1.	Dr.Ramachandra A C	Professor & Head, EC	Chairman
2.	Dr.Avinash L	Assistant Professor, ME	Member
3.	Mr. Anand S	Assistant Professor, EEE	Member
4.	Ms. Pramodhini R	Assistant Professor, ECE	Member
5.	Mr.Sridhar K	Assistant Professor, AE	Member
6.	B Rakesha	VI semester, CV	Member
7.	S Sushma Nayak	VI semester, CS	Member
8.	Chandan N	VI semester, EC	Member
9.	Bhoomika Venugopal	VI semester, AE	Member
10.	Supriya	VI semester, CV	Member

All the members are requested to carry out the duties as per the guidelines of VTU.

CIRCULAR

SC ST BCM CELL

As per the directions of Visvesvaraya Technological University, Belgaum, this is to bring to your notice that an SC, ST and BCM Cell has been constituted at our college with the following members for the academic year 2022-23.

Sl. No	Name	Designation/ Department	Position
1.	Dr.Ramachandra A C	Professor & Head, EC	Chairman
2.	Dr.Avinash L	Assistant Professor, ME	Member
3.	Mr.Anand S	Assistant Professor, EEE	Member
4.	Ms.Pramodhini R	Assistant Professor, ECE	Member
5.	Mr.Sridhar K	Assistant Professor, AE	Member
6.	Tusher	VI semester, CV	Member
7.	Hanumantha V	VI semester, CS	Member
8.	Kadambari K	VI semester, EC	Member
9.	Hamsa B T	VI semester, AE	Member
10.	Chithralekha S	VI semester, EE	Member

All the members are requested to carry out the duties as per the guidelines of VTU.

17/08/22

Dr H C Nagaraj
Principal

Post Box No. 6429, Yelahanka, Bengaluru-560064, Karnataka, INDIA

KNOWLEDGE ■ CHARACTER ■ UNITY

Profile of the Faculty

BRANCH: ELECTRONICS AND COMMUNICATION ENGINEERING

Name	Dr.H C Nagaraj	
Designation	Principal	
Department	**ECE**	
Date of Joining the Institution	28-12-2001	
Date of Birth	04/04/1959	
Faculty Unique	1-410763421	
Email Id	principal@nmit.ac.in	

Education Qualifications:

SL.No	Degree Obtained	Year of Obtaining the highest degree	Class/ Grade obtained
1	UG	1981	FCD
2	PG	1984	First Rank
3	Ph.D	2000	Awarded
4	Others	--	--

Total Work Experience in Years:

SL.No	Work Experience	Total in Years
1	Teaching	36
2	Research	05
3	Industry	--
4	others	--

Area of Specialization:

	Undergraduate	1.Basic Electronics 2.Analog Electronics 3.Digital Electronics 4.Communication System

Courses taught at		5.Image Processing 6.Biomedical Signal Processing 7.Power Electronics.
	Post Graduate	--
	Post Graduate Diploma Level	--

Research Guidance (Number of Students):UG students-

No. of papers published:

SL.No	Type	Numbers
1	National	08
2	International Journals	25
3	Conferences	22
4	Others	--

Master (Completed (Year of Completion)/Ongoing): 1984
s

Ph.D. (Completed Year of Completion)/Ongoing): 2000

Projects Carried out :

Patents (Filed & Granted):

SL No	Topic	**Patent Application No**	Filed/ Granted
1			
2			

Technology Transfer:

a) **Best Student Paper Award** at the 5th National Conference of Biomechanics held During Feb. 22-24, 1996 at I.I.T. Madras, Chennai.

b) **Best Paper Award** at the Karnataka State Level Seminar on “Introduction of Flexible System in Technical Education” held on 8th Feb, 1999 at P.E.S. Institute of Technology, Bangalore.

c) **Delivered Invited Talks** at various Conferences & Workshops organized in the areas of Mobile Communication, Biomedical Engineering, Digital Communication, Instrumentation, Digital Signal Processing , Image Processing etc.

No. of Books published with details: VLSI Circuits”, Star- Tech Education, Bangalore, 2006

BIODATA OF Dr. H C NAGARAJ

Dr. H C Nagaraj

Principal
Nitte Meenakshi Institute of Technology
P.B. No. 6429, Yelahanka, Bangalore – 560 064
Phone: Off: (080) 22167800 / 22167803 || Fax: (080) 22167805 Mobile: 9845275240
|| E-mail: principal@nmit.ac.in ||

Member, Academic Senate of Visvesvaraya Technological University, Belagavi, from 15.06.2019 for a period of three years

Member of the Court
Pondicherry University, Puducherry,
from 02.01.2017 for a period of three years

&

Former Dean, Faculty of Engineering
Visvesvaraya Technological University, Belagavi, Karnataka

1. GENERAL INFORMATION

Permanent & Correspondence Address	:	**Dr. H C Nagaraj** No. 1124, 'SKANDA', HMT Layout, 6th Block, Vidyaranyapura, Bangalore - 560097
Email ID Landline Mobile	: : :	principal@nmit.ac.in 080-22167803/800 9845275240

2. EDUCATIONAL QUALIFICATION

Sl. No.	Degree/ Specialization	University/ Institution	Year of Award of Degree	Remarks
1.	**B.E.** (Electronics & Communication)	University of Mysore	1981	First Class with Distinction
2.	**M.E.** (Communication Systems)	P.S.G College of Technology, Coimbatore	1984	First Rank
3.	**Ph.D** (Biomedical Signal Processing and Instrumentation)	Indian Institute of Technology Madras, Chennai	2000	

3. POSITIONS HELD

Sl. No.	Period		Designation	Department/ College/ University	Nature of work and level of responsibilities
	From	To			
1	02.06.2016	01.06.2019	Dean, Faculty of Engineering	Visvesvaraya Technological University (VTU), Belagavi	Involved in complete academic and developmental work of VTU, Belagavi
2	02.01.2017	01.01.2020	Member of Court	Pondicherry University, Pondicherry	To approve the various academic, planning, and developmental activities of Pondicherry University
3	15.06.2019	14.06.2022	Academic Senate Member	Visvesvaraya Technological University (VTU), Belagavi	Involved in complete academic and developmental work of VTU, Belagavi
4	01.09.2003	Till Date	Principal	Nitte Meenakshi Institute of Technology, Bangalore - 560064	Planning, Development, Quality & Assurance, Implementation and day to day administration
5	28.12.2001	31.08.2003	Professor & Head, Dept. of ECE	Nitte Meenakshi Institute of	Department Level Administration,

				Technology, Bangalore - 560064	Teaching and Research
6	01.07.2000	27.12.2001	Professor & Head, Dept. of Telecommunication Engineering (TCE)	JNN College of Engineering, Shimoga - 577204	Department Level Administration, Teaching and Research
7	16.08.1987	30.06.2000	Assistant Professor, Dept. of ECE	JNN College of Engineering, Shimoga - 577204	Teaching and Research
8	28.12.1981	15.08.1987	Lecturer, Dept. of ECE	JNN College of Engineering, Shimoga - 577204	Teaching

4. PROFESSIONAL ACHIEVEMENTS

I. Professional Affiliation:

i. Life Member of the Indian Society for Technical Education (LM - 04427)
ii. Life Member of The Biomedical Engineering Society of India (L – 431)
iii. Fellow of the Institution of Electronics and Telecommunication Engineers (F - 192154)
iv. Member of the Global Engineering Deans Council (GEDC)

II. Examinership:

Working as an Examiner for B. E., M. Tech., and Ph. D. Programmes of:

i. Visvesvaraya Technological University, Belagavi, Karnataka
ii. Sri Venkateshwara University, Tirupati, Andhra Pradesh
iii. Manipal University (Deemed University), Manipal, Karnataka
iv. Kuvempu University, Shimoga, Karnataka
v. Bangalore University, Bangalore, Karnataka
vi. University of Mysore, Mysore, Karnataka
vii. SRM Deemed University, Chennai, Tamil Nadu
viii. Jain University, Bangalore, Karnataka
ix. Savitribai Phule Pune University, Pune, Maharashtra

III. Chairman/ Membership of University Boards:

i. Dean, Faculty of Engineering, Visvesvaraya Technological University Belagavi, for three years from June 2016 to May 2019.
ii. Member of the Court, Pondicherry University, Puducherry for a period of three years w.e.f January 2017.
iii. Member of Board of Examiners in EC/TE/ML/BM (UG) Board of Visvesvaraya Technological University, Belagavi during the Academic Years 2002 - 2004.
iv. Member of Board of Examiners in M.Tech (Digital Communication and Network Engineering) of Kuvempu University during the Year 2003-2004.
v. Served as Chairman, Member, Board of Studies and Board of Examiners in EC/IT Board of Kuvempu University during the Academic Years 1998 – 2000.
vi. Member of Board of Examiners for B.E (E&CE) & M.E (Power Electronics) of UVCE, Bangalore University for the Academic Years 2007 – 2009.
vii. Chairman, BOS of IT/BM/ML of VTU for 2010-13[03years].
viii. Member, Academic Senate of VTU for 09 years w.e.f. April 2010.Further extended for a period of three years w.e.f 15-06-2019
ix. Member, Karnataka State Innovation Council, Government of Karnataka
x. Member of NAAC (UGC) Peer Team to assess the institution for Accreditation
xi. Visited as an Expert Member of the UGC, New Delhi for inspecting the colleges seeking Autonomous Status.
xii. Associated as an expert member in UPSC related works.

IV. **Delivered Invited Talks** at various Conferences & Workshops organized in the areas of Mobile Communication, Biomedical Engineering, Digital Communication & Digital Signal Processing, Image Processing etc.

V. **Technical Papers Published: 54**
(In National, International Conferences and Journals)

VI. **Book Published:** “VLSI Circuits”, Star- Tech Education, Bangalore, 2006

VII. **No. of candidates completed and pursuing Ph.D Programme under my guidance:**

a) No. of Students completed and awarded Ph.D: 05
b) No. of Students submitted Ph.D thesis & awaiting reports: 01
c) No. of students pursuing Ph.D: 07

VIII. **Awards / Prizes won:**

a) Best Student Paper Award at the 5th National Conference of Biomechanics held during Feb. 22-24, 1996 at I.I.T. Madras, Chennai.

b) Best Paper Award at the Karnataka State Level Seminar on "Introduction of Flexible System in Technical Education" under Visvesvaraya Technological University (VTU), Belagavi held on Feb. 8, 1999 at P.E.S. Institute of Technology, Bangalore.

c) Best Paper Award at IEEE 2nd International Conference on Intelligent Communication and Computational Techniques (ICCT'19), Manipal University, Jaipur held during Sep. 28-29, 2019.

IX. International journal/conferences publications

1. Sundari Tribhuvanam, H.C. Nagaraj, V.P.S. Naidu, "Analysis and Classification of ECG beat Based on Wavelet Decomposition and SVM", Indian Journal of Science and Technology, Vol 13(24): 2404-2417, 2020 (Web of Science)
2. Prasanna G Paga , H C Nagaraj , Tejas R ,Krishnananda Shet "Dual Band Monopole Antenna with Concentric Square Electromagnetic Band Gap (EBG) Structure", 2020 IEEE International Conference on Computing, Power and Communication Technologies (GUCON) Galgotias University, Greater Noida, UP, India. Oct 2-4, 2020. doi: 10.1109/GUCON48875.2020.9231234.
3. Vidyadevi G. Biradar, H.C. Nagaraj, "Leveraging X-Ray and CT-Scans for COVID-19 infection investigation using deep learning models: Challenges and Research directions", ERCICA 2020.
4. Tejas K. Rayangoudar, H.C. Nagaraj, "Significance of Effective Local Gradient Distribution Technique with Eft on Multi-View and Cloth Invariant Gait Recognition," in International Journal of Future Generation Communication and Networking Web of Science, Vol. 13, No. 3, (2020), pp. 243- 252.
5. Rekha Phadke, Varsha Prasad, Abhijit Bhograj, H C Nagaraj, Univariate data-driven models for glucose level prediction of CGM sensor dataset for T1DM management, Sadhana, Indian academy of sciences.

FEE
AND
ADMISSION

	Fee	
	Details of Fee as approved by State Fee Committee for the Institution	As per approval of State Fee Committee
	Time schedule for payment of Fee for the entire Programme	Yearly payment at the beginning of the academic year and one month time will be given to pay the fees
	Criteria for Fee waivers/scholarship	EWS/Merit based scholarship
	Estimated cost of Boarding and Lodging in Hostels	Rs.70000/Year Mess bill is based on dividing system, actuals per month.
10	Admission	
	Number of seats sanctioned with the year of approval	As per AICTE approval
	Number of Students admitted under various categories each year in the last three years	KCET,COMED-K and Management
	Number of applications received during last two years for admission under Management Quota and number admitted	1500 per year

Admission Procedure

	Admission Procedure	
	Mention the admission test being followed, name and address of the Test Agency/State Admission Authorities and its URL (website)	Aptitude and technical test for the management seats to get admission at NMIT NMIT Internal by the college management (No agency)
	Number of seats allotted to different Test Qualified candidate separately (AIEEE/ CET (State conducted test/ University tests/ CMAT/ GPAT)/ Association conducted test etc.)	As per Karnataka government order for self-financing colleges
	Calendar for admission against Management/vacant seats:	
	Last date of request for applications	10 days After the announcement of PUC/CBSC result
	Last date of submission of applications	One month after the last date of request for applications
	Dates for announcing final results	10 working days after submission of applications
	Release of admission list (main list and waiting list shall be announced on the same day)	10 working days after submission of applications
	Date for acceptance by the candidate (time given shall in no case be less than 15days)	30 days after the announcement of results
	Last date for closing of admission	As per Karnataka Govt order (KEA)
	Starting of the Academic session	As per VTU calendar
	The waiting list shall be activated only on the expiry of date of main list	Yes
	Criteria and Weightages for Admission	
	Describe each criterion with its respective weightages i.e. Admission Test, marks in qualifying examination etc.	---

	Mention the minimum Level of acceptance if any	50% of total marks allotted for entrance exam
	Mention the cut-off Levels of percentage and percent ilescore of the candidates in the admission test for the last three years	50% of total marks allotted for eligibility for management seats
	Display marks scored in Test etc. and in aggregate for all candidates who were admitted	Yes

15a	Information of Infrastructure and Other Resources Available	
	Number of Class Rooms and size of each	Out of 107 rooms 88 of about 77sq m
	Number of Tutorial rooms and size of each	19 tutorials rooms few of which are 76.14 sq m
	Number of Laboratories and size of each	95 labs ,around 76.14 sq m size and few are of 128sq m
	Number of Drawing Halls with capacity of each	06 rooms around 76.14 sq m
	Number of Computer Centres with capacity of each	Four computer centers with a capacity of 25 computers in each lab
	Central Examination Facility, Number of rooms and capacity of each	95 Rooms Each can accommodate 36 students
	Online examination facility (Number of Nodes, Internet bandwidth, etc.)	1Gbps 2 connections,100nNodes
	Barrier Free Built Environment for disabled and elderly persons	Annexure -01
	Fire and Safety Certificate	Annexure -02
	Hostel Facilities	Hostel facility is available for both girl and boy students Annexure -03

Additional time is given to Physically challenged students during CIE and SEE.

APPOINTMENT OF SCRIBE

Preamble: Physically handicapped candidate writing the SEE can take assistance from another person who is normally called as AMANUENSIS (SCRIBE). A scribe can be appointed by the COE of the college in consultation with the Principal to the candidate who is disabled to write his/her examination with his own hand. While appointing anscribe the following guidelines are to be followed strictly.

10.2 Guidelines:

a. AScribe can be appointed to the candidate who is blind or disabled from writing the examination with his/her own hand.
b. A candidate seeking the assistance of anScribe shall submit an application to the COE through the HOD of the department duly recommended by the proctor, with the following documents.
   i. Medical Certificate from Medical Officer of a Government District or higher-grade hospital or a registered Medical Practitioner showing the inability of the candidate to write the examination with his/her own hand, which shall be attested by the HOD.
   ii. No relation Certificate - An undertaking by the student and the Amanuensis showing that there is no relation between them with an authentication by the Notary Public.
   iii. Attested copies of testimonials of the Scribe.
   iv. One A4 size paper hand written matter which is written by the Scribe.
   v. Three recent Passport size photos of the Scribe attested by the HOD.
c. AScribe appointed must be of lower grade education than the candidate and should not be studying in the same field (Engineering/Architecture).
d. The Chief Superintendent/ Chief coordinator shall arrange a suitable room for the candidate & the Scribe and appoint a room superintendent for the candidate who shall be changed daily.
e. If the disabled candidate (temporarily disabled) requests to write the examination with his own hand with an extra time (60 minutes for 3 hours examination i.e. 20 minutes per hour), he/she shall submit an application to the Principal of the college through the COE seeking grant of extra time to write the examination, with concerned medical certificates and the attested copies of such permission letters, if any, given earlier by any of the Boards or Universities in India.
f. The permission granted in the case of permanently disabled students shall be valid for the entire period of his study in the program, whereas, in the case of temporary disability the cility extended shall be for the specific period only

NMIT HOSTELS

NMIT provides On-campus Hostels for about 1000 boys and 500 girls. There are four hostels for boys and three for girls. Twin and triple sharing rooms are available. Vegetarian and non-vegetarian meals are available for students.

Students may order extra and special items for all meals in addition to the standard menu. These items are available for a minimum charge.

In-house wardens take care of the needs of students and help maintain discipline in the hostel.

All the Hostels have common areas with TV and reading rooms where students can relax. Campus has good security with CCTV surveillance. Transport facility for students is available.

Amenities:

- Gym for boys and girls
- Outdoor and indoor sport facility
- Wi- Fi connectivity
- 24/7 HT power supply with 320 KVA generator
- Reading room, TV rooms and music room
- Medical center at the college and MOU with two hospitals for medical care
- Security with CCTV surveillance
- Cooperative Stationary store
- ATM of two banks --- AXIS bank and Corporation Bank
- On campus bank counter
- Open Air Theatre
- Eateries

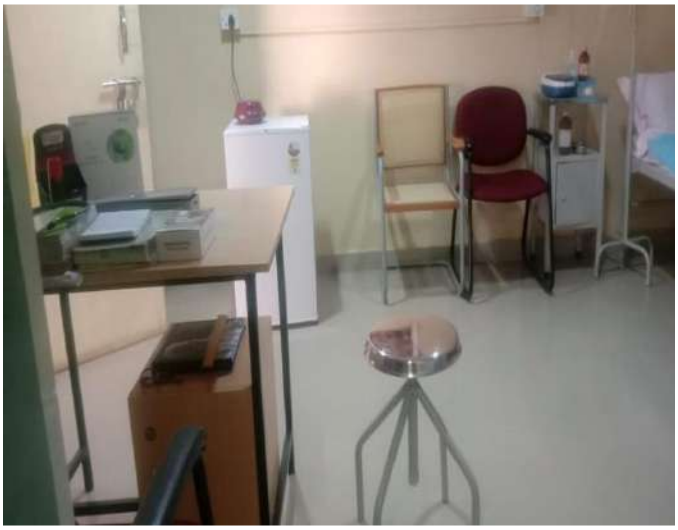
Facility at Boys' hostel

Washing Machine

GYM

Vending Machine

Medical centre



In Hostel for any emergency first aid box

First Aid

Facility at Girls hostel

1. Girl’s Gymnasium
2. Wi- Fi connectivity (24/7)

National Journals

Dept. of Aeronautical Engineering

Sl.No.	Title	Frequency
1	ICAO JOURNAL (ICAO 01)	Quarterly
2	Journal of Automobile Engineering and Applications	Half-Yearly
3	Advances in Aerospace Science & Applications	Half-Yearly
4	Jnl of Aerospace Sciences & Technologies	Quarterly
5	Indian Jnl of Aerospace Engineering.	Half Yearly
6	Indian Journal of Advances in Robotics & Automation	Half Yearly

Dept. of Artificial Intelligence & Machine Learning

Sl.No.	Title	Frequency
1	ICTACT Journal on Soft Computing	Quarterly
2	Current Development In Artificial Intelligence	Half-Yearly
3	International Journal of Computer Science & Mobile Computing	Half-Yearly
4	Journal of Computer Science Engineering & Software Testing	Tri-Annual
5	Advances Research In Applied Artificial Intelligence & Neural Net.	Tri-Annual
6	Research & Review: Machine Learning and Cloud Computing	Tri-Annual

Dept. of Computer Science & Engineering

Sl.No.	Title	Frequency
1	Intl. Journal of Advanced Networking and Applications	Bi-Monthly
2	Research & Application of Web Development & Design	Tri-Annual
3	International Journal of Information Technology and Web EngG	Half-Yearly
4	Indian Jnl .of Neural Networks Research	Half-Yearly
5	International Journal of Mathematical Education	Half-Yearly
6	Indian Journal of Mathematics & Mathematical science	Half-Yearly

Dept. of Information Science & Engineering.

Sl.No.	Title	Frequency
1	Indian Journal of Advances in Electronics Engg.	Half-Yearly
2	Journal of Electronics Design & Technology	Tri-Annual
3	Indian Journal of VLSI Design	Half-Yearly

4	Int. Journal of Instrumentation Science & Engg.	Half-Yearly
5	Journal of Instrumentation Technology & Innovations	Tri-Annual
6	Journal of Telecommunication Switching systems and Networks	Tri-Annual

Dept. of Civil Engineering

Sl.No.	Title	Frequency
1	Indian concrete Journal	Monthly
2	Journal of Structural Engineering	Bi-Monthly
3	Indian Construction Journal	Monthly
4	Indian Geotechnical Journal	Bi-Monthly
5	Global.Jnl.of Structural Design and Construction	Half-Yearly
6	Ind.Jnl.of Structural Design and Construction	Half-Yearly

Dept. of Electronics & Communication Engineering

Sl.No.	Title	Frequency
1	Indian Journal of Electrical Engineering	Half-Yearly
2	IEEEMA Journal	Monthly
3	Indian Journal of Power River Valley Development	Bi-Monthly
4	IETE Journal of Research	Bi-Monthly
5	International Journal of Applied Physics	Half-Yearly
6	CPRI Journal	Quarterly

Dept. of Electrical & Electronics Engineering

Sl.No.	Title	Frequency
1	Indian Journal of Electrical Engineering	Half-Yearly
2	IEEEMA Journal	Monthly
3	Indian Journal of Power River Valley Development	Bi-Monthly
4	IETE Journal of Research	Bi-Monthly
5	International Journal of Applied Physics	Half-Yearly
6	SRELS Journal of Information Management	Monthly

Dept. of Mechanical Engineering

Sl.No.	Title	Frequency
1	Indian Journal of Mechanical Engineering & Research	Half-Yearly
2	Journal of Mechanics & Mems	Half-Yearly
3	Journal of Manufacturing Engineering	Quarterly
4	Mapan - Journal of Metrology Society of India	Quarterly
5	Manufacturing Technology Today	semi-annual
6	INT.JNL.OF DESIGN ENGG & TECHNOLOG (GRP 141)	Half-Yearly

Dept. of Data Science & Machine Learning

Sl.No.	Title	Frequency
1	Advancement of IoT in Blockchain technology and its applications	Tri-Annual
2	International Journal of Information Technology & Database Sys.	Half-Yearly
3	International Journal of Data Modelling in Knowledge Manag.	Half-Yearly
4	International Journal of Data Analysis and Information Systems	Half-Yearly
5	International Journal of Data Mining and Warehousing.	Half-Yearly
6	International Journal of Combinatorial Graphics and Applications	Half-Yearly

Dept. of Basic Sciences

Sl.No.	Title	Frequency
1	Journal Modern Chemistry & Chemical Technology	Tri-Annual
2	International Journal of Pure & Applied Physics	Half-Yearly
3	Indian Journal of Physics	Monthly

Dept. of M. Tech- Aeronautical Engineering

Sl.No.	Title	Frequency
1	Indian Journal of Aeronautical Engineering Research & Development	Half-Yearly
2	Indian Journal of Aerospace & Mechanical Engineering	Half-Yearly
3	Journal of Aerospace Engineering & Technology	Tri-Annual
4	VAYU Aerospace Review	Bi-Monthly
5	Air power Journal	Quarterly

Dept. of M.Tech- Computer Science & Engg

Sl.No.	Title	Frequency
1	International Journal of Scientific Res. in Computer Sciences & Engg.	Half-Yearly
2	SIGACT(ALGORITHMS & COMPTN.THEORY)	Quarterly
3	International Journal of Next-generation Computing	Half-Yearly
4	Journal of 'The Indian Mathematical Society'	Quarterly
5	Indian Journal of Advance In Computer Science & Engg.	Half-Yearly

Dept. of M.Tech- Data Science

Sl.No.	Title	Frequency
1	Journal of Big Data Technology and Business Analytics	Tri-Annual
2	Journal of Innovations in Data Science and Big Data Management	Tri-Annual
3	Journal of Neural Computing Systems	Half-Yearly
4	Journal of Cyber Security in Computer System	Tri-Annual
5	International Journal of Business Analytics and Intelligence.	Half-Yearly

Dept. of M. Tech-VLSI & Embedded Systems

Sl.No	Title	Frequency
1	International Journal of Information & Communication Technology	Half-Yearly
2	International Journal of Network & Mobile Technologies	Half-Yearly
3	International Journal of Embedded System & Computer Engg.	Half-Yearly
4	International Journal for Advances VLSI Design	Half-Yearly
5	IOSR Journal of VLSI & Signal Processing	Bi-Monthly

Dept. of M. Tech- Machine Design

Sl. No.	Title	Frequency
1	Journal of The Institution of Engineers (India): Series C	Bi-Monthly
2	Journal of The Institution of Engineers (India): Series D	Bi-Monthly
3	Journal of The Institution of Engineers (India): Series E	Half-Yearly
4	Journal of Automation & Automobile Engineering	Tri-Annual
5	Journal of Mechatronics & Automation	Tri-Annual

Dept. of M.Tech- Defence Technology

Sl.No.	Title	Frequency
1	Journal of Scientific and Industrial Research	Monthly
2	Indian Journal of intellectual Property Rights	Quarterly
3	Indian Journal of Engineering and Material Sciences	Quarterly
4	Journal of the Indian Institute of Science	Quarterly
5	Current Science	

Dept. of M.Tech- Structural Engineering

Sl.No.	Title	Frequency
1	International Journal of Geotechnic & Environment	Half-Yearly
2	Journal of Indian Water Works Association	Quarterly
3	Journal of Construction Management,	Quarterly
4	International Journal of Construction Engineering & Management	Half-Yearly
5	Indian Journal of Construction Engineering & Technology	Half-Yearly

Dept. of M.Tech-Renewable Energy

Sl.No.	Title	Frequency
1	International Journal of Power Engineering	Half-Yearly
2	International Journal of Power System & Energy Conversion	Half-Yearly
3	Trends in Electrical Engineering	Tri-Annual
4	IOSR Journal of Electrical & Electronics Engineering	Bi-Monthly
5	International Journal Electrical Power Energy	Half-Yearly

Dept. of Management Studies

Sl.No.	Title	Frequency
1	Journal of Management & Entrepreneurship	Quarterly
2	IIMB Management Review	Quarterly
3	Journal of Asian Business Management	Half-Yearly
4	Indian Journal of Economics & Business	Half-Yearly
5	Indian Journal of Finance & Economics Management	Half-Yearly
6	South Asian Journal of Management	Quarterly
7	Harvard Business Review	Tri-Annual

Department of MCA

Sl.No	Title	Frequency
1	Indian Journal of Computer Graphics & Visualiztion	Half-Yearly
2	Indian Journal of Digital Information Technology	Half-Yearly
3	Journal of Software Project Management & Quality Assurance	Half-Yearly
4	Journal of Web Development and Web Designing	Tri-Annual
5	Journal of Android and IOS Applications and Testing	Tri-Annual

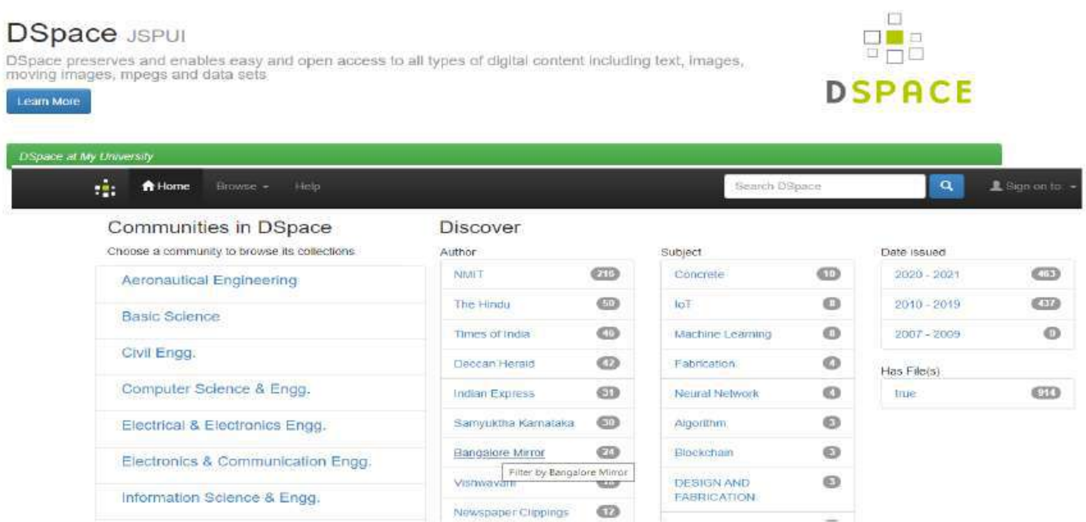
- Links to MOOCs, Swayam, Epg Pathshala, Vidyamitra, VTU EShikhana, Spoken Tutorials etc..

DSpace:

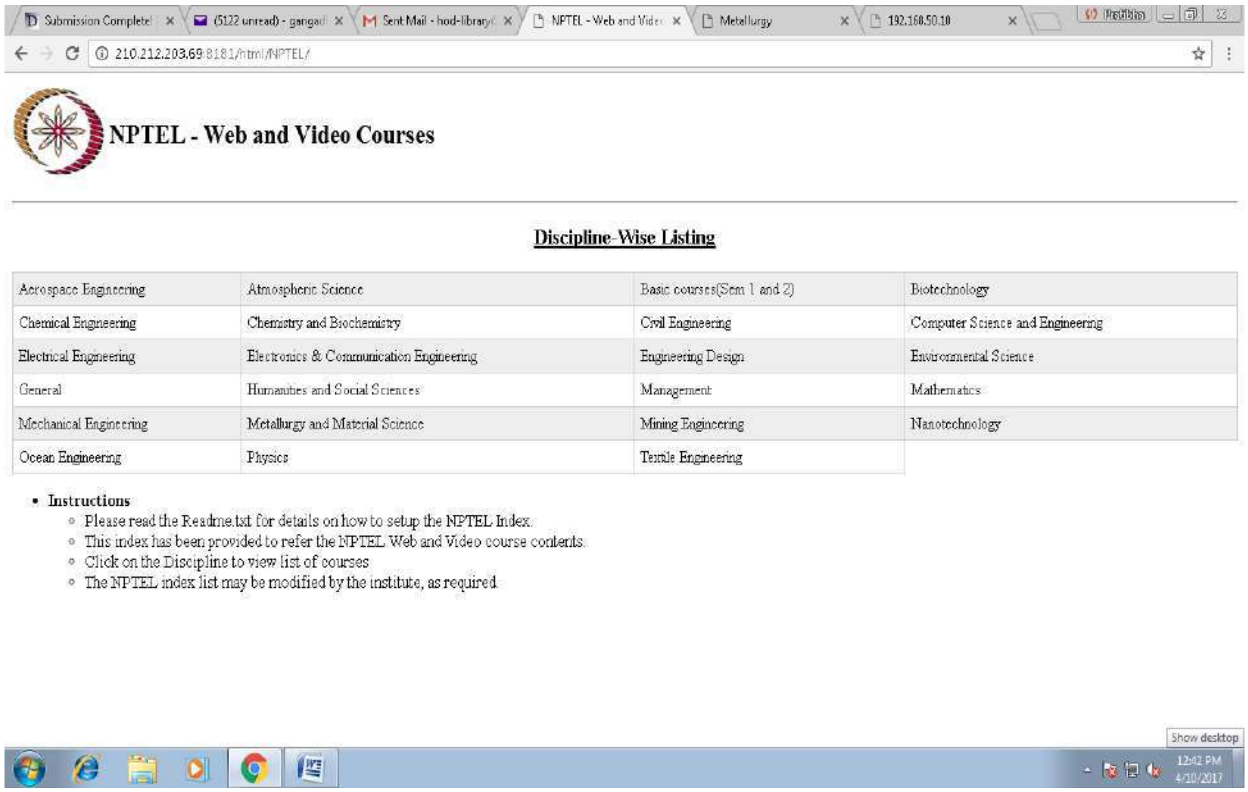
DSpace is institutional repository software that preserves and enables easy and open access to all types of digital content including text, images, moving images, mpegs and data sets.

DSpace is the software of choice for academic, non-profit, and commercial organizations building open digital repositories. It is free and easy to install "out of the box" and completely customizable to fit the needs of any organization. DSpace preserves and enables easy and open access to all types of digital content including text, images, moving images, mpegs and data sets. Users can access E-Seminar Papers/ Journal Articles –presented/published by the Faculty Members (NMIT); Newspaper clippings about NMIT, STUDSAT project-accessed through 'DSpace' software. Resources archived in DSpace can be accessed in the http://172.17.15.168:8080/xmlui/



National Programme for Technology Enhanced Learning (NPTEL)-Online   E-Resource:

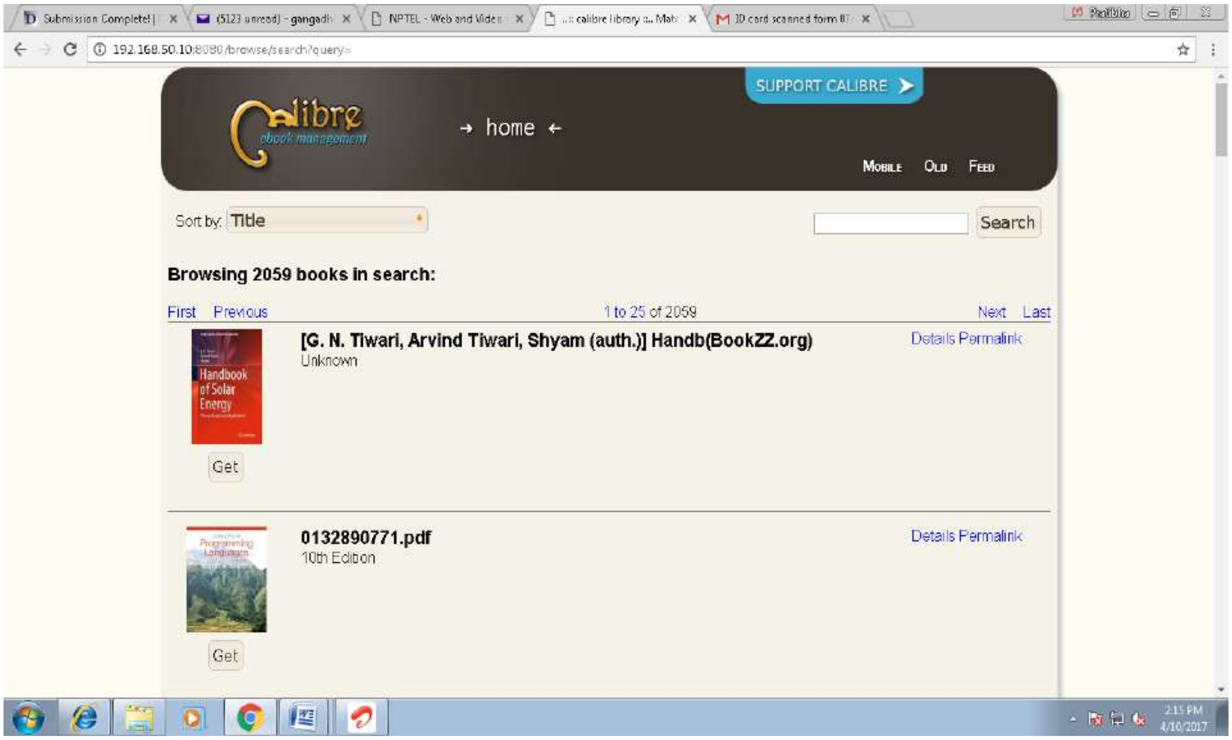
We have uploaded Video courses, Lecture notes, power point presentations prepared by National Programme for Technology Enhanced Learning (NPTEL). This resources can be accessed inside the campus at https://nmit.ac.in/pdf/e-Content-URL.pdf Click Discipline, select Content at right end.



NPTEL courseware is well utilized by the faculty members and students. Based on this courseware, online certification course from IIT, Madras will be issued, where extra credits will be given to the students.

Archiving E-Books in Calibre Software

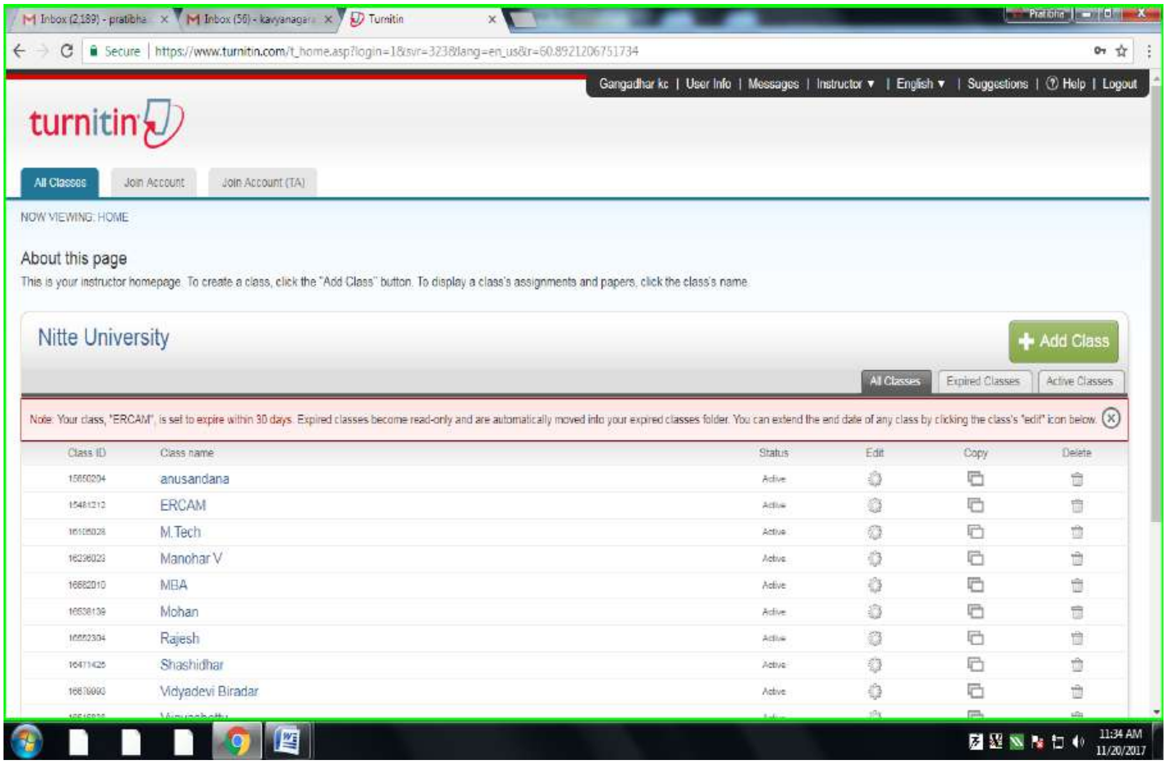
Calibre is Free Book Indexing software where more than 2300 Text and Reference E-books are loaded. The E-books can be accessed/ downloaded from http://172.17.13.57:8080 in the campus only. These can be searched by Author, Title, Subject Language.



More than 2300 Open E-Books are indexed and preserved in Calibre Software. It is accessible within the campus only.

Anti-Plagiarism Web-Tool-TURNITIN

Turnitin is leading software used by researchers all over the world for checking originality and prevention of plagiarism. Library has subscribed to this software to check similarity index of the document. So that, students can avoid plagiarism and inculcate best practices while using /citing material written by other people. Students of UG, PG courses and faculty members are encouraged to check their projects/thesis/articles using this software.



National Digital Library of India (NDLI)

National Digital Library (NDL) is an initiative of MHRD through IIT, Kharagpur. We have got institutional membership for NDL and created accounts for students and staff members where they can access to its collection. The NDL collection has more than 11,72,133 items related to Engineering, Social Sciences, Philosophy in the form of articles, books, theses, audio lectures, video lectures, manuscripts etc.

LABORATORY WORKSHOP AND COMPUTING FACILITY

AERONAUTICAL ENGINEERING DEPARTMENT

List of Major Equipment/Facilities in each Laboratory/Workshop

Sl. No	Name of the Laboratory	Major Equipment's
1	Aerodynamics Lab	Subsonic wind tunnel
2	Solid Mechanics Lab	Computerized Universal Testing Machine
3	Composite Material lab	Hand Layup Set Up Vacuum bag setup
4	Flight Physics Lab	Simulator Air bus 380
5	Research center	Amwin Workstation, corei7, 12 Generation, 64GB RAM, 1TB SSD.

List of Experimental Setup in each Laboratory/Workshop

Sl. No	Name of the Laboratory	Experimental setup
1.	Aerodynamics Lab	➢ Computerized subsonic wind tunnel ➢ Smoke flow generator ➢ Data acquisition system
2.	Solid Mechanics Lab	➢ Computerized Universal Testing Machine ➢ Vickers/Brinell Hardness Testing Machine ➢ Digital Torsion Testing Machine ➢ Impact Testing Machine ➢ Brinell Hardness Testing Machine ➢ Digital Fatigue Testing Machine ➢ Rockwell Hardness Testing Machine
3.	Structures Lab	➢ Vibration of Beam setup ➢ Beam test setup ➢ Wagner beam setup ➢ Column test apparatus
4.	Aircraft Propulsion Lab	➢ Free/ forced convection apparatus ➢ Axial compressor and turbine blade ➢ Subsonic free jet / wall jet setup ➢ Combustion performance study in duct ➢ Nozzle flow measurements ➢ Propeller performance setup ➢ Bomb calorie meter ➢ Study of premixed flame characteristics
5.	Composite Material lab	➢ Vacuum bagging setup ➢ Hand Layup Set Up ➢ Filament Winding Set Up ➢ Autoclave ➢ Hand Injection Moulding ➢ NDT Set Up ➢ Tensile And Flexural Testing ➢ Composite Beam Test Set Up ➢ Hydraulic Press
6.	Design Modeling & Analysis Lab & Simulation lab	➢ Desktop Computer- 56 ➢ Laptop and Accessories ➢ UPS-15KVA ➢ LAN/ WAN ➢ Epson Laser Printer ➢ Hp scan jet scanner ➢ Hp printers ➢ Projector with screen ➢ Software ➢ MATLAB 2022 ➢ 3D experience ➢ Windows 10Pro

7.	Aircraft System Lab	➢ Hydraulic flow System ➢ Hydraulic Pressure System ➢ Hydraulic Break system ➢ Fuel System(Filter clogging simulator) ➢ Breaking Loading test Rig ➢ Sukhoi 30MKI
8.	Aircraft Structures Design Lab	➢ Aero Structural Components, ➢ Column Test Set Up. ➢ Creep Testing Machine. ➢ Photo Elastic Apparatus ➢ Bending Stresses In a Beam. ➢ Fatigue Testing Machine ➢ Indeterminate Beam Structure- Digital. ➢ Beam Test Set Up. ➢ Thin Walled Pressure Vessel. ➢ Pin Jointed Frame Analysis. ➢ Uniaxial Testing Frames. ➢ Universal Vibration Test Apparatus
9.	Avionics Lab	➢ ARM Cortex M4 Microcontroller Kit ➢ Microwave Signal Source (VCO) ➢ Transmitting antenna turn table ➢ Receiving antenna turn table ➢ Transmitting Dipole antenna ➢ Receiving Dipole antenna ➢ Desktop Computer- 26 ➢ UPS-10KVA ➢ LAN/ WAN ➢ Software ➢ 3D experience ➢ Windows 10 Pro
10	Flight Physics Lab	➢ Hanger ➢ CESSNA 172 ➢ Simulator Air bus 380 ➢ Desktop Computer -9 ➢ Projector ➢ UPS 10KVA ➢ LAN/WAN ➢ Software ➢ Windows 10 Pro
11	Research Centre	➢ Telescope ➢ Wireless Speaker ➢ Camera ➢ Amwin Workstation ➢ Desktop Computer – 6 ➢ Laptop -1 ➢ Projector

- The lab is equipped with four Wacom (creative pen tablets).
- One by Wacom can be used with most pen-enabled creative software as well as many online learning applications and platforms on PC and Mac.
- We have four **C270 HD WEBCAM**
- The C270 HD Webcam gives us sharp, smooth conference calls in a widescreen format. Automatic light correction shows you in lifelike, natural colors.
- Mac computer system -for IOS related projects and development.

Smart Boards

Sl.no	Room	Description Equipment’s	Quantity
1	265	Smartboard	01
2	268	Smartboard	01
3	Dept. Seminar Hall	Smartboard	01
4	Hod cabin	Smartboard	01

- One Bluetooth enabled Microphone/ Speaker one tripod for online meeting in Board Room
- smart LED projector-For IOT live streaming and online classes.
- Technical Clubs existing and New from Oct-Dec 2022 (proofs (Report) to be maintained by the department coordinator)

Sl.No	Name of Technical Clubs	Quterly Report
1	CloudZilla	Getting Started with Cloud on 2nd December 2022 Speaker: Mr. Prajwal N, TechLead, WellsFargo
2	HackClub	Web3: The Infrastructure on 22nd November 2022 Speaker: Mr. Pranshu Rastogi, Vice President of Push Protocol

Facilities for conduct of classes/courses in online mode (Theory & Practical)

DEPARTMENT OF PHYSICAL EDUCATION

DETAILS OF PARTICIPATION AND ACHIEVEMENTS-2021-2022

1. Football

Sl no.	NAME OF THE TOURNAMENT	ORGANISED BY	DATE	RESULT
1.	SPARDHA-22	CMRIT	16^{th} & 17^{th} DECEMBER 2022	RUNNERS UP
2	KREEDOTSAV-22	BMSCE	27^{th} & 28^{th} DECEMBER 2022	WINNERS

State Level Inter Collegiate Football (M) Tournament Runners Up at CMRIT.

State Level Inter Collegiate Football (M)Tournament WINNERS at BMSCE.

ANAADYANTA Foot Ball (Men) Touranment Runners Up , on 10th & 11th May 2022 at NMIT,Bangalore

2. Volleyball (Women)

Sl no.	NAME OF THE TOURNAMENT	ORGANISED BY	DATE	RESULT
1.	VTU BANGLORE ZONE INTER COLLEGIATE TOURNAMENT	BMSSA	23rd & 24th NOVEMBER 2022	WINNERS
2.	VTU STATE LEVEL	PES,MANDYA	15th & 16th DECEMBER 2022	RUNNERS
3.	SPARDHA-22	CMRIT	13th & 14th DECEMBER 2022	WINNERS

VTU Bangalore Zone Volleyball (W) Tournament WINNERS at BMSSA, Bangalore.

VTU State Level Volleyball (W) Tournament RUNNERS at PES, Mandya.

.

State Level Inter Collegiate Volleyball (W) Tournament WINNERS at CMRIT.

3. Basketball (Men)

Sl no.	NAME OF THE TOURNAMENT	ORGANISED BY	DATE	RESULT
1.	VTU NORTH DIVISION	NMIT,BANGLORE	30th NOVEMBER & 1st DECEMBER 2022	WINNERS
2.	VTU STATE LEVEL	NMIT,BANGLORE	2nd & 3rd DECEMBER 2022	RUNNERS UP
3.	SPARDHA-22	CMRIT	16th & 17th DECEMBER 2022	WINNERS

VTU Bangalore North Zone Basketball (M) Tournament WINNERS at NMIT, Bangalore

VTU State Level Basketball (M) Tournament RUNNERS at NMIT, Bangalore

State Level Inter Collegiate Volleyball (W) Tournament WINNERS at CMRIT

.

4. Badminton (Men)

Sl No	NAME OF THE TOURNAMENT	ORGANISED BY	DATE	RESULT
1.	VTU BANGALORE NORTH ZONE	NCET, Devanahalli	2nd &3rd NOVEMBER 2022	WINNERS

VTU Bangalore North Zone Badminton (M) WINNERS at NCET, Devanahalli.

5. Badminton (Women)

Sl No	NAME OF THE TOURNAMENT	ORGANISED BY	DATE	RESULT
1.	VTU BANGALORE NORTH ZONE	NCET, Devanahalli	2^{nd} & 3^{rd} NOVEMBER 2022	WINNERS

VTU Bangalore North Zone Badminton (W) WINNERS at NCET, Devanahalli.

VTU Inter Zone Hockey Men 1st Runners up on 21st December 2021 held at Sir RYMEC, Bellary.

6. Kabaddi (Men)

Sl No	NAME OF THE TOURNAMENT	ORGANIZED BY	DATE	RESULT
1.	SPARDHA-22	CMRIT	14th & 15th DECEMBER 2022	WINNERS

State Level Inter Collegiate Volleyball (M) Tournament WINNERS at CMRIT

7. Volleyball (Men)

Sl No	NAME OF THE TOURNAMENT	ORGANIZED BY	DATE	RESULT
1.	VTU BANGALORE NORTH ZONE	SKIT, Bangalore	17th & 18th NOVEMBER 2022	RUNNERS UP

VTU Bangalore North Zone Volleyball (M) Tournament RUNNERS at SKIT.

REPRESENTED VTU IN INTER UNIVERSITY COMPETITION IN THE YEAR OF 2022-2023

1	2022-23	**Ms. ANISHREE P**	CIVIL	**VOLLEYBALL (W)**
2	2022-23	**Ms. SUDEEKSHA**	ECE	**VOLLEYBALL (W)**
3	2022-23	**Ms. ADITI S NAIR**	AERO	**BASKETBALL (W)**
4	2022-23	**Mr. SAGAR P**	CIVIL	**ATHLETICS (M)**
5	2022-23	**Mr. BHUVAN C RAJU**	MECH	**BASKETBALL (M)**
6	2022-23	**Mr. SUMANTH S**	AERO	**BASKETBALL (M)**
7	2022-23	**Mr. DHEERAJ REDDY Y A**	M.TECH	**BASKETBALL (M)**

Our college 1st sem Mechanical Department student **SRIJAY T R** felicitated with **Ekalavya** Award for his achievements in **Shooting**.

UG
SYLLABUS

NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

(AN AUTONOMOUS INSTITUTION, AFFILIATED TO VTU, BELGAUM AND ACCREDITED BY NBA, NEW DELHI)

YELAHANKA, BANGALORE – 560064

Department of Computer Science and Engineering

SCHEME AND SYLLABUS

BE PROGRAMME– 2018 BATCH (AUTONOMOUS SCHEME)

Academic Year 2021-22

TABLE OF CONTENTS

VISION & MISSION OF THE COLLEGE

Vision

To provide India and the World, technical manpower of the highest academic excellence and World class by shaping our youth through holistic and integrated education of the highest quality.

Mission

To develop Nitte Meenakshi Institute of Technology through Quality, Innovative and State-of-art educational initiatives into a centre of academic excellence that will turn out youth with well-balanced personality & commitment to rich cultural heritage of India and who will successfully face the Scientific and Technological challenges in the fast-evolving Global scenario with a high degree of credibility, integrity and ethical standards.

Quality Policy

To bring about constant and Continuous Improvement in the Quality of Education Imparted and Turning out High Quality Professionals with Balanced and Globally Competitive Personality through Regular Monitoring of the Academic/ Administrative Activities of the Institution and Implementing Corrective Actions in the Best Ethical and Transparent Traditions.

1. Vision and Mission of Department

1.1 Vision:

To empower students of Computer Science and Engineering Department to be technologically adept, innovative, self-motivated and responsible global citizen possessing human values and enable them to contribute in the industrial development innovation, high quality technical education and research with the ever changing world.

1.2 Mission:

The department of Computer Science and Engineering strives to prepare students

- For a challenging professional career and nurture their entrepreneurship ability by grooming their leadership skills and innovative ability, thereby enabling them to serve the engineering profession and society.
- To accomplish higher studies by providing conducive teaching-learning, research environment.

2. Programme Education Objectives (PEOs)

PEO1: Excel in Professional career by acquiring knowledge in basic sciences and Computer Science and Engineering principles.

PEO2: Graduates are capable of pursuing higher education and research.

PEO3: Adapt to technological advancements by engaging in lifelong learning with leadership qualities, professional ethics and soft skills**.**

3. Programme Specific Outcomes (PSO)

PSO 1: Professional Skills: The ability to comprehend, analyze, design and implement an conduct research in the domain of Computing Algorithms, Application Development, Operating System, and Allied Areas, Computer Networks& security, Software Design, Data Mining and Big Data Analytics, Cloud computing, Analog and Digital Circuits.

PSO 2: Problem Solving Skills: Ability to apply the techniques of Data Base Management, Mathematical techniques, and adopt standard software engineering and professional practices to evolve optimal solutions.

PSO 3: Ethics and Career Development: Inculcate skills for a successful career in the industry based on sound principles of software project management, team work and ethical practices, develop the spirit of entrepreneurship and also nurture the quest for higher levels of knowledge.

4. Programme Outcomes (POs)

1	**PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2	**PO2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3	**PO3. Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4	**PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5	**PO5. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6	**PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7	**PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8	**PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9	**PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10	**PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11	**PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12	**PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

5. Approach to Curriculum:

The curriculum is framed by keeping in mind the ever changing industrial trends in technology. The Stakeholders in preparing the curriculum involve the Industry experts, Academicians with expertise, Alumni of the department, Parents, Internal Faculty and the Final year students. The suggestions are taken and discussed in the BoS (Board of Studies). After approval from the BoS, the DUGC approval is taken and then the Academic Council approves the final curriculum.

The main objective of framing the curriculum:

- To build a strong technical, analytical and mathematical foundation in students. This will enable the students to be proficient in their technical profession.
- To inculcate in students the good ethical conduct, great team-spirit, excellent leadership qualities and provide a wholesome growth by encouraging Life-long learning which is needed for an excelling career.
- To make the students more competent to face challenges in the outside world.

6. Courses Inclined Towards Cutting Edge Technologies.

Department of CSE offers courses which are inclined towards cutting edge technologies along with the basic fundamental courses.

- Internet Of Things (IoT)
- Deep Learning
- Data Science/Big Data Analytics
- Block Chain Technologies
- Machine Learning
- Artificial Intelligence
- Virtual Reality
- Cloud Computing
- Robotics
- Quantum Computing
- Cyber Security

7. Definitions/Descriptions:

- **Semester Scheme:** Each UG degree is a 4 Academic year Program, each year being divided into 2 semesters. Each semester is for duration of 20 weeks, which includes Course work, CIE (Continuous Internal Evaluation), SEE (Semester End Examination). The CIE is conducted unit-wise on a monthly basis. The SEE is conducted at the end of every semester to evaluate the students' overall performance and achievement.
- **Credit System:** Each unit of a course is assigned *one credit*. The students earn the credits by registering to the respective courses, completing a teaching-learning process which is then followed by CIE and SEE. The CBCS (Choice Based Credit System) helps customizing the course work for a student by including Core Courses and Elective Courses.

- **Core Course:** Courses that are declared as mandatory for the students.
- **Electives:** Courses that are offered to the students from which they are allowed to choose.

- **Credit Courses:** Students earn *one credit* by registering for the course,
  - Attending Lecture (L) - *One hour/Week/Semester* Theory courses.
  - Attending Laboratory or Practical (P)/ Tutorials (T) - *Two Hours/Week/Semester*.
- **Course load:** Every student who registers for the courses in a semester for an average total credits of anywhere between 23 to 26 credits if the student is registered under the scheme of earning a total of 200 credits by the end of the UG degree (In the new scheme students must earn a total of 175 credits). The permissible contact hours are maximum 35 Hours/week. Typical Course Load in a semester is shown in the Table 1.

Course Load per semester			
No. of Courses	**Credits per Course**	**Total Credits**	**Total contact Hours/ week**
Three Lecture Courses	4:0:0	12	12
One Lecture Course	3:0:0	3	3
One Lecture + One tutorial	3:2:0	4	5
Two Lectures + Practical	3:0:2	8	10
Two Practical courses	0:0:2	2	4

Table 1: Typical Course load

- **Credit Representation:** Credits for different academic activities are represented in the **Table 1.**

Lectures (Hours/Week/Semester)	**Tutorials** (Hours/Week/Semester)	**Practical** (Hours/Week/Semester)	**Credits (L:T:P)**	**Total Credits**
4	0	0	4:0:0	4
3	2	0	3:1:0	4
0	2	0	0:1:0	1
0	0	2	0:0:1	1
2	2	2	2:1:1	4
0	2	2	0:1:1	2

Table 1: Credit Representation

2018 SCHEME

SCHEME – I TO VIII SEMESTERS

Typical Curriculum Structure for UG CS&E Degree Programmes

NOTE * - EVALUATION FOR THE INTERNAL MARKS WILL BE BASED ON PRACTICAL ORIENTED ASSIGNMENTS / COURSE PROJECT / MINIPROJECT / TESTS. IN ADDITION, AS A COMPONENT OF TEACHING METHODS THE COURSE CONTENT WILL BE DELIVERED BY DEMOS AND OR ACTUAL HANDS-O N ACTIVITY BY THE STUDENTS IN THE LAB/CLASSROOM.

****Integrated Course:** This course contains 60% of hands-on/practical sessions and 40% of theory. Continues Internal Evaluation (CIE) conducted for 50 Marks theory (70% of theory: Mid Semester Evaluation + Learning Assessment1+Learning Assessment2) and 50 Marks Laboratory (30% of Practical: Record Writing + Observation +Experiment Conduction +Mid Semester Evaluation). To appear in SEE Students should score minimum of 20 Marks in CIE.
Semester End Examination (SEE) evaluation has Theory examination conducted for 100 Marks and then reduced to 50 Marks, there is no Semester End Examinationfor Laboratory. Final Marks of the course is the combination of CIE+SEE.

^BS- BASIC SCIENCE, $EC-ENGG. CORE, @HU-HUMANITIES,

COURSE DESCRIPTION

Errors and approximations, Finite differences and interpolation, Numerical integration, Fourier series, Fourier Transforms, Laplace Transforms are introduced in this course contains

PREREQUISITES

- Basics of Mathematics

COURSE OBJECTIVES

To understand the periodic and harmonic phenomena and to be able to model them using Fourier series and use integral transforms such as Laplace and Fourier transforms, To understand the advantages, limitations and applications of different numerical techniques.

COURSE CONTENTS

UNIT-I **08 Hours**

Laplace Transforms: Definition, Transforms of standard functions (derivation and problems),

Transforms of $e^{at} f(t)$, $t^n f(t)$, $f(t)/t$, Laplace transforms of derivatives and integrals, Laplace transforms of periodic functions, unit step function (problems only, no derivations), Dirac delta function . Inverse Laplace transforms, convolution theorem (without proof), solutions of 1st and 2nd order ODE using Laplace transforms.

UNIT-II **08 Hours**

Fourier series: Euler’s formulae, Dirichlet’s conditions for Fourier series expansion, change of interval, Even and odd function, half range series, Practical harmonic analysis.

Fourier Transforms: Definition, Complex Fourier transforms, Cosine and Sine transforms, Inverse Fourier transforms.

UNIT – III **8 Hours**

Roots of transcendental equations by Newton Raphson and Secant method Interpolation: Newton's forward and backward formulae, Newton's divided difference formulae and Lagrange's formula for unequal intervals and inverse interpolation by Lagrange's formula, Stirling's and Bessel's central difference formula, Numerical differentiation with Newton's forward and backward difference interpolation.

UNIT – IV **08 Hours**

Numerical Integration by Trapezoidal, Simpson's 1/3 and 3/8 , Weddle's rule, Gaussian Quadrature.

Numerical solution of ordinary differential equations: Taylor's series method, Runge-Kutta 4^{th} order method, Milne's predictor corrector method.

UNIT – V **7 Hours**

Linear algebra: LU decomposition, Solution of Tridiagonal system using Thomas algorithm, Eigen values of symmetric matrix by Jacobi method, Reduction to Tridiagonal system by Given's method, Largest Eigen value by Power method.

TEXT BOOKS

1. Numerical Methods By ***R. K. Jain***, S. R. K. Iyengar
2. Higher Engg. mathematicsby Dr. B S Grewal, 42^{nd} Edition.
3. Advanced Engg. Mathematics by Erwin E Kreyszig, 10^{th} edition, Wiley.
4. Introductory methods of numerical analysis, by S SSastry, PHI India.

REFERENCE BOOKS

1. Numerical Methods: For Scientific and Engineering Computation By R. K. Jain, S. R. K. Iyengar
2. Advanced Engg. Mathematics by Erwin Kreyszig, 10^{th} edition,Wiley,2011
3. Numerical Algorithms by Sen and Krishnamurthy

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Parameter	Marks
Surprise test / Tutorials tests to be conducted	10
Quiz/ MATLAB assignment based on practical application	10
Three mid semester examinations will be conducted	30
Total	**50**
Final Exam will be conducted for 100 marks(SEE)	

COURSE OUTCOMES

COs	Description	Bloom's Level
CO 1	Analyze physical situations relevant to periodic and aperiodic functions for solving problems using the concepts of Fourier Theory and Transforms.	L3
CO 2	Model Engineering Problems by applying Fourier Theory and Transforms.	L3
CO 3	Solve Equations, Interpolate and Extrapolate Data using Finite Differences and Matrices by adopting Numerical methods.	L3
CO 4	Interpret solutions by finding Eigen values applying Numerical methods.	L5
CO 5	Solve problems on linear algebra	L4

COURSE DESCRIPTION

The fundamentals of digital circuits and their applications are introduced in this course. Topics covered include; the characteristics of basic and derived logic gates. Boolean algebra applications in the analysis and design of combinational and sequential logic circuits applications such as arithmetic circuits are introduced. This course introduces the characteristics and applications of semiconductor devices and circuits. Emphasis is placed on analysis, selection, biasing, and applications.

PREREQUISITES

- Students should have knowledge of basic concepts of electronics, Binary System.

COURSE OBJECTIVES

To acquire the basic knowledge of digital logic levels and application of knowledge to understand digital electronics circuits. To prepare students to perform the analysis and design of various digital electronic circuits,

COURSE CONTENTS

UNIT–I **8 Hours**

Boolean laws, theorems and Combinational Circuits: Boolean laws and theorems, logic functions, minimization of Boolean functions using theorems. SOP methods and POS method and simplifications. Truth table to Karnaugh map. K-map simplifications Don’t care conditions.

Data Processing Circuits: Multiplexers, Demultiplexers, BCD to decimal decoders, , Encoders, Magnitude Comparator, Read – only memory, programmable array logic, Programmable logic array.

UNIT–II **7 Hours**

Flip-flops :RS flip flop, Gated Flip-flops, Edge triggered RS- flip flop, Edge triggered JK flip-flop. JK Master Slave Flip-flop **Registers:** types of registers, Serial In Serial Out, SIPO, PISO, PIPO. **Counters:** Asynchronous counters, Synchronous Counters, Counter design as synthesis Problem.

UNIT–III **9 Hours**

Design of sequential Circuits. State Transition Diagram, State Synthesis Table, Design Equation and Circuit Diagram, Implementation using Read Only Memory. , Algorithmic State Machine. State reduction techniques **D/A conversion and A/D conversion :**Variable, Resistor Networks, Binary Ladders, D/A Converters, D/A Accuracy and Resolution, A/D Converter-Simultaneous Conversion, A/D Converter-Counter Method, Continuous A/D Conversion, A/D Accuracy and Resolution.

UNIT–IV **7 Hours**

Diode Theory: Basic idea, Ideal Diode, the second approximation, the third approximation. Diode Circuits : Half-wave Rectifier, The transformer, Full-wave Rectifier, The Bridge Rectifier, Clipper and limiters, Clampers.

UNIT–V **08 Hours**

Operational Amplifier: Introduction to Op amps, The 741 op amp, The Inverting Amplifier, The non inverting amplifier. Two op amp applications . Comparators with zero reference, non zero references, Comparators with hysteresis. Window comparators The integrators. Waveform Conversion, Waveform generation, the differentiator.

TEXT BOOKS

COURSE DESCRIPTION

This course provides an in-depth knowledge of structures, pointers and dynamic memory allocation in C. The course also provides the knowledge of different data structures and their applications in solving real-world problems.

PREREQUISITES

- Computer Concepts and C Programming.

COURSE OBJECTIVES

- To understand the concept of pointers and, allocate and deallocate memory dynamically to pointers.
- To understand working principle of different types of data structures
- To identify and apply the appropriate data structure to solve a given problem.

COURSE CONTENTS

UNIT– I **7 Hours**

Pointers: Introduction ,Understanding Pointers, Accessing the Address of a Variable, Declaring Pointer Variables, Initialization of Pointer Variables, Accessing a Variable through the Pointer, Chain of Pointers, Pointer Expressions, Pointer Increments and Scale Factor, Pointers and Arrays, Pointers and Character Strings, Array of Pointers, Pointer as Function Arguments, Functions Returning Pointers, Pointers to Functions, Pointers and Structures

Dynamic Memory Allocation: Introduction, Dynamic Memory Allocation, Allocating a Block of Memory: Malloc, Allocating a Multiple Blocks of Memory: Calloc, Releasing the Used Space: Free, Altering the size of Block: Realloc.

UNIT– II **8 Hours**

The Stack: Definition and Examples— Primitive operations, examples

Representing Stacks in C: Implementing the POP operation, testing for exceptional conditions, implementing the PUSH operation An Example: Infix, Postfix, and Prefix – Basic definitions and examples, Stack Applications---Evaluating a postfix expression, program to evaluate a postfix expression, Converting an expression from infix to postfix, program to convert an expression from infix to postfix.

Recursion (Applications of Stack): Recursive Definition and Processes— factorial function, multiplication of natural numbers. Fibonacci sequence, binary search

Recursion in C – factorial, Fibonacci numbers, binary search, recursive chains, Writing Recursive Programs – Towers of Hanoi, Binary Search.

UNIT– III **8 Hours**

Queues: The Queue and its Sequential Representation **: C Implementation of Queues, Insert Operation, Priority Queue, Array Implementation of a Priority Queue.**

Linked Lists : Inserting and Removing Nodes from a List, Linked Implementation of Stacks, getnode and free node Operations, Linked Implementation of Queues, Linked List as a Data Structure, Examples of List Operations, List Implementation of Priority Queues, Header Nodes

Lists in C: Array Implementation of Lists, Limitations of the Array Implementation, Allocating and Freeing of Dynamic variables, Linked Lists using Dynamic Variables, Queues as List in C, Examples of List Operations in C, Noninteger and Nonhomogeneous Lists, Comparing the Dynamic and Array Implementations of Lists, Implementing Header Nodes.

UNIT–IV **8 Hours**

Other List Structures: Circular Lists, Stack as a Circular List, Queue as a Circular List, Primitive Operations on Circular Lists, Header nodes, Addition of Long Positive Integers Using Circular Lists, Doubly Linked Lists.

Binary Trees: operations on Binary Trees, Applications of Binary Trees.

UNIT–V **8 Hours**

Binary Tree Representations: Node Representation of Binary Trees, Internal and External Nodes, Implicit Array Representation of Binary Trees, Binary Tree Traversal in C, Threaded Binary Trees.

Representing Lists as Binary Trees: Finding the k^{th} Element, Implementing Tree-Represented Lists in C, Constructing a Tree-represented List

Trees and Their Applications: C Representations of Trees, Tree Traversals, General Expressions as Trees, evaluating an expression tree, constructing a Tree.

TEXTBOOKS

1. Data Structures using C, Aaron M. Tanenbaum, YedidyahLangsam& Moshe J. Augenstein, Pearson Education/PHI, 2006.
2. Programming in ANSI C: E Balagurusamy, Third edition, TATA McGraw HILL

REFERENCE BOOKS

1. The C Programming Language, Brian W Kernighan and Dennis M Ritchie, Prentice Hall Software Series, 2nd Edition.
2. Data Structures A Pseudo code approach with C, Richard F. Gilberg and Behrouz A. Forouzan, Thomson, 2005.
3. Data Structures & Program Design in C, Robert Kruse & Bruce Leung, Pearson Education, 2007.
4. Fundamentals of Data Structures in C, Horowitz, Sahani, Anderson, Freed, Second edition, 2008

TEACHING METHODS

- Lecture using Black board and chalk
- Presentations
- Programming Assignments
- Problem Solving Assignments

ASSESSMENT METHODS

Parameter	Marks
Three internals(Average of best of two)	3
Rubrics for the evaluation of Programming Assignments	1
Problem Solving Test	1
Total	**5**
Final Exam will be conducted for 100 marks(SEE)	

COURSE OUTCOMES

At the end of Course, Student will be able to :

CO	Description	Bloom's Level
CO1	Identify the purposes of dynamic memory in applications, Illustrate arrays and structures with programming solutions for real world problems	**L2**
CO2	Quote the implication of stacks and queues for different problems, Build programming solutions using variations of stacks and queues.	**L3**
CO3	Examine data set operations using variations of linked list	**L4**
CO4	Appraise the purposes of Trees to represent data sets, Devise application to solve tree oriented problems.	**L3**
CO5	Develop solutions to given problems based on the application of various data structures.	**L3**

COURSE DESCRIPTION

This is an introductory course in Discrete Mathematics and Graph theory. The goal of this course is to introduce students to ideas and techniques from discrete mathematics that are widely used in science and engineering. This course teaches the students techniques in how to think logically and mathematically and apply these techniques in solving problems. To achieve this goal, students will learn logic and proof, sets, functions, as well as algorithms and mathematical reasoning. Key topics involving relations, groups, graphs, trees, and formal languages and computability are covered in this course.

PREREQUISITES

- Basic knowledge of mathematics and probability.

COURSE OBJECTIVES

- Prepare for a background in abstraction, notation, and critical thinking for the mathematics most directly related to computer science.
- Understand and apply logic, relations, functions, basic set theory, countability and counting arguments, proof techniques,
- Understand and apply mathematical induction, combinatorics, recursion, sequence and recurrence relations.
- Understand and apply graph theory concept in solving computer network problems.
- Understand and apply mathematical proof techniques.

COURSE CONTENTS

UNIT–I **8 Hours**

Fundamentals of Logic: Basic Connectives and Truth Tables, Logic Equivalence – The Laws of Logic, Logical Implication – Rules of Inference. Predicates and Quantifiers. Introduction to proofs.

UNIT–II **8 Hours**

Properties of the Integers: Mathematical Induction. Fundamental Principles of Counting: The Rules of Sum and Product, Permutations, Combinations – The Binomial Theorem, Combinations with Repetition.

Recursive Definitions, Recurrence Relations: First Order Linear Recurrence Relation, the Second Order Linear Homogeneous Recurrence Relation with Constant Coefficients.

UNIT–III **7 Hours**

Relations and Functions: Cartesian Products, Relations, Computer Recognition – Zero-One Matrices and Directed Graphs. Properties of Relations, Equivalence Relations and Partitions. Partial Orders – Hasse Diagrams and Lattices. Functions – Plain and One-to-One, Onto Functions. Function Composition and Inverse Functions. The pigeonhole principle.

UNIT–IV **7 Hours**

Algebraic structures: Groups, Semi groups, Monoids, Cosets and Lagrange's Theorem. Homomorphisms, Isomorphisms, Cyclic Groups, Permutation groups, Rings, Integral Domain, Fields - definitions and examples. (Theorems - statements only, no proofs).

UNIT–V **9 Hours**

Introduction to Graph Theory: Graphs and Graph Models, subgraphs, Connected Graphs, bipartite graphs, Degree of a vertex, Graph Isomorphism, Eulerian Graphs, Hamiltonian Graphs. Trees and Spanning Trees - definition and examples, minimum spanning trees algorithms. Matching, Graph coloring. (Theorems - statements only, no proofs).

TEXT BOOKS

1. Discrete Mathematics & its Applications, Keneth H Rosen, 6th Edition, McGraw-Hill.
2. Ralph P. Grimaldi: Discrete and Combinatorial Mathematics, 5th Edition, Pearson Education.
3. Introduction to Graph Theory, Grary Chartrand and Ping Zhang, Tata McGraw-Hill Edition 2006.

TEACHING METHODS

- Black Board.
- Presentation.
- Tutorial Classes.
- Problem Solving Assignments

ASSESSMENT METHODS

Parameter	Marks
3 Mid Semester Examinations(Average of best of two tests)	30
Surprise test / Tutorials/ Quiz tests	10
Programming Assignments	10
Total	**50**
Final Exam will be conducted for 100 marks(SEE)	

COURSE OUTCOMES

At the end of this course students will be able to,

COs	Description	Bloom's Level
CO 1	Verify the correctness of argument using truth table, propositional and predicate logic.	**L3**
CO 2	Apply and analyze the concepts of counting techniques.	**L3**
CO 3	Make use of Relations and Functions in modeling the solutions.	**L3**
CO 4	Apply the concepts of Groups and Ring structures.	**L3**
CO 5	Apply and Analyze the concepts of graphs and trees.	**L3**

Mapping of Course outcomes (COs) to Program outcomes (POs*)													**Program Specific Outcomes(PSOs**)**

SEE Marks: *50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

The course will work from the understanding the basic concepts of increase the performance of the embedded systems. With a complete understanding of how computer systems execute programs and manipulate data, Topics covered include: data representation, machine-level code, computer arithmetic, elements of code compilation, optimization of memory and runtime performance, and memory organization and management.

PREREQUISITES

- Student should have prior knowledge of Logic Design, Electronic Circuits
- Student should have prior knowledge of Computer Concepts such as memory, I/O Devices, and CPU.

COURSE OBJECTIVES

- Understand basic structure of computers, different memory access types, salient features of a Computer System from the executing program viewpoint: what are the computer system components and how they execute a given program.
- The assembly language level operation of a processor is viewed both in general as well as in operational level using a simple example machine, its (symbolic) assembly language, and simulator that runs assembly language programs developed for that machine. We also look at the operating system role in the program execution.

COURSE CONTENTS

UNIT-I **10 Hours**

Basic Structure of Computers: Computer Types, Functional Units, Basic Operational Concepts, Bus Structures, Performance – Processor Clock, Basic Performance Equation, Pipelining and Superscalar Operation, Clock Rate, Instruction set: CISC and RISC, Compiler, Performance Measurement, multiprocessors and multi computers, Historical Perspective. Machine Instructions and Programs: Basic Input/output Operation, Input/output Organization: Accessing I/O Devices, Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Controlling Device Requests, Exceptions

UNIT -II **10 Hours**

Direct Memory Access, Buses, Interface Circuits, Standard I/O Interfaces(Introduction) The Memory System: speed-size and cost, cache memories, Performance consideration

UNIT -III **11 Hours**

Virtual Memories, Arithmetic: Addition and Subtraction of signed numbers, Design of Fast Adders, Multiplication of positive Numbers, Signed Operand Multiplication, Fast Multiplication, Integer Division floating –point Numbers and Operations

UNIT– IV **11 Hours**

Basic Processing Unit: Some Fundamental Concepts, Execution of a Complete Instruction, Multiple Bus Organization, Hard-wired Control, Microprogrammed Control, Pipelining: Basic Concepts, Data Hazards, Instruction Hazard

UNIT–V **10 Hours**

Embedded System: Examples of Embedded Systems, Processor Chips for embedded Applications, A simple Microcontroller, Programming considerations, I/O device timing Constraints, Reaction Timer- An example

TEXTBOOKS

- Computer Organization, Carl Hamacher, Zvonko Vranesic, Safwat Zaky, 5th Edition, TMH
- Computer Architecture and Organization, John P. Hayes, 3rd Edition, McGraw-Hill Series

REFERENCE BOOKS

1. Computer Organization & Architecture, William Stallings, 7th Edition, PHI, 2006
2. Computer Systems Design and Architecture, Vincent P. Heuring & Harry F. Jordan, 2nd Edition, Pearson Education, 2004
3. Computer Systems Architecture – M.Moris Mano, IIIrd Edition, Pearson/PHI
4. Computer Organization & Embedded Systems – Car Hamacher, Zvonks Vranesic, afeaZaky, 6th Edition, McGrawHill.

TEACHING METHODS

- Black Board/Power Point
- Presentations Assignments

ASSESSMENT METHODS

Parameter	Marks
Three internals(Average of best of two)	30
Programming Assignments	10
Rubrics for the evaluation of Course Project	10
Total	**50**
Final Exam will be conducted for 100 marks(SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

COs	Description	Bloom’s Level
CO 1	Identify the importance of computer organization, memory hierarchy, basic input-output mechanisms and interrupt handling circuits.	**L3**
CO 2	Apply algorithms to perform arithmetic and logical operations, solve problems using computer performance equations and relate Hard-wired Control, Micro programmed Control circuits.	**L3**
CO 3	Analyze the logic delay paths, combinational logic circuits and different bus organizations.	**L4**
CO 4	Illustrate pipeline techniques, Embedded system applications and the significance of multiple bus organizations.	**L2**
CO 5	Write programming assignment report and Present effectively.	**L2**

COURSE DESCRIPTION

This course provides an understanding of OOP Programming paradigm. The course also provides the knowledge of application development for real-world problems in C++.

PREREQUISITES

- Basic knowledge of C Programming**.**

COURSE OBJECTIVES

- To understand the difference between Procedure Oriented and OO Programming.
- To understand OOP features of C++
- To develop applications in C++

COURSE CONTENTS

UNIT–I **7 Hours**

An Overview of C++ : object –Oriented Programming Principles, The origins of C++, C++ Fundamentals- Introducing C++ Classes.

Classes and Objects : C++ Classes and Structures, Class and object declarations ,Friend Functions, Friend Classes, Inline Functions, Static Class Members, The Scope Resolution Operator, Functions and Objects.

Arrays, Pointers, References, and the Dynamic Allocation Operators: Arrays of Objects, this Pointer, References, C++' s Dynamic Allocation Operators.

UNIT–II **8 Hours**

Function Overloading and Default Arguments: Function Overloading, Constructor types, Overloading Constructor Functions, Default Function Arguments, Function Overloading and Ambiguity

Operator Overloading: Creating a Member Operator Function, Operator Overloading Using a Friend Function, Overloading Some Special Operators, Overloading the Comma Operator

UNIT–III **8 Hours**

Inheritance: Base-Class Access Control, Inheritance and Protected Members, Inheriting Multiple Base Classes, Constructors, Destructors and Inheritance, Granting Access, Virtual Base Classes

Virtual Functions and Polymorphism: Virtual Functions, The Virtual Attribute Is Inherited, Virtual Functions Are Hierarchical, Pure Virtual Functions, Using Virtual Functions, Early vs Late Binding.

UNIT–IV **8 Hours**

Templates: Generic Functions, Applying Generic Functions, Generic Classes

Exception Handling: Exception Handling Fundamentals, Handling Derived-Class Exceptions, Exception Handling Options, Applying Exception Handling.

UNIT–V **8 Hours**

C++ File I/O: <fstream> and File Classes, Opening and Closing a File, Reading and Writing Text Files ,Unformatted and Binary I/O, Detecting EOF, The ignore() Function, Peek() and putback(),flush(),Random Access ,I/O Status, Customized I/O and Files.

TEXTBOOK

1. The Complete Reference C++, Herbert Schildt, 4th Edition, TMH, 2005.

REFERENCE BOOKS

- C++ Primer, Stanley B. Lippman, JoseeLajoie, Barbara E. Moo,4th Edition, AddisonWesley, 2005.
- Object-Oriented Programming with C++, SouravSahay, Oxford University Press, 2006.

TEACHING METHODS

- Lecture using Black board and chalk
- Presentations
- Programming Assignments
- Course Project

ASSESSMENT METHODS

Parameter	Marks
Three internals(Average of best of two)	30
Programming Assignments	10
Rubrics for the evaluation of Programming Assignments	10
Total	**50**
Final Exam will be conducted for 100 marks(SEE)	

.

COURSE OUTCOMES

At the end of Course, Student will be able to:

COs	Description	Bloom's Level
CO 1	Design classes for the given application scenarios and apply the concepts of classes and objects, friend functions, friend classes, Inline functions, static class members and this pointer in implementation of solutions to problems.	**L3**
CO 2	Analyze and apply the concepts of function overloading, default arguments, constructors and operator overloading in designing and implementing solutions to given problems.	**L4**
CO 3	Apply the principle of code reusability using Inheritance, use the concept of virtual base classes to prevent the possible ambiguity in multiple inheritance and analyze the benefit of dynamic binding using virtual functions and inheritance.	**L3**
CO 4	Design and use template classes that take generic parameters to support code reusability principle in problem solving, understand and apply the concept of exception handling to prevent run-time abnormal program termination error in applications	**L3**
CO 5	Create text and binary files and use them in the applications to handle voluminous data.	**L3**

COURSE DESCRIPTION

- This course introduces students with various assembly language programs on searching, sorting, arrays, loops, conditional operations, string operations, macros, procedures, logic controllers, Stepper motor and DAC interface.

PREREQUISITES

- Should have knowledge about Basic Electronics and Logic Design.

COURSE CONTENTS

- 8086 Architecture, Addressing Modes, Instruction sets,
- Assembly Language Programming Fundamentals,
- I/O Interfacing of 8086 with 8255 PPI.

List of Programs:

Part A

1. Write an ALP to solve the following arithmetic operations for 8-Bit and 16-Bit numbers:
   I. Addition.
   II. Subtraction.
   III. Division.
   IV. Multiplication.
2. Write an ALP to find a factorial of a number using conditional call operation.
3. Write an ALP to find Fibonacci series for 10 count numbers using arrays concept.
4. Write an ALP to find a greatest/largest number in an array using loop operation.
5. Write an ALP to find a least/smallest number in an array using loop operation.
6. Write an ALP to arrange the array in ascending order using nested loop operation.
7. Write an ALP to arrange the array in descending order using nested loop operation.
8. Write an ALP to reverse a string.
9. Write an ALP to concatenate two different strings.
10. Write an ALP to find whether the given string is palindrome or not.
11. Write an ALP to Display Messages using Macros.
12. Write an ALP to add/subtract two 16 bit numbers using Procedure.

Part B

1. Write an ALP to interface 8086 to a logic controller and check for odd or even parity.
2. Write an ALP to interface stepper motor to 8086 using 8255 Interface controller:
   I. Rotate the motor in Clock-wise direction.
   II. Rotate the motor in Anti-clock-wise direction.
3. Write an ALP to interface DAC to 8086 to generate waveforms:
   I. Square waveform.
   II. Triangle waveform.

Note: Out of the exercises executed in the regular laboratory classes, each student will be allotted one question from Part A and one question from Part B, by blind pick during SEE, and to be executed individually.

COURSE DESCRIPTION

This course introduces students with various data structures and their implementation.

PREREQUISITES

- Students should have basic knowledge of C programming constructs and should be able to write basic C programs

COURSE CONTENTS

Sl No	List of Programs	CO Mapping
1.	• Find sum of N numbers. Allocate the memory dynamically to the numbers. • Find the following for a matrix. Use the concept of pointer to 2D array. • Sum of principal diagonal elements • Sum of secondary diagonal elements iii)sum of all elements	CO1
2.	Using array of pointer concept • Find product of two Matrices • Sort n names in alphabetical order	CO1
3.	Implement and demonstrate the following C functions using pass-by- reference method. i) strCopy( ) ii)strConcat() iii)strcomp() iv)strrev()	CO1
4.	Define an EMPLOYEE structure with members Emp_name, Emp-id, Dept-name and Salary. Read and display data of N employees. Employees may belong to different departments. Write a function to find total salary of employees of a specified department. Use the concept of pointer to structure and allocate the memory dynamically to	CO1

	EMPLOYEE instances	
5.	• Define a recursive factorial function. Evaluate the following series for N terms using a function which takes x in degrees and a pointer to factorial function as parameters. Sin(x)=x-x^3/3!+ x^5/5!- .... • To copy the contents of one file to another, taking file names as command line arguments. Display the contents of target file on the screen.	**CO2**
6.	Write a C program to convert and print a given valid parenthesized infix arithmetic expression to postfix expression. The expression consists of single character operands and binary operators + - * /. Apply the concept of stack data structure to solve this problem	**CO2**
7.	Write a C program to evaluate a valid postfix expression using stack. Assume that the postfix expression is read as a single line consisting of non-negative single digit operands and binary operators. The operators are + - * and /.	**CO2**
8.	Write recursive functions for the following and demonstrate their use. a)Binary Search b)Tower of Hanoi problem.	**CO2**
9.	A Call center phone system has to hold the phone calls from customers and provide service based on the arrival time of the calls. Write a C program to simulate this system using appropriate data structure. Program should have options to add and remove the phone calls in appropriate order for their service.	**CO3**
10.	Write a C program to simulate the working of a circular Queue of integers. Represent circular queue element as a structure and use array of structures as your implementation method. Start and end of the circular queue must be identified by an empty array element.	**CO3**
11.	Write a program to create a singly linked list that maintains a list of names in alphabetical order. Implement the following operations on the list. a. Insert a new name b. Delete a specified name	**CO4**
12.	Write a C program to maintain a stack of integers using linked implementation method.	**CO4**

13.	Write a C program to support the following operations on a doubly linked list. a)Insert a new node to the left of the node whose key value is read as an input. b)Delete a node with given data, if it is found otherwise display appropriate error message.	**CO4**
14.	Write a C program a)To construct a binary search tree (BST) of integers. b)To traverse the tree using inorder, preorder and postorder traversal methods	**CO5**
15.	A list of unordered numbers is given in a file. The file may have duplicate numbers. Read the numbers from the file construct a binary tree of these numbers and display the numbers in ascending order.	**CO5**

ASSESSMENT METHODS

Parameter	**Marks**
Two internals,(Average of two)	15
Lab Record Writing	10
Surprise Test	10
Continuous Evaluation	10
Viva	5
Total	**50**
Final Exam will be conducted for 100 marks(SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

CO	**Description**	**Bloom's Level**
CO 1	Design and implement C programs on structures, unions, pointers, dynamic memory allocation functions and command line arguments	**L3**
CO 2	Simulate stack and queue operations and implement its applications	**L3**
CO 3	Develop C programs on linked list and its variations	**L3**
CO 4	Construct C programs on Binary search tree and its applications	**L3**
CO 5	Understand the applications of data structure in real time	**L2**

COURSE DESCRIPTION

This course makes students be able to demonstrate programming proficiency using the various logical elements to design practically motivated logical UNITs. Wirte different logical elements, to analyze and demonstrate timing diagrams of the UNITs modeled. Analyze half wave and full wave rectifier. Design clipper clamper circuits.

PREREQUISITES

- Satisfactory completion of understanding of basics of physics course on electricity.
- Ability to describe and transform the simple logical equations.
- Ability to perform simple jobs in wiring logical elements.
- Ability to use a computer to prepare written reports and to perform basic data reduction, graphing, and engineering data presentation.

COURSE CONTENTS

PART A			
1.	Design a circuit for Conversion of BCD to Excess - 3 code	CO1	L5
2.	Design a circuit for realizing the given Boolean Function using MUX	CO 2	L5
3.	Design Asynchronous decade counter and mod n counter.	CO1	L4
4.	Design a Ring Counter and Johnson counter and test the working of both	CO1	L3
5.	Implement a sequence generator and verify the output	CO1	L3

PART B			
1	Design half wave rectifier. Determine ripple factor.	CO4	L5
2	Design full wave rectifier. Determine ripple factor.	CO4	L5
3	Design and implement voltage follower, inverting amplifier and non- inverting amplifier using Op-Amp.	CO4	L5
4	Construct CLIPPER circuits and verify its working.	CO4	L5
5	Construct CLAMPER circuits and verify its working.	CO 4	L5

Note: Out of the exercises executed in the regular laboratory classes, each student will be allotted one question from Part A and one question from part B

ASSESSMENT METHODS

Parameter	Marks
Internals	15
Record and Observation	15
Viva	5
Continuous evaluation	5
Problem solving	10
Total	**50**
Final Exam will be conducted for 100 marks(SEE	

COURSE OUTCOMES

COs	Description	Bloom's Level
CO 1	Implement BCD to excess 3 convertor , synchronous counter , asynchronous counter and ring counter	**L3**
CO 2	Design and implement Comparator, multiplexer, demultiplexer and decoder	**L3**
CO 3	Determine ripple factor for half wave and full wave Rectifier	**L5**
CO 4	Make use of Op-amp to construct Inverting , non-inverting , Clipper and clamper circuits.	**L3**
CO 5	Develop D\A converter	**L3**

COURSE DESCRIPTION

This course introduces students with the basics, applications and importance Numerical methods, Random variables, Standard distributions, Sampling and Apply Hypothesis testing

PREREQUISITES

- Basics of Mathematics, Mathematics III

COURSE OBJECTIVES

To understand the basics, applications and importance Numerical methods, Random variables, Standard distributions, Sampling and Apply Hypothesis testing

COURSE CONTENTS

UNIT – I **8 Hours**

Solution of ODE- Taylor's series method, 4^{th} order Runge - Kutta method, Milne's predictor and corrector method.

Solution of PDE – Schmidt method to solve heat equation, explicit method for wave equation, Numerical solution of Laplace equation.

UNIT – II **8 Hours**

Eigen values and Eigen vectors- Largest eigen value by Power method, Rutishauser's method Jacobi method for symmetric matrices, Given's and House Holder's method to reduce symmetric matrix to tridiagonal matrix.

UNIT – III **10 Hours**

Random variable: discrete and continuous, probability distribution- discrete and continuous, probability density function, cumulative density function, mean and variance, expectation.

Joint distribution: discrete and continuous, marginal distribution, expectation, covariance, rank correlation.Binomial, Poisson, Normal distribution.

UNIT – IV **8 Hours**

Sampling theory: Population and sample, sampling with and without replacement, sampling distribution of means, sample variance. Unbiased estimate, reliability, confidence intervals for mean statistical hypothesis, testing of hypothesis, Type I and II errors, one tailed, two tailed tests, test for significance level of large and small samples, t - test, χ^2 – test for goodness of fit.

UNIT-V **8 Hours**

Calculus of Variation: Introduction, Functional, Euler's equation, Solution to Euler's equation, geodesics, isoperimetric problems, Rayleigh Ritz method, Galerkin's method, Hamilton's principle.

TEXT BOOKS

1. Numerical methods for scientific and engg. Computation, 6th edition, by M K Jain, S R K Iyengar, R K Jain, New age, 2012.
2. Introductory methods of numerical analysis, by S SSastry, PHI India.
3. Probability and statistics, by Murray R Spiegel, J Schiller, R AluSrinivasan, Schaum's outline series, second edition
4. Higher engg. Mathematics by Dr. B S Grewal (42nd edition), Khanna publications 2012.

REFERENCE BOOKS

1. Numerical algorithm by Krishnamurthy and Sen, EWP, 2007.
2. Probability and statistics for Science and Engg. By G ShankerRao, Univ Press, 2011

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two)	30
Surprise test / Tutorials tests	10
Quiz/ assignment based on practical application	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course students will be able to :

COs	Description	Bloom's Level
CO 1	Understand Concepts of Numerical methods and apply to problem solving, finding Eigen values, solving ODE and PDE	**L2, L3**
CO 2	Model Physical situations and solutions can be obtained by Numerical methods	**L4**
CO 3	Apply Concepts of random variables, probability distributions and sampling to problem solving.	**L3**
CO 4	Test Probability distributions of hypothesis of testing and model situations arising in analysis of data	**L2**
CO 5	Apply the concept of functional and variational.	**L3**

SEE Marks: *50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course introduces basic methods for the design and analysis of efficient algorithms emphasizing methods which are useful in practice. The computational problems for sorting, searching, Divide and Conquer, dynamic programming and greedy algorithms, graph algorithms string matching, Backtracking, Branch and Bound, NP completeness are discussed.

PREREQUISITES

- Students should have knowledge of C or C++ language
- Students should know data structures
- Students should know the usage of summation formulae and recurrences in mathematics

COURSE OBJECTIVES

- To understand the basic concepts and notations used in the design and analysis of algorithms.
- To provide theoretical background in the design and analysis of major classes of algorithms.
- To solve problems using appropriate algorithms.
- To analyze and compare the performance of algorithms.

COURSE CONTENTS

UNIT - I **7 Hours**

Introduction: What Is an Algorithm? Fundamentals of Algorithmic Problem Solving, Fundamentals of the Analysis of Algorithm Efficiency: The Analysis Framework, Asymptotic Notations and Basic Efficiency Classes, Mathematical Analysis of Non recursive Algorithms, Mathematical Analysis of Recursive Algorithms, Example: Computing the nth Fibonacci number,

UNIT - II **8 Hours**

Brute Force and Exhaustive Search: Selection Sort and Bubble Sort, Sequential Search and Brute-Force String Matching, Depth-First Search and Breadth-First Search, Exhaustive Search.

Decrease-and-Conquer: Insertion Sort, Topological Sorting, Decrease-by-a-Constant-Factor Algorithms – Binary Search.

UNIT - III **8 Hours**

Divide and Conquer: Mergesort, Quicksort **Transform-and-Conquer:** Balanced Search Trees, AVL trees, 2-3 trees, Heaps and Heapsort, Input Enhancement in String Matching, Horspool's Algorithm, Hashing.

UNIT - IV **8 Hours**

Dynamic Programming: The Knapsack Problem and Memory Functions, Warshall's and Floyd's Algorithms, Greedy technique**:** Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm, Huffman Trees and Codes.

UNIT - V **8 Hours**

Iterative Improvement: The Maximum-Flow Problem, Limitations of Algorithm Power**:** P, NP, and NP-Complete Problems, Coping with the Limitations of Algorithm Power**:** Backtracking - n-Queens Problem, Subset-Sum Problem, Branch-and-Bound -Knapsack Problem

Note: For SEE, students should answer five questions, selecting at least one question from each unit.

TEXT BOOKS

1. AnanyLevitin, "Introduction to the Design & Analysis of Algorithms", 3rd Edition, 2011, Pearson education.
2. Horowitz E., SartajSahni S.,Rajasekaran S ,"Fundamentals of Computer Algorithms",, 2001, Galgotia Publications

REFERENCE BOOKS

1. H., Cormen, Charles E. Leiserson, Ronal L. Rivest, Clifford Stein Thomas,"Introduction to Algorithms", 2nd Edition, 2006, PHI.

TEACHING METHODS

- Lectures interspersed with discussion
- Power Point Presentations
- Problem Based Teaching
- NPTEL Course

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two)	30
Problem based Assignment	10
GATE based Tutorial Test	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

COs	Description	Bloom's Level
CO 1	Describe the concepts, methods and notations used in the design and analysis of algorithms	L2
CO 2	Design algorithms using brute force, decrease and conquer , divide and conquer approach, dynamic programming, greedy technique and Transform-and-Conquer methods	L5
CO 3	Apply the various problem solving methodologies to get solution to common engineering problems	L3
CO 4	Evaluate the performance of various algorithms.	L3
CO 5	Solve the problems based on Iterative Improvement method, the Maximum-Flow Problem. Use the space state tree to solve Queens, sum subset problems and knapsack problem.	L3

COURSE DESCRIPTION

This course provides an understanding of Database management systems. The course also provides the knowledge of ER-diagram design, Relational Algebra and RDBMS, SQL for querying the database and Normalization for the good database design.

PREREQUISITES

1. Students should know basics of Discrete Mathematics.
2. Students should know basic programming concepts.

COURSE OBJECTIVES

5. To understand the fundamentals of Relational database management systems.
6. To design database using ER-modeling, Normalization and querying the database using SQL.
7. To understand the fundamentals of transactions, locking mechanisms, database recovery.

COURSE CONTENTS

UNIT-I **9 Hours**

Database and Database Users: Introduction, Example, Characteristics of Database Approach, Actors on the Scene, Workers Behind the Scene, Advantages of Using the DBMS Approach, A Brief History of Database Application. Database System Concepts and Architecture: Data Models, schemas, and Instances: Three-schema architecture and Data Independence, Database Languages and Interfaces, The Database System Environment, Centralized and Client/Server Architecture for DBMS, Classification of Database Management systems. **Data Modeling Using the Entity-Relationship (ER) Model:** Using High - Level Conceptual Data Models for Database Design, An Example Database Application, Entity Types, Entity Sets, Attributes, and Keys, Relationship Types, Relationship Sets, Roles, and Structural Constraints, Weak Entity Types, ER Diagrams, Naming Conventions, and Design Issues.

UNIT-II **9 Hours**

The Relational Data Model and Relational Database Constraints: Relational Model Concepts, Relational Model Constraints and Relational Database Schemas, Update Operations, Transactions and Dealing with Constraint Violations. The Relational Algebra and Relational Calculus: Unary Relational

Operations: SELECT and PROJECT, Relational Algebra Operations from Set Theory, Binary Relational Operations: JOIN and DIVISION, Additional Relational Operations; Examples of Queries in Relational Algebra.

SQL: Schema Definition, Constraints, Queries, and Views: SQL Data Definition and Data Types, Specifying Constraints in SQL, Schema Change Statements in SQL, Basic Queries in SQL, More Complex SQL Queries, Insert, Delete and Update Statements in SQL, Specifying Constraints as Assertion and Trigger, Views (Virtual Tables) in SQL.

UNIT-III **9 Hours**

Introduction to SQL Programming Techniques: Database Programming: Issues and Techniques, Embedded SQL, Dynamic SQL, Database Stored Procedures and SQL / PSM. **Database Design Theory and Methodology:** Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys, General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.

UNIT-IV **6 Hours**

Transaction Processing Concepts: Introduction to Transaction Processing, Transaction and System Concepts, Desirable Properties of Transactions, Characterizing Schedules Based on Recoverability, Characterizing Schedules Based on Serializability, Transaction Support in SQL. **Concurrency Control Techniques: T**wo-Phase Locking Techniques for Concurrency Control, Concurrency Control Based on Timestamp Ordering. **Database Recovery Techniques:** The ARIES Recovery Algorithm. Introduction to NO SQL.

UNIT-V **6 Hours**

Application Design and Development: User Interfaces and Tools, Web Interfaces to Databases, Web Fundamentals, Servlets and JSP, Building Large Web Applications, Triggers, Authorization in SQL, Application Security.

Additional Concepts: ava Scripts/Node JS and Mongodb, JSON and XML
Reference: https://www.simplilearn.com/tutorials/nodejs-tutorial/nodejs-mysql

TEXT BOOKS

1. Elmasri and Navathe: Fundamentals of Database Systems, 7th Edition, Addison-Wesley, 2007
2. Silberschatz, Korth and Sudharshan: Data base System Concepts, 5th Edition, Mc-GrawHill, 2006.
3. Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill, 2003.

REFERENCE BOOKS

1. C.J. Date, A. Kannan, S. Swamynatham: A Introduction to Database Systems, 8th Edition, Pearson education, 2006.

TEACHING METHODS

1. Blackboard teaching
2. PowerPoint presentations (if needed)
3. Programming Assignments using SQL

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two)	30
Demonstration	10
Assignment	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course students will

COs	Description	Bloom's Level
CO 1	Have a broad understanding of database concepts, Understand the essentials of DBMS and its architectures, Design and Model a real time Scenario using ER-Modeling.	**L1**
CO 2	Convert entity relationship and convert entity relationship diagrams into RDBMS. Design Relational Algebra and SQL queries to analyze on the respective data.	**L3**
CO 3	Be able to design SQL commands to create tables and indexes, insert/ update/ delete data, and query data in a relational DBMS. Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database.	**L3**
CO 4	Illustrate the concepts of Transaction Management and Database Recovery Techniques.	**L2**
CO 5	Design and Develop database application using Java Servlets and MYSQL (Web/Windows).	**L4**

COURSE DESCRIPTION

This course provides an in-depth knowledge of Process, Threads and resource management.

PREREQUISITES

- Student should have prior basic knowledge on C, C++ and Data structures
- Student should have some basic knowledge on Unix Shell Programming and Windows.

COURSE OBJECTIVES

- To understand the basic functionalities of Operating System, Process and Threads.
- To understand the implementation of memory management and virtual memory.
- To analyze the usage of different Process and Disk scheduling.

COURSE CONTENTS

UNIT – I **10 Hours**

Introduction: What operating systems do; Operating System structure; Operating System operations; **Process Management:** Basic concept; Process scheduling; Operations on processes; Inter process Communication. **Multithreaded Programming:** Overview; Multithreading models; Thread Libraries; threading issues.

UNIT – II **11 Hours**

Process Scheduling: Basic concepts; Scheduling criteria; Scheduling algorithms; **Process Synchronization:** Synchronization, The Critical section problem; Peterson’s solution; Synchronization hardware; Semaphores; Classical problems of synchronization; Monitors.

UNIT – III **11 Hours**

Deadlocks: System model; Deadlock characterization; Methods for handling deadlocks; Deadlock avoidance; Deadlock detection and recovery from deadlock. **Memory Management Strategies:** Basic hardware, Logical Versus Physical Address Space Dynamic Loading; Swapping; Contiguous memory allocation; Paging; Structure of page table; Segmentation.

UNIT – IV **10 Hours**

Virtual Memory Management: Background; Demand paging; Copy-on-write; Page replacement: FIFO, Optimal, LRU Page replacement; Thrashing.

Implementing File System: File Access methods**,** File mounting, File system structure; File system implementation; Directory implementation; Allocation methods; Free space management

UNIT – V **10 Hours**

Secondary Storage Structures, Protection: Mass storage structures; Disk scheduling; **I/O Systems** I/O hardware, Application I/O interface, kernel I/O Subsystem **System Protection:** Goals of protection, Principles of protection, Domain of protection, Access matrix.

TEACHING METHODS

- Black Board/Power Point Presentations
- Programming Assignments
- NPTEL

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two)	30
Programming Assignments	10
Industry Case study	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course students will be able to :

COs	Description	Bloom's Level
CO 1	Define the components of Operating System and its applications.	**L1**
CO 2	Demonstrate the issues related to process management, synchronization Algorithms along with the cause and effect of deadlocks.	**L3**
CO 3	Identify the memory fragmentation problems and summarize the file system Management, I/O systems and protection in Operating System.	**L2**
CO 4	Compare and evaluate the performance of various disk scheduling algorithms, page replacement algorithms	**L3**
CO 5	Design and develop the algorithms for the rudimentary operating system in Windows/Linux Operating System	**L5**

COURSE DESCRIPTION

This course provides an in-depth knowledge of Object-Oriented application development using Java programming language. It discusses the programming concepts like multithreading, Interfaces, Exception Handling, GUI development and event Handling in JavaFX and, the advanced concepts like database connectivity and servlet deployment.

PREREQUISITES

- Student should have the prior knowledge of C++ and OOP Concepts
- Student should have the basic knowledge of Databases.

COURSE OBJECTIVES

- To understand the basic Object-Oriented features of Java.
- To understand and apply the concept of Interfaces and Exception Handling
- To develop Multithreaded Java Applications.
- To understand and implement applications with database connectivity and accessing web application.
- To develop and deploy Servlets in java.

COURSE CONTENTS

UNIT – I **10 Hours**

Introduction to Java:

Java Buzz words, Byte Code; Object oriented programming; First Simple Java program, Introducing Classes: Classes Fundamentals; Declaring Objects, Assigning Object Reference Variable; Introducing Methods; **A Closer Look at Methods and Classes**; Inheritance Basics- using Super; Creating Multilevel Hierarchy**,** when constructors are called, method Overriding, Dynamic Method Dispatch, Abstract classes, final with inheritance

UNIT – II **10 Hours**

Packages and Interfaces, Exception handling in Java: Packages, Access Protection, importing packages, Interfaces. Exception Handling Fundamentals, Exception types, uncaught Exception, using try and catch, multi catch clause, nested try catch, throw, throws, finally, creating your own exception subclasses.

UNIT – III **10 Hours**

Multi-Threaded Programming: Java Thread model, the main method, Creating thread, Thread priorities, Synchronization, Inter-thread communication.

Java database Connectivity (JDBC): Introduction, JDBC Driver types, Packages, Loading the JDBC Driver, Connect to Database, Creating and executing SQL Query.

UNIT – IV **11 Hours**

GUI Programming, Java Beans and Event Handling: Introducing JavaFx GUI Programming, Exploring JavaFx controls, Introducing JavaFX Menus, Java Beans with example programs.

Event Handling: Event handling mechanisms, The Delegation Event model.

UNIT – V **11 Hours**

Servlets: Introduction, Life cycle of servlets, Simple servlet program, Deployment of Servlet Application in to Tomcat, Javax.servlet and Javax.servlet.http packages, using cookies, session Tracking.

Note:

Course Project should be carried out on the following domains: ERP, Finance, Energy, Health, Insurance etc. A Report on the project and implementation has to be considered for internal assessment

TEXT BOOKS

1. Herbert Schildt, ―Java – The Complete Reference –, 9th Edition, 2014, Oracle Press.
2. Jim Keogh, ―J2EE – The Complete Reference, 2007, Tata McGraw Hill.

REFERENCE BOOKS

2. Stephanie Bodoff et al, ―The J2EE Tutorial, 2nd Edition, 2004, Pearson Education.
3. Head First Java, O‘Reilly Publication, 2005.

TEACHING METHODS

- Black Board/Power Point Presentations
- Demonstration of Applications through IDE using MySQL, Apache Tomcat Servers.

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two)	30
Programming Assignments	10
Rubrics for the evaluation of Course Project	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

COs	Description	Bloom's Level
CO 1	Apply the object oriented principles like Encapsulation, Abstraction inheritance and polymorphism to solve the real-world problems	**L3**
CO 2	Demonstrate with example the usage of Interfaces, packages and Exception handling	**L3**
CO 3	Implement multithreaded Java applications and Illustrate database access in Java.	**L3**
CO 4	Apply concepts of JavaFX for interactive UI development and event handling	**L3**
CO 5	Develop and deploy Java servlets	**L4**

COURSE DESCRIPTION

This course introduces students to SQL Queries and introduction to MongoDB.

PREREQUISITES

- Basic knowledge of databases, its usage.

COURSE CONTENTS

PART-A

1. Database Schema for a Student Library scenario

Consider that a database named **Student Library** is developed by an application software NMITSoft company. There are 4 tables in the database. Relationship scheme for the tables is as below:

Student(Stud_no : integer,Stud_name: string)
Membership (Mem_no: integer,Stud_no: integer)
Book (book_no: integer, book_name:string, author: string)
Iss_rec (iss_no:integer, iss_date: date, Mem_no: integer, book_no: integer)

For the above schema, perform the following—

a) Create the tables with the appropriate integrity constraints
b) Insert around 10 records in each of the tables
c) List all the student names with their membership numbers
d) List all the issues for the current date with student and Book names
e) Give a count of how many books have been bought by each student
f) Give a list of books taken by student with stud_no as 5
g) Create a view which lists out the iss_no, iss _date, stud_name, book name

2. Create a relational database schema for a Project, described by the following relations.

STUDENT (Rollno: integer, Name: String, Sem: integer, Degree: String, Contact no: integer, Guide_No: integer)

GUIDE (Guide_name: String, Guide_No: integer, Guide_reserach_domain: String, Contat_No: integer, Email_Id: String)
PROJECT (Project_No: Integer, Project_title: String, Project_Area: String, Start_dt, date, Guide_No: integer)
GROUP (Group_Code: integer, Roll_No:integer)

PROJECT_GROUP (Group_Code: integer, Project_No: integer, no_of_students:integer)

For the above schema, perform the following.

a) Create the tables with the appropriate integrity constraints
b) Insert around 10 records in each of the tables
c) Find the list of guide, who are guiding more than two student groups.
d) Find the list of project no, project name & name of guide, in domain of Data Base.
e) Update guide details of a roll no „110011", new guide is „Ram Mohan" & id„112200".
f) Remove the Guide details, guide no is "112211" and assign guide no "133113" to all respective students project group.
g) Create a view as student_project details that lists student name, project name and guide name

3. The following relations keep track of airline flight information:

Flights (flno: integer, from: string, to: string, distance: integer, departs: time, arrives: time, price: integer)

Aircraft (aid: integer, aname: string, cruisingrange: integer)
Certified (eid: integer, aid: integer)
Employees (eid: integer, ename: string, salary: integer)
Note that the Employees relation describes pilots and other kinds of employees as well; every pilot is certified for some aircraft, and only pilots are certified to fly.

For the above schema, perform the following.
a) Create the above tables by specifying primary keys and foreign keys.
b) Insert around 10 records in each of the tables.
c) Find the names of aircraft such that all pilots certified to operate them earn more than 80,000.
d) For each pilot who is certified for more than three aircraft, find the eid and the maximum cruising range of the aircraft that he (or she) is certified for.

e). Find the names of pilots whose salary is less than the price of the cheapest route from Los Angeles to Honolulu.
f) Find the second highest salary of an employee.
g) Create a view which lists out the eid, ename, aid, aname

4. **Consider a relational database schema for a Company database below.**

Employee (F_name: string, L_name: string, Emp_id:integer, Bdate: date, Address:string, Gender:string, Salary: integer, Super_Emp_id: integer, D_no: integer)
Department (D_name: string, D_no: integer, D_Mgr_id:integer, Mgr_start_date: date)
Dept_Location (D_no: integer, D_location:string)
Project (P_name: string, P_number:integer, P_location:string, D_no:integer)
Works_on (Emp_id: integer, P_no: integer, Hours: in)
Dependent(Emp_id:integer,Dependent_name:string,Gender:string,Bdate:date,Relationship:String

For the above schema, perform the following

a) Create the above tables by specifying primary keys and foreign keys.
b) Insert around 10 records in each of the tables.
c) Company decided to give a raise on salaries of every employee, working on the „ProductX" project by 10 percent
d) Find the names and address of all employees who work on same department.
e) List the name and address of all employees who work for the "Research" department.
f) Retrieve a list of employees and the projects they are working on, ordered by department and, within each department, ordered alphabetically by last name, then first name.
g) Create a view Dept_info that gives details of department name, Number of employees and total salary of each employee.

5. **Consider a relational database schema for a Sailors database below**

Sailors (sid: integer, sname: string, rating: integer, age: real);
Boats (bid: integer, bname: string, color: string);
Reserves (sid: integer, bid: integer, day: date).

For the above schema, perform the following.

a) Create the above tables by specifying primary keys and foreign keys.
b) Insert around 10 records in each of the tables.
c) Find the names of sailors who have reserved a red boat, and list in the order of age.

d) Find the names of sailors who have reserved boat 103
e) Find the name and the age of the youngest sailor.
f) Find the average age of sailors for each rating level that has at least two sailors.
g) Find the names and ratings of sailor whose rating is better than some sailor called Horatio.

Mongo DB Programs:

1. Consider the following restaurant database with the following attributes- Name, address- (building, street, area, pincode), id, cuisine, nearby landmarks, online delivery- yes/no, famous for (name of the dish)

Create 10 collections with data relevant to the following questions. Write and execute MongoDB queries:

i. List the name and address of all restaurants in Bangalore with Italian cuisine.
ii. List the name, address and nearby landmarks of all restaurants in Bangalore where north Indian thali is available.

2. Consider the following restaurant table with the following attributes- Name, address- (building, street, area, pincode), id, cuisine, nearby landmarks, online delivery- yes/no, famous for (name of the dish)

Create 10 collections with data relevant to the following questions. Write and execute MongoDB queries:

i. List the name, address and nearby landmarks of all restaurants in Bangalore where Indian thali is available.
ii. List the name and address of restaurants and also the dish the restaurant is famous in Bangalore.

3. Consider the following Tourist places table with the following attributes- place, address- (state), id, tourist attractions, best time of the year to visit, modes of transport (include nearest airport, railway station etc), accommodation, food- what not to miss for sure

Create 10 collections with data relevant to the following questions. Write and execute MongoDB queries:

4. List all the tourist places of Karnataka
5. List the places sorted state wise

4. Consider the following Movie table with the following attributes- Actor_name, Actor_id, Actor_birthdate, Director_name, Director_id, Director_birthdate, film_title, year of production, type (thriller, comedy etc).

Create 10 collections with data relevant to the following questions. Write and execute MongoDB queries:

i. List all the movies acted by John in the year 2018
ii. List only the actors name and type of the movie directed by Ram.

5. Consider the following Movie table with the following attributes- Actor_name, Actor_id, Actor_birthdate, Director_name, Director_id, Director_birthdate, year of production, type (thriller, comedy etc).

Create 10 collections with data relevant to the following questions. Write and execute MongoDB queries:

ii. List all the movies acted by John and Elly in the year 2012

iii. List only the name and type of the movie where Ram has acted sorted by movie names.

Part B

1. Execution of Mini-Project for a Specific DB related project using HTML and MySQL only.

Note: Part-A carries 40 marks and Part-B carries 10 Marks for the SEE.

ASSESSMENT METHODS

Parameter	Marks
Experiment Write up + Execution + Viva	15
Lab Record Writing	10
Lab Internals Test	10
Mini Project	10
Mongo DB execution test	05
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

Cos	Description	Bloom’s Level
CO 1	Analyze given schema of a database	**L4**
CO 2	Populate and query a database using MySQL DML/DDL commands and complex SQL queries	**L2**
CO 3	Create and execute Queries using Mongo DB	**L3**
CO 4	Implement Mongo DB concepts using Basic Operations such as insert, delete, update, and retrieve.	**L4**
CO 5	Design and implement a database application.	**L5**

COURSE DESCRIPTION

The course Design and Analysis of Algorithms Lab is designed to introduce basic methods for the design and analysis of efficient algorithms emphasizing methods which are useful in practice. The computational problems include sorting, searching, Divide and Conquer, dynamic programming and greedy algorithms, graph algorithms string matching and Branch and Bound. It also Strengthens the ability to identify and apply the suitable algorithm for the given real-world problem.

