and Subhashini C, Big Data and Analytics, Wiley India, 2015 (Chapter 1,2,3,5,9)
2. Cay S. Horstmann, Scala for the Impatient, 2nd Edition (chapters 1 to 6, 12 to 14).
3. Andy Konwinski, Holden Karau, Matei Zaharia, Patrick Wendell, Learning Spark Lightning-Fast Big Data Analysis, O'Reilly, 2015 (chapters 1 to 8).
4. Spark: The Definitive Guide2018, by Matei Zaharia and Bill Chamber

REFERENCE BOOKS

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Mini project / Case study based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

After completion of the course, the students will be able to:

CO	DESCRIPTION
CO1	Understand the big data , big data analytics, big data processing requirements (L1)
CO2	Compare the Hadoop and SPARK framework for big data(L2)
CO3	Illustrate the programming model in Scala using basic data types, functions, objects, classes(L3)
CO4	Apply the Knowledge of RDDs, Data frames, Structured Data frames, MLLib to develop SPARK applications (L3)
CO5	Analyze the big data framework used in industry(L4)

Course Outcome to Programme outcome Mapping:

Mapping of Course outcomes (COs) to Program outcomes (POs)														
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	PSO3
CO1	3	2	2	2								3		
CO2	2	2	2	2								2		
CO3	3	3	3	2	2							2		
CO4	3	2	2	2	2							2		
CO5	3	2	2	2	2							2		

II SEMESTER

Department: *Computer Science and Engineering (PG)*	***Course Type:*** *Programme Core*
Course Title: Advanced Data Structures and Algorithms	***Course Code:*** 21CSE204
L-T-P: *3-0-1*	***Credits:*** *4*
Total Contact Hours: *52 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks: *50*	***CIE Marks:*** *50*

UNIT 1 **8 Hours**

Introduction, Understanding Pointers, Accessing the Address of a Variable, Declaring Pointer Variables, Initialization of Pointer Variables, Accessing a Variable through the Pointer, Chain of Pointers, Pointer Expressions, Pointer Increments and Scale Factor, Pointers and Arrays, Pointers and Character Strings, Array of Pointers, Pointer as Function Arguments, Functions Returning Pointers, Pointers to Functions, Pointers and Structures

UNIT 2 **10 Hours**

Dictionaries, linear list representation, skip list representation, operations insertion, deletion and searching, hash table representation, hash functions, collision resolution-separate chaining, open addressing-linear probing, quadratic probing, double hashing, rehashing, extendible hashing, comparison of hashing and skip lists.

UNIT 3 **10 Hours**

Priority Queues – Definition, ADT, Realizing a Priority Queue using Heaps, Definition, insertion, Deletion, External Sorting- Model for external sorting, Multiway merge, Polyphase merge.

UNIT 4 **10 Hours**

Binary Search Trees, Definition, ADT, Implementation, Operations- Searching, Insertion and Deletion, AVL Trees, Definition, Height of an AVL Tree, Operations – Insertion, Deletion and Searching, Black and Splay Trees, B-Trees, B-Tree of order m, height of a B-Tree, Comparison of Search Trees

UNIT 5 **10 Hours**

Pattern matching and Tries: Pattern matching algorithms-Brute force, the Boyer –Moore algorithm, the Knuth-Morris-Pratt algorithm, Standard Tries, Compressed Tries, and Suffix tries.

TEXT BOOKS:

1. Data Structures using C, Aaron M. Tanenbaum, Yedidyah Langsam& Moshe J. Augenstein, Pearson Education/PHI, 2006.
2. Data structures, Algorithms and Applications in C++, S. Sahni, University Press (India) Pvt Ltd, 2nd edition, Universities Press Orient Longman Pvt. Ltd.

3. Data structures and Algorithms in C++, Michael T. Goodrich, R. Tamassia and .Mount, Wiley student edition, John Wiley and Sons.

Reference Books:

1. Data structures and Algorithm Analysis in C++, Mark Allen Weiss, Pearson Education. Ltd., Second Edition.
2. Data structures and algorithms in C++, 3rd Edition, Adam Drozdek, Thomson
3. Data structures using C and C++, Langsam, Augenstein and Tanenbaum, PHI.
4. Problem solving with C++, The OOP, Fourth edition, W.Savitch, Pearson education.

Course Outcomes

After completion of the course, the students will be able to:

CO	DESCRIPTION
CO1	Able to implement pointers in c / c++ programming
CO2	Able to utilize the concepts of dictionaries and hash functions for proper applications
CO3	Able to understand and implement different queuing and searching techniques and compare different searching techniques
CO4	Able to understand and implement different techniques of pattern matching for proper applications.

Teaching Methodology:

- Black board teaching
- Lectures
- Power Point Presentation

Assessment Methods:

- Total - 50 marks include

a. Three internals for 30 Marks each will be conducted and the Average of best of two will be taken

b. Surprise Test – 10 Marks

c. Assignment – 10 Marks

- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

COURSE DESCRIPTION

This course focuses on revisiting the machine learning concepts, Deep Feedforward Networks, Regularization, and Optimization for Training Deep Models, Sequence Modelling, and Applications of Deep Learning

PREREQUISITES

NA

COURSE OBJECTIVES

UNIT 1 — 10 Hours

Machine Learning Basics: Learning Algorithms, Capacity, Overfitting and Underfitting, Hyperparameters and Validation Sets, Estimator, Bias and Variance, Maximum Likelihood Estimation, Bayesian Statistics, Supervised Learning Algorithms, Unsupervised Learning Algorithms, Stochastic Gradient Decent, building a Machine Learning Algorithm, Challenges Motivating Deep Learning

UNIT 2 — 10 Hours

Deep Feedforward Networks: Gradient-Based Learning, Hidden Units, Architecture Design, Back Propagation.

Regularization: Parameter Norm Penalties, Norm Penalties as Constrained Optimization, Regularization and Under-Constrained Problems, Dataset Augmentation, Noise Robustness, Semi-Supervised Learning, Multi-Task Learning, Early Stopping, Parameter Tying and Parameter Sharing, Sparse Representations, Bagging, Dropout.

UNIT 3 — 12 Hours

Optimization for Training Deep Models: How Learning Differs from Pure Optimization, Challenges in Neural Network Optimization, Basic Algorithms. Parameter Initialization Strategies, Algorithms with Adaptive Learning Rates. Convolutional Networks: The Convolution Operation, Motivation, Pooling, Convolution and Pooling as an Infinitely Strong Prior, Variants of the Basic Convolution Function, Structured Outputs, Data Types, Efficient Convolution Algorithms, Random or Unsupervised Features.

UNIT 4	10 Hours

Sequence Modelling: Recurrent and Recursive Nets: Unfolding Computational Graphs, Recurrent Neural Networks, Bidirectional RNNs, Encoder-Decoder Sequence-to-Sequence Architectures, Deep Recurrent Networks, Recursive Neural Networks. Long short-term

UNIT 5	10 Hours

memory

Practical Methodology: Performance Metrics, Default Baseline Models, Determining Whether to Gather More Data, Selecting Hyperparameters, Debugging Strategies, Example: Multi-Digit Number Recognition. Applications: Vision, NLP, Speech.

2. Chirstopher Bishop. Pattern Recognition and Machine Learning. 2007.

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Mini project / Case study based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

1. Explain the concepts of deep learning and Neural Networks
2. Demonstrate the architectural principles of Deep Learning Networks
3. Explore the training and use of deep Learning networks with tools & software's
4. Analyse the Modern Practices of Deep Learning and Neural networks
5. Create the deep learning system to solve real world problems

COURSE DESCRIPTION

This course provides the overview of IOT security, Vulnerability Issues, Networking Function Security, and Secured Protocols for IOT.

PREREQUISITES

COURSE OBJECTIVES

UNIT 1 **10 Hours**

Fundamentals, Architecture of IoTs, IoT Security Requirements, IoT Privacy Preservation Issues, IoTReference Model- Introduction -Functional View,IoT Security Challenges-Hardware Security Risks - Hardcoded/Default Passwords -Resource Constrained Computations -Legacy Assets Connections - Devices Physical Security, Software Security Risks -Software Vulnerabilities -Data Interception - Identification of Endpoints -Tamper Detection, Lack of

UNIT 2 **10 Hours**

IOT- SECURITY &VULNERABILITY ISSUES

IoT Security Requirements -Data Confidentiality -Data Encryption -Data Authentication -Secured Access Control –IoT-Vulnerabilities – Secret-Key, Authentication/Authorization for Smart Devices - Constrained System Resources -Device Heterogeneity -Fixed Firmware. Attack Models - Attacks to Sensors in IoTs, Attacks to RFIDs in IoTs, Attacks to Network Functions in IoTs, Attacks to Back-end Systems, Security in Front-end Sensors and Equipment, Prevent Unauthorized Access to Sensor Data,M2M Security, RFID Security, Cyber-Physical Object Security, Hardware Security, Front-end System Privacy Protection IoT Attacks -Side-channel Attacks -Reconnaissance -Spoofing -Sniffing -Neighbour -Discovery -Rogue Devices-Man-in-Middle

UNIT 3	10 Hours

Networking Function Security-IoT Networking Protocols, Secure IoT Lower Layers, Secure IoT Higher Layers, Secure Communication Links in IoTs , Back-end Security -Secure Resource Management, Secure IoT Databases, Security Products-Existing Test bed on Security and Privacy of IoTs, Commercialized Products

UNIT 4	10 Hours

SECURED PROTOCOLS FOR IOT Infrastructure-IPv6 -LowPAN , Identification-Electronic Product Code -uCode, Transport-Bluetooth - LPWAN, Data -MQTT -CoAP, Multi-layer Frameworks-Alljoyn,-IoTivity

UNIT 5	10 Hours

SECURING INTERNET OF THINGS ENVIRONMENT IoT Hardware -Test Device Range-Latency and Capacity -Manufacturability Test -Secure from Physical Attacks, IoT Software -Trusted IoT Application Platforms, -Secure Firmware Updating -Network Enforced Policy -Secure Analytics Visibility and Control

REFERENCE BOOKS

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Mini project / Case study based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

1. Explain the concepts of IOT Security (Understand)
2. Understanding Vulnerability issues and IoT Security (Understand)
3. Study of Networking Function Security. (Understanding)
4. Able to differentiate Secured Protocols for IoT (Analysis).

Course Outcome to Programme outcome Mapping:

II SEMESTER

Department: *Computer Science and Engineering (PG)*	***Course Type:*** *Programme Elective*
Course Title*: Animation and Game development*	***Course Code:*** *21CSE205E3*
L-T-P: *3-1-1*	***Credits:*** *4*
Total Contact Hours: *52 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

Introduction to the programming and development of computer games especially through the use of open-source computer game engine like Unity. Course will cover the major aspects of programming and creating games within a game engine, basic interaction between code and game assets, movement and manipulation of assets, object collision detection, triggers and timed events. Provide an introduction to Animation of assets and Haptic IO devices such as HUD, manipulators, vibrators. The course will also deal with ways of augmenting the playing experience using AI in game development.

COURSE OBJECTIVES

- To understand the basic physics that governs the reactions of the characters of the game.
- To build capability to develop scripts using C# to create assets, UI, graphics and AI game agents
- To develop expertise in using open-source game engines like Unity.
- To enhance the gaming experience by incorporating AI to the assets.
- To be able to build AR and VR based games using Unity's AR foundation.

COURSE CONTENTS

UNIT 1 — 6 Hours

Games Overview; History of Games,History and Generations of Video Games, Designing a Game from Scratch, Setting Up Unity

UNIT 2 — 6 Hours

Game Genre Overview: Game Genres I, Game Genres II,Genres III
Principles of Game Design I: Layers of Game Design, Empathy, Motivation, Feedback, Agency, Pacing

Principles of Game Design II: Immersion, Realism, Consistency, Freedom, Action, Strategy, Simulation, Working with Scenes and Game Objects, Grayboxing with Terrain and ProBuilder,

UNIT 3	10 Hours

Importing and Integrating Assets, Materials and Effects with URP and Shader Graph and Visual Effects with Particle Systems and Visual Effect Graph
Trade-Offs in Game Design, Indicators of Poor Game Design, Game Development Cycle. Lighting Using the Universal Render Pipeline, Full screen Effects with Post processing Sound and Music Integration, User Interface Design, Creating a UI with the UI Toolkit
Creating Animations with Animator, Cinemachine, and Timeline, Introduction to C# and Visual

UNIT 4	10 Hours

Scripting, Implementing Movement and Spawning Physics Collisions and Health System, Win and Lose Condition, Scripting the UI, Sounds, and Graphics

UNIT 5	10 Hours

Implementing Game AI for Building Enemies, Scene Performance Optimization, Building the Project, Finishing Touches, Augmented Reality in Unity, Legalities of Game Development, Ethical Issues in Video Games (Ethics, Culture, Violence in Games; Responsibilities; ESRB Ratings. Future of Video Games

TEXT BOOKS

1. Fundamentals of Game Development: Heather Maxwell Chandler, Rafael Chandler; Jones & Bartlett Learning; 2011.
2. Hands-on Unity 2021 Game development: Nicolas Alejandro Borromeo; Second Edition, Packt Publishing Ltd. 2021.

REFERENCE BOOKS

TEACHING METHODS

- Power point presentation.
- Tutorial Classes.
- Programming exercises

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.

- Mini project on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

CO	Description	Bloom's level
CO1	Unleash the capabilities of C# and Visual scripting tools to create UIs, graphics and customize various aspects like physics, gameplay and user experience	L3
CO2	Explore Unity's latest tools, including Universal Render Pipeline, Shader Graph, UI Toolkit, Visual Scripting, and VFX graph, to enhance graphics.	L4
CO3	Create rich particle systems for your Unity games from scratch using VFX Graph and Shuriken	L4
CO4	Add animations to the games using the Animator, Cinemachine, and Timeline	L3
CO5	Implement game AI to control character behaviour	L3

COURSE OUTCOMES to Programme Outcome Mapping

Mapping of Course outcomes (COs) to Program outcomes (POs)

II SEMESTER

Department: *Computer Science and Engineering (PG)*	***Course Type:*** *Programme Elective*
Course Title*: Dynamic Programming and Randomized Algorithms*	***Course Code:*** *21CSE205E4*
L-T-P: *3-1-1*	***Credits:*** *4*
Total Contact Hours: *52 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

Randomization has been serving as a central idea in algorithm design in particular and theoretical computer science in general. Indeed, randomized algorithms are often tend to be simple and thus practically useful than their deterministic counter parts yet provides matching guarantees. This is the case, for example, for randomized quick sort algorithm, randomized minimum cut algorithm, etc. Other than algorithm design, randomization has also been used to come up with path breaking proof techniques, for example, probabilistic methods, probabilistically checkable proof, etc. in theoretical computer science. In this course, we will introduce these probabilistic techniques with state of the art applications to the students so that they can apply it in their research whenever needed

PREREQUISITES

Knowledge of Fundamentals of Design and Analysis of Algorithms; Fundamentals of Probability theory and Random Processes.

COURSE OBJECTIVES

- To understand the major categories of approaches to Random algorithmic design: Las Vegas and Monte Carlo.
- To get expertise on Basic probability theory including linearity of expectation, conditional expectations and law of total probability.
- To understand the technique of applying Markov bounds, Chebyshev bounds and similar bounds to problems and identify the suitability of these bounds to particular applications.
- To understand the applications of Markov Chains and Monte-Carlo methods
- To be able to determine the performance of classical randomized data structures.

COURSE CONTENTS

UNIT 1 **10 Hours**

Review of Basic Probability, Polynomial Identity Testing, Schwartz-Zippel, Reduction from

Perfect Bipartite Matching to PIT, Randomized Quick sort, Markov, Chebyshev, and Chernoff bounds, Lemma, Tossing coins, coupon collector problem, birthday paradox, Balls and bins, Two-point sampling.

UNIT 2	10 Hours

Introduction to Markov chain, randomized algorithm for 2SAT, stationary distribution, Irreducible and aperiodic Markov chain, fundamental theorem of Markov chain (statement only), coupling.

UNIT 3	10 Hours

Random walk, Metropolis Algorithm, Mixing time of Random Walk on Cycles, Proof of the fundamental Theorem of Markov chains, Finishing proof of the fundamental Theorem of Markov chains, hitting time, commute time, cover time, Monte Carlo Method, FPRAS for DNF Counting, FPRAS for Independent Set Counting using Monte Carlo Method

UNIT 4	8 Hours

Overview of Path Coupling, Introduction to Probabilistic Methods, Methods of expectation, alteration; Lovasz Local Lemma and its application, Method of Conditional Expectation for Derandomization, Introduction to Universal Hash Family, Perfect Hashing, Cuckoo Hashing, Bloom Filter, Count Min Sketch, Construction of Universal Hash Family

UNIT 5	8 Hours

Probabilistic Tree Embedding, Buy at Bulk Network Design, Martingale: Definition, Doob's Martingale, Stopping Time Theorem (without proof), Wald's equation, Azuma-Hoeffding Inequality, McDiarmid's Inequality, Applications.