PREREQUISITES

- Basic Programming Skills
- Knowledge on data Structures

COURSE CONTENTS

Sl. No.	**LIST OF PROGRAMS**	CO/PO
	PART- A	
1.	"Medplus" is a medical store which needs to maintain medicine detail like medicine ID. Each medicine is identified by the medicine ID. Design a program in C to read the medicine provided in the prescription and search the medicine based on its ID by using linear search method and display the relevant message whether the medicine is available or not in the store. Determine the time required to search for medicine. Repeat the experiment for different values of n and plot a graph of the time taken versus n.(n=no of elements).	CO1/1,4
2.	"Cineplix" a multiplex theatre needs to maintain the details of the seat no in ascending order and display the same to the user. Design and develop a program in C to sort the seat numbers by using bubble sort algorithm, Determine the time required to sort the seat numbers. Repeat the experiment for different values of n and plot a graph of the time taken versus n.(n=no of elements).	CO1/1,4
3.	"Cox and kings" a tourism company needs a better way to travel, in particular it should be easy to plan an optimal route through multiple destinations. Design and develop a program in C for traveling salesman problem and repeat the experiment	CO1/1,4

	for different values of n and plot a graph of the time taken versus n (n=no of cities).	
4.	Digital maps, unlike humans, see cities as a bunch of nodes. We (humans) consider this map as a single entity. a GPS navigation or any other digital map divides it into hundreds of segments, with some only 24 meters long. A map displays n cities and their distances. Design and develop a program in C to print all the cities reachable from a given starting city in a digraph by using BFS method. Repeat the experiment for different values of n and plot a graph of the time taken versus n(n=no of nodes)	CO1//1,4
5.	An **island** is surrounded by water and is formed by connecting adjacent lands horizontally or vertically. You may assume all four edges of the grid are all surrounded by water. Given an m x n 2D binary grid which represents a map of '1's (land) and '0's (water), return *the number of islands* using DFS algorithm. Design and develop a program in C to print all the lands reachable from a given starting land in a digraph by using DFS method. Repeat the experiment for different values of n and plot a graph of the time taken versus n(n=no of nodes)	CO1/1,4
6.	"Digishop" a online shopping website needs to keep track of the product availabilitybased on the product ID. Design a program in C to read the product ID provided by the customer and search for it's availability by using Binary search method and display the relevant message whether the product is in stock or not. Determine the time required to search for the product. Repeat the experiment for different values of n and plot a graph of the time taken versus n. (n=no of elements).	CO2/1,4,9
7.	"Aircel" a mobile network company need to maintain the telephone numbers of its customer in order to call and inform them about the new year offer. They have to sort the contact numbers in ascending order to keep track of the customers whom they called. Design and develop a program in C to sort the phone numbers by using insertion sort algorithm, Input should be generated randomly. Determine the time required to sort the elements. Repeat the experiment for different values of n and plot a graph of the time taken versus n. (n=no of elements).	CO2/1,4,9
8.	"Deloit", a software company needs to maintain its employee details like employeeid, name, address in a record, design and develop a program in C to sort the employee records based on their employee ID by using merge sort algorithm, employee ID should be generated randomly. Determine the time required to sort the elements. Repeat the experiment for different values of n and plot a graph of the time taken versus n. (n=no of elements).	CO2/1,4,9

9.	Assume that NMIT college needs to maintain the student details like USN, name, and contact details in a record. USN should be generated randomly. Design and develop a program in C to sort the records based on USN by using quick sort algorithm, Determine the time required to sort the roll numbers. Repeat the experiment for different values of n and plot a graph of the time taken versus n. (n=no of elements).	CO2/1,4,9
	PART-B	
10.	"Sunshine" a job search portal is looking for engineering graduates, they need to sort the candidate's resume based on their ranking(Average Percentage). Ranking should be generated randomly. Design and develop a program in C to sort the resumes by using heap sort algorithm. Determine the time required to sort the elements. Repeat the experiment for different values of n and plot a graph of the time taken versus n.(n=no of elements).	CO3/1,4,9
11.	Consider the problem of searching for genes in DNA sequences using Horspool's algorithm. A DNA sequence is represented by a text on the alphabet {A, C, G, T}, and the gene or gene segment is the pattern. A gene segment of your chromosome 10 has the pattern TCCTATTCTT . Design and develop a program in C to locate the above pattern in the following DNA sequence by applying Horspool's algorithm. TTATAGATCTCGTATTCTTTTATAGATCTCCTATTCTT. Also compute the number of comparisons using this method as compared to linear search method	CO3/1,4,9
12.	A medical representative has to visit n cities to market a medicine. There are n cities numbered from 0 to n-1. Given the array edges where edges[i]=[from$_i$, to$_i$, distance$_i$] represents a bidirectional and weighted edge between cities from$_i$ and to$_i$, Design and develop a program in C to compute the transitive closure of the given directed graph using Warshall's algorithm. Repeat the experiment for different values of n(cities) and plot a graph of the time taken versus n (n=no of nodes).	CO4/1,4,9
13.	There have been a number of fire outbreak cases recorded in the Florida area that has brought about loss of lives to inhabitants and loss of properties. Some routes within the district can be reconstructed into shortcut routes, so that fire man can traverse through the district in order to prevent fire incidents. The objective is to find the minimum distance and shortest path from the fire station to all the residential layout in Florida area. Write an algorithm by applying Floyd's method to find the solution for the given scenario.	CO4/1,4,9
14.	DMART is providing special offer to its customer on New Year's Eve. Customers can buy anything they want with flat80% discount, but the products they buy should fit into the basket provided by DMART. The objective is to collect the expensive products which fit into the given basket and overall weight of the basket cannot exceed 15kg.Write an algorithm by using knapsack algorithm using dynamic programming to	CO4/1,4,9

	find the best subset for the given scenario.	
15	You have a business with several offices; you want to lease phone lines to connect them up with each other, and the phone company charges different amounts of money to connect different pairs of cities. You want a set of lines that connects all your offices with a minimum total cost. Write an algorithm by applying Prim's method to find the minimum spanning tree for the given scenario	CO4/1,4,9
16.	Bangalore Water supply Board responsibility is to distribute water evenly among all the areas in Bangalore city. A new layout has been developed by Maxworth real estate developers. BWSB should connect the water lines to the new layout with minimum cost. The objective is to connect the water pipes so that it reaches all the houses in new layout with minimum cost. Write an algorithm by applying Kruskal's method to find the minimum spanning tree for the given scenario.	CO4/1,4,9
17.	DigiMap services is a module in G-Maps which is used to find the distance from one place to another or from your location to the nearest desired location. This requires the Shortest Path Algorithm, as there are various routes/paths connecting them but it has to show the minimum distance. . Represent a city/place with a vertex and the route between two cities/places as an edge, then by using Dijkstra's algorithm, find the shortest routes between any two cities/places or from one city/place to another city/place.	CO4/1,4,9
18.	Consider the *n*-queens puzzle in which the goal is to place *N* queens on an *N*×*N* chessboard such that no two queens attack each other. A queen can attack horizontally, vertically, or diagonally. Given an integer *N*, return all distinct solutions to the *N*-queens puzzle. Note: Use Backtracking technique.	CO5/1,4,9
19.	Consider the Subset sum problem in which the objective is to find subset of elements that are selected from a given set whose sum adds up to a given number K. Assume the set contains non-negative values and also the input set is unique (no duplicates are present.). Design and develop a program in C to find the subset of a given set whose sum is equal to a positive integer K and display an appropriate message if the given problem instance does not have the solution. Note : Use Backtracking method.	CO5/1,4,9

ASSESSMENT METHODS

Parameter	Marks
Continuous Internal Evaluation	25
Lab Test	20

Gate Based Test	05
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

COs	Description	Bloom's Level
CO 1	Understand, analyze the asymptotic notations and design the algorithms using brute force and exhaustive search methods.	**L2**
CO 2	Design and analyze the algorithms using decrease & conquer, divide & conquer methods.	**L5**
CO 3	Design and analyze the algorithms using transform & conquer space& time tradeoff methods.	**L4**
CO 4	Design and analyze the algorithms using dynamic programming & greedy Technique methods.	**L4**
CO 5	Understand and analyze the iterative improvement, limitations of algorithm power and coping with limitations of algorithm power.	**L2**

Course Content for IV-Semester Program Elective – A

Department: *Computer Science and Engineering*	***Course Type****: Program Elective – 1*
Course Title*: Introduction to Embedded Systems.*	***Course Code****: 18CSE461*
L-T-P: *3-0-0*	***Credits****:03*
Total Contact Hours*: 42 Hours*	***Duration of SEE****: 3 Hours*
SEE Marks*:50*	***CIE Marks****: 50*

COURSE DESCRIPTION

In this course, the fundamentals of embedded system hardware and firmware design will be explored. Learning may be supplemented with periodic guest lectures by embedded systems engineers from industry. Depending on the interests of the students, other topics may be covered.

PREREQUISITES

- Excellent understanding of Digital and Electronics.
- Good to intermediate level of understanding of Basics of Analog Electronics.
- Good C Programming skills.
- Understanding of at least one Micro-controller or Micro-processor.

COURSE OBJECTIVES

This course will enable students to

1. Provide a general overview of Embedded Systems
2. Show current statistics of Embedded Systems
3. Design, code, compile, and test real-time software
4. Integrate a fully functional system including hardware and software.

- To introduce the Arduino Embedded-C Concepts
- To learn the Interfacing the Sensors to the Arduino Board/Node MCU using the Arduino IDE.

COURSE CONTENTS

UNIT – I **08 Hours**

What is an Embedded System?, Embedded Systems vs. General Computing Systems, History of Embedded Systems, Classification of Embedded Systems, Major Application Areas of Embedded System.

Elements of an embedded systems, Core of the Embedded System, Memory Onboard communication interface (UART, SPI, and I2C).

UNIT – II **08 Hours**

Atmel Atmega328P microcontroller architecture, Differences between microprocessor and microcontroller, Importance of microcontroller in embedded system, Arduino platforms for programming: Simple programs to blink LEDs, Fade LED using analog Write (), Button Switch interface to Arduino UNO/Node MCU

UNIT – III **08 Hours**

Introduction to Embedded C Programming, Data types: byte, int, long, float, arrays. Structures: setup (), loop (), functions, {} curly braces,; semicolon, /*….*/ block comments, // line comments. Variables: variable declaration, variable scope. Arithmetic: compound assignments, comparison operators, and logical operators. Constants: true/false, high/low, input/output. Flow control: if, if else, for, while, do while.

UNIT – IV **08 Hours**

Introduction to Sensors and actuators, LED, Optocoupler, DHT111 Sensor, LDR, Tilt sensor, Soil Moisture Sensor, ultrasonic and infrared for obstacle.
Communication – Wireless Communication using Bluetooth and Wi-Fi.
Hardware Communication – GSM module and GPS module using UART.

UNIT-V **07 Hours**

Operating systems Basics, Types of OS, Real time OS Vs General purpose OS, Tasks, Process and Treads, Multiprocessing and Multitasking, Task Scheduling, Device drivers, How to choose an RTOS.

TEXT BOOKS

1. Shibu K V, Introduction to Embedded Systems, McGraw Hill Publication.
2. Frank Wahid, Tony Givargis, Embedded System Design: A Unified Hardware / Software, Wiley India

REFERENCE BOOKS

1. Julien Bayle, C Programming for Arduino, **PACKT** Publishing, 2013.
2. Raj Kamal, Embedded Systems: Architecture, Programming & Design, and TMH

TEACHING METHODS

- Black Board/Power Point Presentations
- Programming Assignments
- Practical demonstration using Arduino UNO/Node MCU, sensors and actuators.
- Tinkercad - Online tool to simulate the experiments virtually
- NPTEL

ASSESSMENT METHODS

Parameter	Marks
Three Internals (MSE) - (Average of best of two MSE's)	30
Learning Activity Assignment (LA) – Case study on a particular embedded application	05
Mini Project	15
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of course, Student will be able to:

COs	Description	Bloom's Level
CO 1	Describe and Analyze the Salient aspects of differentiation between Real time systems and Data Processing system	**L1**
CO 2	Design basic actuator using Arduino board/Node MCU using Embedded C	**L2**
CO 3	Develop functional data types, parameter data types, arithmetic and logical operators, loop, conditional statements and functions.	**L3**
CO 4	Interface sensors, actuators, Bluetooth model, and Wi-Fi module to a development board.	**L4**
CO 5	Work in Teams to design and demonstrate an embedded system applications to solve Real-time issues	**L5**

COURSEDESCRIPTION

This course provides knowledge in scripting languages javascript, php, node JS and Angular js. The course also provides the knowledge of how to use the scripting languages, HTML tags and CSS for developing web pages.

PREREQUISITES

- Students should have prior knowledge of web and internet usage.
- Students should have the prior knowledge of basic html tags.

COURSE OBJECTIVES

- To understand the use of HTML tags and cascading style sheets.
- To understand the basics of scripting languages javascript and its frame works, php, node Js and Angular Js
- To understand how to connect the scripting language with database.

COURSE CONTENTS

UNIT-1 **10 Hours**

FUNDAMENTALS OF WEB: A Brief Introduction to the Internet, the World Wide Web, WebBrowsers,WebServers,Ntierarchitecture,UniformResourceLocators Multipurpose Internet Mail Extensions, The Hypertext Transfer Protocol, Introduction to HTML/XHTML: Basic Syntax, Standard HTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, Syntactic Differences between HTML and XHTML, Cascading Style Sheets: Levels of Style Sheets, Style Specification Formats, Font, Properties Alignment of Text.

UNIT-II **10 Hours**

JAVASCRIPT: Basics, Overview of JavaScript, Object orientation of JavaScript, General Syntactic characteristics, Primitives, Operations and Expressions, Screen output and keyboard input, Control

Statements, Object creation and modification, Arrays, Functions, Constructor, Pattern matching using regular expressions, Errors in Scripts The JavaScript execution environment ,Handling events from the Body elements, Button elements, Textbox and Password elements.

UNIT-III **10 Hours**

PHP: Introduction to PHP, Origins and uses of PHP, Overview of PHP, General syntactic characteristics, Primitives operation and expressions, output, control statement, arrays,functions,patternmatching,formhandling,files,cookies,Database access with PHP & MySQL.

UNIT-IV **09 Hours**

JqueryandAjax: Introduction, Syntax, Selectors, jQuery effects, jQuery HTML, History of AJAX, Basics of AJAX, The form document, the request and response phase, cross-Browser support, return document forms, JSON, AJAX toolkits, security and AJAX

UNIT-V **09 Hours**

Angularjs: Introduction Angularjs, Basic Angularjs directives and controllers, working with ng-model, working with forms, Angular js services**. Node JS**: Introduction. Node js mudules, node js file system, URL module, node js events, upload files, Emails.

TEXT BOOKS

1. Robert W. Sebesta, Programming the World Wide Web-7thEdition, Pearson Education, 2015.
2. Shyam Sheshadri & Brad Green, Angularjs Up & Running O’Reilly Publications 2015 Second Release.

REFERENCE BOOKS

1. M. Dietel, P.J Deital, A.B.GoldBerg, Internet & World Wide Web How to Program– 5th Edition, Pearson Education, 2009
2. WebprogrammingBuildingInternetApplications–ChrisBates.
3. Stevens Holzner, Ajax a beginners guide, TATA MCGRAW SHILL, 2009
4. Professional Angularjs –Valerikarpo& Diego Netto.

TEACHING METHODS

- Lecture (Power Point presentations/ Blackboardteaching(ifneeded))
- Regularreviewofstudentsbyaskingquestionsbasedontopicscoveredintheclass
- Programming Assignments

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Self-Demonstration	10
Assignment	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOME

At the end of course, students will be able to:

COs	Description	Blooms Level
CO 1	Describe and use client-side technologies of the World Wide Web: HTML, XHTML. CSS, and JavaScript.	**L2**
CO 2	Design documents using markup languages and stylesheets. Apply of CSS, JavaScript.	**L5**
CO 3	Create dynamic web applications, client-side and server-side using PHP and MySQL.	**L4**
CO 4	Describe Selectors, jQuery effects, jQuery HTML, jQuery Ajax, Use Ajax to add server-side processing to a Web site.	**L2**
CO 5	Understanding the concepts of angular JS and node JS and able to develop web application.	**L1**

COURSE DESCRIPTION

This course gives the basic knowledge of Unix Operating System platform and API level introduction to concepts like files & directories, processes, System logging, signals and daemon process in the Unix. Students will learn basic c program execution environment and memory layout of it, and APIs for performing most of the unix command operations like creating file &directory, processes, generating signals etc. The subject also introduces accounting processes and types of users and privileges supported to the users.

PREREQUISITES

- Students should have knowledge of operating system and Unix Shell Programming

COURSE OBJECTIVES

- To understand the fundamental design of the UNIX operating system.
- To become fluent with the systems calls provided in the environment**.**
- To be able to design and build an application/service over the UNIX operating system

COURSE CONTENT

UNIT-I	**10 Hours**

Introduction: Unix Components/Architecture. Features of Unix. The UNIX Environment and UNIX Structure, Posix and Single Unix specification. General features of Unix commands/ command structure. Command arguments and options. Basic Unix commands such as echo, printf, ls, who, date,passwd, cal, Combining commands. Meaning of Internal and external commands. The type command: knowing the type of a command and locating it. The root login. Becoming the super user: su command.

Unix files: Naming files. Basic file types/categories. Organization of files. Hidden files. Standard directories. Parent child relationship. The home directory and the HOME variable. Reaching required files- the PATH variable, manipulating the PATH, Relative and absolute pathnames. Directory commands – pwd, cd, mkdir, rmdir commands. The dot (.) and double dots (..) notations to represent present and parent directories and their usage in relative path names. File related commands – cat, mv, rm, cp, wc and od commands.

UNIT-II **10 Hours**

File attributes and permissions: The ls command with options. Changing file permissions: the relative and absolute permissions changing methods. Recursively changing file permissions. Directory permissions. The shells interpretive cycle: Wild cards. Removing the special meanings of wild cards. Three standard files and redirection. Connecting commands: Pipe. Basic and Extended regular expressions. The grep, egrep. Typical examples involving different regular expressions. Shell programming: Ordinary and environment variables. The .profile. Read and readonly commands. Command line arguments. exit and exit status of a command. Logical operators for conditional execution. The test command and its shortcut. The if, while, for and case control statements. The set and shift commands and handling positional parameters. The here (<<) document and trap command. Simple shell program examples.

UNIT-III **10 Hours**

UNIX File APIs: General File APIs, File and Record Locking, Directory File APIs, Device File APIs, FIFO File APIs, Symbolic Link File APIs. UNIX Processes and Process Control: The Environment of a UNIX Process: Introduction, main function, Process Termination, Command-Line Arguments, Environment List, Memory Layout of a C Program, Shared Libraries, Memory Allocation, Environment Variables, setjmp and longjmp Functions, Process Control: Introduction, Process Identifiers, fork, vfork, exit, wait, waitpid, wait3, wait4 Functions, Race Conditions, exec Functions

UNIT-IV **11 Hours**

Overview of IPC Methods: Changing User IDs and Group IDs, Interpreter Files, system Function, Process Accounting, User Identification, Process Times, I/O Redirection. Overview of IPC Methods: Pipes, popen, pclose Functions, Coprocesses, FIFOs, System V IPC, Message Queues, Semaphores. Shared Memory: Client-Server Properties, Stream Pipes, An Open Server-Version 1, Client-Server Connection Functions.

UNIT-V **11 Hours**

Signals and Daemon Processes: Signals: The UNIX Kernel Support for Signals, signal, Signal Mask, sigaction, The SIGCHLD Signal and the waitpid Function, The sigsetjmp and siglongjmp Functions, Kill, Alarm, Interval Timers. Daemon Processes: Introduction, Daemon Characteristics, Coding Rules, Error Logging.

TEXT BOOKS

1. Sumitabha Das., Unix Concepts and Applications., 4thEdition., Tata McGraw Hill (Chapter 1,2 ,3,4,5,6,8,13,14)
2. W. Richard Stevens: Advanced Programming in the UNIX Environment, 2nd Edition, Pearson Education, 2005 (Chapter 3,7,8,10,13,15)
3. Unix System Programming Using C++ - Terrence Chan, PHI, 1999. (Chapter 7,8,9,10)

REFERENCE BOOKS

1. M.G. Venkatesh Murthy: UNIX & Shell Programming, Pearson Education.
2. Richard Blum , Christine Bresnahan : Linux Command Line and Shell Scripting Bible, 2ndEdition,

DELIVERY METHODS

- Lecture (Power Point presentations/ Black board teaching (if needed))
- Regular review of students by asking questions based on topics covered in the class Programming Assignments

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Programming Assignment	10
Quiz	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of this course students will be able to:

COs	Description	Bloom's Level
CO 1	Explain Unix Architecture, File system and use of Basic Commands	**L4**
CO 2	Illustrate Shell Programming and to write Shell Scripts	**L3**
CO 3	Categorize, compare and make use of Unix System Calls	**L2**
CO 4	Learn process to process communication within a system and between the systems	**L2**
CO 5	Build an application/service over a Unix system.	**L4**

COURSE DESCRIPTION

Introduction to theories, algorithms and practical solutions of digital image perception, acquisition, quantization, enhancement, filtering, restoration, analysis, feature extraction, segmentation and morphological transform.

PREREQUISITES

- Fundamental Knowledge of Mathematics

COURSE OBJECTIVES

This course will enable students to

- Explain image fundamentals and mathematical transforms necessary for image processing and to study the image enhancement techniques.
- Demonstrate the image filtering and restoration techniques.
- Demonstrate the image segmentation and representation techniques.
- How image are analyzed to extract features of interest.

COURSE CONTENTS

UNIT - I **8 Hours**

What is a Digital Image? Digital Image Representation; Image Processing, Image Analysis and Image Interpretation, Basic Elements of a Digital Image Processing System; Fundamentals Steps in Digital Image Processing, Image Sensing and Acquisition; Single Sensor; Line Sensor and Array Sensor, Image Formation; Sampling and Quantization, Image Zooming and Shrinking; Digital Image Resolution and Storage; Convolution, Basic relationship between pixels, Histogram Characteristics

UNIT-II **6 Hours**

Image Enhancement in Spatial Domain

Definition, Characteristics, Applications, Categories of Enhancement Methods, Basics of Intensity Transformation and Spatial Filtering, Point Processing, Mask or Neighborhood Processing; Contrast Stretching, Grey Level Slicing, Bit Plane Slicing Histogram Based Image Enhancement: Histogram Equalization,*****Local Enhancement Methods

UNIT - III **10 Hours**

Basics of Spatial Filtering

Linear and Non Linear Spatial Filters, Image Averaging Filter, Mean Filter, Median Filters, Mid-range Filter, Trimmed Mean Filter, Max-Min Filter, Min-Max Filter, Edge Preserving Smoothing Filters, Sharpening Spatial Filters.

Image Restoration: A Model of the Image Degradation/ Restoration Process; Noise Models- Gaussian noise, Rayleigh noise, Erlang (gamma) noise, Exponential noise, Uniform noise, Impulse (salt and pepper) noise; Restoration in the presence of Noise – Spatial Filtering; Periodic Noise Reduction by Frequency Domain Filtering

UNIT IV **6 Hours**

Edge Detection

Mathematical Foundation: First Order and Second order Derivative; Definition of Few Terms, Edge Models: Step, Ramp and Roof Edge; Algorithms - Robert, Sobel, Prewitt, Laplacian; Compass Gradient Mask – Prewitt, Sobel, Laplacian. **Segmentation: Region Based Segmentation, Mean Shift Segmentation. Thresholding:** Manual and Automatic Thresholding;

UNIT V

Feature Extraction **9 Hours**

Introduction, Representation- Boundary, Thinning; Topological Attributes- Connectivity Number, Component Labelling, Component Counting; Geometrical Attributes- Perimeters, Diameter of the Enclosing Circle, Area, Slope,Curvature and Straightness; Convexity, Spatial Moments

TEXT BOOKS

COURSE DESCRIPTION

This course is intended to provide students with the skills required to to design software artifacts by using Latest technologies to create Windows Forms applications in C# by using the .NET Framework, Perl for processing text, MATLAB for doing numerical analysis, Android Frameworks for designing Mobile Apps.

PREREQUISITES

Prior knowledge in programming, Basics of Linear Algebra, Numerical Techniques.

COURSE OBJECTIVES

- Introduce to the software MATLAB for numerical computations
- Develop correct, well-documented programs using the C# programming language
- Learn to use Windows Forms and WPF to create GUI-based programs.
- Understand the syntax and semantics of the Perl language.
- Learn fundamentals of Android programming using the Android SDK.

COURSE CONTENTS

UNIT – I **7 Hours**

Numerical Analysis: MATLAB for numerical programming: Basics of Programming using MATLAB, Getting Started, Scripts, Variables, Data Types, Conditional program flow, Iteration / Looping, Array operations, Functions, Basic Plotting.

UNIT – II **8 Hours**

Introduction to .Net Framework: Microsoft's .Net, .Net Framework, C#, Simple Application in C#, Literals, Variables and Data Types, Formatting Text, Console.write, Console.writeline, Operators and Expressions, decision making & Branching, Strings, Control Statements, Arrays, Structures and Enumerations

UNIT – III **8 Hours**

Graphical User Interface with Windows Forms: Windows forms, event handling, Control properties and layout, labels, textboxes, buttons, checkbuttons, radiobuttons, picture boxes, mouse event handling, Keyboard event handling, examples, Menus, Monthcalendar control, Datetimepicker control, linklabel, list box, Combox, Checkedlistbox, Treview, listview and Tabcontrol control, Multiple Document Interface (MDI), examples.

UNIT – IV **8 Hours**

Scripting Language: Perl Scripting: Origins and uses of Perl, Scalars and their operations, Assignment statements and simple input and output, Control statements, Fundamentals of arrays, Hashes, References, Functions, Pattern matching, File input and output; Examples. The Common Gateway Interface; CGI linkage; Query string format; CGI.pm module; a survey example; Cookies. Database access with Perl and MySQL.

UNIT – V **8 Hours**

Mobile Application Development: Introduction to Mobile Apps, getting started with Android Application Development, Your First App, Deploying your App to a Phone, Extending App- Buttons, Toast, Building Custom UI using XML and logs, Deploying App to Google Play store.

TEXT BOOKS

1. Laurene Fausett, Numerical Methods using MATLAB, 2nd Edition. Prentice-Hall, Inc.
2. P. Deitel, H. Deitel, Visual C# 2012 How to Program, 6/e, Pearson, 2016.
3. Randal L, "Learning Perl", O'Reilly, 6th Edition.
4. Dawn Griffiths, Head First Android Development: A Brain-Friendly Guide, O'Reilly, 2nd Edition

TEACHING METHODS

1. Lecture (PPT).
2. Hands-on-Session using MATLAB, .net framework, Perl Scripting, Android SDK software tools.
3. Seminars.

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Programming Assignment	10
Seminar	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

COs	Description	Bloom’s Level
CO 1	Learn the basics of programming in general and programming MATLAB in particular	**L1**
CO 2	Understand the fundamentals of C# and .Net framework.	**L2**
CO 3	Develop the Windows Forms and apply user controls in Windows Forms applications and Multiple Document Interface (MDI).	**L4**
CO 4	Understand the syntax and semantics of the Perl language	**L2**
CO 5	Learn the basics of Android platform and get to understand the application lifecycle and Communication Skills through Seminar.	**L1**

CENTRE FOR ROBOTICS RESEARCH

Department: *Computer Science and Engineering*	***Course Type:***
Course Title: *Robotics Engineering-LEGO Mindstorm & Tetrix*	***Course Code:*** 18CSO39/49
L-T-P: *2-0-3*	***Credits:*** *03*
Total Contact Hours: *60Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks: *50*	***CIE Marks:*** *50*

PREREQUISITES

- Students should have knowledge of Elements of Mechanical, Basics of Electrical & Electronics Engineering and Computer Concepts &‘C’ Programming

COURSE OBJECTIVES

1. To create a true **multidisciplinary learning** environment by bringing students & faculty members together from different engineering disciplines.
2. To provide **Hands-on & Minds-on** training to students on Robotics using LEGO MINDSTORMS, TETRIX & ROBOTC.
3. To indulge students in **active learning** to foster their **creativity & ingenuity**.
4. To inculcate the research culture among young engineering students by encouraging them in **exploration & experimentation**.
5. To reinforce **STEM** (**S**cience **T**echnology **E**ngineering **M**athematics) education among students.

COURSE CONTENTS

UNIT – I **17 Hours**

Mechanical Design: Introduction to Robotics, LEGO Mindstorms, TETRIX, RobotC, Part Identification, Speed/Velocity, Power, Torque, Friction, Traction, DC & Servo Motors, Role of Mechanical Elements such as Linkages, Joints, Structure, Kinematic Pairs, Mechanisms, Degrees of Freedom, Mechanical Power Transmission (Gear & Belt Drives), Drive Train Design. Interfacing Motors to NXT, Basic Motor Control using RobotC, Simple Problems & Building Challenges.

UNIT- II **15 Hours**

Mechanical Design: Introduction to Control system, Open & Closed loop, Microprocessors, Microcontrollers, Difference between Microprocessor & Microcontroller, NXT Brick & TETRIX Hardware Architecture, Interfacing the I/O devices with NXT Brick, System Response-Transient & Steady State, Proportional-Integral-Differential (PID) Control, Encoders, Position & Velocity Control, Sensors: Introduction to measurement system, Mechanical Switches, Light Sensors, Ultrasonic Sensors, Interfacing

Sensor with NXT & Control using Robot C. Simple Challenges Involving Position/Velocity Control & Sensors

UNIT- III **8 Hours**

Advanced Programming: Advanced ROBOTC Syntax with respect to Robot Movement, Advanced Sensing Concepts, Display, Variables & Functions, Programming Challenges

UNIT - IV **8 Hours**

Computer Vision, Machine Learning, AI and ANN: Image Processing to Computer Vision; Image and Video - Processing, Analysis and Interpretation; Machine Learning and Robotics; Artificial Intelligence and Neural Network for Robotics, Introduction to Internet of Robotic Things (IORT)

UNIT V **12 Hours**

Mini Project: Introduction to Project Management, Design & Development of application based robots using LEGO Mindstorm NXT and TETRIX, Students should be encouraged to come up with their own problem statement and solve it to foster their creativity. (Note: More weightage is given to indigenous design developed by students). Each Group is required to give a brief report & presentation on their project at the end of the completion of their project.

TEXT BOOK& REFERENCES

For UNIT I & II

1. Theory of Machines and Mechanisms By John Joseph Uicker, G. R. Pennock, Joseph Edward Shigley, Oxford University Press.
2. “Mechatronics” – W.Bolton, Longman, 2Ed, Pearson Publications, 2007.
3. “Fundamentals of Robotics-Analysis and Control”, Schilling R. J., PHI, 2006
4. “Robotics, Control and Applications”, SaeedNiku.

For UNIT III to UNIT IV- Open Source-Can be downloaded from NET

5. LEGO MINDSTROM NXT-Getting Started (Link)
6. TETRIX- Getting Started (Link)
7. “ROBOTC for LEGO Mindstorms”- Developed by Carnegie Mellon University (Robotics Academy) (Link)

ASSESSMENT METHODS

Parameter	Marks
Mini-Project (UNIT V) (Evaluated using Rubrics: Design, Presentation, Viva-voce etc.)	15
Mid Semester Examination: Mini-Challenge (Group of 2)	15
Surprise Test (Individual)	10
Engineering Journal (Individual)	05
Viva Voce(Individual)	05
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

COs	Description	Bloom's Level
CO 1	Students will have the fundamental **knowledge** of Mechanical elements, DC & Servo Rotary Actuators, Basic control system, Sensors & Programming with respect to LEGO Mindstorms, TETRIX and RobotC.	**L1**
CO 2	Students will able to **apply** the principles of classical mechanics, control system theory & logic to execute mini challenges using LEGO Mindstorms, TETRIX and RobotC system.	**L3**
CO 3	Students will be able to **examine** the given open-ended challenge, tear down them into mini challenges &**analyze** the various process/system parameters associated with it.	**L4**
CO 4	Students will be able to **synthesize** a robot design, control system & algorithm by **connecting** all the sub systems together to obtain a robot capable of solving the given challenge.	**L3**
CO 5	Students will be able to **evaluate** the various robot design, control system and algorithm capable of solving open ended challenges.	**L5**
CO 6	Students will be able to **design & develop** a robot (In a multidisciplinary group with effective	**L6**
CO 7	Project management skills) capable of solving real world application problems using LEGO Mindstorms, TETRIX & Robot C language.	**L6**

Kindly Note: Students who have undertaken this course can opt to waive-off an elective course in 6th or 7th Semester.

COURSE DESCRIPTION

This course is aimed to introduce the modern network architectures, Layered models, IP addresses. It also covers all protocols, transmission media and Routing concepts.

PREREQUISITES

- Student should have prior knowledge of computer programming, discrete mathematics structures and data structures.

COURSE OBJECTIVES

- To develop an understanding of modern network architectures from a design and performance perspective.
- To introduce the student to the major concepts involved in wide-area networks (WANs), local area networks (LANs) and wireless-LANs (WLANS).
- To introduce the network programming using socket programming.
- To analyze the MAC and ARQ protocol efficiency and delay.

COURSE CONTENTS

UNIT -I **8 Hours**

Introduction: Overview of the internet- Networks, Network Types, Switching and the Internet, Data Communications. **Networks Model**: Protocol Layering, TCP/IP Protocol suite, The OSI model. (Chapter 1.1, 1.2)

UNIT -II **12 Hours**

Introduction to Physical Layer: Data and Signals Analog and Digital - Transmission Impairment - Data rate and Channel capacity – Performance. **Transmission media**: Guided Media and Unguided media (Chapter 7.1, 7.5)

UNIT -III **12 Hours**

Introduction to Data-Link Layer: Introduction, **Data Link Control (DLC)**: Data-link layer protocols, HDLC, PPP, framing, flow and error control, error detection and correction. **Media Access Control (MAC):** random access, controlled access and channelization. Stop and wait, Go back N, Selective repeat, Bi-directional
(Chapter 5.1 – 5.3, Remaining Topics Ref 1)

UNIT -IV **12 Hours**

Network Layer: Introduction - Network-Layer Services, Packet Switching, Network-Layer Performance, Network Layer Protocols - Datagram format, IPv4 addresses, Forwarding of IP packets, Class-full and Classless addressing (CIDR), Internet Protocol (IP), IPv6 addressing.
(Chapter 4.1.1, 4.1.2, 4.1.3, 4.1.4, 4.2.1, 4.2.2, 4.2.3, 4.5.1, 4.5.2)

UNIT -V **8 Hours**

Unicast Routing: Introduction: general idea, least-cost routing, Routing algorithms, Distance-Vector Routing, Link-State Routing, Path-Vector Routing.
(Chapter 4.3.1, 4.3.2)

ASSIGNMENTS:

Simulation and programming assignment: Problems on CRC block coding, IP addressing, Socket programming using C APIs. Simulation of Packet Tracing using wireshark.

TEXT BOOKS

1. Behrouz A. Forouzan and Firouz Mosharraf: Computer Networks: A top down approach, Special Indian Edition, Tata Mc Graw-Hill.2012.

REFERENCE BOOKS

1. Behrouz A. Forouzan,: Data Communication and Networking, 5th Edition Tata Mc Graw-Hill
2. William Stallings: Data and Computer Communication, 8th Edition, Pearson Education, 2007.
3. Larry L. Peterson and Bruce S. Davie: Computer Networks – A Systems Approach, 4thedition, Elsevier, 2007.
4. Alberto Leon-Garcia and Indra Widjaja, "Communication Networks Fundamental Concepts And Key Architectures", 2nd Edition, Mc Graw-Hill Education

TEACHING METHODS

- Lecture by presentations
- Hands-On Sessions Based Teaching

ASSESSMENT METHODS

Parameters	Marks
Three Internals (Average of best of two)	30
Evaluation of Simulation Assignments with MCQ based on concepts taught in the course	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At end of the course student will be able to:

COs	Description	Bloom's Level
CO 1	Describe the services and functionalities provided by each layer of the OSI reference model and also understand the need for a layered model.	**L2**
CO 2	Understand the need for addressing at the different layers.	**L2**
CO 3	Understand the need and working of different protocols at each of the layers in the OSI reference model, compare the features offered by different protocols in each layer and choose the optimal one based on the requirement of the Application.	**L2**
CO 4	Analyze and Apply the techniques to detect errors in data transmission, control flow and congestion in the network, forward packets through the network and improve efficiency in data transmission in any network configuration.	**L3**

CO 5	Analysis of Packet Tracing using Wireshark Tool	**L3**

L-T-P:3*-0-0*	***Credits:*** *03*
Total Contact Hours: *39 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 39*	***CIE Marks:*** *50*

COURSE DESCRIPTION

The course will cover topics regarding the software development other than programming, including testing, bug finding, verification, and validation for constructing robust code. The emphasis is on modern technology for developing reliable software at reasonable cost.

PREREQUISITES

Students must have the knowledge on basic programming and OOP concepts.

COURSE OBJECTIVES

- To introduce software engineering and to explain its importance
- To introduce software development process models.
- To introduce the art of eliciting user requirements and analysis.
- To introduce software design strategies and methodologies.
- To understand the software testing process and tools.
- To understand the process of software Maintenance.

COURSE CONTENTS

UNIT -I **8 Hours**

Introduction to Software Engineering:

Introduction: What is Software Engineering and its history, software crisis, Evolution of a Programming System Product, **Software Development Life Cycles:** Software Development Process, The Waterfall model, The Evolutionary Model, The Incremental Implementation, Prototyping, The Spiral Model, Software Reuse, **An Introduction to Non-Traditional Software Development Process:** Rapid Application Development, Agile Development Process, introduction to DevOps.

UNIT -II **8 Hours**

Requirements: Importance of Requirement Analysis, User needs, Software Features and Software Requirements, **Classes of User Requirements:** Enduring and Volatile, Sub phases of Requirement Analysis, Functional and Nonfunctional requirements, Barriers to Eliciting User requirements, the software requirements document and SRS standards, Requirements Engineering, Case Study of SRS for a Real Time System. **Tools for Requirements Gathering:** Document Flow Chart, Decision Table, Decision Tree.

UNIT -III **8 Hours**

Software Design: Goals of good software design, Design strategies and methodologies, Data oriented software design, **Structured Design:** Structure chart, Coupling, Cohesion, Modular structure, Packaging, Object oriented design, Top-down and bottom-up approach, Design patterns, **Structured Analysis:** DFD, Data Dictionary,

UNIT -IV **8 Hours**

Software Measurement and Metrics: Various Size Oriented Measures: Halstead's software science, Function Point (FP) based measures, **Cyclomatic Complexity Measures:** Control flow graphs. **Development:** Selecting a language, Coding guidelines, writing code, Code documentation.

UNIT -V **7 Hours**

Software Testing: Testing process, Design of test cases, **Functional Testing:** Boundary value analysis, Equivalence class testing, Decision table testing, Cause effect graphing, Structural testing, Path testing, Data flow and mutation testing, Unit testing, Integration and system testing, Debugging, Alpha & beta testing, testing tools & standards.

Software Maintenance: Maintenance process, Regression testing, Software reengineering, Configuration management, documentation.

MINIPROJECT:

A Course project using JAVA/Python Tools needs to be developed by a team of students with a Report on the project and these needs to be considered for internal assessment.

TEXTBOOKS

- Software Engineering: A Practitioner's Approach, R. S. Pressman, McGraw Hill,Seventh Edition, 2010
- Zero Defect Software, G. G. Schulmeyer,McGraw-Hill,1992

COURSE DESCRIPTION

This course is an introductory course on data mining. It introduces students to the basic concepts, principles, methods, implementation techniques, and applications of data mining.

PREREQUISITES

- Student should have knowledge of DBMS

COURSE OUTCOMES

This course imparts the concepts of data mining which is the necessity in today's huge data processing applications. It includes the concepts of data preprocessing, classification, association analysis and cluster analysis.

COURSE OBJECTIVES

- To understand the concepts of data mining, tasks of data mining and preprocessing techniques.
- To describe the data mining tasks - classification, association analysis and cluster analysis.
- To solve problems based on the different data mining tasks.

COURSE CONTENTS

UNIT -I **7 Hours**

Data Mining: Introduction, KDD Process, Challenges, Data Mining Tasks, Data Mining Trends and Applications.

UNIT -II **8 Hours**

Data, Types of Data, Data Preprocessing, Measures of Similarity and Dissimilarity

UNIT -III **8 Hours**

Classification: Basics, General approach to solve classification problem, Decision Tree Induction, Rule Based Classifiers, Nearest Neighbor classifiers.

UNIT -IV **8 Hours**

Association Analysis: Basic Concepts, Frequent Item set Mining Methods – Apriori Algorithm- Frequent item set generation, Rule Generation, FP Growth Algorithm, Evaluation of Association Patterns

UNIT -V **8 Hours**

Cluster Analysis, Partitioning Methods: k-Means, K-mediods, PAM, CLARA and CLARANS **Hierarchical Methods:** AGNES, DIANA, BIRCH, **Density Based Methods:** DBSCAN, Cluster Evaluation.

TEXT BOOKS

1. Pang-Ning Tan, Vipin Kumar, Michael Steinbach: Introduction to Data Mining, Pearson, 2012.
2. Jiawei Han and Micheline Kamber: Data Mining - Concepts and Techniques, 3rd Edition, Morgan Kaufmann Publisher, 2014

REFERENCE BOOKS

1. G. K. Gupta: Introduction to Data Mining with Case Studies, 3rd Edition, PHI, New Delhi, 2009.

Note: For SEE, students should answer five questions, selecting at least one question from each unit

TEACHING METHODS

1. Lectures interspersed with discussions
2. Lectures using presentations
3. Problem Solving Exercises

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two)	30
Evaluation of Problem solving Exercises	10
Implementation of Laboratory based exercises	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course, the student will be able to:

COs	Description	Bloom's Level
CO 1	Outline the data mining tasks, challenges and data mining trends & applications	**L1**
CO 2	Demonstrate the various data preprocessing techniques, measures of similarity and dissimilarity on categorical and numeric data.	**L2**
CO 3	Illustrate the working of Decision tree classifier, Rule based classifier and Nearest neighbor classifier using datasets	**L3**
CO 4	Categorize frequent itemsets from transactional data using FP Growth algorithm and Apriori algorithm	**L3**
CO 5	Illustrate Partitioning Methods and Hierarchical Methods of clustering and evaluate the clusters.	**L3**

COURSE DESCRIPTION

This course provides an in-depth knowledge of structure if AI agents, search algorithms, uninformed and informed search strategies, game playing algorithms, agents that reason logically, fundamental models of neural networks, perceptron networks, feedback networks, feed forward networks, self-organizing feature map.

PREREQUISITES

- Students should have knowledge of Design and Analysis of Algorithms
- Students should have knowledge of Probability Theory.

COURSEOBJECTIVES

- Understanding AI, Structure of Agents, Idea behind search algorithms, analyzing Uninformed and Informed search.
- Understanding and analyzing game playing algorithms and agents that reason logically.
- Understanding and analyzing Neural Networks, Artificial Neural Networks, Fundamental Models of ANN.
- Understanding and Analyzing Perceptron Networks, Feed Back networks
- Understanding and Analyzing Feed forward Networks, Self-Organizing Feature Map.

COURSE CONTENTS

UNIT - I **8 Hours**

Introduction: Why study AI? What is AI? The Turing test. Rationality. Branches of AI.
Brief history of AI. Challenges for the future. What is an intelligent agent? Doing the right thing (rational action). Performance measure. Autonomy, Environment and agent design, Structure of Agents, Agent types.
Uninformed Search: Depth-first, Breadth-first, Uniform-cost, Depth-limited, Iterative deepening, Examples, and Properties. **Informed search**: Best-first, A* search, Heuristics, Hill climbing, Problem of local extrema.

UNIT – II **7 Hours**

Game Playing: The minimax algorithm, Resource limitations, Alpha-beta pruning, Constraint satisfaction, Node, arc, path, and k-consistency, Backtracking search, Local search using min-conflicts. **Agents that reason logically 1**: Knowledge -based agents, Logic and representation, Propositional (Boolean) logic. **Agents that reason logically 2**: Inference in propositional logic, Syntax, Semantics, Examples.

UNIT-III **8 Hours**

Introduction to Neural Networks: Neural processing, Neural Networks-an overview, the rise of Neurocomputing, **Introduction to Artificial Neural Networks:** Introduction, Artificial Neural Networks, Historical development of neural networks, biological neural networks, comparison between the brain and the computer, comparison between artificial and biological neural network, Basic building blocks of ANN, ANN terminologies.

UNIT – IV **8 Hours**

Fundamental Models of Artificial Neural Networks: Introduction, mCCulloch-Pitts Neuron Model, Learning rules, Hebb Net. **Perceptron Networks:** Single Layer Perceptron, Brief Introduction to Multilayer Perceptron Networks. **Feed Back networks:** Introduction, Discrete Hopfield Net, Continuous HopField net.

UNIT – V **8 Hours**

Feed forward Networks: back propagation Network, Radial basis Function Network. **Self-Organizing Feature Map:** Methods used for determining the Winner, Kohonen Self Organizing feature maps, Learning Vector Quantization, Max Net, Mexican hat, Hamming Net.

TEXT BOOKS

***Course Title:** Formal Languages and Automata Theory*	***Course Code:**18CS57*
***L-T-P:** **3**-2-0*	***Credits:** 4*
***Total Contact Hours:** 52Hours*	***Duration of SEE:** 3 Hours*
***SEE Marks:** 50*	***CIE Marks:** 50*

COURSE DESCRIPTION

This course serves as an introduction to the basic theory of Computer Science and formal methods of computation. Topics include automata theory, formal languages and grammars, Turing machines, computability and computational complexity.

PREREQUISITES

- Knowledge on Mathematics, Discrete Mathematical Structures and programming.

COURSE OBJECTIVES

- Introduction to the concept of finite automaton as a regular language recognizer.
- Design grammars and recognizers for different formal languages
- Designing pushdown automata to recognize any context-free language
- Identify the relation between grammars, languages and recognizers.
- Design and explain the principles and operation of a Turing Machine and its different types

COURSE CONTENTS

UNIT - I **12 Hours**

Introduction to Finite Automata: Introduction to Finite Automata, The central concepts of Automata theory, Deterministic finite automata, Nondeterministic finite automata, an application of finite automata, Finite automata with Epsilon transitions, Regular expressions.

UNIT –II **11 Hours**

Regular Expressions & Regular Languages: Finite Automata and Regular Expressions, Applications of Regular Expressions, Regular languages, Proving languages not to be regular languages, Closure properties of regular languages, Decision properties of regular languages, Equivalence and minimization of automata.

UNIT – III **10 Hours**

Context-Free Grammars and Languages, Push down Automata: Context –free grammars, Parse trees, Applications, Ambiguity in grammars and Languages, Definition of the Pushdown automata, the languages of a PDA.

UNIT – IV **10 Hours**

Pushdown Automata, Properties of Context-Free Languages: Equivalence of PDA's and CFG's, Deterministic Pushdown Automata, Normal forms for CFGs, the pumping lemma for CFGs, Closure properties of CFLs.

UNIT – V **09 Hours**

Turing Machine & Undecidability : The Turing machine, Programming techniques for Turing Machines, Extensions to the basic Turing Machines, A Language that is not recursively enumerable, An Undecidable problem that is RE, Post's Correspondence problem.

TEXT BOOK

- Problem solving
- Tool: JFLAP

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Tool based tutorial using JFLAP Tool	10
Test for GATE related questions	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

COs	Description	Bloom's Level
CO 1	Describe central concepts of automate theory	**L1**
CO 2	Demonstrate the applications of finite state machines and regular expressions	**L2**
CO 3	Construct Automata, and equivalent, Parse Trees and Context Free Grammars.	**L3**
CO 4	Design Pushdown Automata , Turing machines and Post Correspondence problems for real time applications	**L3**
CO 5	Apply Pumping Lemma to prove that languages are not regular, context free	**L4**

Mapping of Course outcomes (COs) to Program outcomes (POs*)& PSO **

COURSE DESCRIPTION

This course provides an in-depth knowledge of applying Python Programming Language to Various search strategies and game playing algorithms of Artificial Intelligence and concepts of Neural Networks

PREREQUISITES

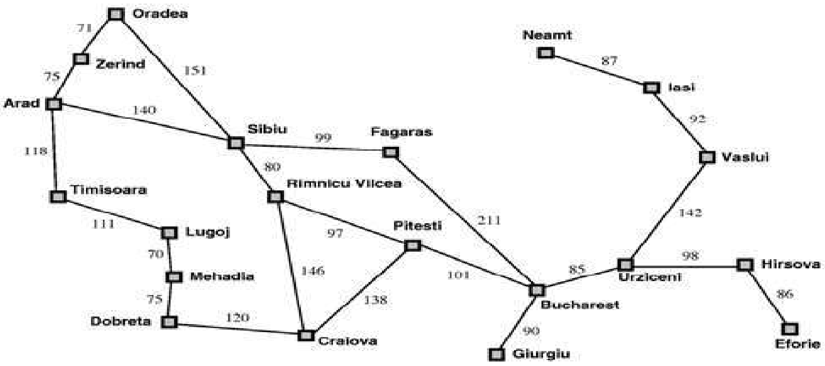
- Students should have knowledge of Design and Analysis of Algorithms.
- Students should have knowledge of Probability Theory.
- Students should have knowledge of Basics of programming.

COURSE OBJECTIVES

- Understanding and analyzing search algorithms.
- Understanding and analyzing game playing algorithms and agents that reason logically.
- Understanding and analyzing Mcculloch-Pitts, Perceptron Networks.
- Understanding and analyzing neural networks with backpropagation.
- Understanding and analyzing Kohonen and Mexican hat Neural Network with fixed weight competitive net

LABORATORY EXERCISES

1. Problems in Search
   - **a.** Problem Statement for A * : ABC has to reach to Mumbai from Bangalore. As there are multiple paths to reach Mumbai help ABC to reach the destination using the shortest path by applying A* Algorithm
   - **b.** Problem Statement for uniform cost search : We have the Map of Romania. In this map, the distance between various places in Romania is given. If we have to reach from one place to another place there exist several paths. Write a Python Program to find the shortest distance between any two places using a uniform cost search.



Straight–line distance to Bucharest	
Arad	366
Bucharest	0
Craiova	160
Dobreta	242
Eforie	161
Fagaras	178
Giurgiu	77
Hirsova	151
Iasi	226
Lugoj	244
Mehadia	241
Neamt	234
Oradea	380
Pitesti	98
Rimnicu Vilcea	193
Sibiu	253
Timisoara	329
Urziceni	80
Vaslui	199
Zerind	374

c. Problem Statement for Depth Limited Search
Design and develop a program in Python to print all the nodes reachable from a given starting node in a graph by using the Depth Limited Search method. Repeat the experiment for different Graphs.

2. Write a program to implement a Minimax decision-making algorithm, typically used in a turn-based, two player games. The goal of the algorithm is to find the optimal next move.

3. Write a program to implement Alpha Beta pruning in Python. The algorithm can be applied to any depth of tree by not only pruning the tree leaves but also the entire subtree. Order the nodes in the tree such that the best nodes are checked first from the shallowest node. Use domain knowledge while finding the best move. Ex: for Chess, try order: captures first, then threats, then forward moves, backward moves.

4. Assume that you are organising a party for N people and have been given a list L of people who, for social reasons, should not sit at the same table. Furthermore, assume that you have C tables (that are infinitly large). Write a function layout(N,C,L) that can give a table placement (ie. a number from 0 . . . C − 1) for each guest such that there will be no social mishaps.
For simplicity we assume that you have a unique number 0 . . . N − 1 for each guest and that the list of restrictions is of the form [(X,Y), ...] denoting guests X, Y that are not allowed to sit together.
Answer with a dictionary mapping each guest into a table assignment, if there are no possible layouts of the guests you should answer False.

5. Implementation of Tic Tac Toe game here ,the player needs to take turns marking the spaces in a 3x3 grid with their own marks,if 3 consecutive marks (Horizontal, Vertical,Diagonal) are formed then the player who owns these moves get won. Noughts and Crosses or Xs and Os abbreviations can be used to play

6. Write a python program to implement The Wumpus world problem.The problem deals with an AI robot navigating its way through a 4x4 puzzle to try and find gold. The robot must safely navigate its way around bottomless pits of death and evil Wumpus creatures to locate the gold hidden on the board. After it has successfully found the gold, it must safely navigate its way back to the starting point. The robot must use its light sensors and the signals sent to it at each square to determine which way to properly navigate to reach its goal.

7. Write a program to implement Mcculloch-Pitts algorithms

8. Implement the Perceptron Learning single layer Algorithm by Initializing the weights and threshold calculate the error of a prediction plot the dataset to see, that they are linearly separable execute the code and check, how many iterations are needed, until all samples are classified right.
9. Write a python program to implement neural networks with backpropagation for xor using one hidden layer.
10. Suppose we have some pattern of arbitrary dimensions, however, we need them in one dimension or two dimensions. Then the process of feature mapping would be very useful to convert the wide pattern space into a typical feature space. Write a program to implement Kohonen algorithm
11. Simulate the Mexican Hat Neural Network with fixed weight competitive net. External signals(S), number of iterations(t_max),Radius of region with positive reinforcement(R1), Radius of region with negative reinforcement(R2),vector of activations (X) are the inputs

COURSE DESCRIPTION

This lab covers an in-depth knowledge about the **Network Simulation** using NS2 and cisco packet tracer – and analyzing the **Network simulation** Performance.

PREREQUISITES

- Knowledge on basic programming

COURSE OBJECTIVES

This **laboratory** exercises are designed to give students ability to design, build, and analyze the Computer Network Protocols.

PART-A

Implement the programs using Network Simulator -2

1. Simulate a point-to-point network with duplex link as follows: n0-n2, n1-n2 and n2-n3. Apply TCP agent between n0-n3 and UDP agent between n1-n3. Apply relevant applications over TCP and UDP agents. Set the queue size to 5 and vary the bandwidth to find number of packets dropped and received by TCP and UDP agents using awk script and grep command.
2. Set up the network topology as shown in fig 1. Simulate different type of internet traffic

Such as traffic using FTP between the nodes n1 – n6 and Telnet between the nodes n2-n5.

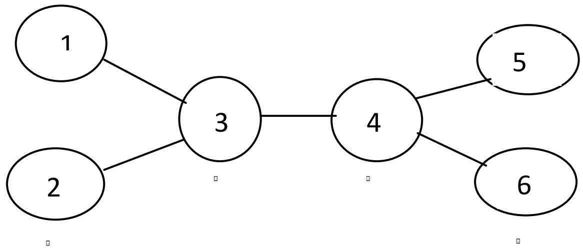

Fig. 1: Network Topology

Plot congestion window for FTP and Telnet, and analyze the throughput.

3. Design networks that demonstrate the working of Distance vector routing protocol. The link between node 1 and 4 breaks at 1.0 ms and comes up at 3.0ms. Assume that the source node 0 transmits packets to node 4. Plot the congestion window when TCP sends packets via other nodes. Assume your own parameters for bandwidth and delay.

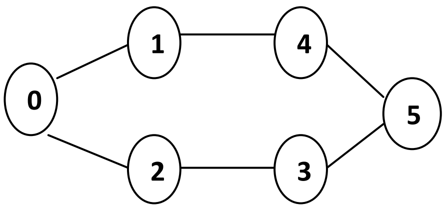

Fig 2: Network Topology

4. Consider a client and a server. The server is running a FTP application over TCP. The client sends a request to download a file of size 10 MB from the server. Write a TCL script to simulate this scenario. Let node n0 be the server and node n1 be the client. TCP packet size is 1500 Bytes.
5. Demonstrate the working of multicast routing protocol. Assume your own parameters for bandwidth and delay.
6. Set up a 2-node wireless network. Analyze TCP performance for this scenario with DSDV as routing protocol.
7. Set up 3-node wireless network with node N1 between N0 and N2. As the nodes N0 and N2 moves towards each other they exchange packets. As they move out of each other's range they drop some packets. Analyze TCP performance for this scenario with AODV routing protocol.
8. Set up a 6-node wireless network; analyze TCP performance when nodes are static and mobile.
9. Write a TCL script to simulate the following scenario. Consider six nodes, (as shown in the figure below) moving within a flat topology of 700m x 700m. The initial positions of nodes are: n0 (150, 300), n1 (300, 500), n2(500, 500), n3 (300, 100), n4(500, 100) and n5(650, 300) respectively. A TCP connection is initiated between n0 (source) and n5 (destination) through n3 and n4 i.e., the route is 0-3-4-5. At time t = 3 seconds, the FTP application runs over it. After time t = 4 seconds, n3 (300,100) moves towards n1 (300, 500) with a speed of 5.0m/sec and after some time the path breaks. The data is then transmitted with a new path via n1 and n2 i.e., the new route is 0-1-2-5. The simulation lasts for 60 secs. In the above said case both the routes have equal cost. Use DSR as the routing protocol andthe IEEE 802.11 MAC protocol.
10. Set up a wireless network with mobile nodes, induce 1 to 10% error to the network using uniform error model. Plot the congestion window for TCP connections. Write your observation on TCP performance as error increases in the network.

PART-B

1. Study of network IP Experiments
   i. Classification of IP address ii. Sub netting iii. Super netting
2. Configure Static and Dynamic Routing information in the router and test the connectivity between two networks.
3. Configure Network Address Translation (NAT) and test Static NAT, Dynamic NAT and PAT.
4. Configuring a Cisco Router as a DHCP Server to dynamically assign IP addres, subnet mask and default gateway to the hosts in the network.
5. Configure and test DNS and Email server in a network.
6. Configure Wireless router to support mobile devices to connect to the internet.

ASSESSMENT METHODS

Parameter	Marks
Experiment write up, Execution, Viva & Record writing	25
Rubrics based the evaluation of Self-study topic	10
Lab Internal Test	15
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course students will be able to:

COs	Description	Bloom’s Level
CO 1	Understand NS2, NS3 and Cisco Packet tracer environment	**L2**
CO 2	Learn and implement various routing protocols.	**L3**
CO 3	Simulate wired and wireless network scenario.	**L3**
CO 4	Apply NS2 tools to analyse the performance of simulation models.	**L4**
CO 5	Simulate network services like DHCP, DNS and NAT on Packet tracer	**L3**

COURSE DESCRIPTION

This course allows students to form a group of maximum four to initiate their final year major project work. The students will have to discuss among themselves and chose their domain for the project work.

PREREQUISITES

- Programming knowledge

COURSE OBJECTIVES

- To allow students work on literature survey to understand the domain of their interest.
- To summarize the literature survey to finalize their project work under selected domain.
- To work effectively in a team, present and prepare the report.

COURSE CONTENT

- Survey and study of published literature on the assigned topic.
- Working out a preliminary Approach to the Problem relating to the assigned topic.
- Preparing a Written Report on the Study conducted for presentation to the Department.
- Final Seminar, as oral Presentation before a Departmental Committee.

ASSESSMENT METHODS

Parameter	Marks
Initial seminar- Formation of team, selection of domain and planning the literature survey	10
Carry out literature survey and preparation of the report	20
Rubrics based the evaluation of seminar in the literature survey	20
Total	**50**

COURSE OUTCOMES

At the end of the course students will be able to**:**

CO	**Description**	**Bloom’s level**
CO 1	Survey and study of published literature on the assigned topic.	**L1**
CO 2	Complete the preliminary approach to the Problem relating to the assigned topic.	**L2**
CO 3	Complete the report on the literature survey.	**L2**
CO 4	Acquire the depth knowledge on the selected domain	**L2**
CO 5	Improve their presentation and writing skills and recognize the importance of team work.	**L2**

SEE Marks: *50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course provides an introduction to Computer graphics and aims at giving an insight about basic concepts of 2-D and 3-D modeling and transformations, viewing transformations, projections, rendering techniques, graphics programming, color model, shading, clipping, and hidden surface removal.

PREREQUISITES

- Basic programming knowledge of C/C++
- Linear algebra and Mathematics

COURSE OBJECTIVES

- Have a basic understanding of the core concepts of computer graphics.
- Be capable of using OpenGL to create interactive computer graphics.
- Understand a typical graphics pipeline.

COURSE CONTENTS

UNIT -I: Overview of Computer graphics and open GL: 8 Hours

Basics of computer graphics, Application of Computer Graphics, Video Display Devices: Random Scan and Raster Scan displays, color CRT monitors, Flat panel displays. Raster-scan systems: video controller, raster scan Display processor, OpenGL: Introduction to OpenGL ,coordinate reference frames, specifying two-dimensional world coordinate reference frames in OpenGL, OpenGL point functions, OpenGL line functions, point attributes, line attributes, curve attributes, OpenGL point attribute functions, OpenGL line attribute functions, Line drawing algorithms(DDA, Bresenham's), circle and ellipse generation algorithms (Bresenham's).

UNIT -II : Open GL primitives and attributes 8 Hours

Fill-Area Primitives, Polygon Fill Areas, OpenGL polygon fill-Area Functions, OpenGL vertex arrays, Pixel-array primitives, OpenGL pixel-Array functions, Character primitives, OpenGL character functions, OpenGL display lists, OpenGL state variables, Color and Gray scale, OpenGL color functions.

UNIT - III: 2D and 3D Geometric Transformations **8 Hours**

Basic two-dimensional geometric transformations, Matrix representations and homogeneous coordinates, inverse transformations, Two-dimensional composite transformations, Other two-dimensional transformations, Raster methods for geometric transformations, OpenGL raster transformations, Transformations between two-dimensional coordinate systems, Geometric transformations in three-dimensional space, Three-dimensional translation, Three-dimensional rotation, Three-dimensional scaling, Composite three-dimensional transformations, other three-dimensional transformations, Transformations between three dimensional coordinate systems, Affine transformations, OpenGL geometric-transformation functions.

UNIT -VI: 2D and 3D viewing **8 Hours**

The Two-Dimensional viewing pipeline, The clipping window, Normalization and viewport transformations, Two-dimensional point clipping, Two –dimensional line clipping : Cohen-Sutherland line clipping, Liang-barsky line clipping, polygon fill-area clipping : Sutherland –Hodgeman polygon clipping, Text clipping, Overview of Three-dimensional viewing concepts, The three- dimensional viewing pipeline, Three- dimensional viewing co-ordinate parameters, Transformation from world to viewing co-ordinate, Projection Transformations, Orthogonal Projections-Axonometric and isometric orthogonal projections, Orthogonal projection co-ordinates, Clipping window and orthogonal-projections view volumes, Oblique parallel Projections-Oblique parallel Projections in drafting and design, Perspective Projections: Perspective- Projections Transformation co-ordinates, Perspective- Projections Equations: special cases, Vanishing points for Perspective Projections.

UNIT-5: illumination models and image processing **7 Hours**

3D scan conversion:- A-Buffer method, Scan-line method, Depth-sorting method, BSP-tree method, Light sources, Surface lighting effects, Basic illumination models, OpenGL menu functions, the RGB color model, the HSV color model, Image, filtering, Image processing, convention and computer assisted animation.

TEACHING METHODS

- Lecture using Black board and chalk
- Power point presentations
- Course Project Assignment

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Rubrics for the evaluation of Course Project component	10
Rubrics for the evaluation of Tool based learning	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES (COs):

At the end of the course the student will be able to

COs	Description	Bloom's Level
CO 1	Explain the core concepts of computer graphics, including viewing, projection, perspective, modeling and transformation in two and three dimensions.	**L2**
CO 2	Apply the concepts of color models, lighting and shading models, textures, ray tracing, hidden surface elimination, anti-aliasing, and rendering.	**L3**
CO 3	Construct and apply 3D transforms including translation, rotation, scaling, shearing, and reflection	**L3**
CO 4	Identify algorithms and techniques to understand relationship between 2D and 3D	**L1**
CO 5	Create effective OpenGL programs to solve graphics programming issues.	**L6**

3: Strong, 2: Medium, 1: Weak ** H: Highly related S: Supportive

COURSE DESCRIPTION

This course covers the need for security against threats and attacks in the network. The security models, Intrusion detection and prevention systems are also discussed in the course.

PREREQUISITES

- Internetworking with TCP/IP
- Cryptography and Network Security

COURSE OBJECTIVES

- To study Information Security Models, threats and attacks.
- To study Intrusion Detection and Prevention models.
- To understand the implementation of Security Models.

COURSE CONTENTS

UNIT – I **8 Hours**

Introduction to Information Security: Introduction, The history of Information Security, what is security? Critical characteristics of Information, CNSS security model, security in the security systems development life cycle. **The need for security:** Threats and Attacks, deviations in quality of service, software attacks.

UNIT – II **8 Hours**

Planning for Security: Introduction, Information Security planning and governance, Information Security policy, standards and practices, the Information Security blueprint, security education, training and awareness program, contingency strategies.

UNIT – III **8 Hours**

Security Technology: Firewalls and VPNs: Introduction, Physical design, Firewalls, Protecting remote connections.

UNIT – IV **8 Hours**

Security Technology: Intrusion Detection and prevention systems, and other security tools- Introduction Detection and prevention Systems, Honey Pots, Honey nets and padded cell systems, scanning and analysis tools.

UNIT – V **7 Hours**

Implementing Information Security: Introduction, Project Management for information security, Technical and nontechnical aspects of implementation. Information Security Maintenance: Introduction, security management models, the maintenance model.

TEXT BOOKS

1. Principles of Information Security, 6th edition, Michael E Whittman, Herbert J Mattord, CENGAGE Learning, 2018

REFERENCE BOOKS

❖ **Infosys approved syllabus**

The explosive growth of the "Internet of Things" is changing the current trends in the world and the rapid drop in price for typical IoT components is allowing people to innovate new designs and products. In this course, students will learn the importance of IoT in society, the current components of typical IoT devices and trends for the future. IoT design considerations, constraints and interfacing between the physical world and your device will also be covered. Addition, students will also learn how to make design trade-offs between hardware and software. This course will also cover key components of networking to ensure that students understand how to connect their device to the Internet.

PREREQUISITES

Students must have basic knowledge on microcontrollers. The students will be requiring to participating actively in creative thinking exercises and be willing to be innovative. Participate in open discussions is a must.

COURSE CONTENTS

UNIT – I Introduction to IoT **8 Hours**

Definition, Characteristics and Architecture of IoT, Physical Design of IoT – IoT Protocols (hardware protocols and software protocols), IoT communication models, IoT Communication APIs, **IoT enabled Technologies :** Wireless Sensor Networks, Cloud Computing, Big data analytics, Communication protocols, IoT Levels and Templates, **Domain Specific IoT's :** Home, City, Environment, Energy, Retail, Logistics, Agriculture, Industry, health and Lifestyle

UNIT – II The IoT Hardware **8 Hours**

Embedded Systems – Introduction, the basics of sensors and actuators, need for ADC & DAC peripherals. Introduction to Arduino, The Arduino UNO development board – architecture and specifications, the Arduino development environment, setting up the IDE, programming the Arduino, basic examples. Communication devices: Bluetooth, BLE, Wi-Fi (ESP8266), GSM, LPWAN (LoRa), LPPAN (6LoPAN, Zigbee). Introduction to RaspberryPi – the RaspberryPi architecture& Hardware overview, RaspberryPi as a gateway device.

UNIT – III The IoT Hardware **8 Hours**

Introduction to Python – Language features of Python, Data types, data structures, Control of flow, functions& loops, modules, packaging, file handling, data/time operations, classes, Exception handling.

UNIT – IV IoT Communication Protocols and Security **8 Hours**

Wired Communication Protocols: UART, I2C, SPI Wireless messaging and communication Protocols: MQTT, CoAP, XMPP, AMQP. Need for IoT security, Overview of Network security, Types of data encryption, data encryption at the node device, and data encryption at the gateway device.

UNIT – V The IoT Cloud and App **8 Hours**

Introduction to Cloud Storage models and communication APIs, Python web application framework, Introduction to NoSQL, IoT dashboard – monitoring and storing sensor data over the cloud. Webservers / Cloud for IoT: Case Studies of some IoT cloud services.

TEXT BOOKS

3. https://nptel.ac.in/course.php

Course Project: Each student will form a group with 1, but no more than 2, other classmates. The students will have to be able to develop a simple IoT system having a simple three-layer web application (web interface, functionality layer, persistence layer) in any computer language (PHP, Python, etc.) with any database (MySQL, noSQL, etc.) and Hardware(microcontroller/Arduino /Raspberry Pi +gateway).

COURSE DELIVERY METHODS

- Lecturer interspersed with discussion
- Course project
- Supporting laboratory assignments

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Rubrics for the course project	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of subject, the student will be able to:

COs	Description	Bloom’s level
CO 1	Demonstrate the fundamental concepts of the Internet of Things and Its Application and architecture models	**L3**
CO 2	Design the real time applications using Arduino Controller and Sensors	**L3**
CO 3	Apply the python programming concepts to create connection with the hardware Devices for IoTs	**L4**
CO 4	Illustrate the features of IoT Communication Protocols and Need for Security issues in the IoT applications	**L2**
CO 5	Develop an IoT system having a simple three-layer web application	**L3**

SEE Marks: 50	***CIE Marks:*** 50

COURSE DESCRIPTION

This course provides an in-depth knowledge of application development using advanced java as the programming language. It discusses advance java concepts and JSP.

PREREQUISITES

- Student should have prior basic knowledge of OOP Concepts and Java Programming
- Student should have basic knowledge of Database.

COURSE OBJECTIVES

- To understand the basic features of JSP.
- To acquire knowledge of implementing concepts of JSP custom tags and Expression language.
- To learn the fundamentals of Struts architecture framework.
- To acquire knowledge of Hibernate Architecture, implementing web application with Hibernate.

COURSE CONTENTS

UNIT -I **08 Hours**

JSP Basics: Introduction to JSP, Lifecycle of JSP, 9 Implicit Objects of JSP, Scripting Elements: Scriplet tag, expression tag, declaration tag, Directives: page, include, tag lib, Standard Actions: jsp:forward ,jsp:include,

UNIT -II **08 Hours**

Custom tags and Expression Languages in JSP: Custom tags: Example of java custom tag, attributes, iterations. Expression languages in JSP: Implicit Objects in EL, Reserve words in EL, EL param example, and JSTL (JSP Standard Tag Library), Advantages of JSTL, JSTL tags

UNIT -III **08 Hours**

Struts2 Framework: what are struts? Struts2 features, Struts2 components, struts2 architecture, example of struts2. Struts validation: input validation

UNIT -IV **08 Hours**

Hibernate: Introduction to Hibernate Architecture, Hibernate example, web Application with Hibernate, Persistence Object Life Cycle, Entity Relationship,

UNIT -V **07 Hours**

Hibernate ORM mappings: ORM-Mappings, Basic mapping. Association Mapping: 121, 12M, M21, M2M Unidirectional & Bidirectional. Queries: HQL, QBC, QBE, Caching.

TEXT BOOKS

1. Herbert Schildt, "Java – The Complete Reference", 9th Edition, 2014, McGrawHill, Oracle Press.
2. Spring and Hibernate by Santhosh Kumar Tata McGraw Hill.
3. Hans Bergsten, Java Server Pages, 3rd Edition, O'Reilly Publication, 2003.

REFERENCE BOOKS

1. Craig D. Knuckles and David S. Yuen, Web Applications: Concepts &Real World Design, John Wiley & Sons, Inc.
2. Robert W Sebesta , Programming world wide web, Sebesta, 6th edition ,Pearson,2010
3. Jim Keogh , "J2EE – The Complete Reference", 2007, Tata McGraw Hill.

TEACHING METHODS

- Black Board teaching
- Demonstrating every concept using Power Point Presentations
-

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Phase one project review	10
Phase two project review	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to

COs	Description	Bloom's Level
CO 1	Describe JSP Application design using MVC and develop JSP Applications	**L1**
CO 2	Construct a Web application using Java Server Pages	**L3**
CO 3	Design web application using struts framework	**L3**
CO 4	Illustrate the concept of Hibernate use to implement the database application.	**L3**
CO 5	Understand the concept of ORM mappings and association mappings	**L2**

Mapping of Course outcomes (COs) to Program outcomes (POs*)& PSO **

	Course Outcomes mapping to Program Outcomes												PSOs		
POs / COs	**1**	**2**	**3**	**4**	**5**	**6**	**7**	**8**	**9**	**10**	**11**	**12**	**PSO1**	**PSO2**	**PSO3**

***SEE Marks**: 50*	***CIE Marks:** 50*

COURSE DESCRIPTION

Introduction to theories, algorithms, and practical solutions of digital image perception, Enhancement, Morphological Image Processing, Compression, Registration, Color Fundamentals and 3D Images

PREREQUISITES

Fundamental Knowledge of Mathematics.

COURSE OBJECTIVES

This course will enable students to

- Explain image fundamentals and mathematical transforms necessary for image processing and to study the image enhancement techniques.
- Demonstrate different edge detection and segmentation methods
- Study of various image compression methods
- Understand image registration techniques and various color models.
- Understanding 3D Images

COURSE CONTENTS

UNIT - I **8 Hours**

Introduction, Human and Computer Vision, The human vision system, Computer Vision systems, Image formation, Sampling and Quantization, Image Enhancement in Spatial Domain: Intensity Transformation and Spatial Filtering, Histogram Based Image Enhancement: Histogram Equalization

UNIT II **6 Hour**

Morphological Image Processing: Preliminaries, Dilation and Erosion, Opening and Closing, The Hit-or-Miss Transformation, Some Basic Morphological Algorithms. Image Segmentation: Detection of Discontinuities, Edge Linking and Boundary Detection, Thresholding, Segmentation Methods

UNIT - III **8 Hours**

Image Compression: Introduction, Error Criterion, Lossy Compression, Transform Domain Compression, JPEG Compression, Vector Quantization Compression, Lossless Compression-Huffman Coding, Arithmetic Coding, Transformed Coding, Run length coding, Block coding, Quad tree coding, Other Methods

UNIT IV **10 Hours**

Image Registration:Introduction, Geometric Transformation, Registration by Mutual Information Maximization, Stereo Imaging, Other Methods, Color Fundamentals: Color Models, Pseudocolor Image Processing, Basics of Full Color Image Processing, Color Transformations, Smoothing and Sharpening, Color Segmentation, Noise in Color Images, Color Image Compression.

UNIT V **8 Hours**

Sources of 3D Data sets, Slicing the Data set, Arbitrary section planes, The use of color, Volumetric display, Stereo Viewing, Ray tracing, Reflection, Surfaces, Multiply connected surfaces, Image processing in 3D, Measurements on 3D images.

TEXT BOOKS

1. Rafel C Gonzalez and Richard E Woods, "Digital Image Processing'', Pearson Education, 3rd Edition, 2009.
2. B. Chanda, D Dutta Majumder, "Digital Image Processing and Analysis'', Prentice-Hall, India, 2002
3. ArdeshirGoshtaby, "2D and 3D Image registration for Medical, Remote Sensing and Industrial Applications", John Wiley and Sons, 2005.

REFERENCE BOOKS

1. John C. Russ, "The Image Processing Handbook", CRC Press, 2007.
2. Anil K. Jain, "Fundamentals of Digital Image Processing", Pearson Education, Inc., 2002.

TEACHING METHODOLOGY

- Lectures
- Power Point Presentation
- Case Study

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Programming Assignment	10
Case Study	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

- After completion of the course, the students will be able to:

CO	DESCRIPTION	Blooms Level
CO1	Apply and analyse the Image Enhancement and Filtering Algorithms for specific applications	**L3,L4**
CO2	Derive mathematical model for different edge detection and will be able to apply different edge models	**L3**
CO3	Apply and analyse the Image segmentation methods	**L3,L4**
CO4	Understand different Image Compression Methods	**L2**
CO5	Understand and apply various Image Compression Methods	**L2,L3**

Mapping of Course outcomes (COs) to Program outcomes (POs*)& PSO **

Total Contact Hours: *39 Hours*	**Duration of SEE***: 3 Hours*
SEE Marks: *50*	**CIE Marks:** *50*

COURSE DESCRIPTION

The focus in this course is on the Advance Web concepts as a platform for interactive applications. The development of web-based applications requires knowledge about the underlying technology and the formats and standards the web is based upon. This course includes advance concepts like Node.JS and vue.js.

PREREQUISITES

- Student should have prior knowledge of HTML tags and Cascading Style sheets.
- Students should be able to develop a dynamic webpage by the use of Java Script and server side scripts using PHP and Angular js .
- Student should know how to connect the scripting language with database.

COURSE OBJECTIVES

- To learn the fundamentals of Node.js as well as a pragmatic approach to making web applications.
- To learn the concepts of vue.js which is current scripting programming in developing front end applications

COURSE CONTENTS

UNIT -I **08 Hours**

NODE.JS

Introduction to Node.js, Getting Started with Node.js, Using Events, Listeners, Timers, and Call backs in Node.js, Handling Data I/O in Node.js, Accessing the File System from Node.js, Implementing HTTP Services in Node.js,

UNIT -II **08 Hours**

NODE.JS with MongoDB Implementing Socket Services in Node.js. Scaling Applications Using Multiple Processors in Node.js, Getting Started with MongoDB and Node.js, Manipulating MongoDB Documents from Node.js, Accessing MongoDB from Node.js, Building web application using Node.js and Mongo DB.

UNIT –III **08 Hours**

vue.js

Introduction toVue.js, first basic examples, Fundamentals: Installing and Using, explains the behind the scenes of Vue.js, provides theoretical insights in to the architectural pattern, touches nearly all the main Vue.js concepts, Components of vue.js: Understanding and Using , goes deep into components and explains how to rewrite applications using a simple component system and single-file components

UNIT -IV **08 Hours**

vue.js

Reactivity–Binding Data to You Application, contains a detailed explanations other usage of data binding mechanisms in Vue.js, Vuex–Managing State in Your Application, contains detailed introduction to Vuex, a state management system or Vue.js, and explains how to use it in your application in order to achieve a nice, maintainable architecture.

UNIT -V **0 7 Hours**

vue.js Deploying–Time to GoLive!, show to bring your Vue application to the world ,guarantee in gits quality with continuous integration tools. It explains how to connect a GitHub repository to the Travis continuous integration system and to the Heroku cloud deployment platform, Solutions to Exercises

TEXT BOOKS

1. Brad Dayley, Brendan Dayley, Caleb Dayley, "Node.js, MongoDB and Angular Web Development" , 2nd Edition, Addison Wesley publications, 2018.
2. "Learning vue.js 2" Learn how to build amazing and complex reactive web applications by Packt Publishing Ltd 2016.

REFERENCE BOOKS

1. M.Dietel, P. Jdeital, A.B. GoldBerg, "Internet & World Wide Web How to Program", 5th Edition, Pearson Education, 2009.
2. "Learning vue.js" free unaffiliated eBook created from stack overflow contributers.
3. "pro react 16" by Adam freeman published by Apress

Other Sources

- W3Schools online Web Tutorials. Available online: https://www.w3schools.com
- Web Development Technologies Tutorials. Available online: https://www.tutorialspoint.com/vuejs/index.htm

TEACHING METHODS

- Lecture (Power Point presentations/ Black board teaching (if needed))
- Regular review of students by asking questions based on topics covered in the class Programming Assignments

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Rubrics evaluation for the Course Project	10
Programming Assignment	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to

COs	Description	Bloom's Level
CO 1	Describe the fundamentals of Node.js as well as a pragmatic approach to making web applications.	**L1**
CO 2	Build a web Application using Node.js and MongoDB.	**L3**
CO 3	Apply the basic concepts of vue.js with basic Applications and components of vue.js	**L3**
CO 4	Understand the concepts of reactivity to bind the data to applications.	**L2**
CO 5	Develop the Applications and solutions to exercises.	**L3**

COURSE DESCRIPTION

The Unix/Linux System Administration course is designed to give experienced Unix/Linux users the skills and knowledge needed to be qualified system administrators. The course is presented in the Linux environment, however, examples from other versions of Unix are given throughout the course. The basic ideas and concepts encountered in this course are the same for all flavors of Unix. Participants are introduced to the key procedures of system booting and shutdown, maintaining file systems, backing up the system, maintaining printers, handling software updates, using and configuring NIS, NFS, and more. Hands-on exercises will allow you to experience and solve problems in a learning environment

PREREQUISITES

- Basic knowledge of Linux, including installing Linux and using the command line is helpful but not required.

COURSE OBJECTIVES

- Installing the Linux operating system, configuring peripherals and controlling startup and shutdown processes. Configuring systems for accessing networking services and taking backup and maintaining the data backups.

COURSE CONTENTS

UNIT I **10 Hours**

Introduction, Installation, and Software Management: Technical Summary of Linux Distributions Installing Linux in a Server Configuration - Hardware and Environmental Considerations Server Design Uptime Methods of Installation, Installing Ubuntu Server, Managing Software -The Debian Package Management System apt Software Management in Ubuntu Querying for Information Installing Software in Ubuntu Removing Software in Ubuntu.

UNIT II 07 **Hours**

Single-Host Administration, Managing Users and Groups-user management tools, Pluggable Authentication Modules(PAM).The Command Line, Booting and Shutting Down – bootloader, init process,rc script, enabling and disabling services, File Systems-the makeup of FS, managing disk. Core System Services, The Linux Kernel.

UNIT III **07 Hours**

Networking and Security, TCP/IP for System Administrators, Network Configuration-modules and network configuration, managing routes, a simple router, Linux Firewall (Netfilter), Local Security-sources of risk, picking the right run-level, limited resources, monitoring your system.

UNIT IV **07 Hours**

Internet Services – Domain Naming Services (DNS), File Transfer Protocol (FTP), Apache Web Server (HTTP Server), Simple Mail Transfer Protocol (SMTP), Post Office Protocol (POP) and IMAP, The Secure Shell (SSH).

UNIT V **07 Hours**

Intranet Services - Network File System (NFS), Samba, Distributed File Systems, Network Information Service LDAP, DHCP, Virtualization, Backups.

TEXT BOOKS

COURSE DESCRIPTION

This course provides knowledge on definitions of big data and big data analytics, comparison of conventional data warehouse and big data environment, big data frame works like Hadoop and SPARK frame works, data storage mechanisms for big data.

PREREQUISITES

- Students should have the knowledge of Distributed Systems and Parallel Processing
- Students should have knowledge object oriented and functional programming.

COURSE OBJECTIVES

- Understand the data and categories of the data.
- Understand the data analytic techniques.
- Study the big data framework Hadoop and SPARK
- Analyze the difference between Hadoop and SPARK environments
- Study the NOSQL databases.

COURSE CONTENTS

UNIT -I **10 Hours**

Introduction to Big Data: Types of Digital Data, **Introduction to Big Data**: Characteristics, Evolution, Definition, Challenges, What is Big Data, Other Characteristics, Why Big data, Significance of Big Data, Traditional BI versus Big Data, Data warehouse environment versus Hadoop Environment, Trends in Big data, **Big Data Analytics**: Introduction to Big Data Analytics, Classification of Analytics, Importance of Big Data Analytics, Technologies for Big data, Data Science, Data Scientist, Terminologies Used.

UNIT -II **12 Hours**

Hadoop / Spark /HDFS Overview, Introduction to Scala: Hadoop Over view: Features, Key advantages, Versions, Distributions, Overview of Hadoop Ecosystem, Why Hadoop, why not RDBMS, **HDFS**: Hadoop Distributed File System (HDFS), HDFS Daemons, File Read, File Write, Replica Placement Strategy, HDFS commands, Special features of HDFS & its limitations

Spark Overview: Spark Ecosystems, Advantages of Spark

Scala: Scala Overview, Vals and Variables, basic types, operators, control structures, functions, maps, tuples, Collections - Mappings, Iterators, comprehensions, classes, objects, pattern matching. Functions as a parameter.

UNIT -III **10Hours**

Spark Core: Spark Standalone application, Running on Cluster, Programming with RDD's: Basics, RDD operations, Lineage Graphs, Lazy evaluation, Persistence, Immutability, Fault Tolerance, Performance (Pipelining, Shuffle). Pair RDD's: Transformations and Actions, Partitioning, Accumulators, Broadcast Variables.

UNIT -IV **10Hours**

Spark SQL: Rows, Data frames, Tables and SQL operations on Tables. SparkSession, Creating Data Frame, Parquet files, working with Hive.

Spark Streaming: Introduction to Stream Processing, Architecture of Spark Streaming, Caching and Persistence, Check pointing, Fault tolerance, Structured Streaming-Output Modes, Output sinks, Failure recovery and check pointing

UNIT -V **10Hours**

NoSQL: Definition, Types of NoSQL Databases, Why NoSQL?, Advantages of NoSQL, NoSQL Vendors, Comparison of SQL, NoSQL & NewSQL, comparison with RDBMS.

Introduction to Hive: History of Hive and Recent Releases of Hive, Hive Features, Hive Integration and Workflow, Hive Data Units, Hive Architecture, Hive Data Types, Hive File Format, HiveQuery Language, DDL (Data Definition Language) Statements, DML (Data Manipulation Language) Statements, RC file implementation, SerDe, User-Defined Function.

TEXT BOOKS

2. Muhammad Asif Abbasi, Learning Apache Spark 2, Packt Publishing, 2017 (Chapter 1,2,3,4,5)
3. Cay S. Horstmann, Scala for the Impatient 2nd Edition (Chapter 1to 6, 12 to 14)
4. Andy Konwinski, Holden Karau, MateiZaharia, Patrick Wendell, Learning Spark Lightning-Fast Big Data Analysis, O'Reilly, 2015 (Chapter 1, 2, 3, 4, 6, 7, 8, 9, 10)
5. Tom White, Hadoop: The Definitive Guide, O'Reilly, 2015

DELIVERYMETHODS

- Black board teaching
- Lectures using presentations
- Assignments

ASSESSMENT METHODS

Parameters	Marks
Midterm Test (Avg. of 2 Tests)	30
Case Study	10
Self-Study	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

.

COURSE OUTCOMES:

At the end of the course student will be able to

COs	Description	Bloom's Level
CO 1	Understand the big data, big data analytics, big data processing requirements.	**L1**
CO 2	Compare the Hadoop and SPARK framework for big data.	**L2**
CO 3	Illustrate the programming model in scala using basic data types, functions, objects, classes.	**L3**
CO 4	Apply the Knowledge of RDDs, Dataframes to develop SPARK applications.	**L3**
CO 5	Analyze the big data framework used in industry	**L4**

Mapping of Course outcomes (COs) to Program outcomes (POs*)& PSO **

Total Contact Hours: *52 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course provides an in-depth knowledge of definitions of cryptography and network security, conventional cryptographic algorithms, block cipher cryptosystems, public cryptosystems, key management systems, authentication techniques to provide secure communication.

PREREQUISITES

- Students should have the knowledge of Computer Networks
- Students should have knowledge of Mathematics and Algorithm Concepts.

COURSE OBJECTIVES

- Understand the basic concepts of cryptography and network security and classify attacks on a network.
- Understand and analyze the different process for hiding the information with conventional cryptographic algorithms.
- Understand various block cipher cryptosystems
- Analyze public cryptosystems and key management Systems
- Understand and apply authentication techniques to provide secure communication

COURSE CONTENTS

UNIT - I **10 Hours**

Introduction: Service mechanisms and attacks, The OSI security architecture, A Model for Network Security. Symmetric Ciphers: Symmetric cipher model, substitution techniques.

UNIT - II **10 Hours**

Symmetric Ciphers: Transposition techniques, Steganography. Block Ciphers and DES : Simplified DES. Block cipher principles, DES, Strength of DES, Block cipher design principles.

UNIT -III **12 Hours**

Block cipher modes of operation. AES Cipher-Substitute Bytes Transformation, Shift Row Transformation, Mix Column Transformation, Add Round Key Transformation, AES key expansion.

UNIT - IV **10 Hours**

Public key cryptography and RSA: Principles of public key cryptosystems, RSA algorithm. Other public key cryptosystems and key management: key management, Diffie-Hellman key exchange. Elliptic Curve Cryptography.

UNIT -V **10 Hours**

Network Security Applications: Authentication Applications: Kerberos, X.509 Authentication Service. Electronic Mail Security: PGP.

SELF STUDY:

Prime Numbers, Fermat's and Euler's Theorem, Testing for Primality, Chinese Reminder Theorem, Discrete Logarithms, Knapsack Cryptosystem, Rabin Cryptosystem, Elgamal Cryptosystem.

Self-Study Evaluation:

1. The Topics are integral part of the course.
2. No formal Lectures will be held for the self-study topics
3. The topics prescribed for the self-study are the part of Learning Assessment-2 (LA2)

TEXT BOOKS

1. Cryptography and Network Security: William Stallings, Pearson Education, 2003
2. Behrouz A Forouzan, Debdeep Mukhopadhyay: Cryptography and Network Security, 2nd Edition, Special Indian edition, Tata McGraw-Hill, 2011.

COURSE DESCRIPTION

This Course covers the fundamentals of Software Development methodologies, Modern Software Project Management and Software Project Cost Estimation Techniques.

PREREQUISITES

- Knowledge of Software Engineering and basic Programming.

COURSE OBJECTIVES

- To introduce Software development Methodologies.
- To understand the project cost estimation.
- To understand the concept of Software Quality and Process.

COURSE CONTENTS

UNIT -I **8 Hours**

Introduction to Software Project Management, Project Evaluation and Programme Management, Overview of Project Planning

UNIT -– II **8 Hours**

Software Development Methodologies The old way and the new: The principles of conventional software engineering, principles of modern software management, transitioning to an iterative process. Life cycle phases. Software Effort Estimation.

UNIT -III **8 Hours**

Activity planning. Risk Assessment, Resource Allocation

UNIT - IV **8 Hours**

Flows of the process: Software process workflows, Inter-trans workflows. Checkpoints of the Process:

Major Mile Stones, Minor Milestones, Periodic status assessments. Interactive process Planning: Work breakdown structures, planning guidelines, Interaction planning process, Pragmatic planning. Managing People.

UNIT -V **7 Hours**

Managing Teams; Software Quality, Closure of Projects; Process Automation: Automation Building Blocks

TEXT BOOK

1. Bob Hughes, Mike Cotterel, Rajib Mall: Software Project Management, Sixth Edition; McGraw Hill, 2005.

REFERENCE BOOK

1. Walker Royce: Software Project Management, Pearson Education, 2005.

TEACHING METHODS

1. Lecture using Black board and chalk
2. PowerPoint presentations (if needed)
3. Regular review of students by asking questions based on topics covered in the class

ASSESSMENTMETHODS

Parameters	Marks
Midterm Test (Avg. of 2 Tests)	30
Case study	10
Tool Based Learning	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to

COs	Description	Bloom's Level
CO 1	Describe the roles and responsibilities by PM process group (initiating, planning, and executing controlling, closing).	L1
CO 2	Articulate the purpose and benefits of project management (PM).	L3
CO 3	Explain quality management and process improvement in the context of software development projects.	L2
CO 4	Work in groups to analyze a project and implement a solution	L4
CO 5	Understand how projects are managed and implemented in real time scenario	L2

COURSE DESCRIPTION

In this course you will learn how to program in R and how to use R for effective data analysis and will learn scala and Spark to drive better business decisions and solve real-world problems.

PREREQUISITES

- Basics of Java (preferred), Python or another object-oriented language.

COURSE OBJECTIVES

At the end of the course students will be able to

1. Get a solid understanding of the fundamentals of the language, the tooling, and the development process.
2. Tackle data analysis problems involving Big Data, Scala and Spark.
3. Design and write efficient programs using R to perform routine and specialized data manipulation/management and analysis tasks.
4. Document, share, and collaborate on code development using a suite of Open Source standards and tools.
5. Develop a good application of more advanced features.

LAB EXERCISES

Part A

Implement the following exercises using R

1. **a.** Create three different variables, one that is numeric type and other two are vector of characters. Use these to create data frame of student.(USN, Name, Marks)
   b. Add a new numeric data column to the existing data frame (Age). Provide summary of the data
   c. Display the list of students whose Age is less than 20 and Marks greater than 25.
2. Write a program to create the csv file for storing Employee data, containing the fields (EmpID, EmpName, DOJ,Dept, Desig.)

- **a.** Read the suitable number of employee details from the user.
- **b.** Create a dataframe of Employee
- **c.** Store the dataframe in the csv file
- **d.** Read the data from csv and Display the contents
- **e.** Append a new row into the csv file

3. Exploring Dataset

- **a.** List the data set available in your system using suitable command
- **b.** Select “mtcars” data set, find and display the number of rows and columns in that data set
- **c.** Find are there more automatic (0) *or* manual (1) transmission-type cars in the dataset?
  Hint: 9th column indicates the transmission type
- **d.** Get a scatter plot of ‘hp’ vs ‘weight’.
- **e.** Change ‘am’, ‘cyl’ and ‘vs’ to *integer* and store the new dataset as ‘newmtc’.
- **f.** Extract the cases where cylinder is less than 5

4. Consider “Airquality” dataset

- **a.** Display the dimension ofthe dataset
- **b.** Display the class of each fields in the data set
- **c.** Test the missing values
- **d.** Recode the missing values, as mean ofthe column values
- **e.** Exclude the missing values

Implement the following exercises using Scala

5. Write a program that reads words from a file. Use a mutable map to count how often each word appears.

6. Write a function minmax (values: Array[Int]) that returns a pair containing thesmallest and largest values in the array.

7. Write the menu driven program to implement quick sort algorithm using imperative style and functional style.

8. Write the program to illustrate the use of pattern matching in scala, for the following Matching on case classes. Define two case classes as below:

abstractclassNotification
caseclassEmail(sender: **String**, title: **String**, body: **String**) **extendsNotification**
caseclassSMS(caller: **String**, message: **String**) **extendsNotification**

Define a function showNotification which takes as a parameter the abstract type Notification and matches on the type of Notification (i.e. it figures out whether it’s an Email or SMS).
In the case it’s an Email(email, title, _) return the string: s"You got an email from $email with title: $title“
In the case it’s an SMS return the String: s"You got an SMS from $number! Message: $message“

Part B

Implement the following exercises using Spark

9. WordCount: Here the goal is to count how many times each word appears in a file and write out a list ofwords whose count is strictly greater than 4.

Use the file log.txt accompanying this assignment to count the words.Save the wordcounts in text form in the "wordcountsDir" using the saveAsTextFile RDD method.Examine the contents ofthe above directory, andthe contents ofthe files ofthe directory.

10. Tweet Mining: A dataset with the 8198 reduced tweets, reduced-tweets.json will be provided.The data contains reduced tweets as in the sample below:

```
{"id":"572692378957430785",
"user":"Srkian_nishu :)",
"text":"@always_nidhi @YouTube no idnt understand bti loved of this mve is rocking",
"place":"Orissa",
"country":"India"}
```

A function to parse the tweets into an RDD will be provided. The task is to print the top 10 tweeters.

Self Demonstartion of the below programs

1. IPLTossWinStats: You will be provided with a dataset from the Indian Premier League containing the following files:
   Ball_by_Ball.csv, Match.csv, Player.csv, Player_Match.csv, Season.csv, Team.csv.
   We want to find the percentage of game wins by teams which win the toss.Solets say N games have been played. Let us say there are M games where the team which has won the toss has also won the game. So we are looking for the percentage (M * 100 / N).Perform the task using SQL code only.
2. Streaming Rainfall Averages: Consider the scenario that there are three weather stations in Bangalore which report the rainfall at the respective locations once every 15 minutes. You have to write a Spark Streaming application which will gather the rainfall data from the three stations and print the average rainfall, also once every 15 minutes.
   You will be provided with a scala program, generate Events, which can simulate generation of the rainfall data from the three stations in JSON format as shown below to a folder:{"Creation_Time": 1.536335939694000013E18,"Station": "Bengaluru-1","Rainfall": 100.0} Write a Spark streaming application which reads the files written to the above folder and updates the average rainfall value every 15 minutes and prints the averages to the console.

ASSESSMET METHODS:

Parameters	Marks
Experiment Write up + Execution + Viva	15
Lab Record Writing	10
Lab Internals Test	15
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to

COs	Description	Bloom's Level
CO 1	Apply the concept of R programming for cleansing, imputation, and computation of simple statistical measures on the data.	**L3**
CO 2	Understand the basics of Scala for data analysis.	**L2**
CO 3	Design a Spark code for basic data manipulation and aggregate analysis.	**L4**
CO 4	Implement real time application such as word count, data mining into a set of distributed computations and implement the same in Spark using Scala.	**L3**
CO 5	Implement analytics on higher level data objects like Tables using Spark SQL and analytics on Streaming datasets using Spark Streaming.	**L3**

COURSE DESCRIPTION

This laboratory introduces students with Android programming concepts and provides knowledge to create android apps.

PREREQUISITES

- Students should have knowledge on any programming language.

COURSE OBJECTIVES

- To introduce Android platform and its architecture.
- To learn activity creation and Android UI designing.
- To be familiarized with Intent, Broadcast receivers and Internet services.
- To work with SQLite Database and content providers.
- To integrate multimedia, camera and Location based services in Android Application. To explore Mobile security issues.

LAB EXERCISES

PART – A

1. In this lab we will be learning how to use and extend the Android user interface library.
   a. Views, View Groups, Layouts, and Widgets are and how they relate to each other.
   b. How to declare and reference resources in code.
   c. How to navigate between multiple activities.
   d. How to share the data between the activities.
   e. Explore life-cycle methods of an activity.
   f. How to use Events and Event Listeners.
   g. How to create Toast Notifications.
2. You will expand on your knowledge of the Android user interface library.
   a. How to declare layouts statically as an xml resource.
   b. How to create custom Views from scratch to suit a specific need.
   c. How to create Options and Context Menus.

d. How to use List Adapter and Array Adapter to bind data source to a List View.
e. How to create Alert Dialog and progress Dialog in your activity.

3. You will be persisting data using a SQLite Database and preserving the state of an application during its lifecycle.
   a. How to save & restore data as Application Preferences (Shared Preference).
   b. How to save & restore data as Instance State.
   c. How to create and manage a SQLite Database in Android.
   d. How to insert, update, remove, and retrieve data from a SQLite Database.
   e. Display data using Recycler View.
4. Develop an app to capture a photo and store it into SDCard, extend this app to display all the photos capture in the grid view.
   a. How to use the Camera.
   b. How to write data to the SD card.
5. Create an application to demonstrate few key features of the Android framework. In particular, the application demonstrates how to send SMS text messages.
   a. How to send SMS text messages.
   b. How to dial using an in-built dialer
   c. How to send email.
6. Develop an app that include broadcast Receiver to receive the miss calls from the Known number and display it to the user using notification services. This same app should also fetch phone number from the inbuilt contacts using the concept of content provider.
   a. How to use broadcast receiver and notifications.
   b. How to use content providers.
7. Design an android app to fetch the JSON data from the internet and display the data using listView.
   a. Employee data is stored in the internet. (use Async Task)
   b. When app sends the request to the server, the server should provide data injson format.
   c. The client app should fetch this data and display using listview.
8. Develop an android app on Google Map, and should provide following functions.
   a. How to incorporate Google Maps into an application.
   b. How to register for and receive GPS location information.
   c. How to create Google Maps Overlays.
   d. Accept city name from user and marks it on map.
   e. Explore features like Zoom and map types.

PART – B

Student should develop a mini project in a group of three.

ASSESSMENT METHODS

Parameters	Marks
Midterm Test (Avg. of 2 Tests)	30
Course Project	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

COs	Description	Bloom's level
CO 1	Describe Android platform, Architecture and features	L1
CO 2	Design User Interface and develop activity for Android App	L4
CO 3	Use Intent, Broadcast receivers and Internet services in Android App.	L3
CO 4	Design and implement Database Application and Content providers.	L4
CO 5	Use multimedia, camera and Location based services in Android App.	L3

SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This laboratory course focuses on the introduction of network security using various cryptographic algorithms, to understand the basic mathematical foundations of cryptography, and to gain insightful experience by working with fundamental cryptographic applications.

PREREQUISITES

- Students should have the knowledge of Computer Networks.
- Students should have knowledge of Mathematics and Algorithm Concepts.

COURSE OBJECTIVES

· Understand the most common type of cryptographic algorithm
· Understand various block cipher cryptosystems
· Understand various substitution and transposition cipher techniques
· Analyze public cryptosystems and key management Systems
· Develop secure mobile Applications.

PART A LAB EXERCISES

1. Implement Caesar Cipher encryption & Decryption technique which is by replacing each character by another character that will be some fixed number of positions down to it.
2. Demonstrate the playfair cipher, consider the key table 5×5 grid of alphabets that acts as the key for encrypting the plaintext.
3. Implement Data encryption and decryption using Hill Cipher method.
4. Encrypt the plaintext we using a Vigenere table that consists of the alphabet from A to Z written out 26 times in different rows, further each alphabet must be shifted cyclically to the left compared to the previous alphabet.
5. Implement Rail fence cipher technique using the row & Column Transformation.
6. Demonstrate the Data Encryption Standard based on the two fundamental attributes of cryptography: substitution (also called as confusion) and transposition (also called as diffusion).
7. Execute the program for simple RSA algorithm to encrypt and decrypt the data.
8. Implement diffie Hellman (DH) key exchange algorithm as a method for securely exchanging cryptographic keys over a public communications channel.

PART B	COURSE PROJECT

Design an android application for end-to-end encryption of short message service (SMS) using any symmetric/asymmetric Cryptographic technique that can conceal message regarding student's results/notification on placements/Department's updates of Nitte Meenakshi Institute of Technology (NMIT), while on transit to another mobile device using Cryptographic technique on android operating system and implement it for security of mobile SMS.

The objectives to implement are shown below:

i) Develop an android application for the NMIT that will ensure the encryption of every message transmitted within the network of the organization using any symmetric/asymmetric Cryptographic technique. This application will provide security measures whenever information is transmitted from one mobile device to another as it is important to protect the information while it is on transit.

ii) The choice of Cryptographic technique depends on your project's needs. The below is the list of some Cryptographic techniques popular for Android which can be used in your project for the implementation purpose.

- symmetric encryption
- asymmetric encryption
- hashing
- digital signature
- end-to-end encryption
- elliptic-curve cryptography
- HMAC

Expected outputs:

Fig. 1: SMS service Dashboard on Mobile App

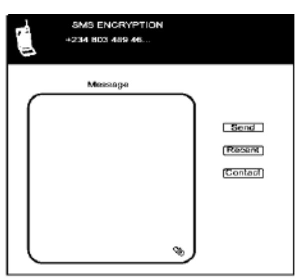

Fig. 2: SMS service to compose message at the sender end

Fig. 3: Display encrypted and Decrypted message at receiver end

Note: The project should include the key objectives however, scope is not limited to mentioned objectives.

ASSESSMENT METHODS

Parameter	Marks
Experiment write up, Execution, Viva & Record writing	20
Course Project	15
Lab Internal Test	15
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course students will be able to

CO	Description	Blooms level
CO 1	Understand the concepts of different ciphers.	**L2**
CO 2	Illustrate various Public key cryptographic techniques.	**L2**
CO 3	Understand and Analyze the different process for hiding the information with conventional cryptographic algorithms, transposition techniques and block ciphers.	**L2**
CO 4	Analyze public cryptosystems and key management Systems	**L3**
CO 5	Develop Secure Mobile Applications	**L4**

COURSE DESCRIPTION

This course allows students to continue their final year major project work. The students will discuss with project guides and come up with software requirements and system design.

PREREQUISITES

- Programming knowledge
- Project work-I

COURSE OBJECTIVES

- To allow students analyze the literature survey conducted.
- To develop project planning statement consisting of project problem statement, aim, scope and timeline diagram.
- To understand the requirements gathering, analysis and design of their project.
- To select modern tools corresponding to their project requirements.

COURSE CONTENT

- Planning of the project work consisting of project problem statement, aim, scope and timeline diagram.
- Preparation of the Software Requirements Specifications (SRS) document.
- Preparation of detailed System Design(use-case diagram, class diagram, activity diagram, sequence diagram and data flow diagram)
- Seminar as oral Presentation before a Departmental Committee.

ASSESSMENT METHODS

Parameter	Marks
Preparation of SRS document and Detailed design	20
Rubrics based on evaluation of seminar on SRS and System Design	30
Total Marks	**50**
Final Exam will be conducted for 50 marks(SEE)	

COURSE OUTCOMES

At the end of the course students will be able to:

COs	**Description**	**Bloom's Level**
CO 1	Analyze the gathered requirements pertaining to their project.	**L4**
CO 2	Apply the software engineering process model to complete the SRS document.	**L3**
CO 3	Complete the detailed design document.	**L2**
CO 4	Acquire the depth knowledge on modern tool usage to implement their project	**L2**
CO 5	Improve their presentation and writing skills and recognize the importance of team work	**L2**

COURSE DESCRIPTION:

This course is aimed to introduce the various protocols at different layers in the network model

COURSE CONTENTS:

UNIT -I **8 Hours**

Network Layer -2: Delivery and Forwarding of IP Packets**,** Internet Protocol Version 4 (Ipv4), Address Resolution Protocol (ARP), Internet Control Message Protocol Version 4 (ICMPv4)

UNIT -II **8 Hours**

Unicast Routing Protocols (RIP, OSPF and BGP)**,** Multicasting and Multicast Routing Protocols: Multicast Addresses, IGMP (Group management, IGMP messages), Multicast Routing, Routing Protocol, **TCP/IP:** Introduction to Transport Layer: Transport Layer Services

UNIT -III **8 Hours**

User Datagram Protocol: User Datagram, UDP Services, UDP Applications, Transmission Control Protocol: TCP Services, TCP Features, Segment, TCP Connection, Windows in TCP, Flow Control, Error Control, Congestion Control, TCP timers, Options, Stream Control Transmission Protocol (SCTP): SCTP services, SCTP features

UNIT -VI **8 Hours**

Applications: Introduction to Application layer: Client-Server Paradigm, Peer-to-peer Paradigm, DHCP: DHCP operation, DNS: Name Space, Remote Login: Telnet, FTP, TFTP, Electronic Mail: SMTP, POP, IMAP and MIME.

UNIT -V **7 Hours**

Next Generation-IPv6 Address: Address Space Allocation, Global Unicast Addresses, IPv6 protocols: Packet Format, Transition from IPV4 to IPV6.

TEXT BOOKS:

1. Behrouz A. Forouzan, TCP/IP Protocol Suite, 4/e, McGraw-Hill (6,7,8.1-8.2,9.1-9.2,11.1,11.2,11.4,11.6,11.8,12.1-12.5,13,14,15,16.1-16.3,17.1-17.2,18.1-18.2,19.1- 19.2,20.1,23, 26, 27)

COURSE DESCRIPTION

This course is for any student who is interested in pursuing a career which would require algorithm design and implementation. Arguably, algorithm design and implementation is the most fundamental and exciting area of computer science. Even though algorithms for solving most of the problems already exist, it is necessary to continuously evolve better ways of implementing them. New domains are being explored by current researchers which could require development of totally new algorithms. All of these activities require a sound knowledge of Algorithm Design. Sound knowledge implies the ability to prove correctness of an algorithm and to estimate the runtime of the algorithm. This course will cover both aspects of algorithm analysis in addition to introducing some advanced data structures and algorithms.

PREREQUISITES

- Students should have gone through the basic courses on data structures and algorithms.
- Students should have knowledge of C or C++ language

COURSE OBJECTIVES:

To enable the students to

- Analyze the asymptotic performance of algorithms.
- Write rigorous correctness proofs for algorithms.
- Demonstrate a familiarity with major algorithms and data structures.
- Apply important algorithmic design paradigms and methods of analysis.
- Synthesize efficient algorithms in common engineering design situations.

COURSE CONTENTS

UNIT -I Basic Algorithms and DS Review 08Hours

Analyzing Algorithm Complexity: Growth of functions. Asymptotic Upper bound, lower bound, tight bound. Solving Recurrences: Substitution, Recurrence tree and Masters theorem. Review of Tree traversal and Search algorithms. Proving correctness of traversal & search, Review of predecessor & successor algorithms. Algorithm complexity analysis. Hashing review. Hash tables, analysis of hashing with chaining. Hash functions. Blooms filter.

UNIT -II Advanced Data Structures 08 Hours

Amortized Analysis: Aggregate Analysis, The Potential Method. Illustrate using Stack operations. Dynamic Tables: Dynamic Tables, Algorithm design using amortization concepts. Data Structures for Disjoint Sets: Disjoint-set operations, linked-list representation and analysis, Disjoint-set forests (without analysis). Operation on RB trees (Analysis, time permitting). Augmenting data structures: Basics, augmenting AVL trees. Introduction to Tries, Suffix trees.

UNIT -III Graph Algorithms (Network Flows) 08 Hours
Review of BFS and DFS in Graphs. Flow networks and max flows. Ford Fulkerson, and Edmonds-Karp Algorithm (overview only). With Analysis of Correctness and Complexity. Bipartite Graph Matching: reduction to a maximum flow problem. Correctness proof (Time permitting).

UNIT -IV Approximation Algorithms 08 Hours
P/NP: P and NP classes. Polynomial time verification. Reducibility. Some example reductions. Approximate algorithms: vertex-cover, TSP, set covering (overview only). With Complexity Analysis.

UNIT -V Special Topics 07 Hours
Longest Common substring, Longest common subsequences, Multithreaded Algorithms - Basics: Computations DAG's, performance measures, scheduling, analysis. matrix multiplication, merge sort.Stencil based computations.

TEXT BOOKS

1. Introduction to Algorithms, Thomas H., Cormen, Charles E. Leiserson, Ronal L. Rivest, Clifford Stein, 3rd Edition, PHI, 2010.
2. Algorithm Design, John Kleinberg and Eva Tardos, Pearson Publication 2006

DELIVERY METHODS

The course will be delivered through lectures, class room interaction, numerical exercises and self-study components.

ASSESSMENT METHODS

Parameters	Marks
Midterm Test (Avg of 2 Tests)	30
Programming Assignment	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

Having successfully completed the course, student will be able to:

COs	Description	Bloom’s Level
CO1	Analyze algorithm complexity using recurrence relations, asymptotic analysis, aggregate analysis, worst case analysis.	L3
CO2	Prove correctness of algorithms.	L3
CO3	Understand the concepts of advanced data structures such as dynamic tables and AVL trees.	L2
CO4	Derive approximation algorithms for hard problems (NP complete problems).	L3
CO5	Design algorithm for multi-threaded applications.	L4

COURSE DESCRIPTION

This course provides an in-depth knowledge of fundamentals of Computer Design, Instruction–Level Parallelism, Multiprocessors and Thread–Level Parallelism and MemoryHierarchy.

PREREQUISITES

- Knowledge on Computer Architecture and Operating Systems.

COURSE OBJECTIVES

- To understand the concept of Computer Design
- To understand Instruction–Level Parallelism and its challenges.
- To identify the Performance of symmetric shared–memory multiprocessors; Distributed shared memory

COURSE CONTENTS

UNIT – I **8 Hours**

Fundamentals Of Computer Design: Introduction; Classes of computers; Defining computer architecture; Trends in Technology, power in Integrated Circuits and cost; Dependability; Measuring, reporting and summarizing Performance; Quantitative Principles of computer design. Pipelining: Introduction; Pipeline hazards; Implementation of pipeline; what makes pipelining hard to implement?

UNIT – II **8 Hours**

Instruction–Level Parallelism–1:ILP:Conceptsandchallenges; Basic Compiler Techniques for exposing ILP; Reducing Branch costs with prediction; Overcoming Data hazards with dynamic scheduling; Hardware-based speculation.

UNIT – III **07 Hours**

Instruction–Level Parallelism: Exploiting ILP using multiple issue and static scheduling; Exploiting ILP using dynamic scheduling, multiple issue and speculation; Advanced Techniques for instruction delivery and Speculation;.

UNIT – IV **08 Hours**

Multiprocessors and Thread–Level Parallelism: Introduction; Symmetric shared-memory architectures; Performance of symmetric shared–memory multiprocessors; Distributed shared memory and directory-based coherence; Basics of synchronization; Models of Memory Consistency.

UNIT – V **08 Hours**

Review of Memory Hierarchy: Introduction; Cache performance; Cache Optimizations, Virtual memory. Memory Hierarchy design: Introduction; Advanced optimizations of Cache performance; Memory technology and optimizations; Protection: Virtual memory and virtual machines.

TEXTBOOKS

1. HenneseyandDavidA.Patterson:ComputerArchitecture,AquantitativeApproach,4thdition,Elsevier,2007.(Chapter.1.1to1.9,2.1to2.10,4.1to4.6,AppendixA, AppendixC, AppendixG)

REFERENCE BOOKS/WEBSITE

1. Kai Hwang: Advanced Computer Architecture Parallelism, Scalability, Programability, 2ndEdition, Tata McGraw Hill, 2010.
2. David E. Culler, Jaswinder Pal Singh, Anoop Gupta: Parallel Computer Architecture, Ahardware/Software Approach, Morgan Kaufman, 1999.
3. https://nptel.ac.in/course.php

TEACHING METHODS

- Lecture using Black board and chalk
- Lecture using Presentations
- Problem Solving Assignments

ASSESSMENT METHODS

Parameters	Marks
Midterm Test (Avg of 2 Tests)	30
Case Study	10
Assignment	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES (COS)

COs	Description	Bloom's Level
CO1	Understand the importance of classes of computers; Trends in Technology.	L2
CO2	Demonstrate the Compiler Techniques for exposing ILP; Reducing Branch costs with prediction	L3
CO3	Analyze the Symmetric shared-memory architectures; Performance of symmetric shared–memory multiprocessors	L3
CO4	Demonstrate the Advanced optimizations of Cache performance techniques	L3
C05	Evaluate the memory technology and optimizations; Protection, cache ,Virtual memory and virtual machines.	L2

COURSE DESCRIPTION

Virtual Reality (VR) Systems Design covers the architecture and design of current generation systems for creating 3D VR environments. Topics included are application/hardware architecture, pipeline development, geometric transformations in a 3D coordinate system, geometry and pixel shading, lighting systems, texturing and VR development. Students will be exposed to current VR technologies and next generation algorithms.