TEXT BOOKS

1. Randomized Algorithms: Rajeev Motwani, Prabhakar Raghavan
2. Probability and Computing: Randomization and Probabilistic Techniques in Algorithms and Data Analysis by Eli Upfal and Michael Mitzenmacher

REFERENCE BOOKS

TEACHING METHODS

- Black Board Teaching (as necessary)
- Power point presentations.
- Tutorial Classes.

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Mini project / Programming exercises based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

Course Outcome to Programme outcome Mapping:

CO	Description	Bloom's level
CO1	Comprehend the basics. Of Randomized Algorithms and Bounds	L2
CO2	Good Understanding of Markov Chains and its applications	L2
CO3	Be a able to apply Monte-Carlo techniques to applications	L4
CO4	Good working knowledge of Probablistic methods	L3
CO5	Good knowledge of inequalities and applications to real life problems	L2

COURSE OUTCOMES to Programme outcome Mapping

Mapping of Course outcomes (COs) to Program outcomes (POs)														
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	PSO3
CO1	3	2	3									3	1

CO3	3	2	3						3		3	3	2	
CO4	3	2	3	2	2				3		3	3	3	
CO5	3	3	3	2	3				3		3	3	3	

II SEMESTER

Department: *Computer Science and Engineering (PG)*	***Course Type:*** *Programme Elective*
Course Title: *Advances in Natural Language Processing*	***Course Code:*** *21CSE206E1*
L-T-P: *3-1-0*	***Credits:*** *4*
Total Contact Hours: *50 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks: *50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course discusses techniques, algorithms, illustrations, applications, solutions and case studies in Natural language processing. Advanced techniques and research topics are also covered.

PREREQUISITES

Mathematical techniques, basics of algorithms.

COURSE OBJECTIVES

To provide knowledge on basics and algorithms used in natural language processing (NLP).
To enable learning of applications in Natural language processing.
To impart implementation experience using Python & NLTK.

COURSE CONTENTS

UNIT 1 **10 Hours**

Introduction: What is Natural Language Processing, Motivation, Words - Regular Expressions and Automata, Words and Transducers, N - grams - Part – of - Speech Tagging, Hidden Markov Models, Maximum Entropy Model.

UNIT 2 **10 Hours**

Syntax: Syntactic Parsing, Statistical Parsing, Features and Unification - Language and Complexity, Language Modeling

UNIT 3 **10 Hours**

. **Semantics and Pragmatics** : Semantics and Pragmatics: The Representation of Meaning, Computational Semantics,
Lexical Semantics: Computational Lexical Semantics, Computational Discourse.

UNIT 4 **10 Hours**

Applications: Applications, Information Extraction, Question Answering and Summarization, Dialog and Conversational Agents, Machine Translation .

UNIT 5 **10 Hours**

NLP Using Python: Language Processing and Python - Accessing Text Corpora and Lexical Resources - Processing Raw Text - Writing Structured Programs -Categorizing and Tagging Words -Learning to Classify Text - Extracting Information from Text – Case study.

TEXT BOOKS

1. Allen, James, Natural Language Understanding, Second Edition, Benjamin/Cumming, 1995.
2. Jurafsky, D. and J. H. Martin. Speech and language processing: An Introduction to Natural Language Processing, Computational Linguistics, and Speech Recognition, Second Edition, Prentice Hall, 2008.
3. Steven Bird, S., Klein, E., Loper, E, Natural Language Processing with Python-Analyzing Text with the Natural Language Toolkit, O'Reilly Media, 2010.

TEACHING METHODOLOGY

- Black Board Teaching
- Tutorials
- Problem solving
- Power Point presentation

ASSESSMENT METHODS

1. Three internals – 30 marks each will be conducted and the average of best of two will be considered
2. Seminar – 10 marks, Course project - 10 marks
3. Final Examination –Conducted for 100 and evaluated for 50 marks

Course Outcomes:

After completion of the course, the student will be able to:

CO	Description	Bloom's level
CO1	Comprehend the basics of NLP and illustrate the techniques used.	L2
CO2	Explain the syntactic parsing and language modeling methods.	L2
CO3	Analyse the semantics and the prgamatics used in NLP.	L4
CO4	Apply NLP techniques for various applications.	L3
CO5	Implement NLP techniques using Python.	L2

Mapping of Course outcomes (COs) to Program outcomes (POs)														
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	PSO3
CO1	3	2	3									3	1	
CO2	3	2	3									3	2	
CO3	3	2	3						3		3	3	2	
CO4	3	2	3	2	2				3		3	3	3	
CO5	3	3	3	2	3				3		3	3	3	

II SEMESTER

Department: *Computer Science and Engineering (PG)*	***Course Type:*** *Programme Elective*
Course Title*: Cyber Forensics*	***Course Code:*** *21CSE206E2*
L-T-P: *3-1-0*	***Credits:*** *4*
Total Contact Hours: *52 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course aims to provide an understanding of the various security attacks and knowledge to recognize malicious activity that lead to vulnerabilities. It gives an outline of the techniques for developing a secure application. The use of security tools and techniques in real life scenarios related to cyber security consultancy and forensics. In addition to this, students will be able to improve their technical skill-sets and enhance their learning experiences through the use of various cyber tools.

PREREQUISITES

COURSE OBJECTIVES

- To implement security as a culture and show mistakes that make applications vulnerable to attacks.
- To understand various attacks like DoS, buffer overflow, web specific, database specific, web-spoofing attacks.
- To identify the nature of the threats to software and incorporate secure coding practices throughout the planning and development of the product.
- Able to properly handle application faults, implement secure authentication, authorization and data validation controls used to prevent common vulnerabilities

COURSE CONTENTS

UNIT 1: INTRODUCTION TO COMPUTER FORENSICS — 10 Hours

A brief about Cyber Forensics, Forensics investigation process, Forensic protocol for evidence acquisition, digital forensic standard and guidelines, Digital Evidence, Cyber Crime and types of cybercrime, notable data breaches, Case studies. Challenges in cybercrime. (Text Book:1, Chapter-1)

UNIT 2: EVIDENCE COLLECTION AND FORENSICS TOOLS — 12 Hours

Processing Crime and Incident Scenes - Working with Windows and DOS Systems. Current Computer Forensics Tools: Software/ Hardware Tools. (Text Book:2, Chapter - 5,6,7)

UNIT 3 : ANALYSIS AND VALIDATION

Validating Forensics Data - Data Hiding Techniques - Performing Remote Acquisition - Network Forensics - Email Investigations - Cell Phone and Mobile Devices Forensics. (Text Book:2, Chapter - 9, 11, 12,13)

UNIT 4: CYBER FORENSIC IMAGING

Overview of forensic imaging, preparing a stage drive, Imaging, Network Evidence and Analysis: Analyzing packet captures, Analyzing network log files, Analyzing system memory: memory evidence overview, memory Analysis Methodology, Network Connection Methodology, Tools. (Text Book:3, Chapter-5,6,7)

UNIT 5: CYBER FORENSIC TOOLS **10 Hours**

Brief Introduction to IoT (Device, Architecture), Security Awareness for IoT Devices, Sectrio Honeypot, Basic Analysis on Malware, Overview on Tools and Software used for Honeypot Research (VBox, Qemu, Remnux, Kali), Overview on VAPT, Overview on Cyber Threat Intelligence.

TEXT BOOKS

1. Niranjan Reddy, "An Incident-Based Approach toForensic Investigations Malware forensics". In: Practical Cyber Forensics. Apress, Berkeley, CA (2019). https://doi.org/10.1007/978-1-4842-4460-9_9.

4. Bill Nelson, Amelia Phillips, Frank Enfinger, Christopher Steuart, ―Computer Forensics and Investigations‖, Cengage Learning, India Edition, 2016.

TEACHING METHODOLOGY

- Black Board Teaching
- Tutorials

- Problem solving
- Power Point presentation

ASSESSMENT METHODS

Midterm Test (Avg. of 2 Tests)	– 30 Marks
Mini project/Seminar on Cyber Forensics Topics	– 10 Marks
Cyber-Forensics-Tools-Usage-Demonstration	– 10 Marks
Total	= 50 Marks

Course Outcomes:

After completion of the course, the student will be able to:

CO	Description	Bloom's level
CO1	Understand how important security principles must be adhered to when securing the infrastructures	L2
CO2	Understand the importance of balancing security, operational effectiveness, and cost	L2
CO3	Analyze and to aptly secure the cyber perimeter of the infrastructures against cyber attacks	L4
CO4	Able to properly handle application faults, implement secure authentication, authorization and data validation controls used to prevent common vulnerabilities	L3
CO5	Perform cyber forensics analysis upon networks and network devices.	L2

Mapping of Course outcomes (COs) to Program outcomes (POs)

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PSO1	PSO2	PSO3

COURSE DESCRIPTION

This course starts with an overview of Compiler design and aims at solving problems in designing compilers and advanced optimization.

PREREQUISITES

Knowledge of assembly level programming, Formal Languages and Automata Theory and principles of Compiler Design.

COURSE OBJECTIVES

- To comprehend basics of user interface and GUI.
- To apply techniques for designing the user interface.
- To understanding the Business Functions
- To understand the Device and Screen-Based Control
- To provide Effective Feedback Guidance and Assistance

COURSE CONTENTS

UNIT 1 **10 Hours**

The User Interface: Introduction, Importance of the User Interface, Importance and benefits of Good Design History of Human Computer Interface. Characteristics of Graphical and Web User Interface: Graphical User Interface, popularity of graphics, concepts of Direct Manipulation, Graphical System advantage and disadvantage, Characteristics of GUI. Web User Interface, popularity of web, Characteristics of Web Interface, Merging of Graphical Business systems& the Web, Principles of User Interface Design

UNIT 2 **10 Hours**

The User Interface Design Process: Obstacles and Pitfall in the development Process, Usability, The Design Team, Human Interaction with Computers, Important Human Characteristics in Design, Human Consideration in Design, Human Interaction Speeds, Performance versus Preference, Methods for Gaining and Understanding of Users.

UNIT 3	10 Hours

Understanding Business Functions: Business Definitions & Requirement analysis, Determining Business Functions, Design standards or Style Guides, System Training and Documentation, Principles of Good Screen Design: Human considerations in screen Design, interface design goals, test for a good design, screen meaning and purpose, Technological considerations in Interface Design System Menus and Navigation Schemes: Structure, Functions, Context, Formatting, Phrasing and Selecting, Navigating of Menus, Kinds of Graphical Menus Windows Interface: Windows characteristic, Components of Window, Windows Presentation Styles,

UNIT 4	10 Hours

Types of Windows, Window Management, Web systems.

Device and Screen-Based Control: Device based controls, Operable Controls, Text entry/read- Only Controls, Section Controls, Combining Entry/Selection Controls, Other Operable Controls and Presentation Controls, Selecting proper controls.

Effective Feedback Guidance and Assistance: Providing the Proper Feedback, Guidance and

UNIT 5	10 Hours

Assistance Effective Internationalization and Accessibility- International consideration, Accessibility, Create meaningful Graphics, Icons and Images, Colors-uses, possible problems with colors, choosing colors.

TEXT BOOKS

5. Alan Dix, Janet Fincay, GreGoryd, Abowd, Russ. Human Computer Interaction. Pearson Education

TEACHING METHODS

- Black Board Teaching.

- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Mini project / Case study based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

1. Able to understand the User Interface, Web Interface and Principles of User Interface Design (Understand)
2. Apply Methods and techniques for design and construction of user interfaces (Apply)
3. Demonstrate basic knowledge on theories of psychology and on how the human being interacts with (computer) systems. (Demonstrate)
4. Give insight on how knowledge of the human capabilities can influence the way in which we construct technical systems.

Course Outcome to Programme outcome Mapping:

COURSE DESCRIPTION

This course starts with an overview of Compiler design and aims at solving problems in designing compilers and advanced optimization.

PREREQUISITES

Knowledge of assembly level programming, Formal Languages and Automata Theory and principles of Compiler Design.

COURSE OBJECTIVES

- To comprehend basics of compilers and the optimizations
- To carry out control flow & data flow analysis of programs and conceptualize the dependency
- To learn optimization techniques using compilers
- To perform register allocation & instruction scheduling for improving program performance

COURSE CONTENTS

UNIT 1 — 10 Hours

Overview of optimizing compilers & applications
Review of Compiler Structure, Importance of code optimization, Structure of optimizing compilers, Optimizations in aggressive optimizing compilers, Applications of Compiler Technology, Informal Compiler algorithm notation (ICAN): Extended Backus Naur Notation, Introduction to ICAN. Producing code generators automatically: Introduction to automatic generation of code generators.

UNIT 2 — 10 Hours

Control flow Analysis: Methods of control flow analysis, different search methods & traversals, dominators & post dominators, loops & strongly connected components, reducibility, interval analysis, structural analysis.

UNIT 3 — 10 Hours

Data flow analysis of programs: Reaching definitions, basic concepts, lattices, flow functions, fixed points, taxonomy of dataflow problems & solution methods, iterative data flow analysis, control tree based data flow analysis, dealing with arrays, structures & pointers, construction of dataflow analyzers, Dependence relations, and basic block dependence DAGs.

UNIT 4	8 Hours

Introduction to optimizations: global optimizations, individual optimizations, Early optimizations: constant folding, scalar replacement, algebraic specification, value numbering, copy propagation, Redundancy elimination: common sub expression elimination, loop invariant code motion, partial redundancy elimination, code hoisting, Loop optimization: induction variable optimization, Procedure optimization: basic concept.

UNIT 5	8 Hours

Register Allocation & Instruction Scheduling

Register allocation & assignment, local methods, graph coloring, other approaches to register allocation, Code scheduling: instruction scheduling, speculative loads & boosting, speculative scheduling, trace scheduling; Basic block scheduling, global code scheduling.

TEXT BOOKS

2. Steve Muchnick, Advanced Compiler Design & Implementation, Morgan Kaufmann publishers, 1997.

3. Alfred V. Aho, Monica S. Lam, Ravi Sethi, Jeffrey D. Ullman, "Compilers : Principles, echniques and Tools", Second Edition, Pearson Education, 2007.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

After successful completion of the course the student will be able to:

CO	Description	BL
CO1	Provide an overview compiler design , applications and the technology.	L1
CO2	Analyse the control flow in the given programs using the popular research methods used in compiler design.	L4
CO3	Perform data flow analysis and dependence analysis required for efficient compiler design.	L2
CO4	Illustrate various code optimization techniques.	L2
CO5	Design register allocation and apply instruction scheduling algorithms for optimizing resources.	L4

AICTE NMIT <aicte@nmit.ac.in>

Laboratory facility for M.Tech Data Science - Annexure-5

Deepthi K <deepthi.k@nmit.ac.in> Sat, Dec 24, 2022 at 1:02 PM
To: AICTE NMIT <aicte@nmit.ac.in>
Cc: "Dr. Mohan S G" <mohan.sg@nmit.ac.in>

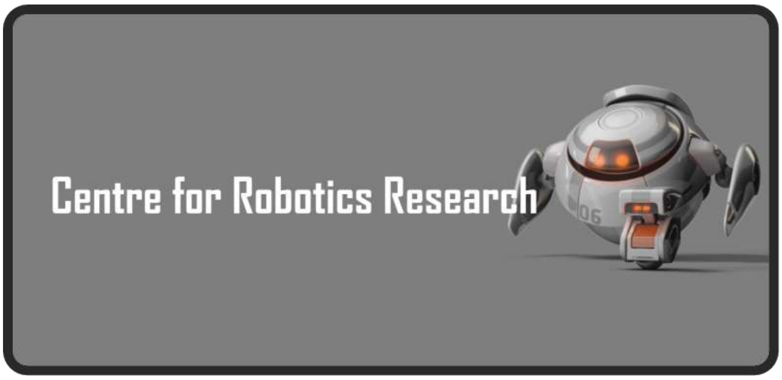
Dear Sir/Madam,
Laboratory facilities exclusive to the Post Graduate Course(M.Tech-Data Science)--
Annexure-5
1) Grid Lab at the Department of ISE for Data Analytics Laboratory course.
2) Ignis Lab with High End System to carry out the project work shared along with UG Programmme.

Regards,
Mrs. Deepthi. K,
Assistant Professor & PG Coordinator,
Department of ISE,
Nitte Meenakshi Institute of Technology,
Bengaluru-64.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

CENTRE FOR ROBOTICS RESEARCH

Nitte Meenakshi Institute of Technology, Bengaluru-64



YouTube

Video to be Embedded on the First Screen: https://www.youtube.com/watch?v=sFgfVwgskr0&t=3s

OVERVIEW

Robotics is an emerging multi-disciplinary field with vast applications ranging from agriculture to outer space explorations. The Nitte Education Trust/Management has established Centre for Robotics Research (CRR) as one of its Centres of Excellence (CoE) to promote collaborative research and development in the field of Robotics & its allied disciplines. CRR has dedicated faculty members and students who are actively pursuing projects/research in the field of Robotics and its allied disciplines.

THRUST AREAS OF RESEARCH

a) Design & Development of Novel Robotic Systems
b) Unmanned Aerial & Ground Vehicles
c) Industrial Automation/Process Automation/Robot Process Automation (RPA)
d) Control Systems/ Localization, Path Planning &Autonomous Navigation Strategies
e) 3D Printing/Process Parameter Optimization
f) Artificial Intelligence/Machine Learning/DeepLearning
g) Computer Vision/Machine Vision Systems
h) Big Data Analytics
i) Social Robotics/Human Robot Interaction (HRI)
j) Real Time Control of Robots using EmbeddedSystems
k) Application of STEM/STEAM in Robotics Domain

HIGHLIGHTS

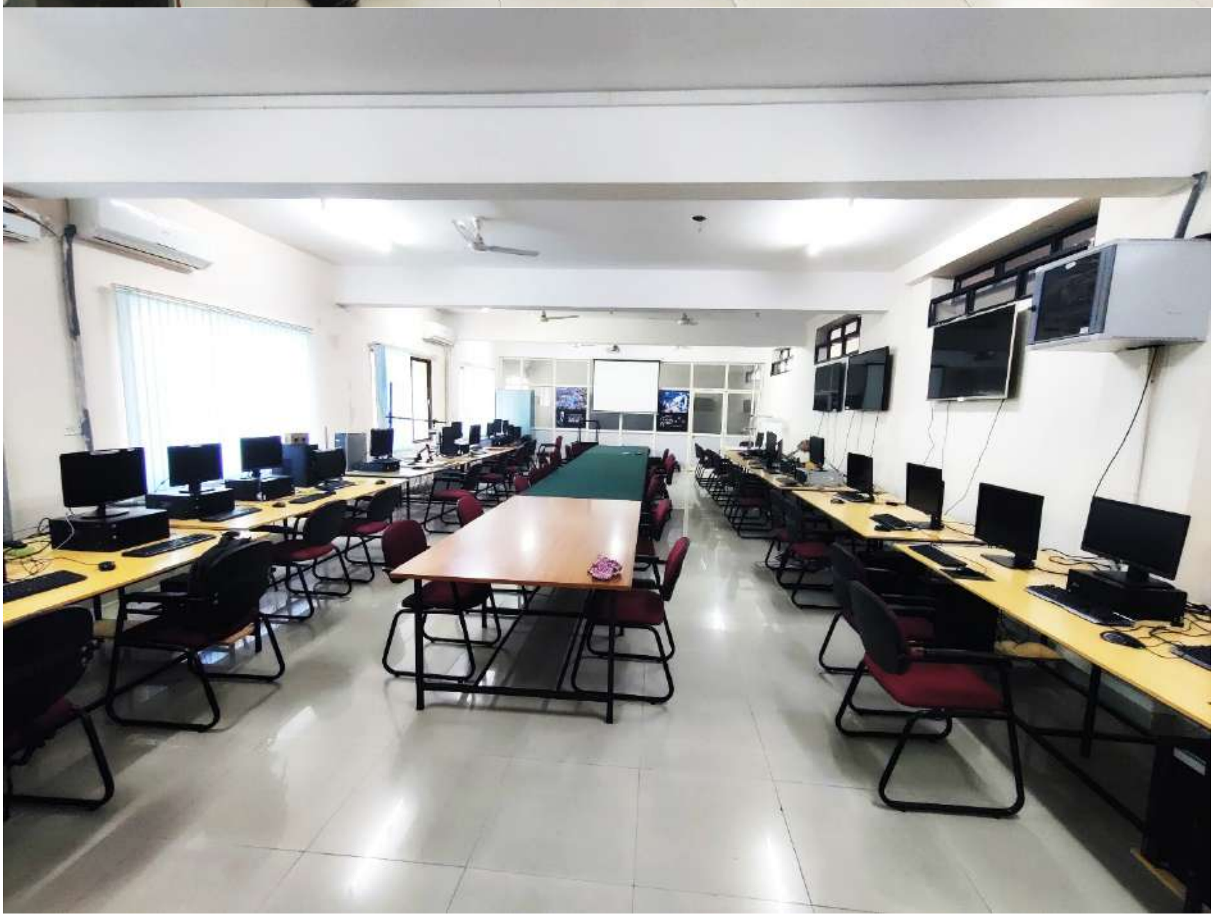
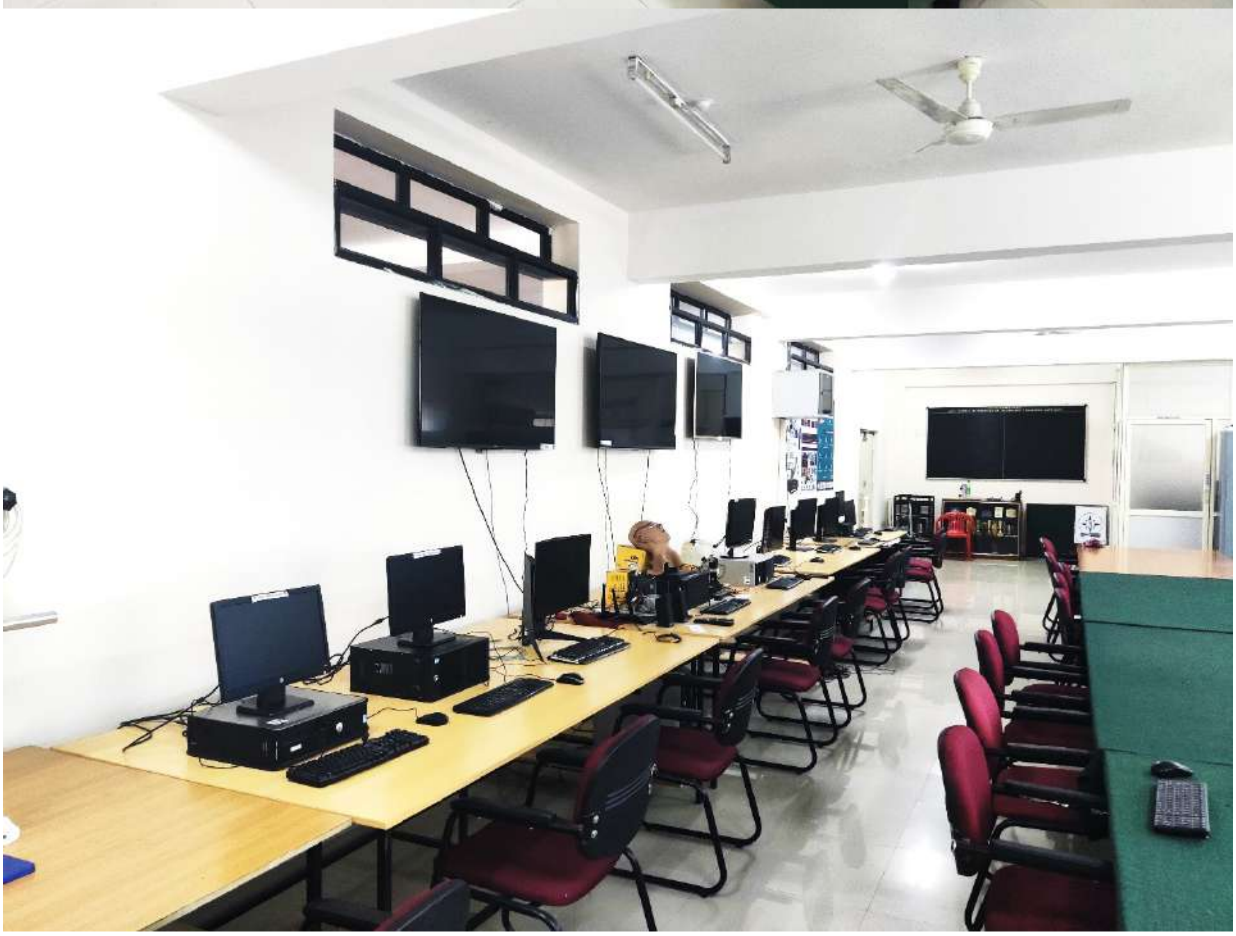
OUR FACILITIES

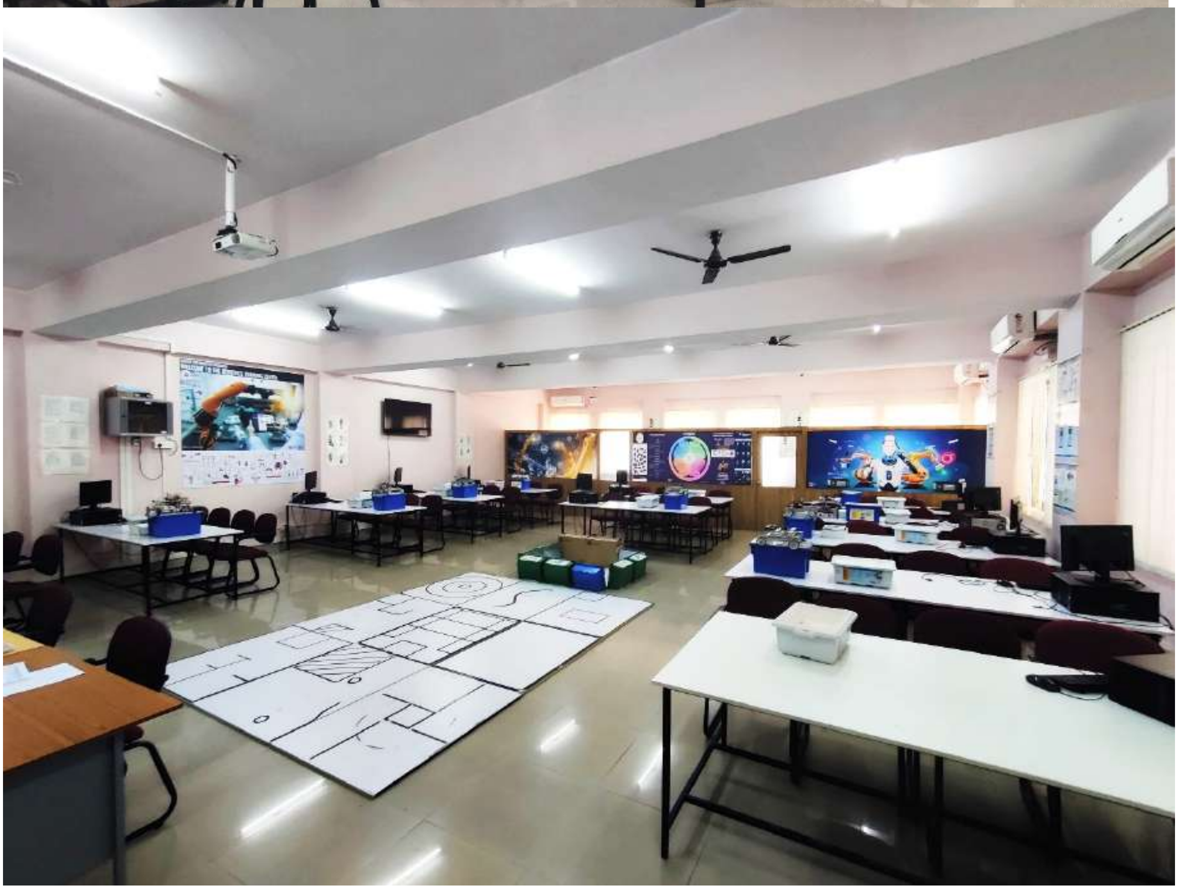
RESEARCH CENTRE:



IEEE
KSCST



TRAINING CENTRES:



THE FUTURE IS HERE....
AUTONOMOUS VEHICLES AND AI LABORATORY

Some of the equipment available at the Centre for Robotics Research (CRR) are as follows:

SINO		FACILITY	CAPABILITIES
1		High End Workstations • HP Z600 with Intel Xeon Processor • Lenovo v520 Tower • Dell Workstation	Workstations can be utilized for High Performance Computing, Design, Analysis, AI/ML Training etc
2	  	Robot Research Platforms Such as • Wheeled Mobile Robots • Firebird Research Platform • Legged Mobile Robots	• Mobile Robots can be used as a Research Platform to test your control system/theory program etc • External Control Boards & Sensors can be interfaced with these robots for autonomous navigation, data collection etc. • The robots are actuated by DC Servo Motors.
3		2nd and 3rd Generation Humanoid Robotic Head for Interactive Applications	• Humanoid Robotic Head comprises of 12 Degrees of Freedom. • Developers/Research can utilize this platform and develop interactive robotic applications.
4		U Print SE From Stratasys-FDM based Rapid Prototype Machine	• The FDM based Rapid Prototype machine is capable of printing industrial grade components with upto 0.254 mm resolution. • Dual Extruder: Separate Extruder for Build Material & Support Material • Max build volume is 203 x 203 x 152 mm. • Supported Material: ABS, Water soluble
5		Embedded Development Boards • NVIDIA Jetson TK1 Board CPU-GPU	These Development boards can be utilized for Application/Product Development and Demonstrations.

	 	• UDOO Board Quad Ultra • NVIDIA TEGRA Jetson TX2 • Raspberry Pi	
6		LIDAR Sensors	This Sensor can be used for various applications such as measuring distance to the obstacles, Mapping the environment etc.
7		Camera • Logitech HD Webcam	These cameras can be used for Image/Video Capturing and Analysis
8		Large Wide Screen Displays	These Display systems can be utilized to demonstrate the project work, presentations etc.
9	 	Prototype Development Kits • LEGO Mindstorms NXT • TETRIX MAX	These Hardware systems can be utilized for Prototype Development & Demonstrations

10		Self-driving Car-Prototype Kit	These Hardware systems can be utilized for Prototype Development & Demonstrations wrt self-driving, AI & ML and learning Python Programming.

TRAINING

The Centre also offers hands-on and minds-on training on Robotics & Allied Disciplines using state of the art STEM Kits. At present the Centre is offering three unique courses which are as follows:

SINO	COURSE TITLE	TYPE OF THE COURSE	SEM	COURSE OFFERED TO STUDENTS FROM	CURRICULUM SUPPORT
1	FUNDAMENTALS OF ROBOTICS ENGINEERING USING LEGO MINDSTORMS	ABILITY ENHANCEMENT COURSE	4	ISE, ECE, AE, AI & Data Science	Carneign Mellon Robotics Academy, USA
			5	CSE, ME, EEE, AI & ML	
2	AUTONOMOUS VEHICLES AND AI USING SELF DRIVING CARS	ABILITY ENHANCEMENT COURSE	4	CSE, ME, EEE, AI & Ml	Master.Ai From Auto Auto labs, Texas, USA
			5	ISE, ECE, AE, AI & Data Science	
3	ADVANCED ROBOTICS ENGINEERING USING TETRIX	OPEN ELECTIVE	5	ISE, ECE, AE, AI & Data Science	PITSCO Education, USA
		INTERNSHIP	6	CSE, ME, EEE, AI & ML	

ROBOTICS ENGINEERING

LETTER OF APPRECIATION

Letter of Appreciation

To
Dr H C Nagaraj
Principal
Nitte Meenakshi Institute of Technology
Bengaluru-560064
Karnataka, INDIA

Respected Sir,

We at **Pitsco Education** sincerely appreciate the efforts of **Nitte Meenakshi Institute of Technology (NMIT)** for setting up a Centre for Robotics Research and being one of the earliest adopters of PITSCO Education products in Engineering Education in India. We have understood that you have formally Incorporated our TETRIX Products in your Robotics Engineering curriculum and have transformed your classroom with Future-ready STEM Learning.

For more than 45 years, Pitsco Education has supplied classrooms with innovative and engaging kits, equipment, and activities that put the power of STEM learning into students' hands and minds. Our classroom-proven concepts bring together student-centered, standards-based activities with hands-on projects that develop critical thinking and collaboration skills in exciting areas such as robotics, dragsters, aerospace, sustainable energy, structures, engineering, and physical science. Conveniently packaged with classroom management in mind and backed by our industry-leading customer service and technical support, everything we provide is teacher tested and teacher approved.

We appreciate your trust in our products and we wish you all the success in your future endeavours.

With Regards,

Melissa a Paterni

Melissa Paterni
President

Letter of Appreciation

To
Dr H C Nagaraj
Principal
Nitte Meenakshi Institute of Technology
Bengaluru-560064
Karnataka, INDIA

Respected Sir,

We at **Master AI, Inc.** are delighted to learn that **Nitte Meenakshi Institute of Technology (NMIT)** has formally Introduced a course on **Python and AI with Autonomous Cars** using our AUTOAUTO products. We believe our Learning Platform and Management System with Project Based Learning, using Virtual and Physical Autonomous Cars, will provide your students an opportunity to Master the Python Programming and Artificial Intelligence Skills needed for the 21st Century.

With more than 180 Hrs of course contents, which includes real world projects, your students will learn high-demand skills for their future jobs. Once again, we appreciate your trust in our products and we wish you all the success in your future endeavours.