PREREQUISITES

- Students should have knowledge of C or C++, visual Basic or Java language
- Students should have knowledge of mathematics Geometry, Graphs and Matrix
- Students should have knowledge Computer Graphics

COURSE OBJECTIVES

- To learn the basics of VR and all components of VR System
- To understand the modeling of VR Systems
- To introduce students with unity development tool

COURSE CONTENTS

UNIT-I **8 Hours**

Introduction of Virtual Reality: **The three I's of virtual reality, commercial VR technology and the five classic components of a VR system. Input Devices: (Trackers, Navigation, and Gesture Interfaces): Three- dimensional position trackers, navigation and manipulation, interfaces and gesture interfaces. (1.1, 1.3, 1.5, 2.1, 2.2 and 2.3 of Text Book (1)).**

UNIT-II **8 Hours**

Output Devices and Modeling in Virtual Reality: Output Devices: Graphics displays, sound displays & haptic feedback, modeling: Geometric modeling, kinematics modeling, physical modeling, (3.1, 3.2, 3.3, 5.1, and 5.3 of Text Book (1)).

UNIT-III **8 Hours**

Modeling in Virtual Reality and Implementation of VR: behavior modeling, model management, How VR works, Stereoscopic displays, Binocular vision, VR Head mounted displays

UNIT-IV **8 Hours**

Getting started with Unity development: Unity Interface**,** Game objects, Importing assets to Unity, Textures and Materials, Unity Scripting Input and UI Unity, UI Components, Beginner Game play Scripting.

UNIT-V **8 Hours**

Getting started with VR development for Google cardboard using unity: Enabling unity's native VR Integration, Creating a VR scene in unity, Integrating Google VR SDK, Deploying the VR application to Android platform**,** Additional Read on unity VR Development

TEXT BOOKS

1. Virtual Reality Technology, Second Edition, Gregory C. Burdea & Philippe Coiffet, John Wiley & Sons, Inc.,

REFERENCE BOOKS

1. Understanding Virtual Reality, interface, Application and Design, William R.Sherman, Alan Craig, Elsevier (MorganKaufmann).
2. 3D Modeling and surfacing, Bill Fleming, Elsevier(MorganKauffman).
3. 3D Game Engine Design, David H.Eberly, Elsevier.
4. Virtual Reality Systems, John Vince, PearsonEducation

TEACHING METHODS

- Black board teaching
- Lectures using presentations(ppts)
- Assignments

ASSESSMENT METHODS

Parameters	Marks
Midterm Test (Avg of 2 Tests)	30
Tool Based Learning	10
Project	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

COs	Description	Bloom's Level
CO 1	Understand the basis concept and framework of Virtual reality	**L2**
CO 2	Apply VR technologies for multimodel User interaction, perception, Visual, audio, haptic interface and behavior	**L3**
CO 3	Explain the VR system framework and development tools	**L1**
CO 4	Develop application in a given VR environment	**L3**
CO 5	Develop animated images using GUI design principles, Virtual reality	**L3**

COURSE DESCRIPTION

This course is intended to provide students with the skills required to create Windows Forms applications in C# by using the .NET Framework. The course will cover the major topics for Windows client application programming on the .NET Framework.

PREREQUISITES

- Knowledge on OOP concepts.

COURSE OBJECTIVES

- To learn the basics of .NET framework and C# Programming.
- To develop the Windows Application Development using C#.
- To understand the Web Application Development using ASP .NET.

COURSE CONTENTS

UNIT –- I **8 Hours**

Introduction to .Net &C# Language Fundamentals: Microsoft's .Net, .Net Framework, C#, Simple Application in C#, Literals, Variables and Data Types, Formatting Text, Console.write, Console.writeline, Operators and Expressions, decision making & Branching, Strings, Control Statements, Arrays, Structures and Enumerations

UNIT –- II **8 Hours**

Object Oriented Programming with C#: Base classes and derived classes, Inheritance, Polymorphism, operator overloading, Interfaces, and examples, Delegates and Exceptions handling.

UNIT –- III **8 Hours**

Graphical User Interface with Windows Forms: Windows forms, event handling, Control properties and layout, labels, textboxes, buttons, checkbuttons, radiobuttons, picture boxes, mouse event handling, Keyboard event handling, examples, Menus, Month calendar control, Datetimepicker control, linklabel, list box, Combox, Checkedlistbox, Treview, listview and Tabcontrol control, Multiple Document Interface (MDI), examples.

UNIT -– IV **7 Hours**

Data access with ADO.NET: Introduction to ADO.NET Entity Framework, Creating the ADO.NET Entity Data Model Class Library, Creating a Windows Forms Project and Configuring It to Use the Entity Data Model, Data Bindings Between Controls and the Entity Data Model, Dynamically Binding Query Results, Creating the Display Query ResultsGUI, Coding the Display Query Results Applications.

UNIT -– V **8 Hours**

Introduction to ASP.NET, Web application development with Microsoft's ASP.NET 3.5 technology, Extensible HyperText Markup Language (XHTML), client-side scripting, Web application development using Web Forms, Web controls.

TEXT BOOKS

1. P. Deitel, H. Deitel, Visual C# 2012 How to Program, 6/e, Pearson, 2016
2. E. Balagurusamy: Programming in C#, 2nd Edition, TataMcGraw Hill, 2008.
3. Herbert Schildt: C# The Complete Reference, Tata McGraw Hill, 2004.

DELIVERY METHODS

* Lecture (PPT)
* Tutorials
* **Course Project:** Each student will form a group with 1, but no more than 2, other classmates. Each group will create a different C# Windows application to be completed at the end of the Semester. Specific details on the deliverable will be explained during the term.

ASSESSMENT METHODS

Parameters	Marks
Midterm Test (Avg of 2 Tests)	30
Course Project	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the completion of this course, the student will be able to

Cos	Description	Bloom's Level
CO 1:	Understand the fundamentals of C# and .Net framework.	L2
CO 2:	Demonstrate the object inheritance and its use in C#.	L3
CO 3:	Develop the Windows Forms and apply user controls in Windows Forms applications.	L4
CO 4:	Design menus in a Windows Forms application and create Multiple Document Interface (MDI) applications.	L4
CO 5:	Create real applications by using C#, Database andADO.NET.	L4

COURSE DESCRIPTION

This course provides an in-depth knowledge of Operating System, Process, Threads and Kernel. It discusses advance concepts like Real Time Scheduling with security.

PREREQUISITES

- Student should have prior basic knowledge on Operating Systems
- Student should have some basic knowledge on Unix Shell Programming and Windows.

COURSE OBJECTIVES

To understand the basic features of Operating System, Process and Threads.

- To understand the implementation of virtual memory and Real Time Scheduling.
- To familiarize the management of resources by usage of kernels

COURSE CONTENTS

UNIT -– I **07 Hours**

Operating System Overview, Process description control

Operating System Objectives and Functions, The Evolution of Operating Systems, Major Achievements, Developments Leading to Modern Operating Systems, Linux, what is a Process? Process States, Process Description, Process Control, Execution of the Operating System, Security Issues

UNIT -– II **08 Hours**

Threads, SMP and Microkernel, Virtual Memory. Processes and Threads, Symmetric Multiprocessing (SMP), Microkernel's, Solaris Thread and SMP Management, Linux Process and Thread Management, Hardware and Control Structures, Operating System Software, Linux Memory Management.

UNIT – III **08 Hours**

Multiprocessor and Real-Time Scheduling Multiprocessor Scheduling, Real-Time Scheduling, Linux Scheduling, UNIX PreclsSlScheduling, Process Migration, Distributed Global States, Distributed Mutual Exclusion, Distributed Deadlock.

UNIT -– IV **08 Hours**

Embedded Operating System Embedded Systems, Characteristics of Embedded Operating Systems, eCOS, TinyOS, Computer Security Concepts, Threats, Attacks, and Assets, Intruders, Malicious Software Overview, Viruses, Worms, and Bots, Rootkits.

UNIT -– V **08Hours**

Kernel Organization: Using Kernel Services, Daemons, Starting the Kernel, Control in the Machine, Modules and Device Management, MODULE Organization, MODULE Installation and Removal, Process and Resource Management, Running Process Manager, Creating a new Task, IPC and Synchronization, The Scheduler, Memory Manager, The Virtual Address Space, The Page Fault Handler.

Note:

Mini Projects should be carried out on the implementation of rudimentary operating system or critical security algorithms to operating system. Report on the project and implementation this to be considered for internal assessment.

TEXT BOOKS

1. William Stallings: Operating Systems: Internals and Design Principles, 6th Edition, Prentice Hall, 2013.
2. Gary Nutt: Operating Systems, 3rd Edition, Pearson, 2014.
3. Silberschatz, Galvin, Gagne: Operating System Concepts, 8th Edition, Wiley, 2008

REFERENCE BOOKS

1. Andrew S. Tanenbaum, Albert S. Woodhull: Operating Systems, Design and Implementation, 3rdEdition, Prentice Hall, 2006.
2. Pradeep K Sinha: Distribute Operating Systems, Concept and Design, PHI, 2007

TEACHING METHODS

1. Lecture using Black Board/Power Point Presentations
2. Programming Assignments
3. NPTEL

ASSESSMENT METHODS

Parameters	Marks
Three internals (Avg of best of 2 Tests)	30
Programming Assignments	10
Rubrics for the evaluation of Course Project	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

COs	Description	Bloom's Level
CO 1	Identify and summarize the important aspects of Operating System, Threads and Process	L2
CO 2	Apply the important concepts of symmetric multiprocessing, multiprocessor and microkernel management	L3
CO 3	Describe the security aspects related to Operating System	L2
CO 4	Identify the different features of real time and embedded operating systems	L2
CO 5	Modify existing open source kernels in terms of functionality or features used.	L3

3: Strong, 2: Medium, 1: Weak ** H: Highly related S: Supportive

SEE Marks*: 50*	***CIE Marks:*** *50*

PREREQUISITES

- Students should have knowledge of database.
- Students should have knowledge of sql queries.

COURSE DESCRIPTION

This course imparts the concepts of database management system with respect to storage, indexing, optimization, evaluation of queries and operators. It helps to understand and also evaluate database access methods.

COURSE OBJECTIVES

- To understand various file organizations and access methods
- To introduce indexing methods.
- To learn query evaluation and operator evaluation

COURSE CONTENTS

UNIT – I **8 Hours**

Overview of Storage and Indexing, Disks and files: Data on external storage; File organizations and Indexing, Index data structures; Comparison of file organizations; Memory hierarchy: RAID; Disk space management; Buffer manager: Files of records; Page formats and record format.

UNIT – II **7 Hours**

Tree Structured Indexing: Intuition for tree indexes; Indexed sequential access method; B+ trees, Search, Insert, Delete, Duplicates, B+ trees in practice

UNIT – III **8 Hours**

Hash-Based Indexing: Static hashing; Extendible hashing, Linear hashing, Comparisons.

UNIT – IV **8 Hours**

Overview of Query Evaluation, External Sorting: The system catalog; Introduction to operator evaluation; Algorithms for relational operations; Introduction to query optimization; Example.

A simple two-way merge sort; External merge sort.

UNIT – V **8 Hours**

Evaluating Relational Operators: The Selection operation; General selection conditions; The Projection operation; The Set operations; Aggregate operations.

TEXT BOOK

Raghu Ramakrishnan and Johannes Gehrke; Database Management Systems.3rd Edition McGraw-Hill, 2003 (Chapters 8, 9, 10, 11, 12, 13.1to 13.3, 14)

REFERENCE BOOKS:

1. Elmasri and Navathe: Fundamentals of Database Systems 5th Edition, Pearson Education, 2007.
2. Connolly and begg: Database Systems, 4th Edition Pearson Education 2002.

Note: Laboratory components is provided as part of the assignment, students will have to execute them and evaluation will be done by the faculty as a component of the CIE.

TEACHING METHODS

- Lectures interspersed with discussions
- Supporting laboratory assignments

ASSESSMENT METHODS

Parameters	Marks
Three internals (Avg of best of 2 Tests)	30
Rubrics for the evaluation of Laboratory based assignment	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of Course, Student will be able to

	Course outcomes (COs)	
COs	**Description**	**Bloom's Level**
CO 1	Discuss and compare various file organizations and indexes in DBMS.	**L1**
CO 2	Describe RAID levels and Analyse the need of RAID.	**L2**
CO 3	Understand and Demonstrate Tree based indexing and use it to perform database update operations.	**L2**
CO 4	Understand and compare Hash based indexing methods and use them to perform database update operations.	**L2,L3**
CO 5	Illustrate external sorting techniques.	**L2**

COURSE DESCRIPTION

The focus in this course is on the Advance Web concepts as a platform for interactive applications. The development of web-based applications requires knowledge about the underlying technology and the formats and standards the web is based upon. This course includes advance concepts like React.js.

PREREQUISITES

- Student should have prior knowledge of HTML tags and Cascading Style sheets.
- Students should be able to develop a dynamic webpage by the use of Java Script and server side scripts using PHP, Vue.js and Node.js.
- Student should know how to connect the scripting language with database.

COURSE OBJECTIVES

- To learn the concepts of React as well as a pragmatic approach to making web applications.
- To learn the Advance concepts of React which is current web programming in developing applications

COURSE CONTENTS

UNIT -I **08 Hours**

REACT : Introduction to REACT:The Virtual DOM, React Elements, React DOM, Children, Constructing Elements with Data, React, Stateless Functional Components, DOM Rendering, React with JSX, Props.

UNIT -II **08 Hours**

REACT : State, andthe Component Tree- Property Validation, Refs, React State Management, State within the Component Tree. Enhancing components- Components lifecycle, Javascript Library Integration, Higher order components, Flux-Views, Action and Action creators, Dispatcher, stores.

UNIT –III **08 Hours**

Redux-State, Actions, Reducers, Store, Action Creators, Middleware. React Forms- Controlled components - the read-only, **Controlled components** - the read and write input, Controlled components – a simple form, Validation, React Redux.

UNIT -IV **07 Hours**

Testing- Testing Redux, Testing React components, Snapshot Testing, **React Routers**-Incorporating the router, nested routers, Router parameters, React flux, Animations.

UNIT-V **08 Hours**

PrepareYour React Application for Painless Maintenance with Flux-Decoupling concerns with Flux, Refactoring the Stream component, Creating Collection Store, Creating CollectionActionCreators, Refactoring the Collection component, Refactoring the Collection Controls component, Refactoring the CollectionRenameForm component, Refactoring the TweetList component, Refactoring the StreamTweet component

Building any React Application with database (In this unit students can design application using React)

TEXT BOOKS

1. Eve Porcello, Alex Banks, “Learning React: Functional Web Development with React and Redux”, O’Reilly Publications, 1st Edition, 2017.

2. Adam Horton, Ryan Vice, “Mastering React”, Packt Publishing, 1st Edition, 2016.

3. “React.js Essentials”, Afast-paced guide to designing and building scalable and maintainable web apps with React.js by **Artemij Fedosejev** Packt Publishing

REFERENCE BOOKS

1. Pro React 16 by Adam freeman, Apress publications
2. React, Quickstart step-by-step guide to learning react javascript Library by LIONEL LOPEZ

TEACHING METHODS

- Lecture (Power Point presentations/ Black board teaching (if needed))
- Regular review of students by asking questions based on topics covered in the class Programming Assignments

ASSESSMENT METHODS

Parameters	Marks
Three internals (Avg of best of 2 Tests)	30
Rubrics evaluation for the Course Project	10
Programming Assignment	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

- At the end of the course student will be able to

COs	Description	Bloom's level
CO 1	Understand the fundamentals of React with DOM and functional components	**L2**
CO 2	Developing the React applications using states and components trees.	**L3**
CO 3	Understand the basic concepts of Redux and controlled components of React.js	**L2**
CO 4	Apply the application for testing react components and learn react routers	**L3**
CO 5	Design the web application using react components with database	**L3**

PREREQUISITES

- Students should have knowledge of Linux operating system and programming knowledge.

COURSE OBJECTIVES

To understand the fundamental design of the Unix operating system and to become familiar with the systems calls provided on the Unix/Linux environment

COURSE CONTENTS

UNIT I **10 Hours**

UNIX File APIs: General File APIs, File and Record Locking, Directory File APIs, Device File APIs, FIFO File APIs, Symbolic Link File APIs, General File Class, regfile Class for Regular Files, Device File Class, Symbolic Link File Class, File Listing program.

UNIT II **12 Hours**

UNIX PROCESSES: The Environment of a UNIX Process: Introduction, main function, Process Termination, Command-Line Arguments, Environment List, Memory Layout of a C Program, Shared Libraries, Memory Allocation, Environment Variables, setjmp and longjmp Functions, getrlimit, setrlimit Functions, UNIX Kernel Support for Processes.

UNIT III **10 Hours**

PROCESS CONTROL: Introduction, Process Identifiers, fork, vfork, exit, wait, waitpid, waited, wait3, wait4 Functions, Race Conditions, exec Functions, Interpreter Files, system Function, Process Accounting, User Identification, Process Times. Process Relationships: Introduction, Terminal Logins, Network Logins, Process Groups, Sessions, Job Control, Shell Execution of Programs, Orphaned Process Groups.

UNIT – IV **8 Hours**

SIGNALS AND DAEMON PROCESSES: Signals: The UNIX Kernel Support for Signals, signal, Signal Mask, sigaction, The SIGCHLD Signal and the waitpid Function, The sigsetjmp and siglongjmp Functions, Kill, Alarm, Interval Timers, POSIX.lb Timers. Daemon Processes: Introduction, Daemon Characteristics, Coding Rules, Error Logging, Single-instance daemons; Daemon conventions; Client-Server Model.

UNIT-V **8 Hours**

INTER PROCESS COMMUNICATION: Pipe, process pipes, the pipe call, parent and child processes, and named pipes: fifos, semaphores: semget, semop, semctl, message queues: msgget,msgsnd, msgrcv, msgctl, shared memory: shmget, shmat, shmdt, shmctl, ipc status commands.

INTRODUCTION TO SOCKETS: Socket, socket connections - socket attributes, socket addresses, socket, connect, bind, listen, accept, socket communications.

TEXT BOOKS

3. Unix System Programming Using C++ – Terrence Chan – Prentice Hall India, 1999.
4. Stephen A. Rago: Advanced Programming in the UNIX Environment – W.Richard Stevens, 2nd Edition, Pearson Education / PHI, 2005.

REFERENCES

5. Advanced Unix Programming – Marc J. Rochkind:, 2nd Edition, Pearson Education, 2005.
6. The Design of the UNIX Operating System – Maurice.J.Bach:, Pearson Education / PHI, 1987.
7. Unix Internals – UreshVahalia:, Pearson Education, 2001.

TEACHING METHODS

- PPTs
- Hands-on Sessions Based Teaching

ASSESSMENT METHODS

Parameters	Marks
Three internals (Avg of best of 2 Tests)	30
Programming Assignment	10
Programming Assignment	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES (COs)

At the end of the course student will be able to:

COs	Description	Bloom's Level
CO 1	Understand the relationship between UNIX Kernel support for files	**L2**
CO 2	Familiar with Kernel support for process creation and termination and memory allocation	**L2**
CO 3	Learn about Process Accounting process UID ,Terminal logins, network logins	**L2**
CO 4	Analyze process control, daemon characteristics, coding rules and error logging	**L3**
CO 5	Learn inter process communication and socket programming.	**L2**

COURSE DESCRIPTION

Cyber-physical systems, which consist of physical systems tightly integrated and/or controlled by software, are ubiquitous in many safety critical domains, including automotive, avionics, railways, healthcare, atomic energy, power, and industrial automation

PREREQUISITES

- Students should have knowledge of programming. Knowledge of Real-time Embedded Systems will help.

COURSE OBJECTIVES

- Develop an exposition of the challenges in implementing a cyber-physical system from a computational perspective
- To expose the student to real world problems in this domain and provide a walk through the design and validation problems for such systems.

COURSE CONTENTS

UNIT – I **8 Hours**

Introduction: Motivation & Intro to Cyber Physical Systems (CPS): Key issues in CPS design: timing predictability, verification and certification; integration and composability,modeling and abstraction,COTS components and time-to-market.Introduction to Real-Time Systems: Task model.Quality of service.Interplay between timing properties and digital control. Basic schedulabilityresults.The worst-case execution problem.The end- to-end delay problem.

8 Hours

UNIT – II

Applications of Cyber-Physical Systems: Overview of CPS applications. IMA (Integrated Modular Avionics) design.Issues in ARINC 653.AUTOSAR (Automotive Open System Architecture).Further examples of Medical systems, Power grid control, monitoring applications.

UNIT – III **8 Hours**

Predictable Computer Architectures: Impact of architectural features on predictability. Controllablepipelines.Cachepartitioning strategies.Scratchpadmemories.Busscheduling.Network-on-chips and Real-time Predictable memory controllers.

UNIT – IV **8 Hours**

Predictable OS Abstractions: Overview of Real-Time OS and Hypervisors. Interrupt scheduling. Hierarchical and component-based OS.Predicable task execution.Parallel execution models.Introduction to Timing and Performance Analysis.

UNIT – V **8 Hours**

Timing and Performance Analysis: Overview of static analysis methodologies. Measurement-based techniques.Cache, Bus and memory analyses. Introduction to Models of Computation and Verification for CPS: Tools and architectural description languages.

TEXT BOOKS

1. E. Lee and S. Seshia. Introduction to Embedded Systems - A Cyber-Physical Systems Approach, LeeSeshia.org, 2011
2. G. Buttazzo. Hard Real-Time Computing Systems, Springer, 2011
3. H. Kopetz. Real-Time Systems: Design Principles for Distributed Embedded Applications, Springer, 2011.

ASSESSMENT METHODS

Parameter	Marks
Midterm Test (Avg. of 2 Tests)	30
Research Literature Survey	10
Project / Modelling Assignment	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSEOUTCOMES

CO	Description	Blooms level
CO 1	Understand the principles of Cyber Physical Systems and Real Time System design. Address key factors that contribute to design of "Safe CPS"	**L1**
CO 2	Enable formulation of Functional, Safety and Testability specifications for CPS.	**L2**
CO 3	Understand and Analyze Hardware architectural components and establish criteria for predictable behavior of CPS	**L1,L3**
CO 4	Understand the OS abstractions as applicable to CPS and establish the criteria for ensuring predictable behavior of CPS	**L1**
CO 5	Create high fidelity models of CPS to analyze the real-time behavior and performance of the systems.	**L4**

Course Content for VII – Semester 2018 Scheme

VII SEMESTER

Department: Computer Science and Engineering	***Course Type: Program*** *Core*
Course Title: *High Performance Computing*	***Course Code:*** *18CS71*
L-T-P:4-0-0	***Credits:*** *03*
Total Contact Hours: *48 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks: *50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course covers the theoretical principles of massively parallel approach to high-performance computing using multiprocessing systems and/or combination of GPU hardware.

PREREQUISITES

- Knowledge on basics of Computer Organization

COURSE OBJECTIVES

- Provide an overview of existing High-Performance Computing (HPC) software and hardware
- Present basic software design patterns for high performance parallel computing
- Introduce CUDA for parallel computing on the Graphics Processing Unit (GPU)

COURSE CONTENTS

UNIT -I **10 Hours**

Introduction to High Performance Computers, Memory Hierarchy, CPU Design: Reduced Instruction Set Computers, Multiple Core Processors, Vector Processors.

Self-Study: Parallel Semantics, Distributed Memory Programming.

UNIT -II **10 Hours**

Programming Shared Address Space Platforms: Thread Basics, Why Threads? The POSIX Thread API, Thread Creation and Termination, Thread Cancellation
Shared-memory parallel programming with OpenMP: Introduction to OpenMP, Parallel execution, Data scoping , OpenMP worksharing for loops , Reductions , Loop scheduling , Tasking , Efficient OpenMP programming :Profiling OpenMP programs , Performance pitfalls: Ameliorating the impact of OpenMP work sharing constructs , Serialization , False sharing.

Self-Study: OpenMP: A Standard for Directive Based Parallel Programming. Case study : OpenMP-parallel Jacobi algorithm,Parallel sparse matrix-vector multiply

UNIT-III **10 Hours**

Programming using the Message-Passing Paradigm: Principles of Message-Passing Programming, The Building Blocks: Send and Receive Operations, MPI: The Message Passing Interface, Topologies and Embedding, Overlapping Communication with Computation, Collective Communication and Computation Operations.

Self-Study: Groups and Communicators.

UNIT-IV **8 Hours**

Introduction: GPUs as Parallel Computers, Architecture of a Model GPU, Why More Speed or Parallelism? GPU Computing. Introduction to CUDA: Data Parallelism, CUDA Program Structure, A Vector Addition Kernel , Device Global Memory And Data Transfer, Kernel Functions and Threading.

Self-Study: GPUs History of GPU Computing: Evolution of Graphics Pipelines, Parallel Programming Languages and Models, GPU Memory

UNIT-V **10 Hours**

CUDA Threads: CUDA Thread Organization, Mapping Threads To Multidimensional Data, Synchronization and Transparent Scalability, Assigning Resources to Blocks, Thread Scheduling and Latency Tolerance
Self-Study: A Matrix-Matrix Multiplication Example

Self-Study Evaluation:

- The topics are integral part of the course.
- No formal lectures will be held for the self-study topics.
- The course coordinator may provide reading materials for self-study topics (optional).
- The topics prescribed under self-study in curriculum are part of CIE and SEE.

TEXT BOOKS

1. Ananth Grama,Anshul Gupta,Vipin kumar, George Karypis, Introduction to parallel computing, second edition, 2003, Pearson education publishers.
2. David B Reference Books: Wen-mei W. Hwu, "Programming Massively Parallel Processors on Approach", First edition, Elsevier and nvidia publishers 2010.
3. Georg Hager, Gerhard Wellein, Introduction to High Performance Computing for Scientists and Engineers, Taylor and Francis Group, LLC, CRC Press, 2011

4. Rubin H Landau, Oregon State University, http://science.oregonstate.edu/ rubin/.

TEACHING METHODS

- Lecture using Black board and chalk
- Presentations
- Problem Solving Assignments

ASSESSMENT METHODS

Midterm Test (Avg. of 2 Tests) – 30 Marks
Course Project -20 Marks

COURSE OUTCOMES

At the end of Course, the student will be able to:

COS	Description	BL
CO 1:	Explain the technologies and architectures used for parallel computing	L1
CO 2:	Design and develop parallel programs using Open-MP programming interface	L3
CO 3:	Elaborate the principles and architecture of message-passing programming paradigm for solving real world problems	L2
CO 4:	Provide an understanding of Graphical Processing Units and their architecture	L1
CO 5:	Analyze the features of GPUs, their functionalities and also Design parallel applications using CUDA-C	L3

COURSE DESCRIPTION

This course provides an in-depth knowledge of Nature and Scope of Cyber Crime, Types of Cyber Crime, Social Engineering, Unauthorized Access to Computers, Computer Intrusions, White collar Crimes, Viruses and Malicious Code, Internet Hacking and Cracking, Virus Attacks, Digital laws and legislation, Law Enforcement Roles and Responses, Digital Forensics, Forensic Software and Hardware, Analysis and Advanced Tools, Forensic Technology and Practices, Forensic Ballistics and Photography, Face, Iris and Fingerprint Recognition, Cyber Crime Investigation, Investigation Tools, eDiscovery, Digital Evidence Collection, Evidence Preservation, E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery, Laws and Ethics, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT IPC and CrPC etc.,

COURSE OBJECTIVES

- Understanding and Analysing Nature and Scope of Cyber Crime, Types of Cyber Crime, Social Engineering
- Understanding and analysing Unauthorized Access to Computers, Computer Intrusions, White collar Crimes, Viruses and Malicious Code, Internet Hacking and Cracking, Virus Attacks
- Understanding and analysing Digital Forensics, Forensic Software and Hardware, Analysis and Advanced Tools, Forensic Technology and Practices, Forensic Ballistics
- Understanding and analysing Cyber Crime Investigation, Investigation Tools, eDiscovery, Digital Evidence Collection, Evidence Preservation, E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery,
- Understanding and analysing Laws and Ethics, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT IPC and CrPC.

COURSE CONTENTS

UNIT-I **8 hours**

Introduction and Overview of Cyber Crime, Nature and Scope of Cyber Crime, Types of Cyber

Crime, Social Engineering, Categories of Cyber Crime, Property Cyber Crime.

UNIT- II **8 Hours**

Unauthorized Access to Computers, Computer Intrusions, White collar Crimes, Viruses and Malicious Code, Internet Hacking and Cracking, Virus Attacks, Pornography, Software Piracy, Intellectual Property, Mail Bombs, Exploitation ,Stalking and Obscenity in Internet, Digital laws and legislation, Law Enforcement Roles and Responses.

UNIT-III **8 Hours**

Introduction to Digital Forensics, Forensic Software and Hardware, Analysis and Advanced Tools, Forensic Technology and Practices, Forensic Ballistics and Photography, Face, Iris and Fingerprint Recognition, Audio Video Analysis, Windows System Forensics, Linux System Forensics, Network Forensics.

UNIT-IV **8 Hours**

Introduction to Cyber Crime Investigation, Investigation Tools, eDiscovery, Digital Evidence Collection, Evidence Preservation, E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery, Hands on Case Studies, Encryption and Decryption Methods, Search and Seizure of Computers, Recovering Deleted Evidences, Password Cracking.

UNIT – V **7 Hours**

Laws and Ethics, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT IPC and CrPC , Electronic Communication Privacy ACT, Legal Policies.

TEXT BOOKS

1. Bernadette H Schell, Clemens Martin, "Cybercrime", ABC – CLIO Inc, California, 2004. "Understanding Forensics in IT ", NIIT Ltd, 2005.

REFERENCE BOOKS

1. Kevin Mandia, Chris Prosise, Matt Pepe, "Incident Response and Computer Forensics ",Tata McGraw -Hill, New Delhi, 2006.
2. Robert M Slade," Software Forensics", Tata McGraw - Hill, New Delhi, 2005.

TEACHING METHODS

1. Lecture using Black board and chalk
2. Presentations

3. Seminar on AI topics
4. Quiz

ASSESSMENT METHOD

- Midterm Test (Avg. of 2 Tests) – 30 Marks
- Seminar on Cyber Forensics Topics (from IEEE/ACM/Journal papers) 10 Marks
- Cyber-Forensics-Tools-Usage-Demonstration 10 Marks

Total = 50 Marks

COURSE OUTCOMES (COS)

At the end of Course, Student will be able to

CO	Description	Blooms Level
CO 1:	Understand and Analyse Nature and Scope of Cyber Crime, Types of Cyber Crime, Social Engineering	L2,L4
CO 2:	Understand and analyse Unauthorized Access to Computers, Computer Intrusions, White collar Crimes, Viruses and Malicious Code, Internet Hacking and Cracking, Virus Attacks	L2,L4
CO 3:	Understand and analyse Digital Forensics, Forensic Software and Hardware, Analysis and Advanced Tools, Forensic Technology and Practices, Forensic Ballistics	L2,L4
CO 4:	Understand and analyse Cyber Crime Investigation, Investigation Tools, eDiscovery, Digital Evidence Collection, Evidence Preservation, E-Mail Investigation, E-Mail Tracking, IP Tracking, E-Mail Recovery,	L2,L4
CO 5:	Understand and analyse Laws and Ethics, Digital Evidence Controls, Evidence Handling Procedures, Basics of Indian Evidence ACT IPC and CrPC	L2,L4

Total Contact Hours: *39 hrs*	***Duration of SEE:*** *3 hrs*
SEE Marks: *50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course provides an introduction to Compiler Design and aims at solving problems in designing compilers, besides giving ideas on optimization techniques. Tools for compiler construction, green compilation techniques and also compiling for power optimization are the advanced topics dealt in this course.

Prerequisites: Knowledge of assembly level programming, Formal Languages and Automata Theory is essential.

COURSE OBJECTIVES

- To identify features of phases of compiler, learn the design aspects and tools.
- To design parser automaton, construct parser table and do the program translation
- To apply various optimization techniques on programs and to extend it for green compilation and power optimization.

COURSE CONTENTS

UNIT – I **8 Hours**

Introduction to compilers: Language processors, the structure of a compiler, Lexical Analysis, Syntax analysis, Semantic analysis, Intermediate Code generation, Optimization, Code generation, Compiler construction tools, The Science of building a compiler, Applications of compiler technology, **Lexical Analysis**: The role of lexical analyzer, A simple approach to the design of lexical analyzer, Lex tool.

UNIT – II **8 Hours**

Syntax Analysis & Parsing: Top down parsing. Recursive descent parsing, Computation of FIRST & FOLLOW sets LL(1) grammar,Bottom up parsing- shift reduce parser & conflicts, Simple LR, The canonical collection of LR(0) items, LR Parsing algorithm, Constructing SLR parsing tables, LR(1) items, Constructing canonical LR(1) parsing tables, Constructing LALR parsing tables, efficient construction of LALR parsing table, Using ambiguous grammars – precedence, associativity, dangling else problem, Parser generators, YACC.

UNIT – III **8 Hours**

Syntax Directed Translation& Intermediate code generation: Syntax directed translation schemes & implementations, Intermediate code, Syntax trees, DAG for expressions, Three address code, quadruples, triples, Translation of expressions, Control flow, Backpatching, Switch statements, Intermediate code for procedures.

UNIT – IV **8 Hours**

Runtime Environment and Code generation: Static VS Dynamic storage, stack allocation scheme, Design issues in code generation, Basic blocks and flow graphs; Optimization in the basic blocks; implementation of simple code generator, code generation algorithm; Peep hole optimization; register allocation and assignments; optimal code generation for expressions.

UNIT – V **7 Hours**

Machine Independent Optimization: The sources of optimization, common subexpression, copy propagation, dead code elimination, code motion; Data flow analysis, live variables, constant propagation, partial redundancy elimination; Loops in flow graph, depth first, back edges & reducibility.

Other Materials: TEXT BOOK for self-study

1. Leland L. Beck, System Software, 3rd Edition, Addison Wesley, 1997.

TEACHING METHODS

- Lecture using Black board and chalk
- Power point presentations
- Exercises on Problem solving

- Self-study Assignment

ASSESSMENT METHODS

- Three internals – 30 Marks each will be conducted and the Average of best of the two will be considered.
- Rubrics for the evaluation of course project for 10 marks.
- Rubrics for the evaluation of case study for 10 marks.
- Final examination will be conducted for 100 marks and evaluated for 50 Marks.

COURSE OUTCOMES

At the end of Course, Student will be able to

CO	Description
CO 1	Explain Compilers& its phases, lexical analysis and demonstrate use of LEX tool.
CO 2	Compute LR(0), LR(1) and LALR sets of items, construct parse table for a givengrammar and show the use of YACC tool.
CO 3	Perform syntax directed translation and generate intermediate code.
CO 4	Implement runtime procedures and code generation managing optimization in codegeneration phase.
CO 5	Perform machine independent optimizations and develop optimizations for power management.

Department: *Computer Science and Engineering*	***Course Type:*** *Programme Elective*
Course Title*: Entrepreneurship Development ,Management and IPR*	***Course Code:****18CSH74*
L-T-P:3*-0-0*	***Credits:****03*
Total Contact Hours:*39 Hours*	***Duration of SEE:****3 Hours*
SEE Marks*: 50*	***CIE Marks:****50*

PREREQUISITES

- Students should have knowledge on the current business trends and technology.

COURSE OBJECTIVES

- To Define the role of supporting agencies, entrepreneurs and IPR
- To Describe the various process involved in establishing start-ups and applying the patents.
- To Demonstrate the knowledge on how to prepare the Project Report.
- To Examine the principles of Intellectual Property Rights
- To Analyse the importance of patents, trademarks and copyrights.

COURSE CONTENTS

UNIT- I **08 Hours**

Introduction to Entrepreneur:

Introduction-meaning and importance of entrepreneurship, entrepreneur, types, characteristics, entrepreneur process, role of entrepreneurs in economic development, problems faced by entrepreneurs, scope in India

UNIT- II **08 Hours**

MSME and Supporting Agencies:

Micro, Small and medium enterprises, Definition of MSMEs as per MSME act, characteristics of small enterprises, need and advantages of small enterprises, Steps in setting up of small enterprises, Institutional support to MSMEs-State supporting agencies-TECSOK, KIADB, KSSIDC, KSFC, National Schemes-MSME-DI, NSIC, SIDBI

UNIT -III **08 Hours**

How to prepare Project report:

Preparation of Project reports, control variables in project, project lifecycle, project report, need, project identification, project selection, components of project report, formulation of report, planning commission guidelines, project appraisal, feasibility study-market, financial, technical and economic, PERT and CPM, errors in report

UNIT -IV **08 Hours**

Introduction to Intellectual Property:

Introduction: Meaning, Relevance, Business Impact, Protection of Intellectual Property, Copyrights, Trademarks, Patents, Designs, Utility Models, Trade Secrets and Geographical Indications Bio-diversity and IPR Competing Rationales for Protection of Intellectual Property Rights, Introduction to the leading International Instruments concerning Intellectual Property Rights: the Berne Convention, Universal Copyright Convention, The Paris Convention, Patent Co-operation Treaty, TRIPS, The World Intellectual Property Organization(WIPO).

UNIT- V **07 Hours**

Introduction to Patents and Trademark:

Patents-What is a patent, history of patent, Criteria for patent, types of patents, Indian patent act, patents for computer software, business models, incremental innovation, patent infringement

Trademarks-role, as a marketing tool, trademark rights, types, use of trademarks, trademark act, trademark registration in India

Copyrights-meaning, copyright protection in India, enforcement measures, copyright.

MINIPROJECT:

A Case study on "Success and Failure of an Entrepreneurs/ Entrepreneurship needs to be presented by a team of students with areport on the Case study and this needs to be considered for internal assessment.

TEXT BOOKS

COURSE DESCRIPTION

The HPC lab is aimed at reinforcing the concepts of Parallel Programming Techniques applicable for the various strains of High-performance architectures: Multicore, Multiprocessor, Message processing based Distributed computing, and Heterogenous processing ensembles.

PREREQUISITES

- Knowledge of Advanced Computer Architectures
- Ability to design and analyse Numerical Processing algorithms, Vector Processing, Searching, Sorting and String functions.

COURSE OBJECTIVES

- Provide systematic and comprehensive treatment to the Highly Integrated development Environments for HPC program development and testing.
- Provide facility with the tools useful in performance analysis of HPC facilities.
- Introduce the concepts of Heterogenous Computing platforms: CPU + GPU architectures.
- Introduce the concepts of program development for Multi-core Shared memory architectures.
- Introduce the concepts of High-Performance Computing as a service on Cloud platforms (utilizing HP computing resources and storage made available through a Cloud platform).

COURSE CONTENTS:

Part -A

1. Given a nxn matrix A and a vector x of length n, their product y=A·x, write a program to implement the multiplication using OpenMP *PARALLEL* directive.

2. Consider a Scenario where a person visits a supermarket for shopping.He purchases various items in different sections such as clothing,gaming,grocery,stationary.Write an

open MP program to process his bill parallely in each section and display the final amount to be paid. (sum of elements parallely).
3. Consider a Person named X on the earth, to find his accurate position on the globe we require the value of Pi. Write a program to compute the value of pi function by Numerical Integration using OpenMP *PARALLEL* section.
4. Using OpenMP, Design and develop a multi-threaded program to generate and print Fibonacci Series. One thread must generate the numbers up to the specified limit and another thread must print them. Ensure proper synchronization.
5. University awards gold medals to the student who has scored highest CGPA. Write a program to find the student with highest CGPA in a list of numbers using OpenMP.
6.Assume you have n robots which pick mangoes in a farm. Write a program to calculate the total number of mangoes picked by n robots parallely using MPI.
7. Design a program that implements application of MPI Collective Communications.
8. Implement Cartesian Virtual Topology in MPI.
9. Design a MPI program that uses blocking send/receive routines and nonblocking send/receive routines.
10. Multiply two square matrices (1000,2000 or 3000dimensions). Compare the performance of a sequential and parallel algorithm using open MP.

Part – B

CUDA is a parallel computing platform and an API model that was developed by Nvidia. Using CUDA one can utilize the power of Nvidia GPUs to perform general computing tasks, such as multiplying matrices and performing other linear algebra operations, instead of just doing graphical calculations. Students write programs in CUDA and understand the efficiency and power of parallelism.

ASSESSMENT METHODS

- **Experiment Write up + Execution + Viva - 15 Marks**
- **Lab Record Writing - 10 Marks**
- **Lab Internals Test - 15 Marks**
- **Surprise Test - 10 Marks**

Total = 50 M

- **Final examination will be conducted for 100 marks and evaluated for 50 Marks.**

COURSE OUTCOMES

Students will be able to

CO	Description
CO 1:	Design and implement high performance versions of standard single threaded algorithms
CO 2:	Demonstrate the architectural features in the GPU and MIC hardware accelerators
CO 3:	Design programs to extract maximum performance in a multicore, shared memory execution environment processor
CO 4:	Develop programs using OPENMP, MPI and CUDA
CO 5:	Design and deploy Parallel programs on Processor clusters, configuring clusters and cloud storage.

COURSE DESCRIPTION

This lab aims at teaching students on how to work in open source projects efficiently and gain benefits from it. Students will learn about teamwork, continuous integration and also encourage diversity in open source projects.

COURSE OBJECTIVES

- To develop an understanding in students Free or Open Source Software ecosystem, its history and current practices.
- To enable students to analyze the opportunities and challenges the Free or Open Source Software presents.
- To expand student‘s knowledge and improve their success by providing them with leading edge software required to achieve better academic, career and personal growth.
- To encourage diversity in open source projects.

COURSE OUTCOMES

Students will be able to:

- Understand and appreciate the advantages of using F/OSS in developing projects.
- Compare the different Software tools and Technologies available and choose the one best suited for their project development purpose.
- Develop their skills by sharing their work and critiquing the work done by others.
- Explain to others the nature of open source software, particularly how it differs from proprietary software.
- Become a contributing member of a software development community.
- Choose an appropriate license for open source things in general and to explain what can and cannot be done with software that has a specific license.
- Explain how software licensing works in general, what choices of license exist.

DELIVERABLES

- Documentation as proof towards contributions to open source communities and/or projects.

ASSIGNMENTS NORMALLY INCLUDE

- Survey and study of published literature on the assigned topic;
- Working out a preliminary Approach to the Problem relating to the assigned topic;
- Conducting analysis/Modeling/Simulation/Experiment/Design/Feasibility;

- Implementing the selected topic
- Preparing a Written Report on the Study conducted for presentation to the Department;
- Final Demo and Seminar, as oral Presentation before a Departmental Committee

ASSESSMENT METHODS

Parameter	Marks
Initial Seminar	10
Product Design and Demo	30
Report	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

***Department:** Computer Science And Engineering*	***Course Type:** Programme Core*
***Course Title**: Project Work-III*	***Course Code:**18CSP79*
L-T-P:0-0-0-4	***Credits:**01*
Total Contact Hours:20 Hours	***Duration Of SEE:**3 Hours*
***SEE Marks**: 50*	***CIE Marks:**50*

COURSE DESCRIPTION

The project work will be assigned to the students towards the end of 6th semester and will start working on those projects at the commencement of their 7th semester. The topic of the project will be decided as per the developments taking place in the field of Computer Science and Engineering.

COURSE OBJECTIVES

The objective of Project Work III is to enable the student to take up investigative study in the broad field of Computer Science & Engineering, either fully theoretical/practical or involving both theoretical and practical work to be assigned by the Department on an individual basis or two/three students in a group, under the guidance of a Supervisor. This is expected to provide a good initiation for the student(s) in R&D work.

The assignment to normally include:

- Survey and study of published literature on the assigned topic;
- Working out a preliminary Approach to the Problem relating to the assigned topic;
- Conducting preliminary Analysis/Modelling/Simulation/Experiment/Design/Feasibility;
- Preparing a Written Report on the Study conducted for presentation to the Department;
- Final Seminar, as oral Presentation before a Departmental Committee.

COURSE OUTCOMES

Students will be able to:

- Survey and study of published literature on the assigned topic
- Complete the preliminary approach to the Problem relating to the assigned topic;
- Complete Conducting preliminary Analysis/Modelling/Simulation/Experiment/Design/Feasibility;

ASSESSMENT METHODS

Parameter	Marks
Initial Seminar	10
Product Design and Demo	30
Report	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

Course content for
VII – Semester
Program Elective - D

Department: *Computer Science and Engineering*	***Course Type:*** *Program Elective*
Course Title: Introduction to Machine Learning	***Course Code:18CS751***
L-T-P:3-0-0	***Credits:*** *03*
Total Contact Hours:39 *hrs*	***Duration of SEE:*** *3hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course imparts the concepts of machine learning which is the necessity is in today's self-learning systems. It includes the concepts of machine learning, types, perceptrons and neural networks, decision tree learning, Bayesian learning and Clustering.

COURSE OBJECTIVES

- To understand the concepts of machine learning. Types of machine learning and preliminaries
- To understand and describe Neural network learning, Bayesian learning, decision tree learning, nearest neighbour learning and clustering.
- To employ machine learning techniques to solve problems

COURSE CONTENTS

UNIT 1 **7 Hours**

Introduction : Machine learning, Types of machine learning, Machine learning process, Supervised learning, Examples of machine learning applications, **Machine learning preliminaries:** Weight space, curse of dimensionality, Testing machine learning algorithms: Overfitting, training, testing, and validation sets, confusion matrix, accuracy metrics, ROC curve, Unbalanced datasets, Measurement precision, **Basic Statistics** : Averages, variance, covariance, Gaussian, Bias, Variance tradeoff.

UNIT 2 **8 Hours**

Neurons, Neural Networks: The brain and the neuron, Neural networks, The Perceptron, Training a perceptron, Learning Boolean functions, Linear Separability,
Multilayer Perceptron : The Multi-layer Perceptron Algorithm, Initialising the Weights , Different Output Activation Functions, Backpropogation algorithm, Sequential and Batch Training, Local Minima, Picking Up Momentum, Minibatches and Stochastic Gradient Descent, Other Improvements

UNIT 3 **8 Hours**

Bayesian Learning : Introduction , Classification, Losses and Risks, Discriminant Functions, Utility Theory, Association Rules, Bayes Optimal Classifier, Naïve Bayes Classifier, Bayesian Belief Networks.

Nearest neighbor methods: k-nearest neighbor learning, Distance – weighted Nearest neighbor algorithm , Examples

UNIT 4 **8 Hours**

Decision trees : Learning with trees, Using decision trees, Univariate Trees, Classification Trees, Regression Trees, Pruning, Rule Extraction from Trees, Learning Rules from Data, Multivariate Trees, ID3, Examples

UNIT 5 **8 Hours**

Unsupervised learning-Clustering : Introduction, Mixture Densities, *k*-Means Clustering, Expectation-Maximization Algorithm, Mixtures of Latent Variable Models, Supervised Learning after Clustering, Hierarchical Clustering, Choosing the Number of Clusters

TEXT BOOKS

1. Stephan Marsland, "Machine Learning, An algorithmic approach", CRC Press Second Edition.
2. Ethem Alpaydin, "Introduction to Machine Learning", 2nd Ed., PHI Learning Pvt. Ltd., 2013

REFERENCE BOOKS

1. Tom M. Mitchell, "Machine Learning", McGraw-Hill Education (INDIAN EDITION), 2013

TEACHING METHODOLOGY

- Lectures, Problem Based Learning
- Discussion
- Demonstration

COURSE OUTCOMES

After completion of the course, the students will be able to:

CO	DESCRIPTION
CO1	Interpret machine learning, types and preliminary concepts related to machine learning
CO2	Describe the working of Perceptron and MLP, Utilize them to solve problems
CO3	Illustrate the working of Bayesian learning and nearest neighbour learning
CO4	Learn to construct and use decision trees.
CO5	Identify the need of unsupervised learning and illustrate Partitioning Methods and Hierarchical Methods of clustering.

CO-PO Mapping

Mapping of Course outcomes (COs) to Program outcomes (POs) & Programme Specific Objectives(PSO)															
Course Outcomes mapping to program outcomes													Program Specific Outcomes (PSOs)		
POs/ COs	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2	PSO3

CO4	3	2	2						1	1			2	2	1
CO5	3	2	2						1	1			2	2	1

Assessment Method

- **MidSem Exams (Avg. of 2 Exams)** **30 Marks**
- **Laboratory Based Exercises** **20 Marks**

Total **50 Marks**

Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Department: *Computer Science and Engineering*	***Course Type:*** *Programme Elective*
Course Title*: Introduction to Block Chain Technologies*	***Course Code:*** *18CSE752*
L-T-P:*3-0-0*	***Credits:****03*
Total Contact Hours:*39 Hours*	***Duration of SEE:****3 Hours*
SEE Marks*: 50*	***CIE Marks:****50*

COURSE DESCRIPTION

The widespread popularity of digital crypto-currencies has led to the foundation of Block Chain, which is fundamentally a public digital ledger to share information in a trustworthy and secure way. The concept and applications of Block Chain have now spread from crypto-currencies to various other domains, including business process management, smart contracts, IoT and so on. This covers both the conceptual as well as application aspects of Block Chain. This includes the fundamental design and architectural primitives of Block Chain, the system and the security aspects, along with various application domains.

PREREQUISITES

- Student should have prior basic knowledge on C++ , Data Structures and OOP Concepts
- Students should be able to develop a webpage by the use of Java Script.

COURSE OBJECTIVES

- Understand how Block Chain systems (mainly Bitcoin and Ethereum) work
- Understand emerging abstract concepts of Block Chain Technology.
- Design, build, and deploy smart contracts and distributed applications,
- Attain awareness of security aspects of bit coin and Block Chain technology.

COURSE CONTENTS

UNIT- I **08 Hours**

INTRODUCTION TO BLOCKCHAIN

Classical Block Chain data structure; Foundational technologies: Hashing, Cryptography, Mining, Key Exchange, Smart contracts, Bitcoin Transactions, public vs permissioned. Block Chain data structures: Merkle Tree, Patricia Tree Hashing Applications, Key distribution, Diffie Hellman problems, PKE and RSA algorithms.

UNIT- II **08 Hours**

SOLIDITY AND DAPPS

Ethereum Clients, Go- EthereumClients(geth),Python Ethereum Client (pyethapp), Ethereum Languages, Solidity, TestRPC, Mist Ethereum Wallet,MetaMask,Web3 JavaScript API, Ethereum Accounts.

Smart Contract, Structure of a Contract, Setting up and Interacting with the Contract using Geth client, Compiling and Developing Contract, Transactions and Calls, Interacting with the Contract, Gas ,Logs, Events, Setting up and Interacting with a Contract using Mist Wallet, Compiling and Developing Contract, Interacting with the Contract, Smart Contract Examples.

UNIT -III **08 Hours**

CONSENSUS ALGORITHMS AND CLASSICAL RESULTS

Block Chain Scalability, Double-Spending Problem, Why consensus is harder in Block Chain? Classical Results, Byzantine Fault Tolerance(PBFT in detail), Proof-of-Work Vs Proof-of-Stake, Consistency, Availability & Partition Tolerance (CAP), Turing Completeness, Greedy Heaviest-Observed Sub-Tree (GHOST), Sybil Attack, Mining Pools and Centralization, Zero knowledge Proof(ZeroCoin).

UNIT- IV **08 Hours**

NEXT GENERATION OF BLOCKCHAINS

HyperLedger: Fabric/Sawtooth- Introduction to generic block Chains and smart contracts. Building applications with HyperLedger Fabric/Sawtooth. Comparison between HyperLedger and Ethereum.
IoTA: Introduction to the Tangle. Concepts of Merkle trees to be applied. Path traversal and development using Javascript Libraries.

UNIT -V **07 Hours**

BITCOIN AND BLOCKCHAIN SECURITY

Securing Bit-coin and Block Chain, Security practices for your wallet, Types of wallets, Hardware wallets, Workings of a hardware wallet, Types of physical Bit-coins, The survival of crypto-currencies.

COURSE PROJECT

Students will have to design and build a first Block Chain, create wallets and send signed transactions using Block Chain using any language of their choice. GROUPS: Students need to form a group of 4 students. All members will collectively submit a single copy of all works.

TEXT BOOKS

1. ArshdeepBahga, Vijay Madisetti, "Block Chain Applications- A Hands-on Approach", VPT; 1 Edition, 2017
2. KirankalyanKulkarni, "Learn Bitcoin and Block Chain", Packt Publishing, 2018.
3. Melanie Swan, "Blockchain: Blueprint for a New Economy, 1st Edition , O'Reilly Publications, 2015.

REFERENCE BOOKS

1. Arvind Narayanan, Joseph Bonneau, Edward Felten, Andrew Miller and Steven Goldfeder, Bitcoin and Cryptocurrency Technologies: A Comprehensive Introduction, Princeton University Press (July 19, 2016).
2. Wattenhofer, The Science of the Blockchain
3. Antonopoulos, Mastering Bitcoin: Unlocking Digital Cryptocurrencies
4. Satoshi Nakamoto, Bitcoin: A Peer-to-Peer Electronic Cash System

5. DR. Gavin Wood, “ETHEREUM: A Secure Decentralized Transaction Ledger,”Yellow paper.2014.
6. Nicola Atzei, Massimo Bartoletti, and TizianaCimoli, A survey of attacks on Ethereum smart contracts

TEACHING METHODS

- Lecture (Power Point presentations/ Black board teaching (if needed))
- Regular review of students by asking questions based on topics covered in the class.

ASSESSMENT METHODS

Parameter	Marks
Three internals(Average of best of two)	30
Rubrics evaluation for the Course Project will be conducted	10
Programming Assignment will be conducted	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

COs	Description	Bloom’s
CO 1	Identify the importance of Cryptocurrency, BlockChain technology and Applications	**L1**
CO 2	Demonstrate the usage of the Ethereum based BlockChain platform	**L3**
CO 3	Setting up and Interacting with the Smart Contracts	**L4**
CO 4	Understand the advanced BlockChain, security concerns of BlockChain Technology, Bitcoins	**L2**
CO 5	Design, build, and deploy a distributed application.	**L6**

Course Title: *Building Applications using Microservices Architecture*	***Course Code:*** *18CSE753*
L-T-P: 3-0-0	***Credits:*** 03
Total Contact Hours: 39 Hours	***Duration of SEE :*** *3 Hours*
SEE Marks*: 50*	***CIE Marks: 50***

COURSE DESCRIPTION

This course is intended to provide students with the skills required to create Applications using the concept o f Microservice Architectures.

COURSE CONTENTS

UNIT – I **6 Hours**

Introduction to Microservices Architectures: Brief introduction toMicrosoft’s .Net, .Net Framework, C#, Simple Application in C#, Introduction to Service Oriented Architectures and Microservice Architectures with examples. Comparison of the two types of architectures. Problems with monolithic architectures. Standardization of the .NET stack. Decomposition criteria.

UNIT – II **8Hours**

Implementing Microservices: Standardization of the .NET stack, Problem Scaling, Decomposition criteria, .NET Development platform, Essential qualities of microservices, Domain Driven Design, Isolation of Services, Defining the seam by delimiting functionality,

UNIT – III **8Hours**

Microservices Integration: Collaborative service architecture, Synchronous and Asynchronous communication schemes, Request / Response, Event based techniques, Integration Patterns- API gateway patterns, Event driven patterns, Consistency, Rollback, Competing transactions, Competing Consumers.

UNIT – IV **6Hours**

Testing Microservices: Testing challenges**,** Testing strategies, Testing pyramid, Unit, Service, and Integration testing, contract testing and performance testing, User Interface testing, Test Stubs and Mocks.

UNIT – V **8Hours**

Deployment of Microservices, Introduction to Containers and Dockers, Securing Microservices, Monitoring Microservices, Case study.

TEXT BOOKS

1. Gaurav Aroraa, Building Microservices with .NET Core 2.0 - Second Edition: Transitioning monolithic architectures using microservices with .NET Core 2.0 using C# 7.0, Packt Publishers,
2. Akhil Mittal: Microservices using ASP.NET Core, E-Book.

DELIVERY METHODS

- .... Lecture (PPT)
- .... Tutorials

Course Project: Each student will form a group with 1, but no more than 2, other classmates. Each group will create a different C# Windows application to be completed at the end of the Semester. Specific details on the deliverable will be explained during the term.

ASSESSMENT METHOD

Parameter	Marks
Three internals(Average of best of two)	30
Course Project	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the completion of this course, the student will be able to:

Cos	Description	Bloom's Level
CO 1	Understand the fundamentals of Microservices and .Net framework.	**L2**
CO 2	Demonstrate the ability to design Microservice application	**L3**
CO 3	Develop the ability to build cooperating multi-microservice applications.	**L4**
CO 4	Demonstrate the techniques of Integrating and Deploying Microservices	**L3**
CO 5	Discuss issues of Testing and Securing Microservice applications	**L2**

***Department**: Computer Science and Engineering*	***Course Type**: Programme Elective*
***Course Title:** Game Theory*	***Course Code**:18CSE754*
***L-T-P**:3-0-0*	***Credits**: 03*
***Total Contact Hours**: 39 Hours*	***Duration** of SEE: 3 Hours*
***SEE Marks**: 50*	***CIE Marks**: 50*

COURSE DESCRIPTION

The course will provide the basics: representing games and strategies, the extensive form (which computer scientists call game trees), Bayesian games (modeling things like auctions), repeated and stochastic games, and more. A variety of examples including classic games and a few applications will be included.

PREREQUISITES

- Mathematical thinking.
- Basic probability theory, Calculus

COURSE CONTENTS

UNIT - I **08 Hours**

Introduction: Introduction, overview, uses of game theory, some applications and examples, and formal definitions of: the normal form, payoffs, strategies, pure strategy Nash equilibrium, dominant strategies.

UNIT – II **08 Hours**

Mixed-Strategy Nash Equilibrium: Pure and mixed strategy Nash equilibria. **Alternate Solution Concepts:** Iterative removal of strictly dominated strategies, minimax strategies and the minimax theorem for zero-sum game, correlated equilibria

UNIT-III **08Hours**

Extensive-Form Games: Perfect information games: trees, players assigned to nodes, payoffs, backward Induction, subgame perfect equilibrium, introduction to imperfect-information games, mixed versus behavioral strategies.

UNIT – IV **08 Hours**

Repeated Games

Repeated prisoners dilemma, finite and infinite repeated games, limited-average versus future-discounted reward, folk theorems, stochastic games and learning.

UNIT – V **07 Hours**

Bayesian Games

General definitions, ex ante/interim Bayesian Nash equilibrium. **Coalitional Games:** Transferable utility cooperative games, Shapley value, Core, applications.

TEXT BOOKS

- Essentials of Game Theory, by Kevin Leyton-Brown and YoavShoham; Morgan and Claypool Publishers, 2008.
- A Brief Introduction to the Basics of Game Theory, by Matthew O. Jackson.

2. Mas-Colell,A., M.D. Whinston and J.R. Green Microeconomic Theory, Oxford University Press, 1995
3. Gibbons, R.A Primer in Game Theory,Pearson Education, 1992

TEACHING METHODS

1. Lecture using Black board and chalk
2. PowerPoint presentations (if needed)
3. Regular review of students by asking questions based on topics covered in the class

ASSESSMENT METHODS

Parameter	Marks
Three internals(Average of best)	30
Seminar	10
Case Study	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

COs	Description	Bloom's Level
CO 1	Understand the Gaming basics and its various applications.	L2
CO 2	Solve problems on game theory for pure and mixed strategy under competitive environment.	L3
CO 3	Understand and Apply Perfect Information Game strategies for real world games.	L2
CO 4	Recognize and evaluate the classic “Prisoners' Dilemma” to a variety of real-world problems	L5
CO 5	Apply Bayesian Nash equilibrium strategy for a specific problem.	L3

COURSE DESCRIPTION

Introduction to Image formation and vision system, representation of image using spatial and frequency transform, finding patterns using edge detection and Texture, Analysis of image using early, mid-level and high level vision techniques.

PREREQUISITES

Fundamental Knowledge of Mathematics.

COURSE OBJECTIVES

This course will enable students to

- Explain image formation, Image model and Vision System
- Study of Early Vision techniques like edge detection and Texture
- Ability to analyse the image in multiple views
- Analysing and representation of images using mid-level vision.
- Analysing and representation of images using high-level vision.

COURSE CONTENTS

UNIT - I **8 Hours**

Image formation and Image model-Components of a vision system-Cameras-Radiometry-Light in space-Light in surface- sources, shadows and shading, Color-Human color perception-Representation of color- A model for image color-Surface color from image color

UNIT II **8 Hours**

Early vision-Linear Filters and Convolution-Shift variant Linear system- Spatial Frequency and Fourier Transforms-Sampling and Aliasing-Filters as Templates-Normalized co relation and finding patterns-Edge detection-Texture Representation ,Analysis and Application

UNIT - III **8 Hours**

Multiple images-The Geometry of multiple views-Stereopsis-Affine structure from motion Elements of Affine Geometry-Affine structure and motion from two images-Affine structure and motion from multiple images-From Affine to Euclidean images.

UNIT IV **8 Hours**

Middle level vision-Segmentation by clustering-Shot Boundary Detection and Background Subtraction-Image segmentation by clustering pixels-Segmentation by Graph-Theoretic clustering- Segmentation by fitting a model-The Hough Transform-Fitting lines-Fitting curves- Fitting as a probabilistic inference problem-Robustness-Segmentation and fitting using probabilistic methods.

UNIT V 8 Hours

High level vision-:Geometric methods-Model based vision-Obtaining hypothesis by pose consistency, pose clustering and using Invariants- Verification-smooth surface and their outlines-Aspect graphs- Range data-Range Data segmentation- Range image Registration and model acquisition-Object Recognition.

TEXT BOOKS

1. Computer vision – A modern Approach , David A forsyth & Jean ponce , Prentice Hall ,2002.
2. “Computer vision and Applications” , Bernd Jahne and Horst HauBecker Academic press ,2000.

TEACHING METHODS

- Lectures
- Power Point Presentation
- Case Study

ASSESSMENT METHODS

L-T-P: 3-0-0	***Credits:*** *03*
Total Contact Hours: *39 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks: *50*	***CIE Marks:*** *50*

PREREQUISITES

- Students should have studied Systems Programming and Applications Programming like C/C++ programming.
- Students should have studied Operating Systems

COURSE OBJECTIVES

enable students to experiment with a contemporary OS (Linux). Through a series of programming assignments, the students will develop an appreciation in systems programming in general, experience the new open source software development model, and gain necessary skills and experiences to work large system software as complex as an OS kernel.

COURSE CONTENTS

UNIT - I **8 Hours**

roduction to Linux- Linux Versus Other Unix-Like Kernels, Hardware Dependency, Linux Versions, Basic Operating System Concepts. Booting, Compilation, Initialization.

UNIT - II **8 Hours**

Programs, Processes, and Threads - Processes, Lightweight Processes, and Threads, Process Descriptor, Process Switch, Creating Processes, Destroying Processes, Scheduling Policy, The Scheduling Algorithm, Data Structures Used by the Scheduler, Functions Used by the Scheduler.

UNIT - III **8 Hours**

Interrupts and Exceptions - The Role of Interrupt Signals, Interrupts and Exceptions, Nested Execution of Exception and Interrupt Handlers, Initializing the Interrupt Descriptor Table, Exception Handling, Interrupt Handling, Softirqs and Tasklets, Work Queues, Returning from Interrupts and Exceptions.

UNIT – IV **8 Hours**

Memory Management- Page Frame Management, Memory Area Management, Noncontiguous Memory

Area Management, The Process’s Address Space, The Memory Descriptor, Memory Regions, Page Fault Exception Handler, Creating and Deleting a Process Address Space, Managing the Heap.

UNIT- V **7 Hours**

System Calls - POSIX APIs and System Calls, System Call Handler and Service Routines, Entering and Exiting a System Call, Parameter Passing, Kernel Wrapper Routines.

Device Drivers - I/O Architecture, The Device Driver Model, Device Files, Device Drivers, Character Device Drivers.

TEXT BOOKS

1. Understanding the Linux Kernel (ULK), 3rd Edition, by Daniel Bovet and Marco Cesati;
2. Linux Kernel Development (LKD), 3rd Edition, by Robert Love, Addison-Wesley, 2010

COURSE DESCRIPTION

This course is designed for imparting knowledge on large enterprise application of present and future era. Details on designing, architecture, construction and testing an enterprise application are provided to enhance the skill levels. A case study of easy money bank is dealt throughout this course.

PREREQUISITES

- Students should have prior knowledge of Object Oriented Concepts.
- Students should have the understanding of SDLC.

COURSE OBJECTIVES

- To define, classify and explain Enterprise Application
- To architect and design enterprise application with relevant technology
- To know construction details of the enterprise application.

COURSE CONTENTS

UNIT – I **8 Hours**

Introduction and Incepting to Building Enterprise applications: Enterprise Applications, Software Engineering Methodologies, Life Cycle of Raising Enterprise Applications, Three Key Determinants of Successful Enterprise Applications, Measuring the Success of Enterprise Applications, Enterprise Analysis, Business Modeling, Case Study of EM Bank.

UNIT – II **8 Hours**

Requirement Analysis and Architecting and Designing Enterprise Applications Case Study, Requirement Elicitation and Analysis, Requirements Validation, Planning and Estimation, Architecture, Views and Viewpoints, Enterprise Application, An Enterprise Architecture Perspective, Logical Architecture.

UNIT – III **8 Hours**

Technical, Data and Infrastructure Architecture Case Study, Technical Architecture and Design, Data Architecture and Design, Infrastructure Architecture and Design, Architecture Design and Documentation.

8 Hours

UNIT – IV

Constructing Enterprise Applications Case Study, Construction Readiness, Introduction to Software Construction Map, Constructing the Solution Layers, Code Review, Static Code Analysis, Build Process and UNIT Testing, Dynamic Code Analysis.

UNIT – V **7 Hours**

Testing and Rolling Out Enterprise Applications Case Study, Testing Enterprise Applications, Enterprise Application Environments, Integration Testing, System Testing, User Acceptance Testing, Rolling out Enterprise Applications.

TEXT BOOKS

1.Anubhav Pradhan, Satheesha B. Nanjappa, Senthil K.Nallasamy and Veerakumar Esakimuthu Raising Enterprise Applications, Wiley India, 2010.

REFERENCE BOOKS

1. Inderjeet Singh, Beth Stearns, Mark Johnson and the Enterprise Team,Designing Enterprise Applications with the J2EE Platform, 2nd Edition, Addison Wesley, 2002.

TEACHING METHODS

1. Lecture using Black board and chalk
2. PowerPoint presentations (if needed)
3. Regular review of students by asking questions based on topics covered in the class
4. Case Study using Selenium tool.

ASSESSMENT METHODS

Parameter	Marks
Midterm Test (Average of 2 Tests)	30
Surprise Test	10
Assignment / Case Study / Minor project	10
Total	**50**

COURSE OUTCOMES

At the end of the course the student will be able to

CO	Description	Bloom's level
CO 1	Comprehend the concepts of building Enterprise Applications, methodologies, life cycle and enterprise modeling.	**L2**
CO 2	Perform requirement elicitation and analysis, validation, planning and estimation.	**L2**
CO 3	Design data and infrastructure architecture and prepare related documentation.	**L3**
CO 4	Construct enterprise applications and perform static & dynamic code analysis.	**L3**
CO 5	Develop testing process of enterprise applications, with emphasis on UNIT testing, integration testing, system testing, and user acceptance testing.	**L4**

SEE Marks*: 50*	***CIE Marks:*** *50*

COURSEDESCRIPTION

Cyber Security course covers system vulnerabilities, and introduces few network defense and web applications tools. The course also gives a brief introduction about cyber crime and investigation.

PREREQUISITES

Required Knowledge of any Operating System, Networking and Digital Security Issues.

COURSE OBJECTIVES

- Able to identify security risks and take preventive steps
- Investigate cybercrime and collect evidences
- Able to use knowledge of forensic tools and software

COURSE CONTENTS

UNIT – I **08 Hours**

Systems Vulnerability: Scanning Overview of vulnerability scanning, Open Port / Service Identification, Banner / Version Check, Traffic Probe, Vulnerability Probe, Vulnerability Examples, OpenVAS, Metasploit. Networks Vulnerability Scanning - Netcat, Socat, Network Reconnaissance – Nmap, Network Sniffers and Injection tools – Tcpdump and Wireshark, Hping Kismet.

UNIT – II **08 Hours**

Network Defense tools: Firewalls and Packet Filters: Firewall Basics, Packet Filter Vs Firewall, How a Firewall Protects a Network, Packet Characteristic to Filter, Stateless VsStateful Firewalls, Network Address Translation (NAT) and Port Forwarding, the basic of Virtual Private Networks, Linux Firewall.

UNIT – III **08 Hours**

Web Application Tools: Scanning for web vulnerabilities tools: Nikto, W3af, HTTP utilities - Curl, OpenSSL and Stunnel, Application Inspection tools – Zed Attack Proxy, Sqlmap. DVWA, Webgoat, Password Cracking and Brute-Force Tools – John the Ripper, L0htcrack, Pwdump, HTC-Hydra.

UNIT – IV **08 Hours**

Cyber Crime: Introduction to Cyber Crime and law Cyber Crimes, Types of Cybercrime, Hacking, Attack vectors, Cyberspace and Criminal Behavior, Clarification of Terms, Traditional Problems Associated with

Computer Crime, Introduction to Incident Response, Digital Forensics, Computer Language, Network Language, Realms of the Cyber world.

UNIT – V **07 Hours**

Cyber Investigation: Introduction to Cyber Crime Investigation Firewalls and Packet Filters, password Cracking, Key loggers and Spyware, Virus and Warms, Trojan and backdoors, Steganography, DOS and DDOS attack, SQL injection, Buffer Overflow, Attack on wireless Networks.

TEXT BOOKS

1. Anti-Hacker Tool Kit (Indian Edition) by Mike Shema, Publication McGraw Hill
2. Cyber Security Understanding Cyber Crimes, Computer Forensics and Legal Perspectives by Nina Godbole and SunitBelpure, Publication Wiley

REFERENCE BOOKS

1. Marjie T. Britz - Computer Forensics and Cyber Crime: An Introduction - Pearson
2. Chwan-Hwa (John) Wu,J. David Irwin - Introduction to Computer Networks and Cybersecurity - CRC Press
3. Bill Nelson, Amelia Phillips, Christopher Steuart - Guide to Computer Forensics and Investigations - engage Learning.

ASSESSMENT METHODS

Parameter	Marks
Midterm Test (Avg. of 2 Tests)	30
Case study	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

COs	Description	Blooms Level
CO 1	Define and illustrate cyber security concepts and applications	L1
CO 2	Analyze the working of cyber security principles to system design	L4
CO 3	Illustrate appropriate techniques to solve cyber security threats	L2
CO 4	Evaluate and implement cyber security through network security	L4

SEE Marks*: 50*	***CIE Marks: 50***

COURSE DESCRIPTION

This course provides an understanding of Software testing. The course also provides the knowledge of White box and Black box testing, Functional and Non-functional testing in real time applications.

PREREQUISITES

- Basic Knowledge of Computer Programming.

COURSE OBJECTIVES

- To understand the fundamentals of Software testing.
- To automate Web applications using Selenium.

COURSE CONTENTS

UNIT – I **08 Hours**

Basics Of Software Testing: Human Errors and Testing; Software Quality; Requirements, Behavior and Correctness; Correctness versus Reliability; Testing and Debugging; Test Metrics, Software and Hardware Testing; Testing and Verification. Defect Management; Execution History; Test generation Strategies, Static Testing. Model-Based Testing and Model Checking ; Control-Flow Graph.

UNIT – II **08 Hours**

Test Generation From Requirements: Introduction, The Test-Selection Problem, Equivalence Partitioning, Boundary Value Analysis, Category-Partition Method, Cause-Effect Graphing.

UNIT – III **08 Hours**

Types Of Testing – 1: White Box Testing, Introduction, Static Testing, Structural Testing, Challenges in Whit box testing, Black Box Testing: Introduction, Testing methods. Integration Testing: Introduction, Integration testing as a Type of Testing, Integration testing as a Phase of Testing, Scenario Testing, Defect Bash

UNIT – IV **08 Hours**

Types of Testing - 2:System and Acceptance Testing, Overview, Functional System Testing, Non-functional Testing, Acceptance Testing; Summary of Testing Phases, Regression Testing: **Test Management and automation**: Introduction, Test planning, Test management, Test process, Test reporting, Test planning checklists, Test plan template.

UNIT – V **07 Hours**

What is Test automation? Terms used in Automation, Skills needed for Automation, what to automate, scope of automation, design and architecture for automation. GUI Testing, Web Application Testing: Introduction to Selenium, Getting Started With the Tools, Selenium IDE Basics, Essential Firefox Add-on's, Testing HTML Forms, Using javascript with Selenium, Introduction to Agile testing.

TEXT BOOKS

1. Aditya P Mathur: Foundations of Software Testing, Pearson Education, 2008.
2. SrinivasanDesikan, Gopalaswamy Ramesh: Software Testing Principles and Practices, 2nd Edition, Pearson Education, 2007.

2. **http://www.softwaretestinghelp.com/selenium-tutorial**
3. https://nptel.ac.in/course.php

TEACHING METHODS

1. Lecture using Black board and chalk
2. PowerPoint presentations (if needed)
3. Regular review of students by asking questions based on topics covered in the class
4. Case Study using Selenium tool.

ASSESSMENT METHODS

Parameter	Marks
Three internals(Average of best of two)	30
Rubrics for the evaluation of case study implementation using Selenium	10
Two Surprise test	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to

COS	Description	Blooms Level
CO 1	Use terms associated with software testing	**L2**
CO 2	Illustrate various test generation strategies.	**L3**
CO 3	Implement different types of software testing in application development.	**L2**
CO 4	Summarize aspects of functional and nonfunctional testing.	**L2**
CO 5	Apply the usage of test Management and automation in software testing.	**L4**

L-T-P: *3-0-0*	***Credits***: *3*
Total Contact Hours: *52 Hours*	***Duration of SEE***: *3 Hours*
SEE Marks:*50*	***CIE Marks***: *50*

PREREQUISITES

- Student should have prior knowledge of DBMS
- Student should have queried some database using SQL

COURSE OBJECTIVES

- To get basic knowledge of business intelligence (BI), BI technology, and related concepts.
- To get knowhow on data integration methods, architecture and technology.
- To design multi-dimensional data modelling.
- To gain knowledge of enterprise reporting techniques and to design such reports.

COURSE CONTENTS

UNIT – I **08 Hours**

Introduction to Business Intelligence: Types of digital data; Introduction to OLTP, OLAP and Data Mining; BI Definitions & Concepts; Business Applications of BI; BI Framework, Role of Data Warehousing in BI, BI Infrastructure Components – BI Process, BI Technology, BI Roles & Responsibilities.

UNIT – II **08 Hours**

Basics of Data Integration: Basics of Data Integration (Extraction Transformation Loading); Concepts of data integration; Need and advantages of using data integration; Introduction to common data integration approaches; Introduction to data quality, data profiling concepts and applications.

UNIT – III **08 Hours**

Introduction to Data Integration: Introduction to SSIS Architecture, Introduction to ETL using SSIS; Integration Services objects; Data flow components – Sources, Transformations and Destinations; Working with transformations, containers, tasks, precedence constraints and event handlers.

UNIT – IV **08 Hours**

Introduction to Multi-Dimensional Data: Modeling Introduction to data and dimension modeling, multidimensional data model, ER Modeling vs. Multi-dimensional modeling; Concepts of dimensions, facts, cubes, attribute, hierarchies, star and snowflake schema; Introduction to business metrics and KPIs; Creating cubes using SSAS.

UNIT – V **07 Hours**

Basics of Enterprise Reporting: Introduction to enterprise reporting; Concepts of dashboards, balanced scorecards; Project: Data warehouse creation and designing reports; Introduction to SSRS Architecture, Enterprise reporting using SSRS; Use of Business Intelligence Development Studio (BIDS).

TEXT BOOK

1. R N Prasad and Seema Acharya, Business Analytics & its Applications, Wiley India, 2013.

REFERENCE BOOKS

1.David Loshin, Business Intelligence, 2nd edition , Morgan Kaufmann, 2012.
2.Mike Biere, Business Intelligence for the Enterprise, Prentice Hall Professional, 2003.

4.Cindi Howson, Successful Business Intelligence: Secrets to making BI a Killer Applications, Tata McGraw-Hill Edu.Pvt.ltd, 2007.

TEACHING METHODS

- Black board and chalk
- Power Point Presentations
- Problem Solving Assignments

ASSESSMENT METHODS

Parameter	Marks
Midterm Test (Avg. of 2 Tests)	30
Course Project/assignment	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course students will be able to :

COs	Description	Bloom's Level
CO 1	Explain BI concepts, methodologies & BI framework.	**L1**
CO 2	Build Data Warehouse by understanding complete ETL process.	**L3**
CO 3	Illustrate SQL Server Integration Services (SSIS) & SSRS Architectures.	**L2**
CO 4	Describe various Data modelling & Dimensional modelling techniques and design with these.	**L2**
CO 5	Demonstrate Enterprise reporting, Concepts of dashboards & Balanced scorecards.	**L3**

COURSE DESCRIPTION

This course will give an understanding of mobile computer systems particularly in the context of wireless network systems such as 2G/3G/4G mobile telephony, data networks, and other wireless networks and infrastructure.

PREREQUISITES

- Students should have prior knowledge of Computer Networks, basics of programming

COURSE OBJECTIVES

- To understand and learn the basics of mobile devices
- To understand and learn the different types of wireless medium access control
- To understand and learn different broadcast techniques
- To understand and learn how to manage transaction

COURSE CONTENTS

UNIT – I **08 Hours**

Mobile Devices And Systems, Architectures: Mobile phones, Digital Music Players, Handheld Pocket Computers, Handheld Devices, Operating Systems, Smart Systems, Limitations of Mobile Devices, Automotive Systems. GSM – Services and System Architectures, Radio Interfaces, Protocols, Localization, Calling, Handover, General Packet Radio Service.

UNIT – II **08 Hours**

Wireless Medium Access Control AndCdma – Based Communication: Medium Access Control, Introduction to CDMA – based Systems, OFDM, Mobile Ip Network Layer, Mobile Transport Layer: IP and Mobile IP Network Layers Packet Delivery and Handover Management.

UNIT – III **08 Hours**

Location Management, Registration, Tunneling and Encapsulation, Route Optimization, Dynamic Host Configuration Protocol. Indirect TCP, Snooping TCP, Mobile TCP, Other Methods of TCP – layer Transmission for Mobile Networks. Databases: Database Hoarding Techniques, Data Caching, Client – Server Computing and Adaptation.

UNIT – IV **08 Hours**

Transactional Models, Query Processing, Data Recovery Process, Issues relating to Quality of Service. Data Dissemination And Broadcasting Systems: Communication Asymmetry, Classification of Data – Delivery Mechanisms, Data Dissemination Broadcast Models, Selective Tuning and Indexing Techniques.

UNIT – V **07 Hours**

Digital Audio Broadcasting, Digital video Broadcasting. Data Synchronization In Mobile Computing Systems: Synchronization, Synchronization Protocols, SyncML – Synchronization Language for Mobile Computing, Synchronized Multimedia Markup Language (SMIL).

TEXT BOOK

1. Mobile Computing – Raj Kamal, Oxford University Press, 2007.

Course Content for VIII – Semester 2018 Scheme

Department of Computer Science and Engineering

Department: *Computer Science and Engineering*	***Course Type:*** *Programme Core*
Course Title: *Green Computing*	***Course Code:*** *18CS81*
L-T-P: *3-0-0*	***Credits:*** *03*
Total Contact Hours: *39 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks: *50*	***CIE Marks:*** *50*

PREREQUISITES

- Environmental Aspects, Enterprise Development and Management, Network Security.

COURSE DESCRIPTION

- Our societal energy usage is rising at an alarming rate and thus it is critical to manage its consumption more efficiently for long term sustainability. This course introduces students to the exciting area of "Green Computing" aiming to help students acquire the knowledge and skills needed to do research in this space.

COURSE CONTENTS

UNIT –I **10 Hours**

Green IT Fundamentals: Business, IT and the Environment, Green computing: carbon foot print, scoop on power, Green IT Strategies: Drivers, Dimensions and Goals, Environmentally Responsible Business: Policies, Practices, and Metrics.

UNIT –II **8 Hours**

Green Assets: Buildings, Data Centers, Networks, and Devices, Green Business Process Management: Modeling, Optimization, and Collaboration, Green Enterprise Architecture, Environmental Intelligence,

UNIT- III **8 Hours**

Virtualizing of IT systems: Green Supply Chains, Green Information Systems, Design and Development Models, Role of electric utilities, Telecommuting, teleconferencing and teleporting, Materials recycling.

UNIT- IV **8 Hours**

Socio-cultural aspects of Green IT, Green Enterprise Transformation Roadmap, Green Compliance: Protocols, Standards, and Audits, Emergent Carbon Issues: Technologies and Future.

UNIT- V **8 Hours**

IT Enabled Smart Buildings: Sensing within Buildings (Occupancy), Sensing within Buildings (Energy and Water), Energy Management in Smart Homes, Security and

Privacy, Case Studies.

TEXT BOOKS

TEACHING METHODS

- PPTs

ASSESSMENT METHODS

Parameter	Marks
Three internals(Average of best)	30
Paper Presntation on Recent Developments in Green IT	10
Surprise Test	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES (COs):

At the end of the course student will be able to:

CO	Description	Blooms Level
CO 1	Describe awareness among stakeholders and promote green agenda and green initiatives in their working environments leading to green movement	**L2**

CO 2	Understand the Green Assets in green Computing for eco-friendly.	**L1**
CO 3	Illustrate the Socio-cultural aspects of Green IT.	**L2**
CO 4	Use Green IT Strategies and metrics for ICT development.	**L3**
CO 5	Illustrate various green IT services and its roles.	**L2**

***Total Contact Hours**: 39 Hours*	***Duration** of SEE: 3 Hours*
***SEE Marks**: 50*	***CIE Marks**: 50*

COURSE DESCRIPTION

This course covers basic laws and ethical behavior associated with network security. Topics include discussions about current common practices used to secure networks as well as test them, and the potential these methods can have in creating a secure network environment.

PREREQUISITES

- Network Security
- Information Security

COURSE OBJECTIVES

- To give an understanding of how ethical issues affect individuals, communities and societies and be able to analyze the consequences of various professional ethical dilemmas.
- To create awareness and understanding of what is morally/ethically at stake in various situations.
- To Apply moral principles and standards of behavior in a workplace setting.
- To Identify concepts such as ethics, morals, character, ethical principles and ethical relativism.
- Identify organizations, laws and regulations related to computer ethics, law, and policy.

COURSE CONTENTS

UNIT- I **08 Hours**

Intellectual property rights, computer software copyrights, copyright in databases and electronic publishing, law of confidence, patent laws, trademarks, designs.

UNIT -II **08 Hours**

Computer contracts, liability for defective hardware and software, contracts for writing software, hardware contracts.

UNIT -III **08 Hours**

Computer crime, computer fraud, hacking, unauthorized modification of information, piracy, computer pornography and harassment.

UNIT- IV **08 Hours**

Understanding Computer, Internet and Cyber laws,IT ACT 2000,Protection ofIPR in Cyber Space

UNIT- V **07 Hours**

Some important offences under the cyber space law and the internet in India International efforts related to cyber space laws.

TEXT BOOKS

1. D. Bainbridge, Introduction to Computer Law, 5/e, Pearson Education, 2004.
2. Harish Chander, Cyber Laws and IT Protection, PHI Learning Private Limited, 2012.

Total Contact Hours: *44 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks: *50*	***CIE Marks:*** *50*

COURSE OBJECTIVES

The object of Major Project & Dissertation is to enable the student to extend further the investigative study taken up under Project work- I to III, either fully theoretical/practical or involving both theoretical and practical work, under the guidance of a Supervisor from the Department alone or jointly with a Supervisor drawn from R&D laboratory/Industry.

COURSE CONTENTS

Based on the survey, identify the project requirements and do feasibility study.

- Identify and draw a system level architecture by showing subsystems and their input/output need.
- Implement the programs using step by step for each module.
- Integrate and examine the implementation and test the project scope and the requirements.
- Prepare Project document and the demonstrating their work.
- The evaluation is based on presentation and report.
- The evaluation will be done by the internal guide and panel of examiners twice during the semester.
- Students must do a group presentation and produce documents of system requirements, and system design (during 6th week)
- Final development of product/process, testing, results, conclusions and future directions;
- Preparing a paper for Conference presentation/Publication in Journals, if possible;
- Preparing a Dissertation in the standard format for being evaluated by the Department;
- **Final Evaluation**: At the End of the semester students must do a group presentation, demonstrate the project work and submit the complete report. (during 13th week)

COURSE OUTCOMES

At the end of the course, the students should be able to:

- Review the current state of Art and trends in their area of interest and identify a suitable problem in their chosen subject domain with justification. (PO-1,2,6, 7, 9, 10, 11, PSO-2,3)
- Survey the available research literature/documents for the tools and techniques to be used. (PO-1, 2, 5, 8, 9, 10, 11, 12, PSO-2,3)

- Examine the functional, non-functional, and performance requirements of their chosen problem definition. (PO-1,2,4, 9, 10, 11, 12, PSO-2,3)
- Design system architecture and different components and develop all the system components using appropriate tools and techniques. (PO-1, 2, 3, 4, 5, 6, 8, 9, 10, 11, 12, PSO-2,3)
- Work effectively in a team and use good project management practices and defend the project work as a team(PO-5, 8, 9, 10, 11, 12, PSO-2,3)

Rubrics for Project Evaluation: The rubrics for project evaluation is provided in separate project work book maintained for each project team.

Review No.	**Agenda**	**Assessment**	**Weightage**
Phase- 1	Project Synopsis / Proposal Evaluation	Rubric 1	25%
Phase-2	Mid-Term Project Evaluation (Design Phase)	Rubric 2	25%
Phase-3	Demonstration, Result discussion, Project Dissertation	Rubric 3	50%

Rubric 1: Project Synopsis/Proposal Evaluation

	Level of Achievement				
	Excellent	**Good**	**Average**	**Poor**	**Score**
Identification of Problem Domain and Detailed analysis of Feasibility, Objectives and Methodology of Project Proposal	Detailed and extensive explanation of the purpose and need of the project, Specifications, Limitations of Existing Systems All objectives of the proposed work are well defined; Steps to be followed to solve the defined problem are clearly specified	Good explanation of the purpose and need of the project , study on existing systems Good justification to the objectives; Methodology to be followed is specified but detailing is not done	Average explanation of the purpose and need of the project; Moderate study of the existing systems; Incomplete justification to the objectives proposed; Steps are mentioned but unclear;	Moderate explanation of the purpose and need of the project the limitations of the existing systems not very satisfactory; Only Some objectives of the proposed work are well defined; Steps to be followed to solve the defined problem are not	

				specified properly	

Rubric 2: Mid-term Project Evaluation (Design phase)

Level of Achievement					
	Excellent	**Good**	**Average**	**Poor**	**Score**
Design Methodology	Division of problem into modules and good selection of computing framework ; Appropriate design methodology and properly justification	Division of problem into modules and good selection of computing framework ; design methodology not properly specified	Division of problem into modules but inappropriate selection of computing framework ; Design methodology not defined properly	Partial division of problem into modules and inappropriate selection of computing framework Design methodology not defined properly	
Demonstration and Presentation	Contents of presentations are appropriate and well arranged ; Proper eye contact with audience and clear voice with good spoken language	Contents of presentations are appropriate but not well arranged; Satisfactory demonstration	Contents of presentations are appropriate but not well arranged; Eye contact with few people and unclear voice	Contents of presentations are not appropriate; Demonstration not satisfactory	

Rubric #R3: End Semester Internal Project Evaluation

Level of Achievement					
	Excellent	**Good**	**Average**	**Poor**	**Score**
Project Demonstration And Presentation	All defined objectives are achieved All modules of project are well integrated and system working is accurate Contents of presentations are appropriate and well delivered	All defined objectives are achieved Integration of all modules not done and system working is not very satisfactory Contents of presentations are appropriate and well delivered	All defined objectives are achieved Modules of project are not properly integrated Contents of presentations are appropriate but not well delivered	Only some of the defined objectives are achieved Contents of presentations are not appropriate and not well delivered	
Description of Concepts and Technical Details in Project Report	Project report is according to the specified format ; References and citations are appropriate and well mentioned ; Complete explanation of the key concepts	Project report is according to the specified format ; References and citations are appropriate but not mentioned well	Project report is according to the specified format but some mistakes ; In-sufficient references and citations; Incomplete explanation of the key concepts	Project report not prepared according to the specified format ; References and citations are not appropriate ; Inappropriate explanation of the key concepts

Program Elective - E

Department of Computer Science and Engineering

Department : *Computer Science and Engineering*	***Course Type :*** *Programme Elective*
Course Title: *Advanced Artificial Intelligence*	***Course Code:*** *18CSE831*
L-T-P: 3-0-0	***Credits:03***
Total Contact Hours: *39 Hours*	***Duration of SEE :*** *3 Hours*
SEE Marks*: 50*	***CIE Marks: 50***

COURSE DESCRIPTION

This course provides an in-depth knowledge of Classical Planning, Planning and Acting in the Real World, Knowledge Representation. Uncertain Knowledge and Reasoning, Quantifying Uncertainty, Probabilistic Reasoning over time, Learning from examples, Learning probabilistic models, Reinforcement Learning, Natural language processing, Natural language for communication.

COURSE OBJECTIVES

- To understand and analyze the classical planning, planning and acting in the real world.
- To understand and analyze Knowledge Representation, Quantifying Uncertainty.
- To understand and analyze Probabilistic Reasoning over time, Learning.
- To understand and analyze learning probabilistic models, Reinforcement Learning.
- To understand and analyze Natural language processing, Natural language for communication.

PREREQUISITES

- Students should have knowledge of Design and Analysis of Algorithms
- Students should have knowledge of Probability Theory.

COURSE CONTENTS

UNIT - I **08 Hours**

Classical Planning: Definition of Classical Planning, Algorithms for Planning as State-Space Search, Planning Graphs, Other Classical Planning Approaches, Analysis of Planning Approaches.

Planning and Acting in the Real World: Time, Schedules and Resources, Hierarchical Planning, Planning and Acting in Non-Deterministic Domains, Multiagent Planning.

UNIT – II **08 Hours**

Knowledge Representation: Ontological Engineering, Categories and Objects, Events, Mental Events and Mental Objects, Reasoning systems for categories, reasoning with default Information, The Internet shopping world.

Uncertain Knowledge and Reasoning: Quantifying Uncertainty: Acting under uncertainty, basic probability notation, inference using full joint distributions, independence, Baye’s rule and its use.

Probabilistic reasoning: Representing knowledge in an uncertain domain. The semantics of Bayesain networks, efficient representation of conditional distributions, exact inference in Bayesian networks.

UNIT-III **08 Hours**

Probabilistic Reasoning over time: Time and Uncertainty, Inference in temporal models, Hidden Markov Models, Kalman Filters, Dynamic Bayesian networks.

Learning: Learning from examples: Forms of Learning, Supervised learning, Learning decision trees, Evaluating and choosing the best Hypothesis, The theory of learning, Regression and Classification with linear models, artificial neural networks, support vector machines, ensemble learning, practical machine learning.

UNIT – IV **08 Hours**

Learning probabilistic models: Statistical learning, learning with complete data, learning with hidden variables: The EM algorithm.

Reinforcement Learning: Introduction, passive Reinforcement learning, active reinforcement learning, generalization of reinforcement learning, policy search, application of reinforcement learning.

UNIT – V **07 Hours**

Natural language processing: Language models, text classification, information retrieved, information extraction

Natural language for communication: phrase structure grammars, syntactic analysis (parsing), augmented grammars and semantic interpretation, machine translation, speech recognition.

TEXT BOOK

1. Artificial Intelligence-A Modern Approach, Stuart J. Russell and Peter Norvig, Pearson 3rd Edition, eleventh impression 2018.

REFERENCE BOOKS

1. Elaine Rich,Kevin Knight, Shivashanka B Nair:Artificial Intelligence, Tata MCGraw Hill 3rd edition. 2013
2. Nils J. Nilsson: "Principles of Artificial Intelligence", Elsevier, ISBN-13: 9780934613101

TEACHING METHODS

1. Lecture using Black board and chalk
2. Presentations
3. Programming Assignments
4. Seminar on AI topics

ASSESSMENT METHODS

Parameter	Marks
Three internals(Average of best of two)	30
Programming Assignments	10
Seminar on AI topics	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of Course, Student will be able to

COs	Description	Bloom's Level
CO 1:	To understand and analyze the classical planning, planning and acting in the real world.	**L2,L4**
CO 2:	To understand and analyze Knowledge Representation, Quantifying Uncertainty	**L2,L4**

Department: *Computer Science and Engineering*	***Course Type:*** *Programme Elective*
Course Title*: Agile Software Development*	***Course Code:*** *18CSE832*
L-T-P 4-0-0	***Credits:*** *04*
Total Contact Hours: *52 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course is rapidly becoming the choice for software development where requirements are unpredictable or is expected to change over time. This course will help you gain knowledge on what is agile? Why agile is better suited for these situations? We will also cover some of the most common agile frameworks like scrum and XP in depth.

PREREQUISITES

- Awareness of basics of software engineering concepts and waterfall methodology
- Exposure to any object oriented programming language such as Java, C#.

COURSE OBJECTIVES

1) To learn and demonstrate the ability to participate effectively in agile practices/process for software development.
2) To explain the purpose behind common agile practices.
3) To gain ability to apply agile principles and values to a given situation.
4) To gain ability to identify and address most common problems encountered in adopting Agile methods.

COURSE CONTENTS

UNIT-1 **08 Hours**

Fundamentals of Agile: The Genesis of Agile, Introduction and background, Agile Manifesto and Principles, Overview of Scrum, Extreme Programming, Feature Driven development, Lean Software Development, Agile project management, Design and development practices in Agile projects, Test Driven Development, Continuous Integration, Refactoring, Pair Programming, Simple Design, User Stories, Agile Testing, Agile Tools.

UNIT-I1 **08 Hours**

Agile Scrum Framework: Introduction to Scrum, Project phases, Agile Estimation, Planning game, Product backlog, Sprint backlog, Iteration planning, User story definition, Characteristics and content of user stories, Acceptance tests and Verifying stories, Project velocity, Burn down chart, Sprint planning and retrospective, Daily scrum, Scrum roles – Product Owner, Scrum Master, Scrum Team, Scrum case study, Tools for Agile project management

UNIT-I1I **08 Hours**

Agile Testing: The Agile lifecycle and its impact on testing, Test-Driven Development (TDD), xUNIT framework and tools for TDD, Testing user stories - acceptance tests and scenarios, Planning and managing testing cycle, Exploratory testing, Risk based testing, Regression tests, Test Automation, Tools to support the Agile tester

UNIT-IV **08 Hours**

Agile Software Design and Development: Agile design practices, Role of design Principles including Single Responsibility Principle, Open Closed Principle, Liskov Substitution Principle, Interface Segregation Principles, Dependency Inversion Principle in Agile Design, Need and significance of Refactoring, Refactoring Techniques, Continuous Integration, Automated build tools, Version control

UNIT-V **07 Hours**

Industry Trends: Market scenario and adoption of Agile, Agile ALM, Roles in an Agile project, Agile applicability, Agile in Distributed teams, Business benefits, Challenges in Agile, Risks and Mitigation, Agile projects on Cloud, Balancing Agility with Discipline, Agile rapid development technologies

TEXT BOOKS

1.James shore, , The Art of Agile Development (Pragmatic guide to agile software development, O'Reilly Media, Shroff Publishers & Distributors, 2007

REFERENCE BOOKS

2. Craig Larman, “Agile and Iterative Development A Manger’s Guide”, Pearson Education, First Edition, India, 2004.

TEACHING METHODS

- Lecture using Black board and chalk
- Presentations
- Programming Assignments

ASSESSMENT METHODS

Parameter	Marks
Three internals(Average of best of two)	30
Model Based Learning	10
Case study Presentation	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

.

COURSE OUTCOMES

At the end of this elective, student will be able to:

COs	Description	Bloom's Level
CO 1	Describe the background and driving forces for taking an Agile approach to software development	**L2**
CO 2	Illustrate the business value of adopting Agile approaches, and the Agile development practices	**L3**
CO 3	Drive development with UNIT tests using Test Driven Development	**L3**
CO 4	Apply design principles and refactoring to achieve Agility	**L3**
CO 5	Deploy automated build tools, version control and continuous integration	**L4**

Mapping of Course outcomes (COs) to Program outcomes (POs*)& PSO **

SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course is about a variety of ways to represent human languages as computational systems, and use the representations to write programs for processing text and speech data, like translation, summarization, extracting information, question answering, natural interfaces to databases, and conversational agents.
This course will include some ideas about discrete classification, probability models and about Linguistics like morphology, syntax, semantics.
The course also covers computational treatments of words, sounds, sentences, meanings, and conversations.

PREREQUISITES

- Data structures and algorithms
- Programming principles and practices

COURSE OBJECTIVES

- Comprehend the techniques in natural language processing.
- Be familiar with the natural language generation and Text Mining.
- Understand the information retrieval techniques and linguistic phenomena.
- Design, analyze and implement NLP algorithms.

COURSE CONTENTS

UNIT – I **08 Hours**

Overview and language modeling: Overview: Origins and challenges of NLP, Language and Grammar, Processing Indian Languages, NLP Applications, Information Retrieval. Language Modeling: Various Grammar- based Language Models, Statistical Language Model.

UNIT – II **08 Hours**

Word level and syntactic analysis: Word Level Analysis: Regular Expressions, Finite-State Automata, Morphological Parsing, Spelling Error Detection and correction, Words and Word classes, Part of Speech Tagging. Syntactic Analysis: Context-free Grammar, Constituency, Parsing, Probabilistic Parsing.

UNIT – III **08 Hours**

Extracting Relations from Text: From Word Sequences to Dependency Paths: Introduction, Subsequence Kernels for Relation Extraction, A Dependency-Path Kernel for Relation Extraction and Experimental Evaluation.

Mining Diagnostic Text Reports by Learning to Annotate Knowledge Roles: Introduction, Domain Knowledge and Knowledge Roles, Frame Semantics and Semantic Role Labeling, Learning to Annotate Cases with Knowledge Roles and Evaluations.
A Case Study in Natural Language Based Web Search: InFact System Overview, The GlobalSecurity.org Experience.

UNIT – IV **08 Hours**
Evaluating Self-Explanations in iSTART: Word Matching, Latent Semantic Analysis, and Topic Models: Introduction, iSTART: Feedback Systems, iSTART: Evaluation of Feedback Systems. Textual Signatures: Identifying Text, Types Using Latent Semantic Analysis to Measure the Cohesion of Text Structures: Introduction, Cohesion, CohMetrix, Approaches to Analyzing Texts, Latent Semantic Analysis, Predictions, Results of Experiments.
Automatic Document Separation: A Combination of Probabilistic Classification and Finite-State Sequence Modeling: Introduction, Related Work, Data Preparation, Document Separation as a Sequence Mapping Problem, Results. Evolving Explanatory Novel Patterns for Semantically Based Text Mining.

UNIT – V
07Hours
INFORMATION RETRIEVAL AND LEXICAL RESOURCES:
Information Retrieval: Design features of Information Retrieval Systems, Classical, Non classical, Alternative Models of Information Retrieval, valuation Lexical Resources: World Net, Frame Net, Stemmers, POS Tagger.

SEE Marks*: 50*	***CIE Marks:****50*

COURSE DESCRIPTION

This course deals with providing the basic concepts of Pattern Recognition, Clustering and theories such as Bayes classifier, linear discriminate analysis

PREREQUISITES

- Basic knowledge of Programming, Data Structures and Algorithms.
- Knowledge on Data mining Techniques.

COURSE OBJECTIVES

1. Understand basic concepts in pattern recognition
2. Gain knowledge about state-of-the-art algorithms used in pattern recognition research
3. Understand pattern recognition theories, such as Bayes classifier, linear discriminant analysis.
4. Apply pattern recognition techniques in practical problems.

COURSE CONTENTS

UNIT – I **7 Hours**

Introduction: Machine perception, an example; Pattern Recognition System; The Design Cycle; Learning and Adaptation.

UNIT – II **13 Hours**

Bayesian Decision Theory: Introduction, Bayesian Decision Theory; Continuous Features, Minimum error rate, classification, classifiers, discriminant functions, and decision surfaces; The normal density; Discriminant functions for the normal density.

Maximum-likelihood and Bayesian Parameter Estimation: Introduction; Maximum-likelihood estimation; Bayesian Estimation; Bayesian parameter estimation: Gaussian Case, general theory; Hidden Markov Models.

UNIT – III **11 Hours**

Non-parametric Techniques: Introduction; Density Estimation; Parzen windows; k n – Nearest- Neighbor Estimation; The Nearest- Neighbor Rule; Metrics and Nearest-Neighbor Classification.

Linear Discriminant Functions: Introduction; Linear Discriminant Functions and Decision Surfaces; Generalized Linear Discriminant Functions; The Two-Category Linearly Separable case; Minimizing the Perception Criterion Functions; Relaxation Procedures; Non-separable Behavior; Minimum Squared-Error procedures; The Ho-Kashyap procedures.

UNIT – IV **11 Hours**

Stochastic Methods: Introduction; Stochastic Search; Boltzmann Learning; Boltzmann Networks and Graphical Models; Evolutionary Methods.
Non-Metric Methods: Introduction; Decision Trees; CART; Other Tree Methods; Recognition with Strings; Grammatical Methods.

UNIT – V **10 Hours**

Unsupervised Learning and Clustering: Introduction; Mixture Densitiesand Identifiability; Maximum-Likelihood Estimates; Application to Normal Mixtures; Unsupervised Bayesian Learning; Data Description and Clustering; Criterion Functions for Clustering.

COURSE DESCRIPTION

This course introduces students to the next revolution in computer science, the quantum computing. The students learn the nuts and bolts of quantum computers, from the basic gates to the proven quantum algorithms like Shor's algorithm. The students will also be exposed to the experimental quantum computers open sourced by IBM. By the end of the course, the students will have basic understanding of the quantum computers and should be able to appreciate the complexity of building one.

PREREQUISITES

1. Basic linear algebra, complex numbers
2. Idea of algorithms and their complexities
3. Idea of classical gates

COURSE OBJECTIVES

- To give the students a basic idea of quantum computing, concepts, complexity and its applications.
- Solve certain problems with vast number of combinations.
- Simulation of quantum processes.

COURSE CONTENTS

UNIT -I
08 Hours Introduction and Mathematical Foundations: What are quantum computers?, Why quantum computers?, Complex numbers, Linear Algebra, Probability

UNIT -II **08 Hours**
Quantum Physics Fundamentals: Quantum Superposition, Quantum Tunneling, Quantum Entanglement, Superconductivity

UNIT -III **08 Hours**
Qubit and Quantum Gates: Leap from Classical to Quantum, Qubits, Bits vs Qubits, Classical Gates, Quantum Gates

UNIT -IV **08 Hours**

Quantum Algorithms: Deutsch’s Algorithm, Shor’s Algorithm, Grover’s Algorithm

UNIT -V **07 Hours**

Experimenting with available online quantum computers and Quantum Computer Applications: Experimenting with IBM-Q Quantum computers, Applications of Quantum computers to cryptography, Other applications

COURSE DESCRIPTION

This course serves to understand discrete event system simulation, the event scheduling/time advance algorithm, useful statistical models, various distributions, random number generators, random variate generators, input modeling and output analysis for single model.

PREREQUISITES

- Students should have Knowledge of Probability and statistics

COURSE OBJECTIVES

- Analysing the application areas of simulation and different types of models of simulation.
- Illustrate the concept of discrete event simulation and Analyse the statistical models in simulation.
- Analysing the properties of Random-Variate and generation of Random-Number.
- Identifying the distribution, Parameter estimation, Goodness of Fit Tests etc with respect to Input modeling.
- Analyse, verify and validate the simulation models.

COURSE CONTENTS.

UNIT – I **08 Hours**

Introduction: When simulation is the appropriate tool and when it is not appropriate; Advantages and disadvantages of Simulation; Areas of application; Systems and system environment; Components of a system; Discrete and continuous systems; Model of a system; Types of Models; Discrete-Event System Simulation; Steps in a Simulation Study. The basics of Spreadsheet simulation, Simulation example: Simulation of queuing systems in a spreadsheet. Simulation of inventory systems.

UNIT – II **08 Hours**

General Principles, Simulation Software: Concepts in Discrete-Event Simulation: The Event-Scheduling / Time advancAlgorithm, World Views,

Manual simulation Using Event Scheduling.

Statistical Models in Simulation: Review of terminology and concepts;Useful statistical models; Discrete distributions; Continuous distributions; Poisson process; Empirical distributions.

UNIT – III **08 Hours**

Random-Number Generation, Random-Variate Generation: Properties of random numbers; Generation of pseudo-random numbers; Techniques for generating random numbers; Tests for Random Numbers Random-Variate Generation: Inverse transform technique; Acceptance-Rejection technique; Special properties.

.UNIT – IV **08 Hours**

Input Modeling : Data Collection; Identifying the distribution with data; Parameter estimation; Goodness of Fit Tests; Fitting a non-stationary Poisson process; Selecting input models without data; Multivariate and Time-Series input models.

UNIT – V **07 Hours**

Output Analysis for single Model: Types of simulations with respect to output analysis; stochastic nature of output data; Absolute measures of performance and their estimation;
Verification and Validation of simulation Models: Model building,verification and validation; Verification of simulation models; Calibration and validation of models.

PREREQUISITES

- Students must have basic knowledge of Machine learning algorithms and techniques.
- Students must have very good understanding of Engineering Mathematics and related theories.

COURSE OBJECTIVES

- To get knowledge of artificial neural networks and deep learning methods, deep neural network architectures and optimization techniques.
- To analyse the algorithms for backpropagation, optimization and training of deep neural networks and determine the parameter settings.
- To work with TensorFlow/Keras, design solutions for real life applications and create applications using deep learning neural networks.

COURSE CONTENTS

UNIT – I **08 Hours**

Foundations of Neural Networks and Deep Learning: The relationship between AI and deep learning, Gradient-Based Optimization, Constrained Optimization, Stochastic Gradient Descent. Neural Networks, The Perceptron, Multilayer Feed-Forward Networks, Activation Functions, Loss Functions, Training Neural Networks.

UNIT – II **08 Hours**

Fundamentals of Deep Networks: Common Architectural Principles of Deep Networks – Parameters, Layers, Activation Functions, Loss Functions, Optimization algorithms, Hyper-parameters. Major Architectures of Deep Networks: Unsupervised Pretrained Networks (UPNs), Convolutional Neural Networks (CNNs), Recurrent Neural Networks, Recursive Neural Networks.

UNIT – III **08 Hours**

Deep Networks: Modern Practices: Deep Feedforward Networks, Example: Learning XOR, Gradient-Based Learning, Hidden Units, Architecture Design, Back-Propagation, Regularization for Deep Learning, Optimization for Training Deep Models.

UNIT – IV **08 Hours**

Deep Learning with TensorFlow: Introduction to TensorFlow,Process of coding a Deep learning program in TensorFlow, Basics of Keras&TensorFlow by application, Distributed system architecture.

UNIT – V **07 Hours**

Application domain: Basic classification with MNIST dataset – Hand written digit recognition, Binary Classification of IMDB Dataset – Movie Ratings, Text Classification of IMDB vocabulary using CNN, Text generation using LSTM, Regression application of Boston House Pricing,Deep learning for Computer Vision, Implementing Deep dream, Magenta (AI Music Generation).

TEACHING METHODS

- Lecture (PPT)
- Programming Assignments/seminar
- Course Project

ASSESSMENT METHODS

Parameter	Marks
Midterm Test (Avg. of 2 Tests)	30
Course Project	10
Seminar	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the completion of this course, the student will be able to:

COs	Description	Bloom's Level
CO 1	Explain the concepts of deep learning and Neural Networks.	**L2**
CO 2	Demonstrate the architectural principles of Deep Learning Networks.	**L3**
CO 3	Explore the training and use of deep Learning networks with tools / techniques and modern practices.	**L2**
CO 4	Analyze the development methods of Deep Learning and Neural networks.	**L4**
CO 5	Create the deep learning system to solve real world problems.	**L6**

COURSE DESCRIPTION

This course provides knowledge about enterprise storage system and protocols related to it. It clearly differentiates between conventional storage system and today's storage system. It also provides brief insight to file systems and standard storage systems.

PREREQUISITES

- Students should have knowledge of DBMS and Computer Network

COURSE OBJECTIVES

- To know storage centric architecture and the advantages over conventional server centric architectures, along with virtualization aspects.
- To identify protocol stack and various storage and virtualization techniques in storage area networks and to extend the design for higher performance.
- To outline various file systems and the tradeoff.

COURSE CONTENTS

UNIT – I **8 Hours**

INTRODUCTION: Server Centric IT Architecture and its Limitations; Storage - Centric IT Architecture and its advantages; Case study: Replacing a server with Storage Networks; The Data Storage and Data Access problem; The Battle for size and access. INTELLIGENT DISK SUBSYSTEMS - 1: Architecture of Intelligent Disk Subsystems

UNIT – II **8 Hours**

Hard disks and Internal I/O Channels, JBOD, Storage virtualization using RAID and different RAID levels; INTELLIGENT DISK SUBSYSTEMS - 1, I/O TECHNIQUES - 1: Caching: Acceleration of Hard Disk Access; Intelligent disk subsystems; Availability of disk subsystems. The Physical I/O path from the CPU to the Storage System; SCSI.

UNIT – III **8 Hours**

I/O TECHNIQUES - 2, NETWORK ATTACHED STORAGE: Fibre Channel Protocol Stack; Fibre Channel SAN; IP Storage. The NAS Architecture, The NAS hardware Architecture, The NAS Software Architecture, Network connectivity, NAS as a storage system.

UNIT – IV **8 Hours**

FILE SYSTEM AND NAS: Local File Systems; Network file Systems and file servers; Shared Disk file systems; Comparison of fibre Channel and NAS.

UNIT – V **7 Hours**

STORAGE VIRTUALIZATION: Definition of Storage virtualization; Implementation Considerations; Storage virtualization on Block or file level; Storage virtualization on various levels of the storage Network; Symmetric and Asymmetric storage virtualization in the Network.

TEXT BOOKS

1. Storage Networks Explained - Ulf Troppens, Wolfgang Muller, Rainer Wolafka, Rainer Erkens and Nils Haustein, John Wiley & Sons, 2009.
2. Storage Networks: The Complete Reference - Robert Spalding, Tata McGraw Hill, 2003.

TEACHING METHODS

- Lecture using Black board and chalk
- Power point presentations

ASSESSMENT METHODS

Parameter	Marks
Three internals Test (Avg. of 2 Tests)	30
Seminar	10
Case Study	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course the student will be able to,

COs	Description	Bloom’s level
CO 1	Identify the details & purpose of Server Centric as well as Storage Centric architectures and also explain the Data Storage, Size and Access problem.	**L1**
CO 2	Analyse the design of Intelligent Disk Subsystems, JBOD, Storage Virtualization using RAID & RAID Levels.	**L2**
CO 3	Describe the fibre channel network protocol & SAN, also design of NAS.	**L2**
CO 4	Analyze the working of File Systems, implementation on fibre channel, compare withNAS Systems.	**L3**
CO 5	Design Storage Virtualization on Various levels of Storage Network	**L4**

PREREQUISITES

- Students should have knowledge of C or C++, visual Basic or Java language
- Students should g have knowledge of mathematics geometry , graphs and matrix
- Students should g have knowledge Computer Graphics

COURSE DESCRIPTION

UNIT–I **10 Hours**

Fundamental concepts in Text and Image: Multimedia and hypermedia, World Wide Web, overview of multimedia software tools. Graphics and image data representation graphics/image data types, file formats, Color in image and video: color science, color models in images, color models in video.

UNIT–II **12 Hours**

Fundamental concepts in video and digital audio: Types of video signals, analog video, digital video, digitization of sound, MIDI, quantization and transmission of audio.

UNIT–III **10 Hours**

Multimedia data compression I: Lossless compression algorithm: Run-Length Coding, Variable Length Coding, Dictionary Based Coding, Arithmetic Coding, Lossless Image Compression.

UNIT–IV **10 Hours**

Multimedia data compression II: Lossy compression algorithm: Quantization, Transform Coding, Wavelet-Based Coding, Embedded Zerotree of Wavelet Coefficients Set Partitioning in Hierarchical Trees (SPIHT).

UNIT–V **10 Hours**

Basic Video Compression Techniques: Introduction to video compression, video compression based on motion compensation, search for motion vectors, MPEG, Basic Audio Compression Techniques.

Case Study	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course students will be able to:

COs	Description	Bloom's Level
CO 1	Explain the foundation knowledge of multimedia computing, e.g. media characteristics, compression standards, multimedia representation, data formats, multimedia technology development	**L3**
CO 2	Understand How to use alternative mathematical representations of problems as tools to make problem solving simpler.	**L2**
CO 3	Analyze basic algorithms that perform simple signal processing to remove noise, emphasize important features, etc.	**L3**
CO 4	Apply multimedia applications and standards.	**L4**
CO 5	Program multimedia data to design and implement media applications	**L3**

BE PROGRAMME– 2021 BATCH (AUTONOMOUS SCHEME-NEP)

NITTE EDUCATION TRUST

BATCH 2021-25

VISION & MISSION OF THE COLLEGE

Vision

To provide India and the World, technical manpower of the highest academic excellence and World class by shaping our youth through holistic and integrated education of the highest quality.