With Regards,

Dr. Joyce Rigelo
Joyce Rigelo

ASSOCIATED ACADEMIC PROGRAMS

Master of Technology in Robotics and Artificial Intelligence
(Approved by AICTE, UGC, Govt of India, VTU, Govt of Karnataka)

Department of Mechanical Engineering in association with the Centre for Robotics Research, will be offering a NEW PG Program i.e. M.Tech in Robotics and Artificial Intelligence from the AY 2022-23 onwards. The PG program with above specialization is being offered for the first time in the state of Karnataka with an intake of 18 students. following are the salient features of the Programme:

- Industry Relevant Curriculum with Complete Hands-on & Project Based Learning.
- Industry Supported Laboratories
- Access to State-of-the-art Research Centres for Projects & Internships
- Job Opportunities in Core Mechanical & IT Multi-National Companies

SPONSORED RESEARCH PROJECTS

We have Successfully Completed/Carrying out Projects worth more than Rs 1 Crore till date from Various Funding Agencies Such as

ONGOING PROJECTS

SINO	PROJECT TITLE	SPONSORS	GRANT AMOUNT	STATUS
1	Establishment Of Centre for Robotics Research to Promote Multidisciplinary Research in Engineering Education	VGST, Govt of Karnataka	16.8 Lakhs (Part of Rs 60 Lakhs)	Ongoing
2	Design And Development of Advanced Multi Drive Mobile Robot	KSCST, Govt of Karnataka	Rs 1.5 Lakhs	Ongoing

SL NO	PROJECT TITLE	SPONSORS	GRANT AMOUNT	Status
1	Detection of Horizon in MAV Images	Aeronautical Development Establishment, DRDO, Min of Defence, Govt. of India	Rs. 9.9 Lakhs	Completed
2	Computer Vision Based Horizon Detection from MAV Video and Estimation of Attitude from Horizon Vision	Aeronautical Development Establishment (ADE), DRDO, Bangalore	Rs 9.60 Lakhs	Completed
3	Development of Video Processing Techniques for Removal of Image Perturbations	Aeronautical Development Establishment (ADE), DRDO, Bangalore	Rs 9.85 Lakhs	Completed
4	Industrial Robot Automation	Centre for Artificial Intelligence and Robotics (CAIR), DRDO, Bangalore	Rs. 9.50 Lakhs	Completed
5	Development of algorithms for fusion of multi sensor, multi spectral, multi focus imagery	VTU Research Fund, VTU, Belgaum	Rs 8.17 Lakhs	Completed
6	STUDSAT (STUDent SATellite) To design, develop and Fabricate India's First Pico Satellite	Consortium of Seven Colleges with NMIT as the Lead Institution, Vision Group of Science and Technology, Karnataka	Rs 55.00 Lakhs	Completed
7	Articulated 5 DOF Pick and Place Robot	IEEE- USA, Centre for Artificial Intelligence and Robotics (CAIR), DRDO, Bangalore	Rs 8.50 Lakhs	Completed
8	Segmentation and Classification of sky and non sky region using Texture and Neural Network Classifier	Innovative Entrepreneur Development Cell (IEDC), New Delhi	Rs 1.00 Lakhs	Completed
9	Door Sensing Mobile Robot	Centre for Artificial Intelligence and Robotics (CAIR), DRDO, Bangalore	Rs. 5.00 Lakhs	Completed
10	Design and Development of Robot Mechanisms, Vision and Control Algorithms	Department of Science and Technology, New Delhi	Rs 28.00 Lakhs	Completed
11	Development of a Real Time Human Tracking Capability on a Mobile Platform	Centre For Artificial Intelligence and Robotics (CAIR), DRDO, Bangalore	Rs. 9.90 Lakhs	Completed
12	Development of algorithms for Video Shot Detection and Video Summarization	Combat Vehicle Research and Development Establishment (CVRDE), DRDO, Chennai	Rs. 17.33 Lakhs	Completed

COMPLETED PROJECTS

RECOGNITIONS/AWARDS/PUBLICATIONS:

- Installed Pick & Place Robot in the Birla Science Centre, Hyderabad.

- Designed & Developed One of its Kind Humanoid Robotic Head in the Country

- More than 80 Publications in Peer Reviewed International /National Journals & Conferences

- Accolades won by Students at International Robotics Competition
- Best Project Award from KSCST, Govt of Karnataka

BEST PROJECT OF THE YEAR AWARD-2021

By KSCST, Govt of Karnataka

- Only Institute in the Country to Offer State of the art STEM Based Robotics Course in combination of TETRIX & LEGO at UG Level

Mr. BHADRESHJMUDAKAMATH, Mr. PRASANNA APPASAHEB MODI Mr. PRATHAP S & Mr. SANDEEP DESHPANDE students of NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY, BENGALURU participated in the 45" Series of Student Project Programme (SPP) held during 12-13th August, 2022 at Visvesvaraya Technological University (VTU), Belagavi. Their project titled DESIGN AND DEVELOPMENT OF LAND ROVER ROBOT FOR MILITARY AND SPACE APPLICATIONS under the guidance of Mr. PRASHANTH N & Dr. J. SUDHEER REDDY, was selected for the Seminar/Exhibition. The SPP is supported by Department of Science and Technology, Government of Karnataka and Department of Science and Technology, Government of India.

PATENTS

SINO	TITLE	STATUS
1	Computer Vision Based Horizon Detection for an aerial vehicle on FPGA	Granted
2	Design and Development of Remote-Controlled Multipurpose Transplanter	Published

OUTREACH ACTIVITIES

FORMATION OF IEEE ROBOTICS AND AUTOMATION STUDENT CHAPTER

The Centre for Robotics Research has active IEEE Robotics and Automation Student Chapter with more than 150 student members from across all the engineering disciplines.

IEEE ROBOTICS AND AUTOMATION
Student Branch Chapter

IEEE Robotics & Automation Society

STUDENT OFFICE BEARERS AY 2022

CHAIR PERSON

M N Suchith
5th Semester
Dept of Mechanical Engineering
IEEE number - 98066963

VICE CHAIR PERSON

Greeshma K H
5th Semester
Dept of Information Science Engineering
IEEE number - 98066939

SECRETARY

Aryan Kumar
5th Semester
Dept of Electronics and Communication Engineering
IEEE number - 96242448

TREASURER

Preethi Prerana
5th Semester
Dept of Computer Science Engineering
IEEE number - 98067041

OUTREACH HEAD

Meenakshi
5th Semester
Dept of Electrical and Electronics Engineering
IEEE number - 98066931

ADVERTISING HEAD

Shreya Shettar
5th Semester
Dept of Computer Science Engineering
IEEE number - 98066911

ORGANIZING HEAD

Dheeraj Naidu
5th Semester
Dept of Mechanical Engineering
IEEE number - 98068241

IEEE RAS STUDENT MEMBERS (As on 1-10-2022)

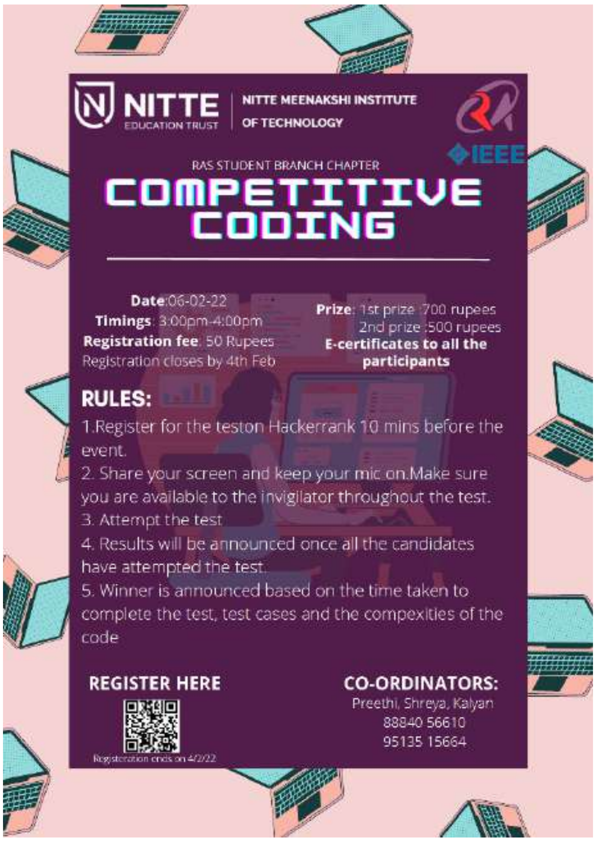
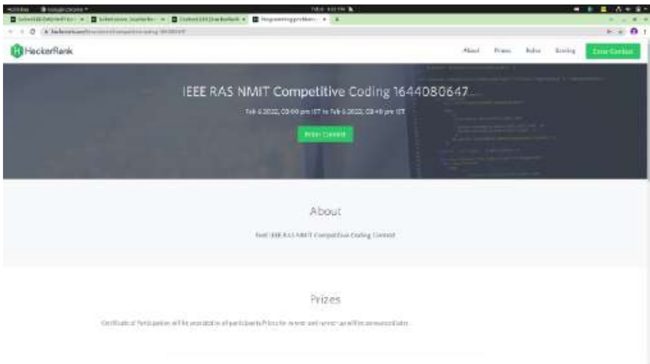
IEEE RAS ACTIVITIES

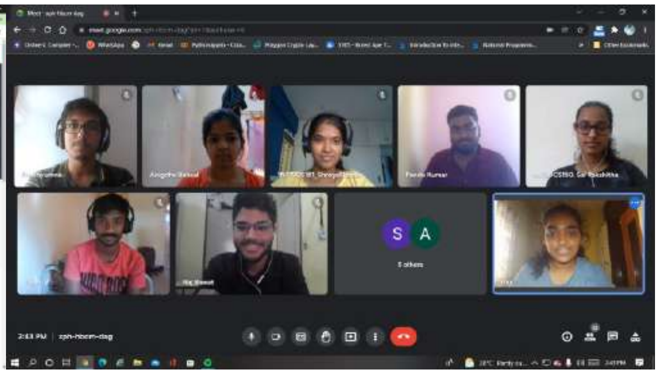
First Technical Event was held on 6-2-2022 as part of Inauguration of IEEE RAS

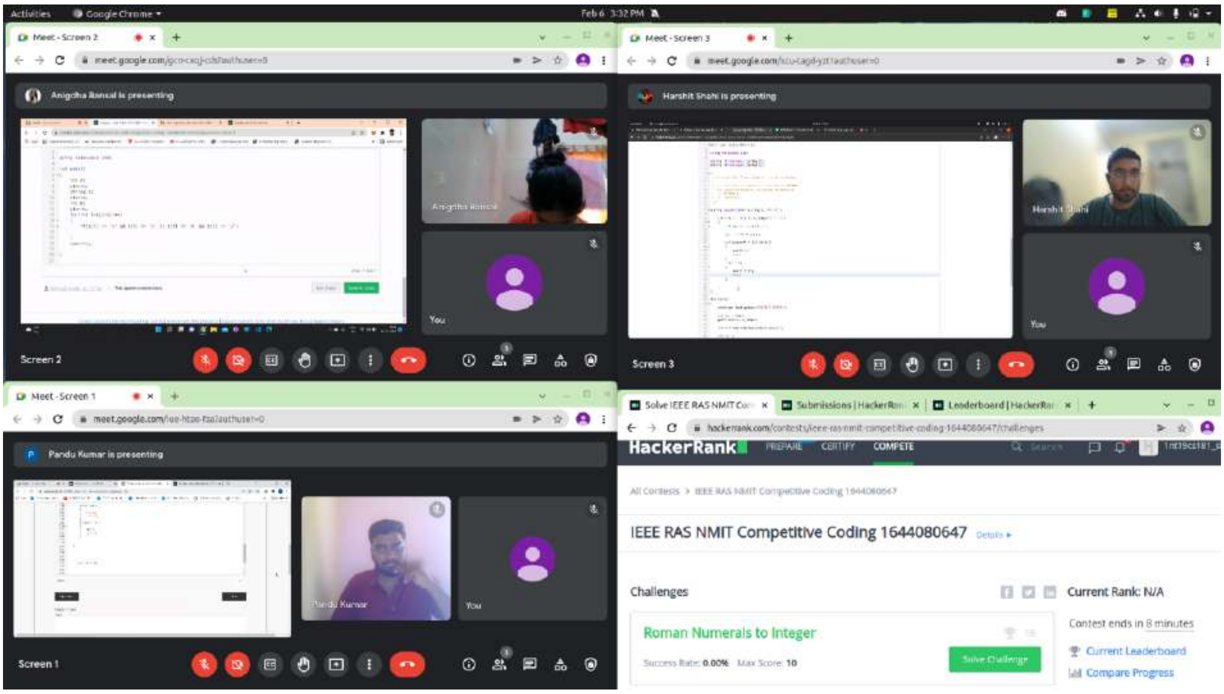


CHALLENGES:

1. Roman numerals to integer
2. Caesar Cipher
3. Extra Long Factorials







TECHNICAL EVENTS ON THE OCCASION OF ANAADYANTA-ANNUAL TECHNO CULTURAL AND MANAGEMENT FESTIVAL OF NMIT

The following events were organized by IEEE RAS

NITTE EDUCATION TRUST
NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY
GEEKMAYHEM
Anaadyanta 2022
IEEE Robotics & Automation Society
PRESENTS
HEX-FACTA
RULES AND REGULATIONS:
Participants can register for all the 6 events by paying a registration amount of Rs. 200. If the participant is not interested to participate in all the events, he/she can register for a particular event by paying an amount of Rs. 50. The participant should take part in at least 4 different events to be considered for the winning criteria. He/she can participate in a maximum of 10 events.
DESCRIPTION:
The registered participants get a total of 10 coins. Each coin has a value of 100 points. So, in total a participant gets 1000 points on registering. The participant should pay 100 points to participate in an event. On winning that event he/she gets back 200 points. All the details regarding the points will be maintained in an excel sheet so as to avoid any malpractice. At the end of the day the participant with the highest number of points will be declared the winner. The participants with 2nd and 3rd highest points will be declared 1st runner up and 2nd runner up respectively
RULES:
Single event registration = 50
Complete registration = 200
Minimum no. of events = 4 different events
Max. = 10 any of your choice
12th MAY 2022
10AM TO 3PM
WINNER : Rs 6000
1st RUNNER-UP : Rs 4000
2nd RUNNER-UP : Rs 2000

INDUSTRIAL VISIT TO IMTEX

IEEE RAS Students visited the IMTEX Exhibition on Forming, Digital Manufacturing, Industry 4.0 on 20th June 2022

Students and Research Scholar from Atria Institute of Technology Visited the Centre for Robotics Research on 10-06-2022 to understand the training & research activities of the Centre

TRAIN THE TRAINER PROGRAM

Hands-on Train the Trainer Program was conducted by Centre for Robotics on 18th-20th July 2022. The training was imparted by industry personnel on the following topics

1. Advanced Robotics using Tetrix
2. Self-Driving Cars and AI

The following Faculty members were trained on the Course:

1. Mr Prashanth N, Asst Prof, Dept of Mech Engg
2. Ms Mamatha Bai B G, Asst Prof, Dept of CSE
3. Ms Sowmya P, Asst Prof, Dept of CSE
4. Dr Kiran MC, Asst Prof, Dept of Mech Engg
5. Mr Nithin U Althal, Asst Prof, Dept of Mech Engg
6. Dr P B Shetty, Prof, Dept of Mech Engg
7. Mrs Vani K S, Asst Prof, Dept of ISE
8. Mrs Sowmya Raman, Asst Prof, Dept of EEE
9. Mr Mahesh Kumar CL, Asst Prof, Dept of Civil
10. Mrs Shilpa Ankalaki, Asst Prof, Dept of CSE
11. Mrs Shwetha K G, Asst Prof, Dept of Civil
12. Mr Vasudeva Upadhya, Asst Prof, Dept of Mech Engg

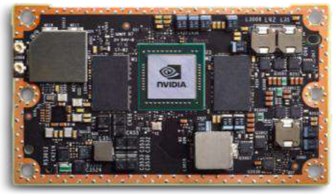
CENTRE FOR ROBOTICS RESEARCH

Centre for Robotics Research is one of the Centres of Excellence at NMIT. It Comprises Group of Researchers and Academicians working on Frontier Areas of Robotics & Allied Disciplines. Few Thrust Areas of Research at the Centre Include: Design & Development of Robots & Mechanisms, Embedded Systems/Control Engineering, Artificial Intelligence & Machine Learning, Mechatronics, Industrial Automation/Robot Process Automation (RPA), Signal Processing, Computer Vision/Machine Vision, Unmanned Ground/Aerial Vehicles/ Drones, Social Robotics/Human Robot Interaction, STEM/STEAM Education using Robotics Kit

3D Printers

HPZ600 Workstations



Embedded Boards & Sensors & Actuators

***Corrigendum for-** 1. Change in Intake

In case of any differences in content in this Computer generated Extension of Approval Letter, the content/information as approved by the Executive Council / General Council as available on the record of AICTE shall be final and binding.

Strict compliance of Anti-Ragging Regulation: - Approval is subject to strict compliance of provisions made in AICTE Regulation notified vide F. No. 37-3/Legal/AICTE/2009 dated July 1, 2009 for Prevention and Prohibition of Ragging in Technical Institutions. In case Institution fails to take adequate steps to Prevent Ragging or fails to act in accordance with AICTE Regulation or fails to punish perpetrators or incidents of Ragging, it will be liable to take any action as defined under clause 9(4) of the said Regulation.

It is mandatory to comply all the essential requirements as given in APH 2019-20(appendix 6)

NOTE: If the State Government / UT / DTE / DME has a reservation policy for admission in Technical Education Institutes and the same is applicable to Private & Self-financing Technical Institutions, then the State Government / UT/ DTE / DME shall ensure that 10 % of Reservation for EWS would be operational from the Academic year 2019-20 without affecting the percentage reservations of SC/ST/OBC/General . However, this would not be applicable in the case of Minority Institutions referred to the clause (1) of Article 30 of Constitution of India.

$ Due to non-submission of NOC's from University / Board and / or State Government

It is mandatory to comply with all the essential requirements as given in APH 2022-23 (Appendix 6)

Important Instructions

1. The State Government/ UT/ Directorate of Technical Education/ Directorate of Medical Education shall ensure that 10% of reservation for Economically Weaker Section (EWS) as per the reservation policy for admission, operational from the Academic year 2019-20 is implemented without affecting the reservation percentages of SC/ ST/ OBC (NCL)/ General. However, this would not be applicable in the case of Minority Institutions referred to the Clause (1) of Article 30 of Constitution of India. Such Institution shall be permitted to increase in annual permitted strength over a maximum period of two years.

2. The Institution offering courses earlier in the Regular Shift, First Shift, Second Shift/Part Time are now amalgamated as total intake and shall have to fulfil all facilities such as Infrastructure, Faculty and other requirements as per the norms specified in the Approval Process Handbook 2022-23 for the Total Approved Intake. Further, the Institutions Deemed to be Universities/ Institutions having Accreditation/ Autonomy status shall have to maintain the Faculty: Student ratio as specified in the Approval Process Handbook. All such Institutions/ Universities shall have to create the necessary Faculty, Infrastructure and other facilities WITHIN 2 YEARS to fulfil the norms based on the Affidavit submitted to AICTE beginning with the Academic Year 2022-23

3. Strict compliance of Anti-Ragging Regulation, Establishment of Committee for SC/ ST, Establishment of Internal Complaint Committee (ICC), Establishment of Online Grievance Redressal Mechanism, Barrier Free Built Environment for disabled and elderly persons, Fire and Safety Certificate should be maintained as Approval Process Handbook and provisions made in AICTE Regulation notified from time to time.

4. In case of any differences in content in this Computer generated Extension of Approval Letter, the content/information as approved by the Executive Council / General Council as available on the record of AICTE shall be final and binding.

Pharmacy Institute: In compliance with the order dated 05.03.2020 passed by the Hon'ble Supreme Court of India in Transferred Petitions (CIVIL) No 87-101 of 2014, for the existing institutions offering courses in Pharmacy Programme, approval of Pharmacy Council of India (PCI) is mandatory and AICTE approval is NOT required. The requirements for running the Programme (Diploma / UG / PG) such as Land & Build-up Area, Student-faculty ratio, Intake etc. will be as per the respective regulatory body (PCI).
In case of any inconsistency in the course name and intake for EoA issued by AICTE and the approval by PCI, the approval of PCI shall prevail.

Architecture Institute: In compliance with the order dated 08.11.2019 passed by the Hon'ble Supreme Court of Indian CA No.364/ 2005, for the existing Institutions offering Courses in Architecture Programme, approval by the Council of Architecture (CoA) is mandatory and AICTE approval is NOT required. The requirements for running the Programme (Diploma / UG / PG) such as Land & Build-up Area, Student-faculty ratio, Intake etc. will be as per respective regulatory body (CoA). In case of any inconsistency in the course name and intake for EoA issued by AICTE and the approval by CoA, the approval of CoA shall prevail.

Deemed to be University: Institutions Deemed to be Universities (Running Technical Education Programmes), it is mandatory to have AICTE approval from the Academic Year 2018-19 in compliance of the Hon'ble Supreme Court Order dated 03-11-2017 passed in CA No.17869- 17870 /2017.

TEMPLE SQUARE
MANGALORE - 575001

AUDITOR'S REPORT

I have audited the attached Balance Sheet of **"Nitte Meenakshi Institute of Technology, Yelahanka, Bangalore"**, as at 31-03-2022 as also the Income and Expenditure Account for the year ended on that date annexed thereto. These financial statements are the responsibility of the management. My responsibility is to express an opinion on these financial statements based on my audit.

I have conducted my audit in accordance with the auditing standards generally accepted in India. Those standards require that I plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatements. An audit includes examining on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by the management as well as evaluating the overall financial statement presentation. I believe my audit provided a reasonable basis for my opinion. I report that:

1. I have obtained all the information and explanations which to the best of my knowledge and belief were necessary for the purpose of my audit.
2. The Balance Sheet and Income & Expenditure Account dealt by this Report are in agreement with the books of account.
3. In my opinion and to the best of my information and according to the explanations given to me, the accounts read together with the notes given thereon, give a true and fair view in conformity with the accounting principles generally accepted in India.

   i. in the case of the Balance Sheet of the state of affairs of the **"Nitte Meenakshi Institute of Technology, Yelahanka, Bangalore"**, as at 31st March, 2022 and

   ii. in the case of the Income and Expenditure Account of the Excess of Income over Expenditure of the **"Nitte Meenakshi Institute of Technology, Yelahanka, Bangalore"**, for the year ended 31st March, 2022.

Table : Description of the Effective and Innovative Delivery Methods adopted

Sl.No	**Types of Activity**	**Purpose /Description**
1.	Quiz	Conventional assessment methods/tools require more preparation time and stressful to the students. To provide joyful learning experience at the same time assess the learning of the students, quiz proves to be an effective informal method of assessment. This learning activity helps to, provide joyful learning experience, to assess the learnt concepts, to provide quick review/recap of the concepts, to improve concentration and time management and to increase confidence.
2.	Group / Individual Writing Assignments	In the "group assignment" writing method, students are first asked to form compatible groups among them well in advance in the beginning of the semester. Later, the predefined assignment topics were randomly allotted to the students. The activity demands that students working in a group of 3–4 need to understand the broad statement of the given chapter-end assignment topics and collect the information from various sources including textbooks, Internet sources such as blogs, research journals, etc. Later, students need to prepare a report and submit in a stipulated period. Reports collected from students were evaluated for different criteria such as the depth and technical significance of the information collected, logical order of content preparation and presentation, and skills and creativities related to document preparation. Finally, the reports were discussed with the students in the class and awarded with marks. Skills such as writing, collection of information, depth of collected information, organization, teamwork, innovation, and creativity were evaluated for this practice.
3.	Programming Assignment	In programming assignment, the student need to implement solution to the specified problem. The purpose of programming assignments is to have students develop the skill of writing programs embodying concepts taught in class. Programming assignments can be done independently or in collaboration.
4.	Simulation based Assignment	Simulation-based assignment refers to the use of simulation software, tools, and serious games to enrich the teaching and learning processes. Students needs to solve the problem given by teachers and demonstrate the simulation using relevant software tools.
5.	GATE based questions	This activity helps students to prepare for the GATE / other competitive exams. Questions for GATE / other competitive exams are selected and encourage students to solve the question.
6.	Surprise test	'Surprise test' will affect students' engagement in the course and encourages the students to develop their knowledge, skill and attitude.
7.	Project Based Learning	Project-based learning frameworks in the curriculum tend to encourage students to work on discrete projects that incorporate multi-step problem solving, research, logical deduction, and iterative learning, as well as teamwork.

8.	Case Study	Case Study method is used to assist students in applying theory concept practically. This method allows the student to engage in the curriculum by adding a sense of realism to the contents of syllabus. This method includes student's active participation by Understanding and applying concept in practical use and also provides scope to their higher studies.
9.	Flipped Classroom	This is a blended learning, where students are assigned with some topics in prior, and when that concept would be discussed in the classroom, that student who is assigned with that topic, would talk about it and the teacher would give more insight on that and other students would give their viewpoint on that topic.
10.	Video Based learning (NPTEL)	The National Programme on Technology Enhanced Learning (NPTEL)'s goal is to improve the quality of engineering and science education in the country by creating content for undergraduate and postgraduate curricula utilising video and web-based courses. These courses cover university-required and AICTE-approved syllabus. In our curriculum, we have offered NPTEL courses as part of the program electives. Students are allowed to take the NPTEL courses as their program elective.
11.	Video Based learning (NPTEL)	The department has also offered the Coursera courses as program elective to the students. The coordinators carefully examine the Coursera catalog and select three courses and bundled them together to form the elective course. Courses are selected ensures that it improves the students ability to understand course in a better way, practical exposure and apply the concepts of the course to build the mini project.
12.	Talk by Industry/ Academic Experts	Industry experts can influence students to think, investigate, apply newfound knowledge, and follow a path of lifelong learning. Experts come from various disciplines and with different areas of expertise, and so students get introduced to potential careers and jobs they can opt for. Students get an idea about, how to face the interviews. It can also contribute to the teacher's knowledge and practices.

Following are some courses have encouraged for NPTEL / Coursera – Video based Learning

NPTEL course-based learning

Department has offered the NPTEL elective courses for students. Students can register for the NPTEL course. The course assessments are evaluated based on the assignment submission and the final course evaluation is computed based on the score obtained by the students in NPTEL written exam.

Following courses are offered for the students as 6th semester program electives

Sl.No	Course Title
1.	Introduction to Industry 4.0 and Industrial Internet of Things
2.	Entrepreneurship Essentials
3.	Fuzzy Logic, sets and systems and application
4.	Applied Multivariate Statistical Modeling
5.	Software Testing
6.	Business Ethics
7.	Data Analytics with Python

Following courses are offered for the students as 5th semester program electives

Sl.No	Course Title
1.	GPU Architecture and Programming
2.	Ethical Hacking
3.	Model Checking
4.	Social Networks
5.	The Joy of Computing using Python
6.	Reinforcement Learning
7.	Online Privacy
8.	Embedded Systems Design
9.	Getting Started with Competitive Programming
10.	Applied Multivariate Statistical Modeling

Learning Management System (LMS)

Learning Management System (LMS)
To overcome the limitations of the conventional classroom teaching, LMS can be invaluable for the education sector as it enables sharing of the learning resources of all the courses at a single place and gives the privilege of accessing content anytime and anywhere.

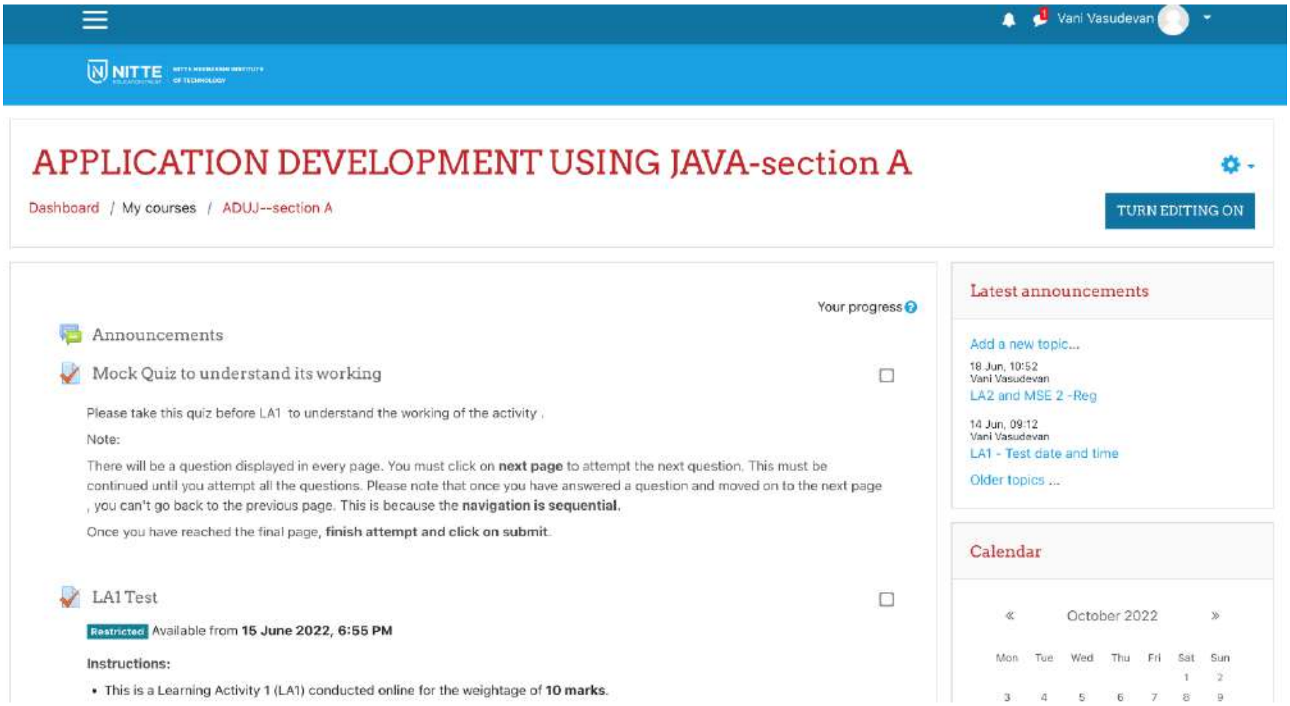
Following are the objectives of adopting LMS in learning practices:

1. To share the learning resources of all the courses at a single place
2. To give the privilege of accessing content anytime and anywhere
3. To make learning effective
4. To create online test/quiz/assignments
5. To monitor and communicate students' progress online.
6. To encourage communication between student and teacher in forums and discussions.
7. To ease process of evaluation and feedback

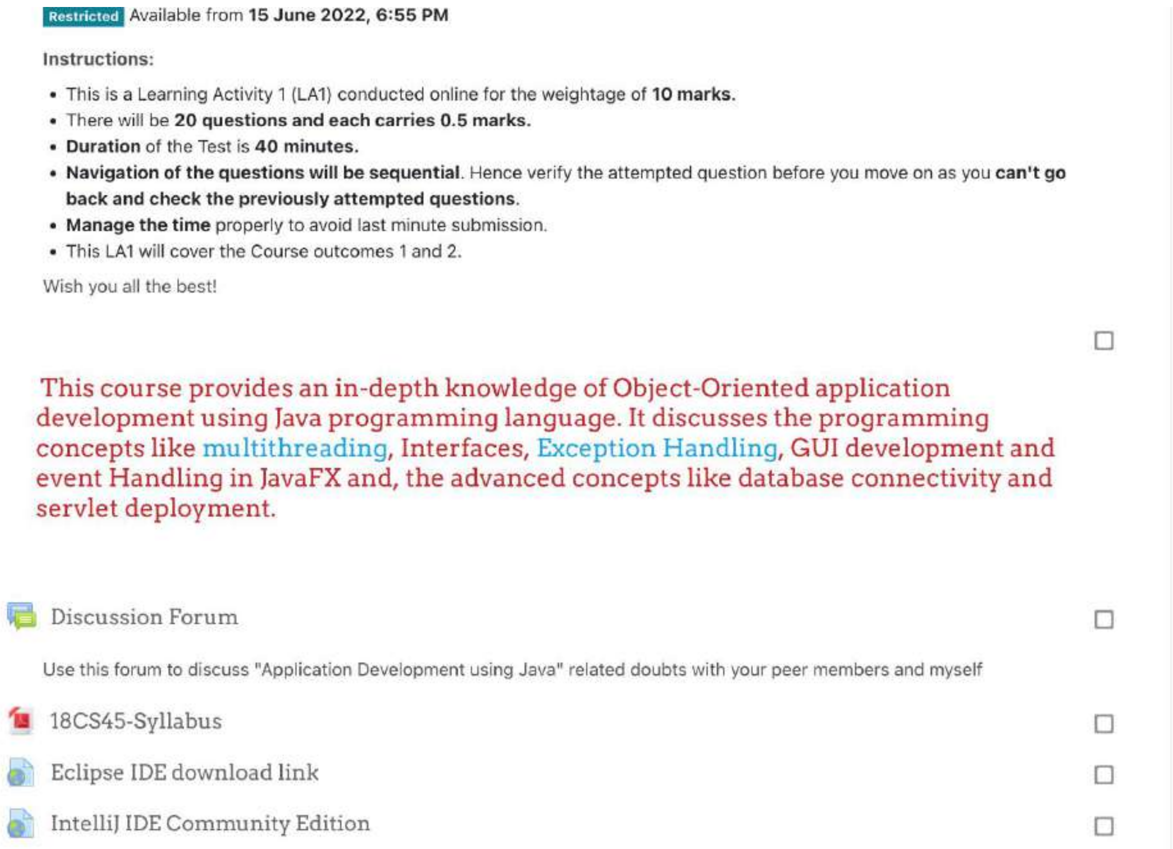
Using LMS teacher can

- shares learning material/resources to the class
- Schedules and conducts theory/practical sessions, Quiz, Assignment, tests etc.
- give project/activity/case study/survey based assignments to students.