Mission

To develop Nitte Meenakshi Institute of Technology through Quality, Innovative and State-of-art educational initiatives into a center of academic excellence that will turn out youth with well-balanced personality & commitment to rich cultural heritage of India and who will successfully face the Scientific and Technological challenges in the fast-evolving Global scenario with a high degree of credibility, integrity and ethical standards.

Quality Policy

To bring about constant and Continuous Improvement in the Quality of Education Imparted and Turning out High Quality Professionals with Balanced and Globally Competitive Personality through Regular Monitoring of the Academic/ Administrative Activities of the Institution and Implementing Corrective Actions in the Best Ethical and Transparent Traditions.

1. Vision and Mission of Department

1.1 Vision:

To empower students of Computer Science and Engineering Department to be technologically adept, innovative, self-motivated and responsible global citizen possessing human values and enable them to contribute in the industrial development innovation, high quality technical education and research with the ever-changing world.

1.2 Mission:

The department of Computer Science and Engineering strives to prepare students

- For a challenging professional career and nurture their entrepreneurship ability by grooming their leadership skills and innovative ability, thereby enabling them to serve the engineering profession and society.
- To accomplish higher studies by providing conducive teaching-learning, research environment.

2. Programme Education Objectives (PEOs)

PEO1: Excel in Professional career by acquiring knowledge in basic sciences and Computer Science and Engineering principles.

PEO2: Graduates are capable of pursuing higher education and research.

PEO3: Adapt to technological advancements by engaging in lifelong learning with leadership qualities, professional ethics and soft skills**.**

3. Programme Specific Outcomes (PSO)

PSO 1: Professional Skills: The ability to comprehend, analyze, design and implement and conduct research in the domain of Computing Algorithms, Application Development, Operating System, and Allied Areas, Computer Networks& security, Software Design, Data Mining and Big Data Analytics, Cloud computing, Analog and Digital Circuits.

PSO 2: Problem Solving Skills: Ability to apply the techniques of Data Base Management, Mathematical techniques, and adopt standard software engineering and professional practices to evolve optimal solutions.

PSO 3: Ethics and Career Development: Ability to apply the learned skills for a successful career in the industry based on sound principles of software project management, team work and ethical practices, develop the spirit of entrepreneurship and also nurture the quest for higher levels ofknowledge.

4. Programme Outcomes (POs)

1	**PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2	**PO2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3	**PO3. Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4	**PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5	**PO5. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6	**PO6. The engineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7	**PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8	**PO8. Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9	**PO9. Individual and team work:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10	**PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11	**PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12	**PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context oftechnological change.

5. Approach to Curriculum:

The curriculum is framed by keeping in mind the ever-changing industrial trends in technology. The Stakeholders in preparing the curriculum involve the industry experts, Academicians with expertise, Alumni of the department, Parents, Internal Faculty and the Final year students. The suggestions are taken and discussed in the BoS (Board of Studies). After approval from the BoS, the DUGC approval is taken and then the Academic Council approves the final curriculum.

The main objective of framing the curriculum:

- To build a strong technical, analytical and mathematical foundation in students. This will enable the students to be proficient in their technical profession.
- To inculcate in students the good ethical conduct, great team-spirit, excellent leadership qualities and provide a wholesome growth by encouraging Life-long learning which is needed for an excelling career.
- To make the students more competent to face challenges in the outside world.

6. Courses Inclined Towards Cutting Edge Technologies.

Department of CSE offers courses which are inclined towards cutting edge technologies along with the basic fundamental courses.

- Internet Of Things (IoT)
- Deep Learning
- Data Science/Big Data Analytics
- Block Chain Technologies
- Machine Learning
- Artificial Intelligence
- Virtual Reality
- Cloud Computing
- Robotics
- Quantum Computing
- Cyber Security

7. Definitions/Descriptions:

- **Semester Scheme:** Each UG degree is a 4 Academic year Program, each year being divided into 2 semesters. Each semester is for duration of 20 weeks, which includes Course work, CIE (Continuous Internal Evaluation), SEE (Semester End Examination). The CIE is conducted unit-wise on a monthly basis. The SEE is conducted at the end of every semester to evaluate the students' overall performance and achievement.
- **Credit System:** Each unit of a course is assigned *one credit*. The students earn the credits by registering to the respective courses, completing a teaching-learning process which is then followed by CIE and SEE. The CBCS (Choice Based Credit System) helps customizing the course work for a student by including Core Courses and ElectiveCourses.

- **Core Course:** Courses that are declared as mandatory for the students.
- **Electives:** Courses that are offered to the students from which they are allowed to choose.

- **Credit Courses:** Students earn *one credit* by registering for the course,
    - Attending Lecture (L) - *One hour/Week/Semester* Theory courses.
    - Attending Laboratory or Practical (P)/ Tutorials (T) - *Two Hours/Week/Semester.*
- **Course load:** Every student who registers for the courses in a semester for an average total credit of anywhere between (In the new scheme students must earn a total of 160 credits). Typical Course Load in a semester is shown in the Table 1.

Course Load per semester			
No. of Courses	**Credits per Course**	**Total Credits**	**Total contact Hours/ week**
Three Lecture Courses	4:0:0	12	12
One Lecture Course	3:0:0	3	3
One Lecture + One tutorial	3:2:0	4	5
Two Lectures + Practical	3:0:2	8	10
Two Practical courses	0:0:2	2	4

Table 1: Typical Course load

- **Credit Representation:** Credits for different academic activities are represented in the **Table 1.**

Lectures (Hours/Week/Semester)	**Tutorials** (Hours/Week/Semester)	**Practical** (Hours/Week/Semester)	**Credits (L: T:P)**	**Total Credits**
4	0	0	4:0:0	4
3	2	0	3:2:0	4
0	2	0	0:2:0	1

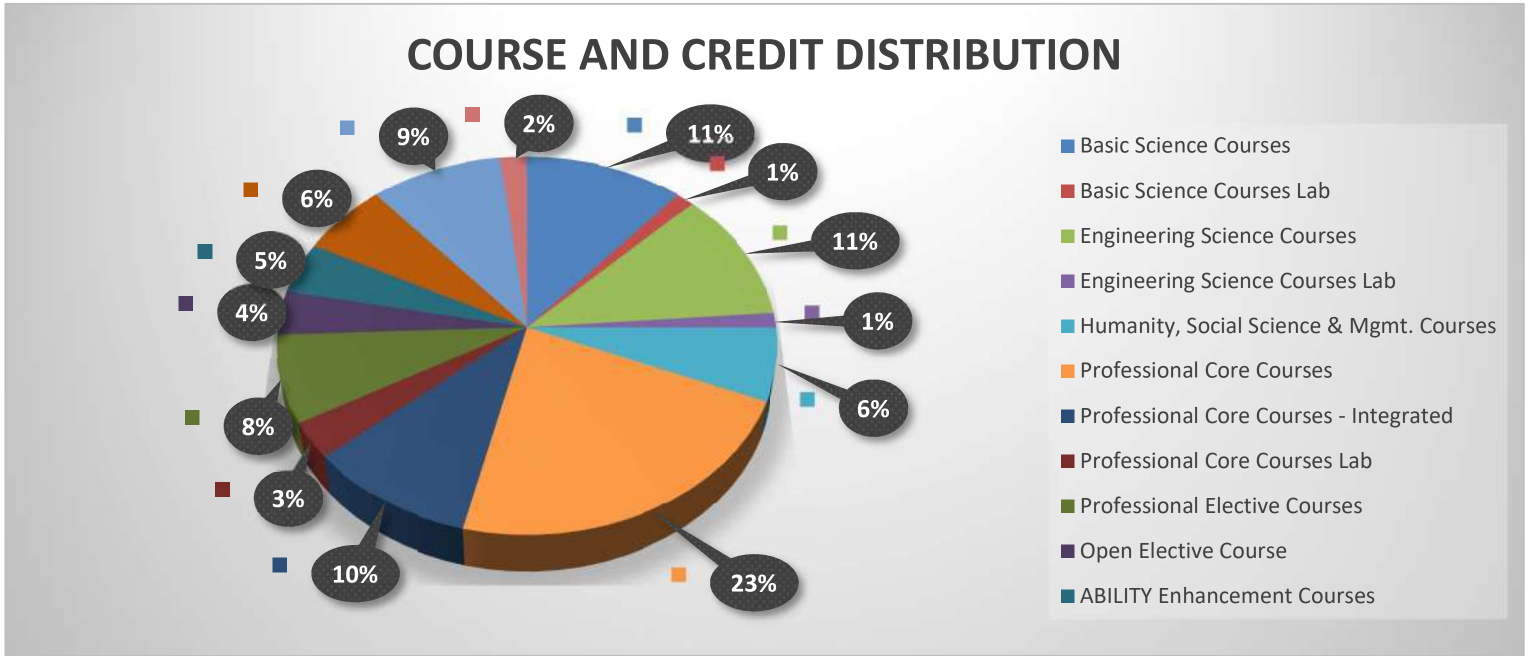
CREDIT DISTRIBUTION



Department: Mathematics	***Course Type: Basic Science***
***Course Title**: Integral Transforms, Linear Algebra and Numerical Methods*	***Course Code: 21MAT31A***
L-T-P :3-2-0	***Credits: 3***
Total Contact Hours: 50	***Duration of SEE: 3 Hrs***
***SEE Marks**: 100*	***CIE Marks: 50***

COURSE DESCRIPTION

The course aims at imparting knowledge of Fourier analysis, Integral transforms, numerical methods, basics of linear algebra relevant to the field of Computer Science, Information Science and Artificial Intelligence.

PREREQUISITES

Integration, differentiation, Taylor series, matrices

COURSE OBJECTIVES

- To understand the periodic and harmonic phenomena and to be able to model them using Fourier series and use integral transforms such as Laplace and Fourier transforms,
- To understand the advantages, limitations and applications of different numerical techniques.
- To explore the concepts and applications of Linear algebra.

COURSE CONTENTS

UNIT - I — 08 Hours

Fourier analysis and Integral Transforms

Fourier series: Euler's formulae, Dirichlet's conditions for Fourier series expansion, Even and odd function.

Fourier Transforms: Complex Fourier transforms, Cosine and Sine transforms, Inverse Fourier transforms.

Laplace Transforms: Definition, Transforms of standard functions, Laplace transforms of periodic functions, Inverse Laplace transforms.

Self-Study: Fourier half range series, solutions of 1^{st} and 2^{nd} order ODE using Laplace transforms.

UNIT - II	08 Hours

Numerical Methods-I

Interpolation: Newton's divided difference formulae, Lagrange's formula, Cubic spline. Least square fitting of Fourier series (Harmonic Analysis).
Numerical Differentiation: Newton's forward and backward formulae, Lagrange's formula.
Numerical Integration**:** Trapezoidal, Simpson's1/3rd and 3/8th, Gaussian Quadrature method.
Self-Study: Quadratic spline, Weddle's rule for numerical integration.

UNIT - III	08 Hours

Numerical Methods-II

Numerical solution of ordinary differential equations: Taylor's series method, Runge-Kutta 4th order method - First order and second order Ordinary differential equations, Milne's predictor corrector method. Finite difference method for Boundary value problems

Numerical solution of partial differential equations: Explicit method for heat and wave equations.

Self-Study: Numerical solution of Laplace Equation.

UNIT - IV	08 Hours

Linear Algebra-I

Vector spaces- definition, examples, Linear combinations, subspaces, linear dependence, basis and dimension, linear mapping, linear operator, Kernel and Image of a Linear mapping, matrix representation of linear operator, change of basis.
Self-Study: Row Space and Column space, Rank and nullity theorem

UNIT - V	08 Hours

Linear Algebra-II

Inner product space, Orthogonal Sets and Bases, Gram Schmidt Orthogonalization process Polynomial of matrices, Characteristic polynomial, diagonalization, Eigenvalues and Eigen vectors, diagonalization, Characteristic and minimal polynomial.
Self-Study: Block matrices and Canonical form.

TEXT BOOKS

1. Numerical Methods for Scientific and Engg. Computation, M K Jain, S R K Iyengar, R K Jain, 6th edition, New Age, 2012
2. Linear Algebra, Seymore Lipschutz and Marc Lipson, 3rd edition, Tata McGrawhill, 2005
3. Advanced Engg. Mathematics, Erwyn Kreyzig, 9th edition, Wiley, 2011

REFERENCE BOOKS

1. Fourier Series, Transforms and Boundary Value Problems, J R Hanna, J H Rowland, 2nd edition, Dover, 2008
2. Numerical Algorithms, E V Krishnamurthy, S K Sen, East West press,2007

TEACHING METHODS

- Black Board Teaching.
- Power point presentation
- Tutorial

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

Surprise test / Tutorials tests to be conducted for each topic for 10 marks.

Quiz/ assignment based on practical application for 10 marks.

Three mid semester examinations will be conducted each for 30 marks and the average of all the 3 will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

1. The numerical methods can be applied for fitting the data, find appropriate functions, differentiate and integrate the same
2. The concept of numerical methods can be used to solve differential equations
3. The concept of linear algebra can be adopted to analyze situations arising in engg. Problems
4. The concepts of Fourier analysis, integral transforms and optimization can be applied to engg. Problems
5. The concept of matrices, orthogonality and vector spaces can be adopted to analyze situations arising in engg. Problems.

COURSE DESCRIPTION

The fundamentals of Analog and Digital circuits and their applications are introduced in this course. Topics covered include; Simplification of boolean functions , applications in the analysis and design of combinational and sequential logic circuits applications such as arithmetic circuits.This course introduces the characteristics and applications of few hardware devices and circuits like Op amp, clippers, clampers and Diodes. Emphasis is placed on analysis, selection, biasing, and applications.

PREREQUISITES

- Students should have knowledge of basic concepts of electronics, Binary System.

COURSE OBJECTIVES

To understand the basics of digital and analog electronics and be able to design the simple logic circuits. To prepare students to perform the analysis and design of various digital electronic circuits.

COURSE CONTENTS

UNIT - I 07 Hours

Simplification of Boolean Functions: The Map method, Two and Three variable Maps, Four variable map, Product of Sums Simplification, NAND and NOR Implementation , Don't care conditions, The Tabulation method ,Determination of Prime Implicants, Selection of Prime Implicants.

Introduction to HDL, HDL Implementation models, Implementation of Data Processing Circuits.

Combinational Logic: Code Conversion, Analysis Procedure.

Text 1: Chapter 3(3.1 to 3.6, 3.8 to 3.11) Chapter 4 (4.5,4.6)

Text 2: Chapter 2(2.5), Chapter 3 (3.11), Chapter 4(4.14)

UNIT - II **08 Hours**

Sequential Logic : Introduction ,Flip-Flops ,Triggering of Flip-Flops,Analysis of Clocked sequential circuits,State reduction and assignment,Flip flop excitation table,Design Procedure, Design of counters ,Design with state equations.

Counters: Ripple counters, Synchronous counters (Binary counter, Binary up-down counter ,BCD counter)

HDL implementation of Flip Flops

Text 1 :Chapter 6(6.1 to 6.9) Chapter 7 (7.4,7.5)

Text 2: *Chapter 8(8.12)*

UNIT - III **08 Hours**

Design of sequential Circuits : Model selection , State Transition Diagram, State Synthesis Table, Design Equation and Circuit Diagram, Implementation using Read Only Memory. Algorithmic State Machine. State reduction techniques.Analysis of Asynchronous Sequential circuit , Problems with Asynchronous Sequential circuit , Design of Asynchronous Sequential circuit .

Text 2 :Chapter 11(11.1 to 11.10)

UNIT - IV **08 Hours**

D/A conversion and A/D conversion : Variable, Resistor Networks, Binary Ladders, D/A Converters, D/A Accuracy and Resolution, A/D Converter-Simultaneous Conversion, A/D Converter-Counter Method, Continuous A/D Conversion,A/D techniques, A/D Accuracy and Resolution.

Text 2 :Chapter 12(21.1 to 12.8, 12.10)

UNIT - V **08 Hours**

Diode Theory: Basic idea, Ideal Diode, the second approximation, the third approximation.

Diode Circuits : Clipper and limiters, Clampers.

Operational Amplifier: Introduction to Op amps, The 741 op amp.

Non Linear Op amp circuits :Comparators with zero reference, non zero references, Comparators with hysteresis. Window comparators The integrators. Waveform Conversion , Waveform generation, the differentiator.

Text 3 :Chapter 3(3.1 to 3.4) Chapter 4(4.10 to 4.11) Chapter 18(18.1 to 18.2) Chapter 22(22.1 to 22.7,22.10)

TEXT BOOKS

1. M.Morris Mano , "Digital Logic and Computer Design" ,Pearson Education ,Prentice Hall ,2016

2. Donald P Leach, Albert Paul Malvino&GoutamSaha"Digital Principles and Applications" , 6th Edition, TMH, 2006.
3. Albert Malvino& David J Bates "Electronic Principles" , 7th Edition, TMH, 2007.

REFERENCE BOOKS

1. Charles H. Roth, Jr. "Fundamentals of Logic Design" , 5th Edition, Thomson, 2004.
2. Ronald J. Tocci Neal S. Widmer, Gregory L. Moss"Digital Systems Principles and Applications" 10th Edition, PHI/Pearson Education, 2007.

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

ASSESSMENT METHODS

Midterm Test	**30 Marks**
VHDL Programming Test	**10 Marks**
Problem Solving Test	**10 Marks**
Total	**50 Marks**

COURSE OUTCOMES

Sl. No.	**COURSE OUTCOMES**	**BL**
CO 1:	Students will be able to Apply knowledge of k map simplification for designing combinational circuits and sequential circuits. Students will be able to Design various synchronous and asynchronous circuits using flip flops, counters.	L3
CO 2:	Students will be able to apply knowledge of VHDL to design combinational circuits and sequential circuits.	L3
CO 3:	Students will be able to Design a sequential circuit using mealy and Moore models, ROM, ASM chart.	L3
CO 4:	Students will be able to analyze the concept of analog to digital and digital to analog convertors.	L4
CO 5:	Students will be able to analyze the concept of Diodes, Op amps, Comparators, Clipper and Clamper circuits	L4

COURSE DESCRIPTION

This course imparts the concepts of various data structures which is the foundation of computer science. It includes the different data structures namely Arrays, Stacks, Queues, Linked lists and Trees.

PREREQUISITES

Students should have basic knowledge of programming constructs and should be able to understand and write programs in C/C++.

COURSE OBJECTIVES

- To understand and implement various data structures.
- To apply various data structures and solve problems.

COURSE CONTENTS

UNIT - I — 08 Hours

Basic C++ Concepts: Overview: System Life Cycle, Object oriented design, Data Abstraction and Encapsulation, Basics of C++, Algorithm Specification, Standard Template Library, Performance Analysis and Measurement. **Introduction to Data Structures**: Data Structure and its Types.

UNIT - II — 08 Hours

Arrays : Abstract Data Types and C++ Class, Array as an Abstract Data Type, The Polynomial Abstract Data type, Sparse Matrices, Representation of Arrays, String Abstract DataType Operations on Arrays: **Recursion :** Recursive Definition and Processes— factorial function, multiplication of natural numbers. Fibonacci sequence, Binary search.

UNIT - III **08 Hours**

Stacks and Queues: Templates in C++, Stack Abstract Data Type, Queue Abstract Data Type, Subtyping and Inheritance in C++, Evaluation of Expressions, Expression Conversion, Applications of Stacks and Queues

UNIT - IV **08 Hours**

Linked Lists: Singly Linked Lists and Chains, representing chains in C++, Template Class chain, Circular lists, Available Space Lists, Linked Stacks and Queues, Polynomials, Equivalence classes, Sparse Matrices, Doubly Linked Lists, Generalized Lists

UNIT - V **08 Hours**

Trees: Introduction, Binary Trees, Binary Tree traversal and Tree iterators, Binary tree operations, Threaded Binary trees, Binary search trees, Forests

TEXT BOOKS

1. Fundamentals of Data Structures in C++, Ellis Horowitz, Sartaj Sahni, Dinesh Mehta, Universities Press, 2nd Edition

REFERENCE BOOKS

1. Data Structures using C/C++, Aaron M. Tanenbaum, Yedidyah Langsam& Moshe J. Augenstein, Pearson Education/PHI, 2006
2. Data Structures and Algorithm Analysis in C++, Mark Allen Weiss, Pearson Education,3rd Edition
3. Data Structures: A Pseudocode Approach with C++, Richard Gilberg, Behrouz Forouzan

TEACHING METHODS

- Lectures interspersed with discussion
- Power Point Presentations
- Problem Solving

ASSESSMENT METHODS

1. Three Midsem exams – 30 Marks each will be conducted and the Average of all the three tests will be considered.
2. Programming Assignment: 10 Marks
3. Problem Solving based test: 10 marks

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Understand the basics of Object oriented concepts and use C++ constructs to write programs.	2
CO2	Illustrate arrays and various operations on Arrays using C++	2,3
CO3	Quote the implication of stacks and queues for different problems, propose programming solutions using variations of stacks and queues in C++	2,3
CO4	Apply Linked list to solve problems using C++.	2,3
CO5	Construct binary tree and perform traversal using different tree traversal techniques.	2,3

CO-PO MAPPING

	PROGRAM OUTCOMES												PROGRAM SPECIFIC OUTCOMES

CO3	2	2	3										3	1	
CO4	2	3	2										3	1	
CO5	2	2	3										3	1	
Correlation level	2	2	3										3	1	

Department: Computer Science and Engineering	***Course Type: Professional Core***
Course Title*: Computer Organization & Microprocessor*	***Course Code: 21CS34***
L-T-P: 3-0-0	***Credits: 3***
Total Contact Hours: 40 Hours	***Duration of SEE: 3 Hours***
SEE Marks*: 50*	***CIE Marks: 50***

COURSE DESCRIPTION

The course will work from the understanding the basic concepts of increase the performance of the embedded systems. With a complete understanding of how computer systems execute programs and manipulate data, Topics covered include: data representation, machine-level code, computer arithmetic, elements of code compilation, optimization of memory and runtime performance, and memory organization and management.

PREREQUISITES

- Student should have prior knowledge of Logic Design, Electronic Circuits
- Student should have prior knowledge of Computer Concepts such as memory, I/O Devices, and CPU.

COURSE OBJECTIVES

- Understand basic structure of computers, different memory access types, salient features of a Computer System from the executing program viewpoint: what are the computer system components and how they execute a given program.
- The assembly language level operation of a processor is viewed both in general as well as in operational level using a simple example machine, its (symbolic) assembly language, and simulator that runs assembly language programs developed for that machine. We also look at the operating system role in the program execution.

COURSE CONTENTS

UNIT - I **08 Hours**

Basic Structure of Computers: Computer Types, Functional Units, Basic Operational Concepts, Bus Structures, Performance – Processor Clock, Basic Performance Equation, Pipelining and Superscalar Operation, Clock Rate, Instruction set: CISC and RISC, Compiler, Performance Measurement, multiprocessors and multi computers, Historical Perspective. Machine Instructions and Programs: Basic Input/output Operation, Input/output Organization: Accessing I/O Devices, Interrupts – Interrupt Hardware, Enabling and Disabling Interrupts, Handling Multiple Devices, Controlling Device Requests, Exceptions

UNIT - II	**08 Hours**

Direct Memory Access, Buses, Interface Circuits, Standard I/O Interfaces (Introduction) The Memory System: speed-size and cost, cache memories, Performance consideration, Virtual Memories.

UNIT - III	**08 Hours**

Arithmetic: Addition and Subtraction of signed numbers, Design of Fast Adders, Multiplication of positive Numbers, Signed Operand Multiplication, Fast Multiplication, Integer Division floating –point Numbers and Operations

UNIT - IV	**08 Hours**

Basic Processing Unit: Some Fundamental Concepts, Execution of a Complete Instruction, Multiple Bus Organization, Hard-wired Control, Microprogrammed Control, Pipelining: Basic Concepts, Data Hazards, Instruction Hazard

UNIT - V	**08 Hours**

Microprocessors and Microcontroller: Overview of Microprocessors and Microcontrollers, Processor Chips for embedded Applications, A simple Microcontroller, Programming considerations, I/O device timing Constraints, Reaction Timer- An example

TEXT BOOKS

- Computer Organization, Carl Hamacher, Zvonko Vranesic, Safwat Zaky, 5th Edition, TMH
- Computer Architecture and Organization, John P. Hayes, 3rd Edition, McGraw-Hill Series

REFERENCE BOOKS

1. Computer Organization & Architecture, William Stallings, 7th Edition, PHI, 2006
2. Computer Systems Design and Architecture, Vincent P. Heuring & Harry F. Jordan, 2nd Edition, Pearson Education, 2004
3. Computer Systems Architecture – M.Moris Mano, IIIrd Edition, Pearson/PHI
4. Computer Organization & Embedded Systems – Car Hamacher, Zvonks Vranesic, afeaZaky, 6th Edition, McGrawHill.

TEACHING METHODS

- Black Board/Power Point
- Presentations Assignments

ASSESSMENT METHODS

Parameter	Marks
Three internals (Average of best of two)	30
Programming Assignments	10
Rubrics for the evaluation of Course Project	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to:

Sl. No.	COURSE OUTCOMES	BL
CO1	Identify the importance of computer organization, memory hierarchy, basic input-output mechanisms, interrupt handling circuits and pipelining	**L2**
CO2	Apply algorithms to perform arithmetic and logical operations, solve problems using computer performance equations and relate Hard-wired Control, Micro programmed Control circuits.	**L3**
CO3	Analyse the logic delay paths, combinational logic circuits and different bus organizations.	**L4**
CO4	Comprehend Microprocessors & applications and the significance of multiple bus organizations.	**L2**
CO5	Write programming assignment report and Present effectively.	**L2**

Total Contact Hours: 48Hours	***Duration of SEE: 3Hours***
***SEE Marks**: 50*	***CIE Marks: 50***

COURSE DESCRIPTION

This course provides an in-depth knowledge of Object-Oriented application development using Java programming language. It discusses the programming concepts like multithreading, Interfaces, Exception Handling, GUI development and event Handling in JavaFX and, the use of the Java's Collection framework to solve real-world computing problems.

PREREQUISITES

- Student should have the prior knowledge of C

COURSE OBJECTIVES

- To understand and apply the basic Object-Oriented features of Java.
- To understand and apply the concept of Inheritance, Packages and Interfaces
- To understand and apply Exception Handling and, develop Multithreaded Java Applications.
- To Understand and use Wrapper classes, autoboxing, unboxing and Java Collection Framework.
- To develop GUI using JavaFX.

COURSE CONTENTS

UNIT - I **10Hours**

An Overview of Java --Object-Oriented Programming, Two Paradigms, Abstraction, The Three OOP Principles, A First Simple Program, Entering the Program, Compiling the Program, A Closer Look at the First Sample Program

Introducing Classes: Class Fundamentals, Declaring Objects, A Closer Look at new, Assigning Object Reference Variables, Introducing Methods, Constructors, Parameterized Constructors, The this Keyword, Instance Variable Hiding, Garbage Collection, The finalize( ) Method, A Stack Class.

A Closer Look at Methods and Classes: Overloading Methods, Overloading Constructors, Using Objects as Parameters, A Closer Look at Argument Passing, Returning Objects, Introducing Access Control, Understanding static, Introducing final, Arrays, Exploring the String Class, Using Command-Line Arguments, Varargs: Variable-Length Arguments.

UNIT - II **09 Hours**

Inheritance: Inheritance Basics, Using super, Creating a Multilevel Hierarchy, When Constructors Are Executed, Method Overriding, Dynamic Method Dispatch, Why Overridden Methods? Using Abstract Classes, Using final with Inheritance, The Object Class.

Packages and Interfaces: Packages, Access Protection, Importing Packages, Interfaces, Defining an Interfaces, Default Interface Methods, Use static Methods in an Interface.

UNIT - III **10Hours**

Exception Handling: Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, multiple catch Clauses, Nested try Statements, throw, throws, finally. Exception Handling: Java's Built-in exceptions, Creating Your Own Exception Subclasses, Chained Exceptions.

Multi-Threaded Programming:

The Java thread model, The main thread, Creating thread, creating multiple threads, Thread priorities, Synchronization. Interthread Communication.

UNIT - IV **10 Hours**

Type Wrappers: Character, Boolean, Numeric type wrappers. Autoboxing: Autoboxing and Methods, Autoboxing / Unboxing occurs in expressions, Autoboxing/Unboxing Boolean and Character values, Autoboxing / Unboxing helps prevents errors.

The Collections Framework: Collections Overview, The Collection Interfaces: the collection interface, the List interface, the Set interface. The Collection Classes: The ArrayList Class, The LinkedList Class, The HashSet Class. Accessing a Collection via an Iterator -Using an Iterator, The For-Each Alternative to Iterators.

UNIT - V **09 Hours**

GUI Programming and Event Handling: Introducing JavaFx GUI Programming, Exploring JavaFx controls, Introducing JavaFX Menus

Event Handling: Event handling mechanisms, The Delegation Event model.

Lab Program List

1. Create a class namely Account with the data members(Accno : integer, name :String, Phone_No: integer, balance_amt:float), and following methods :

a. CreateAccount() method to create an account.
b. Deposit() method to deposit amount to an account.
c. Withdraw() method which gets the amount to be withdrawn from his/her account.
d. PrintAccount() method to display account details.

2. All the banks operating in India are controlled by RBI. RBI has set a well defined guidelines (e.g. minimum interest rate, minimum balance allowed, maximum withdrawal limit etc) which all banks must follow. For example, suppose RBI has set minimum interest rate applicable to a saving bank account to be 4% annually; however, banks are free to use 4%

interest rate or to set any rates above it. Write a JAVA program to implement bank functionality in the above scenario and demonstrate the dynamic polymorphism concept. Note: Create few classes namely Customer, Account, RBI (Base Class) and few derived classes (SBI, ICICI, PNB etc). Assume and implement required member variables and functions in each class.

3. Write a Java Program that does the following related to Inheritance:

   a. Create an abstract class called Vehicle which contains the year_of_manufacture‟ data memberand two abstract methods "getData()‟ and "putData()‟ with a constructor.

   b. Create two derived classes "TwoWheeler" and "FourWheeler" and implement the abstract methods. Make "FourWheeler" as final class.

   c. Create class "MyTwoWheeler‟ which is a sub-class of "TwoWheeler" and demonstrate the use of super keyword to initialize data members of "MyTwoWheeler".

4. Write a Java program to create an abstract class namely Shape that contains two integers and an empty method named print Area (). Provide three classes named Rectangle, Triangle, and Circle such that each one of the classes extends the class Shape. Each one of the classes contains only the method print Area () that prints the area of the given shape.

5. Write a program to add additional functionals like mod() and squrt() for performing modulus and squreroot operation to an existing class called "Calculator" which performs basic functions like add(), sub(), mul() and div().

   a. Initialize the class's data members by using the parameterized constructor.

   b. Define an overridden method called displayResults() to display the result of mathematical operation.

   c. Demonstrate the use of reusability by extending the existing class.

   d. Demonstrate the concept of Dynamic Method Dispatch (or run time polymorphism)

6. Write a Java program that implements a multi-thread application that has three threads. First thread generates random integer every 1 second and if the value is even, second thread computes the square of the number and prints. If the value is odd, the third thread will print the value of cube of the number.

7. Write a Java program that correctly implements the producer – consumer problem using the concept of inter-thread communication

8. Write a Java program that creates a user interface to perform integer divisions. The user enters two numbers in the text fields, Num1 and Num2. The division of Num1 and Num 2 is displayed in the Result field when the Divide button is clicked. If Num1 or Num2 were not an integer, the program would throw a Number Format Exception. If Num2 were Zero, the program would throw an Arithmetic Exception. Display the exception in a message dialog box.

9. Write a Java program that works as a simple calculator. Use a grid layout to arrange buttons for the digits and for the +, -,*, % operations. Add a text field to display the result. Handle any possible exceptions like divided by zero.
10. Write a Java program that simulates a traffic light. The program lets the user select one of three lights: red, yellow, or green with radio buttons. On selecting a button, an appropriate message with "Stop" or "Ready" or "Go" should appear above the buttons in selected color. Initially, there is no message shown.
11. Write a program to create an ArrayList with the name arrlist and type "String". Add strings "AAA","BBB","CCC","DDD","EEE" to the arrlist. Add another string "XXX" to first position, remove the string "AAA", update "BBB" to "AAA" and display the arrlist.
12. Develop a Java program to create a linked list of 5 names of programming languages using appropriate collection class. Remove the first and last element of the linked list and print the remaining names iterating the list.

TEXT BOOKS

1. Herbert Schildt, —Java – The Complete Reference –, 9th Edition, 2014, Oracle Press.

REFERENCE BOOKS

1. Y. Daniel Liang, —Introduction to JAVA Programming, 6thEdition, 2007, Pearson Education,
2. Stephanie Bodoff et al, —The J2EE Tutorial, 2nd Edition, 2004, Pearson Education.
3. Head First Java, O'Reilly Publication, 2005.

TEACHING METHODS

- Black Board/Power Point Presentations
- Demonstration of Applications through IDE

ASSESSMENT METHODS

Parameter	**Marks**
Three Internals (Average of best of two)	30
Programming Assignment based Test	10
Rubrics for the evaluation of Programming Assignments	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Apply the object-oriented principles like Encapsulation, Abstraction inheritance and polymorphism to solve the real-world problems	L3
CO2	Demonstrate with examples the usage of Inheritance, Interfaces, packages and Exception handling	L3
CO3	Implement multithreaded Java applications, demonstrate exception handling in Java	L3
CO4	Use the Java's Collection framework to solve computing real-world problems.	L4
CO5	Use JavaFX for interactive UI development and event handling	L4

COURSE DESCRIPTION

This course imparts the concepts and implementation of various data structures which is the foundation of computer science. It includes the implementation of different data structures namely Arrays, Stacks, Queues, Linked lists, Trees and applications using them.

PREREQUISITES

Students should have basic knowledge of programming constructs and should be able to understand and write programs in C/C++.

COURSE OBJECTIVES

- To understand and implement various data structures.
- To apply various data structures and solve problems.

COURSE CONTENTS

Sl No	List of Programs	CO Mapping
	Design and Implement a C++ Program for the following array operations. a. Creating an array of N Integer Elements b. Display the array Elements with Suitable Headings c. Inserting an Element at a given valid Position d. Deleting an Element at a given valid Position e. Exit.	CO1
	Design a Program in C++ for the following operations on Strings. a. Read a main String (STR), a Pattern String (PAT) and a Replace String (REP) b. Perform Pattern Matching Operation: Find and Replace all occurrences of PAT in STR with REP if PAT exists in STR. Report suitable messages in case PAT does not exist in STR (Note: Do not use built-in functions)	CO1

	Design a C++ program to search for an element in an array using Recursive Binary Search.	CO1
	Create a class BOOK with members ISBN, Title, Author and Price. Write a C++ program to construct a stack data structure for N BOOK objects and write member functions to perform the following operations on it: a) PUSH-To add a new BOOK object to the stack b) POP- To remove a BOOK object from the stack	
	Design a C++ program to convert and print a given valid parenthesized infix arithmetic expression to postfix expression. The expression consists of single character operands and binary operators +, -, *, / and $. Apply the concept of stack data structure to solve this problem.	CO2
	Design a C++ program to evaluate a valid postfix expression using stack. Assume that the postfix expression is read as a single line consisting of non-negative single digit operands and binary operators. The operators are +, -, *, / and $.	CO2
	Design a C++ Program to perform the following operations on Linear Queue of Integers (Array Implementation of Queue with maximum size MAX) a. Insert an Element to a Linear Queue. b. Delete an Element from the Linear Queue. c. Demonstrate Overflow and Underflow situations on Linear Queue d. Display the status of Linear Queue	
	Develop a C++ Program to perform the following operations on Circular Queue of Characters (Array Implementation of Queue with maximum size MAX) a. Insert an Element on to Circular Queue b. Delete an Element from Circular Queue c. Demonstrate Overflow and Underflow situations on Circular Queue d. Display the status of Circular Queue	CO3
	Design a menu driven Program in C++ for the following operations on Singly Linked List of Student Data with the fields: USN, Name, Branch, Sem, PhNo. Perform the following operations on the linked list.	CO4

	a. Insert a student at the front of the list. b. Delete a node with specified student name. c. Display the list and count the number of nodes in it.	
.	Design a menu driven Program in C++ for the following operations on Doubly Linked List (DLL) of Employee Data with the fields: SSN, Name, Dept, Designation and salary. Perform the following operations. Create a double linked list of employees data. Insert a new employee to the left of the node whose key value (employee name) is read as an input. Delete a node with given data, if it is found. Otherwise display appropriate error message	CO4
.	Design a C++ program using Circular single linked list with header nodes to perform the following operations To create a circular linked list to represent unsigned long integers To add two long integers represented by circular linked list and store the result in another circular linked list. Display the resultant circular linked list.	
.	Design a C++ program that uses functions to perform the following: Create a binary search tree of characters. Traverse the above Binary search tree recursively in preorder, in order and post order.	CO5
.	Design a C++ program that uses functions to perform the following: Create a binary search tree of integers. Search for an integer key in the above binary search tree non recursively. Search for an integer key in the above binary search tree recursively.	CO5

ASSESSMENT METHODS

Parameter	Marks
Test (Average of Two tests)	15
Laboratory Record writing	10
Surprise Test	10
Continuous Evaluation	10
Viva	5
Total	**50**

Final SEE will be conducted for 100 marks

COURSE OUTCOMES

At the end of the course the student will be able to

Sl. No.	COURSE OUTCOMES	BL
CO1	Design and Implement operations on arrays and strings using C++.	L3
CO2	Simulate stack operations. Understand and implement its applications in real time.	L3
CO3	Implement basic operations on different types of queue data structures.	L3
CO4	Develop programs on linked lists and its variations.	L3
CO5	Construct C++ programs on Binary search tree and its applications	L3

PROGRAM ELECTIVE - 1

Department: *Computer Science and Engineering*	***Course Type:*** *Professional Elective*
Course Title*: Introduction to Embedded Systems*	***Course Code****: 21CSE361*
L-T-P: *3-0-0*	***Credits****: 3*
Total Contact Hours*: 40 Hours*	***Duration of SEE****: 3 Hours*
SEE Marks*:50*	***CIE Marks****: 50*

COURSE DESCRIPTION

In this course, the fundamentals of embedded system hardware and firmware design will be explored. Learning may be supplemented with periodic guest lectures by embedded systems engineers from industry. Depending on the interests of the students, other topics may be covered.

PREREQUISITES

- Excellent understanding of Digital Electronics.
- Good to intermediate level of understanding of Basics of Analog Electronics.
- Good C Programming skills.
- Understanding of at least one Micro-controller or Micro-processor.

COURSE OBJECTIVES

This course will enable students to

- Provide a general overview of Embedded Systems
- Show current statistics of Embedded Systems
- Design, code, compile, and test real-time software
- Integrate a fully functional system including hardware and software.
- To introduce the Embedded C Concepts

COURSE CONTENTS

UNIT – I 8 Hours

Introduction to Embedded Systems: What is an Embedded System?, Embedded Systems vs. General Computing Systems, History of Embedded Systems, Classification of Embedded Systems, Major Application Areas of Embedded System.

Typical Embedded System: Elements / Architecture of an Embedded System.

UNIT – II 08 Hours

Microcontroller Architecture, Differences between microprocessor and microcontroller, type of microcontrollers, Importance of microcontroller in embedded system. Case Studies and applications.

UNIT – III **08 Hours**

Introduction to Embedded C Programming, Data types: byte, int, long, float, arrays. Structures: setup (), loop (), functions, {} curly braces, ; semicolon, /*….*/ block comments, // line comments. Variables: variable declaration, variable scope. Arithmetic: compound assignments, comparison operators, and logical operators. Constants: true/false, high/low, input/output. Flow control: if, if else, for, while, do while.

UNIT – IV **08 Hours**

Introduction to Sensors and actuators, LED, Optocoupler, DHT111 Sensor, LDR, Soil Moisture Sensor, ultrasonic and infrared for obstacle. Communication – Wireless Communication using Bluetooth, Wi-Fi and RF Modules. Communication Controllers – UART, SPI, I2C.

UNIT – V **08 Hours**

RTOS: Real time Operating System, Tasks, Process and Treads, Multiprocessing and Multitasking, Task Scheduling

TEXT BOOKS

1. Shibu K V, Introduction to Embedded Systems, McGraw Hill Publication.
2. Frank Wahid, Tony Givargis, Embedded System Design: A Unified Hardware / Software, Wiley India

REFERENCE BOOKS

- Programming Assignments
- NPTEL

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Model based Learning	10
Learning Activity Assignment	10
Total	**50**

Final Examination will be conducted for 100 marks (SEE)

COURSE OUTCOMES

At the end of course, Student will be able to:

Sl. No.	COURSE OUTCOMES	BL
CO 1	Describe and Analyze the Salient aspects of differentiation between Real time systems and Data Processing system	**L2**
CO 2	Design embedded systems using Microcontroller and Embedded C	**L5**
CO 3	Conversant with various Sensors, communication protocols used in Embedded applications	**L2**
CO 4	Model RT systems, and Implement aspects of RTs	**L3**
CO 5	Work in Teams to implement applications highlighting Real-time issues	**L2**

COURSE DESCRIPTION

Introduction to theories, algorithms, and practical solutions of digital image perception, acquisition, quantization, enhancement, filtering, restoration, analysis, feature extraction, segmentation and morphological transform.

PREREQUISITES

Fundamental Knowledge of Mathematics

COURSE OBJECTIVES

This course will enable students to

- Explain image fundamentals and mathematical transforms necessary for image processing and to study the image enhancement techniques.
- Demonstrate the image filtering and restoration techniques.
- Demonstrate the image segmentation and representation techniques.
- Analysis image using various features

COURSE CONTENTS

UNIT - I **08 Hours**

What is a Digital Image? Digital Image Representation; Image Processing, Image Analysis and Image Interpretation, Basic Elements of a Digital Image Processing System; Fundamentals Steps in Digital Image Processing, Image Sensing and Acquisition; Single Sensor; Line Sensor and Array Sensor, Image Formation; Sampling and Quantization, Image Zooming and Shrinking; Digital Image Resolution and Storage; Convolution, Basic relationship between pixels, Histogram Characteristics

UNIT – II **08 Hours**

Image Enhancement in Spatial Domain

Definition, Characteristics, Applications, Categories of Enhancement Methods, Basics of Intensity Transformation and Spatial Filtering, Point Processing, Mask or Neighborhood

Processing; Contrast Stretching, Grey Level Slicing, Bit Plane Slicing Histogram Based Image Enhancement: Histogram Equalization, Local Enhancement Methods

UNIT - III	**08 Hours**

Basics of Spatial Filtering

Linear and Non-Linear Spatial Filters, Image Averaging Filter, Mean Filter, Median Filters, Mid-range Filter, Trimmed Mean Filter, Max-Min Filter, Min-Max Filter, Edge Preserving Smoothing Filters, Sharpening Spatial Filters.

Image Restoration: A Model of the Image Degradation/ Restoration Process; Noise Models- Gaussian noise, Rayleigh noise, Erlang(gamma) noise, Exponential noise, Uniform noise, Impulse (salt and pepper) noise; Restoration in the presence of Noise – Spatial Filtering; Periodic Noise Reduction by Frequency Domain Filtering

UNIT - IV	**08 Hours**

Edge Detection

Mathematical Foundation: First Order and Second order Derivative; Definition of Few Terms, Edge Models: Step, Ramp and Roof Edge; Algorithms - Robert, Sobel, Prewitt, Laplacian; Compass Gradient Mask – Prewitt, Sobel, Laplacian

Segmentation: Region Based Segmentation, Mean Shift Segmentation

Thresholding: Manual and Automatic Thresholding;

UNIT - V	**08 Hours**

Feature Extraction

Introduction, Representation- Boundary, Thinning; Topological Attributes- Connectivity Number, Component Labelling, Component Counting; Geometrical Attributes- Perimeters, Diameter of the Enclosing Circle, Area, Slope, Curvature and Straightness; Convexity, Spatial Moments

TEXT BOOKS

1. Rafel C. Gonzalez and Richard E Woods, "Digital Image Processing'', Pearson Education, 3rd Edition, 2009.
2. B. Chanda, D Dutta Majumder, "Digital Image Processing and Analysis'', Prentice-Hall, India, 2002

REFERENCE BOOKS

Milan Sonka, Vaclav Hlavac, Roger Boyle, "Digital Image Processing and Computer Vision", Cengage Learning, 2nd Edition 2008

TEACHING METHODS

- Lectures
- Power Point Presentation

- Case Study

ASSESSMENT METHODS

Midterm Test (Avg. of 2 Tests) – 30 Marks

- Programming Assignment– 10 Marks.
- Case Study – 10 Marks

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Analyse the Image Formation models and to be able to perform Image Interpolation methods	L2
CO2	Apply and analyse the Image Enhancement and Filtering Algorithms for specific applications	L3
CO3	Derive mathematical model for different edge detection and will be able to apply different edge models	L3
CO4	Apply and analyse the Image segmentation and restoration methods.	L4
CO5	Extract and analyse different basic features from an image	L4

Department: *Computer Science and Engineering*	***Course Type: Professional Elective***
Course Title*: Introduction to Unix*	***Course Code: 21CSE363***
L-T-P: *3-0-0*	***Credits:*** *03*
Total Contact Hours: *39 hrs*	***Duration of SEE:*** *3 hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

The course begins by describing simple UNIX architecture, commands usage and scripts to automate frequently executed commands. Course also provides students with the skills to read, write, and debug awk and UNIX shell scripts.

PREREQUISITES

Students should have knowledge of C and C++, Data Structures

COURSE OBJECTIVES

The main objective of this subject is to teach

- The usage of various commands according to the requirement
- To write their own Shell scripts and awk programs to perform the given task.
- To enhance their knowledge in Unix operating System

COURSE CONTENTS

UNIT - I **09 Hours**

The Unix Architecture and command Usage: Introduction: The operating System, UNIX Operating System, Features of UNIX, Architecture of UNIX, Locating Commands, Internal and External Commands, Command Structure, Flexibility of Command Usage, man browsing the manual pages online, understanding the man documentation-man-k, apropos and whatis

General-Purpose Utilities: cal, date, echo, printf, bc, script, mailx, passwd, who, uname, tty, stty. **File System:** The File, File name, Parent-child Relationship, The HOME Variable, pwd, cd, mkdir, rmdir, Absolute Pathnames, Relative Pathnames, ls, UNIX file system.

UNIT - II **08 Hours**

Basic File Attributes: Listing file attributes, Listing Directory attributes, File Ownership, File Permission, Changing File Permissions, Directory Permissions, Changing File Ownership.

Handling Ordinary File: cat, cp, rm, mv, more, lp, file,wc, od, cmp, comm, diff, Converting between DOS and UNIX, Compressing and Archiving Files.
The Shell: Shell offerings, Pattern matching, Escaping and Quoting, Redirection, Pipes, tee command, Command Substitution, Shell variable.

UNIT - III	**08 Hours**

Customizing Environmental Variables: The Shells, Environmental Variables, the common environment variables, aliases.
More File Attributes: File Systems and Inodes, Hard Links, Symbolic Links, The Directory, Default file and Directory Permissions, Modifications and Access Times, Locating Files.
Simple Filters: the sample database, pr, head, tail, cut, paste, sort, uniq, tr command usage with examples.

UNIT - IV	**07 Hours**

Filters using Regular Expressions-grep and sed: Searching for pattern, Basic Regular Expression, Extended Regular Expression, sed: The Stream Editor, Line addressing
Essential Shell Programming: Shell Scripts, read, Command Line Arguments, Exit Status of a Command, The Logical Operators && and ||, if and case conditions, expr, while, for, set and shift, The here document

UNIT - V	**07 Hours**

Awk: Awk – An advanced filter: Simple awk Filtering, splitting a Line in to Fields, printf, the comparison Operators, Number Processing, Variables, The –f option, The BEGIN and END sections, Built-in variables, Arrays.

TEXT BOOKS

1. UNIX – Concepts and Applications, Sumitabha Das, 4th Edition, Tata McGraw Hill, 2006.

REFERENCE BOOKS

1. UNIX and Shell Programming, Behrouz A. Forouzan and Richard F.Gilberg, Thomson, 2005.
2. UNIX & Shell Programming, M.G. Venkateshmurthy, Pearson Education, 2005.
3. Meeta Gandhi, Tilak Shetty, Rajiv Shah, "The 'C' Odyssey Unix – the open boundless C", BPB.
4. Mike Joy, Stephen Jarvis, Michael Luck, "Introducing Unix and Linux", Palgrave Macmillan

TEACHING METHODS

- Black board teaching
- Power Point Presentation

- Regular review of students by asking questions based on topics covered in the class
  Programming Assignments

ASSESSMENT METHODS

Midterm Test (Avg. of 3 Tests) 30 Marks
Surprise Test 10 Marks
Programming Test 10 Marks

Total 50 Marks

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Understand the fundamental knowledge and concepts of UNIX Operating System.	1,2
CO2	Describe and interpret the working of commands available in UNIX.	2
CO3	Apply suitable commands and filters for file processing on shell.	3
CO4	Analyse the solutions for the text processing problems using Regular expression tools like grep and sed.	4
CO5	Analyse and examine the shell and awk scripts to execute simple tasks	4

CO-PO MAPPING

Department: Computer Science and Engineering	***Course Type:***
Course Title: Introduction to Software Technologies	***Course Code: 21CSE364***
L-T-P :3-0-0	***Credits: 3***
Total Contact Hours: 39 Hours	***Duration of SEE: 3 Hours***
***SEE Marks**: 100*	***CIE Marks: 50***

COURSE DESCRIPTION

Software Technology is a general term covering the development methods, programming languages, and tools to support them that may be used in the development of software. Software development is a dynamic field, where programming languages, frameworks, and technologies may live and die within a few years, and job market needs are constantly changing. However, developers remain among the most in-demand tech professionals.

PREREQUISITES

Basic knowledge on Problem solving using programming.

COURSE OBJECTIVES

1. Introduction to the .NET framework and .NET Interoperation services.
2. Building standalone and web applications using .NET Framework
3. Have Broad understanding on recent software technologies.

COURSE CONTENTS

UNIT – I : .Net Framework and Introduction to C# — 8 Hours

.Net Framework Overview- Architecture-.Net Framework class Libraries-CLR-Metadata-Interoperability-Assemblies-the .net Packaging system-CLR-MSIL, Introduction to Visual Studio.Net-C# Programming Concepts-Predefined Types- Value types and reference type, Classes and Objects, Constructors and methods, Conditional statements, loops, arrays, Collection classes: ArrayList, HashTable, Stack, Queue, indexers and properties.

UNIT – II: Windows Event Driven Programming — 8 Hours

Basics of Windows Programming- Event Driven Programming, Windows Forms, Using common controls-Labels, textboxes, buttons, check boxes, radio button, progress bar, combo box, list box. Components-timer, imagelist, Menus, Modal and Modeless Dialog Boxes, MDI, Mouse and keyboard event handling.

UNIT – III: Web Based Programming using ASP.NET 8hours

Introduction to ASP.NET, Web Forms, Web Services, ASP.NET Features, Page Class, Web Forms Life Cycle, Web Forms Event Model, Code-Behind, **ASP.NET and HTTP:** Request/Response Programming, Request/Response Programming, HttpRequest Class, HTTP Collections, HttpResponse Class.

UNIT – IV: Introduction to Java Technology with Database ccess 7Hours

Introducing Swing, JFC, The MVC Architecture, Applet.
Working with JDBC, Introducing JDBC, Exploring JDBC Drivers, Exploring the Features of JDBC,
Describing JDBC APIs, Exploring Major Classes and Interfaces, Exploring JDBC Processes with the java.sql Package, Working with Transactions

UNIT – V: Introduction to Next Generation Software Technologies 08 Hours

Multiexperience, Digital twin technologies, Blockchain, Cloud computing, Progressive web apps. Technologies, libraries and Frameworks, IDE, Versioning Control, Build Tools, Continuous Integration tools, Application and web servers, Enterprise Service bus, Sales force Management.

TEXT BOOKS

1. C# 4.0 the Complete Reference by Herbert Schildt
2. Beginning ASP.NET 4.5 in C# and VB, Wrox, 2012, ISBN-10: 1118311809.
3. JDBC Database access with Java, Graham Hamilton et all, Addison-Wesley ,ISBN-13: 978-0201309959

REFERENCE BOOKS

1. Robert Powel, Richard Weeks, C# and the .NET Framework, Techmedia.
2. The Complete Reference – JAVA, McGraw Hill; Eleventh edition.

TEACHING METHODS

- Lecture using Black board and chalk
- Presentations, Hands-on-Sessions.
- Programming Assignments

ASSESSMENT METHODS

Parameter Marks

Three internals (Average of best of two)	30
Programming Assignments	10
Rubrics for the evaluation of Programming Assignments	10
	Total 50

Final Exam will be conducted for 100 marks (SEE)

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Students will be able to understand the development and deployment cycles of enterprise applications.	2
CO2	Students will be able to utilize the .NET framework to build standalone and distributed enterprise applications.	3
CO3	Students will be able to understand and implement Server side programming: Web Forms, ASP.NET Web Services,	3
CO4	Students will be able to understand and implement database connectivity using JAVA	3
CO5	Students will have broad knowledge on latest software technologies.	2

CO-PO MAPPING

	PROGRAM OUTCOMES												PSO		
	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3

IV SEMESTER

Department: Mathematics	***Course Type: Basic Science***
Course Title*: Discrete Mathematics and Probability*	***Course Code: 21MAT41A***
L-T-P : 3-2-0	***Credits: 3***
Total Contact Hours: 50	***Duration of SEE: 3 Hrs***
SEE Marks*: 100*	***CIE Marks: 50***

COURSE DESCRIPTION

The course gives a broad view of Probability theory, Random Process, Discrete mathematical structures and Graph theory.

PREREQUISITES

Combination, permutation, set theory

COURSE OBJECTIVES

To Impart the knowledge and ability to apply basic concepts of Probability, random process, discrete mathematics and graph theory to engg. problems

COURSE CONTENTS

UNIT - I **08 Hours**

Discrete Mathematical structures

Mathematical Logic: Propositional Logic, logical operators, compound propositions - truth values, truth tables, Propositional Equivalences.

Functions: Definition, surjective, injective and bijective functions, Inverse function and composition of functions.

Relations: Definition, Properties, Equivalence, matrix representation, digraphs, partial order -Hasse diagram- Maximal and minimal elements, LUB and GLB.

Self-Study: Rules of Inference.

UNIT - II **08 Hours**

Graph Theory-I

Graph Terminologies, circuits, cycles and connected graphs hand shaking theorem, Degree sequence, path and trail in graphs, Graph isomorphism, Adjacency and Incidence matrices, Euler and Hamiltonian graphs, Shortest path problems-Dijkstra's algorithm for undirected graphs.

Self-Study: Applications such as Job Assignments, Travelling Salesman problem.

UNIT - III **08 Hours**

Graph Theory-II

Trees- Properties, spanning trees, minimum spanning trees- Prim's and Kruskal's algorithm.

Planar graphs, Problems on Euler's formula, Graph coloring – vertex coloring.
Self-Study: Three house and Three utilities problem, Scheduling Problems using Graph coloring,

UNIT - IV **08 Hours**

Probability and Random Variables

Probability: Definition, Axioms of probability, Addition rule, Conditional Probability, Multiplication rule.

Random variable -: Probability distribution- discrete and continuous, probability density function, cumulative density function, mean and variance, expectation.

Joint distribution - discrete joint probability distribution, marginal distribution, expectation, covariance, rank correlation. Binomial, Poisson distribution.

Self-Study: Baye's Theorem, continuous Joint distribution.

UNIT - V **08 Hours**

Probability and sampling Distribution

Probability Distribution: Normal distribution, exponential distribution and uniform distribution.

Sampling and Testing of hypothesis: Introduction, Sampling with and without replacement, Sampling distribution of means and sample variance. Unbiased estimate, confidence intervals for mean, statistical hypothesis, testing of hypothesis of large samples, one tailed and two tailed test, Significance level.

Markov Process: Definition, transition probability matrix, regular stochastic matrix, n – step transitional probabilities, stationary distribution

Self-Study: Poisson's Process, States of Markov process.

TEXT BOOKS

1. Discrete Mathematics and its applications, Kenneth Rosen, 7th edition, Tata McGrawHill, 2011
2. Fundamentals of Statistics, S C Gupta, 6th edition, Himalaya Pub., 2007

REFERENCE BOOKS

1. Introduction to Graph theory, Gary Chartrand, Tata McGrawHill, 2006

2. Probablility and Statistics, M R Spiegel, JJ Schiller, R A Srinivasan, 3rd edition, Mc GrawHill, 2019

TEACHING METHODS

- Black Board Teaching.
- Power point presentation
- Tutorial

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Quiz/ assignment based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of all the 3 will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

1. The concepts of Mathematical logic, functions and relations can be applied to Engg. Problems
2. The concepts of graph theory can be used to model and solve problems
3. The concepts of Graph theory can be applied to Engg. Problems
4. The basic concepts of Probability, random variables, distributions and Sampling can be used for problem solving
5. The testing of hypothesis and distributions can be applied to engg. Problems

L-T-P : 3:0:0	***Credits: 3***
Total Contact Hours: 39 hours	***Duration of SEE: 3 hours***
***SEE Marks**: 50*	***CIE Marks: 50***

COURSE DESCRIPTION

This course introduces basic methods for the design and analysis of efficient algorithms emphasizing methods which are useful in practice. The computational problems for sorting, searching, Divide and Conquer, dynamic programming and greedy algorithms, graph algorithms string matching, Backtracking, Branch and Bound, NP completeness are discussed.

PREREQUISITES

- Students should have knowledge of C or C++ language
- Students should know data structures
- Students should know the usage of summation formulae and recurrences in mathematics

COURSE OBJECTIVES

- To understand the basic concepts and notations used in the design and analysis of algorithms.
- To provide theoretical background in the design and analysis of major classes of algorithms.
- To solve problems using appropriate algorithms.
- To analyze and compare the performance of algorithms

COURSE CONTENTS

UNIT - I **7 Hours**

Introduction: What Is an Algorithm? Fundamentals of Algorithmic Problem Solving, Fundamentals of the Analysis of Algorithm Efficiency: The Analysis Framework, Asymptotic Notations and Basic Efficiency Classes, Mathematical Analysis of Non recursive Algorithms, Mathematical Analysis of Recursive Algorithms, Example: Computing the nth Fibonacci Number.

UNIT – II **8 Hours**

Brute Force and Exhaustive Search: Selection Sort and Bubble Sort, Sequential Search and Brute-Force String Matching, Depth-First Search and Breadth-First Search, Exhaustive Search. **Decrease-and-Conquer:** Insertion Sort, Topological Sorting, Decrease-by-a-Constant-Factor Algorithms – Binary Search.

UNIT - III **8 Hours**

Divide and Conquer: Mergesort, Quicksort, **Transform-and-Conquer:** Balanced Search Trees, Red Black trees, AVL trees, 2-3 trees, Heaps and Heapsort, Input Enhancement in String Matching, Horspool's Algorithm, Hashing

UNIT - IV **8 Hours**

Dynamic Programming: The Knapsack Problem and Memory Functions, Warshall's and Floyd's Algorithms, Greedy technique**:** Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm, Huffman Trees and Codes.

UNIT - V **8 Hours**

Limitations of Algorithm Power: P, NP, and NP-Complete Problems, **Coping with the Limitations of Algorithm Power:** Backtracking - n-Queens Problem, Subset-Sum Problem, Branch-and-Bound- Assignment problem, Knapsack Problem

TEXT BOOKS

1. Anany Levitin, "Introduction to the Design & Analysis of Algorithms", 3rd Edition, 2011, Pearson education.
2. Horowitz E., Sartaj Sahni S. Rajasekaran" Fundamentals of Computer Algorithms", 2001, Galgotia Publications.

REFERENCE BOOKS

1. H., Cormen, Charles E. Leiserson, Ronal L. Rivest, Clifford Stein Thomas, "Introduction to Algorithms", 2nd Edition, 2006, PHI.

TEACHING METHODS

- Lectures interspersed with discussion
- Power Point Presentations
- Problem Based Teaching

ASSESSMENT METHODS

1. Three Mid-Sem exams – 30 Marks each will be conducted and the Average of all the three tests will be considered.
2. Laboratory Based Exercises: 10 Marks
3. Problem Solving based test: 10 marks

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Describe the concepts, methods and notations used in the design and analysis of algorithms	3
CO2	Understand different algorithm design techniques	2
CO3	Design algorithms to common engineering problems using different algorithm design techniques.	3
CO4	Solve common engineering problems using different techniques.	3
CO5	Evaluate the performance of various algorithms.	3

SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

The course will cover topics regarding the software development other than programming, including testing, verification, and validation for constructing robust code. The emphasis is on modern technology for developing reliable software at reasonable cost.

PREREQUISITES

Students must have the knowledge on basic programming and object oriented concepts.

COURSE OBJECTIVES

To understand what Software Engineering is and why it is important.

- To understand various software development process models and to select the appropriate model for a particular project.
- To introduce the art of eliciting user requirements and analysis.
- To introduce software design strategies and development methodologies.
- To understand the software testing process and tools.
- To understand the process of software Maintenance.
- To know how to manage people, process and problems during software development project.

COURSE CONTENTS

UNIT - I **08 Hours**

Introduction to Software Engineering:

Introduction: FAQ's about software engineering, IEEE / ACM code of software engineering ethics, Process activities; Requirements gathering and analysis: Software Requirements Specification (SRS), Functional and Non-Functional requirements, User requirements, System requirements, Interface specification, Characteristics and components of SRS, Structure of SRS (IEEE format).

Case study: Develop SRS (IEEE format) for any real world application.

UNIT - II **08 Hours**

Software Development Process Models:

Traditional Process Models: The Waterfall model, The Evolutionary model, The Incremental implementation, Prototyping, Spiral model, Software reuse; Non-Traditional Process Models: Rapid Application Development (RAD), Agile Development Process, Extreme Programming, Introduction to DevOps, DevOps V/s Agile.

Case study: Identify the suitable development model for any real-world problem.

UNIT - III **08 Hours**

System Design and Development:

Architectural Design: Architectural design decisions, Architectural patterns; Interaction Modeling: Use case models, Sequence diagrams; Structural Modeling: Class diagrams; Behavioral Modeling: State diagrams; Functional Modeling: Data flow diagrams; Development: Selecting a language, Coding guidelines, Code documentation.

Case study: Design a real-world application using Design Methodologies.

UNIT - IV **08 Hours**

Software Testing and Maintenance:

Software Testing: Testing process, Design of test cases, Functional Testing: Boundary value analysis, Equivalence class testing, Path testing, Unit testing, Integration and system testing, Debugging, Alpha & beta testing, testing tools & standards; Software Maintenance: Maintenance process, Software reengineering, Configuration management.

Case study: Develop Test Suite for any real-world application and demonstrate using any Software Testing Automation Tools.

UNIT - V **08 Hours**

Software Quality and Management:

Quality Management: Process and product quality, quality assurance and standards, Quality planning and control; Project Management: Management Activities, Project Planning, Project Scheduling, Risk Management.

Case study: Realize project management activities using emerging Project Management tools.

TEXT BOOKS

1. Software Engineering: A Practitioner's Approach, R. S. Pressman, McGraw Hill, 7th Edition, 2010.
2. Zero Defect Software, G. G. Schulmeyer, McGraw-Hill, 1992.
3. Ian Somerville —Software Engineering, Pearson 9th Edition, 2016.

3. DevOps for Developers, Michael Huttermann, 2012, Apress, ISBN: 978-1-4302-4569-8.

TEACHING METHODS

- Lecture using presentations.
- Case studies.

ASSESSMENT METHODS

Parameter	Marks
Three Internals (MSEs)	30
Rubrics for evaluation of Case Study Presentation (LA-1)	10
Rubrics for evaluation of Case Study Report (LA-2)	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Understand and apply relevant software engineering principles to gather and analyze software requirements for any application.	2
CO2	Identify suitable process model for designing good software.	2
CO3	Analyze various techniques and Identify suitable methodology for designing any software to meet the requirements of an application.	3
CO4	Develop test suits applying appropriate software testing strategies.	3
CO5	Realize the activities involved in software quality and management.	2

COURSE DESCRIPTION

The fundamentals of Analog and Digital circuits and their applications are introduced in this course. Topics covered include; Simplification of Boolean functions, applications in the analysis and design of combinational and sequential logic circuits applications such as arithmetic circuits. This course introduces the characteristics and applications of few hardware devices and circuits like Op amp, clippers, clampers and Diodes. Emphasis is placed on analysis, selection, biasing, and applications.

PREREQUISITES

- Students should have knowledge of basic concepts of electronics, Binary System.

COURSE OBJECTIVES

To understand the basics of digital and analog electronics and be able to design the simple logic circuits.

To prepare students to perform the analysis and design of various digital electronic circuits.

COURSE CONTENTS

UNIT - I **08 Hours**

Database and Database Users: Introduction, Example, Characteristics of Database Approach, Actors on the Scene, Workers Behind the Scene, Advantages of Using the DBMS Approach, A Brief History of Database Application. Database System Concepts and Architecture: Data Models, schemas, and Instances: Three-schema architecture and Data Independence, Database Languages and Interfaces, The Database System Environment, Centralized and Client/Server Architecture for DBMS, Classification of Database Management systems.

UNIT - II **10 Hours**

Data Modeling Using the Entity-Relationship (ER) Model: Using High - Level Conceptual Data Models for Database Design, An Example Database Application, Entity Types, Entity Sets, Attributes, and Keys, Relationship Types, Relationship Sets, Roles, and Structural Constraints, Weak Entity Types, ER Diagrams, Naming Conventions, and Design Issues.

The Relational Data Model and Relational Database Constraints: Relational Model Concepts, Relational Model Constraints and Relational Database Schemas, Update Operations, Transactions and Dealing with Constraint Violations. The Relational Algebra and Relational Calculus: Unary Relational
Operations: SELECT and PROJECT, Relational Algebra Operations from Set Theory, Binary Relational Operations: JOIN and DIVISION, Additional Relational Operations; Examples of Queries in Relational Algebra.

UNIT - III **10 Hours**

SQL: Schema Definition, Constraints, Queries, and Views: SQL Data Definition and Data Types, Specifying Constraints in SQL, Schema Change Statements in SQL, Basic Queries in SQL, More Complex SQL Queries, Insert, Delete and Update Statements in SQL, Specifying Constraints as Assertion andTrigger, Views (Virtual Tables) in SQL.

UNIT - IV **10 Hours**

Database Design Theory and Methodology: Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys, General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.

UNIT - V **10 Hours**

Transaction Processing Concepts: Introduction to Transaction Processing, Transaction and System Concepts, Desirable Properties of Transactions, Characterizing Schedules Based on Recoverability, Characterizing Schedules Based on Serializability. **Concurrency Control Techniques: T**wo-Phase Locking Techniques for Concurrency Control, Concurrency Control Based on Timestamp Ordering. **Database Recovery Techniques:** The ARIES Recovery Algorithm.

LAB PRORGAM LIST

1**.** Database Schema for a Student Library scenario
Consider that a database named Student Library is developed by an application software NMITSoft company. There are 4 tables in the database. Relationship scheme for the tables is as below:
Student(Stud_no : integer,Stud_name: string)
Membership (Mem_no: integer,Stud_no: integer)
Book (book_no: integer, book_name:string, author: string)
Iss_rec (iss_no:integer, iss_date: date, Mem_no: integer, book_no: integer)

For the above schema, perform the following

a) Create the tables with the appropriate integrity constraints
b) Insert around 10 records in each of the tables
c) List all the student names with their membership numbers
d) List all the issues for the current date with student and Book names
e) Give a count of how many books have been bought by each student
f) Give a list of books taken by student with stud_no as 5

2.Create a relational database schema for a Project, described by the following relations.
STUDENT (Rollno: integer, Name: String, Sem: integer, Degree: String, Contact no: integer, Guide_No: integer)
GUIDE (Guide_name: String, Guide_No: integer, Guide_reserach_domain: String, Contact_No:
integer, Email_Id: String)
PROJECT (Project_No: Integer, Project_title: String, Project_Area: String, Start_dt, date, Guide_No: integer)
GROUP (Group_Code: integer, Roll_No:integer)
PROJECT_GROUP (Group_Code: integer, Project_No: integer, no_of_students:integer)

For the above schema, perform the following.
a) Create the tables with the appropriate integrity constraints
b) Insert around 10 records in each of the tables
c) Find the list of guide, who are guiding more than two student groups.
d) Find the list of project no, project name & name of guide, in domain of Data Base.
e) Create a view as student_project details that lists student name, project name and guide name

3. The following relations keep track of airline flight information:
Flights (flno: integer, from: string, to: string, distance: integer, departs: time, arrives: time, price: integer)
Aircraft (aid: integer, aname: string, cruisingrange: integer)
Certified (eid: integer, aid: integer)
Employees (eid: integer, ename: string, salary: integer)
Note that the Employees relation describes pilots and other kinds of employees as well; every pilot is certified for some aircraft, and only pilots are certified to fly.

For the above schema, perform the following.
a) Create the above tables by specifying primary keys and foreign keys.
b) Insert around 10 records in each of the tables.
c) Find the names of aircraft such that all pilots certified to operate them earn more than 80,000.
d) For each pilot who is certified for more than three aircraft, find the eid and the maximum cruising range of the aircraft that he (or she) is certified for.

e)Find the names of pilots whose salary is less than the price of the cheapest route from Los Angeles to Honolulu.
f) Find the second highest salary of an employee.

4. Consider a relational database schema for a Company database below.
Employee (F_name: string, L_name: string, Emp_id:integer, Bdate: date, Address:string, Gender:string,Salary: integer, Super_Emp_id: integer, D_no: integer)
Department (D_name: string, D_no: integer, D_Mgr_id:integer, Mgr_start_date: date)
Dept_Location (D_no: integer, D_location:string)
Project (P_name: string, P_number:integer, P_location:string, D_no:integer)
Works_on (Emp_id: integer, P_no: integer, Hours: in)
Dependent(Emp_id:integer,Dependent_name:string,Gender:string,Bdate:date,Relationship :String)

For the above schema, perform the following
a) Create the above tables by specifying primary keys and foreign keys.
b) Insert around 10 records in each of the tables.
c) Find the names and address of all employees who work on same department.
d) Retrieve a list of employees and the projects they are working on, ordered by department and, within each department, ordered alphabetically by last name, then first name.
e) Create a view Dept_info that gives details of department name, Number of employees and total salary of each employee.

5. Consider a relational database schema for a Sailors database below
Sailors (sid: integer, sname: string, rating: integer, age: real);
Boats (bid: integer, bname: string, color: string);
Reserves (sid: integer, bid: integer, day: date).

For the above schema, perform the following.
a) Create the above tables by specifying primary keys and foreign keys.
b) Insert around 10 records in each of the tables.
c) Find the names of sailors who have reserved a red boat, and list in the order of age.
d) Find the names of sailors who have reserved boat 103
e) Find the name and the age of the youngest sailor.
f) Find the average age of sailors for each rating level that has at least two sailors.

TEXT BOOKS

1. Elmasri and Navathe: Fundamentals of Database Systems, 5th Edition, Addison-Wesley, 2009

REFERENCE BOOKS

1. C.J. Date, A. Kannan, S. Swamynatham: A Introduction to Database Systems, 8th Edition, Pearsoneducation, 2006.

2. Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill,2003.

TEACHING METHODS

1. Blackboard teaching
2. PowerPoint presentations (if needed)
3. Programming Assignments using SQL

ASSESSMENT METHODS

Parameter	Marks
Three Internals	30
SQL programming test based on lab programs	10
Mongo DB project	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course students will

COs	Description	Bloom's Level
CO 1	Have a broad understanding of database concepts, Understand the essentials ofDBMS and its architectures.	**L1**
CO 2	Design and Model a real time Scenario using ER-Modeling. Convert entity relationship and convert entity relationship diagrams into RDBMS. Formulate queries using Relational Algebra.	**L2**
CO 3	Design SQL commands to create tables and indexes, insert/ update/ deletedata, and query data in a relational DBMS.	**L3**
CO 4	Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database.	**L4**
CO 5	Illustrate the concepts of Transaction Management and Database RecoveryTechniques.	**L2**

COURSE DESCRIPTION

The course Design and Analysis of Algorithms Lab is designed to introduce basic methods for the design and analysis of efficient algorithms emphasizing methods which are useful in practice. The computational problems include sorting, searching, Divide and Conquer, dynamic programming and greedy algorithms, graph algorithms string matching and Branch and Bound. It also Strengthens the ability to identify and apply the suitable algorithm for the given real-world problem.

PREREQUISITES

- Basic Programming Skills
- Knowledge of data Structures

COURSE CONTENTS

Sl. No.	LIST OF PROGRAMS	CO/PO
	PART- A	
1.	Digital maps, unlike humans, see cities as a bunch of nodes. We (humans) consider this map as a single entity. a GPS navigation or any other digital map divides it into hundreds of segments, with some only 24 meters long. A map displays n cities and their distances. Design and develop a program in C to print all the cities reachable from a given starting city in a digraph by using BFS method. Repeat the experiment for different values of n and plot a graph of the time taken versus n(n=no of nodes)	CO1//1,4
2.	An **island** is surrounded by water and is formed by connecting adjacent lands horizontally or vertically. You may assume all four edges of the grid are all surrounded by water. Given an `m x n` 2D binary grid which represents a map of `'1'`s (land) and `'0'`s (water), return *the number of islands* using DFS algorithm. Design and develop a program in C to print all the lands reachable from a given starting land in a digraph by using DFS	CO1/1,4

	method. Repeat the experiment for different values of n and plot a graph of the time taken versus n(n=no of nodes)	
3.	"Digishop" a online shopping website needs to keep track of the product availabilitybased on the product ID. Design a program in C to read the product ID provided by the customer and search for it's availability by using Binary search method and display the relevant message whether the product is in stock or not. Determine the time required to search for the product. Repeat the experiment for different values of n and plot a graph of the time taken versus n. (n=no of elements).	CO2/1,4,9
4.	"Aircel" a mobile network company need to maintain the telephone numbers of itscustomer in order to call and inform them about the new year offer. They have to sort the contact numbers in ascending order to keep track of the customers whom they called. Design and develop a program in C to sort the phone numbers by using insertion sort algorithm, Input should be generated randomly. Determine the time required to sort the elements. Repeat the experiment for different values of n and plot a graph of the time taken versus n. (n=no of elements).	CO2/1,4,9
5.	"Deloit", a software company needs to maintain its employee details like employeeid, name, address in a record, design and develop a program in C to sort the employee records based on their employee ID by using merge sort algorithm, employee ID should be generated randomly. Determine the time required to sort theelements. Repeat the experiment for different values of n and plot a graph of the time taken versus n. (n=no of elements).	CO2/1,4,9
6.	Assume that NMIT college needs to maintain the student details like USN, name, and contact details in a record. USN should be generated randomly. Design and develop a program in C to sort the records based on USN by using quick sort algorithm, Determine the time required to sort the roll numbers. Repeat the experiment for different values of n and plot a graph of the time taken versus n. (n=no of elements).	CO2/1,4,9
7.	"Sunshine" a job search portal is looking for engineering graduates, they need to sort the candidate's resume based on their ranking(Average Percentage). Ranking should be generated randomly. Design and develop a program in C to sort the resumes by using heap sort algorithm. Determine the time required to sort the elements. Repeat the experiment for different values of n and plot a graph of the time taken versus n.(n=no of elements).	CO3/1,4,9
	PART-B	

8.	Consider the problem of searching for genes in DNA sequences using Horspool's algorithm. A DNA sequence is represented by a text on the alphabet {A, C, G, T}, and the gene or gene segment is the pattern. A gene segment of your chromosome 10 has the pattern TCCTATTCTT . Design and develop a program in C to locate the above pattern in the following DNA sequence by applying Horspool's algorithm. TTATAGATCTCGTATTCTTTTATAGATCTCCTATTCTT. Also compute the number of comparisons using this method as compared to linear search method	CO3/1,4,9
9.	There have been a number of fire outbreak cases recorded in the Florida area that has brought about loss of lives to inhabitants and loss of properties. Some routes within the district can be reconstructed into shortcut routes, so that fire man can traverse through the district in order to prevent fire incidents. The objective is to find the minimum distance and shortest path from the fire station to all the residential layout in Florida area. Write an algorithm by applying Floyd's method to find the solution for the given scenario.	CO4/1,4,9
10.	DMART is providing special offer to its customer on New Year's Eve. Customers can buy anything they want with flat80% discount, but the products they buy should fit into the basket provided by DMART. The objective is to collect the expensive products which fit into the given basket and overall weight of the basket cannot exceed 15kg.Write an algorithm by using knapsack algorithm using dynamic programming to find the best subset for the given scenario.	CO4/1,4,9
11.	Bangalore Water supply Board responsibility is to distribute water evenly among all the areas in Bangalore city. A new layout has been developed by Maxworth real estate developers. BWSB should connect the water lines to the new layout with minimum cost. The objective is to connect the water pipes so that it reaches all the houses in new layout with minimum cost. Write an algorithm by applying Kruskal's method to find the minimum spanning tree for the given scenario.	CO4/1,4,9
12.	DigiMap services is a module in G-Maps which is used to find the distance from one place to another or from your location to the nearest desired location. This requires the Shortest Path Algorithm, as there are various routes/paths connecting them but it has to show the minimum distance. . Represent a city/place with a vertex and the route between two cities/places as an edge, then by using Dijkstra's algorithm, find the shortest routes between any two cities/places or from one city/place to another city/place.	CO4/1,4,9
13.	Consider the *n*-queens puzzle in which the goal is to place *N* queens on an *N*×*N* chessboard such that no two queens attack each other. A queen can attack horizontally, vertically, or diagonally. Given an integer *N*,	CO5/1,4,9

	return all distinct solutions to the *N*-queens puzzle. Note: Use Backtracking technique.	
14.	Consider the Subset sum problem in which the objective is to find subset of elements that are selected from a given set whose sum adds up to a given number K. Assume the set contains non-negative values and also the input set is unique (no duplicates are present.). Design and develop a program in C to find the subset of a given set whose sum is equal to a positive integer K and display an appropriate message if the given problem instance does not have the solution. Note : Use Backtracking method.	CO5/1,4,9

ASSESSMENT METHODS

Parameter	Marks
Continuous Internal Evaluation	25
Lab Test	20
Gate Based Test	05
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

COs	Description	Bloom's Level
CO 1	Design algorithms based on different algorithm design techniques to solve real world problems	**L3**
CO 2	Implement solutions for the problems using different algorithm design techniques	**L3**
CO 3	Validate the results obtained for different inputs	**L4**
CO 4	Analyze the time efficiency of the algorithm	**L4**

Total Contact Hours: 40 Hours	***Duration of SEE: 3 Hours***
SEE Marks: *50*	***CIE Marks: 50***

COURSE DESCRIPTION

- Students should have prior knowledge of web and internet usage.
- Students should have the prior knowledge of basic html tags.

PREREQUISITES

This course provides knowledge in scripting languages javascript, php, node JS and Angular js. The course also provides the knowledge of how to use the scripting languages, HTML tags and CSS for developing web pages.

COURSE OBJECTIVES

- To understand the use of HTML tags and cascading style sheets.
- To understand the basics of scripting languages javascript and its frameworks, php, node Js and Angular Js
- To understand how to connect the scripting language with database.

COURSE CONTENTS

UNIT - I 08 Hours

FUNDAMENTALS OF WEB: Introduction to HTML/XHTML: Basic Syntax, Standard HTML Document Structure, Basic Text Markup, Images, Hypertext Links, Lists, Tables, Forms, Syntactic Differences between HTML and XHTML, Cascading Style Sheets: Levels of Style Sheets, Style Specification Formats, Font, Properties Alignment of Text.

UNIT - II 08 Hours

JAVASCRIPT: Basics, Overview of JavaScript, Object orientation of JavaScript, General Syntactic characteristics, Primitives, Operations and Expressions, Screen output and keyboard input, Control Statements, Object creation and modification, Arrays, Functions, Constructor, Pattern matching using regular expressions, Errors in Scripts The JavaScript execution environment, Handling events from the Body elements, Button elements, Textbox and Password elements.

UNIT - III **08 Hours**

PHP: Introduction to PHP, Origins and uses of PHP, Overview of PHP, General syntactic characteristics, Primitives operation and expressions, output, control statement, arrays, functions, pattern matching, form handling, files, cookies, Database access with PHP & MySQL.

UNIT - IV **08 Hours**

Jquery and Ajax: Introduction, Syntax, Selectors, jQuery effects, jQuery HTML, History of AJAX, Basics of AJAX, The form document, The request and response phase, cross-Browser support, return document forms, JSON, AJAX toolkits, security and AJAX

UNIT - V **08 Hours**

Angularjs: Introduction Angularjs, Basic Angularjs directives and controllers, working with ng-model, working with forms, Angular js services. Node JS: Introduction. Node js mudules, node js file system, URL module, node js events, upload files, Emails.

TEXT BOOKS

1. Robert W. Sebesta, Programming the World Wide Web-7thEdition, Pearson Education, 2015.
2. Shyam Sheshadri & Brad Green, Angularjs Up & Running O'Reilly Publications 2015 Second Release.

REFERENCE BOOKS

4. Professional Angularjs –Valerikarpo& Diego Netto.

TEACHING METHODS

- Lecture (Power Point presentations/ Blackboard teaching (if needed))
- Regularreviewofstudentsbyaskingquestionsbasedontopicscoveredintheclass
- Programming Assignments

ASSESSMENT METHODS

- Three internals–30 Marks each will be conducted and the Average of best of two will be considered.

- Self Demonstration for10 marks.
- Assignment for10 marks.
- Final examination will be conducted for100 marks and evaluated for 50 Marks.

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Describe and use client-side technologies of the World Wide Web: HTML, XHTML, CSS, and JavaScript.	L3
CO2	Design documents using markup languages and stylesheets. Apply of CSS, JavaScript as scripting tool for developing Web applications.	L4
CO3	Create dynamic web applications, client-side and server-side using PHP and MySQL.	L4
CO4	Describe Selectors, jQuery effects, jQuery HTML, jQuery Ajax, Use Ajax to add server-side processing to a Web site.	L3
CO5	Understanding the concepts of angular JS and node JS and able to develop web application	L3

COURSE DESCRIPTION

This course is concerned with the development of applications on mobile and wireless computing platforms. Android will be used as a basis for teaching programming techniques and design patterns related to the development of standalone applications and mobile portals to enterprise and m-commerce systems. Emphasis is placed on the processes, tools and frameworks required to develop applications for current and emerging mobile computing devices. Students will work at all stages of the software development life-cycle from inception through to implementation and testing. In doing so, students will be required to consider the impact of user characteristics, device capabilities, networking infrastructure and deployment environment, in order to develop software capable of meeting the requirements of stakeholders.

PREREQUISITES

Basic knowledge on oops concepts and java programming

COURSE OBJECTIVES

- To facilitate students to understand android SDK
- To help students to gain a basic understanding of Android application development
- To inculcate working knowledge of Android Studio development tool

COURSE CONTENTS

UNIT – I — 08 Hours

Introduction to Android: The Android Platform, Android SDK, Eclipse Installation, Android Installation, building your First Android application, Understanding Anatomy of Android Application, Android Manifest file.

UNIT – II — 08 Hours

Android Application Design Essentials: Anatomy of an Android applications, Android terminologies,

Application Context, Activities, Services, Intents, Receiving and Broadcasting Intents, Android
Manifest File and its common settings, Using Intent Filter, Permissions.

UNIT – III **08 Hours**

Android User Interface Design Essentials: User Interface Screen elements, Designing User Interfaces with Layouts, Drawing and Working with Animation.

UNIT – IV **08 Hours**

Testing Android applications, Publishing Android application, Using Android preferences, Managing
Application resources in a hierarchy, working with different types of resources.

UNIT – V **08 Hours**

Using Common Android APIs: Using Android Data and Storage APIs, Managing data using Sqlite,
Sharing Data between Applications with Content Providers, Using Android Networking APIs, Using
Android Web APIs.

TEXT BOOKS

T1. Lauren Darcey and Shane Conder, "Android Wireless Application Development", Pearson
Education, 2nd ed.

REFERENCE BOOKS

1. Reto Meier, "Professional Android 2 Application Development", Wiley India Pvt Ltd
2. Mark L Murphy, "Beginning Android", Wiley India Pvt Ltd
3. Android Application Development All in one for Dummies by Barry Burd, Edition: I.

TEACHING METHODS

- Lecture using Black board and chalk
- Presentations, Hands-on-Sessions.
- Programming Assignments

ASSESSMENT METHODS

Parameter	**Marks**
Three internals (Average of best of two)	30
Programming Assignments	10
Rubrics for the evaluation of Programming Assignments	10

Total 50

Final Exam will be conducted for 100 marks (SEE)

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Students will be able to understand the development of mobile applications.	2
CO2	Students will be able to utilize the android sdk to build applications.	3
CO3	Students will be able to understand and implement the programming toast	3
CO4	Students will be able to understand and implement database connectivity using JAVA	3
CO5	Students will have broad knowledge on latest mobile application development	2

COURSE DESCRIPTION

The explosive growth of the ‑Internet of Things‖ is changing the current trends in the world and the rapid drop in price for typical IoT components is allowing people to innovate new designs and products. In this course, students will learn the importance of IoT in society, the current components of typical IoT devices and trends for the future. IoT design considerations, constraints and interfacing between the physical world and your device will also be covered. Addition, students will also learn how to make design trade-offs between hardware and software. This course will also cover key components of networking to ensure that students understand how to connect their device to the Internet.

PREREQUISITES

Students must have basic knowledge on microcontrollers. The students will be requiring to participating actively in creative thinking exercises and be willing to be innovative. Participate in open discussions is a must.

COURSE OBJECTIVES

- To understand the basic Characteristics of IoT.
- To acquire knowledge of implementing concepts of IoT using Arduino and raspberry pi.
- To learn the fundamentals of Python programming
- To acquire knowledge on Wired Communication Protocols, Cloud Storage models and communication APIs.

COURSE CONTENTS

UNIT – I **08 Hours**

Introduction to IoT

Definition, Characteristics and Architecture of IoT, Physical Design of IoT – IoT Protocols (hardware protocols and software protocols), IoT communication models, IoT Communication APIs, **IoT enabled Technologies:** Wireless Sensor Networks, Cloud Computing, Big data analytics, Communication protocols, IoT Levels and Templates, **Domain Specific IoT's :** Home, City, Environment, Energy, Retail, Logistics, Agriculture, Industry, health and Lifestyle

UNIT – II	**08 Hours**
The IoT Hardware	

Embedded Systems – Introduction, the basics of sensors and actuators, need for ADC & DAC peripherals. Introduction to Arduino, The Arduino UNO development board – architecture and specifications, theArduino development environment, setting up the IDE, programming the Arduino, basic examples. Communication devices: Bluetooth, BLE, Wi-Fi (ESP8266), GSM, LPWAN (LoRa), LPPAN (6LoPAN, Zigbee). Introduction to RaspberryPi – the RaspberryPi architecture& Hardware overview, RaspberryPi as a gateway device.

UNIT – III	**08 Hours**
The IoT Hardware	

Introduction to Python – Language features of Python, Data types, data structures, Control of flow, functions& loops, modules, packaging, file handling, data/time operations, classes, Exception handling.

UNIT – IV	**08 Hours**
IoT Communication Protocols and Security	

Wired Communication Protocols: UART, I2C, SPI Wireless messaging and communication Protocols: MQTT, CoAP, XMPP, AMQP. Need for IoT security, Overview of Network security, Types of data encryption, data encryption at the node device, and data encryption at the gateway device.

UNIT – V	**08 Hours**
The IoT Cloud and App	

Introduction to Cloud Storage models and communication APIs, Python web application framework, Introduction to NoSQL, IoT dashboard – monitoring and storing sensor data over the cloud. Webservers / Cloud for IoT: Case Studies of some IoT cloud services.

TEXT BOOKS

1. Internet of Things – A Hands-on Approach, ArshdeepBahga and Vijay Madisetti, UniversitiesPress, 2015, ISBN: 9788173719547

3. https://nptel.ac.in/course.php

TEACHING METHODS

Course Project: Each student will form a group with 1, but no more than 2, other classmates. The students will have to be able to develop a simple IoT system having a simple three-layer web application (web interface, functionality layer, persistence layer) in any computer language (PHP, Python, etc.) with any database (MySQL, noSQL, etc.) and Hardware(microcontroller/Arduino/Raspberry Pi +gateway).

- Lecturer interspersed with discussion
- Course project
- Supporting laboratory assignments

ASSESSMENT METHODS

Three Internals (Average of best of two test)	30
Rubrics for the course project	20
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Demonstrate the fundamental concepts of the Internet of Things and Its Application and architecture models	**L3**
CO2	Design the real time applications using Arduino Controller and Sensors	**L3**
O3	Apply the python programming concepts to create connection with the hardware Devices for IoTs	**L4**
CO4	Illustrate the features of IoT Communication Protocols and Need for Security issues in the IoT applications	**L2**
CO5	Develop an IoT system having a simple three-layer web application	**L3**

COURSE DESCRIPTION

This course provides introduction to cloud computing and cloud service providers. This course also provides introduction to Virtualization technology which is the base for cloud computing. The course also discusses various AWS services.

PREREQUISITES

Data Base Management Systems, Basics of Programming.

COURSE OBJECTIVES

- To introduce the cloud computing
- The various services provided by the cloud
- Introduction to virtualization techniques and different type of virtualization
- Application of cloud computing in different fields

COURSE CONTENTS

UNIT -I **08 Hours**

Introduction: Cloud computing, Cloud computing delivery models and services, Ethical issues in Cloud Computing, Cloud vulnerabilities.

Cloud Infrastructure: Cloud computing at Amazon, Cloud computing the Google perspective, Microsoft Windows Azure and online services, Open-source software platforms for private clouds, Service and Compliance-level agreements.

UNIT -II **07 Hours**

Cloud Computing – Applications and Paradigms: Challenges for cloud computing, Architectural styles for cloud applications, Workflows: Coordination of multiple activities, Coordination based on a state machine model: The Zookeeper.

UNIT-III **08 Hours**

Introduction to AWS: Basic AWS concepts, Benefits of using AWS over traditional data center, Accessing AWS services, AWS overview, AWS global infrastructure, Virtualization -

Virtualization types based on virtualization software, virtualization methods, Elasticity versus
scalability, Comparing AWS cloud and on-premises data centers, Creating a new AWS account, Deleting an AWS account, AWS free tier, Root user versus non-root user.

UNIT-IV **08 Hours**

AWS Dashboard: Components of AWS dashboard, Core AWS services, Shared security responsibility model, AWS soft limits, Disaster recovery with AWS.

Identity and Access Management (IAM): Understanding AWS root user, Elements of IAM, Multi-Factor Authentication (MFA), IAM role - Creating roles for AWS service, Policy – Managed and Inline policies, IAM best practices.

UNIT-V **08 Hours**

AWS Services: Introduction to EC2, EC2 instance lifecycle, AMI, Elastic Block Store (EBS), Types of EBS, Snapshots, Introduction to Elastic Load Balancer (ELB), Types of ELB, Features of ELB, Creating a Classic Load Balancer, How ELB works, Monitoring with CloudWatch, How Amazon CloudWatch works, Amazon S3, S3 Storage Classes.

TEXT BOOKS

1. Cloud Computing Theory and Practice, Dan C. Marinescu, Morgan Kaufmann, Elsevier 2013.
2. AWS Certified Developer - Associate Guide, Vipul Tankariya and Bhavin Parmar, Packt Publisher, 2017.

REFERENCE BOOKS

1. Cloud Computing A Practical Approach,Anthony T. Velte,Toby J. Velte.,Robert Elsenpeter, McGraw-Hill Education Edition 2010.
2. Mastering Cloud Computing, Rajkumar Buyya, Christian Vecchiola, S. Thamarai Selvi, McGraw Hill Education, 2013.

TEACHING METHODS

- Lecture using Black board and chalk
- Lecture using Presentations
- Demonstration of Cloud Applications and Instances
- Problem Solving Assignments

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two test)	30
Rubrics evaluation for the Course Project	10
Case Study	10

Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of Course, Student will be able to:

COS	**Description**	**Bloom's Level**
CO 1	Comprehend the fundamentals of Cloud Computing and analyze various Cloud infrastructures.	L2
CO 2	Identify and explain the appropriate architecture and cloud services for a given application.	L2
CO 3	Illustrate Virtualization and basic concepts of AWS and creating an AWS account.	L2
CO 4	Explain the AWS dashboard and Identity and Access Management.	L2
CO 5	Design and develop an application using the various AWS services.	L5
CO 6	Design and develop Cloud computing Course projects.	L4

Total Contact Hours:*39 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks: *50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course provides an understanding of Software testing. The course also provides the knowledge of White box and Black box testing, Functional and Non-functional testing in real time applications.

PREREQUISITES

Students should have basic knowledge of software engineering.

COURSE OBJECTIVES

- To understand the fundamentals of Software testing.
- To enable students to write Test cases, Test plan
- To help students, demonstrate the ability to use validation activities (UNIT testing,Integration testing, system testing.

COURSE CONTENTS

UNIT-1 — 7 Hours

Basics Of Software Testing – 1: Human Errors and Testing; Software Quality; Requirements, Behavior and Correctness; Correctness versus Reliability; Testing and Debugging; Test Metrics.

Unit-2 — 8 Hours

Basics of Software Testing – 2: Software and Hardware Testing; Testing and Verification; Defect Management; Test generation Strategies, Static Testing. Types of Testing; the Saturation Effect.

UNIT-3 — 8 Hours

Test Generation from Requirements: Introduction; the Test-Selection Problem; Equivalence Partitioning; Boundary Value Analysis; Category-Partition Method.

UNIT-4 — 8 Hours

Verification Testing: Basic verification methods, getting leverage on verification, verifying documents at different phases, three critical success factors for implementing verification.

Validation Testing: Validation methods, validation activities.

Controlling Validation Costs: Minimizing the cost performing tests, minimizing the cost of maintaining the tests, minimizing validation test ware development costs. Testing Tasks, Deliverables and Chronology: Master test planning, verification testing tasks and deliverables, validation testing tasks and deliverables.

UNIT-5 **8 Hours**

Software Testing Tools: Categorizing testing tools, tool acquisition.
Organizational approach to Testing: structural design elements, approaches to organizing the test functions.
Current practices, Trends, Challenges: GUI's. What is new here, usage testing, tester to develop ratios.

TEXT BOOKS

1. Foundations of Software Testing - Aditya P Mathur, Pearson Education, 2008.
2. Ed Kit: Software Testing in the real world, Addison-Wesley, 1995.
3. Srinivasan Desikan, Gopalaswamy Ramesh: Software Testing Principles and Practices, 2nd Edition, Pearson Education, 2007.

REFERENCE BOOKS

1. Paul C. Jorgensen: Software Testing, A Craftsman's Approach, 3rd Edition, Auerbach Auerbach Publications, 2008.
2. Mauro Pezze, Michal Young: Software Testing and Analysis – Process, Principles and Techniques, Wiley India, 2009.
3. https://nptel.ac.in/course.php

TEACHING METHODS

1. Lecture using Black board and chalk
2. PowerPoint presentations (if needed)
3. Regular review of students by asking questions based on topics covered in the class.

ASSESSMENT METHODS

Parameter	Marks
Three internals (Average of best of two)	30
Rubrics for the evaluation of case study implementation using testing tools	10
Assignment	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

At the end of the course student will be able to

COs	Description	BloomsLevel
CO 1	Apply terms associated with software testing	**L3**
CO 2	Design various test generation strategies.	**L4**
CO 3	Implement different types of software testing in application development.	**L3**
CO 4	Summarize aspects of functional and nonfunctional testing.	**L1**
CO 5	Apply the usage of test Management and automation in software testing.	**L3**

COURSE DESCRIPTION

Detailed study of computer graphics, 2 D and 3 D transformations, representations and visualization

PREREQUISITES

C, C++, Matrices, Algebra

COURSE OBJECTIVES

This course will introduce the basic principles, concepts, and algorithms in computer graphics and visualization. Students will learn mathematical and computational techniques for modeling, representing, and displaying geometric objects and employing these techniques for visualizing data

COURSE CONTENTS

UNIT - I **08 Hours**

Line generation: Points lines, Planes, Pixels and Frame buffers, vector and character generation. Graphics Primitives with opengl functions: Display devices, Primitive devices, Display File Structure, Display control text

UNIT - II **08 Hours**

Polygon: Polygon Representation, entering polygons, Filling polygons. Segments: Segments table, creating deleting and renaming segments, visibility, image transformations with opengl functions

UNIT - III **08 Hours**

Transformations: Matrices transformation, transformation routines, displays procedure. Three Dimension: 3-D geometry primitives, transformations, projection clipping

UNIT - IV **08 Hours**

Windowing and Clipping: Viewing transformation and clipping, generalize clipping, multiple windowing.2D clipping: A simple visibility algorithm, end point codes. Cohen Sutherland algorithm, midpoint sub division algorithm.

UNIT - V **08 Hours**

Interaction: Hardware input devices handling algorithms, Event handling echoing, Interactive techniques. Hidden Line and Surface: introduction to hidden line methods.

TEXT BOOKS

1. Rogers, "Procedural Elements of Computer Graphics", McGraw Hill
2. Asthana, Sinha, "Computer Graphics", Addison Wesley Newman and Sproul, "Principle of Interactive Computer Graphics", McGraw Hill
3. Donald D. Hearn "Computer Graphics with Open GL", 4th Edition
4. Dave Shreiner, Mason Woo, Jackie Neider, Tom Davis, OpenGL Programming Guide: Th

REFERENCE BOOKS

1. Steven Harrington, "Computer Graphics", A Programming Approach, 2nd Edition
2. Rogar and Adams, "Mathematical Elements of Computer Graphics", McGraw Hill.

TEACHING METHODS

- Black Board/Power Point Presentations
- Model demonstrations
- Creative thinking discussions after completing each chapter

ASSESSMENT METHODS

Parameter	Marks
Three Internals (Average of best of two)	30
Mini project	10
Case study	10
Total	**50**
Final Examination will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

CO	COURSE OUTCOMES	BL
CO1	Comprehend the concepts related to basics of computer graphics and visualization.	L2
CO2	Demonstrate various graphics primitives and 2-D, 3-D geometric transformations and clipping techniques.	L2
CO3	Comprehend the concepts related three-dimensional object representations.	L2
CO4	Implement various hidden surface removal techniques.	L3
CO5	Demonstrate the use of OpenGL to create interactive computer graphics applications.	L2

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Department of Information Science and Engineering

2018 Scheme Curriculum Handbook

Vision

To build a strong research and teaching environment in the field of Information Technology to meet the ever-evolving global needs and to equip students with the latest knowledge, skills and practical orientation to face challenges in IT profession.

Mission

1. To offer comprehensive educational programs in the field of Information Technology producing highly accomplished graduates.
2. To inculcate among the students, the culture of research and innovation.
3. To encourage students to participate in co-curricular and extra-curricular activities leading to enhancement of their social and professional skills.

Programme Education Objectives (PEOs)

- PEO-1. Graduates will progress in their careers in IT industries of repute.
- PEO-2. Graduates will succeed in higher studies and research.
- PEO-3. Graduates of Information Science and Engineering will demonstrate highest integrity with ethical values, good communication skills, leadership qualities and self-learning abilities.

Programme Specific Outcomes (PSOs)

- PSO-1. Student will be able to understand the architecture and working of computer system with relevant system software and apply appropriate system calls.
- PSO-2. Student will be able to apply mathematical methodologies in modelling real world problems for the development of software applications using algorithms, data structures and programming tools.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Program Outcomes:

PO-1	Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. .
PO-2	Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
PO-3	Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
PO-4	Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO-5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO-6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO-7	Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO-8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice
PO-9	Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO-10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend

	and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO-11	Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO-12	Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Course Title: Engg. Mathematics-III	Course Code: 18MAT31
L-T-P: 3-1-1	Credits: 4
Total Contact Hours: 52 hrs	Duration of SEE: 3 hrs
SEE Marks: 50	CIE Marks: 50

Course Outcomes:

Students will be able to

COs	Course Outcomes	Blooms Level
1	Concepts of Fourier theory and transforms can be adopted to problem solving, analysing physical situations relevant to periodic and aperiodic functions	3
2	Fourier theory and transforms can be applied to model engg. Problems and MATLAB simulation can be done.	3
3	Numerical methods can be adopted for solving equations, interpolate and extrapolate data using, finite differences and matrices	3
4	Numerical methods can be adopted to differentiate, integrate functions and solve differential equations	3
5	Numerical methods can be applied to model physical situations, find eigen values and interpret solutions.	3

Teaching Method:

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

Assessment Method:

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Quiz/ assignment based on practical application for 10 marks. (Assignments for MATLAB)
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

Course Outcome to Programme outcome Mapping:

CO/PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO1	PSO2	PSO3
CO1	2	1		1	1									1	
CO2	2	1		1	1									1	
CO3	2	1		1	1									1	
CO4	2	1			1									1	
CO5	2	1			1									1	
18MAT31	**2**	**1**		**1**	**1**									**1**	

Course Contents

UNIT-I	**10 hrs**
Laplace Transforms: Definition, Transforms of standard functions (derivation and problems), Transforms of $e^{at}f(t)$, $t^n f(t)$, $\frac{f(t)}{t}$, Laplace transforms of derivatives and integrals, Laplace transforms of periodic functions, unit step function (problems only, no derivations), Dirac delta function . Inverse Laplace transforms (use of direct formulae, completing squares, partial fractions and using derivatives), convolution theorem (without proof, problems to find inverse), solutions of 1^{st} and 2^{nd} order ODE using Laplace transforms.	
UNIT-II	**08 hrs**
Fourier series: Euler's formulae, Dirichlet's conditions for Fourier series expansion, change of interval, Even and odd function (no need to define step functions as even and odd), half range series, Practical harmonic analysis (expansion to include constant, 1^{st} and 2^{nd} harmonic, 1^{st} three terms in case of only sine or cosine series). **Fourier Transforms**: Definition, Complex Fourier transforms, Cosine and Sine transforms, Inverse transforms for complex, sine and cosine	
UNIT-III	**08 hrs**
Roots of transcendental equations by Newton Raphson and Secant method Interpolation: Newton's forward and backward formulae, Newton's divided difference formulae and Lagrange's formula for unequal intervals and inverse interpolation by Lagrange's formula, Stirling's and Bessel's central difference formula, Numerical differentiation with Newton's forward and backward difference interpolation.	
UNIT-IV	**08 hrs**
Numerical Integration by Trapezoidal, Simpson's $\frac{1}{3}$ and $\frac{3}{8}$ rule, Weddle's rule, Gaussian Quadrature (3 point and 4 point formulae using Lagrange polynomials, values to be given in the question paper). Numerical solution of ordinary differential equations: Taylor's series method (expansion upto 5 terms or more), Runge-Kutta 4^{th} order method (problems considering single and two steps for calculations), Milne's predictor corrector method (use of predictor formula once and corrector twice)	
UNIT-V	**08 hrs**
Linear algebra: LU decomposition (both $l_{ii} = 1$ and $u_{ii} = 1$ to be considered, problems where the method fails also to be considered), Solution of Tri-diagonal system using Thomas algorithm, Eigen values of symmetric matrix by Jacobi method, Reduction to Tri-diagonal system by Given's method, Largest Eigen value by Power method. (**Sub questions of a question can appear from any topic within the unit)**	

Text Book:

1. Higher Engg. mathematics by Dr. B S Grewal, 42^{nd} Edition.
2. Advanced Engg. Mathematics by Erwin E Kreyszig, Volume-II, Wiley.
3. Introductory methods of numerical analysis, by S S Sastry, PHI India.
4. Numerical methods for scientific and engg. Computation, 6^{th} edition, by Jain, Iyengar, R K Jain, New age, 2012.

Reference books:

1. Advanced Engg. Mathematics by Erwin Kreyszig, 10^{th} edition, Wiley,2011
2. Numerical Algorithms by Sen and Krishnamurthy

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title*: Digital Design*	***Course Code:****18IS32*
L-T-P:*4-0-0*	***Credits:****04*
Total Contact Hours:*52hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

- Basic Knowledge on Physics and Electronics

Course Outcomes:
Students will be able to:

COs	Course Outcomes	Blooms Level
1	Simplify the combinational logic circuits using Boolean algebra and theorems.	2
2	Apply K-map technique to simplify the complex digital circuits.	3
3	Analyse the operations of Set Reset, Jack Kilby, Data input and Toggle flipflops	4
4	Apply the concepts of flipflops in data transfer and design of counter	3
5	Understand the fundamentals of Analog to Digital and Digital to Analog Converters	2
6	Analyse the digital circuits using VHDL and Verilog programming	4

Teaching Methodology:

i. Black Board Teaching
ii. Power Point Presentation
iii. Tutorial Classes
iv. Assignments

Assessment Methods:

i. Assignments for 10 Marks.
ii. Aptitude Tests for 10 Marks.
iii. Three MSEs for 30 Marks each will be conducted and the Average of best of two will be considered.
iv. Semester End Examination for 100 Marks will be conducted and reduced for 50 Marks.

COURSE CONTENT

UNIT – I	10 hrs
Boolean Algebra and Combinational Networks: Truth Tables, OR Operation with OR Gates, AND Operation with AND Gates ,NOT Operation, Describing Logic Circuits Algebraically, Evaluating Logic-Circuit Outputs ,Implementing Circuits from Boolean Expressions, NOR Gates and NAND Gates, Boolean Theorems, DeMorgan's Theorems, Universality of NAND, Alternate Logic-Gate Representations, Which Gate Representation to Use, Summary of Methods to Describe Logic Circuits	
UNIT – II	**11 hrs**
Simplification of Boolean Expressions: Designing Combinational Logic Circuits: SoP&PoS form, Simplifying Logic Circuits, Algebraic Simplification, Karnaugh Map Method, XOR and XNOR Minimization Circuits, Enable/Disable Circuits Analysis. **Logic Design with MSI Components and Programmable Logic Devices**: Binary adders &Subtractors, Magnitude Comparators, Decoder, Encoder, Multiplexer, Parity Generator and Checker	
UNIT – III	**11 hrs**
Synchronous Sequential Logic: NAND Gate Latch, NOR Gate Latch, Clock Signals and Clocked Flip-Flops, Clocked S-R Flip-Flop, Clocked J-K Flip-Flop, Clocked D Flip-Flop, D Latch(Transparent Latch), Asynchronous Inputs, Master/Slave Flip-Flops,Flip-Flop Conversions, Flip-Flop Applications, Flip-Flop Synchronization, **Registers:** Data Storage and Transfer, Serial Data Transfer: Shift Registers, Frequency Division and Counting	
UNIT – IV	**11 hrs**
Counters&D/A Conversion and A/D Conversion:: Asynchronous (Ripple) Counters, Counters with MOD Numbers, Asynchronous Down Counter, Propagation delay in Ripple Counters, Synchronous (Parallel) Counters, Presettable Counters, The, Synchronous Counter Design.**D/A Conversion and A/D Conversion:** Variable Resistor Networks, Binary Ladders, D/A Converters, D/A Accuracy and Resolution, **A/D Converter**-Counter Method, Continuous A/D Conversion, A/D Conversion using Successive Approximation	
UNIT – V	**09 hrs**
VHDL, VERILOG & FPGA: Introduction to VHDL, Capabilities, Hardware Abstraction, Introduction to Verilog HDL, Major Capabilities. **FPGA:** Introduction, Basic Concepts, Schematics and Logic Symbols, Digital Design and FPGAs. FPGA based System Design.	

Text books:

1. Digital Systems Principles and Applications, Ronald J. Tocci, Neal S. Widmer, Gregory L. Moss 9th Edition, 2013, Pearson Education.
2. Digital Principles and Applications by Donald P Leach, Albert Paul Malvino, GoutamSaha. 7thedition,2012, Tata McGraw-Hill
3. Wayne Wolf FPGA based system design", Pearson education "Electronics Communication Systems", McGraw Hill, first Edition, 2009

Reference books:

1. Digital logic and computer design M. Morris Mano
2. Fundamentals of Logic Design, Charles H. Roth, Jr., 5th Edition, Thomson, 2004.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title*: Data structures using C*	***Course Code:****18IS33*
L-T-P:*4-0-0*	***Credits:****04*
Total Contact Hours:*52hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

i. Students should have knowledge on C Programming

Course Outcomes:

Students will be able to

Cos	Course Outcome Description	Blooms Level
1	Understand the fundamentals of Linear and Non-linear data structures.	L2
2	Apply stack operations for Infix, Prefix and Postfix conversion for the given problem	L3
3	Develop solutions for the given problem using recursion and queues	L3
4	Apply linked list concepts for solving the given problem	L3
5	Construct binary trees and perform tree traversals	L3
6	Understand the concept of hashing technique	L2

Teaching Methodology:

i. Black board teaching
ii. PowerPoint presentation
iii. GATE Aptitude training during tutorial hours

Assessment Methods:

i. Aptitude test (GATE syllabus) for10 Marks.
ii. Three MSEs for 30 Marks each will be conducted and the Average of best of two will be considered.
iii. Semester End Examination for 100 Marks will be conducted and reduced for 50 Marks.

Course Outcome to Programme Outcome Mapping:

	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO1	PSO2
CO1	**3**											**1**		**3**
CO2	**3**	**2**	**3**									**1**		**3**
CO3	**3**	**2**	**3**									**1**		**3**
CO4	**3**	**2**	**3**									**1**		**3**
CO5	**3**	**2**	**3**									**1**		**3**
CO6	**3**											**1**		**3**
18IS33	**3**	**2**	**3**									**1**		**3**

COURSE CONTENT

UNIT – I	**10**hours
Introduction to data structures: revisit to pointers in C, Implementing one dimensional array. **The stack**: Definition—Primitive operations, **Representing Stacks in C** – Implementing the POP operation, testing for exceptional conditions, implementing the PUSH operation. **Infix, Postfix and Prefix**–Basic Definitions, evaluating a postfix expression, converting an expression from infix to postfix.	
UNIT – II	**10**hours
Recursion: Recursive Definition and Processes—factorial function, multiplication of natural numbers. Fibonacci sequence, binary search **Recursion in C–** factorial, binary search, recursive chains **Writing Recursive Programs–**Towers of Hanoi **Queues: The Queue and its Sequential Representation–**C Implementation of Queues, Insert Operation, Priority Queue, Array Implementation of a Priority Queue.	
UNIT – III	**12** hours
Linked Lists -Inserting and Removing Nodes from a List, Linked Implementation of Stacks, getnode and freenode Operations, Linked Implementation of Queues, Linked List as a Data Structure, List Operations, List Implementation of Priority Queues, Header Nodes, Array Implementation of Lists, and Limitations of the Array Implementation. **Lists in C–**Allocating and Freeing of Dynamic variables, Linked Lists using Dynamic Variables, Queues as List in C, List Operations in C, Non integer and Non homogeneous Lists, Comparing the Dynamic and Array Implementations of Lists, Implementing Header Nodes in linked list.	
UNIT – IV	**10** hours
Other List Structures—Circular Lists, Stack as a Circular List, Queue as a Circular List, Primitive Operations on Circular Lists, Header-nodes, Doubly Linked Lists, **Binary Trees —**Operations on Binary Trees, Applications of Binary Trees.**Binary Tree Representations–**Node Representation of Binary Trees, Internal and External Nodes.	
UNIT – V	**10** hours
Binary Trees: Implicit Array Representation of Binary Trees, Binary TreeTraversal in C, Threaded Binary Trees, Heterogeneous Binary Trees. Representing Lists as Binary Trees, Trees and Their Applications — C Representations of Trees, Tree Traversals, General Expressions as Trees, evaluating an expression tree, constructing a Tree. **Hashing:** Open Addressing, Deleting Items from a Hash Table.	

Text Books:

1. **Data Structure using C**, Aaron M. Tanenbaum, YedidyahLangsam& Moshe J. Augenstein, Pearson Education/PHI, 2006
2. **Introduction to algorithms,** Thomas H cormen, Charles E Leiserson, Ronald L Rivest& Clifford stein, The MIT press, third edition, 2009

Reference Books

i. **The C Programming Language**, Brian W Kernighan and Dennis M Ritchie, Prentice Hall Software Series, 2nd Edition
ii. **Data structures and algorithms analysis in C, Allen Weiss, Second Edition, Pearson IN**
iii. **Data Structures a Pseudocode approach with C,**RichardF.GilbergandBehrouzA.Forouzan, Thomson, 2005.
iv. **Data Structures & Program Design in C,** Robert Kruse&BruceLeung, Pearson.
v. **Foundations of Data Structures, IIT Bombay,** https://www.edx.org/course/foundations-of-data-structures

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title: *Discrete Mathematics*	***Course Code:****18IS34*
L-T-P:*3-2-0*	***Credits:****4*
Total Contact Hours:*39*	***Duration of SEE:****3 hrs*
SEE Marks: *50*	***CIE Marks:*** *50*

Pre-requisites:

Knowledge on Calculus, Number theory and fundamentals of statistics.

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Apply Mathematical logic for symbolising the statements and test the validity of premises	3
2	Apply the properties of relations, functions and lattice to solve the given problem	3
3	Construct the circuits using properties of Boolean Algebra	3
4	Apply group theory properties in data encoding, decoding and error detection	3
5	Apply planar, Euler and Hamiltonian graphs to solve network problems	3

Teaching Methodology:

- Black Board Teaching / Power Point Presentation
- Tutorials
- Assignment/Case study

Assessment Methods:

- Rubrics to evaluate Case Study (depends on the course)
- Tutorial Evaluation
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO 1	PO 2	PO 3	PO 4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2	3						2	1		2		2
CO2	3	2	3						2	1		2		2
CO3	3	2	3						2	1		2		2
CO4	3	2	3						2	1		2		2
CO5	3	2	3						2	1		2		2
18IS34	3	2	3						2	1		2		2

COURSE CONTENT

UNIT – I	**8 hours**
Propositional and Predicate Logic Propositional Logic, Propositional Equivalences, Predicates and Quantifiers, Nested Quantifiers, Rules of Inference, Introduction to proofs. Topics (Text Book 1) – Chapter: 1.1 to 1.6.	
UNIT – II	**8 hours**
Relations and digraphs Product sets and partitions, Relations and digraphs, paths in relations and digraphs, Properties of Relations, Equivalence Relations, Operations on Relations, partially ordered Sets, Hasse diagram, Extremal elements of Posets, topological sorting, Lattices. Topics (Text Book 2) - Chapter-4 and Chapter-6 (6.1, 6.2, 6.3)	
UNIT – III	8 hours
Functions Functions, Special types of functions, invertible functions, Growth of Functions, Finite Boolean algebras, Functions on Boolean Algebra, Circuit Designs. Topics (Text Book 2) - Chapter- 5 (5.1, 5.3) Chapter-6 (6.4, 6.5, 6.6)	
UNIT – IV	**8 hours**
Groups and Coding Theory Binary Operations Revisited, Semigroups, Products and Quotients of Semigroups, Groups, Products and Quotients of Groups, Coding of Binary Information and Error Detection, Decoding and Error Correction. Topics (Text Book 2) - Chapter – 9 (9.1 to 9.5) Chapter – (10.1 to 10.2)	
UNIT – V	**7hours**
Introduction to Graph Theory Connected Graphs, Common classes of Graphs, Multigraphs and Digraphs, the Degree of a vertex, Regular Graphs, Degree sequences, Graphs and Matrices, Isomorphism, Eulerian Graphs, Hamiltonian Graphs, Planar Graphs. Topics (Text Book 3) - Chapter-1(1.2-1.4),Chapter-2 (2.1-2.4), Chapter-3 (3.1), Chapter-6(6.1,6.2) and Chapter-9 (9.1) Proofs of Theorems – 1.6, 1.11, 1.12, 6.1, 6.11	

Text books:

4. Discrete Mathematics & its Applications, Keneth H Rosen, 7th Edition, McGraw-Hill.
5. Discrete Mathematical Structures, Kolman, Busby and Ross, 6th Edition, Pearson Education Asia.
6. Introduction to Graph Theory, GraryChartrand and Ping Zhang, Tata McGraw-Hill, 2006.

Reference books:

1. Treatise on Discrete Mathematical Structures, JayanGanguly, Revised Edtion 2012, Pearson.
2. Discrete Mathematics and Combinatorics by T.Sengadir, Pearson publication, 2009.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Department: Information Science and Engineering	**Course Type:** Core
Course Title: **Computer Organization & Architecture**	**Course Code:** 18IS35
L-T-P: 4-0-0	**Credits:** 04
Total Contact Hours: 52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

i. Fundamentals of Computers.
ii. Knowledge on working principles of semiconductor devices like transistor, capacitor and diode.

Course Outcomes:
Students will be able to:

Cos	**Course Outcome Description**	**Blooms Level**
1	Describe the fundamentals of machine instructions, addressing modes and processor clock	L2
2	Understand the internal functional units of a processor to execute instructions and mechanism for generating control signals	L2
3	Analyse internal organization of memory chip and the impact of cache on processor performance	L4
4	Illustrate the approaches involved in achieving communication between Processor and I/O devices	L2
5	Apply Booth algorithm for performing signed integer multiplication, restoring and nonrestoring methods for integer division	L3
6	Understand the classic five stage pipeline and its role in improving the processor performance	L2

Teaching Methodology:

i. Black board teaching

Assessment Methods:

i. Aptitude test (GATE syllabus) for10 Marks.
ii. Assignment for 10 marks.
iii.Three MSEs for 30 Marks each will be conducted and the Average of best of two will be considered.
iv.Semester End Examination for 100 Marks will be conducted and reduced for 50 Marks.

Course Outcome to Programme Outcome Mapping:

18IS35	3	3	3						1	1		1		3

COURSE CONTENT

UNIT – I	8hours
Basic Structure of Computers: Computer Types, Functional Units, Basic Operations Concepts, Performance: Processor clock, Basic Performance Equation, clock rate, Performance measurement. **Machine Instructions and Programs**: Memory Locations and Addresses, Memory Operations, Instructions and instruction sequencing: Register Transfer Notation, Assembly Language Notation, Instruction Types, Instruction Execution and straight line sequencing, branching, condition codes, Addressing modes.	
UNIT – II	**12hours**
Basic processing unit: Some Fundamental Concepts: Register Transfers, Performing an Arithmetic or Logic Operation, Fetching a word from Memory, Storing a word in memory; Execution of a complete Instruction: Branch Instructions; Multiple Bus Organization, Hardwired Control: A Complete Processor; Micro programmed Control: Microinstructions;	
UNIT – III	**11hours**
The Memory System: Some basic concepts, Semiconductor RAM Memories: Internal organization of Memory chips, static memories, Asynchronous DRAMS, synchronous DRAMS, Read-Only Memories, Speed size and cost, Cache memories: Mapping functions, Replacement Algorithms, Performance considerations: Interleaving, Hit rate and Miss Penalty, Caches on the processor chips, other enhancements.	
UNIT – IV	**11hours**
I/O Organization: Access of I/O devices, Interrupts, Direct Memory Access,Buses,I/O interfaces **-** Serial port, Parallel port **Arithmetic:** Signed Operand Multiplication: Booth Algorithm; Fast Multiplication: Bit – Pair recoding of Multipliers, Integer Division.	
UNIT – V	**10hours**
Fundamentals of Computer Design: Defining Computer Architecture **-**Instruction Set Architecture **Pipelining:** Basic and Intermediate Concepts: What Is Pipelining?, The Basics of a RISC Instruction Set, A Simple Implementation of a RISC Instruction Set, The Classic Five-Stage Pipeline for a RISC Processor, The Major Hurdle of Pipelining—Pipeline Hazards.	

Text books:

1. ComputerOrganization, Carl Hamacher, ZvonkoVranesic, SafwatZaky, 5th Edition, TMH
2. Computer architecture: A quantitative approach, John L. Hennessy and David. A. Patterson, 4th edition, Elsevier

Reference books:

1. Computer Organization & Architecture, William Stallings, 7thEdition, PHI, 2006.

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title*: Digital Design Lab*	***Course Code:****18ISL36*
L-T-P:*0-0-2*	***Credits: 1***
Total Contact Hours:*26 hours*	***Duration of SEE:****3 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

i. Basic Knowledge on Physics and fundamentals of Electronics.

Course Outcomes:

Students will be able to:

Cos	**Course Outcome Description**	**Blooms Level**
1	Apply the concepts of Boolean Theorems and K-Maps to realize the combinational logic circuits.	L3
2	Implement sequential circuits using integrated circuits.	L3
3	Implement digital to analog convertor and compare theoretical with experimental values.	L3
4	Simulate combinational and sequential circuits using HDL.	L3

Teaching Methodology:

i. Black Board Teaching

ii. Laboratory experiments

Assessment Methods:

i. Rubrics for continuous evaluation of laboratory experiments for 30 marks.

ii. Two Continuous Internal Evaluations (CIEs) for 20 Marks each will be conducted, and average will be considered.

iii. Semester End Examination (SEE) for 50 Marks will be conducted.

Course Outcome to Programme Outcome Mapping:

CO4	3	2	3	2	1				1	1			3	
18ISL36	3	2	3	2	1				1	1			3	

Sl No	Experiments	CO
Part A		
1.	Realization of Full Adder & Full Subtractor Using NAND gate	1, 2
2.	Implementation of Full Adder & Full Subtractor using 4 : 1 MUX (IC 74153)	1, 2
3.	Converting Binary Number to Seven Segment Display Using Decoder IC 7747	1, 2
4.	Design & Verify Parity Generator & Checker (Even Parity & Odd Parity)	1, 2
5.	Realization of SR, JK, D and T Flip Flops using NAND gates.	2, 3
6.	Implementation of J.K Master Slave Flip Flop using NAND Gates	2,3
7.	Design and Implement Asynchronous UP, DOWN and UP & DOWN Using IC-7476 (JK)	3
8.	Design and Implementation of MOD-N Synchronous Counter Using IC-7476 (JK)	3
9.	Implementation of Ring Counter & Johnson Counter Shift Register Using 7495	3
10.	Digital Analog Converter (DAC) using R to 2R Ladder Method	4
Part B		
1.	Realize logic gates using HDL.	5
2.	Realize 2 to 4 decoder using HDL	2, 5
3.	Realize8 to 3 (Encoder Without Priority & With Priority)	2, 5
4.	Realize8 to 1 Multiplexer	2, 5
5.	Realize4 bit binary to gray Converter	2, 5
6.	Realize Multiplexer, De-Multiplexer, Comparator	2, 5
7.	Realize Flip flop and Counters	3, 5

Department: *Information Science and Engineering*	***Course Type:*** *Core*

18ISL37	3	2	3	2					2	1				3

COURSE CONTENT

Program No.	Program Title	CO Mapping
1	Design and implement C program to demonstrate advantages/usage of pointers. (E.g. add two Matrices using pointer concept, Functions for string manipulation, String manipulation functions).	1
2	Design and implement a database application in C. (E.g. Student/Faculty information using structures).	1
3	Design and implement a stack (Array implementation/ Linked list implementation) and demonstrate its working with necessary inputs. Display the appropriate messages in case of exceptions.	3
4	Design and implement an algorithm for conversion of an expression from one form to another. Demonstrate its working with suitable inputs.	2
5	Design and implement an algorithm to evaluate an arithmetic expression which may be any form (postfix, prefix, infix), and demonstrate its working with suitable examples.	2
6	Design and implement a given type of (ordinary queue, circular queue) queue in C (array implementation/ Linked list implementation). And demonstrate its working with suitable inputs. Display appropriate messages in case of exceptions.	3
7	Design and implement a dynamic list (Singly linked list/ doubly linked list) to store any information which needs a linear data structure.	3
8	Design and implement binary tree and demonstrate its working	4

18ISL38	**3**	**2**	**3**	**1**					**1**	**1**			**3**	

COURSE CONTENT

Sl No	Experiments	CO
	Part A	
1.	List file/directory handling commands.	**1**
2.	Simple shell script for basic arithmetic and logical calculations.	**2**
3.	Shell scripts to check various attributes of files and directories.	**2**
4.	Shell scripts to check and list attributes of processes.	**2**
5.	Write awk script that uses all of its features.	**3**
6.	Write a shell script to display list of users currently logged in.	**2**
	Part B	
7.	Write a C/C++ program to implement the CAT command using general file API.	**4**
8.	Write a C/C++ program to implement the Cp command using general file API's.	**4**
9.	Write a C/C++ program to implement the ln/rename ( )using general file API's.	**4**
10.	Write a C/C++ program to create a file called file1 in blocking read-write mode and show how you can use fcntl api to modify its access control flags to non-blocking read-write mode.	**4**
11.	Write a C/C++ program to duplicate the file descriptor of a file Foo to standard input file descriptor	**4**
12.	Write a C/C++ program to query and display the different attributes associated with a file.	**4**
13.	Write C/C++ program to read and display the last 10 character's of the input file.	**4**
14.	Write a C/C++ program to demonstrate masking of read/write/execute permission of a specified input file for user group and others category.	**4**

Course Title: Engg. Mathematics-IV	Course Code: 18MAT41
L-T-P: 3-1-1	Credits: 4
Total Contact Hours: 52 hrs	Duration of SEE: 3 hrs
SEE Marks: 50	CIE Marks: 50

Course Outcomes:

Students will be able to

COs	Course Outcomes	Blooms Level
1	Concept of linear algebra can be applied to analyse and solve problems	2
2	Physical situations can be modeled using concepts and algorithms of Linear algebra	3
3	Concepts of random variables, probability distributions and sampling can be applied to problem solving	4
4	Probability distributions can be used for testing of hypothesis of testing and model situations arising in analysis of data	3
5	Modelling situations using Markov process and Queueing theory	2

Teaching Method:

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

Assessment Method:

- Assignment / Tutorials tests to be conducted for 10 marks.
- Quiz/ Surprise test based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

Course Outcome to Programme outcome Mapping:

CO/PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	2	1		1										1

CO3	2	1		2	1									1
CO4	2	1		2	1									1
CO5	2	1		2	1									1
18MAT41														

Course Contents

UNIT-I	08 hrs
Vector spaces- definition, examples, Linear combinations, subspaces, linear dependence, basis and dimension, linear mapping, linear operator, matrix representation of linear operator, change of basis.	
UNIT-II	**08 hrs**
Polynomial of matrices, Characteristic polynomial, diagonalization, Eigenvalues and eigen vectors, minimal polynomial, inner product space, Jordan canonical form, Orthogonal vectors and subspaces, Gram Schmidt Orthogonalization process	
UNIT-III	**08 hrs**
Random variable - discrete and continuous, probability distribution- discrete and continuous, probability density function, cumulative density function, mean and variance, expectation. Joint distribution - discrete and continuous, marginal distribution, expectation, covariance, rank correlation. Binomial, Poisson, Normal distribution.	
UNIT-IV	**08 hrs**
Sampling theory - Population and sample, sampling with and without replacement, sampling distribution of means, sample variance. Unbiased estimate, confidence intervals for mean, statistical hypothesis, testing of hypothesis, Type I and II errors, one tailed, two tailed tests, test for significance level of large and small samples, t - test, χ^2 – test for goodness of fit.	
UNIT-V	**10 hrs**
Markov process – definition, examples, transition probability matrix, n – step transitional probabilities, regular, ergodic matrices, stationary distribution, classification of states, Markov chain with absorbing states, periodic, transient and recurrent states. Queueing theory - Pure birth process, death process, birth and death process, Queuing system, list of symbols, Kendall's notation, M/M/1:∞/FIFO and M/M/c:∞/FIFO model.	

Text Books:

1. Probability and statistics, by Murray R Spiegel, J Schiller, R Alu Srinivasan, Schaum's outline series, second edition.
2. Operations research by Richard Bronson & Govindasami Nadimuthu, Schaum's outline series, second edition.
3. Linear Algebra by Lipschitz, Schaum's outline series, second edition.

Reference Books

1. Probability and statistics for Science and Engg. By G Shanker Rao, Univ Press, 2011
2. Probability and stochastic processes, Roy D Yates, David J Goodman, second edition, 2012, Wiley

i. Students should have knowledge of ‘C’ Programming concepts
ii. Knowledge of data structures and discrete mathematics.

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the fundamentals of algorithms and asymptotic notations	L2
2	Apply brute force / divide & conquer design techniques for solving the given problem	L3
3	Apply decrease & conquer / transform conquer design techniques for solving the given problem	L3
4	Use space and time trade-off techniques for sorting and pattern matching problems	L3
5	Apply dynamic programming techniques for solving transitive closure / shortest path / Knapsack problems	L3
6	Apply greedy and backtracking techniques to solve the given problem.	L3

Teaching Methodology:

i. Black Board Teaching
ii. Power Point Presentation
iii. Tutorials

Assessment Methods:

i. Aptitude Test based on GATE syllabus for 10 Marks.
ii. Online NPTEL course for 10 Marks
iii. Three MSEs for 30 Marks each will be conducted and the Average of best of two will be considered.
iv. Semester End Examination for 100 Marks will be conducted and reduced for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

18IS42	3	2	3						1			2		3

COURSE CONTENT

UNIT – I	**12hours**
Introduction: What is an Algorithm? Fundamentals of algorithmic problem solving, Performance Analysis: Space Complexity. **Fundamentals of Analysis of Algorithm Efficiency:** Analysis Framework: Measuring an input's size, Units for Measuring Running Time, Orders of Growth, Worst-case, Best-Case, and Average Case Efficiencies, Asymptotic Notations and Basic Efficiency Classes: Informal introduction, O-notation, Ώ-notation, θ-notation, Basic Efficiency classes; Mathematical Analysis of Non-recursive and Recursive Algorithms	
UNIT – II	**8 hours**
Brute Force: Brute-Force String Matching, Exhaustive Search: Travelling Salesman Problem, Assignment Problem. **Divide and Conquer:** Merge sort, Quick Sort, Binary tree traversals and related properties, Multiplication of Large Integers and Strassen's Matrix Multiplication.	
UNIT – III	**12 hours**
Decrease and Conquer: Insertion Sort, Depth First Search, Breadth First Search, Topological Sorting, Decrease by a Constant factor algorithms: Josephus Problem. **Transform and Conquer:** Balanced Search Trees, Heaps and Heap sort	
UNIT – IV	**10hours**
Space and Time Trade-offs: Sorting by counting, Input Enhancement in String Matching: Horspools Algorithm, Boyer-Moore. **Dynamic Programming:**Warshall's and Floyd's Algorithms, Knapsack problem and Memory Function.	
UNIT – V	**10hours**
Greedy Technique: Prim's Algorithm, Kruskal's Algorithm, Djikstra's Algorithm, Huffman Trees, **Limitations of Algorithm Power:** Decision trees, P, NP and NP- Complete Problems **Backtracking:** n-Queens Problem, Subset-Sum Problem, Graph coloring.	

Text books:

1. Introduction to the Design & Analysis of Algorithms, Anany Levitin, 2ndEdition, Pearson education, 2007
2. Computer Algorithms, Ellis Horowitz, SartajSahani, SanguthevarRajasekaran, 2nd Edition, Computer Science Press.

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title*: Object Oriented Programming with C++*	***Course Code:18IS43***
L-T-P:*3-0-0*	***Credits:****03*
Total Contact Hours: *39hrs.*	***Duration of SEE:*** *3 hrs.*
SEE Marks*: 50*	***CIE Marks:*** *50*

Prerequisite:

- Knowledge of C Programming

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Illustrate the basic concepts of object-oriented programming.	L2
2	Design appropriate classes for the given problem	L3
3	Apply the knowledge of compile-time / run-time polymorphism to solve the given problem	L3
4	Use the knowledge of inheritance for developing optimized solutions	L3
5	Apply the concepts of templates and exception handling for the given problem	L3
6	Use the concepts of input output streams for file operations	L3

Teaching Methodology:

i. Blackboard teaching
ii. PowerPoint presentations
iii. Course Project

Assessment Methods:

i. Rubrics to evaluate Course Project for 20 marks
ii. Three MSEs for 30 Marks each will be conducted and the Average of best of two will be considered.
iii. Semester End Examination for 100 Marks will be conducted and reduced for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COURSE CONTENT

UNIT – I	**08** hours
An Overview of C++ : What is object–Oriented Programming ?,Some C++ Fundamentals, Old Style Vs Modern C++, Introducing C++ Classes, The General Form of a C++ Program. **Classes and Objects :**Classes, Friend Functions, Friend Classes, Inline Functions, Parameterized Constructor , StaticClass Members, When Constructors and Destructors Are Executed, The Scope Resolution Operator, Passing Objects to functions, Returning Objects, Object Assignment	
UNIT – II	**08**hours
Arrays, Pointers, References, and the Dynamic Allocation Operators: Arrays of Objects, Pointers to Objects ,ThethisPointer, Pointers to derived types, Pointers to class members C++' s Dynamic Allocation Operators. **Function Overloading, Copy Constructors, and Default Arguments:** Function Overloading, OverloadingConstructorFunctions ,Copy constructors, Finding the Address of an Overloaded Function ,The overloaded Anachronism, Default Function Arguments, Function Overloading and Ambiguity,	
UNIT – III	**08**hours
Operator Overloading: Creating a Member Operator Function, Operator Overloading Using a Friend Function,Overloading new and delete, Overloading Some Special Operators, Overloading the Comma Operator. **Inheritance: Base-**Class Access Control, Inheritance and Protected Members, Inheriting Multiple Base Classes, Constructors, Destructors, and Inheritance, Granting Access, Virtual Base Classes.	
UNIT – IV	**07** hours
Virtual Functions and Polymorphism: Virtual Functions, The Virtual Attribute Is Inherited, Virtual Functions areHierarchical, Pure Virtual Functions, Using Virtual Functions, Early vs. Late Binding. **Templates:** Generic Functions, Applying Generic Functions, Generic Classes, The typename and export Keywords, The Power of Templates, Fundamentals of STL	
UNIT – V	**08** hours
Exception Handling: Exception Handling Fundamentals, Handling Derived-Class Exceptions, Exception Handling Options, Applying Exception Handling. **The C++ I/O System Basics:** C++ Streams, The C++ Stream Classes, Formatted I/O, Overloading << and >>**C++ File I/O:** <fstream> and File Classes, Opening and Closing a File, Reading and Writing Text Files, Unformatted and Binary I/O: More get() Functions, getline(), Detecting EOF, The ignore(), Peek() and putback(), flush().	

Text Book

1. The Complete Reference C++, Herbert Schildt, 4th Edition, TMH, 2005.

Reference Books

1. C++ Primer, Stanley B. Lippman, JoseeLajoie, Barbara E. Moo,4th Edition, AddisonWesley, 2005.
2. Object-Oriented Programming with C++, SouravSahay, Oxford University Press, 2006.

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Microcontroller	**Course Code:**18IS44
L-T-P:4-0-0	**Credits:**04
Total Contact Hours:52hours	**Duration of SEE:**03 hours
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

i. Digital Logic Circuits, Digital Electronics and Programming using C
ii. Computer Organization and Architecture.

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the Architecture of 8051microcontroller.	L2
2	Describe the addressing modes and Instruction sets of 8051 microcontrollers	L2
3	Apply Assembly Language and Embedded C for designing Timer/Counter of 8051microcontroller	L3
4	Use interrupts subroutine for designing serial communication of 8051 microcontroller.	L3
5	Develop an Embedded C program for 8051 microcontrollers to interface with peripheral devices	L3

Teaching Methodology:

i. Black Board Teaching
ii. Power Point Presentation

Assessment Methods:

i. Rubrics to evaluate course project for 20 marks.
ii. Three MSEs for 30 Marks each will be conducted and the Average of best of two will be considered.
iii. Semester End Examination for 100 Marks will be conducted and reduced for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO 1	PSO 2

18IS44	3	2	1	1		2	1		2	2		2	3	

COURSE CONTENT

UNIT – I	12 hrs
Microprocessor and Microcontroller: Introduction, Microprocessor and Microcontrollers, Inside the Computer, Microcontrollers and Embedded Processors, Overview of the 8051 Family. **The 8051 Architecture:** Introduction, 8051 Microcontroller hardware, input / output pins, Ports and circuits, External Memory, Timers, Serial Communication and Interrupts. **Addressing Modes and Operations:** Introduction, Addressing modes, External data moves, Code Memory data moves, PUSH and POP Instructions, Data Exchanges, Example Programs.	
UNIT – II	**11 hrs**
Logical and Arithmetic: Byte level logical operations, Bit level logical operations, Rotate and Swap Operations, Example Programs. **Arithmetic operations:** Flags, Incrementing and decrementing, addition, Subtraction, multiplication and division, decimal arithmetic, Example Programs. **Jump and Call Instructions:** The jump and call Program range, jumps, calls and subroutines. Example Problems.	
UNIT – III	**10hrs**
8051 Programming in C: Data types and time delays in 8051C, I/O programming, logic operations, data conversion programs, accessing code ROM space, data serialization. **Timer / Counter Programming in 8051:** Programming 8051 Timers in C, Counter Programming timers 0 and 1 in 8051 C.	
UNIT – IV	**10hrs**
8051 Serial Communication: Basics of serial Communication, 8051 connections to RS 232, 8051 serial communication Programming, Serial programming in C. **Interrupts Programming:** 8051 Interrupts, Programming timer interrupts, programming external hardware interrupts, Programming the serial communication interrupts, Interrupts priority in the 8051/52, Interrupt programming in C.	
UNIT – V	**09 hrs**
8051 Interfacing and Applications: Interfacing 8051 to LCD,Keyboard, ADC, DAC, stepper motor interfacing and DC motor interfacing and PWM.

Total Contact Hours:26 hrs	***Duration of SEE: 3 hrs***
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

i. Knowledge of data structures and discrete mathematics

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Apply brute force / divide& conquer / decrease & Conquer techniques to solve the given problem	L3
2	Develop the programs to implement tree traversals using BFS and DFS	L3
3	Implement dynamic programming method to find transitive closure and all pair shortest path.	L3
4	Apply greedy technique for finding minimum spanning tree using Prim's / Kruskal's/ Dijkstra's algorithm.	L3
5	Apply Horspools algorithm / backtracking technique to solve the given problem	L3

Teaching Methodology:

i. Black Board Teaching
ii. Power Point Presentation
iii. Laboratory experiments

Assessment Methods:

i. Rubrics for continuous evaluation of laboratory experiments for 30 marks.
ii. Two Continuous Internal Evaluations (CIEs) for 20 Marks each will be conducted and average will be considered.
iii. Semester End Examination (SEE) for 50 Marks will be conducted.

Course Outcome to Programme Outcome Mapping:

18ISL46	3	2	3	2					1	1				3

COURSE CONTENT

Program No.	Program Title	CO Mapping
Note: **1. The following programs can be executed on C/C++/any equivalent tool/language** **2. Find the time and space complexity for every problem statement.**		
1	Design a C program to sort 'n' elements using selection sort in ascending or descending order. Also find its space and time complexity.	1
2	Consider a list of 'n' files numbered using ID's. Write a C program to sort files based on its ID using merge sort. Also find its time and space complexity.	1
3	Write a C program that, for a given digraph outputs all the vertices reachable from a given starting vertex using BFS method. Find its time and space complexity.	2
4	Consider a network having 'n' systems. Design a DFS based program in 'C' which outputs all systems reachable from a given system. Find its time and space complexity	2
15	Suppose you are given a list of students who are assigned IDs. Write a C program to sort these students based on their id's using heapsort. Find its time and space complexity	1
6	Consider the problem of searching for genes in DNA sequences. A DNA sequence is represented by a text using alphabets [A, C, G, T]. Design a 'C' program to locate a pattern in a given DNA sequence using Horsepool's algorithm. Find its time and space complexity.	5
7	Consider a network of 'n' systems represented as a Graph. Write a 'C' program to find the transitive closure of such a network using warshall's algorithm. Find its time and space complexity.	3
8	Suppose in a network of cities, you are interested in finding shortest paths between all cities. Design a 'C' program to implement this using floyd's algorithm. Find its time and space complexity.	3
9	Suppose a travel agent is interested in finding shortest path from a single city to all the other cities in a network of 'n' cities. Write a C program to implement this using Djikstra's algorithm. Find its time and space complexity.	4
10	Consider a Electrical layout where 'n' houses are connected by electrical wires. Design a 'C' program using Prim's algorithm to output a connection with minimum cost. Find its time and space complexity.	4
11	A Government wants to construct a road network connecting 'n' towns. Suppose each road must connect '2' towns and be straight. Write a C program using Kruskal's algorithm to output the least expensive tree of roads. Find its time and space complexity.	4
12	Consider 'n' patients and 'nxn' small rooms. Design a C program to allot the patients to these rooms using nqueen's method such that no two patients are allotted rooms in same row, column or diagonal. Find its time and space complexity.	5

COURSE CONTENT

Program No.	Program Title	CO Mapping
1	Design a C++ program to implement stack using following functions: a) Push b) Pop c)Display	1
2	a) Design a C++ program to read the data of n employee and compute net salary of each employee using pointer. Given that an employee class contains following:-Data members: Employee no, Employee name, Basic salary, DA, IT, Net salary, gross salary Member functions: To read data, to calculate net salary and to print data[DA = 52% of basic salary, IT = 30% of gross salary, Gross salary = DA + Basic, Net salary = DA + Basic– IT]. b) Design a C++ program to find the largest of three numbers using inline function.	1
3	Design a C++ program to define a student class with data members usn, name and marks of 3 subjects. And member functions to read, display, and to calculate average of best 2 marks. Also find who is the topper among "n" no. of students	1
4	a) Design a C++ program to implement access control to some shared resource used by all objects of a class using a static variable. b) Design a C++ program to keep the track of the number of objects of a particular class type that are inexistence using a static variable.	1
15	Design a C++ program to implement a class which accepts date in different formats (using constructor overloading).	2
6	Design a C++ program to create class called list with member functions to insert an element from front as well as to delete element from front of list. Demonstrate all functions by creating list object.	2
7	Design a C++ program for a hospital to create a database regarding its indoor patients. (Identify the member function). create a base class to store above information, member function should include functions to enter information and display list of all the patients in the database. Create a derived class to store the information about paediatric patients (less than 12yrs age).	3
8	Design a C++ program for exception handling. Create a user defined exception classes for divide by zero and negative number input separately.	3
9	Design a C++ program for sorting names using file handling	4
10	Design a C++ program to implement following operator overloading concept using complex number. + , - ,+ +, -, = =.	2
11	Design a C++ program to convert dollar to rupees, euro to rupees and pound to rupees using pure virtual functions.	
12	Design a C++ program to sort integers and floating point numbers using template.	4
13	a)Write a C++ program to create a file to store Account holdername, account number and alance for given number of customers. Alsoretrieve the values from the file and print it on the standard output. b) Write a C++ program to convert dollar to rupees, euro to rupees andpound to rupees using pure virtual functions. 1 dollar = 54.3 Rs 1 pound = 81.1Rs 1 euro = 70. Rs	4
14	a)Write a C++ program to perform ( ) overloading. b) Write a C++ program to perform -> overloading.	2
15	Sorting using Genric classes	2

COURSE CONTENT

UNIT – I	**8** hours
The way of the program: The Python programming language, what is a program? , What is debugging, Formal and natural languages, the first program, Debugging. Variables, expressions and statements : Values and types , Variables, Variable names and keywords, Operators and operands, Expressions and statements, Interactive mode and script mode, Order of operations, String operations, Comments, Debugging Functions: Function calls, Type conversion functions, Math functions, Composition, Adding new functions, Definitions and uses, Flow of execution, Parameters and arguments, Variables and parameters are local, Stack diagrams, Fruitful functions and void functions, Why functions?, Importing with from, Debugging.	
UNIT – II	**8** hours
Conditionals and recursion: Modulus operator, Boolean expressions , Logical operators, Conditional execution , Alternative execution, Chained conditionals , Nested conditionals , Recursion , Stack diagrams for recursive functions, Infinite recursion , Keyboard input , Fruitful functions: Return values, Incremental development, Composition , Boolean functions. Iteration: Multiple assignment, Updating variables, the while statement, break, Squareroots, Algorithms.	
UNIT – III	**7** hours
A string is a sequence: len, Traversal with a for loop, String slices, Strings are immutable, Searching, Looping and counting, String methods, the in operator, String comparison. Lists: A list is a sequence, Lists are mutable, Traversing a list , List operations, List slices, List methods, Map, filter and reduce, Deleting elements, Lists and strings, Objects and values, Aliasing, List arguments.	
UNIT – IV	**8** hours
Dictionaries: Dictionary as a set of counters, Looping and dictionaries, Reverse lookup, Dictionaries and lists, Memos, Global variables, Long integers, Debugging. Tuples: Tuples are immutable, Tuple assignment, Tuples as return values, Variable-length argument tuples, Lists and tuples , Dictionaries and tuples, Comparing tuples , Sequences of sequences.	
UNIT – V	**8h**ours
Files: Persistence, Contents, Catching exceptions, Databases, Writing. Classes and objects: User-defined types, Attributes, Rectangles, Instances as return values, Objects are mutable, Copying, Classes and functions: Time, Pure functions, Modifiers, Prototyping versus planning. Classes and methods: Object-oriented features, Printing objects, another example, A more complicated example, The init method, The __str__ method, Operator overloading, Type-based dispatch, Polymorphism.

Department: Information Science and Engineering	**Course Type:** Program Elective A
Course Title: Web Technology	**Course Code:** 18ISE452
L-T-P:3-0-0	**Credits: 03**
Total Contact Hours:39 hours	**Duration of SEE:**03 hours
SEE Marks: 50	**CIE Marks:** 50

Pre-requisite:

- Basic conventional Programming practices

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Describe the fundamentals of web technology.	L2
2	Design web pages using HTML mark-up language for the given Scenarios.	L3
3	Apply the concepts of Cascading Style Sheets for designing the web pages.	L3
4	Demonstrate the use of JavaScript to develop the dynamic user interface.	L3
5	Understand server-side scripting using PHP and basics of XML	L1

Teaching Methodology:

- Black board teaching
- Power Point presentations
- Regular review of students by asking questions based on topics covered in the class
- Course Project

Assessment Methods:

- Course Project -15Marks
- Case Study – 5 Marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Cos	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO5	3	1							2	2		2		3
18ISE452	3	3	3			1			2	2		2		3

COURSE CONTENT

UNIT – I	**8** hours
Internet and web technologies, structuring an HTML document, Exploring Editors and Browsers Supported by HTML5, Creating and saving an HTML document, Validating and Viewing an HTML document, Understanding HTML elements, Describing data types, Formatting text with HTML elements, Arranging text, Exploring the hyperlinks and URL, Creating tables.	
UNIT – II	**10 hours**
HTML Continued **-** Inserting images in a web page, Exploring colours, working with forms, Exploring audio and video formats, Describing the multimedia elements, Defining a multimedia file using the EMBED element. CSS – Overview of CSS, Background and colour gradient in CSS, font and text styles, Creating Boxes and Columns in CSS, Displaying, Positioning and Floating an element, List styles, Table layouts.	
UNIT – III	**10 hours**
Exploring the features of Javascript, Using Javascript in an HTML Document, Programming fundamentals of Javascript, Javascript functions, events, image maps and animations, Objects in Javascript, Working with Browser objects, Working with Document Object, Document Object Model.	
UNIT – IV	**6 hours**
Introduction to PHP: Origins and uses of PHP, Overview of PHP, General syntactic characters, Primitives operations and expressions, output, control statements, Arrays, Functions, Pattern matching, Form handling, Cookies, Session Tracking, comparative study of different technologies and its applications.	
UNIT – V	**5hours**
Introduction to XML: Working with basics of XML – Exploring XML, Comparing XML with HTML, Advantages and disadvantages of XML, Structure of XML document,	

TEXT BOOKS:

1. HTML5 Covers CSS3, JavaScript, XML, XHTML, AJAX, PHP and Jquery Black Book, dreamtech PRESS, ISBN:978-93-5119-907-6, 2019
2. Programming the World Wide Web- Robert W. Sebesta, 7thEdition, Pearson Education, 2014.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title*: Graph Theory*	***Course Code:****18ISE453*
L-T-P:*3-0-0*	***Credits:****3*
Total Contact Hours:*39*	***Duration of SEE:****3 hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:
Discrete Mathematics, Basic Knowledge on Graphs

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Apply the properties of trees to solve spanning tree problems	L3
2	Use the concepts of connected graphs, graph colouring, and digraphs to solve the given problem	L3
3	Apply different representations of planar graphs to detect graph planarity	L3
4	Formulate and prove central theorems about trees, connectivity, colouring and planar graphs Apply appropriate graph theoretic algorithms to solve shortest path problems	 L3
5	Apply the concepts of distances and dominations to solve the given problem	L3

Teaching Methodology:

i. Black Board Teaching / Power Point Presentation
ii. Assignment
iii. Case study

Assessment Methods:

- Rubrics to evaluate Case Study for 10 marks
- Rubrics to evaluate Assignments for 10 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2	3						2	2		2		2
CO2	3	2	3						2	2		2		2
CO3	3	2	3						2	2		2		2
CO4	3	2	3						2	2		2		2
CO5	3	2	3						2	2		2		2
18ISE453	3	2	3						2	2		2		2

COURSE CONTENT

UNIT – I	**8** hours
Trees and Fundamental Circuits Trees, Some Properties of Trees, Pendant Vertices in a Tree, Distance and Centers in a Tree, Rooted and Binary Trees, On Counting Trees, Spanning Trees, Fundamental Circuits, finding all Spanning Trees of a Graph, Spanning Trees in a Weighted Graph. Topics (Text Book 1) – Sections: 3.1 to 3.10	
UNIT – II	**8** hours
Connectivity, Digraphs and Coloring Cut-Vertices, Blocks, Connectivity, Strong Digraphs, Tournaments, Decision Making, The Four Color Problem, Vertex Coloring, Edge Coloring. Topics (Text Book 2) – Sections: 5.1 to 5.3, 7.1 to 7.3, 10.1 to 10.3	
UNIT – III	**8** hours
Planar and Dual Graphs Combinatorial Vs. Geometric Graphs, Planar Graphs, Kuratowski's Two Graphs, Different Representations of a Planar Graph, Detection of Planarity, Geometric Dual, Combinatorial Dual, More on Criteria of Planarity, Thickness and Crossings. Topics (Text Book 1) – Sections: 5.1 to 5.9	
UNIT – IV	**8** hours
Graph Theoretic Algorithms and Computer Programs Algorithms, Computer Representation of a Graph, Shortest Path Algorithms, Depth First Search on Graph, Isomorphism, Other Graph Theoretic Algorithms, Performance of Graph Theoretic Algorithms, Graph Theoretic Computer Languages. Topics (Text Book 1) – Sections: 11.1 to 11.10	
UNIT – V	**7** hours
Distance and Domination The Center of a Graph, Distant Vertices, Channel Assignment, The Domination Number of a Graph, Lights out Topics (Text Book 2) – Sections: 12.1, 12.2, 12.5, 13.1, 13.3	

Text books:

1.NarsinghDeo, Graph Theory with Applications to Engineering and Computer Science. Prentice-Hall.

Course Title*: Linear Algebra*	***Course Code:****18ISE454*
L-T-P:*3-0-0*	***Credits:****3*
Total Contact Hours:*39*	***Duration of SEE:****3 hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:
Students should have basic knowledge of solving and factoring algebraic expressions

Course Outcomes:
Students will be able to:

COs	Course Outcome Description	Blooms Level
1	Solve systems of linear equations using Gaussian elimination / LU factorization methods	L3
2	Apply principles of matrix algebra for linear transformations	L3
3	Compute Eigen values and Eigen vectors for diagonalization of matrices	L3
4	Apply Gram-Schmidt process to find orthogonal basis and Singular Value Decomposition in engineering applications	L3

Teaching Methodology:

i. Black Board Teaching / Power Point Presentation
ii. Problem Assignment

Assessment Methods:

- Assignment for 20 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2

CO4	3	2	3						1					2
18ISE454	3	2	3						1					2

COURSE CONTENT

UNIT – I	**8** hours
Linear equations: System of linear equations and its solution sets; elementary row operations and echelon forms; matrix operations; LU- factorization **Application of Linear Equations:** Graph Theory and Computer Graphics	
UNIT – II	**9**hours
Vector Spaces: Vector spaces; bases and dimension; coordinates, summary of row-equivalence; computations concerning subspaces. **Linear Transformations:** Linear transformations; algebra of linear transformations; isomorphism; representation of transformations by matrices; linear functional; transpose of a linear transformation	
UNIT – III	**10**hours
Canonical Forms: Characteristic values; methods for computing eigen Values-Gerschgor in circle method, Jacobi's method, Givens' method, iterative estimates, invariant subspaces; direct-sum decompositions; invariant direct sums; primary decomposition theorem (without proof); cyclic bases; Jordan canonical form.	
UNIT – IV	**6** hours
Inner product spaces: Inner products; inner product spaces; orthogonal sets and projections; Gram-Schmidt process; QR-factorization;	
UNIT – V	**6**hours
Symmetric Matrices and Quadratic Forms: Diagonalization; quadratic forms; constrained optimization; singular valued composition	

Text books:

1. **Introductory Linear Algebra with Applications by** Bernard Kolman and David R.Hill, 7th edition, Pearson Education (Asia)Pte.Ltd.

2. **Theory and problems of linear algebra** from Schaum's outline series, 3rd. edition, Tata McGraw-Hill publications.

Department: Information Science and Engineering	**Course Type**: **Core**
Course Title: Database Management System	**Course Code**: **18IS51**
L-T-P: 4-0-0	**Credits: 04**
Total Contact Hours: 52 hrs	**Duration of SEE: 3 hrs.**
SEE Marks: 50	**CIE Marks: 50**

Pre-requisites:

- Students should have basic programming knowledge.
- General concept of Set theory.

Course outcomes:

Students will be able to

Sl.no	Course outcomes	Blooms Level
1.	Describe the fundamentals of relational database concepts.	L2
2.	Design ER diagram for the given requirement specification.	L3
3.	Apply Normalization concept to eliminate anomalies and achieve consistent database.	L3
4.	Design Relational algebra and SQL Queries for the given schema.	L3
5.	Describe the properties of database transactions and concurrency control Techniques.	L2
6.	Develop Relational Database application.	L4

Teaching Methodology:

- Blackboard teaching
- Hands on approach for SQL
- PowerPoint presentations (if needed)

Assessment Methods:

- Course Project for 20 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for the evaluation assignment.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

PO'S	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO12**

CO3	3	2	3											3
CO4	3	2	3											3
CO5	3													3
CO6	3	3	2		3				3	2	2	2		3
18IS51	3	2.25	2.75		3				3	2	2	2		3

COURSE CONTENTS

UNIT I	10 Hours
Advantages of using DBMS approach; Data models, schemas and instances; DBMS component module Three-schema architecture and data independence; Database languages; Classification of Database Management systems Using High-Level Conceptual Data Models for Database Design; An Example Database Application; Entity Types, Entity Sets, Attributes and Keys; Relationship types, Relationship Sets, Roles and Structural Constraints; Weak Entity Types; ER Diagrams, Naming Conventions and Design Issues; Relationship types of degree higher than two	
UNIT II	**12 Hours**
Relational database design using ER to relational mapping; Relational Model Concepts; Relational Model Constraints and Relational Database Schemas; Update Operations, Transactions and dealing with constraint violations; Unary Relational Operations: SELECT and PROJECT; Relational Algebra Operations from Set Theory; Binary Relational Operations: JOIN and DIVISION; Additional Relational Operations; Examples of Queries in Relational Algebra;	
UNIT III	**10 Hours**
Informal Design Guidelines for Relation Schemas; Functional Dependencies: Definition of FD, Inference rules for FD; Normal Forms Based on Primary Keys; General Definitions of Second and Third Normal Forms; Boyce-Codd Normal Form. Multi valued Dependencies and Fourth Normal Form ; Join Dependencies	
UNIT IV	**10Hours**
SQL Data Definition and Data Types; Specifying basic constraints in SQL; Schema change statements in SQL; Basic queries in SQL; More complex SQL Queries .Insert, Delete and Update statements in SQL; Specifying constraints as Assertion and Trigger; Views (Virtual Tables) in SQL	
UNIT V	**10Hours**
Introduction to transaction processing: Transaction and system concepts; Desirable Properties of transactions; Transactions and Schedules; Characterizing schedules based on recoverability; Characterizing schedules based on Serializability; **Concurrency Control Techniques:** 2PL techniques for concurrency control; Recovery Concepts: Write-ahead logging, Checkpoints in the system log, Transaction Rollback; Recovery Techniques based on Deferred Update and Immediate update; Shadow paging; The ARIES recovery algorithm; Database Security: Introduction to database security issues	

Live Demonstration:

i. Installing and connecting to a database management system; Introduction to SQL, Data Definition Commands
ii. SQL data manipulation commands
iii. Simple SQL SELECT queries
iv. Advanced SQL data definition commands and SELECT queries
v. Write procedure and trigger.

Text Books:

1. Elmasri and Navathe: Fundamentals of Database Systems, 5th Edition, Addison-Wesley, 2007

Reference Books:

1. Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill, 2003
2. **Silberschatz, Korth and Sudharshan** Data base System Concepts, 5th Edition, Mc- GrawHill, 2006.
3. **C.J. Date, A. Kannan, S. Swamynatham** A Introduction to Database Systems, 8th Edition, Pearson education, 2006

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title**: **Operating Systems	***Course Code:*** 18IS52
L-T-P: *4-0-0*	***Credits:*** *04*
Total Contact Hours: *52 hrs*	***Duration of SEE:*** *3 hrs*
***SEE Marks**: 50*	***CIE Marks:*** *50*

Pre-requisites:

- Fundamental knowledge of Computer Peripheral System and Functional Units
- Knowledge of semiconductor and magnetic memory.

Course Outcomes:

Sl.no	Course outcomes	Blooms Level
1	Describe the basic structure and functionality of Operating System.	**L2**
2	Apply different scheduling algorithms to schedule multiple tasks for execution by the processor and compare their performance trade-offs.	**L3**
3	Describe the need for controlled access to computing resources by co-operative processes.	**L2**
4	Apply deadlock detection and prevention algorithms to solve the given problem	**L3**
5	Illustrate Primary and secondary memory management strategies	**L3**
6	Illustrate operating system principles for achieving protection and security.	**L2**

Teaching Methodology:

Black board Teaching/PowerPoint presentation
Industry driven case study

Assessment Methods:

Case studies ,20 Marks
Three internals, 30Marks each will be conducted and the Average of best of two will be taken.
Rubrics for case study presentation
Final examination, of 100Marks will be conducted and will be evaluated for 50Mark

CO to PO Mapping:

Course Content

UNIT I	8Hours
Introduction: What operating systems do; Computer System organization; Computer System architecture; Operating System structure; Operating System operations; Protection and security; Distributed system; Special purpose systems; Virtual machines.Operating system structures: operating system services, user operating system Interface, System calls, Types of system calls, Operating system structure, System boot	
UNIT II	**11Hours**
Process Management: Basic concept; Process scheduling; Operations on processes; Inter process Communication Threads: Overview; Multithreading models; Process scheduling: Basic concepts, Scheduling criteria, scheduling algorithms, multiple processor scheduling, Algorithm evaluation.	
UNIT III	**12Hours**
Process Synchronization: Synchronization, The Critical section problem; Peterson's solution; Synchronizatio hardware; Semaphores; Classical problems of synchronization; Monitors.Deadlocks: System model; Deadlock characterization; Methods for handling deadlocks; Deadlock prevention; Deadlock avoidance; Deadlock detectio and recovery from deadlock.	
UNIT IV	**11Hours**
Memory Management Strategies: Background; Swapping; Contiguous memory allocation; Paging; Structure o page table; Segmentation.Virtual Memory Management: Background; Demand paging; Copy-on write; Pag replacement; Allocation of frames; Thrashing	
UNIT V	**10Hours**
File System: File concept; Access methods; Directory structure; File system mounting; file sharing; Protection.	
Secondary Storage Structures: Disk scheduling; FCFS Scheduling, SSTF scheduling, SCAN,C-SCAN scheduling, Look Scheduling. System Protection: Goals of protection, Principles of protection, Domain of protection, Access matrix, Implementation of access matrix, Access control, Revocation of access rights, Capability-Based systems.	

Text Book:

3. Operating Systems: Principles and Practice (2nd Edition), by Thomas Anderson and Michael Dahlin.

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Theory of Computation	**Course Code:**18IS53
L-T-P:3-2-0	**Credits:**4
Total Contact Hours:39 hrs	**Duration of SEE:**3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Students should have knowledge of set theory.

Course Outcomes:

At the end of the course, Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Describe the core concepts in automata theory.	L2
2	Design DFA and NFA for the given regular languages.	L3
3	Apply the concepts of Regular Expression, and Context Free Grammar for the given problem.	L3
4	Design Push down Automata and Turing Machines to solve the complex computation problems	L3
5	Determine the decidability of computational problems.	L4

Teaching Methodology:

- Black Board Teaching
- Tutorials
- Problem solving using JFLAP tool

Assessment Methods:

- Rubrics to evaluate Tutorials for 10 Marks.
- Rubrics to evaluate Problem solving using JFLAP tool for 10 Marks.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO 1	PSO 2

CO3	3	2	3		2				2	2		2		3
CO4	3	2	3		2				2	2		2		3
CO5	3	1	3											3
18IS53	3	2	3		2				2	2		2		3

COURSE CONTENT

UNIT – I	08 hours
Introduction to Finite Automata: Introduction to Finite Automata; The central concepts of Automata theory; Deterministic finite automata; Nondeterministic finite automata, An application of finite automata; Finite automata with Epsilon transitions; Regular expressions;	
UNIT – II	09 hours
Regular Expressions & Regular Languages: Finite Automata and Regular Expressions; Applications of Regular Expressions. Regular languages; Proving languages not to be regular languages; Closure properties of regular languages; Decision properties of regular languages; Equivalence and minimization of automata.	
UNIT – III	08 hours
Context-Free Grammars and Languages Push down Automata: Context -free grammars; Parse trees; Applications; Ambiguity in grammars and Languages. Definition of the Pushdown automata; the languages of a PDA;	
UNIT – IV	07 hours
Pushdown Automata, Properties of Context-Free Languages: **Equivalence of PDA's and CFG's; Deterministic** Pushdown Automata. Normal forms for CFGs; The pumping lemma for CFGs; Closure properties of CFLs	
UNIT – V	07 hours
Turing Machine &Undecidability: The Turing machine, Programming techniques for Turing Machines; Extensions to the basic Turing Machines; A Language that is not recursively enumerable; An Undecidable problem that is RE; Post's Correspondence problem	

Text books:

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title*: Computer Networks*	***Course Code:****18IS54*
L-T-P: *4-0-0*	***Credits:*** *4*
Total Contact Hours:*52*	***Duration of SEE:****3 hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

- Knowledge of digital electronics and Internet usage.

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the computer network models, layered architecture, functions and its protocols	L2
2	Apply signal encoding, signal conversion and multiplexing for data transmission in computer networks	L3
3	Apply error detection, flow control, access control and channelization protocols for node-to-node data delivery	L3
4	Apply concepts of sub-networks, routing algorithms and Internet protocols for host-to-host packet delivery	L3
5	Understand the TCP and UDP services, TCP Congestion protocol during data transmission in computer networks	L2
6	Understand the services of Electronic mail and DNS	L2

Teaching Methodology:

- Black Board Teaching / Power Point Presentation
- Assignment
- Case- study

Assessment Methods:

- Rubric based evaluation of case- study for 10 marks.
- Rubric based evaluation of Assignment for 10 marks.
- Three internal evaluation tests of 30 Marks each will be conducted and the Average of best two will be taken.
- Semester End Examination for 100 Marks and calculated to a weightage of 50 Marks.

Mapping of Cos, Pos & PSO's:

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO4	3	2	3		2				2	1		1		3
CO5	3				2				2	1		1		3
CO6	3								2	1		1		3
18IS54	3	2	3		2				2	1		1		3

COURSE CONTENTS

UNIT – I: Physical Layer:	**10** hours
TCP/IP Protocol suite, The OSI Model, Data and Signals, Periodic analog signals, Digital signals, Transmission impairments, Data rate limits, Performance, Digital-to-Digital conversion, Analog-to-Digital conversion, Transmission modes, Bandwidth Utilization: Multiplexing	
UNIT – II: Datalink Layer	**11** hours
Introduction, Link layer addressing, Error detection and correction: Introduction, block coding, cyclic codes, checksum, Data link control: DLC services, Data-Link layer protocols, HDLC, Point to Point protocols (PPP), Media Access Control: Random Access, Controlled Access, Channelization.	
UNIT – III: Network Layer	**11** hours
Network layer services, Packet switching, Network-Layer Performance, IPV4 Addressing, Internet protocol (IP), ICMPv4, Routing algorithms, Unicast routing protocols	
UNIT – IV: Network and Transport Layer	**10** hours
IPV6 addressing, The IPV6 Protocols, ICMPV6 Protocol, Transition from IPV4 to IPV6, Transport Layer: Introduction, Transport layer Protocols, User Datagram Protocol (UDP)	
UNIT – V: Transport and Application Layer	**10** hours
Transmission control Protocol: TCP Services, Segment, TCP Connection, Flow control, Error control, TCP Congestion control, Application Layer: Electronic Mail, Domain Name System (DNS)	

Text books:

1. Behrouz A. Forouzan Data Communications and Networking, 4th Edition, Tata McGraw- Hill, 2006.

L-T-P: 3*-0-0*	***Credits: 3***
Total Contact Hours:39	***Duration of SEE:****3 hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Prerequisites

- Mathematics, basics of probability, Elements of permutation and combination

Course Outcome

At the end of the course, students will be able to

Cos	Course Outcome Description	Blooms Level
1	Solve elementary problems on the probability and statistics.	L3
2	Apply discrete probability distribution techniques on given population.	L3
3	Compute population statistic based on the parameters of sampling distribution.	L3
4	Analyse hypothesis to accept/reject alternative hypothesis.	L4
5	Apply ANOVA to infer conclusions about population/sample.	L3

Teaching Methodology

- Black board, Power Point
- Assignment
- Case Study

Assessment Methods:

- Three MSEs of 30 marks of each. The average of best two performances will be considered to award 30 marks.
- Rubrics to evaluate Case Study 10Marks
- Rubrics for evaluating assignment 10 arks.
- SEE for 100 marks will be evaluated for50 marks.

COURSE CONTENT

Unit 1	Probability and statistics	7 Hours
Why Study Statistics?, Modern Statistics, Statistics and Engineering, two Basic Concepts—Population and Sample, A Case Study: Visually Inspecting Data to Improve Product Quality, Pareto Diagrams and Dot Diagrams, Frequency Distributions, Graphs of Frequency Distributions, Stem-and-Leaf Displays, Descriptive Measures, Quartiles and Percentiles, calculation of X bar and S, Problems with aggregating data, Sample Spaces and Events, Counting, Probability, The Axioms of Probability, Some Elementary Theorems, Conditional Probability, Bayes' Theorem		
Unit-2	**Probability Distributions**	**8 Hours**
Random Variables, The Binomial Distribution, The Hypergeometric Distribution, The Mean and the Variance of a Probability Distribution, Chebyshev's Theorem, The Poisson Distribution and Rare Events, Poisson Processes, The Geometric and Negative, Binomial Distribution, The Multinomial Distribution, Simulation		
Unit-3	**Probability Densities and Sampling Distributions**	**8 Hours**
Continuous Random Variables, The Normal Distribution, The Normal Approximation to the, Binomial Distribution, Other Probability Densities, The Uniform Distribution, The Log-Normal Distribution, The Gamma Distribution, The Beta Distribution, The Weibull Distribution, Continuous Random Variables, The Normal Approximation to the Binomial Distribution		
Unit-4	**Inferences concerning mean and variance**	**8 Hours**
Statistical Approaches to Making, Generalizations, Point Estimation, Interval Estimation, Maximum Likelihood Estimation, Tests of Hypotheses, Null Hypotheses and Tests of Hypotheses, Hypotheses Concerning One Mean, The Relation between Tests and Confidence Intervals		
Unit-5	**Analysis of Variance – ANOVA**	**8 hours**
Single-Factor ANOVA, Multiple Comparisons in ANOVA, More on Single-Factor ANOVA, Introduction Two-Factor ANOVA with Kij=1, Two-Factor ANOVA with Kij>1, Three-Factor ANOVA.

Department: *Information Science and Engineering*	***Course Type:*** *Core Elective*
Course Title*: Digital Image Processing*	***Course Code:*** *18ISE552*
L-T-P: *3-0-0*	***Credits:*** *03*
Total Contact Hours: *39 hrs*	***Duration of SEE:*** *3 hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

- Students should have knowledge of mathematics and Programming Concepts.

Course outcomes:

Students will be able to

COs	Course Description	Blooms Level
1	Describe the fundamentals of digital image processing	L2
2	Apply image enhancement methods for the given problems	L3
3	Apply suitable image segmentation algorithm for the given dataset.	L3
4	Understand image restoration techniques	L2
5	Analyse the performance of different image compression algorithms	L4

Teaching Methodology:

- Black Board Teaching / Power Point Presentation
- Programming / Problem solving Assignment

Assessment Methods:

- Rubrics to evaluate Programming assignments using Python and OpenCV. (10 marks)
- Problem solving assignments (10 Marks)
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Po's	Po1	Po2	Po3	Po4	Po5	Po6	Po7	Po8	Po9	Po10	Po11	Po12	Pso1	Pso2

COURSE CONTENT

UNIT – I	8 Hours
Introduction : What Is Digital Image Processing?, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Digital Image fundamentals, Brightness Adaptation and Discrimination, A Simple Image Formation Model, Image Sampling and Quantization, Basic Concepts in Sampling and Quantization , Representing Digital Images, Spatial and Gray-Level Resolution, Zooming and Shrinking Digital Images. Some Basic Relationships between Pixels: Neighbors of a Pixel, Adjacency, Connectivity, Regions, and Boundaries, Distance Measures, Image Operations on a Pixel Basis.	
UNIT – II	8Hours
Linear and Nonlinear Operations: Image Enhancement in the Spatial Domain, Some Basic Gray Level Transformations: Image Negatives, Log Transformations, Power-Law Transformations, Piecewise-Linear Transformation Functions, Histogram Processing: Histogram Equalization, Histogram Matching (Specification),Local Enhancement, Use of Histogram Statistics for Image Enhancement, Enhancement Using Arithmetic/Logic Operations, Image Subtraction, Image Averaging ,Basics of Spatial Filtering, Smoothing Spatial Filters: Smoothing Linear Filters, Order-Statistics Filters, Sharpening Spatial Filters: Foundation, Use of Second Derivatives for Enhancement–The Laplacian, Use of First Derivatives for Enhancement—The Gradient, Combining Spatial Enhancement Methods.	
UNIT – III	8Hours
Image Segmentation: fundamentals, Point Detection, Line Detection, Edge Detection: background, detection of isolated points, line detection, edge models, basic edge detection, more advanced techniques for edge detection: Marr-Hildreth edge detector, canny edge detector, Thresholding: Foundation,blosic global thresholding, optimal global thresholding using Otsu's method. Region based segmentation: region growing, region splitting and merging.	
UNIT – IV	8Hours
Image Restoration: A Model of the Image Degradation/Restoration Process - Noise Models, Spatial and Frequency Properties of Noise, Some Important Noise Probability Density Functions, Periodic Noise, Estimation of Noise Parameters, Restoration in the Presence of Noise Only–Spatial Filtering: Mean Filters, Order-Statistics Filters, Adaptive Filters.	
UNIT – V	7Hours
Image Compression: fundamentals, Coding Redundancy, spatial and temporal redundancy, irrelevant information, Fidelity Criteria, Some basic compression models: Huffman coding, LZW Coding, run length coding, Bit-Plane Coding, Lossless Predictive Coding.	

Text books:

1. Digital Image Processing by Rafael C Gonzalez &Richard E Woods, 3rd Edition

Reference books:

1. Digital Image Processing & Analysis, B. Chnada & D. Datta Majumder, 2/E 2nd Edition

Department: Information Science and Engineering	**Course Type**: Elective Core A
Course Title: Computer Graphics	**Course Code:** 18ISE553
L-T-P: 3-0-0	**Credits: 03**
Total Contact Hours: 39hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks: 50**

Pre-requisite:

- Computer Concepts and C Programming
- Object Oriented Programming

Course Outcomes:

Student will be able to:

Cos	Course Outcomes Description	Blooms Level
1	Understand the concepts of 2D and 3D transformations, projection and viewing using OpenGL-L	L2
2	Design and implement the geometrical objects using graphics language OpenGL	L3
3	Apply the knowledge of geometrical transformations and projection matrix for handling multiple objects	L3
4	Apply the concepts of clipping algorithms and graphics pipeline in solving the given problems	L3

Teaching Methodology:

- Blackboard teaching
- PowerPoint presentations
- Course Project

Assessment Methods:

- Rubrics for evaluating course project-20Marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

CO-PO Mapping:

PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

18ISE553	3	2	3	1	2				2	2	1	2		3

Course Content

UNIT – I	**8 Hours**
OVERVIEW: COMPUTER GRAPHICS GRAPHS AND CHARTS, COMPUTER-AIDED DESIGN, VIRTUAL-REALITY ENVIRONMENTS, DATA VISUALIZATIONS, EDUCATION AND TRAINING, COMPUTER ART. ENTERTAINMENT, IMAGE PROCESSING, GRAPHICS USER INTERFACES. VIDEO DISPLAY DEVICES, RASTER SCAN SYSTEMS, INPUT DEVICES, HARD COPY DEVICES, GRAPHICS SOFTWARE	
UNIT – II	7Hours
GRAPHICS LANGUAGE OVERVIEW: INTRODUCTION OF OPEN GL, COORDINATE REFERENCE FRAMES, SPECIFYING A TWO-DIMENSIONAL WORLD-COORDINATE REFERENCE FRAME IN OPEN GL, OPENGL POINT FUNCTIONS, OPENGL LINE FUNCTION, LINE –DRAWING ALGORITHM CIRCLE GENERATING ALGORITHMS.	
UNIT – III	8Hours
OPEN GL PRIMITIVES & ATTRIBUTES FILL-AREA PRIMITIVES, POLYGON FILL AREAS, OPENGL POLYGON FILL, AREA FUNCTIONS, OPENGL VERTEX ARRAYS, PIXEL –ARRAY PRIMITIVES, OPENGL PIXEL ARRAY FUNCTIONS, CHARACTER PRIMITIVES, OPENGL CHARACTER FUNCTIONS, OPEN GL DISPLAY-WINDOW RESHAPE FUNCTIONS; COLOR AND GRAY SCALE, OPENGL COLOR FUNCTIONS, POINT ATTRIBUTES, LINE ATTRIBUTES, CURVE ATTRIBUTES, OPEN GL POINT ATTRIBUTE FUNCTIONS, OPEN GL LINE ATTRIBUTE FUNCTIONS, FILL-AREA ATTRIBUTES	
UNIT – IV	8Hours
GEOMETRIC TRANSFORMATIONS BASIC TWO-DIMENSIONAL GEOMETRIC TRANSFORMATIONS, INVERSE TRANSFORMATIONS, TWO-DIMENSIONAL COMPOSITE TRANSFORMATIONS, OTHER TWO-DIMENSIONAL TRANSFORMATIONS, GEOMETRIC TRANSFORMATIONS IN THREE-DIMENSIONAL SPACE, THREE-DIMENSIONAL TRANSLATION, THREE-DIMENSIONAL ROTATION, THREE-DIMENSIONAL TRANSLATION, OTHER THREE-DIMENSIONAL TRANSLATION, OPEN GL GEOMETRIC-TRANSFORMATION FUNCTIONS	
UNIT – V	8Hours
VIEWING AND INTERACTION THE TWO-DIMENSIONAL VIEWING PIPELINE, THE CLIPPING WINDOW, NORMALIZATION AND VIEW PORT TRANSFORMATION., OPENGL TWO-DIMENSIONAL VIEWING FUNCTIONS, CLIPPING ALGORITHMS, TWO-DIMENSIONAL POINT CLIPPING., TWO-DIMENSIONAL LINE CLIPPING; THE THREE-DIMENSIONAL VIEWING PIPELINE, GRAPHICAL INPUT DATA, LOGICAL CLASSIFICATIONS OF INPUT DEVICES, OPEN GL MENU FUNCTIONS

2. Interactive Computer Graphics A Top-Down Approach with OpenGL -Edward Angel, 5th Edition, Addison-Wesley, 2008.

Department: Information Science and Engineering	**Course Type: Program** Elective
Course Title: Internet of Things	**Course Code: 18ISE554**
L-T-P:3-0-0	**Credits:03**
Total Contact Hours:39hrs	**Duration of SEE:3hrs**
SEE Marks: 50	**CIE Marks:** 50

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the fundamentals of IoT with a strong knowledge of its architecture	L2
2	Describe the solid fundamentals of IEEE 802.15.4 along with few comparative standards	L2
3	Understand the network layer in the view of IoT along with the application protocol	L2
4	Understand the data and analytics concepts in terms for IoT and Security concerns.	L2
5	Apply IoT concepts using an opensource IoT platform for the given application	L3

Teaching Methodology:
- Lectures/presentations
- Demos whenever required

Assessment Methods:
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for evaluation of Course Project and Seminar.
    - LA1 – seminar on IoT case studies/ platforms
    - LA2 – presentation **-** a new approach on solving a real time problem
- Final examination, of 100 Marks will be conducted and will be evaluated for 50Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

18ISE554	3	2	3		3		1		3	3		2		2

COURSE CONTENT

UNIT – I	08 hours
Introduction to IoT, Genesis of IoT, IoT digitization, IoT impact, Converge IT and OT, IoT challenges. IoT Network architecture and design, drivers behind new architecture, comparing IoT architectures, A simplified IoT architecture, Core IoT Functional stack, IoT data management and compute stack.	
UNIT – II	8 hours
Connecting smart things, communications criteria, IoT access technologies, IEEE 802.15.4, IEEE 802.15.4g and IEEE 802.15.4e, IEEE 1901.2a, IEEE 802.11ah, LoRaWAN, NB-IoT	
UNIT – III	8 hours
IP as IoT network layer, The business case for IP, Need for optimization, optimizing IP for IoT, profiles and compliences	
UNIT – IV	08 hours
Application Protocols for IoT, Data Analytic for IoT, Introduction to data analytics for IoT, Machine learning, Big data analytics tools and technology, edge streaming analytics, network analytics.	
UNIT – V	07 hours
Security for IoT, common challenges in OT security, How IT and OT security practices and systems vary, formal risk analysis structures: OTAVE and FAIR, the phased application of security in an operational environment. Case study: Public safety	

Text books:

Department: *Information Science and Engineering*	***Course Type: Core elective***
Course Title*: Distributed systems*	***Course Code:****18ISE555*
L-T-P:*3-0-0*	***Credits:*** *03*
Total Contact Hours:39 *hrs*	***Duration of SEE:*** *3 hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

- Fundamental knowledge of Computer Organization and Operating System.

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the goals and challenges of distributed system	L1
2	Demonstrate the remote invocation techniques for communication	L3
3	Describe the architecture of distributed file systems and name services	L2
4	Apply clock synchronization algorithms to monitor and order the events.	L3
5	Analyse the performance of mutual exclusion, election and consensus algorithms.	L4
6	Illustrate the fundamental concepts and algorithms related to distributed transactions and replication	L2

Teaching Methodology:

- Black Board Teaching / Power Point Presentation
- Programming Assignments

Assessment Methods:

- Rubrics for evaluating Programming Assignments for 20 Marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final Examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

***SEE Marks:** 50*	***CIE Marks:** 50*

Prerequisite:

- UNIX AND Shell Programming.
- Fundamentals of operating systems.

Course Outcome:

At the end of the course students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Describe need for Standardizing the UNIX Environment.	L2
2	Apply appropriate UNIX File APIs to solve the given problem.	L3
3	Apply the appropriate Unix APIs for process and job control.	L3
4	Apply signal related APIs to solve the given problem.	L3
5	Demonstrate inter-process communication using different IPC structures.	L3

Teaching Methodology:

- Black board teaching/Power point presentation.
- Programming assignments
- Case studies.

Assessment methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for evaluation of case studies.
- Rubrics for evaluation of Programming Assignments.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Content

UNIT I	8Hours
INTRODUCTION: UNIX and ANSI Standards: The ANSI C Standard, Difference between ANSI C and C++, The POSIX Standards, UNIX and POSIX APIs: The POSIX APIs, The UNIX and POSIX Development Environment, API Common Characteristics.UNIX FILES: File Types, The UNIX and POSIX File System, The UNIX and POSIX File Attributes, Inodes in UNIX System V, Application Program Interface to Files, UNIX Kernel Support for Files, Relationship of C Stream Pointers and File Descriptors, Directory Files, Hard and Symbolic Links.	
UNIT II	**8Hours**
UNIX File APIs: General File APIs, File and Record Locking UNIX PROCESSES: The Environment of a UNIX Process: Introduction, main function, Process Termination, Command Line Arguments, Environment List, Memory Layout of a C Program, Memory Allocation, Environment Variables.	
UNIT III	**8Hours**
PROCESS CONTROL: Introduction, Process Identifiers, fork, vfork, exit, wait, waitpid, waited, Race Conditions, exec Functions, Changing User IDs and Group IDs, Interpreter Files, system Function, Process Accounting, User Identification.PROCESS RELATIONSHIPS: Introduction, Terminal Logins, Network Logins, Process Groups, Sessions, Controlling Terminal, tcgetpgrp, tcsetpgrp, and tcgetsid Functions, Job Control.	
UNIT IV	**8Hours**
SIGNALS: Signals: The UNIX Kernel Support for Signals, signal, Signal Mask, sigaction, The SIGCHLD Signal and the waitpid Function, Kill, Alarm.INTERPROCESS COMMUNICATION: Introduction; Pipes, popen, pclose Functions; Coprocesses, FIFOs;	
UNIT V	**7Hours**
DAEMON PROCESSES: Introduction, Daemon Characteristics, Coding Rules.NETWORK IPC: SOCKETS: Introduction, Socket Descriptors, Addressing, Connection establishment, Data transfer.	

Text Books:

Department: Information Science and Engineering	**Course Type:** Elective
Course Title: Artificial Intelligence	**Course code:** 18ISE557
L-T-P: 3-0-0	**Credits:** 3
Total contact hours: 39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50 Marks	**CIE Marks:** 50 Marks

Course Outcomes:

Cos	Course Outcome Description	Blooms Level
1	Understand basics of AI.	L2
2	Understand Heuristic search techniques and Knowledge representation issues.	L2
3	Explain symbolic/statistical reasoning to handle uncertainty.	L2
4	Explain Weak/Strong Slot-and-filter structures.	L2
5	Summarize concepts in Knowledge Representation and Game Playing	L2

Teaching Methodology:
Blackboard teaching / PowerPoint presentations.

Assessment Methods:

- Three MSEs of 30 marks of each. The average of best two performances will be considered to award 30 marks
- Rubrics for evaluating assignment/case study 20 marks.
- SEE for 100 marks will be evaluated for50 marks.

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO5	2	2		1										2
18ISE557	2	2		1										2

COURSE CONTENTS

UNIT I	8Hours
What is Artificial Intelligence: The AI Problems, The Underlying assumption, What is an AI Technique? The Level of the model, Criteria for success, some general references, One final word and beyond. Problems, problem spaces, and search: Defining, the problem as a state space search, Production systems, Problem characteristics, Production system characteristics, Issues in the design of search programs	
UNIT II	**8Hours**
Heuristic search techniques: Generate-and-test, Hill climbing, Best-first search, Problem reduction, Constraint satisfaction, Mean-ends analysis. Knowledge representation issues: Representations and mappings, Approaches to knowledge representation, Issues in knowledge representation, The frame problem. Using predicate logic: Representing simple facts in logic, representing instance and ISA relationships, Computable functions and predicates, Resolution, Natural Deduction.	
UNIT III	**8Hours**
Symbolic Reasoning Under Uncertainty: Introduction to nonmonotonic reasoning, Logic for nonmonotonic reasoning, Implementation Issues, Augmenting a problem-solver, Implementation: Depth-first search, Implementation: Breadth-first search.	
UNIT IV	**8Hours**
Statistical Reasoning: Probability and bayes Theorem, Certainty factors and rule-based systems, Bayesian Networks, Dempster-Shafer Theory, Fuzzy logic. Weak Slot-and-filter structures: Semantic Nets, Frames.	
UNIT V	**7Hours**
Strong slot-and –filler structures: Conceptual dependency, scripts, CYC. Knowledge Representation Summary, Game Playing

Department: Information Science and Engineering	**Course Type:** Program Elective
Course Title: UI/UX Design	**Course code:** 18ISE558
L-T-P: 3-0-0	**Credits:** 03
Total contact hours: 39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

NA

Course Outcomes:

Students will be able to

Cos	Course Outcomes Description	Blooms Level
1	Understand the principals of UX life cycle,	L2
2	Design user layout using pen and paper	L3
3	Design prototype for the given scenario	L3
4	Evaluate the user flow	L4
5	Understand the UX design guidelines.	L2
6	Design user screens for the given real world problem using SE-UX.	L3

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Regular review of students by asking questions based on topics covered in the class.
- Design assignments using Figma.

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for evaluating the assignments -20 Marks.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

CO to PO Mapping:

Course Content

Unit-1	07 Hours
The Wheel- A Lifecycle Template: Introduction, A UX process lifecycle template, choosing a process instance for your project, the system complexity space, Meet the user interface team, Scope of UX presence within the team, more about UX lifecycles. **Design Thinking, Ideation, and Sketching:** Introduction, Design paradigms, Design thinking, Design perspectives, User personas, Ideation, Sketching, more about phenomenology	
Unit-2	**08 Hours**
UX Goals, Metrics, and Targets: Introduction, UX goals. **UX target tables, Prototyping:** Introduction, Depth and breadth of a prototype, Fidelity of prototypes, Interactivity of prototypes, Choosing the right breadth, depth, level of fidelity, and amount of interactivity, Paper prototypes, Advantages of and cautions about using prototypes, Prototypes in transition to the product, Software tools for prototyping	
Unit-3	**08 Hours**
Rapid Evaluation Methods: Introduction, Design walkthroughs and reviews, UX Inspection, our practical approach to UX Inspection, Questionnaires. **UX Methods for Agile Development:** Introduction, Basics of agile SE methods, Drawbacks of agile SE methods from the UX perspective, what is needed on the UX side, Problems to anticipate, synthesized approach to integrating UX	
Unit-4	**08 Hours**
UX Design Guidelines: Introduction, Using and interpreting design guidelines, Human memory limitations, Selected UX design guidelines and examples, Planning, Translation, Physical actions, Outcomes, Assessment, Overall, Conclusions **Connections with Software Engineering:** Introduction, Locus of influence in an organization, which scenario is right for you?	
Unit-5	**08 Hours**
Foundations for success in SE–UX development, The challenge of connecting SE and UX, The ripple model to connect SE and UX. **Making It Work in the Real World:** Putting it to work as a new practitioner, Be a smart UX practitioner, UX professionalism, Cost-justifying UX, UX within your organization, Parting words

COURSE CONTENT

DEMONSTRATION OF A Database connection :

A **Database connection** is a facility in computer science that allows client software to talk to database server software, whether on the same machine or not. A **connection** is required to send commands and receive answers, usually in the form of a result set.

Example: How to create a simple JDBC application. This will show you how to open a database connection, execute a SQL query, and display the results or using PHP which provides **MySQL connect** function to open a database connection.

1. TO IMPLEMENT DATA DEFINITION LANGUAGE

1.1. CREATE, ALTER, DROP, TRUNCATE

1.2. TO IMPLEMENT CONSTRAINTS.

1.2.1. (A). PRIMARY KEY, (B).FOREIGN KEY, (C). CHECK, (D). UNIQUE, (E).NULL, (F). NOT NULL , (G) . DEFAULT, (H). ENABLE CONSTRAINTS, (I). DISABLE CONSTRAINTS (J). DROP CONSTRAINTS

2. TO IMPLEMENTATION ON DML, TCL

2.1. (A).INSERT, (B).SELECT, (C).UPDATE, (D).DELETE, (E).COMMIT, (F).ROLLBACK, (G).SAVE POINT, (I). LIKE'%', (J).RELATIONAL OPERATOR. (K) AGGREGATE FUNCTIONS

3. TO IMPLEMENT NESTED QUERIES & JOIN QUERIES

3.1. IMPLEMENTATION OF NESTED QUERIES

3.2. (A) INNER JOIN (B).LEFT JOIN (C).RIGHT JOIN (D).FULL JOIN (E) SELF JOIN

4. TO IMPLEMENT VIEWS

5. TO IMPLEMENT TRIGGER

6. PL/SQL STORED PROCEDURE

A) PARAMETERS B) CURSOR B) PROCEDURES C) FUNCTIONS

7. TO DESIGN THE DATABASE AND IMPLEMENT .(MINI PROJECT).

Course Title: Java Application Development Lab	**Course code:** 18ISL58
L-T-P: 0-2-2	**Credits:** 02
Total contact hours: 26 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

Knowledge of any Object-oriented Programming concepts is helpful.

Course Outcomes:

Cos	Course Outcomes Description	Blooms Level
1	Illustrate core java programming concepts.	L3
2	Apply concepts of Packages and Exception Handling to implement the given problem.	L3
3	Apply concepts of Multi-Threading and Collection framework concepts for building robust programs.	L3
4	Design applications using AWT, Applets, and Swings; and handle system/user events appropriately.	L3
5	Develop database application using JDBC.	L4

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Regular review of students by asking questions based on topics covered in the class.
- Course Project.

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for Course Project (20 Marks).
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

CO to PO Mapping:

	PO 1	**PO 2**	**PO 3**	**PO 4**	**PO 5**	**PO 6**	**PO 7**	**PO 8**	**PO 9**	**PO1 0**	**PO1 1**	**PO1 2**	**PSO 1**	**PSO 2**

18ISL5 8	03	02.2	2.8	2					02	02		02		03

Course Content

Unit-1	
Introduction to Java: Basics of Java, Java Keywords, Java Features, Java Coding conventions, Identifiers, First application, Data types in java, Flow control statements, Variables, Methods, Constructors, Instance blocks, Static blocks, Class, Objects, Inheritance, Polymorphism, Abstraction, Encapsulation, JVM architecture, Modifiers: Public , private , protected ,abstract ,fina l, static, Garbage Collector, Arrays	
Unit-2	
Packages, Interfaces, Wrapper Classes Packages: Predefined packages, User defined packages, importing packages; Interfaces: Interface declarations, Marker interface, Extends vs implements, Nested interface, Adaptor classes, Interface vs inheritance Wrapper Classes: Data types vs Wrapper classes, toStirng(), ParseXXX(), valueOf(), XXXValue().	
Unit-3	
Exception Handling Exception Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, Displaying a Description of an Exception, Multiple catch Clauses, Nested try Statements, throw, throws, finally, Java's Built-in Exceptions, Creating Your Own Exception Subclasses	
Unit-4	
Multithreaded Programming, Collection Framework The Java Thread Model, Thread Priorities, Synchronization, Messaging, The Thread Class and the Runnable Interface, The Main Thread, Creating a Thread, Implementing Runnable, Extending Thread, Choosing an Approach, Creating Multiple Threads, Using isAlive( ) and join( ), Thread Priorities, Synchronization, Using Synchronized Methods, The synchronized Statement, Interthread Communication, Deadlock, Collections: ArrayList, LinkedList	
Unit-5	
Nested Classes, Swings, Introduction to JDBC: Nested Classes: Introduction Advantages of nested classes Nested classes vs inner classes Swings: Awt vs. swings, Advantages of swings, Different components of Swings(TextField ,Checkbox.etc), Event handling in Swings Introduction to JDBC: The Concept of JDBC; JDBC Driver Types; JDBC Packages; A Brief Overview of the JDBC process; Database Connection; Associating the JDBC/ODBC Bridge with the Database; Statement Objects; Using a Prepared Statement, Parameterized Statements, ResultSet; Metadata, Data types; Exceptions.

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title*: Software Engineering*	***Course Code:18IS61***
L-T-P:*4-0-0*	***Credits:*** *04*
Total Contact Hours:*52 hrs*	***Duration of SEE:*** *3 hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

- Students should have knowledge of Programming Fundamentals

Course Outcomes:

Students will be able to:

COs	Course Outcome Description	Blooms Level
1	Understand the process models and Software development lifecycle	L2
2	Analyse the functional and non-functional requirements of the given use cases	L4
3	Illustrate the rapid software development methods for designing the software	L2
4	Develop test cases and validate using different testing strategies	L3
5	Understand the process of software project management	L2

Teaching Methodology:

- Black Board Teaching
- Power Point Presentation
- Case Study

Assessment Methods:

- Rubrics to evaluate Case Study for 20 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

COURSE CONTENT

UNIT – I	**12**hours
Introduction: Professional and ethical responsibility. Software Quality Attributes, key challenges facing software engineering. **Socio-Technical systems**: Emergent system properties, systems engineering, organizations, people and computer systems, legacy system. **Software Processes:** Software Processes: Software Development Life Cycle (SDLC) Models, Process iteration, Process activities; The Rational Unified Process; Computer Aided Software Engineering.	
UNIT – II	09hours
Requirements: Software Requirements: Functional and Non-functional requirements; User requirements; System requirements, The software requirements document. Requirements Engineering Processes: Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements managements;	
UNIT – III	11 hours
Critical Systems: Simple safety critical system, System dependability, availability and reliability, Safety and Security. **Software Design:** Architectural Design: Architectural design decisions, System organization, Modular decomposition styles, Control styles. **Rapid Software Development**: Agile methods; Extreme programming; Rapid application development, software prototyping.	
UNIT – IV	10 hours
Verification and validation: Planning, verification and validation, software inspections, automated static analysis. **Software Testing:** System testing, Component testing, Test case design, Test automation. **Software cost estimation:** software productivity, estimation techniques, algorithmic cost modelling, project duration and staffing.	
UNIT – V	10 hours
Software Maintenance and Software Project Management: Program evolution dynamics, software maintenance, evolution processes, legacy system evolution. Management activities, project planning, project scheduling, Risk management. **Process Improvement:** Process and Product quality, process classification, process measurement, process analysis and modelling, process change, CMMI process improvement framework.

L-T-P:*4-0-0*	***Credits:*** *04*
Total Contact Hours:*52 hrs*	***Duration of SEE:*** *3 hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

- Students should have knowledge of databases and how they are managed.
- Students should have basic knowledge about graphs, trees and mathematical concepts.

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Describe the basic concepts, challenges and tasks of data mining	L2
2	Apply proximity measures and classification algorithms on labeled dataset	L3
3	Perform association analysis for extracting patterns and rules from the dataset	L3
4	Apply clustering algorithms for the given problem	L3
5	Understand the applications of data mining	L2

Teaching Methodology:

- Black Board Teaching
- Power Point Presentation
- Programming Assignment

Assessment Methods:

- Open book test for 10 marks
- Rubrics to evaluate Programming Assignment for 10 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

CO5	3													3
18IS62	3	2	3						1	1				3

Course Content

UNIT I	12Hours
Introduction: What is Data Mining? Motivating Challenges; The origins of data mining; Data Mining Tasks. Types of Data; Data Quality, Data Cleaning, Measures of Similarity and Dissimilarity.	
UNIT II	**10Hours**
Classification: Preliminaries; General approach to solving a classification problem; Decision tree induction; Rule-based classifier; Nearest-neighbour classifier.	
UNIT III	**10 Hours**
Association Analysis–1: Problem definition, Frequent itemset generation; Rule Generation; Compact representation of frequent itemsets; Alternative methods for generating frequent item sets.	
UNIT IV	**10Hours**
Association Analysis – 2: FP-Growth algorithm, Evaluation of association patterns, Effect of skewed support distribution, Sequential patterns.	
UNIT V	**10 Hours**
Cluster Analysis: Overview, K-means, Agglomerative hierarchical clustering, DBSCAN, Outlier Analysis, Overview of Cluster Evaluation **Applications:** Data mining applications	

Text Books:

1. **Introduction to Data Mining**-Pang-NingTan, Michael Steinbach,Vipin Kumar, Pearson Education, 2007.
2. **Data Mining–Concepts and Techniques**-Jiawei Han and MichelineKamber, 2nd Edition, Morgan Kaufmann, 2006.

Reference Book

1. **Insight into Data Mining–Theory and Practice-** K.P.Soman, ShyamDiwakar, V.Ajay, PHI, 2006.

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Cryptography and Network Security	**Course Code:**18IS63
L-T-P:4-0-0	**Credits:** 04
Total Contact Hours:52 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Fundamentals of algorithm design techniques, Computer Networks.

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand issues, models and devices of secure network and information services	L2
2	Apply Block cipher techniques to provide message confidentiality	L3
3	Apply symmetric and asymmetric key algorithms to preserve message authentication and confidentiality	L3
4	Understand secret key distribution and management techniques for secure data transmission	L2
5	Apply transport and application layer security techniques for secure transfer of data	L3

Teaching Methodology:

- Black Board Teaching
- Power Point Presentation

Assessment Methods:

- Network Security Mini Project considered for 20 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Cos	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CO2	3	2	3	2	2				2	2		2		3
CO3	3	2	3	2	2				2	2		2		3
CO4	3								2	2		2		3
CO5	3	2	3	2	2				2	2		2		3
18IS63	3	2	3	2	2				2	2		2		3

COURSE CONTENTS

UNIT – I: Introduction to Network Security	**10 hours**
Overview of Network Security: Computer security concepts, The OSI Security architecture, Security attacks, Security services, Security Mechanisms, A Model for Network Security, Intruders: Intrusion Detection, Password Management, Malicious Software, Firewalls: The Need for Firewalls, Firewall Characteristics, Types of Firewalls	
UNIT – II: Classical Encryption Techniques and Block Ciphers	**10 hours**
Classical Encryption Techniques: Symmetric Cipher Model, Substitution Techniques: Caesar Cipher, Monoalphabetic Ciphers, Playfair Cipher, Hill Cipher, Polyalphabetic Ciphers, One-time Pad, Transposition Techniques, Block Ciphers and the data encryption standard: Block Cipher principles, Data Encryption Standard	
UNIT – III: Advanced Encryption Standard and Pubic key cryptosystems	**11 hours**
Message Authentication Requirements, MAC Functions, Message Authentication Codes, Key Management and Distribution: Symmetric Key distribution using Symmetric Encryption, Advanced Encryption Standard: AES Structure, Pubic Key Cryptosystems - The RSA Algorithm,ECC, Diffie-Helman key exchange, SHA-512 Logic	
UNIT – IV: Key Distribution and Certificates	**10 hours**
Symmetric key distribution using asymmetric encryption, simple secret key distribution, secret key distribution with confidentiality and authentication, A hybrid scheme, distribution of public keys, public announcement of public keys, publicly available directory, public key authority. Public keys certificates, X-509 certificates. Certificates, X-509 version 3, public key infrastructure	
UNIT – V: Transport level and Email Security	**11 hours**
Secure Sockets Layer(SSL): SSL Architecture, SSL Record Protocol, Change Cipher Spec Protocol, Transport Layer Security(TLS): Version Number, Message Authentication Code, Pseudorandom Function, Alert Codes, Cipher Suites, Client Certificate Types, Certificate Verify and Finished Messages, Cryptographic Computations, Padding, A Pretty Good Privacy(PGP), S/MIME: RFC 5322 Multipurpose Internet Mail Extensions, S/MIME Messages, Kerberos 4 and 5.	

Textbooks:

- William Stallings: Cryptography and Network Security, Pearson 5th /6th edition, 2014.
- M. E. Whitman and Herbert J. Mattored, Principles of Information Security, Information Security Professional 4th edition, 2011.

Reference books:

- Alfred Basta and Wolf Halton, Computer Security Concepts, Issues and Implementation, Cengage Learning
- V k Pachghare: Cryptography and Information Security, 2008.

Department: *Information Science and Engineering*	***Course Type:*** Core Elective
Course Title*:* Client Server Computing	***Course Code:*** 18ISE641
L-T-P:3*-*0-0	***Credits:*** 03
Total Contact Hours: 39 hrs	***Duration of SEE:****3hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Prerequisites:

- Computer networks I
- Computer networks II

Course Outcomes:
Students will be able to:

Cos	**Course Outcome Description**	**Blooms Level**
1	Describe different aspects of client-server-based communication.	L2
2	Design connection oriented and connectionless server-client based systems.	L3
3	Analyze real world problem and design client server software.	L4
4	Execute and demonstrate the functioning of connection oriented and Connectionless server-client based systems.	L3

Teaching Methodology:

- Black board teaching / PowerPoint presentations
- Course Project / Group Discussion / Seminars

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Course Project for 20 marks.
- Rubrics for Course Project / Seminars.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Cos	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO2**

CO4	**3**	**2**	**3**						**2**	**2**		**2**		**2**
18ISE641	**3**	**2.3**	**2.6**						**2**	**2**		**2**		**2**

COURSE CONTENT

UNIT – I	**08 hours**
The Clientserver Modeland SoftwareDesign: Introduction, Motivation, Technology and Concepts, Concurrent Processing in Client-Server software: Introduction, Concurrency in Networks, Concurrency in servers, Terminology and Concepts, An example of Concurrent Process Creation, Executing NewCode, ContextSwitching and Protocol Software Design, Concurrency and Asynchronous I/O,ProgramInterface to Protocols: Introduction, Loosely Specified Protocol Software Interface, Interface Functionality, Conceptual Interface Specification, System Calls, Two Basic Approaches toNetwork Communication <theBasic I/O Functions available in UNIXI/O with TCP/IP.	
UNIT – II	**08 hours**
The Socket Interface: Introduction, Berkley Sockets, Specifying a Protocol Interface, The socket Abstraction, Specifying an End Point Address, A Generic Address structure, Major System calls used with Sockets, Utility Routines for Integer Conversion ,Using Socket Calls in a Program, Symbolic Constants for Socket call Parameters, Algorithms and Issues in Client Software Design: Introduction, Learning Algorithms instead of Details, Client Architecture, Identifying the Location of a Server, Passing an Address Argument ,Looking up a Domain Name ,Looking up a well-known Port by Name, Port Numbers and Network Byte Order, Looking up a Protocol by a name, The TCP Client Algorithm, Allocating a Socket, Choosing a Local Protocol Port number,	
UNIT – III	**08 hours**
A fundamentals Problem in choosing a Local IPAddress, Connecting a TCP Socket to a server, Communicating with the Server using TCP <Reading a response from a TCP Connection. Closing a TCP Connection, Programming AUDP Client <Connected And Unconnected UDP Socket, Using Connect with UDP, Communicating with a Server using UDP, Closing a Socket that uses UDP, Partial Close for UDP, A Warning about UDP Unreliability, Example Client Software: Introduction, The Importance of Small Examples, Hiding Details, An Example Procedure Library for Client Programs, Implementation of Connect TCP, Implementation of Connect UDP, A Procedure That Forms, Connections, Using the Example Library, The DAY TIME Service, Implementation of TCP Client for DAY TIME, Reading from a TCP Connection, The Time Service, Accessing the TIME Service, The ECHO Service, A TCP Client for the ECHO Service, A UDP Client for the ECHO Service.	
UNIT – IV	**8 hours**
Algorithms and Issues in Server Software Design: Introduction, The Conceptual Server Algorithm, Concurrent Vs Iterative Servers, Connection Oriented Vs Connectionless, Access, Connection_Oriented Servers, Connection Oriented Vs Connectionless Access, Connection oriented Servers, Connectionless Servers, Failure, Reliability and Statelessness, Optimizing Stateless Servers, Four Basic Types of Servers, Request Processing Time, Interactive Server Algorithms, An/ interactive Connection-Oriented Server Algorithm, Binding to a Well Known Address using INADDR_ANY , Placing the socket in Passive Mode, Accepting Connections and using them. An Interactive Connectionless Server Algorithms, Master and Slave Processes, A Concurrent Connectionless Server Algorithm, A Concurrent Connection-Oriented Server Algorithm, Using separate Programs as Slaves, Apparent Concurrency using a single Process, When to use each Server Types, The Important Problem of Server Deadlock, Alternative Implementations, Iterative, Connectionless Servers(UDP): Introduction, Creating a Passive Socket, Process Structure, An example TIME Server. Iterative, Connection-Oriented Servers(TCP): Introduction, Allocating a Passive TCP Socket for the DAY TIME Service, Process Structure, An Example DAY TIME Server, Closing Connections, Connection Termination and Server Vulnerability.	
UNIT – V	**7 hours**
Concurrent, Connection–Oriented Servers(TCP): Introduction, Concurrent ECHO, Iterative VsConcurrent Implementations, Process Structure . An example Concurrent ECHO Server, Cleaning up Errant Processes.	

Text books:

1. Douglas E. Comer, DavidL. Stevens Internetworking with TCP /Ip–vol3. Client Server programming and Applications ,BSd Socket Version with ANSI c, 2^{nd}Edition ,Pearson 2001.

Department: *Information Science and Engineering*	***Course Type:*** *Core Elective*
Course Title: *Compiler Construction*	***Course Code:*** *18ISE642*
L-T-P*: 3-0-0*	***Credits:*** *03*
Total Contact Hours: *39 hrs*	***Duration of SEE****: 3 hrs*
SEE Marks: *50*	***CIE Marks:*** *50*

Prerequisites by Topic:

- Students should have knowledge of context free grammar and automata theory.
- Students should have knowledge of basic assembly level language instructions

Course Outcomes: At the end of the course, Students will be able to

Cos	Course Outcome Description	Blooms Level
1	Describe the different phases of compiler and working of lexical analyzer.	L2
2	Design the Top-Down and Bottom-Up parser for the given grammar.	L3
3	Apply the concept of Syntax Directed Translations in type checking and Intermediate code generation	L3
4	Describe the role of Runtime Environment in designing the compiler	L2
5	Describe the principles of designing a code generator	L2

Teaching Methodology:

- Black Board Teaching
- Tool based Problematic Assignment (JFLAP)

Assessment Methods

- Rubrics for Tool Based Assignment (20 Marks)
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks

Course Outcome to Programme Outcome Mapping

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PS02
CO1	3								1	1		2		3
CO2	3	2	3						1	1		2		3
CO3	3	2	3						1	1		2		3
CO4	3								1	1		2		3
CO5	3								1	1		2		3
18ISE642	3	2	3						1	1		2		3

Course Content

UNIT– I	6 Hours
Introduction to compilers: Language Processor, the structure of a compiler, Evolution of Programming language, Science of Building Compiler, Applications of Complier Technology, Programming Language Basics **Lexical Analysis**: **-** The role of lexical analyzer, Input Buffering, Specification of Tokens, Recognition of Tokens, **Syntax Analysis**: Introduction, Context-Free Grammar, Writing a Grammar.	
UNIT– II	**8 Hours**
Syntax Analysis: **Top–Down parsing**: Recursive Descent parsing, Computation of FIRST and FOLLOW, LL(1) Grammar, Non-Recursive Descent parsing, Error Recovery in Predictive Parsing. **Bottom-Up Parsing:** Reductions, Handle Pruning, Shift-Reduce Parsing, Shift-Reduce Parsing Conflicts, Simple LR.	
UNIT– III	**8 Hours**
More Powerful LR Parser: Canonical LR(1) items, Canonical LR(1) Parsing Table, Constructing LALR parsing Tables, Parser Generator. **Syntax – Directed Translation**: Syntax-Directed Definitions, Evaluation Order of SDD's, Application of SDT's	
UNIT– IV	**8 Hours**
Intermediate-Code Generation: Variants of Syntax Tree **,** Three-Address code. **Run-Time Environments**: Storage Organization, Stack Allocation of Space, Access to non-local data on stack, Heap management, Introduction to Garbage Collection	
UNIT– V	**7 Hours**
Code Generation: Issues in the design of code generator, The Target language, Basic blocks & flow graphs, Dag representation of basic blocks, A Simple Code Generator, Peephole optimization. Transformation of basic blocks, **Machine-Independent Optimizations: The principle sources of optimization:** Global common Sub-Expressions, Copy Propagation, Dead-Code Elimination.

L-T-P: 3-0-0	**Credits:** 03
Total Contact Hours: 39hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

Students are expected to have the following topical knowledge upon entering this course:

- Satisfactory understanding of Networking.
- Satisfactory understanding of Engineering Management.

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the fundamental principles of cloud computing.	L2
2	Comprehend the cloud platform architecture	L3
3	Analyse Cloud Programming and Software Environments	L2
4	Understand the features of cloud security	L2
5	Demonstrate available features of cloud environment	L3

Teaching Methodology:

- Black Board Teaching / Power Point Presentation
- Course Project

Assessment Methods:

- Rubrics to evaluate Course Project for 20 marks.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Title: Blockchain Essentials & Dapps	**Course Code**: 18ISE644
L-T-P: 3-0-0	**Credits:** 03
Total Contact Hours: 39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Prerequisites:

- Fundamentals of Distributed System

Course Outcomes:

Student will be able to

Cos	Course Outcome Description	Blooms Level
1	Illustrate the Blockchain terminologies with its applications	L2
2	Analyse the working principles of Blockchain	L2
3	Comprehend the principles and methodologies used in Bitcoin	L2
4	Create Ethereum Network, Wallets, Nodes, Smart contract & Dapps	L4
5	Develop Blockchain Based Application Architecture using Hyperledger	L3
6	Write the Smart Contract	L3

Teaching Methodology:

- Black board teaching/Power Point Presentations
- Hands-on Training
- Course Projects.

Assessment Methods:

- Three internals, 30Marks each will be conducted and the Average of best of two will be taken.
- Rubrics evaluation for the Case Presentation for 10 marks.
- Rubrics evaluation for the Project for 10 Marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Content

UNIT-1	7 Hours
Distributed systems, CAP theorem, Byzantine Generals problem, Consensus. The history of blockchain, Introduction to blockchain, Various technical definitions of blockchains, Generic elements of a blockchain, Features of a blockchain, Applications of blockchain technology, Tiers of blockchain technology, Consensus in blockchain, CAP theorem and blockchain, Benefits and limitations of blockchain	
UNIT-II	**9Hours**
Decentralization using blockchain, Methods of decentralization, Blockchain and full ecosystem decentralization, Smart contract, Decentralized organizations, Decentralized autonomous organizations, Decentralized autonomous corporations, Decentralized autonomous societies Decentralized applications, Platforms for decentralization, Cryptographic primitives : Symmetric cryptography , Asymmetric cryptography , Public and private keys Hash functions: Compression of arbitrary messages into fixed length digest,Easy to compute, Pre-image resistance, Second pre-image resistance,Collision resistance,Message Digest (MD),Secure Hash Algorithms (SHAs), Merkle trees, Patricia trees, Distributed hash tables (DHTs), Digital signatures, Elliptic Curve Digital signature algorithm (ECDSA)	
UNIT-III	**8Hours**
Bitcoin, Bitcoin definition, Transactions, The transaction life cycle, The transaction structure, Types of transaction, The structure of a block , The structure of a block header, The genesis block, The bitcoin network, Wallets, Smart Contracts-History, Definition, Ricardian contracts, Smart contract templates, Oracles, Smart Oracles, Deploying smart contracts on a blockchain, The DAO	
UNIT-IV	**8 Hours**
Ethereum 101, Introduction, Ethereum clients and releases, The Ethereum stack, Ethereum blockchain, Currency (ETH and ETC), Forks, Gas, The consensus mechanism, The world state, Transactions, Contract creation transaction, Message call transaction, Elements of the Ethereum blockchain , Ethereum virtual machine (EVM), Accounts, Block, Ether, Messages, Mining, The Ethereum network Hands-on: Clients and wallets -Geth	
UNIT-V	**7 Hours**
Hyperledger, Hyperledger as a protocol, Fabric, Hyperledger Fabric, Sawtooth lake, Corda	

TEXTBOOKS

1. Imran Bashir. “Mastring BlockChain”, Packt

REFERENCEBOOKS

1. Mastering Bitcoin: Programming the Open Blockchain Paperback – 2017 by Andreas M. O’rielly

Department: *Information Science and Engineering*	***Course Type:*** Core Elective
Course Title: Exploratory Data Analysis	***Course Code:*** 18ISE645
L-T-P: 3-0-0	***Credits:*** 03
Total Contact Hours: 39hrs	***Duration of SEE:****3hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

- Graduate Mathematics.
- Basic understanding of Probability and Statistics.
- Ability to comprehend and understand relational, and unstructured datasets.

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1.	Apply techniques to format data according to the algorithm/methods.	L3
2.	Generate graphical statistics from the given relational data	L3
3.	Apply a range of visualization techniques to summarize the given data	L3
4.	Calculate the level of correlation in data.	L3
5.	Analyze time-series data for survival calculations.	L3

Teaching Methodology:

- Black Board Teaching
- PowerPoint Presentation.
- Seminar

Assessment Methods:

- Rubrics to evaluate Course Project (depends on the course)
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

CO-PO Mapping Table:

COURSE CONTENT

UNIT I Getting Data Into Shape	08 Hours
Creating a Data Frame, Getting Information About a Data Structure, adding a Column to a Data Frame, Deleting a Column from a Data Frame, Renaming Columns in a Data Frame, Reordering Columns in a Data Frame, Getting a Subset of a Data Frame, Changing the Order of Factor Levels, Changing the Order of Factor Levels Based on Data Values, Changing the Names of Factor Levels, Removing Unused Levels from a Factor, Changing the Names of Items in a Character Vector, Recoding a Categorical Variable to Another Categorical Variable, Recoding a Continuous Variable to a Categorical Variable, Transforming Variables, Transforming Variables by Group, Summarizing Data by Groups, Summarizing Data with Standard Errors and Confidence Intervals, Converting Data from Wide to Long, Converting Data from Long to Wide, Converting a Time Series Object to Times and Values.	
UNIT – II Summarized Data Distributions	**08 Hours**
Making a Basic Histogram, Making Multiple Histograms from Grouped Data, Making a Density Curve, Making Multiple Density Curves from Grouped Data, Making a Frequency Polygon, Making a Basic Box Plot, Adding Notches to a Box Plot, Adding Means to a Box Plot, Making a Violin Plot, Making a Dot Plot, Making Multiple Dot Plots for Grouped Data, Making a Density Plot of Two-Dimensional Data	
UNIT – III Miscellaneous Graphs	**08 Hours**
Making a Correlation Matrix, Plotting a Function, Shading a Subregion Under a Function Curve, Creating a Network Graph, Using Text Labels in a Network Graph, Creating a Heat Map, Creating a Three-Dimensional Scatter Plot, Adding a Prediction Surface to a Three-Dimensional Plot, Saving a Three-Dimensional Plot, Animating a Three-Dimensional Plot, Creating a Dendrogram, Creating a Vector Field, Creating a QQ Plot, Creating a Graph of an Empirical Cumulative Distribution Function, Creating a Mosaic Plot, Creating a Pie Chart, Creating a Map, Creating a Choropleth Map, Making a Map with a Clean Background	
UNIT-IV Relationship between variables, and estimation	**08 hours**
Scatter Plots, Characterizing Relationships, Correlation, Covariance, Pearson's Correlation, Nonlinear Relationships, Spearman's Rank Correlation, Correlation and Causation, The Estimation Game, Guess the Variance, Sampling Distributions, Sampling Bias, Exponential Distributions, Classical Hypothesis Testing, Hypothesis Test, Testing a Difference in Means, Other Test Statistics, Testing a Correlation, Testing Proportions, Chi-Squared Tests, First Babies Again, Power, Replication,	
UNIT – V Survival analysis	**07 hours**
Survival Curves, Hazard Function, Estimating Survival Curves, Kaplan-Meier Estimation, The Marriage Curve, Estimating the Survival Function, Confidence Intervals, Normal Distributions, Sampling Distributions, Representing Normal Distributions, Central Limit Theorem, Testing the CLT, Applying the CLT, Correlation Test, Chi-Squared Test

Department: *Information Science and Engineering*	***Course Type:*** Core Elective
Course Title*:* Advanced Java	***Course Code:*** 18ISE646
L-T-P: 3-0-0	***Credits:*** 03
Total Contact Hours: 39hrs	***Duration of SEE:****3hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Prerequisites:

- Fundamental knowledge of C++ and Core Java concepts are helpful

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Develop Client/Server-side solutions using servlets Competency: Develop the online shop Web Application.	L3
2	Design dynamic Web Pages using Java Server Pages.	L3
3	Apply the APIs related to Java Mail and Application Development to solve the given problem.	L3
4	Design the solutions for a given problem using Hibernate and Struts Framework.	L3
5	Design the solutions for a given application module using Spring Framework Competency: Design the solution using MVC Architecture	L3

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Course Project

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for evaluating Course Project (20 Marks).
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Cos	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

18ISE646	**3**	**2**	**3**						**2**	**2**		**2**		**2**

COURSE CONTENT

UNIT – I	08 hours
Java Servlet Technology: What is a Servlet, Servlet Life Cycle Events, Handling Errors, Sharing Information, Initializing a Servlet, Writing Service methods, Invoking other web resources, Accessing the web resources, accessing the web context, maintaining client state, finalizing a servlet. Getting started with Web Applications, Web Application Life Cycle, Web Modules, Configuring Web Applications, Accessing Databases from web applications	
UNIT – II	08 **hours**
Implementing Event Handling and Wrappers in Servlets 3.1 ·Introducing Events ·Introducing Event Handling ·Working with the Types of Servlet Events ·Developing the online shop Web Application. Introducing wrappers, working with wrappers. Java Server Pages 2.3 and Expression Language 3.0 ·Introducing JSP Technology ·Listing Advantages of JSP over Java Servlet ·Exploring the Architecture of a JSP Page ·Describing the Life Cycle of a JSP Page.	
UNIT – III	**08 hours**
J2EE Examples Using the JMS API: A J2EE Application That Uses the JMS API with a Session Bean, Writing the Application Components, Creating and Packaging the Application, Deploying the Application, Running the Application Client, A J2EE Application That Uses the JMS API with an Entity Bean, Overview of the Human Resources Application, Writing the Application Components, Creating and Packaging the Application, Deploying the Application, Running the Application Client, An Application Example That Consumes Messages from a Remote J2EE Server, Overview of the Applications, Writing the Application Components, Creating and Packaging the Applications, Deploying the Applications, Running the Application Client	
UNIT – IV	**08 hours**
Working with Hibernate ·Introducing Hibernate ·Exploring the Architecture of Hibernate ·Downloading Hibernate. Exploring HQL ·Understanding Hibernate O/R Mapping ·Working with Hibernate ·Implementing O/R Mapping with Hibernate, Working with Struts 2 ·Introducing Struts 2 ·Understanding Actions in Struts 2 ·Dependency Injection and Inversion of Control.	
UNIT – V	07 **hours**
Introduction to Spring 3.0 ·Overview of Spring 3.0 ·Dependency Injection ·Spring Library ·The Spring Source Tool Suite ·Developing a Spring 3.0 Application ·Summary Spring Configuration ·Spring Containers ·Configuring Beans, Spring Web MVC ·Spring MVC Architecture ·Components of Spring MVC ·Request mapping ·Developing a Simple Spring MVC Application.

Department: *Information Science and Engineering*	***Course Type:*** *Core*
Course Title*: Network Programming Lab*	***Course Code:****18ISL66*
L-T-P:*0-0-2*	***Credits:****1*
Total Contact Hours:*26*	***Duration of SEE:3*** *hrs*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisite:

- Knowledge on Computer Networks
- NS 3.29 simulator, OS: Ubuntu/ Fedora Core, Wireshark.

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Apply Point-to-Point protocol in networks with a client and a server, many clients and a server, in star topology and bus topology.	L3
2	Apply NetAnim software to demonstrate the graphical scenario of the network models.	L3
3	Analyze packet parameters by creating trace file using Ascii trace metrics.	L4
4	Analyze the network performance by running Wireshark software with NS3.29 simulator.	L4
5	Analyse, by simulating the performance of UDP, TCP, Congestion avoidance and Congestion control protocols.	L4

Teaching Methodology:

i. Instruction classes
ii. Demonstrations

Assessment Methods:

i. Rubrics for evaluating the regular laboratory classes for 30 marks.
ii. Two internal assessment tests of 20 marks each and average of the two will be taken.
iii. Final examination is for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Cos	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO 1	PSO 2
CO1	3	2	3	2	3				1			2		2
CO2	3	2	3	2	3				1			2		2
CO3	3	2	3	2	3				1			2		2
CO4	3	3	2	2	3				1			2		2
CO5	3	3	2	2	3				1			2		2
18ISL66	3	2.4	2.6	2	3				1			2		2

The following experiments shall be conducted using NS3.29 built on Ubuntu /Fedora Core Operating System.

(1) Simulate peer-to-peer communication between a client and a server using Point-to-Point protocol. Apply NetAnim software to demonstrate the scenario graphically. Analyze packet parameters by creating trace file using Ascii trace metrics.

(2) Simulate peer-to-peer communication connecting three nodes considering one node as a central node acts as a server using Point-to-Point protocol. Apply NetAnim software to demonstrate the scenario graphically. Analyze packet parameters by creating trace file using Ascii trace metrics.

(3) Simulate to implement the star topology using Point-to-Point protocol. Apply NetAnim software to demonstrate the scenario graphically. Analyze packet parameters by creating trace file using Ascii trace metrics.

(4) Simulate to implement a bus topology using Point-to-Point protocol. Apply NetAnim software to demonstrate the scenario graphically. Analyze packet parameters by creating trace file using Ascii trace metrics.

(5) Simulate to implement the connection of 2 nodes and 4 router such that the extremes nodes act as client and server using Point-to-Point protocol. Apply NetAnim software to demonstrate the scenario graphically. Analyze packet parameters by creating trace file using Ascii trace metrics.

(6) Simulate peer-to-peer communication between a client and a LAN with 4 nodes. The LAN use CSMA during packet transmission. Apply NetAnim software to demonstrate the scenario graphically. Analyze packet parameters by creating trace file using Ascii trace metrics. Analyze the packet parameters using Wireshark software.

(7) Simulate packet flow in a network for UDP protocol. Apply NetAnim software to demonstrate the scenario graphically. Analyze packet parameters by creating trace file using Ascii trace metrics. Analyze the packet parameters using Wireshark software.

(8) Simulate TCP congestion control protocol. Analyze the congestion the congestion window for slow start phase, congestion avoidance phase and congestion detection phase.

Department: Information Science and Engineering	**Course Type: Laboratory**
Course Title: WEB PROGRAMMING LAB	**Course Code:**18ISL67
L-T-P: 0-2-2	**Credits: 2**
Total Contact Hours: 26 hrs	**Duration of SEE:**3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- HTML, CSS

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the core concepts of javascript and nodejs	L2
2	Apply appropriate features of javascript for building the web application	L3
3	Implement the web application using MVC architecture.	L3
4	Develop the fully functional real-time applications	L3

Teaching Methodology:

- Hands on training
- Capstone Projects
- Assignment

Assessment Methods:

- Rubric based evaluation of case- study for 10 marks.
- Rubric based evaluation of Assignment for 10 marks.
- Three internal evaluation tests of 30 Marks each will be conducted and the Average of best two will be taken.
- Semester End Examination for 100 Marks and calculated to a weightage of 50 Marks.

Mapping of Cos, Pos & PSO's:

Cos	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3								2	2				2
CO2	3	2	3	2					2	2				2
CO3	3	2	3	2					2	2				2
CO4	3	2	3	2					2	2				2
18ISL67	3	2	3	2					2	2				2

COURSE CONTENTS

Module – I: Basics	
Introduction to ECMAScript, JavaScript basics, JavaScript first steps, JavaScript building blocks, Introducing JavaScript objects	
MODULE – II: Fundamentals	
Introduction, Grammar and types, Control flow and error handling, Loops and iteration, Functions, Expressions and operators, Numbers and dates, Text formatting, Regular expressions, Indexed collections, Keyed collections, Working with objects, Details of the object model, Using promises	
MODULE – III: Intermediate level	
Client-side web APIs**,** JavaScript data structures, Equality comparisons and sameness, Closures, Classes and object oriented feature	
MODULE – IV: NODEJS	
Introduction to Nodejs, Basic CRUD operations, REST API	
MODULE – V : PROJECT	
One capstone project (detailed) with few other real time applications in demo

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Use MongoDB commands to implement given application.	L3
2	Apply commands to perform file operations on HDFS	L3
3	Develop map/reduce programs to perform basic operations on the given data set	L3
4	Use HiveQL to filter and aggregate the given data	L3

Teaching Methodology:

- Black Board Teaching / Power Point Presentation
- Laboratory experiments
- Hands On session
- Video Lecturing

Assessment Methods:

- Rubrics for evaluating laboratory experiments for 30 marks
- LA1 mini project on Mongodb for 10 Marks
- LA2 Programming assignment on Hadoop for 10Marks (Rubrics Based Evaluation)
- Final examination of 50 Marks will be conducted.

Course Outcome to Programme Outcome Mapping:

Cos	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO10	PO11	PO12	PSO 1	PSO 2

COURSE CONTENT

Execrcise-1: Mongo DB Use The mongo dB database to Exercise NOSQL Queries to Demonstrate the following with an USECASE 1) Create database 2) Basic CRUD operations 3) Aggregate functions 4) Pipeline 5) MapReduce	**CO1**
Execrcise-2: Map/Reduce Job Submission Start by reviewing HDFS. It found that the composition of HDFS is similar to your local Linux file system. Use the ***hadoopfs*** command while interacting with HDFS. 1. Review the commands available for the Hadoop Distributed File System: 2. Copy file foo.txt from local disk to the user's directory in HDFS 3. Get a directory listing of the user's home directory in HDFS 4. Get a directory listing of the HDFS root directory 5. Display the contents of the HDFS file user/fred/bar.txt 6. Move that file to the local disk, named as baz.txt 7. Create a directory called input under the user's home directory 8. Delete the directory input old and all its contents 9. Verify the copy by listing the directory contents in HDFS:	**CO2**
Execrcise-3: Map Reduce (Programs) Use the Hadoop framework to write a custom MapReduce program to perform word count operation on a custom data set .	**CO3**
Execrcise-4: Map Reduce (Programs) Use the Hadoop framework to write a MapReduce program to read a .csv file into a single node Hadoop cluster containing following fields Sl. No. CARD name UserName Amount withdrawn Implement the following, 1. Count the Number of transactions done by each user 2. Find the total amount of money transacted by each user	**CO3**
Execrcise-5: Extract facts using Hive : 1)Create and Drop Databases 2)Create, Alter , Drop Table 3)Built-in Operators 4)Built-in function 5)Views and Index 6)HIVEQL(select where , Select Order by, Select group by , Select Joins)	**CO4**

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Scalable computing	**Course Code:18IS71**
L-T-P: 4-0-0	**Credits:** 04
Total Contact Hours: 52 hrs	**Duration of SEE:**3hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisite:

- C/C++ programming
- Linux Development Environment
- Computer Organization & Architecture
- An introduction to database systems, covering SQL and related programming systems

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Describe the parallel computation, systems & Programming.	L2
2	Apply MPI programming models to build parallel applications.	L3
3	Develop parallel application using OpenMP programming directives.	L3
4	Design GPU based parallel application using OpenCL	L3
5	Design Big Data Application on SPARK cluster computing framework.	L3

Teaching Methodology:

- Black board teaching/Power Point Presentations
- Programming Assignment/ Course Project

Assessment Methods:

- Three internals, 30Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for Programming assignment for 10 Marks
- Rubrics for Course Project for 10 Marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

CO5	3	3	2						2	2		1	3	
18IS71	3	2.25	2.75						2	2		1	3	

COURSE CONTENT

UNIT – I FOUNDATION	12 hours
Need of parallel programming, Overview of parallel systems – History of parallel computing, systems and programming, Modelling parallel computation, Multiprocessor models, The impact of communication, Parallel computational complexity, Laws and theorems of parallel computation.	
UNIT – II PROGRAMMING – MPI	**12 hours**
MPI processes and messaging – Distributed memory computers can execute in parallel, Programmer's view, Message passing interface, Basic MPI operations, Process-to-process communication, Collective MPI communication, Communication and computation overlap, How effective are your MPI programs?	
UNIT – III PROGRAMMING – OpenMP	**11 hours**
Shared memory programming model, Using OpenMP to write multithreaded programs-Compiling and running an OpenMP program, Monitoring an OpenMP program, Parallelization of loops- Parallelizing loops with independent iterations, Combining the results of parallel iterations, distributing iterations among threads, The details of parallel loops and reductions, Parallel tasks – Running independent tasks in parallel, Combining the results of parallel tasks.	
UNIT – IV PROGRAMMING – CUDA	**9 hours**
Introduction: The Benefits of Using GPUs, CUDA: A General-Purpose Parallel Computing Platform and Programming Model, A Scalable Programming Model. Programming Model: Kernels, Thread Hierarchy, Memory Hierarchy, Heterogeneous Programming, Asynchronous SIMT Programming Model, Compute Capability. CUDA Parallel Programming: Summing two vectors (CPU-GPU), Dot Product optimized.	
UNIT – V SPARK	**9 hours**
In-Memory Computing with Spark: Spark Basics, The Spark Stack, Resilient Distributed Datasets, Programming with RDDs, Interactive Spark Using Spark, Writing Spark Applications, Visualizing Airline Delays with Spark.