Following are the some of the proofs for using LMS in learning practices



Scheduled Learning Assessment 1 Test for the subject Application Development Using JAVA subject



Restricted Available from **15 June 2022, 6:55 PM**

Instructions:

- This is a Learning Activity 1 (LA1) conducted online for the weightage of **10 marks.**
- There will be **20 questions and each carries 0.5 marks.**
- **Duration** of the Test is **40 minutes.**
- **Navigation of the questions will be sequential**. Hence verify the attempted question before you move on as you **can't go back and check the previously attempted questions.**
- **Manage the time** properly to avoid last minute submission.
- This LA1 will cover the Course outcomes 1 and 2.

Wish you all the best!

This course provides an in-depth knowledge of Object-Oriented application development using Java programming language. It discusses the programming concepts like multithreading, Interfaces, Exception Handling, GUI development and event Handling in JavaFX and, the advanced concepts like database connectivity and servlet deployment.

Programs on Inheritance and Polymorphism

Programming Assignment 2

Strings

Unit II

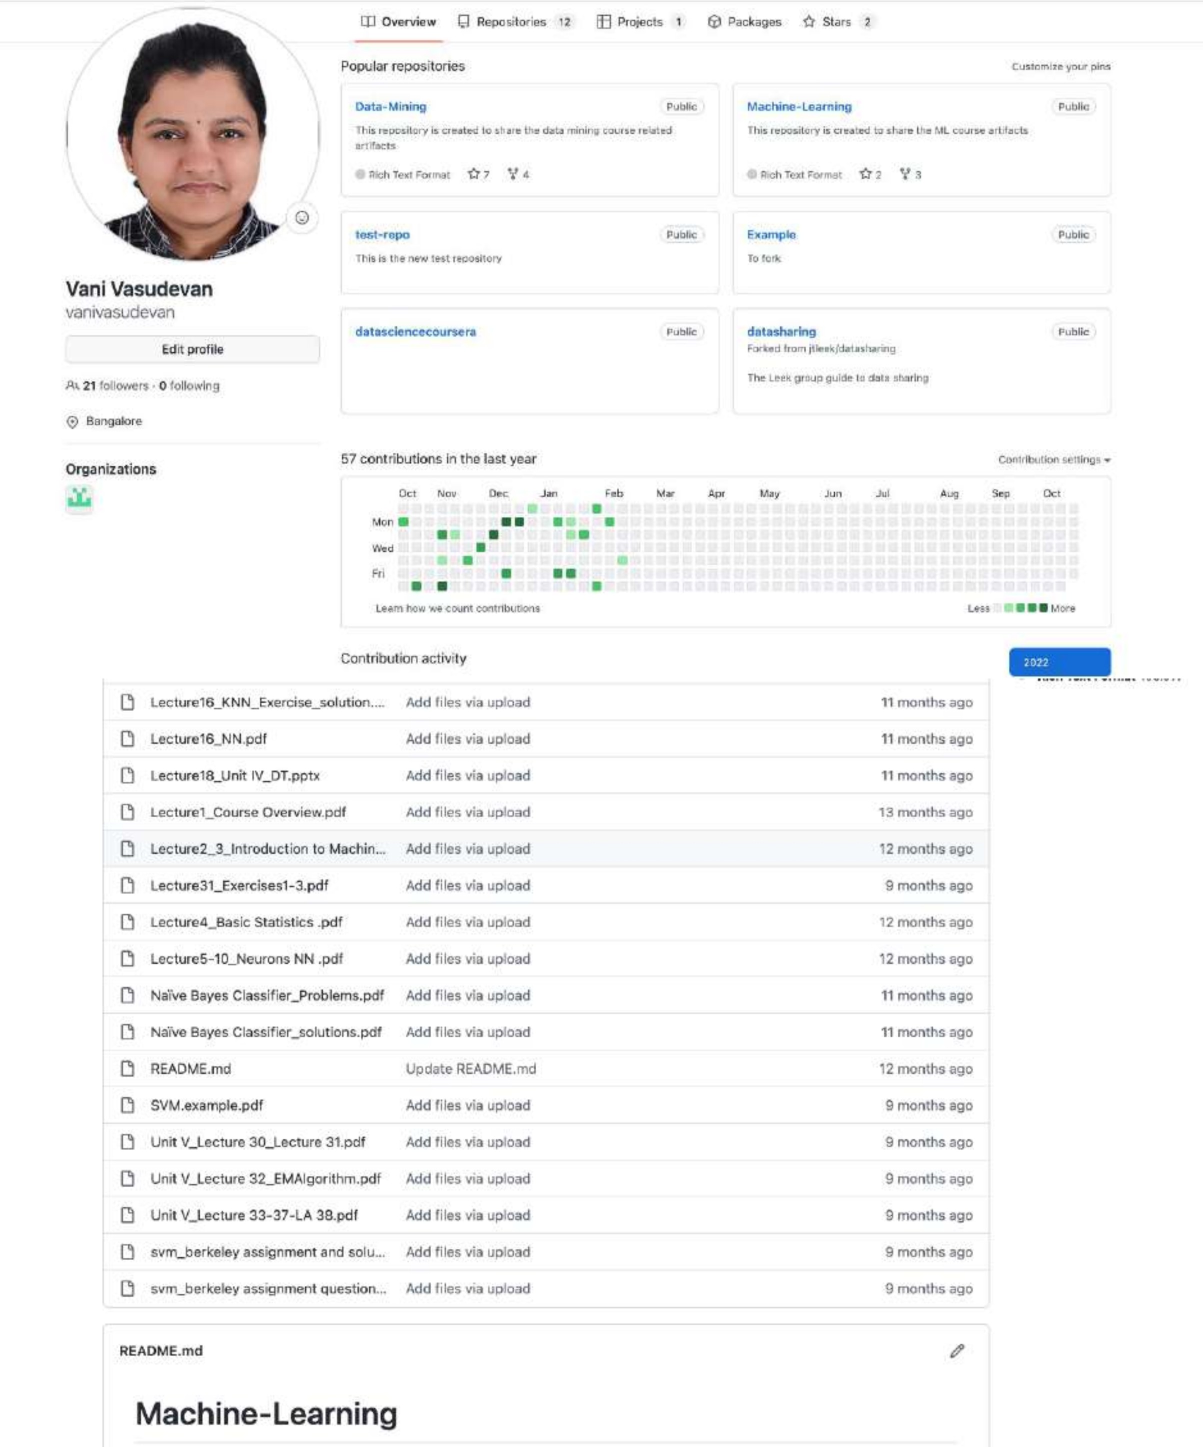
Interfaces and Array of Objects

Exception Handling

Java - Practice Questions(MCQ)

Shared teaching material of the subject Application Development Using JAVA through LMS.

Teachers also shares the teaching material through github and encourage students to use the github. Following is the proof of material shared to the students through github.



Shared teaching material of the subject Machine Learning through github.

Department of ECE

Innovations by the Faculty in Teaching and Learning

1. Innovation in teaching and learning includes following few of the important points
    - Demonstration using industrial standard simulation software
    - Group Assignments
    - Teaching through research papers
2. The objective of Innovation:

In India, it is observed that the subjects like Electromagnetic theory, Antenna and Wave Propagation, Microwave Engineering etc. is losing interest among the students due to its complicated mathematical nature and requirement of lot of imaginations. In spite of core subjects of the discipline the students adopt casual approach about these subjects and it remains effectively unexplored. As a result, RF communication based industries are lacking qualified antenna designers and microwave engineers to cater the needs.

Therefore, with the motivation developed during various faculty development programs on effective teaching, following are some innovative teaching and learning practices experimented during last year-

Demonstration using industrial standard simulation software–

The subjects mentioned above based upon laws of electricity and magnetism which were established through experimentation. Therefore they require strong physical reasoning to establish the electromagnetic phenomenon.

The parameters under investigations like radiation patterns require a strong imagination and thinking capability. Use of electromagnetic structure simulation software provided a virtual environment to observe and analyze the physical picture of every mathematical postulated one carries out.

The demonstration using simulation software enables the students to develop clear understanding of the concept maintaining the theoretical aspect in mind. It gives an understanding of the approach used by the industry to develop and design a prototype or a product.

Group Assignments–

The students were asked to submit a group assignments in the form of course project in a form to investigate any practical electromagnetic structure on several parameters and present the review. They were also asked to simulate the product on the EM software available in the laboratory. The objective is to develop technical and soft management skills in the student.

The students develop soft management skills like teamwork, coordination, decision making, organizational behaviour, leadership, time management and presentation skills along with the enhancement in technical skills through in-depth investigation, product design, prototype, working in RF environment and calibration of test instruments.

Teaching through research papers–

In order the encourage the students to read, understand and discuss the technical terms given in quality literature and understand its implementation in emerging technologies and recent advancement some of the topics from the syllabus are taught through research papers.

The students developed their habit to refer classic papers from reputed journals and transactions like IEEE Transaction on Antenna and Propagation, Microwave Theory techniques, IET etc. They developed their understanding over the recent advancement in the field; know the peer community and familiar with technical way of documentation.

2. Ask Open-Ended Questions

All our faculties ask open-ended questions, there can be various answers and points of view. Student answers can lead to strong collaboration, exciting conversations, new ideas, as well as encourage leadership skills.

3. Use Problem-Finding

Using this strategy, our teachers provide students with the opportunity to think deeply, ask critical questions and apply creative ways to solve problems.

4. LCD projectors in the Class room and laboratories to Demonstrate through Videos, animations and Lectures

5. Industrial visits are organized for pre-final and final year students

6. Organized Technical talk/workshop/conference/Guest lectures

7. Conduction of Surprise test, group assignments

8. Hands on Sessions

9. Certification Based Learning

Certification based learning enable the student to attain Lifelong learning skills and improves their knowledge in the area of study. Certification from reputed organization will benefit for their career growth. For few of the courses, we have implemented Certification Based Learning.

C Programming, Object Oriented Programming with C++,Data Structures using C,Phython, Machine learning

Python for Data Science. At the end of the course, students will take online examination to obtain the certificates from IIT Bombay Spoken Tutorial Microsoft Course era etc.

Conduction of Tutorial Classes

Course Coordinator will prepare the Tutorial Sheet which will be reviewed by DUGC During the tutorial hour, student will solve the problems in group which will enhance their communication and ability to work in group

Tutorial classes will be moderated by one or two faculty members In couple of courses, student’s interaction with the group is considered for evaluation In programming-based courses, students are using laptops or apps to solve the given problem

Course Projects

Problem statements related to modules of real-world applications are defined by course coordinator It is mandatory to follow Software Development Life Cycle. Effective Rubric has been designed to evaluate the course project.

FACULTY PROFILES
2022-2023

NITTE EDUCATION TRUST

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY
An Autonomous Institution Approved by UGC/AICTE/Govt. of Karnataka
Accredited by NBA (Tier-I) and NAAC 'A+' Grade
Affiliated to Visvesvaraya Technological University, Belagavi
Post Box No. 6429, Yelahanka, Bengaluru-560064, Karnataka, INDIA

Profile of the Faculty

BRANCH: AERONAUTICAL ENGINEERING

Name	Dr.Srikanth H V	
Designation	Associate Professor & HoD (i/c)	
Department	**Aeronautical Engineering**	
Date of Joining the Institution	19.08.2013	
Date of Birth	24.08.1988	
Faculty Unique ID	1-9321368516	
Email Id	srikanth.hv@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	2010	SC
2	PG	2012	FC
3	PhD	2019	
4			
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	10 Years
2	Research & Industry	**NIL**
3		
4	others	

Area of Specialization: Thermal Engineering, Propulsion

Courses taught at	Undergraduate	1.Thermodynamics 2. Heat & Mass transfer 3. Aircraft Propulsion 4. Aircraft materials 4. Control Engineering
	Post Graduate	1.Rockets and missiles, 2. Researchmethodology & IPR

Research Guidance (Number of Students):UG students- 12

No. of papers published:

SL.No	Type	Numbers
1	National	
2	International Journals	20
3	Conferences	12
4	Others	

Master (Completed(Year of Completion)/Ongoing): 2 completed, 2 ongoing

Ph.D. (Completed Year of Completion)/Ongoing): 2 ongoing

Projects Carried out :

1. To study the effect of pressure oscillations in a Solid Rocket Motor using CFD, ARDE,Pune, Rs. 949000/-
2. Study on Production and Characterization of Biodiesel Derived from Plant and Animal Origin, Seed money for research, TEQIP-II, Rs. 1,00,000/-
3. A study on crystallization properties of biodiesel and improving with cold flow improvers,KSCST, Rs.14000/-
4. Experimental and numerical on the performance of Eppler airfoil for low Reynold's number flows,KSCST, Rs.8000/-
5. Enhancement of Aerodynamic characteristics of Airfoil. KSCST,Rs. 6000/-

Patents (Filed & Granted):

SL No	Topic	**Patent Application No**	Filed/ Granted
1	Electric Vehicle Manufacturing Process: Intelligent Electric Vehicle Manufacturing Process and Methods to Improve the Production.	202111037455	Published
2	Automatic irrigation and fertigation using ML and mobile based application	202241021997	Published
3	Development Of Annular Combustor With Gyrated Fuel Injection Technique For Gas Turbine Application	202241015081	published

Technology Transfer:

No. of Books published with details: 2

Profile of the Faculty

BRANCH: COMPUTER SCIENCE AND ENGINEERING

Name	Krishnarao Venkatesh	
Designation	Professor	
Department	**CSE**	
Date of Joining the Institution	July 30th, 2015	
Date of Birth	September 24th, 1952	
Faculty Unique	1-2661302953	
Email Id	krishnarao.venkatesh@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	1973	First
2	PG	1975, 1977	Distinction
3	PhD	1988	No grades awarded

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	7 years
2	Research	
3	Industry (R&D)	38 years

Area of Specialization:

Courses taught at	Undergraduate	1. Design of Digital & Analog Circuits 2. Data Structures 3. Introduction to Embedded Systems 4. Cyber Physical Systems 5. Introduction to IOT 6. Advanced Algorithms 7. High Performance Computing
	Post Graduate	1 Advanced Data Structures 2 Advanced Algorithms 3 Hybrid Computing

Master (Completed (Year of Completion)/Ongoing): ----

Ph.D. (Completed Year of Completion)/Ongoing):

Projects Carried out :

Over hundred projects of strategic and tactical importance developed when I was in the industry. In NMIT an aid for the Visually impaired has been developed with grants from DST.

Master (Completed (Year of Completion)/Ongoing): 2008

Ph.D. (Completed Year of Completion)/Ongoing): 2018

Projects Carried out :3

1. **Title:** "IoT based Car Maintenance Assist".
   Amount Sanctioned: 1,60,000/- (One Lakh sixty Thousand)
   Funding: under TEQIP Seed Money Projects
   Status: completed

2. **Title**: An Intelligent English Essay Scoring System for Rural Educational Institutes using
   NLP and Sentiment Analysis
   Funding Agency: KSCST
   Grant:Rs. 4,000/
   Status: completed

3. **Title**: A Kannada Handwritten Character Recognition and Speech Conversion System to Promote
   Digital Learning of Kannada Language in Rural Schools
   Funding Agency: KSCST
   Grant: Rs. 3,000/

	Postgraduate	Taught almost all Courses of UG-Civil Engineering and PG- Structural Engineering including laboratory courses
	Post Graduate Diploma Level	Nil – I was not a part of any PGD

Research Guidance (Number of Students):UG students –

- ✓ Guided 62 projects of UG with each batch of 4 students
- ✓ Guided 43 Projects Work of PG – Individual/Independent project

No. of papers published:

SL. No	Type	Numbers
1	National	04
2	International Journals	06
3	Conferences	39
4	Others	14

Master (Completed (Year of Completion)/Ongoing): 2007

Ph.D. (Completed Year of Completion)/Ongoing): 2015

Projects Carried out:
4 KSCST Projects
Applied for projects applied to DST / VGST and FIST – 4 numbers each worth Rs.20 lacs
Applied for MODROBS – Rs. 20 lacs

Patents (Filed & Granted):

No. of Lecture Notes & Book Chapters published – 02 and 02

Profile of the Faculty

Name	G. Raghava	
Designation	Professor	
Department	**CIVIL**	
Date of Joining the Institution	10th July 2019	
Date of Birth	20th July 1957	
Faculty Unique	1-7419656111	
Email Id	raghava.g@nmit.ac.in	

Education Qualifications:

SL. No.	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG – B.E. Civil Engineering	1980	First Class with Distinction
2	PG – M.Tech. Industrial Structures	1984	First Class with Distinction
3	PhD – Civil Engineering	1999	Not applicable; degree awarded based on research
4	Others		
5			

Total Work Experience in Years:

SL. No.	Work Experience	Total in Years
1	Teaching	4
2	Research	34
3	Industry	Nil
4	others	Nil

Area of Specialization: Fatigue and fracture in structures and structural components; Corrosion fatigue; Experimental investigations on large size structural components;

Courses taught at	Diploma/ Post Diploma	
	Undergraduate	1. Design and Drawing of Steel Structures 2. Disaster Management and Mitigation Engineering
	Post Graduate	
	Post Graduate Diploma Level	

Research Guidance (Number of Students): UG students -
PG students - 21

No. of papers published:

SL. No.	Type	Numbers
1	National	14
2	International Journals	36
3	Conferences	115
4	Others	28

Master (Completed (Year of Completion)/Ongoing): Completed (1984)

Ph.D. (Completed Year of Completion)/Ongoing): Completed (1999)

Projects Carried out: During my service at CSIR-SERC as a scientist, I have carried out many projects for government and private organisations, public and private sector agencies. It was a service of 34 years and the list of projects is long.

Patents (Filed & Granted): Nil

41.	Smitha Sharath Shankar	Asst. Prof	M.Tech(Ph.D)	02/01/2023
42.	Mr. Srinivas K.S	Asst. Prof	M.Tech	17-02-2021

NITTE EDUCATION TRUST

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

An Autonomous Institution Approved by UGC/AICTE/Govt. of Karnataka
Accredited by NBA (Tier-I) and NAAC 'A+' Grade
Affiliated to Visvesvaraya Technological University, Belagavi
Post Box No. 6429, Yelahanka, Bengaluru-560064, Karnataka, INDIA

KNOWLEDGE ▪ CHARACTER ▪ UNITY

Profile of the Faculty

BRANCH: ELECTRONICS AND COMMUNICATION ENGINEERING

Name	Dr.V Sridhar
Designation	Professor,Dean Academics
Department	**ECE**
Date of Joining the Institution	04/10/2018
Date of Birth	10/08/1958
Faculty Unique	1-4739259864
Email Id	dean-academics@nmit.ac.in

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	B.E (E & C), From University of Mysore, Year 1980	FIRST CLASS
2	PG	M.E (E & C), From Jadavpur Univeristy, Calcutta, Year 1986	FIRSTCLASS
3	PhD	IIT –DELHI, Year-1996	Awarded
4	Others	Post Doctoral R/s, UNITEN, Malaysia, year 2000-2002	Awarded

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	From Dec1980 till date- 44 years
2	Research	
3	Administrative	
4	Others (RE (VTU), & Act. VC)	

Area of Specialization:
VLSI and Biomedical Instrumentation

Courses taught at		
	Undergraduate	1.Basic Electronics 2.Analog Electronics 3.Digital Electronics 4.Communication System 5.Analog Communication 6.Biomdical Signal Processing 7.Fundamentals of VLSI
	Postgraduate	CMOS Circuit design VLSI Technology
	Post Graduate Diploma Level	

Research Guidance (Number of Students):UG students-

No. of papers published:

SL.No	Type	Numbers
1	National	4
2	International Journals	50
3	Conferences	54
4	Others	

Master (Completed (Year of Completion)/Ongoing): 1986

Ph.D. (Completed Year of Completion)/Ongoing): 1996

Projects Carried out : NA

Patents (Filed & Granted):

SL.No	Work Experience	Total in Years
1	Teaching	22
2	Research	7
3	Industry	2
4	others	

Area of Specialization:
Computer Network, Network Virtualisation, Processor Architecture

Courses taught at	Undergraduate (last Five years)	1. Arm Programming Optimisation 2. Digital Electronics 3. Wireless Communication

		4. Computer Organisation 5. 8051 Microcontroller 6. Entrepreneurship Development &IPR 7. Advanced Microcontroller 8. Basic Electronics
	Post Graduate (last two years)	1. Embedded System Architecture and Software 2. Advanced Embedded Systems

Research Guidance (Number of Students): 1

No. of papers published:

SL.No	Type	Numbers
1	National	2
2	International Journals	7
3	Conferences	3
4	Others	

Projects Carried out:
Funded FDP - 01

Patents (Filed & Granted):

SL No	Topic	**Patent Application No**	Filed/ Granted
1	Smart garbage management system using Interment of Things	202141018948A	Filed
2	An efficient adaptive beam former for cellular communications	202141016330	Filed

Technology Transfer: Nil

No. of Books published with details: Nil

Profile of the Faculty

BRANCH: ELECTRONICS AND COMMUNICATION ENGINEERING

Name	**Dr. Parameshachari B.D**

2	Research	06
3	Industry	0.5
4	others	

Area of Specialization: ANTENNAS

Courses taught at	Undergraduate:	1.WIRELESS COMMUNICATION 2 LTE AND BEYOND 5G 3 COMMUNICATION SYSTEMS II 4.MICROWAVE AND RADIATING SYSTEMDS 5.ANTENNA AND WAVE PROPAGATION 6.MICROWAVE ENGIEERING AND RADAR

		7. FIELD THEORY 8.MICROCONTROLLER 8051 .
	Post Graduate	1.RF AND MICROWAVE CIRCUIT DESIGN 2. ANTENNA THEORY AND DESIGN

Research Guidance (Number of Students):UG students- 100

No. of papers published:

SL.No	Type	Numbers
1	National	-
2	International Journals	14
3	Conferences	12
4	Others	

Master (Completed (Year of Completion)/Ongoing): 2004

Ph.D. (Completed Year of Completion)/Ongoing): 2019

Projects Carried out :

1.DESIGN AND SIMULATION OF A LUNEBURG LENS AND DIELECTRIC FOCAL PLANAR ARRAY FOR SIMULTANEOUS MULTIPLE BEAMS FOR 5G mm wave APPLICATIONS
2.DESIGN AND SIMULATION OF A DUAL BAND 4X4 MIMO ANTENNA FOR 5G.
3.DESIGN AND SIMULATION OF A PHASED ARRAY ANTENNA FOR 5G.
4. Design of a circularly polarized patch antenna for 5G sub 6 GHz applications .
5. Design and analysis of OFDM communication systems using different modulation techniques.
6. Transmission and reception of AIS messages for satellite Applications
7. Design and Analysis of Gain in Dual band Monopole Antenna with different Electromagnetic Band Gap structures

8. Design and Analysis of Dual Band Monopole Antenna with and without CSRR in the Ground plane
9. Design and Analysis of a two element series fed patch antenna for 28GHz mm wave band applications.
10. Enhancement of Gain of Printed T Monopole Antenna Using Uniplanar EBG for ISM Band (2.4GHz) Applications”
11. Mutual coupling Reduction between patch Antenna arrays using Electromagnetic Band Gap structures
12. Performance Analysis of co- axial feed and Microstrip line feed techniques for Microstrip Antenna for C Band Radar based applications.
13. Performance Analysis of co- axial feed and Microstrip line feed techniques for Microstrip Antenna with Electromagnetic Band Gap structures for C Band Radar based applications.es fed patch antenna array for 5G
14. Design of a Omni Directional Antennas
15. Design of a phased antennas array for 2.4GHz Applications
16. Design of a polarization reconfigurable Antenna for 2.4GHz Application.

Ph.D. (Completed Year of Completion)/Ongoing): 2020

Projects Carried out:

1. Received a grant of INR **10.00 Lakh** from VTU under Research Grants Scheme - 2021. The details of the grant are as follows:
   - **Project Title:** Development of Real Time System for End-to-End Continuous Kannada Speech recognition
   - **Role:** Principal Investigator (PI)
   - **Status:** Ongoing
2. Submitted a project proposal to VGST – 2022 under K – FIST L1 scheme. The details of the proposal are as follows:
   - Proposal Title: Establishment of IoT laboratory for problem-based learning
   - VGST Reference No.: VRN/002984/21-22
   - **Status: Shortlisted and Called for the Presentation**
   - Role: Co-PI

Master (Completed (Year of Completion)/Ongoing): 2010

Ph.D. (Completed Year of Completion)/Ongoing): 2021

Projects Carried out :

1). **Home Surveillance System using Raspberry Pi 3 B.**
Hardware & Software Used: Development tool & board : Thonny , Raspberry Pi 3 B
Code : Python
Platform : Linux
Simulation tool: PSIM 8.8

2). **IoT based Live Weather Station Monitoring Using ESP32.**
Hardware & Software Used: Development tool & board : Arduino IDE , ESP32
Code : C,C++
Platform : Windows 10
Cloud platform: Arduino IoT Cloud

3). **IoT based Smart Agriculture System Using ESP32.**
Hardware & Software Used: Development tool & board : Arduino IDE , ESP32
Code : C,C++
Platform : Windows 10
Cloud platform: Arduino IoT Cloud

4). **IoT based Live Weather Station Monitoring Using ESP32.**
Hardware & Software Used: Development tool & board : Arduino IDE , ESP32
Code : C,C++
Platform : Windows 10
Cloud platform: Arduino IoT Cloud

5).**Bluetooth based Wireless Printer Using Arduino Mega microcontroller**
Hardware & Software Used: Development tool & board : Arduino IDE , Arduino Mega
Code : C,C++
Platform : Windows 10

6). **IoT based Liquid level measurement and Alert system for Cryogenic Tank.**
Hardware & Software Used: Development tool & board : Arduino IDE , ESP32
Code : C,C++
Platform : Windows 10

Cloud platform: ThinkgSpeak

7). **Home Automation Using Arduino and Bluetooth .**
Hardware & Software Used: Development tool & board : Arduino , Arduino unoR3
Code : Embedded C
Platform : Windows 10

8). **Arduino based digital control of buck converter for low power applications.**
Hardware & Software Used: Development tool & board : Arduino IDE , Arduino unoR3
Code : Embedded C
Platform : Windows 10
Simulation tool: PSIM 8.8 & Simulink

9). **DSP based embedded system design for DC-DC converters.**
Hardware & Software Used: Development tool & board : CCS 8 , TMS320F28335
Code : Embedded C
Platform : Windows 10
Simulation tool: PSIM 8.8 & MATLAB/Simulink

10). **Advanced vehicle security and accident management system with CAN protocol & thr microcontrollers.**
Hardware & Software Used: Development tool & board : Arduino IDE, Arduino unoR3
Code : Embedded C
Platform : Windows 10

11). **Home Automation and Security Using Raspberry pi pico**
Hardware & Software Used: Development tool & board : Arduino IDE , Raspberry pi pico

Code : MicroPython
Platform : Windows 10

12). **Internet of Things (IoT) Based Multilevel Drunken Driving Detection and Prevention System using Raspberry Pi 3.**
Hardware & Software Used: Development tool & board : Thonny , Raspberry Pi3
Code : Python
Platform : Linux

Master (Completed (Year of Completion)/Ongoing): 2013

Ph.D. (Completed Year of Completion)/Ongoing): 2017 Registered

Projects Carried out : **Robust Automatic Estimation Of Ejection Fraction Using Cardiac Magnetic Resonance Images**

This research is about a development of customized wavelet lifting transform with Quartic polynomial which has several advantages like reduced latency, less memory requirement and also the accuracy as it is a lossless technique to identify the contour, segmentation of left ventricle and estimation of left ventricular volume automatically This research will also propose a new method called direct LL-mask band scheme (DLLBS) that will be based on the 2-D integer symmetric mask-based discrete wavelet transform (SMDWT) to track the contour of the left ventricle at endocardial or epicardial layers through all the cardiac cycles to measure the ventricular volume and the ejection fraction.

Ph.D. (Completed Year of Completion)/Ongoing): NIL

Projects Carried out: NIL

Technology Transfer:

1. Awards or Scholarships:

- Received SERB-DST Young Scientist Travel Grant to attend an International Conference at Singapore.
- First Rank holder in M.Tech in Nanoscience and Technology
- SERB-DST India three-year SRF Fellowship
- MHRD India PhD Fellowship
- Institute Topper in Diploma

2. Technical Skills

- Experience in the synthesis of magnetic nanomaterials and characterizations.
- Knowledge of magnetic materials and magnetism.
- Experience in ferromagnetic oxide materials.
- Knowledge and Proficiency in the tools like MATLAB, ANSYS-HFFS for the antenna, and Multisim (National Instruments) for circuit design and simulation.
- Proficiency in Assembly Languages -8085,8086,8051, ARM7, VHDL
- Proficiency in Programming Languages: C, C++

BRANCH: ELECTRONICS AND COMMUNICATION ENGINEERING

Name	SUGANYA.E	
Designation	ASSISTANT PROFESSOR	
Department	**ECE**	
Date of Joining the Institution	1.12.2022	
Date of Birth	9^{th} August 1987	
Faculty Unique	**8990-**INSTITUTION ID **1-10609747688**-AICTE FACULTY ID	
Email Id	suganya.eswaran@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	2009	First class with Distinction
2	PG	2012	First class with Distinction(9.15 CGPA)
3	PhD	Pursuing	
4	Others		
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	9 years
2	Research	
3	Industry	
4	others	

Area of Specialization:

	Undergraduate	1.RF and Microwave Engineering 2.Wireless Communication 3.Communication Theory

Courses taught at		4.Digital Communication 5.Electromagnetic Fields 6.Electromagnetic Theory 7.Wireless Networks 8.RF System Design 9.Medical Electronics 10.Digital Electronics 11.Digital Image Processing

Research Guidance (Number of Students):UG students-16 batches

No. of papers published:

SL.No	Type	Numbers
1	National	-
2	International Journals	11 (6 Scopus & 5 International journals)
3	Conferences	8 International & 4 National
4	Others	-

Master (Completed (Year of Completion)/Ongoing):
2012

Ph.D. (Completed Year of Completion)/Ongoing): Pursuing

Projects Carried out :
2

Patents (Filed & Granted): NIL

SL No	Topic	**Patent Application No**	Filed/ Granted
1			
2			

Technology Transfer: CERTIFIED IN ANTENNA DESIGN ENGINEERING

No. of Books published with details: 3

EEE Faculty List-2022-23

Sl.No	Faculty Name	Designation
1	Dr. Premila Manohar	Prof. & HoD
2	Dr. Vasudha Hegde	Professor
3	Dr. T C Balachandra	Professor
4	Dr. Rajkiran Ballal	Professor
5	Dr. Samanvitha N	Professor
6	Dr. Shefali Jagwani	Assoc. Prof.
7	Ms. Veena S	Assoc. Prof.
8	Dr. Prashanth V	Assoc. Prof.
9	Dr. Aruna M	Assoc. Prof.
10	Ms. Sridevi H R	Asst. Prof.
11	Ms. Sowmya Raman	Asst. Prof.
12	Ms. Sujatha Shivashimpeger	Asst. Prof.
13	Mr. Sudeep Shetty	Asst. Prof.
14	Mr. Nagaraj M J	Asst. Prof.
15	Ms. Shruti Gatade	Asst. Prof.
16	Mr. Anand S	Asst. Prof.
17	Ms. Meghana A	Asst. Prof.
18	Ms. Smitha B	Asst. Prof.
19	Dr. Shreeram V Kulkarni	Asst. Prof.
20	Dr. Pavana	Asst. Prof.
21	Dr. Pramod Bhat Nempu	Asst. Prof.
22	Dr. CH Hussaian Basha	Asst. Prof.
23	Dr. Singaravelan A	Asst. Prof.
24	Dr. Likhitha R	Asst. Prof.
25	Dr. Ramakrishna Reddy K	Asst. Prof. (New)
26	Ms. Chaitra Hebbar	Asst. Prof. (Diploma)
27	Ms.Savitha M	Asst. Prof. (Diploma)

NITTE EDUCATION TRUST

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

An Autonomous Institution Approved by UGC/AICTE/Govt. of Karnataka
Accredited by NBA (Tier-I) and NAAC 'A+' Grade
Affiliated to Visvesvaraya Technological University, Belagavi
Post Box No. 6429, Yelahanka, Bengaluru-560064, Karnataka, INDIA

Profile of the Faculty

BRANCH: ELECTRICAL AND ELECTRONICS ENGINEERING

Name	Premila Manohar	
Designation	Professor & HoD	
Department	**EEE**	
Date of Joining the Institution	11th Dec 2021	
Date of Birth	18th May 1958	
Faculty Unique	1-470711407	
Email Id	premila.manohar@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	1982	FCD
2	PG	1985	FCD
3	PhD	1991	-
4	Others		
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	22
2	Research	20
3	Industry	07
4	others	

Area of Specialization:

	Undergraduate	1. Basic Electrical Engg 2. Transmission and Distribution 3. Introduction to MEMS

<table>
<tr><td rowspan="3">Courses taught at</td><td></td><td>4. HVDC Transmission
.</td></tr>
<tr><td>Post Graduate</td><td>1. Dynamics of control systems
2. Design of control systems
3. Solar Energy Technology
Machine Learning applications in Renewable Energy</td></tr>
<tr><td>Post Graduate Diploma Level</td><td>1
2</td></tr>
<tr><td colspan="3">Research Guidance (Number of Students): UG students - 44</td></tr>
</table>

No. of papers published:

SL.No	Type	Numbers
1	National	-
2	International Journals	15
3	Conferences	42
4	Others	-

Master (Completed (Year of Completion)/Ongoing): 22

Ph.D. (Completed Year of Completion)/Ongoing): 5/2

Projects Carried out : 2

Patents (Filed & Granted):

SL No	Topic	Patent **Application No**	Filed/ Granted
1	Breath Fresh	333526-001	Granted

Profile of the Faculty

BRANCH: ELECTRICAL AND ELECTRONICS ENGINEERING

Name	Dr. Shruti Gatade	
Designation	Assistant Professor	
Department	**EEE**	
Date of Joining the Institution	18/08/2016	
Date of Birth	12/01/1991	
Faculty ID	1-3209622577	
Mail	shruti.gatade@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	BE in Electrical and Electronics Engineering	2012	1st
2	MTech in VLSI Design and Embedded Systems	2016	1st
3			
4			
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	6
2	Research	
3	Industry	1
4	others	