TotalContactHours:52 hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Prerequisite:

- Linear Algebra, Calculus, Data Mining
- Any programming language like Python, Java.

Course Outcomes:

After the course completion, students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the fundamental concepts of machine learning.	L2
2	Design a simple Learning System using Find-S and Candidate elimination algorithms.	L3
3	Apply Linear & Logistic regression to solve continuous and binary classification problems.	L3
4	Understand the working of Artificial Neural Networks, Support Vector Machine, and Ensemble methods for classification.	L2
5	Apply Bayesian probabilistic models for classification tasks.	L3
6	Apply Principal Component Analysis for dimensionality reduction	L3

Teaching Methodology:

- Black board teaching
- Power Point presentations
- Executable Codes/ Live Demonstration

Assessment Methods:

- Programming assignment for 20 marks.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COURSE CONTENTS

UNIT – I	10 hours
Introduction: Learning problems, Designing a learning system, perspectives and issues in Machine Learning. Concept Learning Task, Concept Learning as search, (Chapters 1.1, 1.2, 1.3, 2.1, 2.2, 2.3 from TextBook-1) Model Evaluation: Model Evaluation Techniques: Holdout, Cross-Validation; Model Evaluation Metrics: Classification Evaluation: Confusion Matrix, Accuracy, Sensitivity, Specificity Gain, Lift, K-S, and ROC Charts. Area Under the Curve. Regression Evaluation: Root Mean Square Error, RSE, MAE, RAE, R2 (TextBook-2). Feature Engineering for Machine Learning: Machine Learning Pipeline, Binarization, Quantization/Binning, Log Transformation, Feature Scaling/Normalization, Interaction features, and feature selection. (Chapter-2 from TextBook-3)	
UNIT – II	**12 hours**
Introduction to Linear Regression **(Textbook-4)**. Introduction to logistic regression: Logistic regression. Cost function. (**Textbook-5).** Artificial neural networks: Biological Motivation, Artificial Neural Networks representations, appropriate problems for neural network learning, Perceptron's: Representational power of Perceptron's, The Perceptron training rule. **(Chapters 4.1, 4.2, 4.3, 4.4.1, 4.4.2 from Texbook-1)**	
UNIT – III	**11 hours**
Bayesian Learning: Introduction, Bayes theorem – An Example; Bayes theorem and concept learning: Brute-Force Bayes Concept Learning, MAP Hypotheses and Consistent Learners; Bayes optimal classifier; naive Bayes classifier. **(Chapters 6.1, 6.2, 6.3, 6.7, 6.9 from Textbook-6)** Bayesian belief networks – Model Representation, Model Building, Example, Characteristics. **(Chapters 5.3.5 from Textbook-6)**	
UNIT – IV	**10 hours**
Principal Component Analysis: Introduction, Properties of Principal Component, Implementing PCA on a 2-D Dataset, Applications of PCA. (Textbook-7)Support Vector machine: Maximum margin hyperplanes: Rationale for Maximum Margin Linear SVM: Separable Case: Linear Decision Boundary, Margin of a Linear Classifier. Nonlinear SVM: Attribute Transformation, Kernel Trick, Characteristics of SVM. (Chapters 5.5 from Texbook-6)	
UNIT – V	**8 hours**
Ensemble Methods: Rationale for Ensemble Method, Methods for constructing an Ensemble Classifier, Bias Variance Decomposition, Bagging, Boosting, Random Forest. **(Chapters 5.6 from Texbook-6)**

Department: Information Science and Engineering	**Course Type: Core**
Course Title: Software Project Management	**Course Code:** 18IS73
L-T-P: 3-0-0	**Credits:** 03
Total Contact Hours: 39 hrs	**Duration of SEE:**3hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisite:

- Software concepts
- Programming languages such as C/C++ and software engineering

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand software project management issues and learn project planning.	L2
2	Identify the critical path and critical activities using activity-on-arrow networks to estimate the cost of the project.	L3
3	Analyse risks associated with the given project using PERT technique.	L3
4	Understand the techniques for resources allocation and cost monitoring.	L2
5	Describe the techniques of software configuration management and quality assurance policies for a project.	L2

Teaching Methodology:

- Blackboard teaching
- PowerPoint presentations (if needed)
- Case Study

Assessment Methods:

- Three internals, 30Marks each will be conducted and the Average of best of two will be taken
- Rubrics for Case Study-20marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Cos	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2

CO2	3	3	2						2	2	3	1		3
CO3	3	3							2	2	3	1		3
CO4	3								2	2	3	1		3
CO5	3								2	2	3	1		3
18IS73	3	2.5	2.						2	2	2.4	1		3

COURSE CONTENT

UNIT – I	8 hours
Introduction to software project management: Introduction, Why is software project management important?, What is a project? , Software projects versus other types of project, Contract management and technical project management, Activities covered by software project management, Plans, methods and Methodologies, Some ways of categorizing software projects, Stakeholders, Setting objectives, The business case, Project success and failure, What is management?, Management control. Selection of an appropriate project approach: Introduction , Build or buy?, Choosing methodologies and Technologies, Choice of process models, Structure versus speed of delivery, The waterfall model, The spiral model, Software prototyping, Other ways of categorizing, Prototypes, Incremental delivery, Agile methods, Atern/Dynamic Systems, Development Method, Extreme programming (XP), Managing iterative processes, Selecting the most appropriate process model.	
UNIT – II	8 **hours**
Project Evaluation – A business case , project portfolio management, Evaluation of individual projects, Cost-benefit evaluation techniques .Software effort estimation: Introduction, Where are estimates done? , Problems with over- and underestimates, the basis for software estimating, Software effort estimation techniques, bottom -up estimating, the top-down approach and parametric models, Expert judgment, estimating by analogy. Activity planning: Introduction, The objectives of activity planning, When to plan, Project schedules, Projects and activities, Sequencing and scheduling activities, Network planning models, Formulating a network model, Adding the time dimension, The forward pass, The backward pass, Identifying the critical path, Activity float, Shortening the project duration, Identifying critical activities, Activity-on-arrow networks.	
UNIT – III	8 **hours**
Risk management: Introduction, Risk, Categories of risk, A framework for dealing with risk, Risk identification, Risk assessment, Risk planning, Risk management, Evaluating risks to the schedule, Applying the PERT technique, Monte Carlo simulation, Critical chain concepts. Resource allocation: Introduction, The nature of resources, Identifying resource requirements, Scheduling resources, Creating critical paths, Counting the cost, Being specific, Publishing the resource schedule, Cost schedules, The scheduling sequence.	
UNIT – IV	**7 hours**
Monitoring and control: Introduction, Creating the framework, Collecting the data, Visualizing progress, Cost monitoring, Earned value analysis, Prioritizing monitoring, Getting the project back to target, Change control. Quality management: Quality concepts, software quality assurance, software reviews, formal technical reviews, formal approaches to software quality assurance, statistical software quality assurance, software reliability, The ISO 9000 quality standards, The SQA plan.	
UNIT – V	8 **hours**
Software configuration management: SCM scenario, elements of configuration management system, baselines, software configuration items, The SCM repository- the role of the repository, general features and content, SCM features, the SCM process- identification of objects in the software configuration, version control, change control, configuration audit, status reporting, configuration management for WebApps- dominant issues, WebApp configuration objects, content management, change management, version control, auditing and reporting. Reengineering: Business process reengineering, software reengineering, reverse engineering, restructuring, forward engineering, the economics of reengineering.

Department: Information Science and Engineering	**Course Type**: Program Elective
Course Title: Introduction to Game Theory	**Course Code:** 18ISE741
L-T-P:3-0-0	**Credits:**03
TotalContactHours:39 hrs	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Pre-requisite:

- Software concepts
- Programming languages such as C/C++ and software engineering

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the basic principles of game theory.	L2
2	Identify strategic situations and represent them as games	L3
3	Solve simple games using various techniques	L3
4	Analysis of situations from the perspective of strategic interaction	L4
5	Ability to apply basic mathematical concepts of Game Theory to the real-world problems.	L4

Teaching Methodology:

• Black board teaching

• Power point presentation

• Practical component

Assessment Methods:

• Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.

• Rubrics for evaluation of Course Project.

• LA1 and LA2 – Course Project

• Final examination, of 100 Marks will be conducted and will be evaluated for 50Marks.

Course Outcome to Programme Outcome Mapping:

Cos	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2

18ISE7 41	**3**	**3**	**3**	2	1				**2**	**2**		**1**		**2**

COURSE CONTENTS

UNIT – I	08 hours
Introduction: What is game theory? An outline of the history of game theory, John von Neumann, the theory of rational choice, Coming attractions, Nash Equilibrium: Theory: Strategic games, the Prisoner's Dilemma, Bach or Stravinsky? Matching Pennies, the Stag Hunt, Nash equilibrium, Examples of Nash equilibrium, best response functions, Dominated actions, Equilibrium in a single population: symmetric games and symmetric equilibria.	
UNIT – II	**08 hours**
Mixed Strategy Equilibrium: Introduction, Strategic games in which players may randomize, Mixed strategy Nash equilibrium, dominated actions, Pure equilibria when randomization is allowed, Illustration: expert diagnosis, Equilibrium in a single population, Illustration: reporting a crime, The formation of players' beliefs, Extension: Finding all mixed strategy Nash equilibria, Extension: Mixed strategy Nash equilibria of games in which each player has a continuum of actions.	
UNIT – III	**08 hours**
Extensive Games with Perfect Information: Introduction, Extensive games with perfect information, Strategies and outcomes, Nash equilibrium, Subgame perfect equilibrium, Finding subgame perfect equilibria of finite horizon games: backward induction, The ultimatum game and the holdup game, Experiments on the ultimatum game, Stackelberg's model of duopoly, Buying votes, A race, Allowing for simultaneous moves, More experimental evidence on subgame perfect equilibrium.	
UNIT – IV	**8 hours**
Coalitional Games and the Core: Coalitional games, The core, Illustration: ownership and the distribution of wealth, Illustration: exchanging homogeneous horses, Illustration: exchanging heterogeneous houses, Illustration: voting, Illustration: matching, Matching doctors with hospitals, Bayesian Games: Introduction, Motivational examples, General definitions, Two examples concerning information, Illustration: Cournot's duopoly game with imperfect information, Illustration: auctions, Auctions of the radio spectrum, Illustration: juries.	
UNIT – V	**7 hours**
Repeated games: The Prisoner's Dilemma, The main idea, Preferences, Infinitely repeated games Strategies, Some Nash equilibria of the infinitely repeated Prisoner's Dilemma, Nash equilibrium payoffs of the infinitely repeated Prisoner's Dilemma when the players are patient, Subgame perfect equilibria and the one-deviation property, Some subgame perfect equilibria of the infinitely repeated Prisoner's Dilemma, Nash equilibria of general infinitely repeated games, Subgame perfect equilibria of general infinitely repeated games, Finitely repeated games.	

Text book:

Department: Information Science and Engineering	**Course Type:** Program Elective
Course Title: Natural Language Processing	**Course Code:18ISE742**
L-T-P:3-0-0	**Credits:** 03
Total Contact Hours:39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Intermediate proficiency in Python programming
- Basics of machine learning

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the wide spectrum of problem statements, tasks, and solution approaches within NLP	L2
2	Gain experience in implementing and evaluating different NLP applications and applying machine learning and deep learning methods for this process.	L3
3	Evaluate various algorithms and approaches for the given task, dataset, and stage of the NLP product.	L3
4	Understand the BERT Model	L2

Teaching Methodology:

- Power Point Presentation / Demos
- Course Project

Assessment Methods:

- Rubrics to evaluate Course Project for 20 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Cos	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2
CO1	3	2												3
CO2	3	2		1									2	3
CO3	3	2	2	1	2			2	1				2	3
CO4	3	3		2		2	2	2	1	1			2	3
18ISE742	3	2	2	2	2	2	2	2	1	1			2	3

COURSE CONTENT

UNIT – I	**08** hours
NLP: A Primer, NLP in the Real World, NLP Tasks, What Is Language?, Building Blocks of Language, Why Is NLP Challenging?, Machine Learning, Deep, Learning, and NLP: An Overview, Approaches to NLP, Heuristics-Based NLP, Machine Learning for NLP, Deep Learning for NLP, Why Deep Learning Is Not Yet the Silver Bullet for NLP, NLP Pipeline	
UNIT – II	08 hours
Text Representation, Vector Space Models, Basic Vectorization Approaches, One-Hot Encoding, Bag of Words, Bag of N-Grams, TF-IDF, Distributed, Representations, Word Embeddings, Going Beyond Words, Distributed, Representations Beyond Words and Characters, Universal Text Representations, Visualizing Embeddings, Handcrafted Feature Representations	
UNIT – III	07 hours
Text Classification, Applications, A Pipeline for Building Text Classification Systems, One Pipeline, Many Classifiers, Using Neural Embeddings in Text Classification, Deep Learning for Text Classification, Interpreting Text Classification Models, Learning with No or Less Data and Adapting to New Domains	
UNIT – IV	08 hours
Information Extraction, IE Applications, IE Tasks, The General Pipeline for IE, Keyphrase Extraction, Implementing KPE, Practical Advice, Named Entity Recognition, Building an NER System, NER Using an Existing Library, NER Using Active Learning, Practical Advice, Named Entity Disambiguation and Linking, NEL Using Azure API, Relationship Extraction, Approaches to RE, RE with the Watson API, Other Advanced IE Tasks, Temporal Information Extraction, Event Extraction, Template Filling, Chatbots	
UNIT – V	08 hours
Section 1 - Starting Off with BERT, A Primer on Transformers, Understanding the BERT Model, Getting Hands-On with BERT	

Text books:

- **Practical Natural Language Processing**

  A Comprehensive Guide to Building Real-World NLP Systems - 2020

  Sowmya Vajjala, Bodhisattwa Majumder, Anuj Gupta, and Harshit Surana

  - Getting Started with Google BERT

  Build and train state-of-the-art natural language processing models using BERT
  Sudharsan Ravichandiran

Department: Information Science and Engineering	**Course Type:** Program Elective
Course Title: Object Oriented Modelling and Design	**Course Code:18ISE743**
L-T-P:3-0-0	**Credits:** 03
Total Contact Hours:39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

1. Programming Fundamentals
2. Object Oriented Programming languages

Course outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Apply advanced structural and behavioural UML modeling to solve software intensive problems	L3
2	Model the OOAD aspects through Unified Modeling Language (UML) for the given problem.	L3
3	Analyse the requirements of the problem and design solutions to complex problems Using UML notations	L4
4	Understand the concepts of Design patterns	L2

Teaching Methodology:

- Blackboard teaching
- PowerPoint presentations (if needed)
- Regular review of students by asking questions based on topics covered in the class
- Case Study

Assessment Methods:

- Two programming assignments 10 Marks each.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for programming assignments
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Course Content

UNIT – I	08 hours
Introduction: Modeling Concepts, What is Object Orientation? What is OO development? OO themes; Evidence for usefulness of OO development; OO Behavior history. Modeling as Design Technique: Modeling; abstraction; The three models Class Modeling Class Modeling: Object and class concepts; Link and associations concepts; Generalization and inheritance; A sample class model; Navigation of class models. Advanced object and class concepts; Association ends; N-ary associations; Aggregation; Abstract classes; Multiple inheritance; Metadata; Reification; Constraints; Derived data; Packages.	
UNIT – II	**08 hours**
State Modeling: Events, States, Transitions and Conditions; State diagrams; State diagram behavior; Practical tips. Advanced State Modeling: Nested state diagrams; Nested states; Signal generalization; Concurrency; A sample state model; Relation of class and state models; Practical tips. Interaction Modeling: Use case models; Sequence models; Activity models; Use case relationships; Procedural sequence models; Special constructs for activity models.	
UNIT – III	**08 hours**
Overview of system design; Estimating performance; Making a reuse plan; Breaking a system in to sub-systems; Identifying concurrency; Allocation of sub-systems; Management of data storage; Handling global resources; Choosing a software control strategy; Handling boundary conditions; Setting the trade-off priorities; Common architectural styles; Architecture of the ATM system as the example. Class Design, Implementation Modeling:- Class Design: Overview of class design; Bridging the gap; Realizing use cases; Designing algorithms; Recursing downwards, Refactoring; Design optimization; Reification of behavior; Adjustment of inheritance; Organizing a class design	
UNIT – IV	**08 hours**
Implementation Modeling: Overview of implementation; Fine-tuning classes; Fine-tuning generalizations; realizing associations. Design Patterns what is a pattern and what makes a pattern? Pattern categories; Relationships between patterns; Pattern description. Structural Decomposition: Whole-Part; Organization of Work: Master-Slave; Management: Command processor; View handler; Communication: Forwarder-Receiver; Client-Dispatcher-Server; Publisher-Subscriber.	
UNIT – V	**07 hours**
Patterns and software architecture: Introduction to Idioms, Idioms style, pattern classification , pattern selection, Pattern Systems as Implementation Guidelines, Patterns in Software Architecture, Enabling Techniques for Software Architecture, Non-functional Properties of Software Architecture, Pattern-Mining, Pattern Organization and Indexing, Formalizing Patterns	

Text Books

3. K. Barclay, J. Savage: Object-Oriented Design with UML and JAVA, Elsevier, 2008. 4. Booch, G., Rumbaugh, J., and Jacobson, I.: The Unified Modeling Language User Guide, 2nd Edition, Pearson, 2005

Department: Information Science and Engineering	**Course Type:** Core Elective
Course Title: Cyber Security	**Course Code:** 18ISE744
L-T-P: 3-0-0	**Credits:** 03
Total Contact Hours: 39hrs	**Duration of SEE:**3hrs
SEE Marks: 50	**CIE Marks:** 50

Prerequisites:

- Required Knowledge of any Operating System, Networking and Digital Security Issues

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the basic concepts of Cybersecurity, Cryptography and Firewalls.	L2
2	Analyse the attacker motivation and techniques employed to exploit vulnerabilities in cyberspace.	L4
3	Apply the mitigation techniques to solve the threats posed by cybersecurity attacks.	L3
4	Design a cyber strategy to prevent and recover from cybersecurity attacks.	L3

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Case study/Mini Project

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for evaluating cybersecurity tool installation and demonstartion 10 Marks.
- Rubrics for evaluating cybersecurity case study 10 Marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

18ISE744	**3**	**3**	**3**	**1**	**3**			**2**	**2**	**3**		**3**	**1**	**2**

COURSE CONTENT

UNIT – I	7 Hours
CYBER SECURITY FUNDAMENTALS: Network and Security Concepts, Information Assurance Fundamentals, Basic Cryptography, Symmetric Encryption, Public Key Encryption, The Domain Name System (DNS), Firewalls, Virtualization, Radio-Frequency Identification, **UNDERSTANDING THE CYBERSECURITY LANDSCAPE:** The State of Today's Intrusions, The Changing Face of Cyber Criminals, The Lifecycle of an Advanced Attack	
UNIT-II	**8 Hours**
ATTACKER TECHNIQUES AND MOTIVATIONS: How Hackers Cover Their Tracks (Anti-forensics), How and Why Attackers Use Proxies, Tunneling Techniques, Fraud Techniques, Phishing, Smishing, Vishing and Mobile Malicious Code, Rogue Antivirus, Click Fraud, Threat Infrastructure, Botnets, Fast-Flux, Advanced Fast-Flux	
UNIT – III	**8 Hours**
EXPLOITATION: Techniques to Gain a Foothold, Shellcode, Integer Overflow, Vulnerabilities, Stack-Based Buffer Overflows, Format-String Vulnerabilities, SQL Injection, DoS Conditions, Brute-Force and Dictionary Attacks, Misdirection, Reconnaissance and Disruption Methods, Cross-Site Scripting (XSS), Social Engineering, DNS Amplification Attacks	
UNIT – IV	**8 Hours**
MALICIOUS CODE: Self-Replicating Malicious Code, Worms, Viruses, Evading Detection and Elevating Privileges, Obfuscation ,Virtual Machine Obfuscation ,Persistent Software Techniques, Rootkits, Spyware, Attacks against Privileged User Accounts and Escalation of Privileges, Virtual Machine Detection, Stealing Information and Exploitation, Form Grabbing, DLL Injection, Browser Helper Objects.	
UNIT – V	**8 Hours**
DEFENSE AND ANALYSIS TECHNIQUES: Memory Forensics, Why Memory Forensics Is Important, Capabilities of Memory Forensics, Memory Analysis Frameworks, Dumping Physical Memory ,Installing and Using Volatility, Finding Hidden Processes, Volatility Analyst Pack, Honeypots, Intrusion Detection Systems Ten Best Practices for Controlling APTs: Ensure Visibility into All Traffic, Restrict High-Risk Applications, Selectively Decrypt and Inspect SSL Traffic, Sandbox Unknown Files, Block URLs That Are Known to Host Malware and Exploits, Enforce Drive-by-Download Protection, Block Known Exploits and Malware, Limit Traffic for Common Applications to Default Ports, Evaluate Network and Application Events in Context, Investigate Unknowns.	

Text Books:

1. James Graham, Richard Howard, Ryan Olson- "Cyber Security Essentials" CRC Press.
2. Lawrence C. Miller, "Cyber Security for Dummies" Palo Alto Networks® Edition.

REFERENCE BOOKS:

1. James A. Lewis, security: turning national solutions into international cooperation

3. John Rittinghouse, PhD, William M. Hancock, PhD, security Operations Handbook

Department: Information Science and Engineering	**Course Type:** Core Elective
Course Title: DevOps	**Course Code:**18ISE745
L-T-P 3-0-0	**Credits:** 03
Total Contact Hours:39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

Concepts of Computer Networks, Operating System, Network Security, Cloud Computing

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the different application managed service options in the cloud.	L2
2	Demonstrate DevOps workflow with GitLab and Terraform	L2
3	Discover practical skills of Cloud to improve the speed, stability, availability and security for software delivery capability	L4
4	Apply practical skills needed for integrating container orchestration into their own workflow	L3
5	Discover a variety of managed big data services in the cloud.	L4

Teaching Methodology:

- Black Board Teaching
- Power Point Presentation

Assessment Methods:

- Project/ Programming assignment will be considered for 20 marks
- MCQs for 10 Marks
- Two lab internals, 20 Marks each will be conducted, and the Average will be considered
- Final lab examination of 50 Marks.

Course Outcome to Programme Outcome Mapping:

COURSE CONTENTS

UNIT – I: Cloud automation and Management Tools	**08 hours**
Introduction to Infrastructure as Code, Cloud Deployment Manager, Public and private IP address basics, Monitoring and managing your services, applications, and infrastructure, Stackdriver, Introduction to big data managed services in the cloud, Leverage big data operations with Cloud Dataproc, Build Extract, Transform, and Load pipelines using Cloud Dataflow, BigQuery, Google's Enterprise Data Warehouse.	
UNIT – II: GIT – A version Control Tool	**07 hours**
Uses of GIT in Industry, how to setup GIT, working with commands in GIT, recording changes to the repository, Automating DevOps workflows with GitLab and Terraform	
UNIT – III: Kubernetes In Cloud	**08 hours**
Introduction to Docker, Kubernetes Engine: Qwikstart, Orchestrating the cloud with Kubernetes, Managing Deployments using Kubernetes Engine, Continuous delivery with Jenkins in Kubernetes Engine	
UNIT – IV: DevOps Essentials	**08 hours**
Accelerate the state of DevOps, Cloud source Repositories: Start, Managing Deployments using Kubernetes Engine, Deploy Kubernetes Load Balancer Service with Terraform, Site Reliability Trouble shooting with Cloud Monitoring APM, Continuous Delivery pipelines with Spinnaker and Kubernetes Engine	
UNIT – V: ML in Cloud	**08 hours**
Introduction to machine learning in the cloud, Building bespoke machine learning models with AI Platform, Cloud AutoML, Google's pre-trained machine learning APIs.	

Textbooks:

Google Cloud Teaching Resources

Department: Information Science and Engineering	**Course Type**: Open Elective
Course Title: Fundamentals of Java	**Course code**: 18ISO751
L-T-P: 3-0-0	**Credits**: 03
Total contact hours: 39 hrs	**Duration of SEE**: 3 hrs
SEE Marks: 50	**CIE Marks**: 50

Pre-requisites:

Knowledge of any Object-oriented Programming concepts is helpful.

Course Outcomes:

The students would be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the fundamental object-oriented methodology of Java programming	L2
2	Apply the Java programming concepts to implement the real-world problem.	L3
3	Understand knowledge of Packaging and interfaces.	L2
4	Analyse usage of Multi-Threading and Exception Handling.	L4

Teaching Methodology:

- PowerPoint presentations.
- Regular review of students by asking questions based on topics covered in the class.
- Course Project.

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for Course Project. 20 Marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks

Course Outcome to Programme Outcome Mapping:

Course Contents

UNIT – I	08 hours
The History and Evolution of Java: The Birth of Modern Programming: C. C++: The Creation of Java. How Java Changed the Internet. Java Applets, Security and Portability. Java's Magic: The Bytecode. Servlets: Java on the Server-Side **Object-Oriented Programming**. Two Paradigms Abstraction the Three OOP Principles. A First Simple Program Entering the Program. First Sample Program. Second Short Program **Java Is a Strongly Typed Language**. The Primitive Types Integers. Floating-Point Types Characters, Booleans. A Closer Look at Literals. Variables Declaring a Variable. Type Conversion and Casting. Automatic Type Promotion in Expressions Arrays. One-Dimensional Arrays. Multidimensional Arrays Alternative Array Declaration Syntax.	
UNIT – II	**08 hours**
Operators Arithmetic Operators the Bitwise Operators Relational Operators Boolean Logical Operators The Assignment Operator. The? Operator Precedence. Using Parentheses **Control Statements** Java's Selection Statements. Java's Selection Statements. Iteration Statements. Jump Statements. Introduction **to Classes.** Class Fundamentals Declaring Objects Assigning Object Reference Variables. Introducing Methods. Constructors. This Keyword. Garbage Collection. The finalize () Method.	
UNIT – III	**08 hours**
A Closer Look at Methods and Classes Overloading Methods Overloading Constructors Using Objects as Parameters. A Closer Look at Argument Passing Returning Objects. Recursion Introducing Access Control. Understanding static. Introducing final **Inheritance Inheritance** Basics. Member Access and Inheritance. Using super. Creating a Multilevel Hierarchy When Constructors Are Called Method Overriding Dynamic Method Dispatch. Why Overridden Methods?	
UNIT – IV	**07 hours**
Applying Method Overriding Using Abstract Classes Using final with Inheritance Using final to Prevent Overriding Using final to Prevent Inheritance the Object Class. **Packages and Interfaces.** Packages. Access Protection. Importing Packages. Interfaces Defining Interface, Implementing Interface, Nested Interfaces, Applying interfaces, Variables in Interfaces and Interface extension.	
UNIT – V	**08 hours**
Exception Handling Exception-Handling Fundamentals Exception Types Uncaught Exceptions Using try and catch Displaying a Description of an Exception. Multiple catch Clauses. Nested try Statements. Throw, throws, finally. Java's Built-in Exceptions Creating Your Own Exception Subclasses. Chained Exceptions Using Exceptions **Multithreaded Programming** the Java Thread Model Thread Priorities Synchronization Messaging The Thread Class and the Runnable Interface The Main Thread Creating a Thread. Implementing Runnable Extending Thread Choosing an Approach Creating Multiple Threads Using is Alive () and join() Thread Priorities

Course Title: Introduction to Web Technology	**Course Code:** 18ISO752
L-T-P:3-0-0	**Credits:**03
TotalContactHours:39hrs	**DurationofSEE:**3hrs
SEEMarks:50	**CIEMarks:**50

Course outcomes:
Student will be able to

Cos	Course Outcome Description	Blooms Level
1	Describe the fundamentals of web technology.	L2
2	Design web pages using HTML mark-up language for the given Scenarios.	L3
3	Apply the concepts of Cascading Style Sheets for designing the web pages	L3
4	Demonstrate the use of JavaScript to develop the dynamic user interface.	L3
5	Understand server-side scripting using PHP	L2

Teaching methodology:

- Hands-on teaching using Power Point presentations
- Regular review of students by asking questions based on topics covered in the class
- Course Project

Assessment methods:

- Course Project -20 Marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

PO	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12
CO1	3

CO5	3	1							2	2		2
18ISO752	3	3	3			1			2	2		2

Course Content

UNIT – I	8 hours
Introduction to web technologies, structuring an HTML document, Understanding HTML elements, Describing Character Entities, Horizontal rules, Line Breaks, Paragraph, citations, Quotations, Definitions and Comments, Formatting text with HTML elements, Arranging text: Word breaks, PRE, DIV, SPAN, Exploring the hyperlinks and URL, Inserting images in a web page.	
UNIT – II	**9 hours**
HTML Continued **-** Creating tables, exploring colours, working with forms, Exploring audio and video formats. **CSS –** Overview of CSS, Background Properties; color, image, repeat, position, attachment and colour properties; opacity, RGBA, font and text styles, Creating Boxes and Columns in CSS.	
UNIT – III	**8 hours**
CSS: Displaying, Positioning and Floating an element, List styles, Table layouts. JavaScript: Exploring the features of JavaScript, Using JavaScript in an HTML Document, Programming fundamentals of JavaScript, JavaScript functions, events, Objects in JavaScript, Exploring Standard or built-in JavaScript Objects.	
UNIT – IV	**8 hours**
JavaScript: Form Validation, Working with Document Object: Collections, Properties and Methods, Document Object Model: Understanding DOM nodes, DOM level1, DOM level 2, DOM level 3	
UNIT – V	**6 hours**
Introduction to PHP: Origins and uses of PHP, Overview of PHP, General syntactic characters, Primitive's operations and expressions, output, control statements, Arrays, Functions, Pattern matching, Form handling, Cookies, Session Tracking, comparative study of different technologies and its applications.	

TEXT BOOKS:

1. **HTML5 Covers CSS3, JavaScript, XML, XHTML, AJAX, PHP and Jquery Black Book, dreamtech PRESS, ISBN:978-93-5119-907-6, 2019**
2. **Programming the World Wide Web- Robert W. Sebesta, 7th Edition, Pearson Education, 2014.**

Department: Information Science and Engineering	**Course Type:** Open-Elective
Course Title: Mobile App Development	**Course Code:** 18ISO753
L-T-P:3-0-0	**Credits:**03
TotalContactHours:39hrs	**DurationofSEE:**3hrs
SEEMarks:50	**CIEMarks:**50

Pre-requisites:

- Students should have completed least one programming language course on Object Oriented Programming (Preferably C++, Java, or C#).

Course Outcomes:

CO's	Course Learning Outcomes	BL
1	Describe basic concepts of mobile development environment.	L2
2	Design a rich user interface for mobile application through using XML code and WYSIWYG editor.	L3
3	Apply SQLite Open Helper features to build a mobile application which uses relational database.	L3
4	Develop programs to read the values of various sensors in mobile phone.	L3
5	Create a developer account and publish application on online marketplace such as Google Play.	L2

Teaching Methodology:

- Blackboard Teaching
- PPT.
- Course Project

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for evaluating Course Project -20Marks
- Final examination, of 100 Marks will be conducted and will be evaluated for - 50 Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO1	PO 2	PO 3	PO 4	PO5	PO 6	PO7	PO8	PO 9	PO10	PO11	PO12

CO5	3	2	3		1				2	2		
18ISO753	3	2	3		1				2	2		

Course Contents

Unit 1	08Hours
Mobility and Android, Introduction, Mobility Panorama, Mobile Platforms, App Development Approaches, Android Overview, Getting Started with Android, setting up Development Environment, Saying Hello to Android, Traversing an Android App Project Structure, Logical Components of an Android App, Android Tool Repository, Installing and Running App Devices Learning with an Application, Mobile App Development Challenges, Tenets of a Winning App.	
Unit 2:	**08 Hours**
Building Blocks, App User Interface, Activity, UI Resources, UI Elements and Events, Interaction among Activities, Fragments, Action Bar, App Functionality - Beyond UI: Threads, Async Task, Service, Notifications, Intents and Intent Resolution	
Unit 3:	**08 Hours**
App Data - Persistence and Access, Flat Files, Shared Preferences, Relational Data, Data Sharing Across Apps, Enterprise Data, Location Services and Maps, Google Play Services, Location Services	
Unit 4:	**08 Hours**
Sensors: Sensors in Android, Android Sensor Framework, Motion Sensors, Position Sensors, Environment Sensors.	
Unit 5:	**07 Hours**
Moving to Market: Testing Android Apps, Testing Android App Components, App Testing Landscape Overview, Publishing Apps, Groundwork, Configuring, Packaging, Distributing.	

TEXTBOOKS:

- Composing Mobile Apps: Learn, Explore, apply using Android, 1st Edition, Anubhav Pradhan, Anil V Deshpande, Wiley Publication 2017.

Department: Information Science and Engineering	**Course Type:** Open-Elective
Course Title: Fundamentals of Software Systems	**Course Code:** 18ISO754
L-T-P:3-0-0	**Credits:**03
TotalContactHours:39hrs	**DurationofSEE:**3hrs
SEEMarks:50	**CIEMarks:**50

Pre-requisites:

1. Programming Fundamentals

Course outcomes:

COs	Course Outcome Description	Blooms Level
1	Understand the different process models and Software development lifecycle	L2
2	Analyse the functional and non-functional requirements of the given use cases	L4
3	Design solutions to complex problems Using UML notations	L3
4	Illustrate the rapid software development methods for designing the software	L2
5	Develop test cases and validate using different testing strategies	L3
6	Understand the process of software Maintenance and project management	L2

Teaching Methodology:

- Blackboard teaching
- PowerPoint presentations (if needed)

Assessment Methods:

- Two programming assignments 10 Marks each.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for Programming assignments
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Course Contents

UNIT – I	8 hours
Introduction: Professional and ethical responsibility. Software Quality Attributes, key challenges facing software engineering. **Software Processes:** Software Processes: Software Development Life Cycle (SDLC) Models, Process iteration, Process activities; The Rational Unified Process; Computer Aided Software Engineering	
UNIT – II	**8 hours**
Requirements: Software Requirements: Functional and Non-functional requirements; User requirements; System requirements, The software requirements document. Requirements Engineering Processes: Feasibility studies, Requirements elicitation and analysis, Requirements validation, Requirements managements;	
UNIT – III	**9 hours**
Modelling as a Design Technique: Modelling, abstraction, the three models. Class Modelling: Object and class concepts, Link and associations concepts, Generalization and inheritance, a sample class model. State Modelling: events, states, Transitions and conditions, sample state diagram. Interaction modelling: Use case models, sequence models and Activity models.	
UNIT – IV	**8 hours**
Rapid Software Development: Agile methods; Extreme programming; Rapid application development, software prototyping. Software Testing: System testing, Component testing, Test case design, Test automation.	
UNIT – V	**6 hours**
Software Project Management: Management activities, project planning, project scheduling, Risk management.	

Text Books:

1. Ian Somerville: Software Engineering, 8th Edition, Pearson Education, 2007.
2. Michael Blaha, James Rumbaugh: Object-Oriented Modeling and Design with UML, 2nd Edition, Pearson Education, 2005.

Reference Books:

1. Roger.S.Pressman: Software Engineering-A Practitioners approach,7th Edition, McGraw Hill, 2007.
2. Pankaj Jalote: An Integrated Approach to Software Engineering, Wiley India, 2009.
3. . Frank Buschmann, Regine Meunier, Hans Rohnert, Peter Sommerlad, Michael Stal: Pa00000ttern-Oriented Software Architecture, A System of Patterns, Volume 1, John Wiley and Sons, 2006
4. Grady Booch et al: Object-Oriented Analysis and Design with Applications, 3rd Edition, Pearson, 2007.

Department: Information Science and Engineering	**Course Type: Open Elective**
Course Title: Programming with Python	**Course Code:** 18ISO755
L-T-P:3-0-0	**Credits: 03**
Total Contact Hours:39 hours	**Duration of SEE:**03 hours
SEE Marks: 50	**CIE Marks:** 50

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Describe the basic programming concepts of python and Functions	L2
2	Apply appropriate data types/ data structures for the given problem using Lists, Dictionaries, Tuples and Files.	L3
3	Apply Exception handling technique in Python applications for error handling.	L3
4	Apply Python object-oriented concepts to solve real world problems.	L3

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Mini Project

Assessment Methods:

- Rubrics to evaluate Mini project for 20 Marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

Cos	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

18ISO755	**3**	**2**	**3**		**1**				**1**	**1**		**1**		**2**

COURSE CONTENT

UNIT – I	**8** hours
The way of the program: The Python programming language, what is a program? , What is debugging, Formal and natural languages, the first program, Debugging. Variables, expressions and statements : Values and types , Variables, Variable names and keywords, Operators and operands, Expressions and statements, Interactive mode and script mode, Order of operations, String operations, Comments, Debugging Functions: Function calls, Type conversion functions, Math functions, Composition, Adding new functions, Definitions and uses, Flow of execution, Parameters and arguments, Variables and parameters are local, Stack diagrams, Fruitful functions and void functions, Why functions?, Importing with from, Debugging.	
UNIT – II	**8** hours
Conditionals and recursion: Modulus operator, Boolean expressions , Logical operators, Conditional execution , Alternative execution, Chained conditionals , Nested conditionals , Recursion , Stack diagrams for recursive functions, Infinite recursion , Keyboard input , Fruitful functions: Return values, Incremental development, Composition , Boolean functions. Iteration: Multiple assignment, Updating variables, the while statement, break, Squareroots, Algorithms.	
UNIT – III	**7** hours
A string is a sequence: len, Traversal with a for loop, String slices, Strings are immutable, Searching, Looping and counting, String methods, the in operator, String comparison. Lists: A list is a sequence, Lists are mutable, Traversing a list , List operations, List slices, List methods, Map, filter and reduce, Deleting elements, Lists and strings, Objects and values, Aliasing, List arguments.	
UNIT – IV	**8** hours
Dictionaries: Dictionary as a set of counters, Looping and dictionaries, Reverse lookup, Dictionaries and lists, Memos, Global variables, Long integers, Debugging. Tuples: Tuples are immutable, Tuple assignment, Tuples as return values, Variable-length argument tuples, Lists and tuples , Dictionaries and tuples, Comparing tuples , Sequences of sequences.	
UNIT – V	**8h**ours
Files: Persistence, Contents, Catching exceptions, Databases, Writing. Classes and objects: User-defined types, Attributes, Rectangles, Instances as return values, Objects are mutable, Copying, Classes and functions: Time, Pure functions, Modifiers, Prototyping versus planning. Classes and methods: Object-oriented features, Printing objects, another example, A more complicated example, The init method, The __str__ method, Operator overloading, Type-based dispatch, Polymorphism.	

Text books:

2. Allen Downey, Think Python(How to Think Like a Computer Scientist), 2nd Edition by O'Reilly Media

Reference Books:

3. Learning Python, Fourth Edition, Mark Lutz, O’Reilly publication

Department: Information Science and Engineering	**Course Type**: Core
Course Title: Machine Learning Lab	**Course Code:** 18ISL76
L-T-P: 0-0-2	**Credits:**01
Total Contact Hours:26 hours	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Prerequisite:

- Linear Algebra, Probability & Statistics, Calculus, Data Mining
- Any programming language such as Python, Java

Course Outcomes:

After the course completion, students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the implementation procedures for the machine learning algorithms	L2
2	Design Java/Python programs for various Learning algorithms	L3
3	Apply Machine Learning algorithms to the appropriate data sets	L3
4	Identify and apply Machine Learning algorithms to solve real world problems	L3

Teaching Methodology:

- Black Board Teaching / Power Point Presentation
- Laboratory experiments

Assessment Methods:

- Rubrics for evaluating laboratory experiments for 30 marks
- Two internals, 20 Marks each will be conducted, and average of two internals will be taken.
- Final examination of 50 Marks will be conducted.

Course Outcome to Programme Outcome Mapping:

Cos	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO1 0	PO1 1	PO1 2	PSO 1	PSO 2
CO1	3	3	2		1				2	2				**3**

CO3	3	3	2		1				2	2				**3**
CO4	3	3	2		1				2	2				**3**
18ISL76	3	3	2		1				2	2				**3**

Program No.	Title	CO Mapping
Note:	**•** **The programs can be implemented in either Python/Java or any programming language** **•** **For PART-A, programs are to be developed without using the built-in classes or APIs of Java/Python** **•** **Data sets can be taken from standard repositories (https://archive.ics.uci.edu/ml/datasets.html) or constructed by the students** **•** **During Examination Students must execute one program from PART-A and one program from PART-B**	
	PART A	
1.	([115.3, 195.5, 120.5, 110.2, 90.4, 105.6, 110.9, 116.3, 122.3, 125.4]) Use the above array of values and compute the mean, median, mode, Standard deviation, variance min-max normalization and standardization	CO1
2.	Use IRIS data set and perform the PCA on the dataset. Examine the first 2 principal components of X. Create a scatter plot with each of the 150 rows of X projected onto the first two principal components. In other words, the horizontal axis should be first principal component, the vertical axis should be second principal component.	CO1
3.	Given the matrix X whose rows represent different data points, run k-means clustering on this dataset using the Euclidean distance as the distance function. Here k is chosen as 3. The centres of 3 clusters were initialized as µ1 = (6.2, 3.2) (red), µ2 = (6.6, 3.7) (green), µ3 = (6.5, 3.0) (blue). $X = \begin{bmatrix} 5.9 & 3.2 \\ 4.6 & 2.9 \\ 6.2 & 2.8 \\ 4.7 & 3.2 \\ 5.5 & 4.2 \\ 5.0 & 3.0 \\ 4.9 & 3.1 \\ 6.7 & 3.1 \\ 5.1 & 3.8 \\ 6.0 & 3.0 \end{bmatrix}$ • What's the centre of the first cluster (red) after one iteration? (Answer in the format of [x1, x2], round your results to three decimal places, same as problems 2 and 3) • What's the centre of the second cluster (green) after two iteration? • What's the centre of the third cluster (blue) when the clustering converges? • How many iterations are required for the clusters to converge?	CO1
4.	Build a Binary Decision Trees using zoo data available at UCI Zoo Data Set. Generate a confusion matrix and print class wise accuracy, precision and recall in your result.	CO2
5.	Use an appropriate 2-dimensional data set and generate scatter plots of its features. Build a correlation matrix and use linear regression to compute the regression parameters. Also compute the Cost, SSE, SSR, SST and R^2.	CO2
6.	Use an appropriate multi-dimensional data set to perform Logistic regression for multi class classification. Illustrate the gradient descent method and compute the regression parameters. Also demonstrate the effect of feature pre-processing like removal of noise, NAN's, Missing value imputation.	CO2
	PART B	
1.	Implement the Naïve Bayesian classifier on COVID data set to predict whether a patient is covid +ve or not. Compute the accuracy, precision recall F1score ROC curve of the classifier, considering 80% training data .Draw the validation curves of the classifier.	CO3

2.	Use RBF, Polynomial and Sigmoid kernel with SVM and compare the performance of the kernels using suitable multiclass data set.	CO3
3.	Build a Random Forest classifier on any readily available disease dataset to predict the correct disease. Compare the performance of the classifier with decision tree.	CO4

Department: Information Science and Engineering	**Course Type**: Core
Course Title: Hybrid Application Development Lab	**Course Code:** 18ISL77
L-T-P: 0-0-2	**Credits:**02
Total Contact Hours:26 hours	**Duration of SEE:**3hrs
SEE Marks:50	**CIE Marks:**50

Prerequisites

- Fundamentals of object-oriented programming, Logic building skills

Course Outcome

At the end of the course, students will be able to

CO's	Course Learning Outcomes	BL
1	Understand android activity lifecycle and project structure of native/hybrid application	L2
2	Design an application using basic building blocks of android	L3
3	Apply SQLite OpenHelper for building a database application	L3
4	Implement GPS application using Google play Location Services	L3
5	Build Hybrid applications using Google Flutter framework and DART programming language	L3

Teaching Methodology:
1. Hands-on session
2. Tutorial on Lab Programs
3. Course Project

Assessment Methods:
1. Rubrics for evaluating laboratory experiments 20 Marks
2. Rubrics for evaluating course project 20 Marks
3. Lab internals for 10 marks.
4. SEE examination will be evaluated for 50 marks.

Course Outcome to Programme Outcome Mapping

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3								2	2				3
CO2	3	2	3		2				2	2				3
CO3	3	2	3		2				2	2				3
CO4	3	2	3		2				2	2				3
CO5	3	2	3		2				2	2				3
18ISL77	3	2	3		2				2	2				3

Program No.	Title	CO Mapping
	PART A	
1.	Create an android application to understand android activity lifecycle. Demonstrate uses of at least 5 android UI widgets	CO1
2.	Develop a native application which uses intents to navigate between activities of the application. Demonstrate how to pass data using bundles when the intent is invoked for navigation.	CO2
3.	Develop a native calculator application using LinearLayout and onClickListener interface on buttons.	CO2
4.	Construct a native application for demonstrating database implementing SQLiteOpenHelper class. Demonstrate how to delete, update, and insert entries in the created database.	CO3
5.	Develop a native application that uses GPS location information and display the current coordinates on google maps using google maps API	CO3
	PART B	
1.	Create a media player application that will play media file saved on memory card. Demonstrate application with play, pause, fast forward, and rewind functionality.	CO4
2.	Demonstrate the use of Scaffold, SafeArea, params related to cross axis alignement and Main axis alignment params.	CO4
3.	Implement a hybrid dice rolling application to demonstrate the use of SetState() method for marking part of code as dirty, and refreshing the application code upon marking some part of code as dirty.	CO4
4.	Create a hybrid application using flutter to demonstrate how to use stateless and stateful widgets. Demonstrate building Xylophone app Using Flutter and Dart Packages.	CO4
5.	Create a hybrid application using flutter to demonstrate how to use stateless and stateful widgets. Demonstrate building Xylophone app Using Flutter and Dart Packages.	CO4
6.	Implement a quiz application using flutter. Consisting of two button – true and false. Upon answering one question, the result of the answer should be shown, and the user should be taken to next question. One the number of questions in quiz ends – user should be shown the score and he should be given option to restart the quiz.	CO4

Department: Information Science and Engineering	**Course Type: Core elective**
Course Title: Venture Process Management & IPR	**Course Code:** 18ISH81
L-T-P: 3-0-0	**Credits:** 03
Total Contact Hours: 39 hrs	**Duration of SEE:**3hrs
SEE Marks: 50	**CIE Marks:** 50

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Understand the importance of entrepreneurship and its role in economic development.	L2
2	Develop Business strategies for the venture Competency: Develop vision and mission statement for a venture Identify the market challenges Understand the strength and opportunity of SWOT	L3
3	Analyze innovation strategies for a venture	L4
4	Analyze risk and uncertainties of the business	L4
5	Understand Business Ethics	L2
6	Understand the concepts of IP rights.	L2

Teaching Methodology:

- Blackboard teaching
- PowerPoint presentations
- Case Studies

Assessment Methods:

- Three internals, 30Marks each will be conducted and the Average of best of two will be taken.
- Rubrics for Case Study evaluation-20marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50Marks.

Course Outcome to Programme Outcome Mapping:

Course Content

UNIT – I	8 hours
Economic Growth and the Technology-The Entrepreneur's Challenge, The Entrepreneur ,Economics and the Firm , Creative Destruction , Innovation and Technology , Opportunity and the Concept , Opportunity Identification , Trends and Convergence Opportunity Evaluation , The Concept Summary	
UNIT – II	**8 hours**
Vision and the Business Model, The Mission Statement, The Value Proposition, The Business Model, Business Model Innovation in Challenging Markets, Core Competencies, Sustainable Competitive Advantage, Competitive Strategy, Venture Strategy, The Industry and Context for a Firm, Strengths and Opportunities—SWOT	
UNIT – III	**8 hours**
Innovation Strategies, First Movers Versus Followers, Imitation, Creativity and Invention, Types and Sources of Innovation, Technology and Innovation Strategy, New Technology Ventures, Risk and Return, Risk and Uncertainty, Scale and Scope, Network Effects and Increasing Returns.	
UNIT – IV	**7 hours**
What is Business Ethics? The Place of Business Ethics, Is Business Ethics Necessary?, **Employee's Ethics: Getting a Job, Getting a Promotion, Leaving,** The Résumé Introduction, What Am I Worth?, Plotting a Promotion, Looking for a Better Job Outside the Company	
UNIT – V	**8 hours**
Legal Formation and Intellectual Property ,Legal Form of the Firm ,Company Name ,Intellectual Property , Trade Secrets , Patents , Trademarks , Copyrights , Licensing ,Detailed functional Planning Forthe Venture- The Marketing and Sales Plan , Marketing , Marketing Objectives and Customer Target Segments, Product and Offering Description, Market Research, Customer Relationship Management, The Value Chain,Processes and Operations Management

COURSE CONTENT

UNIT – I	8 hours
Green ICT: History, Agenda, and Challenges Ahead Introduction,The Second Industrial Revolution—The Emergence of Information and Communication Technologies, The Integrated Circuit (IC) Revolution ,New Age of Computer Technology, Global Mobile Computing and Its Environmental Impact, The Agenda and Challenges Ahead, Videoconference as an Alternative to Business Travel, Dematerialization of Product Chain, Travel Advice/Road Traffic Control, Saving IT Resources—A Drop in the Ocean?	
UNIT – II	**7 hours**
Measurements and Sustainability Introduction, ICT Technical Measures, Introduction, Service of Data Processing, Service of Data Transport, Service of Data Storage, Multimedia Service, Ecological Measures and Ethical Consideration, Introduction, ICT Impact on Pollution, Resource Efficiency, Ethics in ICT, Systems Engineering for Designing Sustainable ICT-Based Architectures, Introduction, Stakeholder Requirements Definition, System Requirements Analysis, System Requirements Validation and Verification, ICT Expertise and Results, Traceability Matrix, Ecoefficiency Metrics.	
UNIT – III	**8 hours**
The Law of Green IT, General Remarks on Law and the Regulation of Environmental Behavior ,Direct and Indirect Governance of "Green IT" , Norm Addressees and Efficient Regulation, **Sustainable Cloud Computing, Introduction,** Challenges in the Use of Cloud Computing As Green Technology , Cloud Computing and Sustainability, Sustainable Applications of Cloud Computing, Technologies Associated With Sustainable Cloud Computing, Future Prospects of Sustainable Cloud Computing, Reflections on Sustainable Cloud Computing Applications	
UNIT – IV	**8 hours**
Achieving the Green Theme Through the Use of Traffic, Characteristics in Data Centers, Introduction, Green IT and the Cloud, Virtualization Behavior , Rationale, Relationship Between Infrastructure as a Service (IaaS) and Power, Network Processes and Power ,Need for Thermal-Aware Virtualization, Understanding Sustainability on the Cloud ,Current State of Affairs, Achieving Sustainability on the Cloud ,Sustainability with VM Management , Green Cloud as a Network Management Problem, Importance of Virtualization Management, Relationship Between Networking and Power Consumption , Need for Traffic Characterization in Virtualized Environment, Role of Hypervisors in Traffic Characterization , SNMP for Green Cloud Traffic Characterization, SNMP Operation in Context of Green Clouds , A Model for Network Management for Green Cloud, Model Outline, Gathering and Using Statistics, Conclusions and Future Work.	
UNIT – V	**8 hours**
Critical Issues for Data Center Energy Efficiency , Introduction, Aim and Objectives, Literature Survey ,Green ICT ,Data Centers, Data Center Efficiency ,Data Center Efficiency Measurements and Metrics, Methodology, Implementation ,Operation of the Experiment, Assumptions, Results and Discussion , PUE Analysis, Effect of Set Point Temperature ,Effect of a Change in the Cooling System , Immediate Impact, Future Impact, Cloud Computing, Sustainability, and Risk, Introduction, Cloud Architecture and Risk Preferences ,Green Cloud Computing and Risk Management, Risk Appetite and Tolerance.

Department: Information Science and Engineering	**Course Type:** Elective
Course Title: Business Analytics	**Course Code**:18ISE831
L-T-P: 3-0-0	**Credits:** 03
Total Contact Hours:39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks**: 50

Course Outcomes: Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Describe the importance of business analytics for creating the successful business.	L2
CO2	Analyse the suitability of different types of statistics for business analytical processing with visualization.	L3
CO3	Apply analytics on data warehouse to derive useful insight	L3
CO4	Apply web and social networking analysis concept on business data for gaining the insights, correlation and customer interests.	L3
CO5	Understand/Summarize the emerging trends and future impacts on business operations.	L2

Teaching Methodology:

- Blackboard Teaching
- Power point presentation
- Case study

Assessment Methods

- Group Discussion for 10 Marks.
- Rubrics to evaluate Case study for 10 Marks.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

18ISE831	3	2	2		1				2	2				2

Course content

Unit – I	8 Hrs
Business Analytics: Why Analytics, Business Analytics: the Science of data driven decision making, Descriptive Analysis, Predictive Analytics, Prescriptive Analytics, Big Data Analytics, Web and Social media Analytics, Machine Learning Algorithms, Framework for data driven decision making, Analytics Capability Building, Roadmap, Challenges, Types (Descriptive, Predictive and Prescriptive).	
Unit – II	**7Hrs**
Descriptive Analytics: Data Types and Scales, Types of Data Measurement Scales, Population and Sample, Measures of Central Tendency, Percentile, Decile, and Quartile, Measures of Variation, Measures of Shape − Skewness and Kurtosis, Data Visualization	
Unit – III	**8 Hrs**
Data warehousing: definition and concepts, data warehousing process overview, data warehousing architecture, data integration and the extraction, transformation, and load processes, Data warehouse development, data warehousing implementation issues, Real time data warehousing, data warehousing administration, security issues, and future trends	
Unit – IV	**8 Hrs**
Text and web analytics: text analytics and text mining overview, Natural language processing, Text mining application, text mining process, Sentiment analysis, web mining overview, search engines, web usage mining, Social analytics	
Unit – V	**8 Hrs**
Emerging Trends and Future Impacts: Location-Based Analytics for Organizations, Geospatial Analytics, Real Time Location Intelligence, Analytics Applications for Consumers, The web 2.0 revolution and online social networking, cloud computing and BI, impact of analysis in organization: An overview, Issues of Legality, Privacy, and Ethics.	

Textbooks:

Department: Information Science and Engineering	**Course Type:** Core
Course Title: Neural Networks & Deep Learning	**Course Code:18ISE832**
L-T-P:3-0-0	**Credits:** 03
Total Contact Hours:39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

- Machine learning-I, Data mining

Course Outcomes:

Students will be able to

CO's	Course Learning Outcomes	BL
CO1	Understand the basic concepts of artificial neural networks	**L2**
CO2	Build Deep Learning architecture-Autoencoders, CNN	**L3**
CO3	Illustrate the working of Recurrent Neural Networks	**L2**
CO4	Apply different parameters on the deep learning networks.	**L3**

Teaching Methodology:

- Blackboard teaching and PPT
- Executable Codes/ Live Demonstration
- Case Study

Assessment Methods

- Model building of any Deep learning Architecture using benchmark datasets -10M
- Case study to be evaluated using rubrics for 10 marks
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks

COURSE CONTENT

Unit – I	**7 Hrs**
Foundations of Neural Networks and Deep Learning: Neural Network, Neuron, Expressing Linear Perceptrons as Neurons, Feed-Forward Neural Networks, Linear Neurons and Their Limitations, Sigmoid, Tanh, and ReLU Neurons, Softmax Output Layers, Training Feed-Forward Neural Networks, Gradient Descent	
Unit – II	**8 Hrs**
Fundamentals of Deep Networks: The Delta Rule and Learning Rates, Gradient Descent with Sigmoidal Neurons, The Backpropagation Algorithm, Stochastic and Minibatch Gradient Descent, Test Sets, Validation Sets, and Overfitting, Common Architectural Principles of Deep Networks, Loss Functions, Optimization Algorithms, Hyperparameters, Building Blocks of Deep Networks, Autoencoders, Variational Autoencoder	
Unit – III	**8 Hrs**
Major Architectures of Deep Networks: Unsupervised Pretrained Networks, Deep Belief Networks, Generative Adversarial Networks, Convolutional Neural Networks (CNNs), CNN Architecture Overview, Input Layers, Convolutional Layers, Pooling Layers, Fully Connected Layers, Other Applications of CNNs	
Unit – IV	**8 Hrs**
Recurrent Neural Networks: Modelling the Time Dimension, 3D Volumetric Input, General Recurrent Neural Network Architecture, LSTM Networks, Domain-Specific Applications and Blended Networks, Recursive Neural Networks, Network Architecture Varieties of Recursive Neural Networks	
Unit – V	**8 Hrs**
Basic Concepts in Tuning Deep Networks: Building Deep Networks, Building Step-by-Step Process, Matching Input Data and Network Architectures, Relating Model Goal and Output Layers, Weight Initialization Strategies, Sparsity Affects the Learning, Applying Methods of Optimization, Using Parallelization and GPUs for Faster Training, Controlling Epochs and Mini-Batch Size, Regularization, Class Imbalance, Methods for Sampling Classes, Dealing with Overfitting	

Textbook:

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Department: Information Science and Engineering	**Course Type: Core**
Course Title: Software Defined Networks	**Course Code:** 18ISE833
L-T-P: 3-0-0	**Credits:** 03
Total Contact Hours: 39 hrs	**Duration of SEE:**3hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisite:

- Knowledge on Computer networks, and Programming languages like PYTHON, JAVA.

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	understand the architecture, key elements and requirements for building Software defined networks.	L1
2	analyse the technology evolution leading to SDN as well as Open-Source role in SDN.	L4
3	apply techniques that enable applications to control the underlying network using SDN.	L3
4	demonstrate knowledge of software defined networking and its applications, including network programmability and virtualization.	L3
5	understand Network Functions Virtualization components and their roles in SDN	L1

Teaching Methodology:

- Black board teaching
- Power point presentation
- Practical component

Assessment Methods:

- Three internals, 30Marks each will be conducted and the Average of best of two will be taken
- Rubrics for Course Project -20marks
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COURSE CONTENT

UNIT – I ELEMENTS of Modern Networking	8 hours
Network Architectures, Requirements and Technology: Global Network Architecture. Typical Network Hierarchy, Ethernet: Applications of Ethernet, Standards, Ethernet Data Rates, Wi-Fi: Applications of Wi-Fi, Standards, Wi-Fi Data Rates, 4G/5G Cellular: First Generation, Second Generation, Third Generation, Fourth Generation, Fifth Generation. Cloud Computing: Cloud Networking, Cloud Storage Types of Networks and Internet Traffic: Elastic Traffic, Inelastic Traffic Real-Time Traffic Characteristics Demand: Big Data, Cloud Computing, and Mobile Traffic: Big Data, Cloud Computing, Mobile Traffic Requirements: QoS, QoE, Quality of Service, Quality of Experience. Routing: Characteristics, Packet Forwarding, Routing Protocols, Elements of a Router Congestion Control: Effects of Congestion, Congestion Control Techniques, SDN and NFV: Software-Defined Networking, Network Functions Virtualization	
UNIT – II SDN DATA PLANE	8 **hours**
SDN: Background and Motivation. Evolving Network Requirements, Demand Is Increasing, Supply Is Increasing, Traffic Patterns Are More Complex, Traditional Network Architectures are Inadequate. The SDN Approach: Requirements, SDN Architecture, Characteristics of Software-Defined Networking SDN- and NFV-Related Standards: Standards-Developing Organizations, Industry Consortia, Open Development Initiatives Data Plane and OpenFlow: SDN Data Plane, Data Plane Functions, Data Plane Protocols OpenFlow Logical Network Device: Flow Table Structure, Flow Table Pipeline, The Use of Multiple Tables, Group Table.	
UNIT – III SDN CONTROL PLANE	8 **hours**
SDN Control Plane: SDN Control Plane Architecture, Control Plane Functions, Southbound Interface, Northbound Interface. Routing, ITU-T Mode, OpenDaylight , OpenDaylight Architecture , OpenDaylight Helium ,REST, REST Constraints , Example REST API. Cooperation and Coordination among Controllers, Centralized Versus Distributed Controllers, High-Availability Clusters, Federated SDN Networks, Border Gateway Protocol, Routing and QoS Between Domains, Using BGP for QoS Management, IETF SDNi , OpenDaylight SNDi.	
UNIT – IV SDN APPLICATION PLANE	**7 hours**
SDN Application Plane: SDN Application Plane Architecture, Northbound Interface, Network Services Abstraction Layer, Network Applications, User Interface Network Services Abstraction Layer, Abstractions in SDN, Frenetic. Traffic Engineering, PolicyCop Measurement and Monitoring Security, OpenDaylight DDoS Application Data Center Networking, Big Data over SDN, Cloud Networking over SDN, Mobility and Wireless Information-Centric Networking, CCNx, 169 Use of an Abstraction Layer.	
UNIT – V NFV Functionality	8 **hours**
NFV Infrastructure, Container Interface, Deployment of NFVI Containers, Logical Structure of NFVI Domains, Compute Domain, Hypervisor Domain, Infrastructure Network Domain. Virtualized Network Functions, VNF Interfaces, VNFC to VNFC Communication, VNF Scaling NFV Management and Orchestration, Virtualized Infrastructure Manager, Virtual Network Function Manager, NFV Orchestrator, Repositories, Element Management, OSS/BSS NFV Use Cases, Architectural Use Cases, Service-Oriented Use Cases. SDN and NFV.	

Text books:

Foundations of Modern Networking SDN, NFV, QoE, IoT, and Cloud by William Stallings

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Department: Information Science and Engineering	**Course Type**: Core Elective– F
Course Title: Ad hoc Network	**Course Code**: 18ISE834
L-T-P:3-0-0	**Credits:** 03
Total Contact Hours: 39 hrs	**Duration of SEE:** 3 hrs
SEE Marks: 50	**CIE Marks:** 50

Pre-requisites:

Fundamental knowledge on wired and wireless networks and communication.

Course outcomes

At the end of the course, Student will be able to

Cos	Course Outcome Description	Blooms Level
1	Describe the concepts of ad hoc networks.	L1
2	Apply the MAC layer protocols for controlling access to the shared media in ad hoc networks.	L3
3	Get exposure to state of the art in VANETs	L2
4	Understand VANETs which now open new vistas for internet access, distributed gaming and the fast-growing Mobile entertainment industry.	L2
5	Understand VANETs to promote Traffic Safety.	L2

Teaching Methodology

- Blackboard teaching / PowerPoint presentation
- Case Study.

Assessment Methods

- Three internals, 30 marks each, Average of best of two will be taken.
- Case Study – documentation made based on the rubrics- 10 marks.
- Simulation of a VANET Applications for 10 marks.
- Final examination is conducted for 100 marks and evaluated for 50 marks.

Course Outcome to Programme Outcome Mapping

Course Content

UNIT – I	**6 hours**
Ad Hoc wireless networks: Fundamentals of Wireless Communication Technology, The Electromagnetic Spectrum, Radio Propagation Mechanisms, Characteristics of the Wireless Channel, Modulation Techniques, Multiple Access Techniques, Voice Coding, Error Control, IEEE 802 Network Standards, Introduction to Ad hoc Wireless Networks, Issues in Ad Hoc Wireless Networks, Ad Hoc Wireless Internet.	
UNIT – II	8 **hours**
MAC Protocols for Ad Hoc wireless networks: Introduction, Issues in Designing a MAC Protocol for Ad Hoc Wireless Networks, Design goals of a MAC Protocol for Ad Hoc Wireless Networks, Classifications of MAC protocols, Contention-Based Protocols, Contention-Based protocols with reservation mechanisms, Contention-Based MAC protocols with scheduling mechanisms, MAC protocols that use directional antennas, Other MAC protocols.	
UNIT – III	8 **hours**
Introduction to Vehicular Ad Hoc Networks (VANETs): Traffic Monitoring, Causes of congestion, Traffic Monitoring Data, Common Applications of Traffic Data, commonly used sensor technology, Detection methods **Models for Traffic flow and Vehicle Motion:** Models for Longitudinal Vehicle Movement, Lane changes situations, Simulating Vehicle-to Vehicle and Infrastructure-to-Vehicle Communication.	
UNIT – IV	**8 hours**
Networking Issues: Routing in MANET, Applicability of MANET Routing to Vehicular Environment, Routing protocols for VANET. **Delay-Tolerant Networks in VANETs: Deterministic**/Stochastic Delay-Tolerant Routing, Vehicle Traffic Model, Vehicle- Roadside Data Access, Data Dissemination in VANETs.	
UNIT – V	8 **hours**
Localization in Vehicular Ad-Hoc Networks: Localization-Aware VANET applications, Localization Techniques for VANETs, Data Fusion in VANET Localization Systems **Vehicular Applications:** Safety related vehicular applications, use of Infrastructure in VANETs, Vehicular Network Simulators, Vehicular Mobility Models.	

Text Books:

1. Ad Hoc Wireless Networks Architecture and Protocols: C. Siva Ram Murthy, B. S Manoj, 2nd edition, Pearson education.
2. Stephan Olariu, Michele C. Weigle, "Vehicular Networks from Theory to Practice", CRC Press.
3. Selected Papers about Vehicular Ad Hoc Networks (VANETs).

Department: Information Science and Engineering	**Course Type:** Core elective
Course Title: ***Soft Computing***	**Course Code:**18ISE835
L-T-P: 3-0-1	**Credits:** 03
Total Contact Hours: 39hrs	**Duration of SEE:** 3hrs
SEE Marks: 50	**CIE Marks:**50

Prerequisites:

- Students should have knowledge of Databases and how they are managed.
- Students should have basic knowledge about graphs, trees and basic mathematical concepts.

Course outcomes:

Cos	Course Outcome Description	Blooms Level
1	Understand Various soft computing techniques/framework and their applications	L2
2	Analyze various neural network architecture	L4
3	Apply fuzzy logic to solve real world problems	L3
4	Understand genetic algorithms concepts and their applications	L2
5	Identify and select a suitable soft computing technology to solve the problem, construct/ implement a soft computing solution	L2

Teaching Methodologies:

- Blackboard teaching
- PowerPoint presentations
- Regular review of students by asking questions based on topics covered in the class
- Course Project / Programming assignment

Assessment Methods:

- Rubrics for evaluating Course Project/ Programming assignment
- 3 internals, 30 Marks each will be conducted and the average of best of two will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

COURSE CONTENTS

UNIT – I	7 hours
Introduction: Introduction to soft computing, application areas of soft computing, classification of soft computing techniques, structure & functioning of biological brain & Neuron, and concept of learning/training. Model of an Artificial Neuron, transfer/activation functions, perceptron, perceptron learning model, binary & continuous inputs, linear separability.	
UNIT – II	8 **hours**
Multilayer Neural Networks: Feed Forward network - significance, training, loss function, Back-Propagation algorithm, convergence & generalization, momentum, applications. Feedback network -Hopfield Nets: architecture, energy functions, training algorithms & examples, competitive learning, self-organizing maps. Introduction to CNN and RNN network.	
UNIT – III	8 **hours**
Fuzzy Systems: fuzzy set theory, fuzzy sets and operations, membership functions, concept of fuzzy relations and their composition, concept of fuzzy Measures. Fuzzy logic: fuzzy rules, inferencing. Fuzzy Control system: selection of membership functions, Fuzzification, rule-based design & inferencing, defuzzification, applications of fuzzy system.	
UNIT – IV	**8 hours**
Genetic algorithm: concepts, creation of offspring, working principle, encoding, fitness functions, reproduction, genetic modeling. Generation cycle & convergence of GA, application areas of GA	
UNIT – V	8 **hours**
Advanced soft computing techniques: Rough Set Theory - Introduction, Set approximation, Rough membership, Attributes, optimization. SVM - Introduction, obtaining the optimal hyper plane, linear and nonlinear SVM classifiers. Introduction to Swarm Intelligence, Swarm Intelligence Techniques: Ant Colony Optimization, Particle Swarm Optimization, Bee Colony Optimization etc.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Department of Artificial Intelligence and Data Science

2021 Scheme Curriculum Handbook

3rd and 4th Semesters

Vision

To produce effective and capable engineers, scientists and professionals in Artificial Intelligence and Data Science who can meet the demands of society, industry and universities for decades to come by continually improving teaching and research standards of the department.

Mission

The Dept. of Artificial Intelligence and Data Science Engineering is committed to

- Provide high-quality education to the students to fulfil the requirements of industry and R&D establishments.
- Constantly strive to improve teaching-learning methods to deliver good academic programs.
- Respond to the fast evolving scientific and technological challenges in a highly competitive world.
- Inculcate ethics, integrity, honesty, credibility, social and environmental consciousness

PEOs:

- Graduates will have the ability to Analyze, Develop and Apply Innovative ideas to solve real-world problems using Artificial Intelligence and Data Science techniques.
- Pursue higher studies to carry out research and development in the area of Artificial Intelligence and Data Science.
- Engage in lifelong learning, communicate effectively and exhibit leadership skills and demonstrate sensitivity towards professional ethics.

PSO 1: Apply solutions based on Computer Programming and Artificial Intelligence to societal and technological problems

PSO2: Create innovative solutions , processes, methodologies and products to enable organizations and automated systems to make data-driven decisions

Program Outcomes:

PO-1	Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems. .
PO-2	Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences
PO-3	Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations
PO-4	Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO-5	Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO-6	The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO-7	Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO-8	Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice
PO-9	Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO-10	Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO-11	Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one’s own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO-12	Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Semester 3:

Course Description

The course aims at imparting knowledge of Fourier analysis, Integral transforms, numerical methods, basics of linear algebra relevant to the field of Computer Science, Information Science and Artificial Intelligence

Pre-requisites:

Integration, differentiation, Taylor series, matrices

Cos	Course Outcome Description	Blooms Level
1	To apply numerical methods for fitting data, find appropriate functions, differentiate and integrate the same	L3
2	To use the concept of numerical methods to solve differential equations	L3
3	To analyze situations arising in Engineering Problems using concepts of Linear Algebra	L3
4	To apply the concepts of Fourier analysis ,integral transforms and optimization to Engineering Problems	L3
5	To analyze situations arising in Engineering Problems using the concept of matrices, orthogonality and vector spaces	L3

The course objectives are:

To understand the periodic and harmonic phenomena and to be able to model them using Fourier series and use integral transforms such as Laplace and Fourier transforms,

To understand the advantages, limitations and applications of different numerical techniques.

To explore the concepts and applications of Linear algebra.

UNIT – I	**8 HOURS**

Linear Algebra-I
Vector spaces- definition, examples, Linear combinations, subspaces, linear dependence, basis and dimension, linear mapping, linear operator, Kernel and Image of a Linear mapping, matrix representation of linear operator, change of basis.
Self Study: Row Space and Column space, Rank and nullity theorem

UNIT – II	**8 HOURS**

Linear Algebra-II

Inner product space, Orthogonal Sets and Bases, Gram Schmidt Orthogonalization process Polynomial of matrices, Characteristic polynomial, diagonalization, Eigenvalues and Eigen vectors, diagonalization, Characteristic and minimal polynomial, Singular value decomposition

Self-Study:Block matrices and Canonical form.

UNIT - III	**8 HOURS**

Numerical Methods-I
Interpolation: Newton's divided difference formulae, Lagrange's formula, Cubic spline.
Least square fitting of Fourier series (Harmonic Analysis).
Numerical Differentiation: Newton's forward and backward formulae, Lagrange's formula.
Numerical Integration**:** Trapezoidal, Simpson's1/3rd and 3/8th, Gaussian Quadrature method.
Quadratic spline, Weddle's rule for numerical integration.

UNIT – IV	**8 HOURS**

Numerical Methods-II

Numerical solution of ordinary differential equations: Taylor's series method, Runge-Kutta 4th order method - First order and second order Ordinary differential equations, Milne's predictor corrector method. Finite difference method for Boundary value problems
Correlation, Karl Pearson's coefficient, Regression lines
Continuous Optimization: Gradient Descent, Lagrange multipliers
Numerical solution of Laplace Equation, Rank correlation

UNIT – V	**7 HOURS**

Fourier analysis and Integral Transforms
Fourier series: Euler's formulae, Dirichlet's conditions for Fourier series expansion,
Even and odd function.
Fourier Transforms: Complex Fourier transforms, Cosine and Sine transforms, Inverse

Fourier transforms. Laplace Transforms: Definition, Transforms of standard functions, Laplace transforms of periodic functions, Inverse Laplace transforms **Self-Study:** Fourier half range series, solutions of 1st and 2nd order ODE using Laplace transforms.

Text Books:

1. Linear Algebra, Seymore Lipschutz and Marc Lipson, 3rd edition, Tata McGrahill, 2005

2. Numerical Methods for Scientific and Engineering Computation, M K Jain, S R K Iyengar, R K Jain, 6th edition, New Age, 2012
3. Advanced Engineering Mathematics, Erwyn Kreyzig, 9th edition, Wiley, 2011

Reference Books:
1. Linear Algebra for everyone, Gilbert Strang, 2020
2. Fourier Series, Transforms and Boundary Value Problems, J R Hanna, J H Rowland, 2nd edition, Dover, 2008
3. Numerical Algorithms, E V Krishnamurthy, S K Sen, East West press,2007

Teaching Methods:

- Black Board Teaching.
- Power point presentation
- Tutorials

Assessment Methods:

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Quiz/ assignment based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of all the 3 will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

Semester: 3 **Year: 2022-23**

Department: *Artificial Intelligence & Data Science*	***Course Type:*** *Core*
Course Title*:* Programming using Python	***Course Code:*** *21AD32*
L-T-P:3*-0-0*	***Credits:****03*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

No programming knowledge is assumed, successful completion of first year course on programming is desirable..

Course Outcomes:

Cos	Course Outcome Description	Blooms Level
1	Describe Python and Libraries with Applications to Data Science	L1
2	Develop Python programs using control statements and functions	L3
3	Develop Python programs using features of Lists, tuples, Dictionaries and Sets with simple applications to Data Science	L3
4	Use Object-oriented features of Python, Exception handling and File handling in Python Programs performing Unit Testing.	L3
5	Develop simple Python programs to perform data analysis	L3

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Motivation of concepts using Practical Examples.
- Course Project/Assignment.

Assessment Methods:

- Three internal tests, 40,40 and 20 marks will be conducted and the total weightage is 30%.
- Assignments emphasizing design and implementation of applications of the concepts of the course of 20% weightage .
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks(50% weightage).

Course Content

UNIT – I	**6 HOURS**
Introduction to Computers and Python: Object Technology basics, Overview of Python, Python standard library, Data Science libraries, Cloud and the Internet of Things and Big Data. Introduction to Python Programming: Variables and Assignment statements. Arithmetic. Single, double and triple-quoted strings. Getting Input, Decision making, Objects and Dynamic Typing, Basic Descriptive Statistics. Control Statements.	
UNIT – II	**10 HOURS**
Functions, Sequences, Lists and Tuples, Dictionaries and Sets: Functions: Various features and concepts used in developing functions in programming languages and specifically, Python. Lists and Tuples: Unpacking sequences, Sequence slicing, Sorting lists, searching sequences, Simulating Stacks with Lists, List Comprehensions, Generator Expressions, Filter, Map and Reduce, Two dimensional lists, Simple Python programs for Simulations and Static Visualizations. Dictionaries, Sets and Dynamic Visualizations.	
UNIT - III	**8 HOURS**
Arrays, Strings, Files and Exceptions: Array-oriented Programming with NumPy, Strings: A Deeper Look, Files and Exceptions. Introduction to Data Science: pandas Series and Data Frames, Regular expressions and data munging, Working with CSV files.	
UNIT – IV	**8 HOURS**
Object-oriented Programming: Classes, Inheritance, Polymorphism, Operator Overloading, Exceptions, Unit Testing, Namespaces and Scopes, Data Science example program on Time Series and Simple Regression.	

UNIT – V	7 HOURS
Data Analysis using Python: Cleaning and Preparing the Data, Identify and Handle Missing Values, Data Formatting,Data Normalization Sets, Descriptive Statistics, Basics of Grouping, ANOVA, Correlation,Simple and Multiple Linear Regression, Model Evaluation Using Visualization, R-squared and MSE for In-Sample Evaluation	

Text Book:
Python for Programmers by Paul Deitel and Harvey Deitel ,2020, Pearson India.

Websites:
https://www.python.org

Department: *Artificial Intelligence & Data Science*	***Course Type:*** *Core*
Course Title: Programming using Python Lab	***Course Code:*** *21ADL38*
L-T-P:0*-0-2*	***Credits:****01*
Total Contact Hours: 30 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Cos	Course Outcome Description	Blooms Level
1	Describe Python and Libraries with Applications to Data Science	L1
2	Develop Python programs using control statements and functions	L3
3	Develop Python programs using features of Lists, tuples, Dictionaries and Sets with simple applications to Data Science	L3
4	Use Object-oriented features of NumPy, Exceptions and File handling in Python Programs performing Unit Testing.	L3
5	Develop simple Python Programs to perform data analysis	L3

Assessment:

CIE(Experiments, Record, Viva Voce: 20 marks; Lab Test: 30 marks); SEE: 50 marks

Sl No	**Programs for Laboratory**	**CO**
1.	Design, Develop and Implement Python Programs for the following: a) Input a number , compute and print factorial of the number. b) Print Fibonacci sequence upto the first k elements, input k. c) Enter Python code at the Python shell prompt to illustrate that a Python list is mutable whereas tuples and strings are not. d) Count and print the number of occurrences of a sub string in a string.	**1**

2.	Develop functions to perform the following: 1. Perform sparse matrix addition using an appropriate Python data type 2. Perform addition of two polynomials 3. Search for an element in a list 4. A function that confirms Birthday Paradox.	**2**
3.	Write Python code for the following: 1. Given examples of slicing 2. Checking if a list of parentheses is well-formed 3. Given examples of list comprehensions and generator expressions 4. Given examples of Filter, Map and Reduce 5. Perform multiplication operation on two matrices and display the result.	3
4.	1.Develop Simple Python programs for Simulations and Static Visualizations. 2. 2. Develop simple Python programs for Dynamic Visualizations.	2
5.	1.Develop programs for given Array-oriented problems with NumPy 2.Develop given programs for string manipulation.	2
6.	1.Design and implement Python programs that handle exceptions for the given problem. 2. Use Pandas Series and DataFrame in given data science exercise. 3.Use Regular expressions in given data science exercise. 4. Apply data munging in the given data science application. 5. Read from CSV file and process as per the given data science exercise.	**4**
7.	Design and develop Python classes for the given exercise. Develop methods. Design , develop and run Unit tests.	**5**
8.	1.Design, Develop and Implement a Python class hierarchy using inheritance for the given exercise. Use Polymorphism where applicable. Unit test the class. 2.Develop a Python program for time series and regression.	**5**
9.	Design, develop and test Python programs for the given data science exercise involving Cleaning and Preparing the Data, Identify and Handle Missing Values, Data Formatting,Data Normalization Sets.	**6**
10	Design, develop and test Python programs for the given data science exercise involving Descriptive Statistics, ANOVA, Correlation,Simple and Multiple	**6**

	Linear Regression, Model Evaluation Using Visualization,R-squared and MSE for In-Sample Evaluation.	

CO-PO Mapping:

	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

Semester: 3 **Year: 2022-23**

Department: *Artificial Intelligence & Data Science*	***Course Type:*** *Core*
Course Title*: Computer Organization and Architecture*	***Course Code:*** *21AD33*
L-T-P:3*-0-0*	***Credits:****03*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

i. Fundamentals of Computers.
ii. Programming.

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Describe the fundamentals of Boolean algebra, gates and combinatorial circuits	L2
2	Understand the internal functional units of a processor to execute instructions and mechanism for generating control signals	L2
3	Analyse internal organization of memory chip and the impact of cache on processor performance	L4
4	Illustrate the approaches involved in achieving communication between Processor and I/O devices	L2
5	Apply Booth algorithm for performing signed integer multiplication, restoring and non-restoring methods for integer division	L3
6	Understand the classic five stage pipeline and its role in improving the processor performance	L2

Teaching Methodology:

i. Black board teaching
ii. Motivation of Concepts using relevant Examples

Assessment Methods:

- Three internal tests, 40,40 and 20 marks will be conducted and the total weightage is 30%.
- Assignments emphasizing design and implementation of applications of the concepts of the course of 20% weightage .
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks(50% weightage).

	03	02	03						02	02		**02**	**1**	**03**

COURSE CONTENT

UNIT – I	**6 hours**
Logic Gates; Boolean Algebra: Basic laws, K-Maps; Combinational Circuits: Adders, Multiplexer, De-Mux, Encoder, Decoder; and Sequential Circuits: characteristic equations and excitation tables of SR, JK, D and T flip-flops,; their role incomputer organization	
UNIT – II	**8 hours**
Basic Structure of Computers: Computer Types, Functional Units, Basic Operations & Concepts, Performance: Processor clock, Basic Performance Equation, clock rate, Performance measurement. **Machine Instructions and Programs**: Memory Locations and Addresses, Memory Operations, Instructions and instruction sequencing: Register Transfer Notation, Assembly Language Notation, Instruction Types, Instruction Execution and straight line sequencing, branching, condition codes, Addressing modes.	
UNIT – III	**9 hours**

The Memory System: Internal organization of Memory chips, Random access memory, Read-Only Memories, Speed size and cost. Cache memories: Mapping functions. Performance considerations: Hit rate and Miss Penalty; Replacement Algorithms: FIFO, LRU and OPTIMAL. **Secondary Storage:** Disk structure, and disk access time.	
UNIT – IV	**7 hours**
Fundamentals of Computer Design: Defining Computer Architecture -Instruction Set Architecture **Pipelining:** The Basics of a RISC Instruction Set, The Classic Five-Stage Pipeline for a RISC Processor, The Major Hurdle of Pipelining—Pipeline Hazards.	
UNIT – V	**9 hours**
Basic processing unit: Performing an Arithmetic or Logic Operation, Fetching a word from Memory, Storing a word in memory; Execution of a complete Instruction:Branch Instructions; Multiple Bus Organization, Hardwired Control: A Complete Processor; Micro programmed Control: Microinstructions; Parallelism: Overview of Instruction Level Parallelism, Data level parallelism and Thread level parallelism.

L-T-P:3*-0-0*	***Credits:****03*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

i. A course on Programming.

Course Outcomes:

Cos	Course Outcome Description	Blooms Level
1	Describe the evolution of artificial intelligence along with search methods and applications	L1
2	Apply the principles of search strategies to relevant problems	L3
3	To design algorithms to find optimal paths and apply concepts of A* algorithm in developing applications	L1, L3
4	Describe and apply the principles and steps of Game Playing Algorithms	L3
5	To describe the usage of Prolog in realization of Knowledge base for querying	L1

Teaching Methodology:

- Black board Teaching
- PowerPoint Presentation

Assessment Methods:

- Three internal tests, 40,40 and 20 marks will be conducted and the total weightage is 30%.
- Assignments emphasizing design and implementation of applications of the concepts of the course of 20% weightage .
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks(50% weightage).

Course Content

UNIT – I	8hours
Introduction: History, Can Machines think? Turing Test, Winograd Schema Challenge, Language, Philosophy, Mind, Reasoning, Computation, The Chess Saga, Intelligent Agents **Search strategies:** State Space Search: Depth First Search, Breadth First Search, Depth First Iterative Deepening , Heuristic Search: Best First Search, Hill Climbing, Solution Space, Travelling Salesman Problem	
UNIT – II	**8 hours**
Search strategies and A* Algorithm: Escaping Local Optima, Stochastic Local Search, Population based methods, Genetic Algorithms, SAT, TSP, Emergent Systems, Ant Colony Optimization; Finding Optimal Paths: Branch&Bound, A*, Admissibility of A*, Informed Heuristic Functions	
UNIT – III	**7hours**
Results related to Admissibility of A* , Space Saving Versions of A*:Weighted A*, Iterative Deepening A*, Recursive Best First Search, Monotone Condition, Sequence Alignment, Divide and Conquer Beam Stack Search	
UNIT – IV	**9 hours**
Game Playing: Game Theory, Board Games and Game Trees, Algorithm MiniMax, AlphaBeta and SSS*, Automated Planning: Domain Independent Planning, Blocks World, Forward&Backward Search, Goal Stack Planning, Plan Space Planning, Problem Decomposition: Means Ends Analysis, Algorithm Graphplan, Algorithm AO*	
UNIT – V	**7hours**
Rule Based Expert Systems, Knowledge, Reasoning and Planning, First order logic, Knowledge base using Prolog, Concepts of Uncertainty and Knowledge Reasoning

COURSE CONTENT

UNIT – I	8 hrs
Introduction: Data Structures, Classifications (Primitive & Non-Primitive), Data structure Operations, Dynamic Memory Allocation Functions, dynamically allocated arrays, Representation of 2D Arrays in Memory, Pointers to 2D arrays (Matrix addition, subtraction, multiplication), Multidimensional Arrays, Polynomials and Sparse Matrices.	
UNIT – II	**10 hrs**
Stacks: Definition, Stack Operations, Array Representation of Stacks, Stacks using Dynamic Arrays, Stack Applications: Polish notation, Infix to postfix conversion, evaluation of postfix expression. **Recursion -**Recursive definition and process, Factorial function, Fibonacci Sequence, Binary search, Tower of Hanoi.	
UNIT – III	**10 hrs**
Queues: Definition, Array Representation, Queue Operations, Circular Queues, Circular queues using Dynamic arrays, Dequeues, Priority Queues. Multiple Stacks and Queues. Programming Examples.	
UNIT – IV	**12 hrs**
Linked Lists: Definition, Representation of linked lists in Memory, Memory allocation; Garbage Collection. **Linked list operations:** Traversing, Searching, Insertion, and Deletion. Doubly Linked lists, Circular linked	

lists, and header linked lists. Linked Stacks and Queues. Applications of Linked lists – Polynomials, Sparse matrix representation. Programming Examples	
UNIT – V	**12 hrs**
Trees: Terminology, Binary Trees, Properties of Binary trees, Array and linked Representation of Binary Trees, Binary Tree Traversals - Inorder, postorder, preorder; Additional Binary tree operations. Threaded binary trees, Binary Search Trees – Definition, Insertion, Deletion, Traversal, Searching, Application of Trees-Evaluation of Expression, Programming Examples. Overview of Hashing functions and Tables with applications.	

Text Books:

1. Ellis Horowitz and Sartaj Sahani, Fundamentals of Data Structures in C, 2nd Ed, Universities Press, 2014.
2. Seymour Lipschutz, Data Structures Schaum's Outlines, Revised 1st Ed, McGraw Hill, 2014.

Reference Books:

1. Data Structure using C, Aaron M. Tanenbaum, YedidyahLangsam& Moshe J. Augenstein, Pearson Education/PHI, 2006
2. The C Programming Language, Brian W Kernighan and Dennis M Ritchie, Prentice Hall Software Series, 2nd Edition
3. Data Structures a Pseudocode approach with C,Richard F.Gilberg and Behrouz A .Forouzan, Thomson,2005.
4. Data Structures & Program Design in C, Robert Kruse & Bruce Leung, Pearson.

Sl No	**Programs for Lab**	**CO**
1.	Design, Develop and Implement a menu driven Program in C for the following operations using pointer to 2D arrays e) Read two matrices of order m * n f) Display the elements of the matrices g) Perform addition operation on two matrices and display the sum. h) Perform subtraction operation on two matrices and display the result. i) Perform multiplication operation on two matrices and display the result.	**1**
2.	Design and implement a stack (Array implementation/ Linked list implementation) and demonstrate its working with necessary inputs. Display the appropriate messages in case of exceptions	**2**
3.	Develop a program to demonstrate concept of recursion (Factorial / Binary Search / Fibonacci /Towers of Hanoi)	3
4.	Design and implement an algorithm for conversion of an expression from infix to postfix and infix to prefix form. Demonstrate its working with suitable inputs	2

5.	Design and implement an algorithm to evaluate an postfix and prefix arithmetic expression and demonstrate its working with suitable examples	2
6.	Design and implement a given type of (ordinary queue, circular queue) queue in C (array implementation/ Linked list implementation). And demonstrate its working with suitable inputs. Display appropriate messages in case of exceptions.	**4**
7.	Design, Develop and Implement a menu driven Program in C for the following operations on Singly Linked List (SLL) of Student Data with the fields: USN, Name, Programme, Sem, Phone Number. a) Create a SLL to store details of N Students by using both front insertion and rear insertion. b) Display the details of all the students and count the number of students whose details is stored in the list. c) Demonstrate deletion of student details from both front and rear end of SLL. d) Demonstrate Insertion and deletion of student details at specified position of SLL. (Note: Only few of the operations can be asked in exam)	**5**
8.	Design, Develop and Implement a menu driven Program in C for the following operations on Doubly Linked List (DLL) of Employee Data with the fields: SSN, Name, Dept, Designation, Basic, DA, Income tax(IT). a) Create a DLL to store details of N Employees by using both front insertion and rear insertion. b) Display the details of all the Employees from (both front to back and back to front) and count the number of employees whose details is stored in the list . c) Demonstrate deletion of employee details from both front and rear end of DLL. d) Demonstrate Insertion and deletion of Employee details at specified position of DLL e) Calculate and display the net and gross salary of each employee whose details is stored in the DLL. (gross_sal = Basic + DA) (net_sal = gross_sal - IT) (Note: Only few of the operations can be asked in exam)	**5**
9.	Design, Develop and Implement a menu driven Program in C for the following operations on Binary Search Tree (BST) of Integers . a. Create a BST of N Integers: 6, 9, 5, 2, 8, 15, 24, 14, 7, 8, 5, 2 b. Traverse the BST in Inorder, Preorder and PostOrder c. Search the BST for a given element (KEY) and report the appropriate message d. Exit	**6**
10	Design and implement binary tree and demonstrate its working	**6**

Department: *Artificial Intelligence & Data Science*	***Course Type:*** *Elective*
Course Title*: Statistics using R*	***Course Code:*** *21ADE371*
L-T-P:3*-0-0*	***Credits:****03*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

- Self-contained (but desirable to have understanding of Calculus)

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	To apply concepts of probability such as Axioms of Probability, Association Rule Mining and Baye's Theorem, Random variables, mathematical expectation, variance, discrete and continuous distributions.	L3
2	To apply and visualize, using R, concepts of Random variables, distributions such as Binomial, Normal, Poisson, Geometric, Uniform , Exponential, Chi-Square, Student's t-distribution and F-distribution.	L3
3	To apply the concepts of sampling, Central Limit Theorem, Maximum Likelihood Estimation and Confidence Intervals	L3
4	To use Hypothesis Testing	L3
5	To apply ANOVA and correlation analysis	L3

Teaching Methodology:

- Black board teaching
- Power Point presentations
- Handson Sessions

Assessment Methods:

- Three internal tests, 40,40 and 20 marks will be conducted and the total weightage is 30%.
- Assignments emphasizing design and implementation of applications of the concepts of the course of 20% weightage .
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks(50% weightage).

CO-PO Mapping:

	03	03	03	02	03	02	02		01	02	01	**02**	**02**	**03**

UNIT – I (7 hours)

Overview of Probability Concepts, Random experiment, Sample Space, Event, Probability Estimation, Axioms of Probability, Association Rule Mining as an application, Baye's Theorem. Overview of Programming using R.

UNIT – II (7 hours)

Random Variables, Probability Density Function, Discrete and Continuous distributions, Mathematical expectation, variance of a random varaible. R functions to calculate density functions, expectations and variance.

UNIT – III (8 hours)

Binomial Distribution, Geometric Distribution, Poisson Distribution, Parameters of Continuous Distributions, Uniform Distribution, Exponential Distribution, Normal Distribution. Chi-Square Distribution, Student's t-Distribution, F-Distribution. Examples and demonstrations using R.

UNIT – IV (9 hours)

Sampling and Estimation, Random Sampling, Stratified Sampling, Cluster Sampling, Bootstrap aggregating, Non-probability Sampling, Sampling distribution, Central Limit Theorem, Sampling Size Estimation for the Mean of the Population, Estimation of Parameters, Maximum Likelihood Estimation, Confidence Intervals. Examples and demonstrations using R.

UNIT – V (8 hours)

Introduction Hypothesis Testing, Setting up a Hypothesis Test, One-Tailed and Two-Tailed Test, Type I Error, Type II Error, z-Test, t-Test, non-parametric tests, Chi-Square Goodness of Fit Tests, Analysis of Variance, Correlation Analysis: Pearson Correlation. Examples and demonstrations using R.

Pre-requisites:

- A Programming course

Course Outcomes:

Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Design web pages using HTML mark-up language for the given Scenarios.	L3
2	Describe the fundamental concepts of XML	L1
3	Apply the concepts of Cascading Style Sheets for designing the web pages.	L3
4	Demonstrate the use of JavaScript to develop the dynamic user interface.	L3
5	Implement server-side scripting using PHP	L3

Teaching Methodology:

- Black board teaching
- Power Point presentations
- Handson Sessions

Assessment Methods:

- Course Project -20 Marks
- Three internals, 30 Marks each will be conducted and the Average of all three will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

CO-PO Mapping:

COURSE CONTENT UNIT – I 7 hours

Internet and web technologies, structuring an HTML document, Exploring Editors and Browsers Supported by HTML5, Creating and saving an HTML document, Validating and Viewing an HTML document, Understanding HTML elements, Describing data types, Formatting text with HTML elements, Arranging text, Exploring the hyperlinks and URL, Creating tables.

UNIT – II **7 hours**

HTML Continued - Inserting images in a web page, Exploring colours, working with forms, Exploring audio and video formats, Describing the multimedia elements, Defining a multimedia file using the EMBED element.

Introduction to XML: Working with basics of XML – Exploring XML, Comparing XML with HTML, Advantages and disadvantages of XML, Structure of XML document

UNIT – III **8 hours**

CSS – Overview of CSS, Background and colour gradient in CSS, font and text styles, Creating Boxes and Columns in CSS, Displaying, Positioning and Floating an element, List styles, Table layouts.

UNIT – IV **9 hours**

Exploring the features of Javascript, Using Javascript in an HTML Document, Programming fundamentals of Javascript, Javascript functions, events, image maps and animations, Objects in Javascript, Working with Browser objects, Working with Document Object, Document Object Model.

UNIT – V **8 hours**

Introduction to PHP: Origins and uses of PHP, Overview of PHP, General syntactic characters, Primitives operations and expressions, output, control statements, Arrays, Functions, Pattern matching, Form handling, Cookies, Session Tracking.

TEXT BOOKS:

1. HTML5 Covers CSS3, JavaScript, XML, XHTML, AJAX, PHP and Jquery Black Book, dreamtech PRESS, ISBN:978-93-5119-907-6, 2019

L-T-P:3*-0-0*	***Credits:****03*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Prerequisites:

- A course on programming

COs	Course Outcome Description	Blooms Level
1	Describe the phases of software engineering life cycle	L1
2	Specify requirements for a chosen case study by applying principles of requirements engineering and best practices	L3
3	Create Architecture and detailed design for the chosen case study by applying best practices in architecture and design	L3
4	Develop software for the chosen case study by using appropriate coding guidelines and running unit, integration and system tests	L5
5	Implement changes and bug-fixes to the software of the case study pointing out opportunities for refactoring code besides ensuring correctness	L3

Teaching Methodology:

- Black board teaching
- Power Point presentations
- Handson Sessions

Assessment Methods:

- Course Project -20 Marks
- Three internals, 30 Marks each will be conducted and the Average of all three will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

	03	01	03		02			2	02	02		**02**	**02**	**03**

Course Content:

UNIT – I	8 hours
Software Development Life Cycle: History of Software Engineering. Software Development Life Cycle. Process Models. Sample case studies for illustration. Classification of software qualities. Quality requirements.	
UNIT – II	8 hours
Requirements Specification: User Requirement Specifications. Products and Requirements. Use Cases. Sample Case studies for illustration. Development Cost Estimation methods. Principles of Requirements Engineering. Product Line , common and varying requirements. The uses of specifications, specification qualities, verification of specifications, Building and using specifications in practice.	
UNIT – III	8 hours
Architecture and Design: Separation of concerns, Modularity, Abstraction, Anticipation of change, Generality and incrementality. Case studies illustrating software engineering principles. Software Design activity and its objectives. Modularization techniques. Handling anomalies. Object-oriented design. architecture and components.	
UNIT – IV	8 hours
Implementation and Validation: Alpha, Beta and Revenue Release milestones. Coding guideline standards. Development of code in conformance with coding guidelines. Case studies. White-box and Black-box testing methods. Unit , integration and system testing.	
UNIT – V	7 hours
Making Changes to Software: Importance of software process models. Dealing with Legacy software. Organizing the Process. Organizing Artifacts. Configuration Management Standards.

	2.4	2.4	2.2	2	2.4	2	1.8	1.8	03	2.6	2.6	**2.4**	**02**	**03**

Assessment:

Students need to submit a report on project work carried out (50% weightage) and present or undergo a Viva Voce (50% weightage).

Course Content:

Students perform projects of their choice or assigned ones that shall have specified course outcomes. Typically, students develop software and co-ordinate with a small team learning project management issues in addition to resolving technical challenges.

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

Semester 4:

Department: Mathematics	*Course Type: Basic Science*
***Course Title**: Mathematics IV* *(Probability and Discrete mathematics)*	***Course Code: 21MAT41A***
L-T-P : 3-0-0	***Credits: 3***
Total Contact Hours: 39	***Duration of SEE: 3.00hrs***
***SEE Marks**: 100*	***CIE Marks: 50***

COURSE DESCRIPTION

The course gives a broad view of Probability theory, Random Process, Discrete mathematical structures and Graph theory.

PREREQUISITES

Concepts of Combinations, Permutation and Set theory

COURSE OBJECTIVES

To Impart the knowledge and ability to apply basic concepts of Probability, random process, discrete mathematics and graph theory to engineering problems

COURSE CONTENTS

UNIT - I 08 Hours

Probability and Random Variables

Probability: Definition, Axioms of probability, Addition rule, Conditional Probability, Multiplication rule.

Random variable -: Probability distribution- discrete and continuous, probability density function, cumulative density function, mean and variance, expectation.

Joint distribution - discrete joint probability distribution, marginal distribution, expectation, covariance, rank correlation.

Binomial, Poisson distribution, Gaussian distribution

Baye's Theorem, continuous Joint distribution

UNIT - II 08 Hours

Probability and sampling Distribution

Probability Distribution: Normal distribution, exponential distribution and uniform distribution.

Sampling and Testing of hypothesis: Introduction, Sampling with and without replacement, Sampling distribution of means and sample variance. Unbiased estimate, confidence intervals for mean, statistical hypothesis, testing of hypothesis of large samples, one tailed and two tailed test, Significance level.

Markov Process: Definition, transition probability matrix, regular stochastic matrix, n – step transitional probabilities, stationary distribution

Self-Study: Poisson's Process, States of Markov process.

.

UNIT - III 08 Hours

Discrete Mathematical structures

Mathematical Logic: Propositional Logic, logical operators, compound propositions - truth values, truth tables, Propositional Equivalences.

Functions: Definition, surjective, injective and bijective functions, Inverse function and composition of functions.

Relations: Definition, Properties, Equivalence, matrix representation, digraphs, partial order -Hasse diagram-Maximal and minimal elements, LUB and GLB.

Self-Study: Rules of Inference.

UNIT - IV 08 Hours

Graph Theory-I

Graph Terminologies, circuits, cycles and connected graphs hand shaking theorem, Degree sequence, path and trail in graphs, Graph isomorphism, Adjacency and Incidence matrices, Euler and Hamiltonian graphs, Shortest path problems-Dijkstra's algorithm for undirected graphs.

Applications such as Job Assignments, Travelling Salesman problem

UNIT - V 07 Hours

Graph Theory-II

Trees- Properties, spanning trees, minimum spanning trees- Prim's and Kruskal's algorithm.

Planar graphs, Problems on Euler's formula, Graph coloring – vertex coloring.

Self-Study: Three house and Three utilities problem, Scheduling Problems using Graph coloring,

TEXT BOOKS

1. Fundamentals of Statistics, S C Gupta, 6th edition, Himalaya Pub., 2007
2. Discrete Mathematics and its applications, Kenneth Rosen, 7th edition, Tata McGrawHill, 2011

REFERENCE BOOKS

1. Introduction to Graph theory, Gary Chartrand, Tata McGrawHill, 2006
2. Probablility and Statistics, M R Spiegel, JJ Schiller, R A Srinivasan, 3rd edition, Mc GrawHill, 2019

TEACHING METHODS

- Black Board Teaching.
- Power point presentation
- Tutorial

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Quiz/ assignment based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of all the 3 will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

1. The concepts of Mathematical logic, functions and relations can be applied to Engineering. Problems
2. The concepts of graph theory can be used to model and solve problems
3. The concepts of Graph theory can be applied to Engineering Problems
4. The basic concepts of Probability, random variables, distributions and Sampling can be used for problem solving
5. The testing of hypothesis and distributions can be applied to engineering problems

Mapping of CO-PO:

L-T-P:3-0-0	***Credits:****03*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Prerequisites

- Data Mining shall be a self-contained course, mathematical preliminaries such as probability theory are helpful.

Course Outcomes:

At the end of the course, students will be able to

Cos	Course Outcome Description	Blooms Level
1	Describe methods for data cleaning	L1
2	Explain methods of frequent pattern mining	L2
3	Apply techniques for classification of data	L3
4	Analyse given data using classification and clustering algorithms	L4
5	Synthesise and solve data mining problems of practical importance using theoretical analysis and software tools	L3

Teaching Methodology

- Black board, Power Point
- Assignment
- Case Study

Assessment Methods:

- Three MSEs of 30 marks of each. The average of all three performances will be considered to award 30 marks.
- Rubrics to evaluate Case Study 10Marks
- Rubrics for evaluating assignment 10 Marks.
- SEE for 100 marks will be evaluated for50 marks.

Course Outcome to Programme Outcome Mapping

	3	2.2	2.8	2	3	2	2	1	1	2	2	2	2	2

COURSE CONTENT

Unit 1(Introduction to Data mining): Data mining, kinds of data mining, patterns, technologies. Getting to know your data. Description of data, data visualization, measuring the similarity and dissimilarity. Data Pre-processing: An overview of data pre-processing, data cleaning, integration, reduction, transformation and discretization. (8 Hours)

Unit 2 (Mining Frequent Patterns): Mining Frequent Patterns, Associations, and Correlations: Basic Concepts and Methods, Market Basket Analysis, Data Warehousing and Online Analytical Processing, Data Cube Technology (8 Hours)

Unit 3 (Classification): Basic Concepts, Decision Tree Induction, Bayes Classification Methods, Rule-Based Classification, Model Evaluation and Selection, Techniques to Improve Classification Accuracy. (8 Hours)

Unit 4 (Clustering): Basic Concepts and Methods, Cluster Analysis, Partitioning Methods, Hierarchical Methods, Density-Based Methods, Grid-Based Methods and Evaluation of Clustering. (8 Hours)

Unit 5 (Outlier and data mining Applications): Outliers and Outlier Analysis, Outlier Detection Methods, Statistical Approaches, Proximity-Based Approaches, Clustering-Based Approaches, Classification-Based Approaches, Mining Contextual and Collective Outliers.

Case studies from text mining, recommender systems, image and video processing, data warehousing. Data Mining Trends and Research Frontiers: Data Mining Applications, Graph Mining and Social Network Analysis.

(7 Hours)

L-T-P:*3-0-0*	***Credits:****03*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisite:

- Students should have knowledge of data structures.

Course Outcomes:

Students will be able to:

.

Cos	Course Outcome Description	Blooms Level
1	Describe the concepts, design and applications of database systems	L1
2	Explain the principles of data modelling, querying, SQL programming techniques of database systems.	L2
3	Design and implement queries using query languages for a given database system.	L3
4	Analyse given schema and use appropriate normalization techniques for relational databases.	L4
5	Explain the principles of storage, transactions and optimization of database systems	L2
6	Design and implement an efficient database system and interface it with a given application	L3

Teaching Methodology:

- Black board teaching
- Power Point presentations
- Hands on Sessions

Assessment Methods:

- Course Project /Assignment-20 Marks
- Three internals, 30 Marks each will be conducted and the Average of all three will be taken.

- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COs	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

6	2	2	2	2	3	2	2	1	2	2	2	2	3	3
	2	2	2	2	3	2	2	1	2	2	2	2	3	3

Course Content:

Unit 1 (Introduction to Database Systems and Entity Relationship Model): Purpose of database systems, characteristics of database approaches, history of database applications, classification of DBMS, database users, architectures for DBMS, recent database applications, data models, schemas, data independence, database design and implementation process.

E-R diagrams, entities, attributes, relationships, roles and constraints, Enhanced Entity-Relationship (EER) diagrams, sub classes and super classes, specialization and generalization.

11 HOURS

Unit 2 (Relational Data models and Query Languages): Relational schema, relational model constraints, keys, relational database design, relational algebra, relational calculus.

SQL- data definition and data types, query formulation, constraints in SQL, basic queries in SQL, complex queries in SQL, QBE, query processing, database programming - techniques and issues, embedded SQL, using JDBC, database stored procedures.

8 hours

Unit 3 (Normalization) : Functional dependency, normal forms, decomposition of a schema, multivalued dependencies, join dependencies, dependency preservation, inclusion dependencies.

6 hours

Unit 4 (File Structures)

Basic file structure, RAID technology, hashing techniques, indexing structures, types of single level ordered indexes, multi-level indexes, B+ trees

7 hours

Unit 5 (Transaction Processing)

Transaction processing systems, transaction states, ACID properties, characterizing schedules, recoverability and serializability of schedules, concurrency control, locking techniques, time stamp ordering, database recovery techniques, shadow pages, ARIES recovery algorithm, database security and authorization.

7 hours

Text Book:

SEE Marks*: 50*	***CIE Marks:*** *50*

This course introduces basic methods for the design and analysis of efficient algorithms emphasizing methods which are useful in practice. The computational problems for sorting, searching, Divide and Conquer, dynamic programming and greedy algorithms, graph algorithms string matching, Backtracking, Branch and Bound, NP completeness are discussed.

Pre-requisites:

- Self-contained , however, desirable for student to have successfully completed first year programming course and have knowledge of mathematical preliminaries such as probability theory.

Course Outcomes:
Students will be able to:

Cos	Course Outcome Description	Blooms Level
1	Describe Algorithmic problem solving approaches , important problem Types and Analysis of Algorithm efficiency	L1
2	Design various algorithms for Search, and Sort including Depth First and Breadth First approaches	L3
3	Design algorithms using Divide and Conquer approach, Transform and Conquer and Dynamic Programming	L3
4	Design algorithms using Greedy technique, iterative improvement,	L3
5	Analyse with respect to space time tradeoffs	L4

Teaching Methodology:

- Black board teaching
- Power Point presentations
- Hands on Sessions

Assessment Methods:

- Course Project/Assignment -20 Marks
- Three internals, 30 Marks each will be conducted and the Average of all three will be taken.
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Outcome to Programme Outcome Mapping:

COURSE CONTENT UNIT – I	8 hours
Fundamentals of Algorithmic Problem Solving, Algorithm Design techniques, Design an Algorithm and Data Structures, Analyzing an Algorithm, Coding an Algorithm, Important Problem Types, Fundamental data structures. Analysis Framework. Asymptotic notations and basic efficiency classes.	
UNIT – II	**9 hours**
Bruteforce and exhaustive search, Selection Sort and Bubble Sort, Sequential Search and Brute-force String matching, Closest Pair and Convex-Hull problems by Brute force, Exhaustive Search, Depth-first search and Breadth-first search.	
UNIT – III	**8 hours**
Decrease-and Conquer, Insertion Sort, Topological Sorting, Algorithms for generating Combinatorial Objects, Decrease by a constant factor algorithms, Variable size decrease algorithms,	
UNIT – IV	**7 hours**
Divide and Conquer, Mergesort, Quicksort, Binary Tree Traversals, Multiplication of large integers, Strassen's matrix multiplication, closest-pair and Convex-Hull problems by Divide and Conquer.	
UNIT – V	**7 hours**
Transform and conquer, Gaussian elimination, Balanced search trees, Hashing, B-Trees, Dynamic Programming, Greedy Algorithms. Overview of P,NP,NP-Complete Problems.

COURSE CONTENT

Unit1(Python for Data Science): Sample usage of numpy, scipy and Pandas. Introduction to Data Science, Basic Descriptive Statistics, Measures of central tendency, Measures of dispersion, Simulation and Static Visualization, Dynamic Visualizations, Pandas series and data frames, Pandas regular expressions and data munging, Working with CSV files, Time Series and Simple Linear regression.

8 hours

Unit2(Simple program for NLP and Data Mining Twitter): TextBlob, Visualizing word frequencies with bar charts and word clouds, Readability Assessment with Textatistic, Named entity recognition with spaCy, Other NLP libraries and Tools,

7 hours

Unit 3(Machine Learning and Data Mining for Twitter)

Machine Learning and Deep learning Natural Language Applications, Natural Language Datasets. Overview of the Twitter APIs and their usage as in, for example, creating a Twitter account, Authentication, Searching recent Tweets. Tweet Sentiment Analysis.

8 hours

Unit4(Programs for Classification, Regression and Clustering): Introduction to Machine learning , Scikit-Learn, Program development for Classification with k-Nearest Neighbours, Time Series and Simple Linear Regression, Multiple Linear Regression, Unsupervised Machine Learning, Deep Learning Applications, Keras, Neural Networks, Tensors.

9 hours

Unit5(Big Data: Hadoop, NoSQL): Overview of Relational Databases and SQL, Overview of NOSQL and NewSQL Big-Data Databases, MongoDB JSON Document Database, Hadoop. IoT and Publish-Subscribe Model.

7 hours

Laboratory Exercises:

Text Book:

Python for Programmers by Paul Deitel and Harvey Deitel ,2020, Pearson India.

Laboratory:

7. Exercises to work with CSV files using Python
8. Exercises to work with concepts of Time series and Linear Regression
9. Exercises with TextBlob and NLP applications
10. Exercises on Data Mining Twitter
11. Exercises in Machine Learning(classification, regression and clustering)
    - Classification with k-Nearest Neighbours
    - Dimensionality Reduction
    - K-Means clustering
12. Deep learning applications
13. Deep Learning Applications
14. Exercises with BigData databases
15. Exercises with BigData databases
16. Exercises with Data Science libraries NumPy, Pandas, SciPy, NLTK, TexBlob, Tweepy, Matplotlib, Seaborn, Folium

At the end of the course, a student shall be able to:

Sl. No.	Course Outcome Description	Blooms Level
1	Describe the components of database systems	L1
2	Explain the principles of database design and implementation	L2
3	Design a database system for a given application	L3
4	Implement a database using DBMS and interface it with an application	L3
5	Test and validate the developed database system	L3

Course Content of Database Management Systems Lab course:

Exercises in the specified problems shown below will be performed by students.

- Analyze and perform data modeling for a given application
- Convert the data model into a relational model
- Use DDL and DML commands in SQL queries
- Develop SQL commands to create and maintain database structure
- Interface application to the developed database system
- Multidimensional data modelling

Assessment:

CIE(Experiments, Record, Viva Voce: 20 marks; Lab Test: 30 marks); SEE: 50 marks

Semester: 4 **Year: 2022-23**

Semester: 4 **Year: 2022-23**

Department: *Artificial Intelligence & Data Science*	***Course Type: Elective***
Course Title*: Object-oriented* Programming using Java	***Course Code:*** *21ADE473*
L-T-P:3*-0-0*	***Credits:****03*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

No programming knowledge is assumed, successful completion of first year course on programming is desirable..

Course Outcomes:

Cos	Course Outcome Description	Blooms Level
1	Describe main features of Object-oriented programming and associate them with features of Java	L1
2	Develop Java programs using features of classes, methods and control structures of Java	L3
3	Develop Java programs involving classes , inheritance and polymorphism using exception handling where necessary	L3
4	Use advanced features of Java such as generics, functional programming and threads	L3

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Regular review of students by asking questions based on topics covered in the class.
- Course Project.

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of all three will be taken.
- Rubrics for Course Project (20 Marks).
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

Course Content

Unit1(Internet and Java):

Object Technology basics, Overview of Java, Operating Systems on which Java implementations are available, Java Development Environment, Internet and World Wide Web, Software Technologies. (4 Hours)

Unit2(Control Structures, Operators, Arrays in Java): Decision making, Relational operators, Instance variables, constructors, primitive types, Reference types, A simple GUI, Control Statements, Assignment and operators, logical operators, Methods, parameters, call stack, Method overloading, Arrays and Array Lists. (10 Hours)

Unit3(Object-oriented Programming): Controlling Access to Members of objects, this Reference, Overloaded Constructors, Default and No-Argument Constructors, Set and Get methods, Composition, enum types, Garbage collection, static Class Members, final Instance Variables, Package Access, Superclasses and subclasses. Protected members, constructors in subclasses, Class Object, Composition vs Inheritance. Polymorphism and Interfaces, Abstract Classes and Methods.Case study using polymorphism. (12 Hours)

Unit4(Advanced features of Java and Unit Testing): Classes, Inheritance, Polymorphism, Operator Overloading, Exceptions, Unit Testing, Namespaces and Scopes, Overview of Generic Collections, Lambdas and Streams. Java Threads. (9 Hours)

Unit 5(Accessing Databases with JDBC):

Setting Up a database, connecting to and querying a database. (4 Hours)

Texbook:

Java How to Program Early Objects 11th edition, Paul Deitel and Harvey Deitel, March 2022.

Department: *Artificial Intelligence & Data Science*	***Course Type: Elective***
***Course Title**: Software Design Patterns*	***Course Code:*** *21DSE472*
L-T-P:3*-0-0*	***Credits:****03*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

Successful completion of first year course on programming and knowledge of object-oriented programming is desirable.

Cos	Course Learning Outcomes	BL
1	To describe the purpose of design patterns in software development and data science applications	L2
2	To use relevant structural patterns in application development	L3
3	To use behavioural patterns in software development	L3
4	To apply patterns relevant for data science	L3

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Regular review of students by asking questions based on topics covered in the class.
- Course Project.

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of all three will be taken.
- Rubrics for Course Project (20 Marks).
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

COURSE CONTENT UNIT – I	8 hours
Motivation for using design patterns, Overview of design patterns, structural and behavioural patterns	
UNIT – II	**9 hours**
Structural Patterns : Creational Patterns with examples, Adapter and Decorator Patterns, Bridge and Façade Patterns, Model-View Controller and Proxy Patterns.	
UNIT – III	**10 hours**
Behavioural Patterns: Chain of Responsibility, Command and Observer Patterns, State and other behavioural patterns with examples and discussion on applications.	
UNIT – IV	**12 hours**
Data Science Patterns: Map Reduce Patterns and other patterns relevant for data science applications with examples.

Course Title: Cloud Computing and Distributed Systems	***Course Code:*** *21DSE471*
L-T-P:2-0-0	***Credits:****02*
Total Contact Hours: 39 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Pre-requisites:

Successful completion of the course on data structures.

Course Outcomes:

Cos	Course Learning Outcomes	BL
1	To discuss basic concepts of operating systems and network concepts necessary for distributed systems	L2
2	To discuss clouds, virtualization and virtual machine	L2
3	To apply Leader Election Algorithm and classical distributed algorithms in Cloud and Distributed Systems	L3
4	To discuss Consensus, Paxos and Recovery in clouds	L2
5	To discuss concepts of cloud storage and implement cloud applications	L2, L3

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Regular review of students by asking questions based on topics covered in the class.
- Course Project.

Assessment Methods:

- Three internals, 30 Marks each will be conducted and the Average of all three will be taken.
- Rubrics for Course Project (20 Marks).
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

COURSE CONTENT UNIT – I	8 hours
Overview of Operating System and Network Concepts; Introduction to clouds, virtualization and virtual machine; Features of Clouds; Data-intensive computing; Hypervisor; Types of virtualization; Hotspot mitigation for Virtual Machine migration	
UNIT – II	**9 hours**
Network Virtualization and Geo-distributed clouds; Server Virtualization, Software Defined Network; Geo-distributed Cloud Data Centres; Leader Election in Cloud, Distributed Systems.	

UNIT – III	**10 hours**
Classical Distributed Algorithms; Time and Clock Synchronization in Cloud Data Centres; Global State and Snapshot Recording Algorithms; Distributed Mutual Exclusion;	
UNIT – IV	**12 hours**
Consensus, Paxos and Recovery in Clouds;Cloud Storage; Key Value Stores/NoSQL; P2P Systems and their use; Cloud Applications; Map Reduce, Spark and Apache Kafka

Department: *Artificial Intelligence & Data Science*	***Course Type: Ability Enhancement***
Course Title: Business Analytics	***Course Code:*** *21ADA491*
L-T-P:2-0-0	***Credits:****02*
Total Contact Hours: 26 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Course Outcomes:

Cos	Course Learning Outcomes	BL
1	To understand the concepts of Business Analytics as the science of data-driven decision making	L2
2	To apply concepts of descriptive analytics	L3
3	To understand the concepts of Stochastic Models and use them in predictive analytics	L2
4	To apply concepts of predictive analytics	L3
5	To apply concepts of prescriptive analytics	L3

Course Content:

UNIT I Overview_: Overview of Business Analytics, Motivation and Examples.Web and Social Media Analytics, Framework and challenges in data-driven decision making (1 hour)
UNIT II Descriptive Analytics: Data types and Scales, Types of data measurement scales, Population and Sample, Measures of Central Tendency, Percentile, Decile and Quartile, Measures of Variation, Skewness and Kurtosis, Data Visualization (2 hours)

UNIT III Predictive Analytics: Simple Linear Regression, Multiple Linear Regression, Logistic Regression, Decision Tree Learning and Forecasting Techniques (12 hours)

UNIT IV Prescriptive Analytics: Linear Programming, Integer Programming and Goal Programming (6 hours)

UNIT V Stochastic Models: Stochastic Process, Compound Poisson Process, Markov Chains, Using Markov Chains in Predictive Analytics (5 hours)

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Regular review of students by asking questions based on topics covered in the class.

Assessment Methods:

- Two internals, 30 Marks each will be conducted and the Average of two will be taken.
- Course Seminar (20 Marks).
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

L-T-P:2*-0-0*	***Credits:****02*
Total Contact Hours: 26 *hours*	***Duration of SEE:****03 hours*
SEE Marks*: 50*	***CIE Marks:*** *50*

Course Outcomes:

Cos	Course Learning Outcomes	BL
1	To discuss concepts of Data Life Cycle and Relational Data	L2
2	To apply concepts of data cleaning and pre-processing using SQL	L3
3	To use various features of SQL for addressing requirements of data life cycle	L2
4	To apply concepts of data analysis and implement them using SQL queries	L3

Course Content:

Unit1: Data Life Cycle; Sequence of stages from data acquisition to archiving; Data Loading, Cleaning and pre-processing Relational Databases ; Usage of MySQL and Postgres

(8 hours)

Unit2: SQL queries, implementation of data analysis tasks such as data exploration, cleaning and Transformation; implementation of sample analyses; Lab exercises/demonstrations (8 hours)

Unit 3: Additional SQL features for Data Analysis ; implementation of sample analyses; Practical demonstrations; addressing various requirements of Data Life Cycle using SQL

(8 hours)

Unit 4: Using SQL from with R and Python (2 Hours)

Teaching Methodology:

- Blackboard teaching / PowerPoint presentations.
- Regular review of students by asking questions based on topics covered in the class.

Assessment Methods:

- Two internals, 30 Marks each will be conducted and the Average of two will be taken.
- Course Seminar (20 Marks).
- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

NITTE EDUCATION TRUST

Academic Year 2021-22

CONTENTS

VISION & MISSION OF THE COLLEGE

Vision

To provide India and the World, technical manpower of the highest academic excellence and World class by shaping our youth through holistic and integrated education of the highest quality.

Mission

To develop Nitte Meenakshi Institute of Technology through Quality, Innovative and State-of-art educational initiatives into a Centre of academic excellence that will turn out youth with well-balanced personality & commitment to rich cultural heritage of India and who will successfully face the Scientific and Technological challenges in the fast-evolving Global scenario with a high degree of credibility, integrity and ethical standards.

Quality Policy

To bring about constant and Continuous Improvement in the Quality of Education Imparted and Turning out High Quality Professionals with Balanced and Globally Competitive Personality through Regular Monitoring of the Academic/ Administrative Activities of the Institution and Implementing Corrective Actions in the Best Ethical and Transparent Traditions.

1. Vision and Mission of Department

1.1 Vision:
To empower students of Artificial Intelligence and Machine Learning Department is to be technologically adept, innovative, self-motivated and responsible global citizen possessing human values and enable them to contribute in the industrial development innovation, high quality technical education and research with the ever-changing world.

1.2 Mission:

The department of Artificial Intelligence and Machine Learning strives to prepare students

- For a challenging professional career and nurture their entrepreneurship ability by grooming their leadership skills and innovative ability, thereby enabling them to serve the engineering profession and society.

- To accomplish higher studies by providing conducive teaching-learning, research environment.

2. Programme Education Objectives (PEOs)

PEO1: Excel in Professional career by acquiring knowledge in Artificial Intelligence and Machine Learning.

PEO2: Graduates are capable of pursuing higher education and research.

PEO3: Adapt to technological advancements by engaging in life long learning with leadership qualities, professional ethics and soft skills**.**

3. Programme Specific Outcomes (PSO)

PSO 1: Professional Skills: The ability to comprehend, analyze, design, implement and conduct research in the domain of Artificial Intelligence and Machine Learning, and their application in several fields like disease prediction, stock market prediction, computer vision, understanding of several supervised and unsupervised models, big data analytics, data science etc.

PSO 2: Problem Solving Skills: Ability to apply the machine learning and AI techniques in computer vision and Natural Language processing and adopt standard software engineering and professional practices to evolve optimal solutions.

PSO 3: Ethics and Career Development: Inculcate skills for a successful career in the industry based on sound principles of software project management, team work and ethical practices, develop the spirit of entrepreneurship and also nurture the quest for higher levels of knowledge.

4. Programme Outcomes (POs)

1	**PO1. Engineering knowledge:** Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2	**PO2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3	**PO3. Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4	**PO4. Conduct investigations of complex problems:** Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5	**PO5. Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
6	**PO6.Theengineer and society:** Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
7	**PO7. Environment and sustainability:** Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8	**PO8.Ethics:** Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9	**PO9.Individual and teamwork:** Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10	**PO10. Communication:** Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11	**PO11. Project management and finance:** Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a Member and leader in a team, to manage projects and in multidisciplinary environments.
12	**PO12. Life-long learning:** Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

5. Approach to Curriculum:

The curriculum is framed by keeping in mind the ever-changing industrial trends in technology. The Stakeholders in preparing the curriculum involve the industry experts, Academicians with expertise, Alumni of the department, Parents, Internal Faculty and the Final year students. The suggestions are taken and discussed in the BoS (Board of Studies). After approval from the BoS, the DUGC approval is taken and then the Academic Council approves the final curriculum.

The main objective of framing the curriculum:

- To build a strong technical, analytical and mathematical foundation in students. This will enable the students to be proficient in their technical profession.
- To inculcate in students the good ethical conduct, great team-spirit, excellent leadership qualities and provide a wholesome growth by encouraging Life-long learning which is needed for an excelling career.
- To make the students more competent to face challenges in the outside world.

6. Courses Inclined Towards Cutting Edge Technologies.

Department of AI&ML offers courses which are inclined towards cutting edge technologies along with the basic fundamental courses.

- Computer Vision
- Deep Learning
- Data Science/ Big Data Analytics
- Block Chain Technologies
- Machine Learning
- Artificial Intelligence
- Virtual Reality
- Cloud Computing
- Robotics
- Quantum Computing
- Cyber Security

7. Definitions/ Descriptions:

- **Semester Scheme:** Each UG degree is a 4 Academic year Program, each year being divided into 2 semesters. Each semester is for duration of 20 weeks, which includes Course work, CIE (Continuous Internal Evaluation), SEE (Semester End Examination). The CIE is conducted unit-wise on a monthly basis. The SEE is conducted at the end of every semester to evaluate the students' overall performance and achievement.
- **Credit System:** Each unit of a course is assigned *one credit*. The students earn the credits by registering to the respective courses, completing a teaching-learning process which is then followed by CIE and SEE. The CBCS (Choice Based Credit System) helps customizing the course work for a student by including Core Courses and Elective Courses.

- **Core Course:** Courses that are declared as mandatory for the students.
- **Electives:** Courses that are offered to the students from which they are allowed to choose.

- **Credit Courses:** Students earn *one credit* by registering for the course,
  - Attending Lecture (L)-*One hour/Week/Semester* Theory courses.
  - Attending Laboratory or Practical (P)/Tutorials (T)-*Two Hours/Week/Semester*.
- **Course load:** Every student who registers for the courses in a semester for an average total credit of anywhere between 23 to 26 credits if the student is registered under the scheme of earning a total of 200 credits by the end of the UG degree (In the new scheme students must earn a total of 175 credits). The permissible contact hours are maximum 35 Hours/week. Typical Course Load in a semester is shown in the Table 1.

Course Load per semester			
No. of Courses	**Credits per Course**	**Total Credits**	**Total contact Hours/ week**
Three Lecture Courses	4:0:0	12	12
One Lecture Course	3:0:0	3	3
One Lecture + One tutorial	3:2:0	4	5
Two Lectures + Practical	3:0:2	8	10
Two Practical courses	0:0:2	2	4

Table1: Typical Courseload

- **Credit Representation:** Credits for different academic activities are represented in the **Table1.**

Lectures (Hours/Week/Semester)	**Tutorials** (Hours/Week/Semester)	**Practical** (Hours/Week/Semester)	**Credits (L:T:P)**	**Total Credits**
4	0	0	4:0:0	4
3	2	0	3:1:0	4

Course Content for III –Semester 2021 Scheme

Department of Artificial Intelligence and Machine Learning

Department: *Mathematics*	***Course Type: Basic Science***
Course Title*: Integral Transforms, Linear Algebra and Numerical Methods*	***Course Code: 21MAT31A***
L-T-P: 2-2-0	***Credits:****3*
Total Contact Hours: *50 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks:****50*

COURSE DESCRIPTION

The course aims at imparting knowledge of Fourier analysis, Integral transforms, numerical methods, Basics of linear algebra relevant to the field of Computer Science, Information Science and Artificial Intelligence

PREREQUISITES

Integration, differentiation, Taylor series, matrices

COURSE OBJECTIVES

To understand the periodic and harmonic phenomena and to be able to model them using Fourier series and use integral transforms such as Laplace and Fourier transforms,

To understand the advantages, limitations and applications of different numerical techniques.

To explore the concepts and applications of Linear algebra.

COURSE CONTENTS

UNIT-I

Linear Algebra-I **08 Hours**

Vector spaces- definition, examples, Linear combinations, subspaces, linear dependence, basis and dimension, linear mapping, linear operator, Kernel and Image of a Linear mapping, matrix representation of linear operator, change of basis.

Self-Study: Row Space and Column space, Rank and nullity theorem

UNIT-II

Linear Algebra-II **08 Hours**

Inner product space, Orthogonal Sets and Bases, Gram Schmidt Orthogonalization process Polynomial of matrices, Characteristic polynomial, diagonalization, Eigenvalues and Eigen vectors, diagonalization, Characteristic and minimal polynomial, Singular value decomposition

Self-Study: Block matrices and Canonical form.

.

UNIT–III

Numerical Methods-I **8 Hours**

Interpolation: Newton's divided difference formulae, Lagrange's formula, Cubic spline.
Least square fitting of Fourier series (Harmonic Analysis).
Numerical Differentiation: Newton's forward and backward formulae, Lagrange's formula.
Numerical Integration: Trapezoidal, Simpson's1/3rd and 3/8th, Gaussian Quadrature method.
Self-Study: Quadratic spline, Weddle's rule for numerical integration.

UNIT–IV

Optimization and Numerical Methods **8 Hours**

Continuous Optimization: Gradient Descent method, Un constrained optimization- single variable function, condition for local minima and maxima, Multivariable function, Constrained optimization, Lagrange multipliers, Kuhn-Tucker necessary and sufficient conditions.
Numerical solution of ordinary differential equations: Taylor's series method, Runge-Kutta 4th order method - First order and second order Ordinary differential equations,
Self-Study: Correlation and regression

UNIT–V

Fourier analysis and Integral Transforms **8 Hours**

Fourier series: Euler's formulae, Dirichlet's conditions for Fourier series expansion, Even and odd function.
Fourier Transforms: Complex Fourier transforms, Cosine and Sine transforms, Inverse Fourier transforms.
Laplace Transforms: Definition, Transforms of standard functions, Laplace transforms of periodic functions, Inverse Laplace transforms
Self-Study: Fourier half range series, solutions of 1st and 2nd order ODE using Laplace transforms.

TEXT BOOKS

1. Linear Algebra, Seymore Lipschutz and Marc Lipson, 3rd edition, Tata McGrawhill, 2005
2. Numerical Methods for Scientific and Engg. Computation, M K Jain, S R K Iyengar, R K Jain, 6th edition, New Age, 2012
3. Advanced Engg. Mathematics, Erwyn Kreyzig, 9th edition, Wiley, 2011

REFERENCE BOOKS

1. Linear Algebra for everyone, Gilbert strang, 2020
2. Fourier Series, Transforms and Boundary Value Problems, J R Hanna, J H Rowland, 2nd edition, Dover, 2008
3. Numerical Algorithms, E V Krishnamurthy, S K Sen, East West press,2007

TEACHING METHODS

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

Department of Artificial Intelligence and Machine Learning

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10marks.
- Quiz/ assignment based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of all the 3 will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

1. The numerical methods can be applied for fitting the data, find appropriate functions, differentiate and integrate the same
2. The concept of numerical methods can be used to solve differential equations
3. The concept of linear algebra can be adopted to analyze situations arising in engg. Problems
4. The concepts of Fourier analysis, integral transforms and optimization can be applied to engg. Problems
5. The concept of matrices, orthogonality and vectors paces can be adopted to analyze situations arising in engg. Problems

COURSE DESCRIPTION

This course provides the usage and application of pointers and dynamic memory allocation in C. It deals with different data structures such as Stacks, Queues, Linked List, Trees and their applications in solving real world problems.

PREREQUISITES

Computer Concepts and C programming

COURSE OBJECTIVES

- To understand the concept of pointers and allocate and deallocate memory dynamically.
- To understand the working principle of different types of data structures.
- To identify and apply the appropriate data structure to solve real world problem.

COURSE CONTENTS

UNIT-I 08 Hours

Pointers: Introduction, Understanding Pointers, Accessing the Address of a Variable, Declaring Pointer Variables, Initialization of Pointer Variables, Accessing a Variable through the Pointer, Chain of Pointers, Pointer Expressions, Pointer Increments and Scale Factor, Pointers and Arrays, Pointers and Character Strings, Array of Pointers, Pointer as Function Arguments, Functions Returning Pointers, Pointers to Functions, Pointers and Structures

Dynamic Memory Allocation: Introduction, Dynamic Memory Allocation, Allocating a Block of Memory: Malloc, Allocating a Multiple Blocks of Memory: Calloc, Releasing the Used Space: Free, Altering the size of Block: Realloc

UNIT-II **08Hours**

The Stack: Definition and Examples—Primitive operations, examples

Representing Stacks in C: Implementing the POP operation, testing for exceptional conditions, implementing the PUSH operation An Example: Infix, Postfix, and Prefix – Basic definitions and examples, Stack Applications---Evaluating a postfix expression, program to evaluate a postfix expression, Converting an expression from infix to postfix, program to convert an expression from infix to postfix

Recursion (Applications of Stack): Recursive Definition and Processes—factorial function, multiplication of natural numbers. Fibonacci sequence, binary search

Recursion in C – factorial, Fibonacci numbers, binary search, recursive chains, Writing Recursive Programs – Towers of Hanoi, Binary Search

UNIT-III **08 Hours**

Queues:

The Queue and its Sequential Representation: C Implementation of Queues, Insert Operation, Priority Queue, Array Implementation of a Priority Queue.

Linked Lists: Inserting and Removing Nodes from a List, Linked Implementation of Stacks, getnode and freenode Operations, Linked Implementation of Queues, Linked List as a Data Structure, Examples of List Operations, List Implementation of Priority Queues, Header Nodes

Lists in C: Array Implementation of Lists, Limitations of the Array Implementation, Allocating and Freeing of Dynamic variables, Linked Lists using Dynamic Variables, Queues as List in C, Examples of List Operations in C, Noninteger and Nonhomogeneous Lists, Comparing the Dynamic and Array Implementations of Lists, Implementing Header Nodes

UNIT-IV **08 Hours**

Other List Structures: Circular Lists, Stack as a Circular List, Queue as a Circular List, Primitive Operations on Circular Lists, Header nodes, Addition of Long Positive Integers Using Circular Lists, Doubly Linked Lists, Addition of Long Integer Using Doubly Linked Lists

Binary Trees: operations on Binary Trees, Applications of Binary Trees

UNIT-V **08 Hours**

Binary Tree Representations: Node Representation of Binary Trees, Internal and External Nodes, Implicit Array Representation of Binary Trees, Choosing a Binary Tree Representation, Binary Tree Traversal in C, Threaded Binary Trees.

Representing Lists as Binary Trees: Finding the k^{th} Element, Deleting an Element, Implementing Tree-Represented Lists in C, Constructing a Tree-represented List

Trees and Their Applications: C Representations of Trees, Tree Traversals, General Expressions as Trees, evaluating an expression tree, constructing a Tree.

TEXT BOOKS

1. Programming in ANSI C: E Balagurusamy, Third edition, TATA McGraw HILL
2. Data Structures using C, Aaron M. Tanenbaum, Yedidyah Langsam & Moshe J. Augenstein, Pearson Education/PHI, 2006

REFERENCE BOOKS

1. The C Programming Language, Brian W Kernighan and Dennis M Ritchie, Prentice Hall Software Series, 2nd Edition.
2. Data Structures A Pseudocode approach with C, Richard F. Gilberg and BehrouzA. Forouzan, Thomson, 2005.
3. Data Structures & Program Design in C, Robert Kruse & Bruce Leung, Pearson Education, 2007.
4. Fundamentals of Data Structures in C, Horowitz, Sahani, Anderson, Freed, Second edition, 2008.

Laboratory Based Exercises

1. a) Find sum of N numbers. Allocate the memory dynamically to the numbers.
   b) Find the following for a matrix. Use the concept of pointer to 2D array.
      i) Sum of principal diagonal elements
      ii)Sum of secondary diagonal elements
      iii)Sum of all elements

2. Using array of pointer concept
   a) Find product of two Matrices
   b) Sort n names in alphabetical order

3. Implement and demonstrate the following C functions using pass-by-reference method.
   i)StrCopy()
   i) StrConcat()
   iii)Strcomp()
   iv)Strrev()

4. Define an EMPLOYEE structure with members Emp_name, Emp-id, Dept-name and Salary. Read and display data of N employees. Employees may belong to different departments. Write a function to find total salary of employees of a specified department. Use the concept of pointer to structure and allocate the memory dynamically to EMPLOYEE instances.

5. Define a structure BOOK with members ISBN, Title and price. Write a C program to construct a stack data structure of N BOOK objects and to perform the following operations on it:
    a) PUSH—To add a new book to the stack
    b) POP To remove a book from the stack

6. Write a C program to convert and print a given valid parenthesized infix arithmetic expression to postfix expression. The expression consists of single character operands and binary operators + - * /. Apply the concept of stack data structure to solve this problem.

7. Write a C program to evaluate a valid postfix expression using stack. Assume that the postfix expression is read as a single line consisting of non-negative single digit operands and binary operators. The operators are + - * and/.

8. Write recursive functions for the following and demonstrate their use.
    a) Binary Search
    b) Tower of Hanoi problem.

9. A Call center phone system has to hold the phone calls from customers and provide service based on the arrival time of the calls. Write a C program to simulate this system using appropriate data structure. Program should have options to add and remove the phone calls in appropriate order for their service.

10. Write a C program to simulate the working of a circular Queue of integers. Represent circular queue element as a structure and use array of structures as your implementation method. Start and end of the circular queue must be identified by an empty array element.

11. Write a program to create a singly linked list that maintains a list of names in alphabetical order. Implement the following operations on the list.
    a) Insert a new name
    b) Delete a specified name

12. Write a C program to maintain a stack of integers using circularly linked implementation method.

13. Write a C program to support the following operations on a doubly linked list
    a) Insert a new node to the left of the node whose key value is read as an input.
    b) Delete a node with given data, if it is found. otherwise display appropriate error message.

14. Write a C program
    a) To construct a binary search tree (BST) of integers.
    b) To traverse the tree using inorder, preorder and postorder traversal methods

TEACHING METHODS

- Lectures interspersed with discussion
- Power Point Presentations
- Problem Based Teaching
- Demonstration and Implementation

ASSESSMENT METHODS

1. Three Midsem exams – 30 Marks each will be conducted and the Average of all the three tests will be considered.
2. LaboratoryBasedExercices:20Marks

COURSE OUTCOMES

Sl. No.	COURSEOUTCOMES	BL
CO1	Identify the purposes of dynamic memory in applications, Illustrate arrays and Structures with programming solutions for real world problems	3
CO2	Quote the implication of stacks and queues for different problems, Propose Programming solutions using variations of stacks and queues	3
CO3	Manage dataset operations using variations of linked list	3
CO4	Appraise the purposes of Trees to represent datasets, Devise application to solve Tree oriented problems	3
CO5	Develop solutions to given problems based on the application of various data structure	3

COURSE DESCRIPTION

This course provides an in-depth knowledge of structure of Artificial agents, search algorithms, uninformed and informed search strategies, game playing algorithms, agents that reason logically.

PREREQUISITES

Student should have knowledge on the concepts of programming

COURSE OBJECTIVES

Theobjectiveofthecourseistofamiliarizestudentswithworkingofartificialagents

- Understanding AI, Structure of Agents, Idea behind search algorithms, analyzing Uninformed and Informed search.
- Understanding and analyzing game playing algorithms and agents that reason logically.

COURSE CONTENTS

UNIT-I 08 Hours

Introduction. Why study AI? What is AI? The Turing test. Rationality. Branches of AI. Brief history of AI. Challenges for the future. What is an intelligent agent? Doing the right thing (rational action). Performance measure. Autonomy. Environment and agent design. Structure of Agents. Agent types. Solving Problems by Searching - **Uninformed Search** - Depth-first. Breadth-first. Uniform-cost. Depth-limited. Iterative deepening. Examples. Properties. **Informed search** –Best-first. A* search. Heuristics. Hill climbing. Problem of local extrema.

UNIT-II **08Hours**

Beyond Classical Search Local Search Algorithms and Optimization Problems, Local Search in continuous Spaces, Searching with Nondeterministic Actions, Searching with Partial Observations, Online Search Agents and Unknown Environments. **Adversarial Search** Games, Optimal Decisions in Games, Alpha–Beta Pruning, Stochastic Games. **Constraint Satisfaction Problems** Defining Constraint Satisfaction Problems, Constraint Propagation: Inference in CSPs, Backtracking Search for CSPs, Local Search for CSPs, The Structure of Problems

UNIT-III **07 Hours**

Knowledge, reasoning, and planning Logical Agents Knowledge-Based Agents, The Wumpus World, Logic, Propositional Logic: A Very Simple Logic, Propositional Theorem Proving, Effective Propositional Model Checking **First-Order Logic** Representation Revisited, Syntax and Semantics of First-Order Logic, Using First-Order Logic, Knowledge Engineering in First-Order Logic

UNIT-IV **08 Hours**

Inference in First-Order Logic Propositional vs. First-Order Inference, Unification and Lifting, Forward Chaining, Backward Chaining, Resolution. **Classical Planning** Definition of Classical Planning, Algorithms for Planning as State-Space Search, Planning Graphs, Other Classical Planning Approaches, Analysis of Planning Approaches. **Planning and Acting in the Real-World** Time, Schedules, and Resources, Hierarchical Planning, Planning and Acting in Nondeterministic Domains, Multiagent Planning

UNIT-V **08 Hours**

Learning from Examples Forms of Learning, Supervised Learning, Learning Decision Trees, Evaluating and Choosing the Best Hypothesis, The Theory of Learning, Regression and Classification with Linear Models, Artificial Neural Networks, Nonparametric Models, Support Vector Machines, Ensemble Learning, Practical Machine Learning **Knowledge in Learning** A Logical Formulation of Learning, Knowledge in Learning, Explanation-Based Learning, Learning Using Relevance Information , Inductive Logic Programming

COURSE DESCRIPTION

This course is designed to provide students with an overview of the basic principles of virtual reality (VR) and virtual environment technology (VET). There is a strong emphasis on the use of AI technology as a tool for conducting scientific research and as a platform for real-world applications. The goal is to learn enough about the strengths and limitations of VR technology in order to be able to construct simple immersive environments as well as to understand the human factors and cognitive issues that should be considered when using this medium.

PREREQUISITES

Basics of statistics, Basics of Programming, Numerical Techniques

COURSE OBJECTIVES

- Understand the basics of Virtual reality
- Learn geometry of virtual world, which is needed to make Virtual Reality models
- Understand how the design of VR technology relates to human perception and cognition.
- Learn to design own VR application or game

COURSE CONTENTS

UNIT-I — 08 Hours

Introduction of Virtual Reality: Definition of VR, modern experiences, historical perspective. Hardware, sensors, displays, software, virtual world generator, game engines, human senses, perceptual psychology, psychophysics.

UNIT-II — 08 Hours

Geometry of virtual world: Geometric modelling, transforming rigid bodies, yaw, pitch, roll, axis-angle representation, quaternions, 3D rotation inverses and conversions, homogeneous transforms, transforms to displays, look-at and eye transforms, canonical view and perspective transforms, viewport transforms.

Light and Optics: Light propagation, lenses and images, diopters, spherical aberrations, optical distortion; more lens aberrations; spectral properties; the eye as an optical system; cameras; visual displays.

UNIT-III — 08Hours

The Physiology of Human Vision: Parts of the human eye, photoreceptors and densities, scotopic and photopic vision, display resolution requirements, eye movements, neural vision structures, sufficient display resolution, other implications of physiology on VR.

Visual Perception: Depth perception, motion perception, stroboscopic apparent motion, color perception, combining information from multiple cues and senses, implications of perception on VR.

UNIT-IV — 08 Hours

Computing Architectures For VR: The Rendering Pipeline, PC Graphics Architecture, Workstation-Based Architectures, Distributed VR Architectures.

Modelling: Geometric Modelling, Kinematics Modelling, Physical Modelling, Behaviour Modelling, Model Management

UNIT-V **08 Hours**

Human Factors in VR: Methodology and Terminology, User Performance Studies, VR Health and Safety Issues

Emerging Applications of VR: VR Applications in Manufacturing, Applications of VR in Robotics, Information Visualization

Total Contact Hours: 39	***Duration of SEE: 3hrs***
SEE Marks*:100*	***CIE Marks: 50***

COURSE DESCRIPTION

The course introduces basic techniques and tools commonly applied in data science for extracting meaningful information from data. The concepts to deal with various facets of data science practice, including data collection and management, data wrangling and visualization, predictive modelling using statistical learning and machine learning algorithms and effective communication.

PREREQUISITES

Basic Mathematics

COURSE OBJECTIVES

To Impart the knowledge and ability to understand and apply the fundamental concepts of data science to real world scenarios.

COURSE CONTENTS

UNIT-I — 08 Hours

Introduction to Data Science: The data science process, The roles in a data science project, Project roles, Stages of a data science project, Defining the goal, Data collection and management, Modeling, Model evaluation and critique, Presentation and documentation, Model deployment and maintenance, Setting expectations, Determining lower bounds on model performance, **Starting with R and data**.

UNIT-II — 07Hours

Exploring data: Using summary statistics to spot problems, Spotting problems using graphics and visualization, **Managing data:** Cleaning data, Data transformations, Normalization, Sampling for modelling and validation.

UNIT-III — 08Hours

Data engineering and data shaping: Data selection, Basic data transforms, Aggregating transforms, Multitable data transforms, Reshaping transforms, **Modeling methods: Choosing and evaluating models:** Mapping problems to machine learning tasks, Evaluating models.

UNIT-IV — 07Hours

Modeling methods: Linear and logistic regression: Understanding linear and logistic regression, Building a linear and logistic regression model, Making predictions, Finding relations and extracting advice, the models summary and characterizing coefficient quality, Linear and logistic regression models – key takeaways

UNIT-V — 08 Hours

Unsupervised methods: Cluster analysis, Distances, Preparing the data, Hierarchical clustering, The k-means algorithm, Assigning new points to clusters, Association rules

COURSE DESCRIPTION

Business Intelligence (BI) refers to technologies, applications, and practices for the collection, integration, analysis, and presentation of business information. The purpose of business intelligence is to support better business decision making. This course provides an overview of the technology of BI and the application of BI to an organization's strategies and goals.

PREREQUISITES

- Student should have prior knowledge of DBMS
- Student should have queried some database using SQL

COURSE OBJECTIVES

- To get basic knowledge of business intelligence (BI), BI technology, and related concepts.
- To get knowhow on data integration methods, architecture and technology.
- To design multi-dimensional data modelling.
- To gain knowledge of enterprise reporting techniques and to design such reports.

COURSE CONTENTS

UNIT-I — 08 Hours

Introduction to Business Intelligence
Types of digital data; Introduction to OLAP and OLAP, BI Definitions & Concepts, Business Applications of BI, BI Framework, Role of Data Warehousing in BI, BI Infrastructure Components BI Process, BI Technology, BI Roles & Responsibilities.

UNIT-II — 08 Hours

Basics of Data Integration (Extraction Transformation Loading) Concepts of data integration need and advantages of using data integration, introduction to common data integration approaches, Introduction to data quality, data profiling.

UNIT-III **08Hours**

Introduction to Data Integration: Introduction to SSIS Architecture, Introduction to ETL using SSIS; Integration Services objects; Data flow components – Sources, Transformations and Destinations; Working with transformations, containers, tasks, precedence constraints and event handlers.

UNIT-IV **08 Hours**

Introduction to Multi-Dimensional Data Modeling
Introduction to data and dimension modeling, multidimensional data model, ER Modeling VS. Multi-dimensional modeling. Concepts of dimensions, facts, cubes, attributes, hierarchies, star and snowflake schema, introduction to business metrics and KPIs, Creating cubes using SSAS.

UNIT-V **08 Hours**

Basics of Enterprise Reporting
Introduction to enterprise reporting, concepts of dashboards, balanced scorecards, introduction to SSRS architecture, enterprise reporting using SSRS.

COURSE DESCRIPTION

This course focuses on the statistitcal Inferences required for Artificial Intelligence and Machine Learning. It covers topics on parametric and non parametric models, Hypothesis testing, Bayes Inferences, Statistical decision theory , supervised learning-classification, linear and logistic regression, multivariate models, non parametric curve estimation.

PREREQUISITES

Basic Mathematics

COURSE OBJECTIVES

To Impart the knowledge and ability to apply basic concepts of statistical inferences in the field of Artificial Intelligence and Machine Learning.

COURSE CONTENTS

UNIT-I — 07 Hours

Statistical Inference: **Models, Statistical Inference and Learning**: Statistical Learning-Introduction, Parametric and Nonparametric Models, Fundamental Concepts in Inference, **Estimating the CDF and Statistical Functionals, The Bootstrap, Parametric Inference:** Parameter of Interest, The Method of Moments, Maximum Likelihood, Properties of Maximum Likelihood Estimators, Consistency of Maximum Likelihood Estimators, Equivariance of the MLE, Computing Maximum Likelihood Estimates.

UNIT-II — 07Hours

Hypothesis Testing and p-values: The Wald Test, p-values, The X_2 Distribution, Pearson's X_2 Test For Multinomial Data, The Permutation Test, The Likelihood Ratio Test, Multiple Testing, Goodness-of-fit Tests, The t-test, **Bayesian Inference:** The Bayesian Philosophy, The Bayesian Method, Functions of Parameters, Simulation, Large Sample Properties of Bayes' Procedures, Flat Priors, Improper Priors, and Noninformative Priors, Multiparameter Problems, Bayesian Testing , Strengths and Weaknesses of Bayesian Inference

UNIT-III — 10Hours

Statistical Decision Theory: Preliminaries, Comparing Risk Functions, Bayes Estimators, Minimax Rules, Maximum Likelihood, Minimax, and Bayes, Admissibility, Stein's Paradox, **Statistical Models and Methods: Overview of Supervised Learning, Linear and Logistic Regression**, **Multivariate Models**

UNIT-IV — 07Hours

Non parametric Curve Estimation: The Bias-Variance Tradeoff, Histograms, Kernel Density Estimation, Nonparametric Regression, **Smoothing Using Orthogonal Functions:** Orthogonal Functions and L2 Spaces, Density Estimation, Regression, Wavelets

UNIT-V — 09 Hours

Classification: Introduction, Error Rates and the Bayes Classifier, Gaussian, and Linear Classifiers
Linear Regression and Logistic Regression, Relationship Between Logistic Regression and LDA,
Density Estimation and Naive Bayes, Trees, Assessing Error Rates and Choosing a Good Classifier, Support Vector Machines, Kernelization, Other Classifiers.

TEXT BOOKS

1. All of statistics, A concise course in statistical inference, Larry Wasserman, (Springer Series in Statistics), 2004.
2. The Elements of Statistical Learning, Trevor Hastie, Robert Tibshirani, Jerome Friedman, (Springer Series in Statistics) , Second Edition, February 2009.

REFERENCE BOOKS

1. Empirical Methods for Artificial Intelligence, Paul Rcohen, The MIT Press September1995.
2. Naked Statistics: Stripping the Dread from the Data, Charles Wheelan, W. W. Norton Company, February 2014.

TEACHING METHODS

- Black Board Teaching.
- Power point presentation

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Case studies and Assignments based on practical application for20 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of all the 3 will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES (COs)

After completion of the course, the students will be able to:

CO	Description	Bloom'sLevel
1	Understand statistical inference	L1
2	Describe models, methods in statistics	L2
3	Solve elementary problems in statistics.	L3
4	Apply parametric and non-parametric Models	L3
5	Analyze hypothesis to accept/reject Alternative hypothesis.	L4

COURSE DESCRIPTION

This course provides an in-depth knowledge of applying Python Programming Language to Various search strategies and game playing algorithms of Artificial Intelligence and Design and Analysis of Algorithms.

PREREQUISITES

- Students should have knowledge of Design and Analysis of Algorithms.
- Students should have knowledge of Probability Theory.
- Students should have knowledge of Basics of programming

COURSE OBJECTIVES

Theobjectiveofthecourseistofamiliarizestudentswithworkingofartificialagents

- Understanding AI, Structure of Agents, Idea behind search algorithms, analyzing Uninformed and Informed search.
- Understanding and analyzing game playing algorithms and agents that reason logically.

LABORATORY EXERCISES

1. Write a program in python to implement simple arithmetic operations.
2. Write a program to implement a vacuum cleaner agent with basic functions.
3. Write a Python Program to find the shortest distance between any two places using a A* search algorithm. Repeat the experiment for different Graphs.
4. Write a program to implement a Minimax decision-making algorithm, typically used in a turn-based, two player games. The goal of the algorithm is to find the optimal next move.
5. Write a program to implement Alpha Beta pruning in Python. The algorithm can be applied to any depth of tree by not only pruning the tree leaves but also the entire subtree. Order the nodes in the tree such that the best nodes are checked first from the shallowest node.
6. Write a program to solve 4 Queens Problem.
7. Implementation of Tic Tac Toe game here, the player needs to take turns marking the spaces in a 3x3 grid with their own marks, if 3 consecutive marks (Horizontal, Vertical, Diagonal) are formed then the player who owns these moves get won. Noughts and Crosses or X's and O's abbreviations can

be used to play.
8. Implement unification in first order logic.
9. Write a program to implement a knowledge base consisting of first order logic statements and prove the query using forward reasoning.

SEE Marks: 50	***CIE Marks: 50***

COURSE DESCRIPTION

The course will cover topics regarding the software development other than programming, including testing, verification, and validation for constructing robust code. The emphasis is on modern technology for developing reliable software at reasonable cost.

PREREQUISITES

Students must have the knowledge on basic programming and object-oriented concepts.

COURSE OBJECTIVES

- To understand what Software Engineering is and why it is important.
- To understand various software development process models and to select the appropriate model for a particular project.
- To introduce the art of eliciting user requirements and analysis.
- To introduce software design strategies and development methodologies.
- To understand the software testing process and tools.
- To understand the process of software Maintenance.
- To know how to manage people, process and problems during software development project.

COURSE CONTENTS

UNIT-I — 08 Hours

Introduction to Software Engineering:

Introduction: FAQ's about software engineering, IEEE/ ACM code of software engineering ethics, Process activities; Requirements gathering and analysis: Software Requirements Specification (SRS), Functional and Non-Functional requirements, User requirements, System requirements, Interface specification, Characteristics and components of SRS, Structure of SRS (IEEE format).

Case study: Develop SRS (IEEE format) for any real-world application.

UNIT-II	08 Hours

Software Development Process Models:
Traditional Process Models: The Waterfall model, The Evolutionary model, The Incremental implementation, Prototyping, Spiral model, Software reuse; Non-Traditional Process Models: Rapid Application Development (RAD), Agile Development Process, Extreme Programming, Introduction to DevOps, DevOps V/s Agile.
Case study: Identify the suitable development model for any real-world problem.

UNIT-III	08 Hours

System Design and Development:
Architectural Design: Architectural design decisions, Architectural patterns; Interaction Modeling: Use case models, Sequence diagrams; Structural Modeling: Class diagrams; Behavioral Modeling: State diagrams; Functional Modeling: Data flow diagrams; Development: Selecting a language, Coding guidelines, Code documentation.
Case study: Design a real-world application using Design Methodologies.

UNIT-IV	08 Hours

Software Testing and Maintenance:
Software Testing: Testing process, Design of test cases, Functional Testing: Boundary value analysis, Equivalence class testing, Path testing, Unit testing, Integration and system testing, Debugging, Alpha & beta testing, testing tools & standards; Software Maintenance: Maintenance process, Software reengineering, Configuration management.
Case study: Develop Test Suite for any real-world application and demonstrate using any Software Testing Automation Tools.

UNIT-V	08 Hours

Software Quality and Management:
Quality Management: Process and product quality, quality assurance and standards, Quality planning and control; Project Management: Management Activities, Project Planning, Project Scheduling, Risk Management.
Case study: Realize project management activities using emerging Project Management tools.

TEXT BOOKS

1. Software Engineering: A Practitioner's Approach, R. S. Pressman, McGraw Hill, 7th Edition, 2010.
2. Zero Defect Software, G.G.Schulmeyer, McGraw-Hill,1992.

3. Ian Somerville—Software Engineering, Pearson 9th Edition,2016.

REFERENCE BOOKS

1. Software Engineering, Ian Summerville,10thEdition, 2015, Pearson Education Ltd, ISBN: 9780133943030.
2. An Integrated Approach to Software Engineering, Pankaj Jalote,3rdEdition,2013, Narosa Publishing House, ISBN: 81-7319-702-4.
3. DevOps for Developers, Michael Huttermann, 2012, Apress, ISBN:978-1-4302-4569-8.

TEACHING METHODS

- Lecture using presentations.
- Case studies.

ASSESSMENT METHODS

Parameter	Marks
Three Internals (MSEs)	30
Rubrics for evaluation of Case Study Presentation (LA-1)	10
Rubrics for evaluation of Case Study Report (LA-2)	10
Total	**50**
Final Examination will be conducted for100marks (SEE)	

COURSE OUTCOMES

Sl.No.	COURSEOUTCOMES	BL
CO1	Understand and apply relevant software engineering principles to gather and analyse software requirements for any application.	2
CO2	Identify suitable process model for designing good software.	2
CO3	Analyse various techniques and identify suitable methodology for designing any software to meet the requirements of an application.	3
CO4	Develop test suits applying appropriate software testing strategies.	3
CO5	Realize the activities involved in software quality and management.	2

Department of Artificial Intelligence & Machine Learning

Department: *Artificial Intelligence and Machine Learning*	***Course Type: Programme Core***
Course Title: Introduction to Machine Learning	***Course Code: 21AI43***
L-T-P 3-0-0	***Credits: 3***
Total Contact Hours:40	***Duration of SEE: 3 Hours***
SEE Marks: 50	***CIE Marks: 50***

COURSE DESCRIPTION

This course focuses on the theory of learning machines, which are important techniques underlying data mining and many AI applications. The topics include concepts of Machine Learning, types, supervised learning and unsupervised learning

PREREQUISITES

Probability, Statistics, Data structures

COURSE OBJECTIVES

- To introduce the basic concepts and techniques of Machine Learning
- To be familiar with a set of well-known supervised and unsupervised learning algorithms
- To employ machine learning techniques to solve problems

COURSE CONTENTS

UNIT-I 06 Hours

Introduction: Machine learning, Types of machine learning, Machine learning process, Supervised learning, Examples of machine learning applications, **Machine learning preliminaries:** Weight space, curse of dimensionality, Testing machine learning algorithms: Overfitting, training, testing, and validation sets, confusion matrix, accuracy metrics, ROC curve, Unbalanced datasets, Measurement precision, **Basic Statistics**: Averages, variance, covariance, Gaussian, Bias, Variance tradeoff

UNIT-II 08Hours

Neurons, Neural Networks: The brain and the neuron, Neural networks, The Perceptron, Training a perceptron, Learning Boolean functions, Linear Separability, **Multilayer Perceptron** : The Multi-layer Perceptron Algorithm, Initializing the Weights , Different Output Activation Functions, Backpropagation algorithm, Sequential and Batch

UNIT-III 08Hours

Bayesian Learning: Introduction, Classification, Losses and Risks, Discriminant Functions, Utility Theory, Association Rules, Bayes Optimal Classifier, Naïve Bayes Classifier, Bayesian Belief Networks. **Nearest neighbor methods**: k-nearest neighbor learning, Distance–weighted Nearest neighbor algorithm , Examples

UNIT-IV 10 Hours

Decision trees: Learning with trees, Using decision trees, Univariate Trees, Classification Trees, Regression Trees, Pruning, Rule Extraction from Trees, Learning Rules from Data, Multivariate Trees, ID3, Examples **Support Vector Machines**: Optimal Separation, Kernels, SVM Algorithm, Multiclass Classification, SVM Regression

UNIT-V **08Hours**

Unsupervised learning-Clustering: Introduction, Mixture Densities, *k*-Means Clustering, Expectation-Maximization Algorithm, Mixtures of Latent Variable Models, Supervised Learning after Clustering, Hierarchical Clustering, Choosing the Number of Clusters

TEXT BOOKS

Department of AI and ML

Department: *Artificial Intelligence and Machine Learning*	***Course Type:***
Course Title**: **PATTERN RECOGNITION FOR AI	***Course Code: 21AIE442***
L-T-P :2-0-1	***Credits: 2***
Total Contact Hours: 40	***Duration of SEE: 3Hours***
SEE Marks: 100	***CIE Marks: 50***

COURSE DESCRIPTION

The primary objective of this course is to equip students with mathematical and statistical techniques used in pattern recognition and enable students to develop machine learning algorithms for real life problems

PREREQUISITES

Basic knowledge of Introduction to Artificial Intelligence

COURSE OBJECTIVES

- Understand what a pattern is and how to make pattern recognition and machine learning algorithms and how they can be used.
- Understand how to extract features, evaluate features, and connect research in the field of pattern recognition.
- Understand and use both supervised and unsupervised classification methods to build a PR system that works with real-world data.
- Make use of pattern-recognition techniques to solve real-world problems, such as finding and recognizing objects in the real world.
- To make simple pattern classifiers, combination classifiers, and structural pattern recognizers.

COURSE CONTENTS

UNIT–I 08 Hours

Introduction to Pattern Recognition- Tree Classifiers Getting our feet wet with real classifiers- Decision Trees: CART, C4.5, ID3- Random Forests

UNIT–II 08 Hours

Bayesian Decision Theory Grounding our inquiry- Linear Discriminants Discriminative Classifiers: The Decision Boundary, Separability, Perceptrons, Support Vector Machines.

Parametric Techniques Generative Methods grounded in Bayesian Decision Theory, Maximum Likelihood Estimation- Bayesian Parameter Estimation.

UNIT–III **08 Hours**

Non-Parametric Techniques- Kernel Density Estimators- Nearest Neighbor Methods - Unsupervised Methods Exploring the Data for Latent Structure - Component Analysis and Dimension Reduction

UNIT–IV **08 Hours**

The Curse of Dimensionality, Principal Component Analysis, Fisher Linear Discriminant, Locally Linear Embedding

UNIT–V **08 Hours**

Clustering, K-Means. Expectation Maximization, Mean Shift, Classifier Ensembles, Bagging, Boosting / AdaBoost.

TEXT BOOKS

1. Duda, Hart and Stork, Pattern Classification, Second Edition, Wiley,2001.

REFERENCE BOOKS

1.T. M. Mitchell, Machine learning, McGraw-Hill, NewYork,1997.
2.S. Theodoridis, K. Koutroumbas, Pattern Recognition, Academic Press, 1999

TEACHING METHODS

- Lecture using Blackboard and chalk
- Presentations
- Programming Assignments
- Course Project

ASSESSMENT METHODS

Parameter Marks

Three internals (Average of best of two)	30
Programming Assignments	10
Rubrics for the evaluation of Programming Assignments	10
	Total 50
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

Sl. No.	COURSEOUTCOMES	BL
CO1	Understand the concept of a pattern and the basic approach to the development of pattern recognition and machine intelligence algorithms and applications of PR system	3
CO2	Understand the basic methods of feature extraction, feature evaluation, analyse and relate research in the pattern recognition area	4
CO3	Understand and apply both supervised and unsupervised classification methods to develop PR system in real-world data.	3
CO4	Apply pattern recognition techniques to real-world problems such as object detection and recognition.	3
CO5	To implement simple pattern classifiers, classifier combinations, and structural pattern recognizers.	3

Department of Artificial Intelligence & Machine Learning

Department: *Artificial Intelligence and Machine Learning*	***Course Type:*** *Programme Core*
Course Title: Design and Analysis of Algorithms	***Course Code:*** 21AI41
L-T-P: 3-0-0	***Credits: 3***
Total Contact Hours: 39Hours	***Duration of SEE:*** *3 Hours*
SEE Marks: 50	***CIE Marks: 50***

COURSE DESCRIPTION

This course introduces basic methods for the design and analysis of efficient algorithms emphasizing methods which are useful in practice. The computational problems for sorting, searching, Divide and Conquer, dynamic programming and greedy algorithms, graph algorithms string matching, Backtracking, Branch and Bound, NP completeness are discussed.

PREREQUISITES

- Students should have knowledge of C or C++ language
- Students should know data structures
- Students should know the usage of summation formulae and recurrences in mathematics

COURSE OBJECTIVES

- To understand the basic concepts and notations used in the design and analysis of algorithms.
- To provide theoretical background in the design and analysis of major classes of algorithms.
- To solve problems using appropriate algorithms.
- To analyze and compare the performance of algorithms.

COURSE CONTENTS

UNIT-I 07 Hours

Introduction: What Is an Algorithm? Fundamentals of Algorithmic Problem Solving, Fundamentals of the Analysis of Algorithm Efficiency: The Analysis Framework, Asymptotic Notations and Basic Efficiency Classes, Mathematical Analysis of Non recursive Algorithms, Mathematical Analysis of Recursive Algorithms, Example: Computing the nth Fibonacci number.

UNIT-II **08Hours**

Brute Force and Exhaustive Search: Selection Sort and Bubble Sort, Sequential Search and Brute-Force String Matching, Depth-First Search and Breadth-First Search, Exhaustive Search.
Decrease-and-Conquer: Insertion Sort, Topological Sorting, Decrease-by-a-Constant-Factor Algorithms, Binary Search.

UNIT-III **08 Hours**

Divide and Conquer: Merge sort, Quicksort Transform-and-Conquer: Balanced Search Trees, AVL trees,2-3 trees, Heaps and Heap sort, Input enhancement in string matching, Horspools algorithm, Hashing.

UNIT-IV **08 Hours**

Dynamic Programming: The Knapsack Problem and Memory Functions, Warshall's and Floyd's Algorithms, Greedy technique**:** Prim's Algorithm, Kruskal's Algorithm, Dijkstra's Algorithm, Huffman Trees and Codes.

UNIT-V **08 Hours**

Iterative Improvement: The Maximum-Flow Problem, Limitations of Algorithm Power**:** P,NP, and NP-Complete Problems, Coping with the Limitations of Algorithm Power**:** Backtracking - n-Queens Problem, Subset-Sum Problem ,Branch-and-Bound -Knapsack Problem

TEXT BOOKS

1. Anany Levitin, "Introduction to the Design & Analysis of Algorithms", 3rd Edition, 2011, Pearson education.
2. Horowitz E., Sartaj Sahni S., Rajasekaran S," Fundamentals of Computer Algorithms", 2001, Galgotia Publications

REFERENCE BOOKS

1. H., Cormen, Charles E. Leiserson, Ronal L. Rivest, Clifford Stein Thomas," Introduction to Algorithms", 2nd Edition, 2006, PHI.

TEACHING METHODS

- Lectures interspersed with discussion
- Power Point Presentations
- Problem Based Teaching
- NPTEL Course

ASSESSMENT METHODS

Midterm Test	**30 Marks**
Problem based Assignment	**10 Marks**
GATE based Tutorial Test	**10 Marks**
Total	**50 Marks**

COURSE OUTCOMES

Sl. No.	COURSEOUTCOMES	BL
CO1	Describe the concepts, methods and notations used in the design and analysis of algorithms	L3
CO2	Design algorithms using brute force, decrease and conquer, divide and conquer approach, dynamic programming, greedy technique and Transform-and-Conquer methods	L3
CO3	Apply the various problem-solving methodologies to get solution to common engineering problems	L4
CO4	Evaluate the performance of various algorithms.	L4
CO5	Solve the problems based on Iterative Improvement method, the Maximum-Flow Problem, Use the space state tree to solve Queens, sum subset problems and knapsack problem.	L4

COURSEDESCRIPTION

This course provides knowledge on definitions of big data and big data analytics, big data frameworks like Hadoop and SPARK, messaging paradigm such as Kafka and data storage mechanisms for big data.

PREREQUISITES

- Experience of one Programming language like Python/Java/Scala required.
- SQL and Data knowledge preferred

COURSEOBJECTIVES

1. Understand the data and categories of the data.
2. Study the big data framework Hadoop and SPARK
3. Study messaging paradigms such as Kafka.
4. Analyze the difference between Hadoop and SPARK environments
5. Study the NOSQL databases.

COURSECONTENTS

UNIT-I — 08 Hours

Introduction to Big Data: Characteristics of Data, Evolution of Big Data, Definition, Challenges, What is Big Data Analytics, Classification of Analytics, Need of Big Data Analytics, CAP and Base Theorem, Introduction to No SQL.

UNIT-II — 08 Hours

MapReduce: Distributed File Systems, MapReduce, Algorithms Using MapReduce, Extensions to MapReduce. MapReduce Basics: Functional Programming Roots, Mappers and Reducers, The Execution Framework, Partitioners and Combiners, Hadoop Cluster Architecture, Hadoop Example: Word Count.

UNIT-III — 08Hours

Introduction to Kafka: Kafka, Publish/Subscribe Messaging, Messages and Batches, Producers and Consumers, Brokers and Clusters, Multiple Clusters, Why Kafka, Multiple Producers, Multiple Consumers, The Data Ecosystem, Use Cases, LinkedIn's Problem, The Birth of Kafka.
Kafka Producers: Writing Messages to Kafka, Kafka Consumers: Reading Data from Kafka.

UNIT-IV **08Hours**

Introduction to Apache Spark: The Genesis of Spark, What Is Apache Spark, Apache Spark's Structured APIs, Structuring Spark, The Data Frame API, Spark's Basic Data Types, Schemas and Creating Data Frames , Typed Objects, Untyped Objects, Creating Datasets, Dataset Operations , Spark SQL and Data Frames: Introduction to Built-in Data Sources, Using Spark SQL in Spark Applications, Basic Query Examples, SQL Tables and Views, Creating SQL Databases and Tables, Reading Tables into Data Frames, Data Sources for Data Frames and SQL Tables.

UNIT-V **08Hours**

Introduction to Hive: what is Hive, Hive architecture, Data types, File Formats, Hive Query Language, RCfile implementation, SerDe, User Defined Functions.

TEXT BOOKS

1. Seema Acharya and Subhashini C, Big Data and Analytics, Wiley India, 2015.
2. Jules S. Damji, Brooke Wenig, Tathagata Das and Denny Lee, Learning Spark,2nd Edition, O'Reilly, 2015.
3. Neha Narkhede, Gwen Shapira & Todd Palino, Kafka The Definitive Guide, O'Reilly,2017.
4. Jure Leskovec, Anand Rajaraman and Jeff Ullman, Mining of Massive Datasets, 3rd edition, Cambridge University Press.
5. Jimmy Lin and Chris Dyer, Data-Intensive Text Processing with MapReduce, University of Maryland, College Park,2010.

1. Muhammad Asif Abbasi, Learning Apache Spark 2, Packt Publishing, 2017.
2. Cay S. Horstmann, Scala for the Impatient 2nd Edition.
3. Andy Konwinski, Holden Karau, Matei Zaharia, Patrick Wendell, Learning Spark Lightning-Fast Big Data Analysis, O'Reilly, 2015.
4. Tom White, Hadoop: The Definitive Guide, O'Reilly, 2015.

TEACHING METHODS

Black board teaching.
Lectures using presentations.
Assignments

ASSESSMENT METHODS

Parameters	Marks
Midterm Test (Avg. of 2 Tests)	30
Case Study	10
Programming Assignment	10
Total	**50**
Final Exam will be conducted for 100 marks (SEE)	

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Understand the big data, big data analytics, big data processing requirements.	L1
CO2	Compare the Hadoop and SPARK framework for big data.	L2
CO3	Learn, Apply and Analyze how Apache Kafka works in comparison with other publish/subscribe messaging queues	L3
CO4	Apply the Knowledge of RDDs, Data frames to develop SPARK applications.	L3
CO5	Analyze the big data framework used in industry	L4

COURSE DESCRIPTION

This course provides an overall concept of basic biology, biochemistry, microbiology and how to predict a disease using AI and machine learning algorithm.

PREREQUISITES

Students should have knowledge of the basics of AI.

COURSE OBJECTIVES

The main objective of this course is

1. To introduce students to basic cell level biology.
2. To introduce students to biochemistry and gene technology.
3. To introduce students some concepts of microbiology and the use of microscopy.
4. To introduce students Computer Assisted diagnosis by using AI, disease prediction

COURSE CONTENTS

UNIT-I **08 Hours**

Introduction to Biology: Cellular Level

Introduction to cells, basic properties of cell, Prokaryotic cells, Eukaryotic cells, cell cycles and cell division, M-Phase, Meiosis, Cell differentiation.

UNIT-II **08 Hours**

Biochemistry: Chemical composition of living forms, Carbohydrates, Amino acids and Proteins, Nucleic acids, lipids, Enzymes, Importance of enzymes, brief introduction to metabolism, metabolic basis for living- Anabolic and Catabolic Pathways, photosynthesis, glycolysis etc.

UNIT-III **08Hours**

Genetics: Mendelian law, Mende's Law of inheritance, Gene interactions, multiple alleles, chromosomal theory of inheritance, linkage, Chromosome mapping, genetic disorder, replication of DNA, Types of RNA, genetic code, transcription, translation, regulation of Gene expression.

UNIT-IV **08 Hours**

Microbiology: Microorganisms, growth kinetics, sterilization, microscopy, application of microbiology, immunology and immunity, pathology, histopathology, cytopathology, cancer biology, Cancer in multiple organs, Stem cells.

Radiology: What are X-Rays? How are X-Rays used to produce images, Chest X-Rays, abdominal X-Rays, CT scans: CT head, CT chest, CT cervical spine, MRI head, MRI spine, MRI Knee and other joints, Ultra-sound scan.

UNIT-V **08 Hours**

Introduction to AI and Machine Learning: Supervised and unsupervised learning, regression and classification task, Introduction to Deep Learning, SVM and Random Forest, Genetic algorithm.

Application of AI in Biology: Computer Assisted diagnosis of cancer from histopathology images, disease prediction from CT images and Chest X-Ray images, disease prediction from time series data, Disease detection from Gene data etc.

TEXT BOOKS

1. "Biology for Engineers: as per AICTE curriculum", Wiley Editorial (2018)
2. Lawrence E Hunter, "Artificial Intelligence and Molecular Biology", MIT Press.

REFERENCE BOOKS

1. David Baltimore and H. Lodish (2021) "Molecular Cell Biology", 9th edition, Macmillan Learning.

TEACHING METHODS

- Power Point presentation

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Assignment/Project based on the practical application for 20 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of all the 3 will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

Sl. No	COURSE OUTCOMES	BL
CO1	To introduce students to cellular level biology	L2
CO2	To introduce students to brief idea of Biochemistry and metabolism	L2
CO3	To introduce students to genetics	L2
CO4	To introduce students to microbiology and radiology	L3
CO5	To introduce some AI concepts, Deep Learning and other machine learning algorithms and using these algorithms to predict disease	L3

COURSE DESCRIPTION

This course provides an understanding of Database management systems. The course also provides the knowledge of ER-diagram design, Relational Algebra and RDBMS, SQL for querying the database and Normalization for the good database design.

REREQUISITE

1. Students should know basics of Discrete Mathematics.
2. Students should know basic programming concepts.

COURSE OBJECTIVES

1. To understand the fundamentals of Relational database management systems.
2. To design database using ER-modeling, Normalization and querying the database using SQL.
3. To understand the fundamentals of transactions, locking mechanisms, database recovery.

COURSE CONTENTS

UNIT - I 08 Hour

Database and Database Users: Introduction, Example, Characteristics of Database Approach, Actors on the Scene, Workers Behind the Scene, Advantages of Using the DBMS Approach, A Brief History of Database Application. Database System Concepts and Architecture: Data Models, schemas, and Instances: Three-schema architecture and Data Independence, Database Languages and Interfaces, The Database System Environment, Centralized and Client/Server Architecture for DBMS, Classification of Database Management systems. Data Modeling Using the Entity-Relationship (ER) Model: Using High - Level Conceptual Data Models for Database Design, An Example Database Application, Entity Types, Entity Sets, Attributes, and Keys, Relationship Types, Relationship Sets, Roles, and Structural Constraints, Weak Entity Types, ER Diagrams, Naming Conventions, and Design Issues.

UNIT - II 08 Hour

The Relational Data Model and Relational Database Constraints: Relational Model Concepts, Relational Model Constraints and Relational Database Schemas, Update Operations, Transactions and Dealing with Constraint Violations. The Relational Algebra and Relational Calculus: Unary Relational Operations: SELECT and PROJECT, Relational Algebra Operations from Set Theory, Binary Relational Operations: JOIN and DIVISION, Additional Relational Operations; Examples of Queries in Relational Algebra.

SQL: Schema Definition, Constraints, Queries, and Views: SQL Data Definition and Data Types, Specifying Constraints in SQL, Schema Change Statements in SQL, Basic Queries in SQL, More Complex SQL Queries, Insert, Delete and Update Statements in SQL, Specifying Constraints as Assertion and Trigger, Views (Virtual Tables) in SQL.

UNIT - III — 08 Hour

Introduction to SQL Programming Techniques: Database Programming: Issues and Techniques, Embedded SQL, Dynamic SQL, Database Stored Procedures and SQL / PSM. **Database Design Theory and Methodology:** Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys, General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.

UNIT - IV — 08 Hour

Transaction Processing Concepts: Introduction to Transaction Processing, Transaction and System Concepts, Desirable Properties of Transactions, Characterizing Schedules Based on Recoverability, Characterizing Schedules Based on Serializability, Transaction Support in SQL. **Concurrency Control Techniques:** Two-Phase Locking Techniques for Concurrency Control, Concurrency Control Based on Timestamp Ordering. **Database Recovery Techniques:** The ARIES Recovery Algorithm. Introduction to NO SQL.

UNIT - V — 08 Hour

Application Design and Development: User Interfaces and Tools, Web Interfaces to Databases, Web Fundamentals, Servlets and JSP, Building Large Web Applications, Triggers, Authorization in SQL, Application Security.

TEXT BOOKS

1. Elmasri and Navathe: Fundamentals of Database Systems, 7th Edition, Addison-Wesley, 2007
2.Silberschatz, Korth and Sudharshan: Data base System Concepts, 5th Edition, Mc-GrawHill, 2006.
3.Raghu Ramakrishnan and Johannes Gehrke: Database Management Systems, 3rd Edition, McGraw-Hill,2003.

REFERENCE BOOKS

1.C.J. Date, A. Kannan, S. Swamynatham: A Introduction to Database Systems, 8th Edition, Pearson education, 2006.

TEACHING METHODS

1. Blackboard teaching
2. PowerPoint presentations (if needed)
3. Programming Assignments using SQL

ASSESSMENT METHODS

Three Internals (Average of best of two) 30
Demonstration 10
Assignment 10

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Have a broad understanding of database concepts, Understand the essentials o DBMS and its architectures, Design and Model a real time Scenario using EF Modeling.	L1
CO2	Convert entity relationship and convert entity relationship diagrams into RDBMS Design Relational Algebra and SQL queries to analyze on the respective data.	L3
CO3	Be able to design SQL commands to create tables and indexes, insert/ update/ delet data, and query data in a relational DBMS. Demonstrate an understanding of normalization theory and apply such knowledge to the normalization of a database.	L3
CO4	Illustrate the concepts of Transaction Management and Database Recovery Techniques.	L2
CO5	Design and Develop database application using Java Servlets an MYSQL(Web/Windows).	L4

Department of Artificial Intelligence and Machine Learning

Department: *Artificial Intelligence and Machine Learning*	***Course Type:***
Course Title**: **Application Development using C++	***Course Code: 21AII473***
L-T-P :	***Credits: 2***
Total Contact Hours:	***Duration of SEE:***
SEE Marks:	***CIE Marks:***

COURSE DESCRIPTION

This course provides an understanding of OOP Programming paradigm. The course also provides the knowledge of application development for real-world problems using C++.

PREREQUISITES

Basic knowledge on Problem solving using programming in C.

COURSE OBJECTIVES

1. To understand the difference between Procedure Oriented and OO Programming.
2. To understand OOP features of C++.
3. To develop applications in C++.

COURSE CONTENTS

UNIT – I : An Overview of C++ 08 Hours

Object Oriented Programming Principles, The origins of C++, C++ Fundamentals- Introducing C++ Classes, Procedure Oriented Programming vs Object Oriented Programming, Class Diagram.

Classes and Objects : C++ Classes and Structures, Class and object declarations ,Friend Functions, Friend Classes, Inline Functions, Static Class Members, The Scope Resolution Operator, Functions and Objects.

Arrays, Pointers, References, and the Dynamic Allocation Operators: Arrays of Objects, this pointer, References, C++'s Dynamic Allocation operators. Best practices and coding standards.

UNIT – II: Applying Polymorphism 08 Hours

Function Overloading and Default Arguments: Function Overloading, Constructor types, Overloading Constructor Functions, Default Function Arguments, Function Overloading and Ambiguity

Operator Overloading: Creating a Member Operator Function, Operator Overloading Using a Friend Function, Namespaces.

UNIT – III: Inheritance in C++ 08 Hours

Inheritance: Base-Class Access Control, Inheritance and Protected Members, Inheriting Multiple Base Classes, Constructors, Destructors and Inheritance, Granting Access, Virtual Base Classes
Virtual Functions and Polymorphism: Virtual Functions, The Virtual Attribute Is Inherited, Virtual Functions Are Hierarchical, Pure Virtual Functions, Using Virtual Functions, Early vs Late Binding.

UNIT – IV: Templates, Exceptional Handling and STL 08 Hours

Templates: Generic Functions, Applying Generic Functions, Generic Classes
Exception Handling: Exception Handling Fundamentals, Applying Exception Handling.
Introduction to Standard Template Libraries: Introduction to STL Components, Containers, Algorithms, Iterators.

UNIT – V: C++ File I/O 08 Hours

C++ File I/O: <fstream> and File Classes, Opening and Closing a File, Reading and Writing Text Files, Unformatted and Binary I/O, Detecting EOF, Random Access.
Smart Pointers: auto pointer, RTTI.

TEXT BOOKS

1. The Complete Reference C++, Herbert Schildt, 4th Edition, TMH, 2005.

REFERENCE BOOKS

1. C++ Primer, Stanley B. Lippman, Josee Lajoie, Barbara E. Moo,4th Edition, AddisonWesley,2005.
2. Object-Oriented Programming with C++, Sourav Sahay, Oxford University Press, 2006.

TEACHING METHODS

- Lecture using Black board and chalk
- Presentations
- Programming Assignments
- Course Project

ASSESSMENT METHODS

Parameter	Marks
Three internals (Average of best of two)	30
Programming Assignments	10
Rubrics for the evaluation of Programming Assignments	10
	Total 50

Final Exam will be conducted for 100 marks (SEE)

COURSE OUTCOMES

Sl. No.	COURSE OUTCOMES	BL
CO1	Design classes for the given application scenarios and apply the concepts of classes and objects, friend functions, friend classes, static class members and this pointer in implementation of solutions to problems.	3
CO2	Analyze and apply the concepts of function overloading, default arguments, constructors and operator overloading in designing and implementing solutions to given problems.	4
CO3	Apply the principle of code reusability using Inheritance, use the concept of virtual base classes to prevent the possible ambiguity in multiple inheritance and analyze the benefit of dynamic binding using virtual functions and inheritance.	3
CO4	Design and use template classes that take generic parameters to support code reusability principle in problem solving, understand and apply the concept of exception handling to prevent run-time abnormal program termination error in applications	3
CO5	Create text and binary files and use them in the applications to handle voluminous data.	3

NITTE EDUCATION TRUST | NITTE MEENAKSHI INSTITUTE OF TECHNOLOGY

(An Autonomous Institution, Affiliated To Visvesvaraya Technological University Belagavi, Accredited by NAAC- "A+" Grade, approved by AICTE, New Delhi. Yelahanka, Bangalore-64)

Department of Artificial Intelligence and Machine Learning

Department: *Artificial Intelligence and Machine Learning*	***Course Type: PCC***
Course Title*: APPLICATION DEVELOPMENT USING JAVA*	***Course Code: 21AII471***
L-T-P: 2-0-0	***Credits: 2***
Total Contact Hours: 26	***Duration of SEE: 3Hrs***
SEE Marks*: 50*	***CIE Marks: 50***

COURSE DESCRIPTION

This course provides the knowledge of Object-Oriented Application Development using Java programming language. It discusses the application of programming concepts like Classes, Objects, Interfaces, Inheritance, Exception Handling and the Java's Collection framework to solve real-world computing problems.

PREREQUISITES

- Student should have the prior knowledge of C

COURSE OBJECTIVES

- To understand and apply the basic Object-Oriented features of Java.
- To understand and use the concept of Packages and Interfaces
- To understand and apply the Principle of Inheritance.
- To understand and use Exception Handling and Wrapper classes in application development
- To appraise the use of Java Collection Framework.

COURSE CONTENTS

UNIT - I **06Hour**

An Overview of Java --Object-Oriented Programming, Two Paradigms, Abstraction, The Three OOP Principles, A First Simple Program, Entering the Program, Compiling the Program, A Closer Look at the First Sample Program

Introducing Classes: Class Fundamentals, Declaring Objects, A Closer Look at new, Assigning Object Reference Variables, Introducing Methods, Constructors, Parameterized Constructors, The this Keyword, Instance Variable Hiding, Garbage Collection, The finalize( ) Method..

UNIT - II **05 Hour**

A Closer Look at Methods and Classes: Overloading Methods, Overloading Constructors, Using Objects as Parameters, A Closer Look at Argument Passing, Returning Objects, Introducing Access Control, Understanding static, Introducing final, Arrays, Exploring the String Class,

Packages and Interfaces: Packages, Access Protection, Importing Packages, Interfaces, Defining an Interfaces, Default Interface Methods.

UNIT - III **05Hour**

Inheritance: Inheritance Basics, Using super, Creating a Multilevel Hierarchy, When Constructors Are

Executed, Method Overriding, Dynamic Method Dispatch, Why Overridden Methods? Using Abstract Classes, Using final with Inheritance.

UNIT - IV **05 Hour**

Exception Handling: Exception-Handling Fundamentals, Exception Types, Uncaught Exceptions, Using try and catch, multiple catch Clauses, Nested try Statements, throw, throws and finally.

Type Wrappers: Character, Boolean, Numeric type wrappers. Autoboxing: Autoboxing and Methods, Autoboxing / Unboxing occurs in expressions, Autoboxing/Unboxing Boolean and Character values, Autoboxing / Unboxing helps prevents errors.

UNIT - V **05 Hour**

The Collections Framework: Collections Overview, The Collection Interfaces: the collection interface, the List interface, the Set interface. The Collection Classes: The ArrayList Class, The LinkedList Class, The HashSet Class. Accessing a Collection via an Iterator -Using an Iterator, The For-Each Alternative to Iterators.

TEXT BOOKS

1. Herbert Schildt, —Java – The Complete Reference –, 9th Edition, 2014, Oracle Press.

REFERENCE BOOKS

CO5	2		3						1	1			3	2	

Department of Artificial Intelligence and Machine Learning

Department: *Artificial Intelligence and Machine Learning*	***Course Type: Professional Elective Course***
Course Title: Image Processing for AI	***Course Code:*** *21AIE443*
L-T-P 3-0-0	***Credits: 3***
Total Contact Hours: 39	***Duration of SEE:*** 3 hrs
SEE Marks: 100	***CIE Marks:*** 50

COURSE DESCRIPTION

This course provides an overall concept of basic conventional image processing techniques like image filtering, image compression, image segmentation, etc. Thereafter, Some Deep Learning models or machine learning models will also be utilized to accomplish image processing tasks.

PREREQUISITES

Students should have knowledge of the basics of AI and Machine Learning algorithms.

COURSE OBJECTIVES

The main objective of this course is

1. To introduce students to basic low-level image processing concepts, revising some concepts of AI, ML and Deep learning.
2. To introduce students to high-level image processing concepts.
3. Thereafter, to make the students understand how Deep Learning or other machine learning algorithms can also be utilized to accomplish those image processing tasks.
4. Students should do one project for image detection or image segmentation task by using AI (specifically machine learning or advanced Deep learning algo)

COURSE CONTENTS

UNIT-I 08 Hours

Introduction to Image Processing: Digital image, Image statistics and basic relationship among pixels, Convolution operation, Image enhancement and transformations in spatial domain by mask operations, Histogram Equalization, CLAHE.

Introduction to AI and Machine Learning: Supervised and unsupervised learning, Introduction to Deep Learning, activation function, loss function, performance metrics for image processing.

UNIT-II **08Hours**

Conventional Low-level Image Processing: Image Filtering and noise reduction in frequency domain, DFT, DCT, Wavelet Transform, Image compression, JPEG, Singular Value Decomposition (SVD) and its application in image processing, Digital Image Watermarking, Image restoration.

UNIT-III **08 Hours**

High-Level Image Processing: Edge detection: Laplacian operator, Gaussian Filter, LoG, Multi-scale LoG, Canny edge detection, Image segmentation: Image thresholding, Otsu's Thresholding, Region growing and region merging operation, Watershed Transformation, Active Contour Model, Morphology: Dilation, erosion, opening, closing etc., feature extraction by boundary processing, PCA and SIFT.

UNIT-IV **08 Hours**

Image Processing task using Deep Learning or Machine Learning:
Image detection by Random Forest, Ensemble models and Support Vector Machines (SVM), Quality metric performance: Accuracy, Recall, Precision, F1Score, AUC, Transfer Learning, Image detection by Convolutional Neural Network (CNN), some pretrained CNN models: Alex-Net, VGG-16, ResNet etc., Image segmentation task by Seg-Net, U-Net model.

UNIT-V **08 Hours**

Project Work: Students should come up with a particular project of image processing, performance improvement of Deep learning or other machine learning algo by pre-processing, data-augmentation, modifying architecture and loss function etc.

TEXT BOOKS

1. Rafael C. Gonzalez and Richard E Woods (2018), "Digital Image Processing", Pearson Publication (4th edition).
2. Mohamed Elgendy (2020), "Deep learning for vision systems", Manning Publications (O'Reilly)

REFERENCE BOOKS

1. Ian Goodfellow, Y. Bengio, A. Courville, (2018) "Deep Learning", MIT Press Book.
2. Christopher M. Bishop (2006) "Pattern Recognition and Machine Learning", Springer Publication.
3. Lots of research publications.

TEACHING METHODS

- Black Board teaching
- Power Point presentation
- Assigning projects into groups

ASSESSMENT METHODS

Continuous internal Evaluation (CIE) for 50 Marks

- Assignment/ Project based on the practical application for 20 marks.
- Three mid semester examinations will be conducted each for 30marks and the average of all the 3 will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

Sl. No	COURSE OUTCOMES	BL
CO1	To introduce students to basic low-level image processing concepts	L3
CO2	To revisit some of the machine learning and Deep learning models and the fundamentals	L3
CO3	To introduce students to high-level image processing concepts.	L3
CO4	Apply Machine Learning and Deep Learning for image processing tasks	L3
CO5	Come out of implementing some projects of object detection by SVM / Random orest / CNN model	L3

L-T-P : *0-0-2*	***Credits:*** *01*
Total Contact Hours: *36 Hours*	***Duration of SEE:*** *3 Hours*
SEE Marks*: 50*	***CIE Marks: 50***

COURSE DESCRIPTION

This course provides an in-depth knowledge of applying Python Programming Language to various machine learning problems like prediction or classification.

PREREQUISITES

- Students should have knowledge of Basics of programming.
- Students should have knowledge of Probability Theory.

COURSE OBJECTIVES

The objective of the course is to familiarize students with working of some machine learning models

- Understanding Linear Regression and do forecast modeling by using linear regression.
- Understanding Bayesian learning and its application.
- Understanding Artificial Neural Network and its application in image detection
- Understanding Decision tree, KNN and K-Means Clustering algorithm and their working principles

LABORATORY EXERCISES

1. Feed the data into a linear regression model for weather forecasting from the following table-1.

Days	8:00 AM	12:00 PM	6:00 PM	11:00 PM	4:00 AM
Monday	33°C	39°C	36°C	34°C	30°C
Tuesday	34°C	38°C	37°C	35°C	32°C
Wednesday	33°C	27°C	29°C	28°C	27°C
Thursday	31°C	33°C	32°C	30°C	?

   Write a program in TensorFlow (python) in order to predict what should be the temperature on Thursday at 4:00 AM? Use linear regression method for the prediction and analyze the result.

2. Employ weather forecasting data from Kaggle site (Weather Dataset | Kaggle) and apply a regression technique in TensorFlow in order to do the forecasting.

3. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an

appropriate data set for building the decision tree and apply this knowledge to classify a new sample.

4. Build an Artificial Neural Network by implementing the Back-propagation algorithm in TensorFlow and test the same with MNIST dataset in order to do letter recognition task. Train the network from scratch.
5. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
6. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Python (TensorFlow) ML library classes can be used for this problem.
7. Apply K-Means clustering algorithm to a set of data stored in a .CSV file. Do the same experiments with considering different seeds and compare those two results. Analyze the limitations of K-Means clustering algorithm.
8. Do the same experiment of 4, for EM algorithm. Compare which of the algorithm is better for that particular dataset.

SEE Marks*: 100*	***CIE Marks: 50***

COURSE DESCRIPTION

The course gives a broad view of Probability theory, Random Process, Discrete mathematical structures and Graph theory.

PREREQUISITES

Combination, permutation, set theory

COURSE OBJECTIVES

To Impart the knowledge and ability to apply basic concepts of Probability, random process, discrete mathematics and graph theory to engg. problems

COURSE CONTENTS

UNIT -I 8 Hours

Probability and Random Variables

Probability: Definition, Axioms of probability, Addition rule, Conditional Probability, Multiplication rule.

Random variable -: Probability distribution- discrete and continuous, probability density function, Cumulative density function, mean and variance, expectation.

Joint distribution - discrete joint probability distribution, marginal distribution, expectation, covariance, rank correlation.

Binomial, Poisson and Normal distributions

Self-Study: Baye's Theorem, continuous Joint distribution,

UNIT -II 8 Hours

Sampling Distribution

Sampling and Testing of hypothesis: Sampling with and without replacement, Sampling distribution of means. Estimation, confidence intervals for mean, statistical hypothesis, one tailed and two tailed test, Significance level, testing of hypothesis of large samples, t- test and chi- square test.

Markov Chain: Definition, transition probability matrix, regular stochastic matrix, stationary distribution

Self-Study: Exponential distribution and uniform distribution

UNIT -III 8 Hours

Discrete Mathematical structures

Relations: Definition, Properties, Equivalence, matrix representation, digraphs, partial order -Hasse diagram- Maximal and minimal elements, LUB and GLB.

Functions: Definition, surjective, injective and bijective functions, Inverse function and composition of functions.

Algebraic Structures: Groups, Semi Groups, Monoids (Definition and examples).

Self-Study: Mathematical Logic: Propositional Logic, logical operators, compound propositions - truth values, truth tables, Propositional Equivalences

UNIT -IV **8 Hours**

Graph Theory-I

Graphs- definitions and examples. Paths and cycles, degree of a vertex and hand shaking theorem. Graph isomorphism, Adjacency and Incidence matrices, Euler and Hamiltonian graphs, shortest path problems-Dijkstra's algorithm for undirected graphs.

Self-Study: Modeling of graphs and Travelling Salesman problem

UNIT -V **8 Hours**

Graph Theory-II

Trees- Properties, spanning trees, minimum spanning trees- Prim's and Kruskal's algorithm. Planar graphs, Problems on Euler's formula, Graph coloring – vertex coloring.

Self-Study: Graph coloring –Edge coloring.

TEXT BOOKS

TEACHING METHODS

- Black Board Teaching.
- Power point presentation
- Tutorial

CO-PO MAPPING

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10marks.
- Quiz/ assignment based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks and the average of all the 3 will be taken.

Semester End Examination (SEE) for 50 Marks

Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

COURSE OUTCOMES

1. The concepts of Mathematical logic, functions and relations can be applied to Engg. Problems
2. The concepts of graph theory can be used to model and solve problems
3. The concepts of Graph theory can be applied to Engg. Problems
4. The basic concepts of Probability, random variables, distributions and Sampling can be used for problem solving
5. The testing of hypothesis and distributions can be applied to engg. Problems

SEE Marks*: 50*	***CIE Marks:*** *50*

COURSE DESCRIPTION

This course deals with parallelism, limitation of memory system performance and Communication cost in parallel systems. This course also covers Programming systems, Distributed Computing and current methodologies

PREREQUISITES

Students should have knowledge of C, C++, Computer Network and Operating Systems

COURSE OBJECTIVES

- To understand parallel computing.
- To understand the principles of parallel Algorithms.
- To understand the basic communication operations.
- To understand distributed computing.

COURSE CONTENTS

UNIT-I — 10 Hours

Introduction: The Reality of High-Performance Computing – Modern Algorithms – Compilers – Scientific Algorithms – History – State-of-Art and Perspective – Things that are not Traditional Supercomputers. Parallel Computing – PDC models working mechanism – scalability of PDC architectures – applications, performance metrics and Amdahl's Law.

UNIT-II — 10 Hours

Models and Algorithms – PRAM algorithms, Process-level parallelism, data-level parallelism, Problem partitioning, divide-and-conquer, **Distributed algorithms** – Algorithm design techniques – filters, client / server, heartbeat, probe / echo, token passing, replicated servers Communication.

UNIT-III — 10 Hours

Interconnection network design- Topological and parametric models of interconnection networks; routing mechanisms; flow control mechanisms, communication protocols, Communication primitives – Point-to-point communication primitives; group communication patterns

UNIT-IV — 9 Hours

Broadcast in distributed systems-CSP, MPI; Synchronization – Locks, monitors, barriers; deadlock; hardware primitives and implementation issues; clock synchronization, distributed mutual exclusion; distribute deadlock detection

UNIT-V — 9 Hours

Computation: Threads – Creation, coordination, termination; futures. Shared Memory – Models of memory consistency; implementation of consistency protocols; transactions: serializability, concurrency

– control, commit protocols; Linda. Scheduling and Load Balancing: Load distribution algorithms; task migration; coscheduling; affinity scheduling; self-scheduling in loops.

TEACHING METHODS

- Black Board/Power Point
- Presentations Assignments

ASSESSMENT METHODS

- Three internals – 30 Marks each will be conducted
- Programming Assignments for 10 marks/NPTEL
- Rubrics for the evaluation of Course Project for 10 marks.
- Final examination will be conducted for 100 marks and evaluated for 50 Marks

COURSE OUTCOMES

At the end of the course student will be able to:

CO	Description
CO 1	To discuss the principles of parallel algorithm platforms, interconnection networks (ICN), and present a suite of techniques & cost estimation methods that can be applied across diverse range of applications.
CO 2	Apply and illustrate different decomposition techniques, mapping techniques, parallel algorithm models of hypercube, mesh and other topologies.
CO 3	Establish various mechanisms of communication in different ICN topologies used in parallel systems and analyse the cost.
CO 4	Provide analytical modeling of parallel programs, and assess performance through metrics for facilitating efficient data transfer in parallel algorithms.
CO 5	Analyze and evaluate the programming of message passing & shared address space parallel machines using paradigm such as POSIX threads, OpenMP and MPI.

III SEMESTER

SEMESTER: III

INTEGRAL TRANSFORMS AND NUMERICAL METHODS

Course Code	**21MAT31B**		Credits	**03**
Hours/ Week (L-T-P)	**2-2-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

1. Concepts of Fourier theory and integral transforms can be adopted to problem solving, analyzing physical situations relevant to periodic and aperiodic functions
2. Fourier theory and transforms can be applied to model and solve engineering problems.
3. Concept of Z transforms can be applied to problem solving and model discrete functions.
4. Numerical methods can be adopted for solving equations, ODE, interpolate and extrapolate data and integrate numerically, using finite differences and matrices
5. Numerical methods can be applied to model physical situations, find eigen values and interpret solutions.

COURSE CONTENTS

UNIT -1- (08 Hrs)

Z- transforms: Definition, Standard Z transforms, Linearity property, Damping Rule, Shifting rule, multiplication by n, Bivariate Z-transforms, region of convergence, Inverse by partial fractions method, convolution theorem. Solution of difference equations.
Self-Study: Initial and final value theorems, proof and problems

UNIT -2- (08 Hrs)

Fourier series: Euler's formulae, Dirichlet's conditions for Fourier series expansion, change of interval, Even and odd function, half range series, harmonic analysis.
Fourier Transforms: Definition, Complex Fourier transforms, Cosine and Sine transforms, Inverse Fourier transforms.
Self-Study: Parseval identity

UNIT -3- (08 Hrs)

Laplace Transforms: Definition, Transforms of standard functions, Transforms of $e^{at} f(t)$, $t^n f(t)$, $\frac{f(t)}{t}$, Laplace transforms of derivatives and integrals Laplace transforms of periodic functions, unit step function Dirac delta function . Inverse Laplace transforms, solutions of 1st and 2nd order ODE using Laplace transforms.
Self-Study: Convolution theorem: Proof and problems to find inverse.

UNIT -4- (08 Hrs)

Interpolation: Newton's divided difference formulae, Lagrange's formula, Cubic spline.
Numerical Differentiation: Newton's forward and backward formulae, Lagrange's formula.
Numerical Integration**:** Trapezoidal, Simpson's1/3rd and 3/8th, Gaussian Quadrature method.
Self-Study: Quadratic spline, Weddle's rule.

UNIT -5- (07 Hrs)

Numerical solution of ordinary differential equations: Taylor's series method, Runge-Kutta 4th order method - First order and second order initial value problems, Milne's predictor corrector method., shooting method for boundary value problems.
Explicit method for heat and wave equations. Discrete Fourier method, shooting for boundary value problems, Discrete Fourier transforms, Fast Fourier transforms.
Self-Study: Solution of Laplace equations

TEXTBOOKS

COURSE ASSESSMENT METHOD:

Continuous internal Evaluation (CIE) for 50 Marks

- Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
- Quiz/ assignment based on practical application for 10 marks.
- Three mid semester examinations will be conducted each for 30 marks

Semester End Examination (SEE) for 50 Marks

- Final examination, of 100 Marks will be conducted and will be evaluated for 50 marks.

PEDAGOGY

1. Black Board Teaching.
2. Power point presentation
3. Tutorial Classes

CO-PO-PSO MAPPING

CO5																

SEMESTER: III

ANALOG ELECTRONIC CIRCUITS

Course Code	**21EC32**		Credits	**03**
Hours/ Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

Students will be able to

1. Analyze and explain the structure, V-I characteristics, working of diodes and Bipolar Junction Transistors (BJTs),
2. Analyze and explain the structure, V-I characteristics of MOSFETs.
3. Analyze and design MOSFET amplifiers.
4. Analyze types of voltage sources, current sources and feedback circuits.
5. Analyze power amplifier circuits.

COURSE CONTENTS

UNIT -1- (08 Hrs)

Diode and its Applications: Load line analysis, Rectifiers with Capacitor filters (with derivation), Nonlinear applications of diode (Shunt Clippers & Clampers), BJT DC Analysis: Operating point, Fixed bias circuits, Voltage divider biasing circuits. BJT AC Analysis: BJT r_e modelling (CE configuration), CE Fixed bias configuration, Voltage divider bias.

T1: **Chapter 2-** 2.2, 2.8 ,2.9 T1; **Chapter4 -**4.2 ,4.3 ,4.5 T1: **Chapter 5-**5.4, 5.5, 5.6

UNIT -2- (08 Hrs)

Metal-Oxide Field Effect Transistor (MOSFET): MOS Field –Effect Transistor, Two-Terminal MOS Structure, N-Channel and P Channel Enhancement –Mode MOSFET, Ideal MOSFET Current-Voltage Characteristics-NMOS Device and PMOS Device, MOSFET DC Circuit Analysis: Common-Source circuits, DC load line and region of operation, Common-MOSFETs configuration.

T2: **Chapter 3-** 3.1, 3.1.1, 3.1.2, 3.1.3, 3.1.4, 3.1.5, 3.1.6, 3.1.8, 3.2, 3.2.1

UNIT -3- (08 Hrs)

Basic Transistor Amplifier Configurations, The Common-Source Amplifier, The Common-Drain (Source-Follower) Amplifier, The Common-Gate Configuration, The Three Basic Amplifier Configurations and Comparison.

T2: **Chapter 4-** 4.2, 4.3, 4.3.1, 4.4, 4.4.1, 4.4.2, 4.5, 4.5.1, 4.5.2, 4.6

UNIT -4- (08 Hrs)

Current Sources, Voltage Sources and Feedback Concepts: Types of current sources and Voltage Sources (Voltage controlled and current controlled), Single Stage and Two Stage Current Mirror, Types of voltage sources (Voltage controlled and current controlled), Feedback Concepts, Feedback connection types.

T1: **Chapter 14-** 14.1, 14,2, 14.5, 14.6, 14.7, 14.8, 14.9

https://youtu.be/zF12z_R6xZA

UNIT -5- (07 Hrs)

Power Amplifiers: Introduction to Power Amplifiers, Definitions and amplifier types: Series fed class A amplifier, Class B amplifier operations, Class B amplifier circuits, Class C and Class D amplifier circuits.

T1: **Chapter 12-**12.1,12.2,12.4,12.5,12.8

COURSE ASSESSMENT METHOD:

CIE:

1. Tool based Assessment - 10 Marks
2. Surprise tests based on Gate questions- 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit.

Learning Activity Components

1. Clipper and Clamper Circuits
2. BJT Amplifiers for given specifications
3. MOSFET Characteristics.
4. MOSFET Amplifiers (Common Source, Common Drain and Common Gate Amplifiers)
5. Current Mirrors
6. Solving a network for finding node voltages and currents
7. Feedback Amplifier Circuits
8. Power Amplifier Circuits

PEDAGOGY

1. Blackboard Teaching
2. PowerPoint Presentations (if needed)
3. Regular review of students by asking questions based on topics covered in the class.

CO-PO-PSO MAPPING

CO/ PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT

SEMESTER: III ARM MICROCONTROLLER				
Course Code	**21EC33**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

Students will be able

1. Students will get exposure to the loftier architecture of advanced microcontroller.
2. Students will get introduced to the diverse instructions of the advanced microcontroller.
3. Students will understand the role of tools and libraries in the software implementation of advanced microcontroller.
4. Students will get the exposure for handling interrupts in advanced microcontroller.
5. Student will understand the comprehensive debug support provided by advanced microcontroller.

COURSE CONTENTS

UNIT -1- (08 Hrs)

ARM Cortex M3: ARM Cortex M3 Processor and ARM Family, Cortex-M3 Processor Applications, Architecture of ARM Cortex M3, Operation Modes, The built-in nested Vectored Interrupt Controller, Memory Map, The Bus Interface, The MPU, Low Power and High Energy Efficiency, Debugging Support

Text: 1.1, 1.2, 1.5, 2.1, 2.3, 2.4, 2.5, 2.6, 2.7, 2.9.1, 2.10

ARM Cortex M3 Architecture: Registers, Special Registers, Vector Tables, Stack Memory Operation, Reset Sequence

Text 1: 3.1, 3.2, 3.5, 3.6, 3.7

UNIT -2- (08 Hrs)

ARM Cortex M3 Instruction Set: Assembly Basics, Instruction List, Instruction Descriptions, Several Useful Instructions in the Cortex M3

Text 1: 4.1, 4.2, 4.3.1 - 4.3.6, 4.4.1 - 4.4.9

ARM Cortex M3 Memory Systems: Memory System Features Overview, Memory Map, Memory Access Attributes, Memory Access Permissions, Bit-Band Operations, Unaligned Transfers, Exclusive Access, Endian Mode

Text 1: 5.1, 5.2, 5.3, 5.4, 5.5, 5.6,5.7,5.8

UNIT -3- (08 Hrs)

ARM Cortex M3 Exceptions: Exception Types, Definition of Priorities, Vector Tables, Interrupt Inputs and Pending Behaviour, Fault Exceptions, Supervisor Call and Pendable Service Call

Text 1: 7.1, 7.2, 7.3, 7.4, 7.5, 7.6

ARM Cortex M3 NVIC: Nested Vectored Interrupt Controller Overview, The Basic Interrupt Configuration, Example Procedures in Setting Up an Interrupt, Software Interrupts, The SYSTICK Timer

Text 1: 8.1, 8.2, 8.3, 8.4, 8.5

UNIT -4- (08 Hrs)

ARM Cortex M3 Programming: Overview, A Typical Development Flow, Using C, CMSIS, Using Assembly, Using Exclusive Access for Semaphores, Using Bit Band for Semaphores.

Text 1: 10.1, 10.2, 10.3, 10.4, 10.5, 10.6

UNIT -5- (08 Hrs)

ARM Cortex M3 MPU and Other Features: MPU Registers, Setting Up the MPU, Power Management, Multiprocessor Communication, Self-Reset Control

Text 1: 13.2,13.3, 14.2, 14.3, 14.4

ARM Cortex M3 Debug Architecture: Debugging Features Overview, Core Sight Overview, Debug Modes, Debugging Events, Breakpoint in the CORTEX-M3
Text 1: 15.1, 15.2, 15.3, 15.4,15.5

SEMESTER: III

DIGITAL SYSTEM DESIGN

Course Code	**21EC34**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

Students will be able to

1. Analyse the concepts of combinational and sequential logic circuits
2. Design the combinational and sequential logic circuits.
3. Apply the suitable design concepts to build Sequential Circuits
4. Design the sequential circuits using SR, JK, D, T flip-flops and Mealy & Moore machines
5. Design applications of Combinational & Sequential Circuits

COURSE CONTENTS

UNIT -1- (08 Hrs)

Analysis and design of combinational logic:

General approach to combinational logic design, Decoders, BCD decoders, Encoders, digital multiplexers, using multiplexers as Boolean function generators, Adders and subtractors, cascading full adders, Look ahead carry, Binary comparators, Arithmetic logic units,

Text 1 - Chapter 4.

UNIT -2- (08 Hrs)

Flip-Flops and its Applications:

Introduction, Flip flops, Triggering of Flip Flops, Analysis of clocked sequential circuits, State reduction and assignment, flip flop excitation table**,** Registers: Registers with parallel load, Sequential logic implementation

(Text 3: chapter 6: 6.1-6.6, chapter 7: 7.1 -7.3)

UNIT -3- (08 Hrs)

Sequential Circuit Design:

Simple counters: Asynchronous and synchronous counter, Johnson counter, Ring counter.

(Text 1: chapter 5).

Design of Binary counters, counters for other sequences, counter design using S-R and J-K Flip flops.

(Text2: chapter 12)

UNIT -4- (08 Hrs)

Introduction to sequential circuits:

Mealy and Moore models, sate machine notation, Synchronous sequential circuit analysis, construction of state diagram, Design of a Sequence Detector, Serial EX-3 to BCD Code converter, counter design

(Text1: chapter 6)

UNIT -5- (07 Hrs)

Applications of Digital Circuits:

Design Example – Code Converter, Design of Iterative Circuits (Comparator), Design of Sequential Circuits using ROMs and PLAs, CPLDs and FPGAs, Serial Adder with Accumulator, Design of Binary Multiplier, Design of Binary Divider.

(Text 2 –16.2, 16.3, 16.4, 18.1, 18.2, 18.3)

NETWORKS AND SYSTEMS

Course Code	**21EC35**		Credits	**04**
Hours/Week (L-T-P)	**3-0-2**		CIE Marks	**50**
Total Hrs.	**52**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

Students will be able to

1. Understand and interpret the response of electrical networks using various approaches and theorems
2. Analyse simple DC and AC electrical circuits by applying the concepts of transient behaviour and solving the same by using the concept of Laplace transformation and time domain methods.
3. Analyse the two-port network concepts Students are able to interpret and , and obtain the response of electrical networks using graphical method.
4. Analyse the different types of signals
5. Develop mathematical description and representation of continuous and discrete time signals and systems and to relate response of LTI system for given input.

COURSE CONTENTS

UNIT -1- (8 Hrs)

Basic circuit analysis concepts: Practical Sources, Source transformation, Mesh analysis and Node analysis with dependent and Independent sources for DC and AC networks. Concepts of super node and super mesh.

Text1: Ch 1, Ch 2

Network Theorems: Superposition theorem, , Thevenin's theorem, Norton's theorem, , Maximum power transfer theorem

Text1: Ch 7

UNIT -2- (8 Hrs)

Transient behaviour and initial conditions: Behaviour of circuit elements under switching condition and their representation of initial and final conditions in RL, RC and RLC circuits for DC excitations.

Laplace transform and its applications: Laplace transform of periodic functions, Solution of linear differential equation, Solution of network problems.

Text1: Ch 5, Ch 6

UNIT -3- (8 Hrs)

Graph Theory and Network equations: Graph of a network, Trees, Co-trees and Loops, Incidence Matrix, Cut-set Matrix, Tie-se Matrix and loop currents, Number of possible trees of a graph.

Text1: Ch 3

Two port Network: Characterization of linear time invariant two port network, open circuit impedance parameter, short circuit admittance parameter, transmission parameter

Text1: Ch 8, Ch 10

UNIT -4- (8 Hrs)

Introduction:

What is a signal and what is a system, classification of signals, Elementary Signals (Unit step, impulse function, Ramp function, Exponential function), Basic operations on signals, basic examples on signals operations

Text 1: ch1: 1.1,1.2, 1.4,1.5,1.6

UNIT -5- (8 Hrs)

Time domain representation for Linear Time Invariant Systems (LTI)

Properties of Systems, Problems based on system properties for Continuous LTI Systems, Convolution Integral (Problems on infinite step and exponential function)

Text 1: Ch 1: 1.8, Ch 2: 2.2

PROFESSIONAL ELECTIVE COURSE - I

SEMESTER: III				
EMBEDDED SYSTEMS WITH C				
Course Code	**21ECE361**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Elective Course**

COURSE OUTCOMES

Students will be able to

1. Understand the Basics of Embedded systems
2. Understand the Architecture of Embedded systems
3. Understand the C-programming structure for Embedded systems
4. Understand the development of libraries for Embedded systems
5. Understand the Optimizing and testing of Embedded C

COURSE CONTENTS

UNIT -1- (07 Hrs)

Embedded Systems: Understanding the Basic Concepts: What is an Embedded System? Embedded Systems VS. General Computing Systems. History of Embedded Systems. Classification of Embedded Systems. Major Application Areas of Embedded Systems. Purpose of Embedded Systems. Wearable Devices—The Innovative Bonding of Lifestyle with Embedded Technologies.

Text -1: chapter 1

UNIT -2- (08 Hrs)

Microcontrollers Basics: The Central Processing Unit (CPU) . Instruction Sets . The Stack . Memory Addressing and Types . RAM and ROM . ROM and Programming. Von Neumann Versus Harvard Architectures . Timers . Watchdog Timer . Examples . Interrupt Circuitry . Vectored and Non- vectored Arbitration . Saving State during Interrupts . Executing Interrupt Handlers . Multiple Interrupts. RESET. I/O Ports . Analog-to-Digital Conversion . Serial Peripheral Buses . Development Tools for a Microcontroller**.**

Text-2 Chapter 3

UNIT -3- (08 Hrs)

C for Embedded Systems : In-line Assembly Language . Device Knowledge . #pragma has . #pragma port . Endianness . Mechanical Knowledge. Libraries . First Look at an Embedded C Program. **Data Types and Variables** : Identifier Declaration . Special Data Types and Data Access . Function Data Types . The Character Data Type . Integer Data Types . Byte Craft's Sized Integers . Bit Data Types . Real Numbers . Complex Data Types . Pointers . Arrays . Enumerated Types . Structures . Unions . typedef . Data Type Modifiers . Value Constancy Modifiers: const and volatile . Allowable Values Modifiers: signed and unsigned . Size Modifiers: short and long .Pointer Size Modifiers: near and far . Storage Class Modifiers . External Linkage . Internal Linkage . No Linkage . The extern Modifier . The static Modifier . The register Modifier . The auto Modifier.

Text-2 : Chapter-5. Chapter-6

UNIT -4- (08 Hrs)

C Statements: Structures, and Operations . Combining Statements in a Block . Functions 80 Function Parameters . Control Structures . The main() Function . Initialization Functions . Control Statements . Decision Structures . Looping Structures . Control Expression . break and continue . Operators and Expressions .Standard Math Operators . Bit Logical Operators . Bit Shift Operators.

Text-2: Chapter-7

UNIT -5- (08 Hrs)

Libraries : Creating Libraries . Writing the Library . Libraries and Linking. **Optimizing and Testing**

Embedded C Programs . Optimization . Instruction Set-Dependent Optimizations . Hand Optimization . Manual Variable Tweaking . Debugging Embedded C . Register Type Modifier . Local Memory . Pointers 105 Mixed C and Assembly . Calling Conventions . Access to C Variables from Assembly . Exercising Hardware 106 Debugging by Inspection . Working with Emulators and Simulators . Simulators . Emulators . The Packaging of Embedded Software.

Text-2 : Chapter-8. chapter-9

CO5	3	3	3	3	3											4

SEMESTER: III

DSD USING VERILOG

Course Code	**21ECE362**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Elective Course**

COURSE OUTCOMES

Students will be able to

1. Understand the basic concepts of Verilog HDL.
2. Familiarize with the different levels of abstraction in Verilog using different modelling styles.
3. Design different combinational and sequential circuits using Verilog HDL code
4. Compile and execute Verilog HDL programs using software tools.
5. Analyze Tasks, Functions and User -Define Primitives.

COURSE CONTENTS

UNIT -1- (8 Hrs)

Overview of Digital Design with Verilog HDL: Evolution of CAD, Emergence of HDLs, typical HDL-flow, why Verilog HDL? trends in HDL.

Hierarchical Modelling Concepts: Top-down and bottom-up design methodology, modules and module instances, Components of a simulation, design block, stimulus block.

Text 1:1.1-1.6, 2.1-2.7

UNIT -2- (8 Hrs)

Basic Concepts: Lexical conventions, data types, system tasks, compiler directives. **Modules and Ports:** Module definition, port declaration, connecting ports,

Text 1: 3.1- 3.3, 4.1-4.2

UNIT -3- (8 Hrs)

Gate-Level Modelling: Modelling using basic Verilog gate primitives, description of and/or and buf/not type gates, rise, fall and turn-off delays, min, max, and typical delays.

Dataflow Modelling: Continuous assignments, delay specification, expressions, operators, operands, operator types.

Lab programs:

1. Realization of logic gates and Boolean expressions.
2. Gate level Modeling of Half Adder, Full Adder and Parallel Binary Adder

Text 3: 5.1-5.3, 6.1-6.6

UNIT -4- (8 Hrs)

Behavioural Modelling: Structured Procedures, Procedural assignments, Timing controls, Conditional statements, multi-way branching, Loops, Sequential and Parallel Blocks, Examples.

Lab programs:

1. Realization of combinational designs using Verilog HDL code
   a. 2 to 4 decoders
   b. 8 to 3 (encoder without priority & with priority)
   c. 8 to 1 multiplexer
   d. 1 to 8 De Multiplexer
   e. 4 bit binary to gray converter and vice versa
2. Develop the HDL Code for the following flip-flops: SR, D, JK, and T

Text3: 7.1-7.7,7.9.

UNIT -5- (7 Hrs)
Tasks and Functions and User -Define Primitives: **Tasks and Functions:** Differences between tasks and functions, declaration, invocation, automatic, tasks and functions, Examples **User -Define Primitives:** UDP Basics, Combinational UDPs, Sequential UDPs, UDP Table shorthand symbols, Guidelines for UDP designs. **Text3**: 8.1-8.3 **Text1**: 12.1-12.3

SEMESTER: III				
BASICS OF PYTHON PROGRAMMING				
Course Code	**21ECE363**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Elective Course**

COURSE OUTCOMES

1. Understand Python syntax and semantics and be fluent in the use of Python flow control and functions.
2. Demonstrate proficiency in handling Strings and File Systems.
3. Implement Python Programs using core data structures like Lists, Dictionaries and use Regular Expressions.
4. Interpret the concepts of Object-Oriented Programming as used in Python.
5. Implement exemplary applications related to Network Programming, Web Services and Databases inPython.

COURSE CONTENTS

UNIT -1- (8 Hrs)

Why should you learn to write programs?

Variables, Expressions and statements: Values and type, Variables, Variable names and keywords, Statements, Operators and operands, Expressions, Order of operations, Modulus operator, String operations, Asking the user for input, Comments, choosing mnemonic variable names, Debugging

Conditional execution: Boolean expressions, Logical operators, Conditional execution, Alternative execution, Chained conditionals, Nested conditionals, catching exceptions using try and except, short-circuit evaluation of logical expressions, Debugging

Functions: Function calls, Built-in functions, Type conversion functions, Math functions, Random numbers, adding new functions, Definitions and uses, Flow of execution, Parameters and arguments, Fruitful functions and void functions, why functions? Debugging

Text 1: Chapter 1, 2,3,4

UNIT -2- (8 Hrs)

Iteration: Updating variables, the while statement, Infinite loops, finishing iterations with continue, Definite loops using for, Loop patterns, Counting and summing loops, Maximum and minimum loops, Debugging

Strings: A string is a sequence, Getting the length of a string using Len, Traversal through a string with a loop, String slices, Strings are immutable, Looping and counting, the in operator, String comparison, String methods, Parsing strings, Format operator, Debugging

Files: Opening files, Text files and lines, reading files, searching through a file, Letting the userchoose the file name, Using try, except, and open, writing files, Debugging **Text 1 : Chapter 5, 6,7**

UNIT -3- (8 Hrs)

Lists: A list is a sequence, Lists are mutable, Traversing a list , List operations, List slices, List methods, Deleting elements , Lists and functions, Lists and strings, Parsing lines ,Objects and values , Aliasing , List arguments ,Debugging

Dictionaries: Dictionary as a set of counters, Dictionaries and files Looping and dictionaries, Advanced text parsing , Debugging

Tuples: Tuples are immutable, Comparing tuples, Tuple assignment, Dictionaries and tuples, Multiple assignment with dictionaries , The most common words, Using tuples as keys in dictionaries ,Sequences: strings, lists, and tuples - Oh My! , Debugging

Regular Expressions: Character matching in regular expressions , Extracting data using regular expressions , Combining searching and extracting ,Escape character ,,136 11.5 Summary ,Debugging ,

Text 1: Chapter 8,9, 10,11

UNIT -4- (8 Hrs)

Classes and objects: Programmer-defined types Attributes , Rectangles ,Instances as return values ,Objects are mutable, Debugging

Classes and functions : Time , Pure functions ,Modifiers ,Prototyping versus planning ,Debugging

Classes and methods: Object-oriented features, Printing objects ,A more complicated example, The init method ,The_str method , Operator overloading ,Type-based dispatch Polymorphism ,Debugging

Text 2 : Chapter 15,16,17

UNIT -5- (7 Hrs)

NumPy: Multidimensional array object, Linear algebra, Pseudo random generator,

Pandas: Pandas data structures, Data frame, Essential functionality, Handling missing data, Data transformation, Discretization and binning, Detecting and filling outliers, Computing indicator/Dummy variables, String manipulations.

Tex3: Chapter 4,5,7

CO4	1	1	1		3				2			2		**1**		**3**

SEMESTER: III

COMPUTER ORGANIZATION AND ARCHITECTURE

Course Code	**21ECE364**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

1. Students will be able to understand basic structure of a computer
2. Students will be able to understand the computer arithmetic Operations
3. Students will be able to understand the concept of I/O organization
4. Students will be able to understand the design of memory organization and the concept of cache mapping techniques
5. Student will be able to understand control unit operations

COURSE CONTENTS

UNIT -1- (8 Hrs)

Types of computers, functional units, basic operational concepts, performance: clock, performance equation, pipelining & superscalar operation, clockrate, CISC & RISC, compiler, evolution of computers.
[txt -1 : ch-1 : 1.1, 1.2, 1.3, 1.5, 1.6: 1.6.1 -1.6.7, 1.8]

Memory locations & address, memory operations, instructions & instruction sequencing: rtn, aln, basic instruction types: one, two, three address format (basic programs using them), instruction execution & st-line sequencing, addressing modes, assembly language, basic input/output operations, stacks and queues, subroutines, encoding of machine instruction.
[txt -1 : ch-2 : 2.2,2.3,2.4,2.5,2.6,2.7,2.8,2.9,2.12]

UNIT -2- (8 Hrs)

Data representation : representation of signed numbers (sign –mag form ,1's & 2's comp form) ,addition & subtraction of signed numbers, arithmetic overflow, **Floating point representation : IEEE standard** (single precision and double precision form)
[txt -1 : ch-2 : 2.1: 2.1.1,2.1.2, 2.1.3, 2.1.4 ch-6 : 6.7: 6.7.1]

Arithmetic: design of fast adders, multiplication of signed numbers: booth's algorithm, fast multiplication, integer division: restoring & non restoring division methods.
[txt -1 : ch-6 : 6.2,6.3,6.4,6.5,6.6]

UNIT -3- (8 Hrs)

Input/output organization: accessing i/o devices, interrupts: interrupt h/w, enabling & disabling interrupts, handling multiple devices, controlling device requests, exceptions, direct memory access, interface circuits :parallel ports, serial ports, standard i/o interfaces: PCI bus, SCSI bus, USB.
[txt -1 : ch-4 : 4.1, 4.2 : 4.2.1 -4.2.4 , 4.4 ,4.5, 4.6]

UNIT -4- (8 Hrs)

Memory system: basic concepts, ram-internal organization of memory chips, rom, cache memory, virtual memory, secondary storage.
[txt -1 : ch-5: 5.1 ,5.2 : 5.2.1,5.3 : 5.3.1, 5.4,5.5 :5.5.1 ,5.5.2 ,5.7, 5.9]

UNIT -5- (7 Hrs)

Basic processing unit: fundamental concepts : multiple bus organization, hardwired control, micro programed control: organization of micro control unit, basic control unit for handling conditional branching
[txt -1 : ch-7 : 7.1: 7.1.1-7.1.4 ,7.2,7.3,7.4,7.5:7.5.1-7.5.4]

Pipelining: basic concepts, data hazards, instruction hazards
[txt -1 : ch-8 :8.1,8.2,8.3]

4
5

COURSE CONTENTS

UNIT -1- (8 Hrs)

Linear Algebra: System of linear equations, matrices, solving system of linear equations, vector spaces, linear independence, Basis and Rank, Linear mapping, Affine spaces

UNIT -2- (8 Hrs)

Analytic Geometry: Norms, Inner products, Lengths and distances, angles and orthogonality, Orhonormal basis, orthogonal complement, Inner product of functions, Orthogonal projections, Rotations

UNIT -3- (8 Hrs)

Matrix decompositions: Determinant and Trace, Eigen values and Eigen functions, Cholesky decompositions, Eigen decompositions and diagonalizations, Singular Value Decompositions, Matrix approximation, Matrix phylogeny

UNIT -4- (8 Hrs)

Vector Calculus: Differentiation of Univariate functions, Partial differentiation and gradients, gradients of vector valued functions, Gradients of matrices, useful identities for computing gradients, Back propagation and automatic differentiation, Higher order derivatives, linearization and multivariate Taylor's series

UNIT -5- (7 Hrs)

Probability and Distributions: Construction of a probability space, discrete and continuous probabilities, Sum rule, product rule and Baye's Theorem, summary statistics and Independance, Gaussian distribution, Conjugacy and the exponential family, change of variables/Inverse transform,

Continuous Optimization: Optimization using gradient descent, constrained optimization and Lagrange multipliers, convex optimization

IV SEMESTER

SEMESTER: IV PROBABILITY, RANDOM PROCESS AND LINEAR ALGEBRA				
Course Code	**21MAT41**		Credits	**03**
Hours/Week (L-T-P)	**2-2-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

1. Concept of linear algebra can be applied to analyse and solve problems
2. Physical situations can be modelled using concepts and algorithms of Linear algebra
3. Concepts of random variables, probability distributions and sampling can be applied to problem solving.
4. Probability distributions can be used for testing of hypothesis of testing and model situations arising in analysis of data
5. Modelling situations using different random process like Poisson and Markov

COURSE CONTENTS

UNIT -1- (08 Hrs)

Linear Algebra-I

Vector spaces- definition, examples, Linear combinations, subspaces, linear dependence, basis and dimension, linear mapping, linear operator, matrix representation of linear operator, Rank and nullity of a transformations.