Area of Specialization:

	Undergraduate	1.Microcontroller 2 Linear integrated circuits 3AI Applications in Power systems

Courses taught at		4Object Oriented Programming using C++ 5. Sensors and Transducers 6.Programmable Logic Controller 7. Electrical Power Generation Transmission and Distribution 8.Entrepreneurship Development Management and IPR

Research Guidance (Number of Students):UG students- 10

No. of papers published:

SL.No	Type	Numbers
1	National	
2	International Journals	
3	Conferences	8
4	Others	

Master (Completed (Year of Completion)/Ongoing): NIL

Ph.D. (Completed Year of Completion)/Ongoing): NIL

02 Ongoing

Projects Carried out

- Design and Fabrication of video Laryngoscope with styletoscope integrated with mobile phone to overcome difficulty in airway management for elderly, DST (SEED / TIDE / 002 / 2017)
- Fund for Improvement of S&T Infrastructure in Universities and Higher Educational Institutions (FIST) - level-I, DST
- Establishment of Centre for Applied Mechatronics to Promote Multidisciplinary Training, Research and Development, AICTE - Modernisation and Removal Of Obsolescence
- Innovation and Entrepreneurship Development Center' (IEDC) funded by National Science and Technology Entrepreneurship Development Board (DST- NSTEDB), New Delhi, during April 2010-2015, with a Grant of Rs 45 Lakhs

Patents (Filed & Granted):

SL No	Topic	**Patent Application No**	Filed/ Granted
1	"Range Extender Engine For Hybrid Electric Vehicles', Kirana K K, Sudheer Reddy	201941054031, 1/57107/2019-CHE	Published
2	Portable Mobile Disinfection Device for Disinfecting a Given Facility	202141042150	Filed

Technology Transfer:

Profile of the Faculty

BRANCH: MECHANICAL ENGINEERING

Name	Kiran Aithal S
Designation	Professor
Department	**ME**
Date of Joining the Institution	19/08/2004
Date of Birth	20/03/1973
Faculty Unique	1-409547293
Email Id	kiranaithal.s@nmit.ac.in

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	1995	First
2	PG	1998	First
3	PhD	2013	-
4	Others		
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	24
2	Research	-
3	Industry	01
4	others	

Area of Specialization:

Courses taught at	Undergraduate	1FEM 2 Vibrations 3 Energy Environment & Sustainability 4 Mechanics of Materials .
	Post Graduate	1 Theory of Elasticity 2 Advanced FEM 3 Conceptual Design

Research Guidance (Number of Students):UG students-90

No. of papers published:

SL.No	Type	Numbers

1	National	01
2	International Journals	37
3	Conferences	05
4	Others	

Master (Completed (Year of Completion)/Ongoing): 1998

Ph.D. (Completed Year of Completion)/Ongoing): 2013

Projects Carried out: -

Patents (Filed & Granted):

SL No	Topic	**Patent Application No**	Filed/ Granted
1	A Novel Method for Machining Coupons of Glass Reinforced Hybrid Laminate	374902 - 6132/CHE/2014	Granted
2	Design & Development of Geriatric Support System	202241041446	Pub
3	Development of Smart Window Systems with Integrated Air-Purifiers	202241044130	Pub
4	Real-Time Onboard Truckload Weighing System	201941054030	Pub
5	Automated Center Stand For Motorcycles	202041057527	9ub

Technology Transfer: -

No. of Books published with details: 01- Elements of Aeronautics, Subhas Stores publications

Profile of the Faculty

BRANCH: ELECTRONICS AND COMMUNICATION ENGINEERING

Name	Dr. N. Kapilan	
Designation	Professor and Head	
Department	**ME**	
Date of Joining the Institution	09-09-2020	
Date of Birth	21-07-1974	
Faculty Unique	1-9575796772	
Email Id	kapilan.n@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	1996	1st Class
2	PG	2002	Distinction
3	PhD	2011	NA
4	Others		
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	23
2	Research	12
3	Industry	1
4	others	

Area of Specialization:

Courses taught at	Undergraduate	1. Basic Thermodynamics 2. Applied thermodynamics 3. Fluid Mechanics 4. Heat and mass transfer 5. Elements of Mechanical Engg 6. Computer aided engineering drawing 7. Turbomachinery 8. Renewable energy sources 9. HVAC

Research Guidance (Number of Students):UG students-

No. of papers published:

1	National Journals	02
2	International Journals	52
3	Conferences	17
4	Others	

Master (Completed (Year of Completion)/Ongoing):
Completed : 04
On-going : 00

Ph.D. (Completed Year of Completion)/Ongoing):
Completed : 03
On-going : 04

Projects Carried out :

Patents (Filed & Granted):

SL No	Topic	**Patent Application No**	Filed/ Granted
1	Air treatment apparatus for contagious respiratory patient	202141035026	Filed
2	Method and Apparatus for Solar Photovoltaic Panel Cooling		Filed

Technology Transfer: Nil

No. of Books published with details: Dr R.P.Reddy and N.Kapilan, Elements of Mechanical Engineering, Himalaya Publishing House, 2014.

Profile of the Faculty

BRANCH: MECHANICAL ENGINEERING

Name	Dr Shailesh Rao A	
Designation	Professor	
Department	**Mechanical Engineering**	
Date of Joining the Institution	29th August 2022	
Date of Birth	14th November 1975	
Faculty Unique	1-4488113197	
Email Id	shailesh.rao@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	1997	First Class
2	PG	2002	First Class with distinction
3	PhD	2010	
4	Others		
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	23
2	Research	09
3	Industry	03
4	others	

Area of Specialization: Machining Characteristics, Smart Agriculture with Data Techniques

Courses taught at	Undergraduate	1 Statistical Quality Control with R 2 Mechanics of Materials 3 Computer Aided Engg. Drawing
	Post Graduate	1 Micro Machining 2 Additive Manufacturing 3

Research Guidance (Number of Students):UG students-

No. of papers published:

SL.No	Type	Numbers

1	National	
2	International Journals	23
3	Conferences	14
4	Others	

Master (Completed (Year of Completion)/Ongoing): 02

Ph.D. (Completed Year of Completion)/Ongoing): 04

Projects Carried out :

Received project grant from VTU, Belgaum, leading as Principal Investigator for the project titled 'Modelling and Analysis of Molten Metal Behaviour in Centrifugal Casting' (Rs. 8.62 lakhs) in the year 2010-13

Patents (Filed & Granted):

1	Design and Fabrication of Footmate Power Generation System	202241050686	Filed and published
2	Design and Fabrication of Bluetooth Controlled Smart Pesticide Spraying Robot	202241050679	Filed and published

Technology Transfer:

No. of Books published with details:
02 books published as of date

1. Arjun Siddharth, Vinyas Mahesh, Vishwas Mahesh, Sriram Mukunda, Satishkumar A, Dinesh Kumar Harursampath, “Effect of external resistances on energy harvesting behavior of porous functionally graded magneto-electro-elastic beam”. Mathematical methods in Dynamic Systems, CRC Press, Taylor and Francis, EDS: S. Chakravarty, Jena S K.

2. Vinyas Mahesh, Sriram Mukunda, Vishwas Mahesh, “Free vibration properties of the natural fiber-based epoxy composites”. Epoxy based bio composites, CRC Press, Taylor and Francis.

Profile of the Faculty

BRANCH: MECHANICAL ENGINEERING

Name	Vikram Kedambadi Vasu
Designation	Assistant Professor
Department	**ME**
Date of Joining the Institution	06/09/2016
Date of Birth	29/05/1987
Faculty Unique	1-3180254257
Email Id	vikram.k@nmit.ac.in

Education Qualifications:

SL. No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	2008	First Class
2	PG	2012	First Class with Distinction
3	PhD	Pursuing	
4	Others		
5			

Total Work Experience in Years:

SL. No	Work Experience	Total in Years
1	Teaching	10
2	Research	
3	Industry	
4	others	

Area of Specialization: Nanocomposites and Micro-machining

Courses taught at	Diploma/ Post Diploma	
	Undergraduate	1. Computer Aided Engineering Drawing 2. Digital Manufacturing 3. Computer Integrated Manufacturing 4. CAD/CAM/CIM 5. Elements of Mechanical Engineering 6. Total Quality Management 7. Theory of Machines 8. Rapid Prototyping
	Postgraduate	1. Rapid Prototyping 2. Advanced Manufacturing Technology
	Post Graduate Diploma Level	

Research Guidance (Number of Students):UG students: 32

No. of papers published:

SL. No	Type	Numbers
1	National	01
2	International Journals	07
3	Conferences	03
4	Others	

Master (Completed (Year of Completion)/Ongoing): Completed - 2012

Ph.D. (Completed Year of Completion)/Ongoing): Ongoing

Projects Carried out: Masters (02), Undergraduate (08)

Patents (Filed & Granted):

Sl. No	Topic	Patent Application No	Filed/ Granted
1	Frictionless Vertical Axis Wind Maglev Turbine	201941054028	Published
2	Range Extender Engine for Hybrid Electric Vehicles	201941054031	Published
3	Design, Analysis and Fabrication of Voice Operated Pneumatic Exo Skeleton Arm for Monoplegia, Quadriplegia, and Industrial Applications	202041057529	Published
4	Design And Fabrication of Solar Powered Treadmill Bicycle	202041057530	Published
5	A Method and System for Efficiently Paying and Collecting Fine in a Traffic Violation	202141062255	Published
6	A Fuel System for a Vehicle	202141062256	Published
7	Stir Casting Route for Processing Metal matrix Nanocomposites	202241027779	Published
8	Smart Robotic Material Transporter	202241050096	Published

Technology Transfer: Nil

Projects Carried out :

Title	**Duration**	**~Amount (INR)**
Design and Development of Solar Vehicle for the participation in ESVC Solar Vehicle Championship 2023	Sept 2022 – ongoing *	4-5 Lakhs
Thermal and economic analysis of a liquid flat-plate solar collector system using green carbon nanofluids	May 2019 – till present	50 lakhs
Solar Vehicle for the participation in Electric Solar Vehicle Championship 2019.	Aug 2018 – Mar 2019	1.67 Lakhs
Formula vehicle for the participation in SAE-formula and Formula Bharath 2018-19	Jan 2018 - May 2019	9 Lakhs
2-Wheeler Hybrid Scooter for the participation in SAE EGA hybrid Championship 2018.	Aug 2017- Mar 2018	1.2 Lakhs
Solar Vehicle for the participation in Indian Solar Vehicle Championship 2018.	Sept 2017- Feb 2018	1.5 Lakhs
2-Seater ATV for the participation in Rally Car Design Challenge 2018.	Jun 2017- Feb 2018	3.4 Lakhs

Design and development of a dish type solar concentrator for power generation	Nov 2017 - May 2018	1 Lakh
Design and Development of a Hybrid Energy Tree	Dec 2016 - May 2017	1.5 Lakhs
Thermic Transient Analysis of Al 18%-Si through experiment and simulation	Mar 2015 - Aug 2015	10000

Email Id	sriram.mukunda@nmit.ac.in	

Education Qualifications:

Sl.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	1955	First Class with Distinction
2	PG	1962	First Class with Distinction
3	PhD	1971	First Class
4	Others (D.I.I.Sc)	1957	First Class with Distinction
5			

Total Work Experience in Years:

Sl. No	Work Experience	Total in Years
1	Teaching	58
2	Research	40
3	Industry	
4	others	

Area of Specialization:

Courses taught at	Undergraduate	1. Metrology& Measurements 2. Engg materials and metallurgy 3. Manufacturing technology 4. Advanced manufacturing technology 5.Composite Materials

		6. Smart Materials 7. Material Selection in Engg Design
	Post Graduate	1. Composite Materials

Research Guidance (Number of Students):UG students- 04

No. of papers published:

Sl. No	Type	Numbers
1	National	50
2	International Journals	40
3	Conferences	60
4	Others	

Master (Completed (Year of Completion)/Ongoing): Completed in year 1962

Ph.D. (Completed Year of Completion)/Ongoing): Completed in the year 1971

Projects Carried out:
1. Study of Microstructure and Mechanical Testing of Aluminum - Carbon Nanotube Metal Matrix Composites

Patents (Filed & Granted):

Date of Birth	01/05/1983
Faculty Unique	1-9540448451
Email Id	Savitakr@gmail.com

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	2006	
2	PG	2014	
3	PhD		
4	Others		
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	08
2	Research	
3	Industry	
4	others	

Area of Specialization:

Courses taught at	Diploma/ Post Diploma 1.	1Electrical Estimation and Costing 2Digital Electronics 3Basic Electrical power systems 4.Analog Electronics
	ndergraduate	
	Post Graduate	
	Post Graduate Diploma Level	

Research Guidance (Number of Students):UG students-

No. of papers published:

SL.No	Type	Numbers
1	National	
2	International Journals	
3	Conferences	
4	Others	

Master (Completed(Year of Completion)/Ongoing):

Ph.D. (Completed Year of Completion)/Ongoing):

Projects Carried out :

Patents (Filed & Granted):

SL No	Topic	**Patent Application No**	Filed/ Granted
1			
2			

Technology Transfer:

No. of Books published with details:

Profile of the Faculty

BRANCH: AERONAUTICAL ENGINEERING

Name	SWAMYRAJ RAHUL BHISE	
Designation	LECTURER	
Department	**AE**	
Date of Joining the Institution	13/08/2022	
Date of Birth	19/10/1999	
Faculty Unique		
Email Id	Swmyraj.bhise@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	2022	1st class
2	PG	-	-
3	PhD	-	-
4	Others	-	-
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	0
2	Research	0
3	Industry	0
4	others	0

Area of Specialization:

Courses taught at	Diploma/ Post Diploma	1. Drone Technology 2. Low sped aerodynamics 3. Aircraft materials and manufacturing technology 4. Low sped aerodynamics lab 5. Aircraft materials and manufacturing technology Lab

	Undergraduate	
	Post Graduate	
	Post Graduate Diploma Level	

Research Guidance (Number of Students):UG students-

No. of papers published:

SL.No	Type	Numbers
1	National	0
2	International Journals	0
3	Conferences	0
4	Others	0

Master (Completed (Year of Completion)/Ongoing):

Ph.D. (Completed Year of Completion)/Ongoing):

Projects Carried out : **Thrust vector control model rocket with self landing capability**

Patents (Filed & Granted):

SL No	Topic	**Patent Application No**	Filed/ Granted
1			
2			

Technology Transfer:

No. of Books published with details:

Profile of the Faculty

BRANCH: MECHANICAL ENGINEERING

Name	Mangesh Mogarkar	
Designation	LECTURER	
Department	**ME**	
Date of Joining the Institution	16/03/2022	
Date of Birth	26/01/1997	
Faculty Unique		
Email Id	Mangesh.bm@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	2019	1st class
2	PG	-	-
3	PhD	-	-
4	Others	-	-
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	2
2	Research	0
3	Industry	2
4	others	0

Area of Specialization:

Courses taught at	Diploma/ Post Diploma	1. Computer aided engineering Graphics 2. Materials for engineering 3. Product design and Development 4. CNC Lab 5. Thermodynamics 6. Thermodynamics Lab

		7. Aircraft Materials & Manufacturing Technology Lab
	Undergraduate	
	Post Graduate	
	Post Graduate Diploma Level	

Research Guidance (Number of Students):UG students-

. of papers published:

SL.No	Type	Numbers
1	National	0
2	International Journals	0
3	Conferences	0
4	Others	0

Master (Completed (Year of Completion)/Ongoing):

Ph.D. (Completed Year of Completion)/Ongoing):

Projects Carried out : Automatic River Cleaning system

Patents (Filed & Granted):

SL No	Topic	**Patent Application No**	Filed/ Granted
1			
2			

Technology Transfer:

No. of Books published with details:

BRANCH: MECHANICAL ENGINEERING

Name	SRINIVAS MT	
Designation	HOD	
Department	**ME**	
Date of Joining the Institution	08-11-2021	
Date of Birth	15-02-1979	
Faculty Unique	1-7982753986	
Email Id	Srinivas.mt@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	2006	FC
2	PG	2011	FCD
3	PhD		
4	Others		
5			

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	12
2	Research	
3	Industry	04
4	others	

Area of Specialization:

Courses taught at	Diploma/ Post Diploma	1. Mechanics of material 2. Machine Tool Technology 3. Machine Design 4. Automobile Engineering 5.Hydraulics and Pneumatics .
		1. Elements of Mechanical Engineering

	Undergraduate	2. Mechanics of Materials. 3. Kinematics of Machines 4. Machine Design 1 & 2 5. Automotive Engineering 6. CAED .
	Post Graduate	1. Non Traditional Machine 2. Advance Manufacturing Technology
	Post Graduate Diploma Level	

Research Guidance (Number of Students):UG students-

No. of papers published: 03

SL.No	Type	Numbers
1	National	
2	International Journals	3
3	Conferences	1
4	Others