Self- Study: Applications to matrices row and column spaces, change of basis

UNIT -2- (11 Hrs)

Linear Algebra-II

Polynomial of matrices, Characteristic polynomial, Cayley-Hamilton theorem, diagonalization, Eigenvalues and eigen vectors, minimal polynomial, inner product space, Jordan canonical form, Orthogonal vectors and subspaces, Gram-Schmidt Orthogonalization process.

Self-Study: Bilinear and Quadratic forms

UNIT -3- (11 Hrs)

Probability and Random Variables

Probability: Definition, Axioms of probability, Addition rule, Conditional Probability, Multiplication rule.

Random variable -: Probability distribution- discrete and continuous, probability density function, cumulative density function, mean and variance, expectation.

Joint distribution - discrete joint probability distribution, marginal distribution, expectation, covariance, rank correlation.

Self-Study: Baye's Theorem, continuous Joint distribution.

UNIT -4- (8 Hrs)

Probability Distribution: Binomial, Poisson, Normal distribution,

Theory of Sampling: Population and sample, sampling with and without replacement, sampling distribution of means and variance, confidence intervals for mean. Testing Hypothesis, one tailed and two tailed test, testing of large samples, significance level and testing large samples.

t- test and Chi square test.

Self-Study: Weibull and Gamma distributions, exponential distribution, uniform distribution.

UNIT -5- (8 Hrs)

Random Process

Introduction, classification, probability density function, cumulative density function, mean, auto correlation, Stationary and Ergodic random process, Poisson process.
Markov process- Definition, examples, TPM, n – step transitional probabilities, regular, ergodic matrices, stationary distribution. States of Markov process
Correlation, Karl Pearson's coefficient, regression lines.
Self-study: Pure birth and Death process, Rank correlation

SEMESTER: IV

LINEAR INTEGRATED CIRCUITS

Course Code	**21EC42**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

Students will be able to

1. Identify the different configurations of op-amp; understand the construction, characteristics and parameters.
2. Design and Demonstrate op -amp as DC and AC amplifier.
3. Observe the Op-Amp frequency response, stability and to design various linear circuits.
4. Design and analyse op amp for non-linear applications and Signal generator circuits.
5. Design and analyse the applications of op-amp as filters, 555 timers IC as Multivibrators

COURSE CONTENTS

UNIT -1- (8 Hrs)

Introduction to operational amplifiers: Operational amplifier description, Internal circuit of Basic operational amplifier circuit, OPAMP 741 IC (excluding IC amp circuit): Practical op amp circuitry, Internal circuit of: Voltage follower circuit, Non-inverting amplifier, Inverting amplifier.

Operational Amplifier parameters: Input and Output voltage, Common mode and supply rejection ratio, Offset voltages and currents, Input and output impedances, Slew rate and frequency limitations.

Text1: 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, Text1: 2.1, 2.2, 2.3, 2.4, 2.5

UNIT -2- (8 Hrs)

OPAMP as DC Amplifier: Biasing operational amplifier, direct coupled voltage follower, direct coupled non inverting amplifier, direct coupled inverting amplifier

OPAMP as AC Amplifier: Capacitor coupled voltage follower, Capacitor coupled non inverting amplifier, Capacitor coupled inverting amplifier, setting the upper cut off frequency

Text 1: 3.1.3.2,3.3,3.4 Text 1: 4.1,4.3,4.5,4.6,4.7,4.8

UNIT -3- (8 Hrs)

OPAMP's frequency response and compensation: OPAMP circuit stability, Frequency and phase response, Frequency compensating methods

Miscellaneous OPAMP linear applications: Voltage sources, Current sources, Current amplifiers, Instrumentation amplifier

Text 1: 5.1, 5.2, 5.3 Text 1: 6.1, 6.2, 6.4, 6.8

UNIT -4- (8 Hrs)

Differentiating and Integrating Circuits: Differentiating circuit, Differentiator Design, Integrating circuit, Integrator Design,

OPAMP nonlinear circuits: OPAMP in switching circuits, crossing detectors inverting Schmitt trigger circuit, Non-inverting Schmitt circuits, Astable Multivibrator, and Mono stable Multivibrator.

Signal Generator: Triangular / Rectangular wave generator, Waveform Generator Design, Phase Shift Oscillator, Wein Bridge Oscillator

Text 2: 4.10,4.11, Text 2: 5.2,5.3,5.4,5.5, Text 1: 10.1, 10.2, 10.3, 10.5

UNIT -5- (7 Hrs)
Active Filters: All Pass shifting Circuits, First order Low Pass active filter, First order high pass filter, Band pass filter, Band Stop filter. **555 Timer**: Description of functional diagram, Monostable operation, Astable operation, Schmitt trigger. **PLL and ADC/DAC**: Basic Principles, Phase Detector/Comparator, Voltage controlled oscillator, Basic DAC Techniques, A-D converters. **Text 1:11.1, 11.2, 11.4, 11.8, 11.10, Text 2:8.1-8.4, Text 2:9.2,9.3,9.4, 10.2.,10.3** **Additional Topics beyond the syllabus in order to know other applications of op amp** **Signal Processing Circuits:** Precision half wave rectifiers, Precision full wave rectifiers, Clipping circuits, Clamping circuits, Peak detectors, Sample and hold circuits **Text 2:4.6, 4.7: 7.1, 7.2, 7.3, 7.4, 7.5, 7.6**

Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

Students will be able to

1. Interpret the response of LTI systems using time domain and frequency domain techniques.
2. Analyze frequency domain representations of real and complex discrete time signals.
3. Design an analog and digital filter for the given specifications
4. Realization of Digital filters designed for the given specifications using digital computations.
5. Apply signal processing algorithms for the given input signal/specifications

COURSE CONTENTS

UNIT -1- (08 Hrs)

Time domain representations for LTI systems:
Introduction, convolution sum (Problems on infinite step and exponential sequence) properties of the Impulse response for LTI systems (Stability, causality, memoryless), Differential and Difference equation representation for LTI systems (Natural response and forced response)
Text1: Ch2: 2.1, 2.2 ,2.3, 2.4
Z transform: Definition of Z transform, Basic problems on z transform, Properties of ROC unilateral z-Transform (Natural and forced response of LTI system)
Ch -7 :7.1,7.2,7.3, 7.8

UNIT -2- (08 Hrs)

Fourier representation and Applications: Introduction to DTFS and DTFT, Frequency response of LTI system.
Text1: Ch- 4 : 4.1, 4.2
Discrete Fourier Transforms (DFT): Frequency domain sampling and reconstruction of discrete time signals. DFT as a linear transformation, its relationship with other transforms.
Ref: T2 multiplication of two DFTs- the circular convolution -7.1

UNIT -3- (08 Hrs)

Properties of DFT, Use of DFT in linear filtering, overlap-save and overlap-add method.
Ref: T2- 7.2, 7.3
Fast-Fourier-Transform (FFT) algorithms: Direct computation of DFT, need for efficient computation of the DFT (FFT algorithms), Radix-2 FFT algorithm for the computation of DFT and IDFT–decimation-in-time and decimation-in- frequency algorithms
Ref: T2-8.1.1,8.1.3,8.1.4

UNIT -4- (08 Hrs)

FIR filter design: Introduction to FIR filters, design of FIR filters using Window based method, Linear phase FIR filter design using frequency sampling and Equiripple filter design. Design of FIR Differentiators. Design of Hilbert Transformers
Structure for FIR Systems: Direct form, Linear Phase, Frequency Sampling Structure Lattice structure. Ref: Text book T2:4.6.1, T2:9.2

UNIT -5- (07 Hrs)
Analog filter design: Characteristics of commonly used analog filter – Butterworth and Chebyshev Ref: T2: Chapter 3 **IIR filter design:** Approximation of derivative and bilinear transformation method, Matched Z-Transforms, Verification for stability and linearity during mapping. Design of IIR Filters from analog filter (Butterworth and Chebyshev) Impulse invariance, Mapping of transfer functions. **Structure for IIR Systems:** Direct forms, Cascade form, Parallel form structures. Ref: T2:4.0-4.5, 5.1-5.3,T1:10.2.4-10.2.6

COURSE ASSESSMENT METHOD:

CIE:

- Tutorials/Assignments - 10 Marks
- Surprise tests/Mini Project - 10Marks.
- Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

- Two questions are to be set from each unit, carrying 20 marks each

PEDAGOGY

1. Blackboard teaching
2. PowerPoint presentations (If needed)
3. Regular review of students by asking questions based on topics covered in the class

SEMESTER: IV

APPLICATIONS OF MACHINE LEARNING USING PYTHON

Course Code	**21EC44**		Credits	**04**
Hours/Week (L-T-P)	**3-0-2**		CIE Marks	**50**
Total Hrs.	**52**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Core Course**

COURSE OUTCOMES

Students will be able to

1. Define machine learning and understand the basic theory underlying machine learning.
2. Analyse the basic concepts of supervised learning
3. Analyse the basic concepts of unsupervised learning and pre-processing
4. Understand the basics of Dimensionality
5. Understand data representation

COURSE CONTENTS

UNIT -1- (12 Hrs)

Introduction:

Why Machine Learning ? Why Python ? Essentials libraries and tools

Experiment : Basics of python libraries

Text Book 1 : Chapter 1

UNIT -2- (12 Hrs)

Supervised learning

Classification and Regression , Generalization , Overfiiting and Underfitting, Supervised Machine learning Algorithms

Experiment : Implementation of supervised learning algorithms

Text Book1, Chapter 2

UNIT -3- (12 Hrs)

Unsupervised learning and pre-processing

Types of Unsupervised learning , Challenges in Unsupervised learning , Pre-processing and scaling

Textbook 1, Chapter 3

UNIT -4- (08 Hrs)

Dimensionality & Clustering:

Dimensionality reduction , feature extraction and manifold learning , clustering

Text book 1, Chapter 3

UNIT -5- (08 Hrs)

Representing data and engineering features

Categorical Variables, Binning , Interactions and polynomials , automatic feature selection

Text book 1, Chapter 4

TEXTBOOKS

SEMESTER: IV			
ELECTROMAGNETICS			
Course Code	**21EC45**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Professional Core Course**

COURSE OUTCOMES

After completion of the course students will be able to

1. Understand the basic concepts of electric fields, magnetic fields and electromagnetic waves
2. Apply the basic concepts to solve complex problems in electric fields, magnetic fields and electromagnetic waves.
3. Analyse different charge and current configurations to derive the electromagnetic field equations
4. Analyse static & time varying EM fields as governed by Maxwell's equations. Also study the propagation of EM wave in different media.
5. Design simple solutions for applications in electric and electronic circuits, electrical machines and communication systems

COURSE CONTENTS

UNIT-1 (8Hrs)

Electrostatics 1: Vector Analysis: Scalars & vectors, Basics of Coordinate systems. Coulomb's law, illustrative examples, Electric Field Intensity, Applications (Field due to Line charge distribution, Surface charge distribution), Illustrative examples. Flux, flux density, Gauss's Law, Application of Gauss's law, Divergence, Maxwell's First Equation (Electrostatics). Vector operator DEL and Divergence Theorem, Illustrative examples.

Text 1: Ch 1.1, 1.2,1.3,1.4,1.5,1.6,1.7,1.8,1.9, Ch 2.2.1 to 2.5, Ch 3.3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7

UNIT-2 (8 Hrs)

Electrostatics 2: Energy and Potential: Energy & potential in a moving point charge in an Electric Field, The Line Integral, |Definition of potential difference & potential, The potential field of a point charge, The potential Gradient, The Dipole, Energy density in the Electric Field.

Conductors, Dielectrics and Potential: Current & current density, continuity of current, conductor properties & boundary conditions. Boundary conditions for perfect dielectric materials.

Poisson's and Laplace Equations: Poisson's & Laplace Equations, Examples of the solutions of Laplace's equation & Poisson's equation.

Text 1: Ch 4. 4.1, 4.2, 4.3, 4.4, 4.6, 4.7, 4.8, Ch 5. 5.1, 5.2, 5.3, 5.4, 5.8 Ch 7- 7.1, 7.3, 7.4

UNIT-3 (8 Hrs)

Magnetostatics 1: The Steady Magnetic Field: Biot-Savart Law, Ampere's Circuital Law (Application: Magnetic Field Intensity due to Infinitely Long Straight Conductor, Magnetic Field Intensity due to Infinite Sheet of Current), Curl, Stokes' Theorem, Magnetic Flux & Magnetic Flux density, The Scalar & Vector magnetic potentials.

Text 1: Ch 8. 8.1, 8.2, 8.3, 8.4, 8.5, 8.6

UNIT-4 (8Hrs)

Magnetostatics 2: Magnetic Forces: Force on a moving charge, Force on a Differential current element, Force between differential Current elements, Force & Torque on a closed circuit.

Time- varying fields & Maxwell's Equations: Faraday's Law, Displacement current, Maxwell's equations in

point form, Maxwell's equations in Integral form.
Text-1: Ch 9. 9.1, 9.2, 9.3, 9.4 Ch 10. 10.1, 10.2, 10.3, 10.4

UNIT-5 (7Hrs)

Electromagnetic Waves: Wave propagation in Free space, Wave propagation in Dielectrics, The Poynting vector & power considerations, Propagation in good conductors: Skin Effect, Wave polarization.
Plane waves at Boundaries: Reflection of uniform plane waves at normal Incidence, Standing wave ratio, Wave reflection from multiple interfaces, Plane wave propagation in general Directions.
Text-1: Ch 11. 11.1, 11.2, 11.3, 11.4, 11.5, Ch 12. 12.1, 12.2, 12.3, 12.4

TEXT BOOKS

1. William H Hayt Jr. and John A Buck, "Engineering Electromagnetics", Tata McGraw-Hill, 6th Edition 2001.

PROFESSIONAL CORE ELECTIVE - II

SEMESTER: IV

INTRODUCTION TO NANO TECHNOLOGY

Course Code	**21ECE461**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Elective Course**

COURSE OUTCOMES

Students will be able to

1. Analyse concept of nanotechnology, unique features of the materials and technologies that exist at the Nano scale level and categories of the Nano materials.
2. Analyse the tools Nano scientists utilize such as high powered micro-scopes that use unique methods to allow the visualization of surface features on the atomic scale.
3. Analyse the concept of quantum dots , examine their unique properties and synthesis methods and will be able to explore the imaging and sensing applications of quantum dots.
4. Analyse the concept of nanowire properties and fabrication methods and its sensing applications
5. Analyse the structure, properties and synthesis methods of carbon nanotubes (CNTs) and its sensing applications

COURSE CONTENTS

UNIT -1- (08 Hrs)

Introduction To Nanotechnology:

Definition, Surface to Volume Ratio, Nano Structures 0 D, 1D, 2D, 3D, Nano Composites

UNIT -2- (08 Hrs)

Fabrication And Characterization:

Nano Structure Fabrication: Top-down Fabrication , Bottom up Fabrication

Characterization Techniques: Atomic force Microscopy(AFM), Scanning Electron Microscopy(SEM), Transmission Electron Microscopy(TEM)

UNIT -3- (08 Hrs)

Quantum Dot Sensors:

Definition and main properties, quantum size effect, functionalization of quantum dots, synthesis, applications.

UNIT -4- (08 Hrs)

Nanowire Based Sensor:

Definition, properties, fabrication: top- down, bottom-up, fabrication by e-beam lithography, Nanowire in sensing applications.

UNIT -5- (07 Hrs)

Carbon Nanotube based Sensor:

Structure and properties of CNT, electrical properties, CNT strength and elasticity, CNT synthesis, CNT in sensor applications

SEMESTER: IV BIOMEDICAL SENSORS				
Course Code	**21ECE462**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Elective Course**

COURSE OUTCOMES

Students will be able to

1. Identify the calibration procedure for the basic instruments involved in physiological parameter measurement.
2. Interpret the errors in measurement by analysing the performance characteristics of the sensors.
3. Demonstrate the appropriate sensor approach which is most likely to meet a specific biosensor application.
4. Apply the suitable design criteria for developing a medical sensor for a particular application.
5. Develop advanced medical sensors based on the basic transduction principles

COURSE CONTENTS

UNIT -1- (08 Hrs)

Science of Measurement:
Generalized Instrumentation System, General properties of input transducer. Static Characteristics: Accuracy, Precision, Resolution, Reproducibility, Sensitivity, Drift, Hysteresis, Linearity, Input Impedance and Output Impedance. Dynamic Characteristics: First Order and Second Order Characteristics, Time Delay, Transfer Function – First and Second Order Systems

UNIT -2- (08 Hrs)

Different transduction principles:
Temperature transducers- thermo resistive transducers, thermoelectric, Displacement transducers - potentiometric, resistive strain gauges, inductive displacement, and capacitive displacement transducer. Pressure transducer- indirect method - measurement of blood pressure using sphygmomanometer, piezoelectric type, catheter tip transducers, measurement of intracranial pressure, catheter tip- implantable type.

UNIT -3- (07 Hrs)

Biological sensors:
Optical Sensors, Electrolytic sensors, optical sensor, fiber optic sensors. Biosensors in clinical chemistry, medicine, and health care

UNIT -4- (08 Hrs)

Biochemical sensors:
Introduction, Advantages and limitations, various components of Biosensors, Biocatalysts based biosensors, bio-affinity based biosensors & microorganisms-based biosensors, Types of membranes used in biosensor constructions.

UNIT -5- (08 Hrs)

Bio potential electrodes:
Electrodes Electrolyte Interface, Half Cell Potential, Polarization, Polarizable and Non-Polarizable, Electrodes, Calomel Electrode, Electrode Circuit Model, Electrode Skin-Interface and Motion Artifact. Body Surface Electrodes. Ion exchange membrane electrodes, oxygen electrodes, CO_2 electrodes enzyme electrode.

SEMESTER: IV OS/LINUX FUNDAMENTALS				
Course Code	**21ECE464**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Elective Course**

COURSE OUTCOMES

Students will be able to

1. Understand very high level picture of Operating system (OS)
2. Understand concepts related to processes and CPU scheduling
3. Understand concepts related to memory management and virtual memory
4. Understand concepts related to mass-storage and File-System interface
5. Understand Linux OS fundamentals

COURSE CONTENTS

UNIT -1- (8 Hrs)

What Operating Systems Do, Computer-System Organization , Computer-System Architecture , Operating-System Structure , Operating-System Operations , Process Management , Memory Management , Storage Management , Protection and Security

T1 1.1 to 1.9

UNIT -2- (8 Hrs)

Processes

Processes , Process Concept , Process Scheduling , Operations on Processes , Interprocess Communication , Examples of IPC Systems , Communication in Client– Server Systems

CPU Scheduling

Basic Concepts , Scheduling Criteria , Scheduling Algorithms

T1 3.1 to 3.6, 6.1 to 6.3

UNIT -3- (8 Hrs)

Main Memory

Background , Swapping , Contiguous Memory Allocation , Segmentation , Paging , Structure of the Page Table

Virtual Memory

Background ,Demand Paging

8.1 to 8.6, 9.1 – 9.2

UNIT -4- (8 Hrs)

Mass-Storage Structure

Overview of Mass-Storage Structure , Disk Structure

File-System Interface

File Concept , Access Methods , Directory and Disk Structure , File-System Mounting , File Sharing , Protection

10.1 to 10.2 , 11.1 to 11.6

UNIT -5- (7 Hrs)

Linux System

Linux History , Design Principles , Kernel Modules , Process Management , Scheduling , Memory Management , File Systems , Input and Output , Interprocess Communication , Network Structure, Security

18.1 – 18.11

SEMESTER: 5				
IoT FUNDAMENTALS AND ARCHITECTURE				
Course Code	**21ECE464**		Credits	**03**
Hours/Week (L-T-P)	**3-0-0**		CIE Marks	**50**
Total Hrs.	**39**		SEE Marks	**50**
Exam Hrs.	**03**		Course Type	**Professional Elective Course**

COURSE OUTCOMES

Students will be able

1. Interpret the impact and challenges posed by IoT networks leading to new architectural models.
2. Compare and contrast the deployment of smart objects and the technologies to connect them to network.
3. Appraise the role of IoT protocols for efficient network communication.
4. Elaborate the need for Data Analytics and Security in IoT.
5. Illustrate different sensor technologies for sensing real world entities and identify the applications of IoT in Industry.

COURSE CONTENTS

UNIT -1- (8 Hrs)

Introduction to IoT: Genesis of IoT, IoT and Digitization, IoT Impact, Convergence of IoT and IoT, IoT Challenges, IoT Network Architecture and Design, Drivers Behind New Network Architectures, Comparing IoT Architectures, A Simplified IoT Architecture, The Core IoT Functional Stack, IoT Data Management and Compute Stack.

UNIT -2- (8 Hrs)

Smart Objects: The “Things” in IoT, Sensors, Actuators, and Smart Objects, Sensor Networks, Connecting Smart Objects, Communications Criteria, IoT Access Technologies.

UNIT -3- (8 Hrs)

IP as the IoT Network Layer: The Business Case for IP, The need for Optimization, Optimizing IP for IoT, Profiles and Compliances, Application Protocols for IoT, The Transport Layer, IoT Application Transport Methods.

UNIT -4- (8 Hrs)

Data and Analytics for IoT: An Introduction to Data Analytics for IoT, Machine Learning, Big Data Analytics Tools and Technology, Edge Streaming Analytics, Network Analytics, Securing IoT, A Brief History of OT Security, Common Challenges in OT Security, How IT and OT Security Practices and Systems Vary, Formal Risk Analysis Structures: OCTAVE and FAIR, The Phased Application of Security in an Operational Environment.

UNIT -5- (7 Hrs)

IoT Physical Devices and Endpoints: Arduino UNO: Introduction to Arduino, Arduino UNO, Installing the Software, Fundamentals of Arduino Programming. IoT Physical Devices and Endpoints - RaspberryPi: Introduction to RaspberryPi, About the RaspberryPi Board: Hardware Layout, Operating Systems on RaspberryPi, Configuring RaspberryPi, Programming RaspberryPi with Python, Wireless Temperature Monitoring System Using Pi, DS18B20 Temperature Sensor, Connecting Raspberry Pi via SSH, Accessing Temperature from DS18B20 sensors, Remote access to RaspberryPi, Smart and Connected Cities, An IoT Strategy for Smarter Cities, Smart City IoT Architecture, Smart City Security Architecture, Smart City Use-Case Examples.

I/II SEMESTER

SEMESTER: I/II

BASIC ELECTRONICS ENGINEERING

Course Code	**18ELN14/24**	**Credits**	**04**
Hours/Week(L-T-P)	**3-2-0**	**CIE Marks**	**50**
Total Hours	**39(L)+26(T)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

COURSE OUTCOMES

After completion of the course students will be able to

1. Construct and implement basic digital electronic circuits for a given applications using the knowledge of Boolean algebra and logic gates.
2. Apply the knowledge of semiconductor physics to illustrate the operation of semiconductor devices.
3. Design electronic circuits such as rectifiers, amplifiers, oscillators, operational amplifier based applications using semiconductor devices.
4. Summarize the basic concepts of communication systems and cellular topology.
5. Apply the knowledge of electronic devices and circuits in interdisciplinary engineering domains.

COURSE CONTENTS

UNIT-1 (8Hrs)

Number system and Digital logic:
Introduction, Decimal, Binary, Octal & hexadecimal number system conversion, Compliments(only 2's,1's,10's & 9's compliment) Addition and Subtraction (Binary and Decimal numbers system), Binary Coded Decimal number, Boolean Algebra, Logic Gates .Introduction to Combinational Logic : Half Adder, Full adder ,Introduction to Sequential circuits : Flip Flops(RSFF , JK FF,D FF , T FF) (only truth table)
T1 Ch: 1.2,1.3,1.4,1.5,1.6,2.1,2.3,2.4,2.7,4.1,4.3,6.1,6.2

UNIT-2 (8Hrs)

Semiconductor Diode and Applications:
PN junction Diode, Characteristics and parameters, Diode approximations, Zener diode, Half wave Rectification, Full wave diode Rectification, Bridge rectifier, Half wave rectifier, Full wave rectifier DC power supply, Numerical Problems,
Optoelectronics devices: Light Emitting Diode, Photo diode.
T2 Ch: 2.1, 2.2, 2.3, 2.9, 3.1, 3.2, 3.3, 3.4, 20.2

UNIT-3 (8Hrs)

Transistor:
Bipolar Junction transistor, Transistor voltages and currents, Amplification, Common Base, Common Emitter and common Collector Characteristics (only input and output characteristics) numerical.
Amplifiers: Classification of Amplifiers, Single stage CE amplifier, Cascaded amplifier and capacitor coupled 2-stage CE amplifier.
Introduction to IC Technology: The IC era, Basic MOS transistor.
T2 CH: 4.1,4.2,4.3,4.5,4.6,4.7,9.5,12.1

UNIT-4 (8Hrs)

Oscillator: Introduction to Oscillator, RC phase shift Oscillator, Hartley Oscillator, Colpitts Oscillator, and Numerical.
Operational Amplifiers: Introduction to Operational Amplifiers Ideal Op-Amp, Voltage follower, Non-Inverting amplifier, Inverting amplifier, Summing amplifier, Difference amplifier (circuits, derivations of output voltage and numerical).
T2 Ch : 14.1, 14.3, 14.4, 14.5, 14.6, 14.7, 16.1, 16.2, 16.3

UNIT-5 (7Hrs)

Communication system: Introduction, Block diagram, Modulation, need for modulation, Types of modulation, Amplitude modulation, Frequency modulation: concept, waveform (no derivation & problems), Comparison between AM&FM, Super heterodyne receivers.

Optical Fiber Communication: Block diagram, Advantage & Disadvantage of OFC cable, OFC construction.

Cellular Telephone Concept: Cellular telephone, Frequency reuse (no problems), Cellular system topology, Roaming & Hands off

T3 Ch: 13.5, 13.3, 13.6.1, 19.4, 19.5, 19.8, 19.9

TEXT BOOKS

Unit 1	"Digital Logic and Computer Design", Morris Mano ,PHI 2002
Unit 2,3 4	"Electronics Devices and circuits", David A. Bell, PHI, 2004
Unit 5	"Electronic Communications Systems ", Wayne Tomasi , Fifth edition

REFERENCE BOOKS

1. "Principles of Electronics " , V K Mehta , S Chand publications , 2003
2. "Basic VLSI design" , Douglas A Pucknell& Kamran E, Third Edition (PHI)

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (if needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESEMENT METHOD

CIE:

1. Tutorials - 10 Marks
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO/PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT

CO4	3	3		2								3	3	3	2	2
CO5	3	3	1	3								3	3	2		3

III SEMESTER

SEMESTER: III

ENGINEERING MATHEMATICS-III

Course Code	**18MAT31**	**Credits**	**04**
Hours/Week(L-T-P)	**3-2-0**	**CIE Marks**	**50**
Total Hours	**39(L)+26(T)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

COURSE OUTCOMES

1. Concepts of Fourier theory and integral transforms can be adopted to problem solving, analyzing physical situations relevant to periodic and aperiodic functions
2. Fourier theory and transforms can be applied to model and solve engineering problems
3. Concept of Z transforms can be applied to problem solving and model discrete functions.
4. Numerical methods can be adopted for solving equations, ODE, interpolate and extrapolate data and integrate numerically, using finite differences and matrices
5. Numerical methods can be applied to model physical situations, find eigen values and interpret solutions.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Z- transforms : Definition, Standard Z transforms, Linearity property, Damping Rule, Shifting rule, multiplication by n, Initial and final value theorems(no proof), Bivariate Z-transforms, region of convergence, Inverse by partial fractions method, convolution theorem. Solution of difference equations (no derivations or proof).

UNIT-2 (8 Hrs)

Fourier series: Euler's formulae, Dirichlet's conditions for Fourier series expansion, change of interval, Even and odd function, half range series, Practical harmonic analysis. Fourier Transforms: Definition, Complex Fourier transforms, Cosine and Sine transforms, Inverse Fourier transforms.

UNIT-3 (8 Hrs)

Laplace Transforms: Definition, Transforms of standard functions (derivations and problems), Transforms of e f (t) at , t f (t) n , ( ) t f t , Laplace transforms of derivatives and integrals (no derivations), Laplace transforms of periodic functions, unit step function (no derivations), Dirac delta function . Inverse Laplace transforms, convolution theorem (without proof), solutions of 1st and 2nd order ODE using Laplace transforms.

UNIT-4 (8 Hrs)

Interpolation- Newton's forward and backward formula, Newton's divided difference formulae and Lagrange's formula for unequal intervals and inverse interpolation by Lagrange's formula, valuation of derivatives using Newton's forward and backward difference interpolation formulae. Numerical Integration - Trapezoidal, Simpson's 3 1 and 8 3 rules, Weddle's rule.

UNIT-5 (7 Hrs)

System of equations: Solution of system of equations by LU decomposition, Solution of Tridiagonal system by Thomas algorithm, eigen values of symmetric matrix by Jacobi method, Power method. Roots of transcendental equations by Newton Raphson Method Numerical solution of ODE: Taylor's series method, Runge-Kutta 4th order method.

TEXT BOOKS

1. Higher Engg. Mathematics by Dr. B S Grewal, 42nd Edition.
2. Advanced Engg. Mathematics by Erwin E Kreyszig, 10th edition, Wiley.
3. Introductory methods of numerical analysis, by S S Sastry, PHI India.

REFERENCE BOOKS

1. Advanced Engg. Mathematics by Erwin Kreyszig, 10th edition,Wiley,2011
2. Numerical Algorithms by Sen and Krishnamurthy

TEACHING METHODOLOGY

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

COURSE ASSESSEMENT METHOD

CIE:

1. Tool based Assessment - 10 Marks
2. Surprise tests based on Gate questions- 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two willbe taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3

SEMESTER: III

ANALOG ELECTRONICS CIRCUITS

COURSE CODE	**18EC32**	**CREDITS**	**03**
HOURS/WEEK(L-T-P)	**3-0-0**	**CIE MARKS**	**50**
TOTAL HOURS	**39(L)**	**SEE MARKS**	**50**
EXAM HOURS	**03**	**COURSE TYPE**	**Core**

PRE-REQUISITES
Familiarity with elements of Electronics Engineering & basic circuit knowledge.

COURSE OUTCOMES

The student will be able to

1. Analyze and explain the structure, V-I characteristics, working of analog electronic devices - diodes, Bipolar Junction Transistors (BJTs), JFETs and MOSFETs.
2. Illustrate DC and AC analysis of BJT, JFET and MOSFET amplifier circuits.
3. Interpret the performance characteristics of transistor-based amplifiers and their frequency Response.
4. Design of analog electronic circuits such as diode clippers and clampers, amplifiers using BJTs, JFETs and MOSFETs, power amplifiers, feedback amplifiers, oscillators for given specifications.
5. Apply the knowledge of analog circuits for various applications in electronics & communication systems.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Diode and its Applications: Load line analysis, Rectifiers with Capacitor filters (with derivation), Nonlinear applications of diode (Clippers & Clampers). (Only shunt clippers)

BJT DC Analysis: Operating point, Fixed bias circuits, Emitter stabilized biased circuits, Voltage divider biased.

BJT AC Analysis: BJT re modelling (CE configuration), CE Fixed bias configuration, Emitter Bias, Voltage divider bias, (Derivation of Zi,Z0,Av,Ai for the configuration)

T1:2.2,2.6,2.7,2.8,2.9, T1:4.2,4.3,4.4,4.5, T1:5.4,5.8,5.9,5.10

UNIT-2 (8 Hrs)

Junction Field Effect Transistor (JFET): Introduction, Construction and characteristics of JFET, Transfer Characteristics,

T1-Ch6 :6.1, 6.2, 6.3

JFET Frequency Response: logarithms, Decibels, low frequency response FET Amplifier,

T1-9.2,9.3,9.7

UNIT-3 (8 Hrs)

Metal-Oxide Field Effect Transistor (MOSFET): MOS Field –Effect Transistor, Two-Terminal MOS Structure, N-Channel Enhancement –Mode MOSFET, Ideal MOSFET Current-Voltage Characteristics-NMOS Device, p-Channel Enhancement –Mode MOSFET, Ideal MOSFET Current-Voltage Characteristics-PMOS Device, Additional MOSFET structures and Circuit Symbols, MOSFET DC Circuit **Analysis:** Common-Source circuits, DC load line and region of operation, Common-MOSFETs configuration

T2: 3.1, 3.2

UNIT-4 (8 Hrs)

Feedback and Oscillator Circuits: Feedback Concepts, Feedback connection types, Oscillator operation, Phase shift oscillator, Wein bridge oscillator, Tuned oscillator circuit, Crystal oscillator.

T1:14.1, 14,2, 14.5, 14.6, 14.7, 14.8, 14.9,

UNIT-5 (7 Hrs)

Power Amplifiers: Introduction, Definitions and amplifier types: series fed class A amplifier, Transformer coupled Class A amplifiers, Class B amplifier operations, Class B amplifier circuits, Class C and Class D amplifier circuits.

T1:12.1,12.2,12.3,12.4,12.5,12.8

TEXT BOOKS

1. Robert L. Boylestad and Louis Nashelsky, “Electronic Devices and Circuit Theory”, PHI/Pearson Education, 9th Edition.
2. Donald A. Neamen, “Electronic Circuit Analysis and Design”, TATA McGraw Hill, 3rd Edition 2.

REFERENCE BOOKS

1. David A. Bell, “Electronic Devices and Circuits”, PHI, 4th Edition, 2004
2. Malvino,Albert Paul “Electronic Principles”, 6th edition ,2000

   Jacob Millman& Christos C. Halkias, “Electronic Devices and Circuits”, Tata -McGraw Hill, 1991

TEACHING METHODOLOGY

- Blackboard teaching
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Tool based Assessment - 10 Marks
2. Surprise tests based on Gate questions- 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

DIGITAL ELECTRONICS

Course Code	**18EC33**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES
A Fundamental course on Physics and Basic Electronics

COURSE OUTCOMES

Students will be able to

1. Apply the principles of Boolean algebra to manipulate/minimize logic expressions.
2. Optimize the logical circuits using various simplification techniques.
3. Analyze and design various combinational and sequential circuits.
4. Design finite state machines using various types of flip-flops and combinational circuits with prescribed functionality.
5. Design and implement a digital system for a given application to meet predefined functional requirements.

COURSE CONTENTS

UNIT-1 (8Hrs)

Boolean algebra and Combinational Networks:
Definition of Boolean algebra and theorems, Boolean formulas and functions, canonical formulas: minterm and maxterm, Equation complementation, Equation simplification and Reduction Theorems, Gates and combinational networks, Incomplete Boolean functions and Don't care conditions, Additional Boolean operations and gates, Gate Properties.
Text 1: Ch 3. 3.1 to 3.10

UNIT-2 (8 Hrs)

Simplification of Boolean expressions: Formulation of the simplification problem, Prime implicants and irredundant disjunctive expressions, Prime implicates and irredundant conjunctive expressions, Karnaugh Maps, Using K-Maps to obtain minimal expressions for complete Boolean functions, Minimal expressions of incomplete Boolean functions, Five-Variable and Six-variable K-Maps. Quine Mc-clusky method of generating prime implicants. Variable Entered K maps
Text 1: Ch 4.1- 4.8, 4.14

UNIT-3 (8 Hrs)

Logic Design with MSI components and programmable logic devices: Binary adders and Subtractors, Decimal adders. Comparators, Decoders, Encoders, Multiplexers, Programmable Logic Arrays (PLAs), Programmable Array Logic Devices (PLA)
Text 1: 5.1.1,5.2-5.6, 5.9-5.10

UNIT-4 (8Hrs)

Flip-Flops and Simple Flip-Flop Applications: The Basic Bistable Element, Latches, The SR Latch, Timing Considerations, Master-Slave Flips-Flops, Edge-Triggered Flip-Flops, Characteristic Equations, Registers
Text 1: chap 6.1-6.7

UNIT-5 (7Hrs)

Introduction to Sequential Circuit: Counters, Design of Synchronous Counters, Mealy and Moore Models, State Machine Notation, Construction of State Diagrams, Counter Design, Design of a Digital system for a given problem statement.

Text 1: chap 6.8-6.9 Text 2: chap 6

TEXT BOOKS

1. Donald D Givone, ”Digital Principles and Design “,Tata McGraw Hill Edition,2002.
2. John M.Yarbrough, “Digital Logic Applications and Design” Vikas Publishing House, Third Reprint 2002

REFERENCE BOOKS

1. Tocci,”Digital systems, Principles and Applications”, PHI/Pearson Education,6th Edition,1997

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (if needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Tutorials - 10 Marks
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

NETWORK ANALYSIS

Course Code	**18EC34**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES

a) Mathematics-1
b) Basic Electrical Engineering

COURSE OUTCOMES

Students will be able to

1. Interpret the response of an electrical network using different approaches.
2. Apply network theorems to minimize circuit complexities and to arrive at optimized solution.
3. Interpret and analyze transient and steady state response of DC and AC electrical circuits using time domain and frequency domain approaches.
4. Solve and analyze the response of an electrical circuit by applying graph theory
5. Analyze and apply the knowledge of network concepts in various applications of Electronics & Communication Systems

COURSE CONTENTS

UNIT-1 (8Hrs)

Basic circuit analysis concepts: Practical Sources, Source transformation, Network reduction using star delta transformation, Mesh analysis and Node analysis with dependent and independent sources for DC and AC networks. Concepts of super node and super mesh. Matlab based exercises

Text1: Ch 1, Ch 2

UNIT-2 (8Hrs)

Network Theorems: Superposition theorem, Reciprocity theorem, Thevenin's theorem, Norton's theorem Millman's theorem, Maximum power transfer theorem and Matlab based exercises

Text1: Ch 7

UNIT-3 (8 Hrs)

Transient behaviour and initial conditions: Behavior of circuit elements under switching condition and their representation of initial and final conditions in RL,RC and RLC circuits for AC and DC excitations

Laplace transform and it's applications: Laplace transform of periodic functions, Solution of linear differential equation, Solution of network problems.

Text1: Ch 5, Ch 6

UNIT-4 (8Hrs)

Graph Theory and Network equations: Graph of a network, Trees, Co-trees and Loops, Incidence Matrix, Cut-set Matrix, Tie-se Matrix and loop currents, Number of possible trees of a graph, Analysis of networks, Duality.

Text1: Ch 3

UNIT-5 (7Hrs)

Two port Network: Characterization of linear time invariant two port network, open circuit impedance parameter, short circuit admittance parameter, transmission parameter, inverse transmission parameter, hybrid parameter, inverse hybrid parameter, relationship between parameters, input and output impedance in terms of two-port parameters and Matlab based exercises.

Text1: Ch 8, Ch 10

SEMESTER: III			
SIGNALS AND SYSTEMS			
Course Code:	**18EC35**	**Credits:**	**04**
Hours/Week: (L:T:P)	**3-2-0**	**CIE Marks**	**50**
Total Hours:	**52Hrs**	**SEE Marks**	**50**
Exam Hours:	**03**	**Course Type**	**Core**

PRE-REQUISITES
Mathematics-I, Mathematics –II, Basic Electronics Engineering.

COURSE OUTCOMES
Upon Completion of the course students will be able to 1. Represent Continuous and discrete time signals using mathematical model and classify systems based on their properties. 2. Analyze the response of Linear Time Invariant system for given input 3. Apply the transform techniques for representing the signals in time and frequency domain. 4. Analyse the spectral characteristics of continuous and discrete time signals. 5. Relate signals from one domain to another domain and apply this to solve real time applications

COURSE CONTENTS
UNIT-1 (11Hrs)
Introduction: What is a signal and what is a system, overview of specific system, classification of signals, basic operations on signals, elementary signals, and systems viewed as interconnection of operations, properties of systems. [Operations on signals to be done using MAT LAB] **Text1: Ch - 1 1.1 to 1.8**
UNIT-2 (11 Hrs)
Time domain representations for LTI systems: Introduction, convolution: Impulse response representation for LTI systems, properties of the Impulse response representation for LTI systems, Differential and Difference equation representation for LTI systems. [Convolution examples to be done using MATLAB] **Text1: Ch- 2 2.1 to 2.5**
UNIT-3 (10 Hrs)
Fourier representations for signals: Introduction, discrete time periodic signals: DTFS, continuous time periodic signals: CTFS, discrete time non-periodic signals**,** continuous time non-periodic signals: CTFT **Text1: Ch-3 3.1 to 3.5**
UNIT-4 (10 Hrs)
Fourier representations and Applications: DTFT, properties of DTFT Frequency response of LTI system, Sampling, reconstruction of continuous time signals from samples, discrete time processing of continuous time signals, **Text1: Ch- 4 : 4.2,4.6,4.7,4.8**
UNIT-5 (10 Hrs)
Transform Analysis of LTI systems using Z transform : The Z transform, Properties of ROC, inverse z-Transform , Transform Analysis of LTI systems, Computational structures for implementing discrete time system, unilateral z-Transform **Text1: Ch -7 :7.1,7.2,7.3,7.5 ,7.6,7.7,7.8**
TEXT BOOKS

MICROCONTROLLER

COURSE CODE	**18EC36**	**CREDITS**	**04**
HOURS/WEEK(L-T-P)	**3-0-2**	**CIE MARKS**	**50**
TOTAL HOURS	**39+26(L)**	**SEE MARKS**	**50**
EXAM HOURS	**03**	**COURSE TYPE**	**Core**

PRE-REQUISITES
• Knowledge of number Systems • Programming experience with C

COURSE OUTCOMES
Upon completion of the course, students will be able to
1. Interpret the architecture and addressing modes of 8051 microcontroller
2. Program 8051 microcontroller in assembly and C for various embedded system applications.
3. Using KEIL IDE, programming 8051 microcontroller in assembly and C.
4. Apply embedded C for programming 8051 microcontroller for serial communications and interrupts.
5. Interface 8051microcontroller with different peripheral devices.

COURSE CONTENTS
UNIT-1 (8 Hrs)
The 8051 Architecture:8051 Microcontroller Hardware, Input/Output Pins, Ports and circuits, External Memory. **Moving Data:** Addressing Modes, External data moves, Code Memory data moves PUSH and POP Instructions, Data Exchanges. Example Programs. **Text 1: Ch 3- 3.1 to 3.3,Ch 5- 5.l to 5.5**
UNIT-2 (7 Hrs)
Logical Operations: Byte level logical operations, Bit level logical operations, Rotate and swap operations. **Arithmetic Operations**: Incrementing and decrementing, addition, subtraction, multiplication and division, decimal arithmetic, **Jump and Call Instructions** Example Programs. **Text 1: Ch 6-6.1 to 6.3, Ch 7 – 7.1 to 7.6**
UNIT-3 (8 Hrs)
8051 Programming in C: Data types and time delays in 8051C, I/O programming, logic operations, data conversion programs and data serialization. **8051 Timer programming in C:** Programming 8051 timers, counter Programming, Examples in C. **Text 2: Ch 7-7.1 to 7.6, Ch 9-9.1 to 9.3**
UNIT-4 (8 Hrs)
8051 Serial Communication: Basics of serial Communication, 8051 connections to RS 232, Serial communication Programming, Programming examples in C. **Interrupts Programming:** 8051 Interrupts, Programming timer interrupts, programming external hardware interrupts, Programming the serial communication interrupts, Interrupt priority, Programming examples in C. **Text 2: Ch 10-10.1 to 10.2,10.4 to 10.5, Ch11-11.1 to 11.6**
UNIT-5 (8 Hrs)
8051 Interfacing and Applications: Interfacing 8051 to LCD, keyboard, parallel and serial ADC, DAC interfacing, stepper motor and DC motor interfacing. Programming in C. **Text 2: Ch 12- 12.1 to 12.2, Ch 13- 13.1 to 13.2, Ch 17-17.2 to 17.3**
TEXT BOOKS

1. Kenneth Ayala, “The 8051 Microcontroller”, Thomson Delmar Learning, 3rd Edition
2. Muhammad Ali Mazidi and Janice Gillespie Mazidi and Rollin D. McKinlay, “The 8051 Microcontroller and embedded systems – using assembly and C”, Prentice Hall India, Pearson, 2006

REFERENCE BOOKS

1. Predko,”Programming and customizing the 8051 micro controller”, Tata McGraw Hill
2. Frank Vahid& Tony Givargis, “Embedded System design”, John Wiley, 2002.
3. Michael J. Pont, “Embedded C”, Pearson Education, 2002.

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (if needed) and demonstrations
- Regular topic-based discussions involving application examples of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Hands on assignments for assessment of learning activities (LA1 and LA2).
2. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO/ PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT

CO5	3	2	2	1	3				1		1	2	2	2	1	3

MICROCONTROLLER INTEGRATED LAB

PART A: **Programming in Assembly language**

1. Programs on arithmetic operations
2. Block Transfer with and without overlapping programs.
3. Data exchange programs.
4. Programs on sorting data.
5. Programs on Logical operations.
6. Code conversion programs
7. Programs to generate delay using Timers and to transmit data using serial communication

PART B: INTERFACING (Programming in C)

1. Stepper and DC motor control interface to 8051
2. Interface Alpha Numeric LCD panel to 8051.
3. Interface Hex keypad to 8051.
4. Using DAC interface to 8051, generate different waveforms sine, square, triangular, ramp

SEMESTER: III

ANALOG ELECTRONICS LAB

Course Code	**18ECL37**	**Credits**	**01**
Hours/Week(L-T-P)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**26(P)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES
Basic Electronics and Basic Electrical Engineering Concepts

COURSE OUTCOMES

Students will be able to

1. Analyze operation of electronic equipment's like CRO, Signal Generator, Power Supply.
2. Design and test rectifier, clipping circuits and clamping circuits.
3. Design and test amplifier and oscillator circuits.
4. Evaluate the device parameters from the characteristics of JFET and MOSFET.
5. Design and verify power amplifier characteristics

COURSE CONTENTS

LIST OF EXPERIMENTS

1. Demonstrate the working of Bridge Rectifier.
2. Design and conduct to demonstrate clipping and clamping circuits.
3. Design and set up the BJT common emitter amplifier using voltage divider bias with and without feedback and determine the gain-Bandwidth product from its frequency response.
4. Plot the transfer and drain characteristics of a JFET and calculate its drain resistance, mutual conductance and amplification factor.
5. Plot the transfer and drain characteristics of n-channel MOSFET and calculate its parameters, namely drain resistance, mutual conductance and amplification factor.
6. Design, setup and plot the frequency response of Common Source MOSFET amplifier and obtain the bandwidth.
7. Set-up and analyze the working of complementary symmetry Class B Push Pull Power Amplifier and calculate the efficiency.
8. Design and set-up a RC-Phase shift Oscillator for the specified frequency of oscillation.
9. Design and set-up a Hartley Oscillator for the specified frequency of oscillation.
10. Design and set-up a Colpitts Oscillator circuit for the specified frequency of oscillation.
11. Design a crystal oscillator circuit for the specified frequency of oscillation.
12. Realize BJT Darlington Emitter follower with and without Bootstrapping and determine the gain, input and output impedances. (Can be given as a Demo Experiment)

CO-PO-PSO MAPPING

CO/PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BL

DIGITAL ELECTRONICS LAB

Course Code	**18ECL38**	**Credits**	**01**
Hours/Week(L-T-P)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**26(P)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PREREQUISITES:
1. Basic Electronics

COURSE OUTCOMES

After successful completion of the course, students are able to

1. Realize the simplified expressions using Basic and universal gates.
2. Construct Combinational and Sequential circuits for an application.
3. Design Code Converter circuits for an application.
4. Design Counter and Shift register circuits for an application.
5. Implement the digital designs using CAD tools.

COURSE CONTENTS

LIST OF EXPERIMENTS

1. Realization of Basic Gates using Diodes and Transistors.
2. Simplification, Realization of Booleans Expressions using logic gates/universal gates and verify,
   (a) De-Morgan's Theorem for 2, 3, 4 variables.
   (b) The Sum-of-Product and Product-of- Sum expressions using universal gates.
3. Design and implement
   (a) Full Adder /Full Subtractor using basic logic gates.
   (b)Full Adder /Full Subtractor using Universal gates.
4. Design and implement 4-bit Parallel Adder/ Subtractor using IC 7483.
5. Design and Implement BCD to EXCESS-3 Conversion and Vice Versa using
   (a) Logic Gates
   (b)Parallel Adder/ Subtractor IC 7483
6. Design and Implement BCD to Gray Conversion and Vice Versa using logic gates.
7. Realize
   (a) 2:1/4:1 Multiplexer using gates.
   (b)Adders/Subtractors Using IC 74153
   (c) 1:4 Demux using Gates
   (d)Adders/Subtractors using IC 74139
8. Design and Implementation of magnitude comparators.
   (a) One and two bit Comparator using Logic gates
   (b) 4-bit and 8-bit comparator using IC 7485
9. Realize the following flip-flops using.
   (a) JK Flip-Flop using Nand gates
   (b) Clocked SR, JK, D, T Flip Flop using IC 7476
10. Realize the following operations using shift registers IC7495
    (a) SISO (b) SIPO (c) PISO (d) PIPO
11. Design and Implement Asynchronous Mod N up/Down Counter using IC 7476.
12. Design and Implement Synchronous Mod N up/down counter using IC 7476
13. Design and Implement Ring/Johnson counter Using IC 7495
14. Simulate Full- Adder using simulation tool.

15. Simulate Mod-8 Synchronous UP/DOWN Counter using simulation tool.

IV SEMESTER

SEMESTER: IV

ENGINEERING MATHEMATICS-IV

Course Code	**18MAT41**	**Credits**	**04**
Hours/Week(L-T-P)	**3-1-1**	**CIE Marks**	**50**
Total Hours	**39(L)+26(T)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

COURSE OUTCOMES

1. Concept of linear algebra can be applied to analyse and solve problems
2. Physical situations can be modeled using concepts and algorithms of Linear algebra
3. Concepts of random variables, probability distributions and sampling can be applied to problem solving.
4. Probability distributions can be used for testing of hypothesis of testing and model situations arising in analysis of data
5. Modelling situations using different random process like Poisson and Markov

COURSE CONTENTS

UNIT-1 (8 Hrs)

Random variable, discrete probability distribution, continuous random variables, continuous probability distribution, cumulative density function, Expectation, variance. Joint distribution- continuous and discrete, expectation, variance, standard deviation, covariance Binomial, Poisson, Exponential, Normal.

UNIT-2 (8 Hrs)

Population and sample, sampling with and without replacement, sampling distribution of means, sample variance. Unbiased estimate, confidence intervals for mean, statistical hypothesis, testing of hypothesis, Type I and II errors, one tailed, two tailed tests, t - distribution, χ 2 – test, test for goodness of fit.

UNIT-3 (8 Hrs)

Random process- definition, classification, pdf, cdf, mean, auto correlation, Stationary and Ergodic random process, Poisson process. Markov process- Definition, examples, TPM, n – step transitional probabilities, regular, ergodic matrices, stationary distribution, classification of states, Markov chain with absorbing states, periodic, transient and recurrent states.

UNIT-4 (8 Hrs)

Vector spaces- definition, examples, Linear combinations, subspaces, linear dependence, basis and dimension, linear mapping, linear operator, matrix representation of linear operator, change of basis.

UNIT-5 (7 Hrs)

Polynomial of matrices, Characteristic polynomial, Cayley-Hamilton theorem, diagonalization, Eigenvalues and eigen vectors, minimal polynomial, inner product space, Jordan canonical form, Orthogonal vectors and subspaces, Gram-Schmidt Orthogonalisation process, Quadratic forms.

TEXT BOOKS

1. Probability and statistics, by Murray R Spiegel, J Schiller, R Alu Srinivasan, Schaum's outline series, second edition.
2. Operations research by R. Bronson & G. Nadimuthu, Schaum's series, II edition.
3. Linear Algebra by Lipschitz, Schaum's outline series, second edition.
4. Probability and random process by S Palaniammal, PHI, 2012.

REFERENCE BOOKS

1. Probability and statistics for Science and Engg. By G Shanker Rao, Univ Press, 2011
2. Probability and stochastic processes , Roy D Yates, David J Goodman, second edition, 2012, Wiley

TEACHING METHODOLOGY

- Black Board Teaching.
- Power point presentation (If needed).
- Tutorial Classes.

COURSE ASSESSEMENT METHOD

CIE:

1. Surprise test / Tutorials tests to be conducted for each topic for 10 marks.
2. Quiz/ assignment based on practical application for 10 marks.(Assignment for MATLAB)
3. Three mid semester examinations will be conducted each for 30 marks and the average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3
CO1	2	2											1		
CO2	2	2		2	1								1		
CO3	2	2		1									1		
CO4	2	2		2	1								1		
CO5	2	2		2	1								1		

SEMESTER: IV			
LINEAR INTEGRATED CIRCUITS AND INTEGRATED LAB			
Course Code	18EC42	Credits	04
Hours/week(l-t-P)	3-0-2	CIE Marks	50
Total Hours	39(L)+26(P)	SEE Marks	50
Exam Hours	03	Course Type	Core

PRE-REQUISITES

- Basic electronics
- Analog electronic circuits

COURSE OUTCOMES

STUDENTS WILL BE ABLE TO

1. Identify the different configurations of op-amp, understand the construction, characteristics and parameters.
2. Design and Demonstrate op -amp as an AC amplifier and observe its frequency response and stability.
3. Design and analyze various linear applications and signal processing circuits of op-amp and verify the same using simulation Tool.
4. Design and analyze non-linear applications and Signal generator circuits using op-amp and verify the same using simulation Tool.
5. Design and analyze the applications of op-amp as filters, 555 timers IC as Multivibrators and D-A and A-D converter circuits, verify the same using simulation Tool.

COURSE CONTENTS

UNIT-1 (8Hrs)

Introduction to operational amplifiers: Operational amplifier description, Basic operational amplifier circuit, OPAMP 741 IC (excluding IC amp circuit), Voltage follower circuit, non-inverting amplifier, Inverting amplifier.

Operational Amplifier parameters: Input and Output voltage, Common mode and supply rejection ratio, Offset voltages and currents, Input and output impedances, Slew rate and frequency limitations.

Text1: 1.1, 1.2, 1.3, 1.4, 1.5, 1.6, Text1: 2.1, 2.2, 2.3, 2.4, 2.5

UNIT-2 (8Hrs)

OPAMP as AC Amplifier: Capacitor coupled voltage follower, Capacitor coupled non inverting amplifier, Capacitor coupled inverting amplifier, setting the upper cut off frequency

OPAMP's frequency response and compensation: OPAMP circuit stability, Frequency and phase response, Frequency compensating methods.

Text 1: 4.1,4.3,4.5,4.6,4.7,4.8 **Text 1: 5.1, 5.2, 5.3**

UNIT-3 (8Hrs)

Miscellaneous OPAMP linear applications: Voltage sources, Current sources, Current amplifiers, Instrumentation amplifier.

Signal Processing Circuits: Precision half wave rectifiers, Precision full wave rectifiers, Clipping circuits, Clamping circuits, Peak detectors, Sample and hold circuits

Text 1: 6.1, 6.2, 6.4, 6.8

Text 2:4.6, 4.7: 7.1, 7.2, 7.3, 7.4, 7.5, 7.6

UNIT-4 (8Hrs)

Differentiating and Integrating Circuits: Differentiating circuit, Differentiator Design, Integrating circuit, Integrator Design,

OPAMP nonlinear circuits: OPAMP in switching circuits, crossing detectors inverting Schmitt trigger circuit, Non-inverting Schmitt circuits, Astable multivibrator, and Mono stable multivibrator.

Signal Generator: Triangular / Rectangular wave generator, Waveform Generator Design, Phase Shift Oscillator, Wein Bridge Oscillator

Text 1: 8.1, 8.2, 8.4, 8.5, 9.1, 9.2, 9.3, 9.4, 9.5, 9.6

Text 1: 10.1, 10.2, 10.3, 10.5

UNIT-5 (7Hrs)

Active Filters: All Pass shifting Circuits, First order Low Pass active filter, First order high pass filter, Band pass filter, Band Stop filter.

555 Timer: Description of functional diagram, Monostable operation, Astable operation, Schmitt trigger

D-A and A-D Converters: Basic DAC techniques, weighted Resistor DAC, R-2R Ladder DAC, A-D Converters, Direct Type ADCs: Parallel Comparator (flash) A/D Converter, Successive Approximation Converter.

Text 1:11.1, 11.2, 11.4, 11.8, 11.10,

Text 2:8.1-8.4, 10.1, 10.2, 10.2.1, 10.2.2, 10.3,10.3.1, 10.3.4

TEXT BOOKS

1. David A. Bell, “Operational Amplifiers and Linear IC's", PHI, 2nd edition, 2004.
2. D. Roy Choudhury and Shail B. Jain "Linear Integrated Circuits", New Age International, 2nd edition, 2006.

REFERENCE BOOKS

1. Allen Holberg : Analog and Mixed mode VLSI”
2. Robert. F. Coughlin and Fred.F.Driscoll,” Operational amplifiers and Linear Integrated Circuits”, Pearson, 2006.
3. Ramakant A. Gayakwad, "Op - Amps and Linear Integrated Circuits", PHI, 4th edition, 1999.

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (if needed)
- Regular review of students by asking questions based on topics covered in the class, Verification using simulation Tool.

COURSE ASSESSEMENT METHOD

CIE:

1. Hands on assignments for assessment of learning activities (LA1 and LA2, (2 hours per week as lab Experiments)
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.

CO-PO-PSO MAPPING

CO5	3	3	2	2	3							2	3	2	2	4

SEMESTER: IV			
DIGITAL SIGNAL PROCESSING			
Course Code	**18EC43**	**Credits**	**04**
Hours/Week(L-T-P)	**3-2-0**	**CIE Marks**	**50**
Total Hours	**52**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES
Signals and systems, Engineering Mathematics

COURSE OUTCOMES
After studying this course, students will be able to: 1. Interpret the response of LTI systems using time domain and frequency domain techniques. 2. Analyze frequency domain representations of real and complex discrete time signals. 3. Design an analog and digital filter for the given specifications 4. Realization of Digital filters designed for the given specifications using digital computations. 5. Apply signal processing algorithms for the given input signal/specifications

COURSE CONTENTS
UNIT-1 (11 Hrs)
Review of Signals and Systems – LTI systems, Fourier representation **Discrete Fourier Transforms (DFT):** Frequency domain sampling and reconstruction of discrete time signals. DFT as a linear transformation, its relationship with other transforms. Properties of DFT, multiplication of two DFTs- the circular convolution, Additional DFT properties. Ref: T1-7.1,7.2
UNIT-2 (Hrs)
Use of DFT in linear filtering, overlap-save and overlap-add method. **Fast-Fourier-Transform (FFT) algorithms:** Direct computation of DFT, need for efficient computation of the DFT (FFT algorithms), Radix-2 FFT algorithm for the computation of DFT and IDFT–decimation-in-time and decimation-in- frequency algorithms Ref: T1-7.3,8.1.1,8.1.3,8.1.4
UNIT-3 (Hrs)
Applications of FFT Algorithms, Goertzel algorithm, and chirp-z transform. Ref: T1:8.2,8.3 **Analog filter design:** Characteristics of commonly used analog filter – Butterworth and Chebyshev (Type 1) filters, analog to analog frequency transformations. Ref: T2: Chapter 3 **Digital Signal processors:** Case study based on TMS320C6713 Digital Signal Processor, Programming examples. Ref: R3:1.2-1.6
UNIT-4 (Hrs)
IIR filter design: Approximation of derivative and bilinear transformation method, Matched Z-Transforms, Verification for stability and linearity during mapping. Design of IIR Filters from analog filter (Butterworth and Chebyshev) Impulse invariance, Mapping of transfer functions. **Structure for IIR Systems:** Direct forms, Cascade form, Parallel form structures. Ref: T2:4.0-4.5, 5.1-5.3,T1:10.2.4-10.2.6

UNIT-5 (Hrs)
FIR filter design: Introduction to FIR filters, design of FIR filters using Window based method, Linear phase FIR filter design using frequency sampling and Equiripple filter design. Design of FIR Differentiators. Design of Hilbert Transformers **Structure for FIR Systems:** Direct form, Linear Phase, Frequency Sampling Structure Lattice structure. Ref: Text book T2:4.6.1, T1:9.2

TEXT BOOKS

1. Digital signal processing – Principles Algorithms & Applications, Proakis &Monalakis, Pearson education, 4th Edition, New Delhi, 2007.
2. Fundamentals of Digital Signal Processing, Lonnie C. Ludeman,

REFERENCE BOOKS

1. Discrete Time Signal Processing, Oppenheim & Schaffer, PHI, 2003.
2. Digital Signal Processing, S. K. Mitra, Tata Mc-Graw Hill, 3rd Edition, 2010.
3. Digital Signal Processing and Applications with the C6713 and C6416 DSK, RulphChassaing, Wiley Interscience

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Tutorials/Assignments - 10 Marks
2. Surprise tests/Mini Project - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

SEMESTER: IV

FIELDS AND WAVES

Course Code	**18EC44**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES

1. Vector Analysis
2. Engineering Mathematics-I and II
3. Basic of Physics

COURSE OUTCOMES

After completion of the course students will be able to

1. Illustrate the basic mathematical concepts related to Electromagnetic vector field.
2. Apply the principles of Electro statistics to the solutions of problems relating to Electric field, Electric potential, boundary conditions & electric energy density.
3. Apply principles of Magneto statistics to solutions of problem relating to Magnetic field.
4. Analyze static & time varying EM fields as governed by Maxwell's equations.
5. Apply Maxwell's equations to analyze the propagation of EM wave in different media.

COURSE CONTENTS

UNIT-1 (8Hrs)

Vector Analysis: Scalars & vectors, Vector Algebra, the Cartesian coordinate system, vector components & unit vectors, vector field, Dot product & cross product, circular coordinate system, cylindrical coordinate system, spherical coordinate system.

Coulomb's Law and Electric Field Intensity: The Experimental law of Coulomb, Electric Field Intensity, and Field due to continuous Volume charge distribution, Field of a line charge, field of a sheet charge.

Electric Flux density, Gauss's Law & Divergence: Electric Flux density, Gauss Law, Applications of Gauss' Law: Differential Volume Element, Divergence, Maxwell's First Equation (Electrostatics), The vector operator DEL and Divergence Theorem.

Text 1: Ch 1.1, 1.2,1.3,1.4,1.5,1.6,1.71.8,1.9, Ch 2.2.1 to 2.5, Ch 3.3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7

UNIT-2 (8 Hrs)

Energy and Potential: Energy & potential in a moving point charge in an Electric Field, The Line Integral, |Definition of potential difference & potential, The potential field of a point charge, The potential field of a system of charges: conservative property, Potential Gradient, The Dipole, Energy density in the Electric Field.

Conductors, Dielectrics and Potential: Current & current density, continuity of current, metallic conductors, conductor properties & boundary conditions. The method of images, Semiconductors, Nature of Dielectric materials, Boundary conditions for perfect dielectric materials, Capacitance, several capacitance examples, capacitance of a two-wire line.

Poisson's and Laplace Equations: Poisson's & Laplace Equations, Uniqueness theorem, Examples of the solutions of Laplace's equation & Poisson's equation.

Text 1: Ch 4. 4.1, 4.2, 4.3, 4.4, 4.5, 4.6, 4.7, 4.8, Ch 5. 5.1, 5.2, 5.3, 5.4, 5.5, 5.6, Ch 7- 7.1, 7.2, 7.3, 7.4

UNIT-3 (8 Hrs)

The Steady Magnetic Field: Biot-Savart Law, Ampere's Circuital Law, Curl, Stokes' Theorem, Magnetic Flux & Magnetic Flux density, The Scalar & Vector magnetic potentials, Derivation of steady magnetic field Laws.

Magnetic Forces: Force on a moving charge, Force on a Differential current element, Force between differential Current elements, Force & Torque on a closed circuit.

Text 1: Ch 8. 8.1, 8.2, 8.3, 8.4, 8.5, 8.6, Ch 9. 9.1, 9.2, 9.3, 9.4

UNIT-4 (8Hrs)

Time- varying fields & Maxwell's Equations: Faraday's Law, Displacement current, Maxwell's equations in point form, Maxwell's equations in Integral form, The Retarded potentials.

Text-1: Ch 10. 10.1, 10.2, 10.3, 10.4, 10.5

UNIT-5 (5Hrs)

The Uniform Plane wave: Wave propagation in Free space, Wave propagation in Dielectrics, ThePoynting vector & power considerations, Propagation in good conductors: Skin Effect, Wave polarization.

Plane waves at Boundaries: Reflection of uniform plane waves at normal Incidence, Standing wave ratio, Wave reflection from multiple interfaces, Plane wave propagation in general Directions.

Text-1: Ch 12. 12.1, 12.2, 12.3, 12.4, 12.5, Ch 13. 13.1, 13.2, 13.3, 13.4

TEXT BOOKS

1. William H Hayt Jr. and John A Buck, "Engineering Electromagnetics", Tata McGraw-Hill, 6th Edition 2001.

SEMESTER: IV

ADVANCED MICROCONTROLLER

Course Code	**18EC45**	**Credits**	**04**
Hours/Week(L-T-P)	**4-0-0**	**CIE Marks**	**50**
Total Hours	**52(L)**	**SEE Marks**	**100**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES
Basic of Microcontroller (8051)

COURSE OUTCOMES

Students will be able to

1. Acquire the knowledge of an advanced microcontroller architectural features
2. Differentiate the instructions that an advanced microcontroller supports and to develop assembly level program applications.
3. Implement application programs using compatible EDA tools with associated libraries.
4. Synthesize HLL programs for interfacing the peripherals present in a microcontroller environment.
5. Analyze the interrupt events in advanced microcontroller programming.

COURSE CONTENTS

UNIT-1 (11Hrs)

ARM Cortex M3: ARM Cortex M3 Processor and ARM Family, Cortex-M3 Processor Applications, Architecture of ARM Cortex M3, Operation Modes, The built-in nested Vectored Interrupt Controller, Memory Map, The Bus Interface, The MPU, Low Power and High Energy Efficiency, Debugging Support

Text: 1.1, 1.2, 1.5, 2.1, 2.3, 2.4, 2.5, 2.6, 2.7, 2.9.1, 2.10

ARM Cortex M3 Architecture: Registers, Special Registers, Vector Tables, Stack Memory Operation, Reset Sequence

Text: 3.1, 3.2, 3.5, 3.6, 3.7

UNIT-2 (11Hrs)

ARM Cortex M3 Instruction Set: Assembly Basics, Instruction List, Instruction Descriptions, Several Useful Instructions in the Cortex M3

Text: 4.1, 4.2, 4.3, 4.4, 4.5, 4.6

ARM Cortex M3 Memory Systems: Memory System Features Overview, Memory Map, Memory Access Attributes, Memory Access Permissions, Bit-Band Operations, Unaligned Transfers, Exclusive Access, Endian Mode

Text: 5.1, 5.2, 5.3, 5.4, 5.5, 5.6

UNIT-3 (10Hrs)

ARM Cortex M3 Exceptions: Exception Types, Definition of Priorities, Vector Tables, Interrupt Inputs and Pending Behaviour, Fault Exceptions, Supervisor Call and Pendable Service Call

Text: S.1, 7.2, 7.3, 7.4, 7.5, 7.6

ARM Cortex M3 NVIC: Nested Vectored Interrupt Controller Overview, The Basic Interrupt Configuration, Example Procedures in Setting Up an Interrupt, Software Interrupts, The SYSTICK Timer

Text: 8.1, 8.2, 8.3, 8.4, 8.5, 8.6

UNIT-4 (10Hrs)

ARM Cortex M3 Programming: Overview, A Typical Development Flow, Using C, CMSIS, Using Assembly, Using Exclusive Access for Semaphores, Using Bit Band for Semaphores, Working with Bit Field Extract and Table Branch

Text: 10.1, 10.2, 10.3, 10.4, 10.5, 10.6

UNIT-5 (10Hrs)

ARM Cortex M3 MPU and Other Features: MPU Registers, Power Management, Multiprocessor Communication, Self-Reset Control

Text: 13.2, 14.2, 14.3, 14.4

ARM Cortex M3 Debug Architecture: Debugging Features Overview, Core Sight Overview, Debug Modes, Debugging Events, Text: 15.1, 15.2, 15.3, 15.4

TEXT BOOK

1. Joseph Yiu, "The Definitive Guide to the ARM Cortex-M3, Newnes, (Elsevier), 2008

REFERENCE BOOK

SEMESTER: IV

DSD USING VERILOG

Course Code	**18EC46**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES
1. Digital Electronics

COURSE OUTCOMES
1. Students will be able to relate the basic concepts of Verilog HDL. 2. Students will be able to familiarize with the different levels of abstraction in Verilog using different modelling styles. 3. Students will be able to build and translate different combinational and sequential circuits into Verilog HDL code 4. Students will be able to construct, compile and execute Verilog HDL programs using provided software tools 5. Students will be able to design digital components and circuits that are testable, reusable and synthesizable.

COURSE CONTENTS
UNIT-1 (8Hrs)
Design Concepts: Digital Hardware, the design Process, Design of Digital Hardware, Introduction to CAD tools, standard chips, Programmable Logic Devices, Custom Chips and Gate arrays, Introduction to Verilog, What is Verilog HDL, History, Major capabilities. **Text 1**:1.1, 1.2, 1.3, 2.9, 3.5, 3.6, 3.7 **Text 2**:1.1, 1.2.1.3
UNIT-2 (7Hrs)
Language Elements & Modules and ports: Identifiers, comments, format, compiler directives, value set, data types, parameters modules and ports **Text2**: 3.1-3.8 **Text3**:4.1,4.2
UNIT-3 (8Hrs)
Gate Level Modelling and Data Flow Modelling: Gate types, Gate delays, Continuous assignments, Delays, Expressions, Operators and Operands, Operator types, Examples. **Text3**:5.1-5.3, 6.1-6.6
UNIT-4 (8 Hrs)
Behavioral Modelling and UDP: Structured Procedures, Procedural assignments, Timing controls, Conditional statements, multi-way branching, Loops, Sequential and Parallel Blocks, Examples, UDP Basics, Combinational UDPs, Sequential UDPs, UDP Table shorthand symbols, Guidelines for UDP designs **Text3**: 7.1-7.7,7.9, 12.1-12.5
UNIT-5 (7 Hrs)

Tasks and Functions, Useful Modelling Techniques and Examples: Difference between task-functions, Tasks, Functions, Procedural continues assignments, Overriding assignments, overriding parameters, conditional compilation and execution, timescales, Modelling simple elements, delays, Truth-table, conditional operations, synchronous logic,state machines and examples.

Text 3:8.1-8.3,9.1-9.4 , Text2:12.1-12.17

TEXT BOOKS

1. Stephen Brown, ZvonkoVransic," Fundamentals of digital logic with verilog Design", TMH 2nd Edition.
2. J. Bhasker," A verilog HDL Primer" BS Publications,2nd Edition.
3. Samir Palnitkar, "Verilog HDL-A Guide to digital design and synthesis", 2nd Edition, Pearson education. 2003

REFERENCE BOOKS

1. NazeihM.Botros, "HDL Programming (VHDL & Verilog)", John Weily - India & Thomson Learning, 2006

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (if needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

- Two Surprise Tests, 10 Marks each. Best of two tests will be taken.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

SEMESTER: IV

DSD USING VERILOG LAB

Course Code	**18ECL47**	**Credits**	**01**
Hours/Week(L-T-P)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**26(P)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core Lab**

PRE-REQUISITES

- Digital Electronics

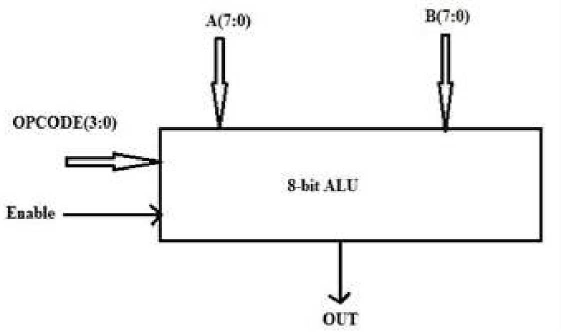
COURSE OUTCOMES

After the completion of the course, Students will be able to

1. Familiarize with EDA tools for simulation, verification and synthesis of digital design.
2. Simulate Combinational circuits in Dataflow, Behavioral and Gate level Abstraction using Verilog HDL code
3. Program sequential circuits like flip flops and counters in Behavioral description and obtain simulation waveforms.
4. Implement Combinational and Sequential circuits on FPGA and test the hardware.
5. Interface/Emulate the hardware to the FPGA and obtain the required output.

LIST OF EXPERIMENTS

1. Realization of logic gates using Verilog HDL code.
2. Realization of combinational designs using Verilog HDL code
   a. 2 to 4 decoders
   b. 8 to 3 (encoder without priority & with priority)
   c. 8 to 1 multiplexer
   d. 4 bit binary to gray converter and vice versa
   e. 4 bit binary to excess 3 and vice versa
   f. De-multiplexer, comparator.
3. Realize and verify the function of a Full Adder in three modelling styles using HDL code
4. Design of parallel adders using 1-bit full adder.
5. Write a model for 8/32-bit ALU using the schematic diagram shown below



5. Develop the HDL Code for the following flip-flops: SR, D, JK, and T

6. Design 4-bit binary, BCD counters (Synchronous reset and asynchronous reset) and “any sequence” counters.
7. Design and Realize an FSM for the given specification (specification in terms of State diagram, state table, problem statement)

Note: Test bench program should be written for all the above experiments

INTERFACING

1. Write HDL code to display messages on the given seven segment display and accepting Hex key pad input data.
2. Write HDL code to control speed, direction of DC and Stepper motor.
3. Write HDL code to generate different waveforms (Sine, Square, Triangle, Ramp etc.,) using DAC, change the frequency and amplitude.

SEMESTER: IV

ADVANCED MICROCONTROLLER LAB

Course Code	**18ECL48**	**Credits**	**01**
Hours/Week(L-T-P)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**02hrs/week**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core Lab**

PRE-REQUISITES

- Knowledge of Digital electronics
- Knowledge of ARM cortex M3 instruction set and exposure to C programming

COURSE OUTCOMES

The students will be able to

1. Demonstrate the usage of standard tools for system development
2. Formulate programs using the assembly instructions of the processor and test using the IDE Environment
3. Analyze the working and execution of Special instructions of the processor
4. Develop Embedded C programs for Interfacing different input/output peripherals to microcontrollers.
5. Implement different communication protocols used in the design of portable device

LIST OF EXPERIMENTS

Two Parts: With Simulator and Board

A. Simulation – with ASM

1. Introduction / Overview of the IDE – Creation of Project, Editor, Compilation, Debugging / Execution (All with a sample code)

   Programming in Assembly for
2. Addition, Multiplication, calling subroutines, multiple source files, writing result(s) to RAM
3. The Execution of various special instructions of the processor (such as CMP / TST, LDRD / STRD, UBFX / SBFX, SDIV / UDIV, REV / REVH / REVSH, SXTB / SXTH / UXTB / UXTH, BFC etc.)
4. GPIOs interfacing LED and Switch
5. Timer Peripheral for demonstrating the use of interrupts
6. Mixed Programming

B. With the Board

Programming the device TM4C123GH6PM using Embedded C for

7. Controlling LED, Buzzer with SW and Timer (use of interrupt)
8. Display of text messages on LCD through UART Communication
9. Interfacing Motors- DC, Stepper
10. Generation of Sine wave through DAC using I2C interface
11. Generation of PWM signal whose duty cycle can be varied
12. The on-board Temperature Sensor
13. Special Communication Interface CAN

V SEMESTER

SEMESTER: V			
CONTROL SYSTEMS			
Course Code	**18EC51**	**Credits**	**4**
Hours/Week(L-T-P-S)	**3-2-0**	**CIE Marks**	**50**
Total Hours	**39(L)+26(T)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

COURSE OUTCOMES

At the end of the course, the students will be able to

1. Interpret the mathematical model of mechanical, electrical and electromechanical systems
2. Formulate transfer function for a given control system using block diagram reduction techniques and signal flow graph method.
3. Determine the time response specifications of first and second order systems by using standard test signals
4. Analyze the overall performance and stability of the control system using time domain and frequency domain approaches.
5. Anayze and interpret all the stability concepts using MATLAB tool

COURSE CONTENTS

UNIT-1 (08Hrs)

Introduction to Control Systems: Types of Control Systems, Effect of Feedback Systems, Differential equation of Physical Systems – Mechanical Systems, Electrical Systems, Analogous Systems. Block diagrams and signal flow graphs: Transfer functions, Block diagram algebra and Signal Flow graphs.

Introduction to MATLAB/Simulink for control system. Implementation of block diagram and signal flow diagram using MATLAB/Simulink.

Text Book T1: Chapter 1: 1.1,1.3,1.5,1.6 , Chapter 2: 2.1,2.2,2.4,2.5,2.6,2.7

Text Book T2: Chapter 3

UNIT-2 (07Hrs)

Time Response of feedback control systems: Standard test signals, Unit step response of First and Second order Systems. Time response specifications, Time response specifications of second order systems, steady state errors and error constants.

Analysis of second order system using MATLAB/ Simulink

Text Book T1: Chapter 5:5.1,5.2,5.3,5.4,5.5

Text Book T2: Chapter 3

UNIT-3 (08Hrs)

Stability analysis: Concept of stability, necessary conditions for Stability, Routh- stability criterion, Relative stability criterion

Root-Locus Techniques: Root locus concepts, Construction of root loci, Stability of System.

Time domain analysis of Root Locus plot exercises using MATLAB/Simulink

Text Book T1: Chapter 6:6.1,6.2,6.3,6.4,6.5 Chapter 7:7.1,7.2,7.3

Text Book T2: Chapter 3

UNIT-4 (08Hrs)

Frequency domain analysis and stability: Introduction to Polar Plots, Mathematical preliminaries, Nyquist Stability criterion, Nyquist plots.

Text Book T1: Chapter 8: 8.1,8.3, Chapter 9: 9.1,9.2,9.3
Text Book T2: Chapter 3

UNIT-5 (08Hrs)

Frequency domain analysis and stability using Bode plots: Correlation between time and frequency response, Bode Plots, Experimental determination of transfer function.

Analysis of Bode plots exercises using MATLAB/Simulink
Text Book T1: Chapter 8: 8.2,8.4,8.5,8.6,8.7
Text Book T2:Chapter 3

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Tutorial/MATLAB based assignments/Miniproject - 10Marks
2. Surprise Tests/Assignments -10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO/ PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	B T

SEMESTER: V

COMMUNICATION SYSTEM - I

Course Code:	**18EC52**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours:	**39(L)**	**SEE Marks**	**50**
Exam Hours:	**03**	**Course Type**	**Core**

PRE-REQUISITES

1. Fundamentals of Signals and Systems.
2. Basics of probability, Fourier transform

COURSE OUTCOMES

Students will be able to :

1. Illustrate the fundamentals of basic communication system, random process and types of noise and its effect on communication system.
2. Apply concepts of Random process to the communication systems.
3. Analyze various methods of baseband analog transmission and detection in time domain and frequency domain.
4. Analyze the performance of communication system in the presence of noise.
5. Emphasize on fundamentals of digital transmission techniques.

COURSE CONTENTS

UNIT-1 (11Hrs)

Introduction: Elements of communication system, Limitations and resources of communication system
Random process: Mean, Correlation and Covariance function: Power Spectral Density, Principles of autocorrelation function, cross –correlation functions. Properties of Gaussian process.
Noise: Introduction, shot noise, thermal noise, white noise, Noise equivalent bandwidth **Noise in Continuous wave modulation systems:** Introduction, AM Receiver model
Text 1: Ch.1: 1.4,1.6Ch 8: 8.5,8.7,8.9,8.10,8.12 Ch9: 9.1,9.2
Text2: Ch1 : 1.9,1.10

UNIT-2 (11Hrs)

Amplitude Modulation: Introduction to AM: Time-Domain description, Frequency – Domain description. Generation of AM wave: Square Law Modulator, switching modulator. Detection of AM waves: envelope detector.
Double side band suppressed carrier modulation (DSBSC): Time-Domain description, Frequency-Domain representation, Generation of DSBSC waves: Balanced Modulator, ring modulator. Coherent detection of DSBSC modulated waves. Costas loop. Quadrature carrier multiplexing, Noise in DSB-SC receivers
Text 1: Ch 7: 7.1,7.2,7.3 Ch9:9.3

UNIT-3 (10Hrs)

Single Side-Band Modulation (SSB): Hilbert transform, properties of Hilbert transform, Pre-envelope, Canonical representation of band pass signals.Single side-band modulation, Frequency-Domain description of SSB wave, Time-

Domain description. Phase discrimination method for generating an SSB modulated wave. Demodulation of SSB waves. Noise in SSB receivers

Vestigial Side-Band Modulation (VSB): Frequency – Domain description, Time - Domain description, Comparison of amplitude modulation techniques, Frequency translation, Frequency division multiplexing. Application: AM radio.

Text 1: Ch. 7: 7.4, 7.5,7.6,7.7,7.8,7.9 Ch9: 9.3

UNIT-4 (10Hrs)

Angle Modulation (FM): Basic definitions, FM, narrow band FM, wide band FM, transmission bandwidth of FM waves, generation of FM waves: indirect FM and direct FM.

Demodulation of FM waves: Phase-locked loop, Nonlinear model of the phase – locked loop, Linear model of the phase – locked loop, Nonlinear effects in FM systems

Noise in FM receivers, FM threshold effect, Pre-emphasis and De-emphasis in FM

Text 1: Ch 7: 7.10,7.11,7.12. Ch9: 9.5,9.6, 9.7,9.8

UNIT-5 (10Hrs)

Pulse Modulation: Introduction, Sampling Process, Different forms of pulse modulation, Pulse Amplitude modulation, Bandwidth- noise trade-off, Quantization Process, Basic Elements Of PCM system.

Text 2: Ch 3- 3.1,3.2,3.3.,3.4,3.5,3.6,3.7

SEMESTER: V			
FUNDAMENTALS OF VLSI DESIGN			
Course Code:	**18EC53**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES
Analog Electronic Circuits, Digital Electronics, Basics of Op-amp

COURSE OUTCOMES
Students will be able to
1. **Analyze** basic operation of MOSFETs.
2. **Characterize** and model MOSFETs using delay Models and parasitic parameters
3. **Design** combinational circuits at the MOSFET level for given specifications/functionality
4. **Design** sequential circuits at the MOSFET level for given specifications/functionality
5. **Analyze** basic physical design concepts employed in standard physical design techniques.

COURSE CONTENTS
UNIT-1 (11 Hrs)
Introduction: VLSI Design Flow, CMOS logic, CMOS Fabrication and Layout. **MOS Transistor Theory:** Introduction, Ideal I-V Characteristics**,** Simple MOS Capacitance Models, Non-ideal Effects, Velocity Saturation and Mobility Degradation, Channel Length Modulation, Body Effect, DC Transfer Characteristics, Complementary CMOS Inverter DC Characteristics, Beta Ratio Effects, Noise Margin. **Text 1: 1.4, 1.5, 1.6, 2.1, 2.2, 2.3.1, 2.4.1, 2.4.2, 2.4.3 , 2.5.1, 2.5.2, 2.5.3**
UNIT-2 (11 Hrs)
Circuit Characterization and Performance Estimation: Complementary: Introduction, Delay Estimation, Logical Effort and Transistor Sizing, Power Dissipation, Interconnect, Design Margin **Text 1: 4.1, 4.2, 4.3, 4.4, 4.5, 4.6**
UNIT-3 (10 Hrs)
Combinational Circuit Design: Introduction, Circuit families, Static Families, Ratioed Circuits, Cascode Voltage Switch Logic, Dynamic Circuits, Pass Transistor Circuits, BiCMOS Circuits, Other Circuit families, Comparison of Circuit Families **Text 1: 6.1, 6.2, 6.3.3, 6.3.4, 6.5**
UNIT-4 (10 Hrs)
Sequential Circuit Design: Introduction, Sequencing Static Circuits, Conventional CMOS Latches, Conventional CMOS Filp –flops, Datapath Subsystems, Single Bit Adder **Text 1: 7.1, 7.2, 7.3.1, 7.3.2, 8.1, 8.2.1**
UNIT-5 (10 Hrs)

Basics of Physical Design: Concepts of Full Custom Design and Semi-Custom Design Libraries, Standard Cells, Transistor sizing, Input-Output Pads, Library Characterization, Concepts of Floor planning, Power planning, Concepts of Placement and Routing. **Text 2: Chapter 1, 2.1, 3.1, 4.1**

SEMESTER: V

DATA STRUCTURES USING C++

Course Code:	**18EC54**	**Credits**	**03**
Hours/Week(L-T-P)	**3-2-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES

- Satisfactory completion and understanding of C programming

COURSE OUTCOMES

Students will be able to:

1. **Interpret** the various phases associated with the development of a system
2. **Analyze** the OOPs paradigm through different C++ language examples
3. **Analyze** the operations of Linear Data structures: Stack, Queue and Linked List and their applications
4. **Apply** the basics of data processing approaches like hashing and sorting for solving computing problems
5. **Apply** concepts of Data Structures using C++ for designing algorithms

COURSE CONTENTS

UNIT-1 (8 Hrs)

Overview: System Life Cycle
Chapter 1: 1.1,

Object-Oriented Design, Data Abstraction and Encapsulation, Basics of C++: Program Organization in C++, Scope in C++, C++ Statements and Operators, Data Declarations in C++, Comments in C++, Input / Output in C++, Functions in C++, Parameter Passing in C++, Function Name Overloading in C++. Classes and Objects, Inline Functions, Dynamic Memory Allocation in C++, Exceptions, STL, ADT and the C++ Class
Chapter 1: 1.2 (1.2.1 to 1.2.3), 1.3, 1.4 (1.4.1 to 1.4.12), 1.6

UNIT-2 (8 Hrs)

Array as an Abstract Data Type, Representation of Arrays, String Abstract Data Type, String Pattern Matching: A Simple Algorithm
Chapter 2: 2.1 (2.1.1 to 2.1.6), 2.2, 2.5, 2.6 (2.6 and 2.6.1)

Templates in C++, Template Functions, Using Templates to Represent Container Classes, The Stack and Abstract Data Type, The Queue Abstract Data Type, Subtyping and Inheritance in C++,
Evaluation of Expressions, Expressions, Postfix Notation, Infix Notation
Chapter 3: 3.1 to 3.4, 3.6

UNIT-3 (8 Hrs)

Singly Linked Lists and Chains, Representing Chains in C++, defining a Node in C++, Designing a Chain Class in C++, Pointer Manipulation in C++, Chain Manipulation Operations

The Template Chain Class, Implementing Chain with Templates, Chain Integrators, Chain Operations, Reusing a class, Circular Lists, Available Space Lists, Linked Stacks and Queues, Doubly Linked Lists

Chapter 4: 4.1, 4.2 (4.2.1 to 4.2.4), 4.3 (4.3.1 to 4.3.4), 4.4, 4.5, 4.6, 4.10

UNIT-4 (8 Hrs)

TREES: Introduction: Terminology, Representation of Trees, Binary Trees: ADT, Properties of Binary Tree, Binary Tree Representations,

Binary Tree Traversal and Tree Iterators: Introduction, In order, Preorder, Post order Traversal, Iterative In order Traversal, Level Order Traversal, Traversal without stack,

Heaps: Priority Queues, Definition of Max Heap, Insertion and Deletion from Max Heap, Binary Search Trees

Chapter 5: 5.1 (5.1.1 to 5.1.2), 5.2 (5.2.1 to 5.2.2), 5.3 (5.3.1 to 5.3.7, 5.6 (5.6.1 to 5.6.4), 5.7 (5.7.1 to 5.7.6)

UNIT-5 (7 Hrs)

SORTING AND HASHING:

Motivation, Insertion Sort, Quick Sort, How Fast Can We Sort? Merge Sort: Merging, Iterative Merge Sort, Recursive Merge Sort, Heap Sort

Introduction to Hashing, Static Hashing: Hash Tables, Hash Functions, Secure Hash Functions, Overflow Handling, Theoretical Evaluation of Overflow Techniques, Dynamic Hashing: Motivation, Dynamic Hashing using Directories, Directory less Dynamic Hashing

Chapter 7, 8: 7.1, 7.2, 7.3, 7.4, 7.5 (7.5.1 to 7.5.3), 7.6, 8.1, 8.2 (8.2.1 to 8.2.5), 8.3 (8.3.1 to 8.3.3)

REFERENCE BOOKS

1. Object Oriented Programming with C++, E.Balaguruswamy, TMH, 6th Edition, 2013.
2. Mark Allen Weiss: Data Structures and Algorithm Analysis in C++, 3rd Edition, Pearson Education
3. Yedidyah, Augenstein, Tannenbaum: Data Structures Using C and C++, 2nd Edition, Universities Press, 2003
4. Sahni: Data Structures, Algorithms and Applications in C++, 2nd Edition, McGraw Hill
5. W. Savitech: “Problem Solving with C++, The OOP, Fourth Edition, Pearson Education

TEACHING METHODOLOGY

- Blackboard teaching and PowerPoint presentations (If needed)
- Programming Examples using C++
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESEMENT METHOD

CIE:

1. Tutorials (hands on programming) - 20 Marks
2. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO/PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT

CO5	3	3	3	3	3			1	2	3		3		2	2	3

SEMESTER: V

MICROWAVE AND RADIATING SYSTEMS

Course Code	**18EC55**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES

- Basics of Signals and Systems
- Basics of Field Theory

COURSE OUTCOMES

1. Students will be able to model a transmission line and analyze the different performance parameters associated with them.
2. Students will be able to analyze the wave propagation inside a waveguide and develop a suitable equation for Electric and magnetic fields and design a suitable impedance matching scheme.
3. Analyze and study the s parameters associated with different types of microwave passive devices and their performance parameters.
4. Study and analyze the fundamental parameters associated with antennas and will be able to plot the radiation pattern for basic wire antennas of different lengths and evaluate their Electric and magnetic fields.
5. Design and analyze the construction and performance of different types of antennas and apply them for realtime applications.

COURSE CONTENTS

UNIT-1 (11 Hrs)

Microwave transmission lines: Introduction, transmission lines equations and solutions, reflection and transmission coefficients, standing waves and SWR, line impedance and line admittance, Microwave coaxial connectors.

Text 1**:** *Ch 3.3.1, 3.2, 3.3, 3.4, 3.7*

UNIT-2 (11 Hrs)

Microwave waveguides and Smith Chart: Rectangular waveguides: Solutions of wave equations in rectangular co-ordinates, TE modes in rectangular waveguides.

Smith chart: Introduction to Smith chart, A valuable Graphical aid, Derivation of Smith chart. Smith chart's Circular scales, Smith Chart's Radial scales. Applications of Smith chart: Input impedance determination using a known load, Input impedance determination using input Reflection Coefficient, Determination of Admittance from impedance, Determination of value and location of Zmax and Zmin from a known load, Single stub matching.

Text 1:Ch4: 4.0,4.1.1,4.1.2 ,4.1.3

Text 2: Ch. 9: 9.1, 9.2, 9.3,9.5,9.6 ;Ch10: 10.2.1, 10.2.2, 10.2.3, 10.2.4, 10.2.5 ;Ch. 11: 11.6.3

UNIT-3 (10 Hrs)

Circuit Representations of Two port RF/Microwave Networks Introduction, Low Frequencyparameters, High Frequency parameters, Properties of S parameters, Shifting Reference planes, Generalized scattering parameters. Passive devices: Attenuators, Waveguide Tees, Magic tees, Hybrid rings, waveguide corners, Bends and Twists.

Microwave components: Directional couplers: Two hole directional coupler, S matrix of a directional coupler, Circulators and Isolators.

Simulation of passive devices using HFSS, Matlab

Text 2: Ch. 3. 3.1, 3.2, 3.3, 3.4 ; Ch. 8 8.1,8.2,8.3,8.4,8.5,8.6

Text 1: Ch4. 4.4,4.5,4.6

UNIT-4 (10 Hrs)

Antenna Basics: Introduction, **antenna radiation mechanism**, basic Antenna parameters, patterns, beam area, radiation intensity, beam efficiency, directivity and gain, antenna apertures, effective height**, bandwidth, radiation efficiency,** antenna temperature and antenna field zones.

Wire Antennas: Electric dipoles: Introduction, short electric dipole (fields, **power density, power radiated, directivity,** and radiation resistance), Half wave dipoles (field: qualitative analysis **power density, power radiated, directivity**, radiation resistance).

Text 3: 2.1-2.10,2.13,2.19 6.1-6.6

UNIT-5 (10 Hrs)

Antenna Arrays: Introduction, ,Point sources ,Power theorem, Array of two isotropic point sources (Broad side and End fire with out of phase), N element linear array with uniform spacing and phase(Array factor), Broadside and end fire array, pattern multiplication.

Antenna Types: Folded dipole

Yagi-Uda array, parabolic reflectors(introduction, properties, field intensity ratio, feed system), log periodic antenna, Rectangular patch antenna(Introduction, features, limitations, advantages, feed methods) horn antenna (Qualitative analysis only: Construction, working). Simulation of few designs Using HFSS, Matlab

Text 3: 5.1-5.6, 5.9 (case1 and case2),5.10,5.13(case1 and case2) 6.24, 9.1,9.5,9.7,9.9,11.7, 7.19,7.20, 14.1-14.5

TEXT BOOKS

1. Liao, “Microwave Devices and circuits”,Pearson Education,2008
2. Matthew M. Radmanesh,”Radio Frequency and Microwave Electronics”, Pearson Education,2002
3. John D.Krauss, Ronald J Marhefka, Ahmad S Khan “Antennas and Wave Propagation”, McGraw- Hill International edition, IV edition, 2013**.**
4. Stutzman and Thiele, ”Antenna Theory and Design”, TMH, 3rd Ed, 2001

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (if needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESEMENT METHOD

CIE:

- Two Surprise Tests of 10 Marks each. Best of two tests will be taken.
- Tool based assignments covering the syllabus for 10 Marks
- Three internals of 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.
- Two Questions are to be set from each unit, carrying 20 Marks each.
- Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

PROGRAM ELECTIVE – 1

SEMESTER: V

DIGITAL IMAGE PROCESSING

Course Code	**18ECE561**	**Credits**	**03**
Hours/Week(L-T-P)	**4-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES

- Digital Signal Processing
- Engineering Mathematics (Linear Algebra, Probability Theory)

COURSE OUTCOMES

At the end of the course students should be able to: ·

1. Interpret the basics of mathematical concepts to understand image processing algorithms
2. Interpret image formation and the role human visual system plays in perception of gray and color image data.·
3. Design image analysis techniques in the form of image segmentation, image enhancement techniques and morphological Image processing
4. Apply image processing techniques in both the spatial and frequency (Fourier)domains.
5. Analyze the output for the various image processing blocks for the given input image

COURSE CONTENTS

UNIT-1 (8 Hrs)

Digital Image Fundamentals

What is Digital Image Processing? Origins of Digital Image Processing, Examples of fields that use DIP, Fundamental Steps in Digital Image Processing, Components of an Image Processing System, Elements of Visual Perception, Image Sensing and Acquisition, Image Sampling and Quantization, Some Basic Relationships Between Pixels, Linear and Nonlinear Operations

Text 1: 1.1 – 1.5, 2.1, 2.3-2.5, 2.6.2

UNIT-2 (8 Hrs)

Image transforms

Introduction, Two dimensional Orthogonal and Unitary transforms, Properties of Unitary transforms, 2-Dimensional DFT, Discrete Cosine Transform (DCT), Discrete Sine transform (DST), Hadamard transform, Haar transform, Slant transform, KL Transform,

Text 2: 5.1-5.3, 5.5-5.11

UNIT-3 (8 Hrs)

Image enhancement

Spatial Domain: Some Basic Intensity Transformation Functions, Histogram Processing, Fundamentals of Spatial

Filtering, Smoothing Spatial Filters, Sharpening Spatial Filters

Frequency Domain: Basics of Filtering in the Frequency Domain, Image Smoothing using frequency domain filters, Image Sharpening Using Frequency Domain Filters, selective filters

Text 1: 3.2-3.6, 4.7-4.10

UNIT-4 (8 Hrs)

Image Restoration and Color Image Processing

Image Restoration: Noise models, Restoration in the Presence of Noise only - Spatial Filtering, Periodic noise reduction by Frequency Domain Filtering, Linear Position-Invariant Degradations, Estimating the Degradation Function, Inverse Filtering, Minimum Mean Square Error (Wiener) Filtering and Constrained Least Squares Filtering

Color Image Processing: Color Fundamentals, Color Models, Pseudo color Image Processing

Text 1: 5.2-5.9, 6.1-6.3

UNIT-5 (7 Hrs)

Morphological Image Processing and Image segmentation

Morphological Image Processing: Preliminaries, Erosion and Dilation, Opening and Closing, the Hit-or- Miss Transforms, Some Basic Morphological Algorithms

Image Segmentation: Fundamentals, point line and edge detection**,** Thresholding, Region-Based Segmentation

Text 1: 9.1-9.5, 10.1-10.4

TEXT BOOKS

Text Book:

1. Digital Image Processing- Rafael C Gonzalez and Richard E. Woods, PHI 3rd Edition, 2010. Fundamentals of Digital Image Processing-A. K. Jain, Pearson 2004.

REFERENCE BOOKS

Reference Books:

1. Digital Image Processing- S.Jayaraman, S.Esakkirajan, T.Veerakumar, Tata McGraw Hill 2014.

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Mini Project (Groupwise) - 10Marks
2. Surprise tests -10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	B T

CO5	3	2	1		2				2			**1**		1	3	**3**

SEMESTER: V

ARTIFICIAL NEURAL NETWORKS

Course Code	**18ECE562**	**Credits**	**03**
Hours/Week (L-T-P)	**4-0-0**	**CIE Marks**	**50**
Total Hours	**39 (L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

COURSE OUTCOMES

CO1: Explain the basic models of ANN

CO2: Demonstrate the basic learning schemes for supervised and unsupervised systems

CO3: Illustrate afew Algorithms in Single/Multi-layer Feed-forward ANN

CO4: Design Single/Multi-layer Feed-forward ANN

CO5: Work in teams to Implement/Simulate applications of CNN

COURSE CONTENTS

UNIT-1 (11 Hrs)

Introduction: What is a neural network? Human brain; models of a neuron; neural networks as directed graphs; feedback; network architectures; knowledge representation.

Learning Processes: Error-correction learning; memory-based learning; Hebbian learning; competitive learning; Boltzmann learning; credit-assignment problem; learning with and without a teacher.

Textbook #1: 1.1-1.7, 2.1-2.9

UNIT-2 (11 Hrs)

Single-Layer Perceptron: Adaptive filtering problem; unconstrained optimization techniques; linear least-squares filters; least-mean-square algorithm; learning curves; learning rate annealing techniques, Perceptron

Textbook #1: 3.1-3.8

UNIT-3 (10 Hrs)

Multi-Layer Perceptron: Preliminaries, Back-Propagation Algorithm, XOR problem, Heuristics to make Back-Propagation Algorithm perform better

Textbook #1: 4.1-4.6

UNIT-4 (10 Hrs.)

Support Vector Machines: Optimal Hyperplane for Linearly Separable Patterns, Optimal Hyperplane for Non-separable patterns, How to Build a SVM for Pattern recognition.

Textbook #1: 6.1-6.4

UNIT-5 (10 Hrs)

Convolutional Neural Networks: Concept and Applications in Image and video.

Textbook #1:4.19, other sources from the Internet

TEXT BOOKS

1.	“Neural Networks: A Comprehensive Foundation,”S.Haykin, 2nd Ed, Prentice Hall of India, 2003.

REFERENCE BOOKS

1. “Artificial Neural Systems”, JacekZurada

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE

1. Assignment - 10 Marks
2. Surprise tests - 10Marks.
3. 3 mid-sem exams (30 Marks each) will be conducted and the Average of best two will be taken.

SEE

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO/PO	**PO1**	**PO2**	**PO3**	**PO4**	**PO5**	**PO6**	**PO7**	**PO8**	**PO9**	**PO10**	**PO11**	**PO12**	**PSO1**	**PSO2**	**PSO3**	**BT**

SEMESTER: V

FPGA ARCHITECTURE AND APPLICATIONS

Course Code:	**18ECE563**	**Credits**	**04**
Hours/Week(L-T-P)	**4-0-0-0**	**CIE Marks**	**50**
Total Hours	**52(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

COURSE OUTCOMES

Students will be able to

1. Have a basic knowledge of FPGA Architecture and FPGA design flow
2. Get hands on experience on FPGA EDA tool.
3. Design and implementation of digital logic circuits for various applications.
4. Design and Analyze data path circuits.
5. To implement digital system on FPGA

COURSE CONTENTS

UNIT-1 (8Hrs)

Introduction to Programmable logic Device:-Logic Implementation Options, FPGA, Advantages and Disadvantages of FPGA, Technology Trends, Designing for FPGAs.

FPGA Programming Technology: SRAM Programmable FPGAs, The Xilinx XC4000 Architecture, Programming the FPGA, Software, The future, Design Applications(Counter example)

Text 1 (Chapter1:1.1 to 1.6, Chapter 2: 2.1 to 2.6)

UNIT-2 (8Hrs)

Algorithmic State Machine, Digital System Design Using ASM Chart and PAL

Design of Combinational and Sequential Circuits: Introduction to Hardware Design Language, Design of Combinational Circuits, Verilog Modeling of Sequential Circuits, Coding Organization. Writing Test bench for the Design.

Text 2 (Chapter 2: 2.16 to 2.17, Chapter 3: 3.1 to 3.4, Chapter4: 4.1 to 4.3)

UNIT-3 (8Hrs)

RTL Coding Guidelines:-Synchronous Logic, Synchronous Flip-flop, Realization of Time Delays, Elimination of Glitches Using Synchronous Circuits, Hold Time Violation in Asynchronous Circuits, RTL Coding Style.

Arithmetic Circuit Designs, Digital Pipelining, Partitioning of a Design, Signed Adder Design, Multiplier Design. Data path designing.

Text 2 (Chapter 5: 5.1 to 5.7, Chapter 10: 10.1 to 10.4)

UNIT-4 (7Hrs)

FSMD Introduction and motivation, Fixed-Point Representation, Fixed-Point Representation in 3D Graphics, Unsigned saturating Arithmetic and Fixed-Point Numbers Fixed-Point Representation, Multiplication, The *Blend* Equation, Simple Datapaths and The Blend equation, Registering datapath inputs Versus Registering Datapath outputs, Pipelined computations Versus Execution Unit Pipelining, A Blend implementation With a Single Multiplier, Recursive Calculations, Initialization Versus Computation, A design methodology For higher Complexity Datapaths.

Text3 (Chapter 3:-3.1to 3.11,3.14,3.15)

UNIT-5 (8Hrs)

Embedded Memory Usage in Finite State Machine With Datapath (FSMD) Designs: -

Introduction to Embedded memories, Sample Application: Memory Sum, First-In, First-Out Buffer(FIFO), Dual-Port memory, Synchronization.

Text3 (Chapter 3:-4.1to 4.6)

TEXT BOOKS

1. Field Programmable Gate Array Technology - S. Trimberger, Edr, 1994, Kluwer Academic Publications.
2. Digital VLSI Systems Design, S. Ramachandran, Springer, 2007
3. Finite State Machine Datapath Design, Optimization, and Implementation (Synthesis Lectures on Digital Circuits and Systems) 1st Edition, Morgan and Claypool Publishers; 1 edition (February 27, 2008)

REFERENCE BOOKS

1. Digital Design Using Field Programmable Gate Array, P.K.Chan& S. Mourad, 1994,Prentice Hall.
2. Field programmable gate array, S. Brown, R.J.Francis, J.Rose,Z.G.Vranesic, 2007, BSP.
3. Digital Systems Design Using Verilog, First Edition Charles H. Roth, Jr. The University of Texas at Austin,LizyKurian John
4. The University of Texas at AustinByeong,Kil Lee The University of Texas at San Antonio.

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESEMENT METHOD

CIE:

1. Tool based assignments (to be submitted in the form report)- 10 Marks
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

SEMESTER: V

SOLID STATE DEVICES

Course Code	**18ECE564**	**Credits**	**04**
Hours/Week(L-T-P)	**4-0-0**	**CIE Marks**	**50**
Total Hours	**52(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES
Familiarity with semiconductor physics

COURSE OUTCOMES
1. Apply the knowledge of semiconductor physics to devices
2. Analyse the importance of fabrication process parameters in device working
3. Realize the faults in semiconductor devices
4. Conceptualise the working of new semiconductor devices
5. Recognise the effects of scaling in device working

COURSE CONTENTS
UNIT-1 (10 Hrs)
Junctions Diode: pn junctions (Thermal Equilibrium and the build in potential, pn junction I-V Characteristics) Handson using silvacotool: pn junction diode characteristics Text 1: 2.1.1, 2.1.2
UNIT-2 (11 Hrs)
Metal Semiconductor Barriers (Blocking contacts): Thermal equilibrium, IV characteristics **Metal Semiconductor Barriers (Non-Blocking contacts):**Tunnel contacts and Schottky ohmic contacts Hands-on using silvaco tool: Metal semiconductor junctions' study Text 1:2.2.1, 2.2.2
UNIT-3 (10 Hrs)
Field Effect Transistor: MOS Capacitor system(Flat band voltage; Accumulation, Depletion, inversion, Model for Charges in the Silicon Substrate) Handson using silvaco tool: FET characteristics Text 1:4.1.1 to 4.1.5
UNIT-4 (10 Hrs)
MOSFETs: Long channel theory, Refinements and Extensions to Long-Channel Theory, Subthreshold Conduction Text 1:4.2.1to 4.2.3
UNIT-5 (11Hrs)

The Electronic Structure of Organic Semiconductors: Introduction, What Are "Organic Semiconductors"? Historical Context, Different Organic Semiconductor Materials, Molecular Crystals, Polymer Films, Further Related Compounds, A Comment on Synthetic Approaches, Electronic States of a Molecule, Atomic Orbitals in Carbon, From Atomic Orbitals to Molecular Orbitals, From Orbitals to States, Singlet and Triplet States

Text 2: 1.1 to 1.3.4

TEXT BOOKS

1. Christo Papadopoulos, Solid State Electronic devices an introduction, Springer, ISSN 2192-479
2. Anna Kohler and Heinz Bassler, Electronic Processes in organic Semiconductor, an introduction, Wiley – VCH, ISBN: 978-3-527-33292-2

REFERENCE BOOKS

1. Streetman, Banerjee, Solid State Devices, Pearson , 7th Edition
2. Jasprit Singh, Solid State Devices, McGraw Hill, 1994

TEACHING METHODOLOGY

- Blackboard teaching, PPT using ICT facility
- Regular review of students by asking questions based on topics covered in the class
- Integrated lab with Silvaco TCAD tool

COURSE ASSESSEMENT METHOD

CIE:

1. Integrated Lab.
2. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO5	3	2	1	1	1							3	1			2

SEMESTER V

MICROELECTROMECHANICAL SYSTEMS

Course Code	**18ECE565**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

COURSE OUTCOMES

Students will be able to

1. Apply basic knowledge of engineering in MEMS Applications, modelling and Fabrication Process
2. Develop MEMS devices by designing, modelling and through use of MEMS CAD tool.
3. Apply the knowledge of MEMS devices with electronic circuitry for system development
4. Analyse working principle of MEMS Devices
5. Analyse the concept of scaling and its effects in device modelling and device applications

COURSE CONTENTS

UNIT-1 (11Hrs)

Introduction: Why Miniaturization?, Microsystems versus MEMS, Why microfabrication? Smart Materials, Structures and systems, Integrated Microsystems, Applications of smart Materials and Micro Systems

Micro Sensors, Actuators, Systems and Smart Materials: An Overview: Silicon Capacitive Accelerometer, Piezoresistive Pressure Sensor, Conductometric Gas Sensor, Fiber-Optic Sensors, Electrostatic Comb-Drive, Magnetic Microrelay, Microsystems at Radio Frequencies, Portable Blood Analyzer, Piezoelectric Inkjet Print Head, Micromirror Array for Video Projection, Micro-PCR Systems, Smart Materials and Systems

Text book 1: Ch.1: 1.1 to 1.6 Text book 1: Chapter 2 complete

UNIT-2 (11Hrs)

Micromachining Technologies: Thin Film Deposition: Evaporation, Sputtering, CVD, Epitaxial growth, Thermal oxidation for silicon di oxide, Lithography: photolithography, lift off, Etching: Isotropic etching, Anisotrppic etching, etch stops, Silicon Micromachining: Bulk micromachining, Surface micromachining, Specialized materials for microsystems: Polymers, Ceramic materials, Advanced Process for Microfabrication: Wafer Bonding Techniques, Dissolved Wafer process, Special microfabrication techniques. *Text Book1: Ch 3: 3.2, 3.3, 3.5, 3.7,3.8,3.9*

UNIT-3 (10Hrs)

Circuits for conditioning sensed signals: Differential charge measurement, switched capacitor circuits for capacitance measurement, circuits for measuring frequency shift,

Implementation of controllers: Design methodology, circuit implementation, digital controllers.

Scaling Effects in Microsystems: Scaling in the mechanical Domain, Scaling in the electrostatic Domain, Scaling in Magnetic Domain, Scaling in the thermal Domain, Scaling in Diffusion, Scaling in Fluids, scaling Effects in the Optical Domain, Scaling in Biochemical Phenomena. *Text book1: Ch. 7: 7.4,7.6*
Ch. 9: 9.1, to 9.8

UNIT-4 (10Hrs)

Mechanics of Slender Solids in Microsystems: The Simplest Deformable Element: A Bar, Transversely Deformable Element: A Beam, Energy Methods for Elastic Bodies
Text 1: Chapter 4: 4.1 to 4.4

UNIT-5 (10Hrs)

Integration of Micro and Smart Systems: Integration of Microsystems and Microelectronics: CMOS First, MEMS first, other approaches of integration , Microsystems Packaging: Objectives of packaging, Special issues in microsystem packaging, Types of Microsystem packages, Packaging technologies, Reliability and key failure mechanisms, Case studies of Integrated Microsystems: Pressure sensors, Micromachined Accelerometer, Case Study of a Smart Structure in Vibration Control: PZT transducers, Vibrations in beams. *Text Book 1: Ch 8 complete*

Simulations of the applications using MEMS tools

SEMESTER: V

INTRODUCTION TO PYTHON PROGRAMMING

Course Code	**18ECE566**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES
Students should have the knowledge of programming in any of the programming languages as C.

COURSE OUTCOMES
1. Understand Python syntax and semantics and be fluent in the use of Python flow control and functions.
2. Demonstrate proficiency in handling Strings and File Systems.
3. Implement Python Programs using core data structures like Lists, Dictionaries and use Regular Expressions.
4. Interpret the concepts of Object-Oriented Programming as used in Python.
5. Implement exemplary applications related to Network Programming, Web Services and Databases in Python.

COURSE CONTENTS
UNIT-1 (8 Hrs)
Why should you learn to write programs? **Variables, Expressions and statements:** Values and type, Variables, Variable names and keywords, Statements, Operators and operands, Expressions, Order of operations, Modulus operator, String operations, Asking the user for input, Comments, choosing mnemonic variable names, Debugging **Conditional execution:** Boolean expressions, Logical operators, Conditional execution, Alternative execution, Chained conditionals, Nested conditionals, catching exceptions using try and except, short-circuit evaluation of logical expressions, Debugging **Functions:** Function calls, Built-in functions, Type conversion functions, Math functions, Random numbers, adding new functions, Definitions and uses, Flow of execution, Parameters and arguments, Fruitful functions and void functions, Why functions? Debugging **Text 1: Chapter 1, 2,3,4**
UNIT-2 (8 Hrs.)

Iteration: Updating variables, the while statement, Infinite loops, finishing iterations with continue, Definite loops using for, Loop patterns, Counting and summing loops, Maximum and minimum loops, Debugging

Strings: A string is a sequence, Getting the length of a string using Len, Traversal through a string with a loop, String slices, Strings are immutable, Looping and counting, the in operator, String comparison, String methods, Parsing strings, Format operator, Debugging

Files: Opening files, Text files and lines, reading files, searching through a file, Letting the user choose the file name, Using try, except, and open, writing files, Debugging

Text 1 : Chapter 5, 6,7

UNIT-3 (8 Hrs.)

Lists: A list is a sequence, Lists are mutable, Traversing a list , List operations, List slices, List methods, Deleting elements, Lists and functions, Lists and strings, Parsing lines, Objects and values, Aliasing, List arguments, Debugging

Dictionaries: Dictionary as a set of counters, Dictionaries and files Looping and dictionaries, Advanced text parsing, Debugging

Tuples: Tuples are immutable, Comparing tuples, Tuple assignment, Dictionaries and tuples, Multiple assignment with dictionaries, The most common words, Using tuples as keys in dictionaries, Sequences: strings, lists, and tuples - Oh My!, Debugging

Regular Expressions: Character matching in regular expressions, Extracting data using regular expressions, Combining searching and extracting, Escape character ,,136 11.5 Summary, Debugging ,

Text 1 : Chapter 8,9, 10,11

UNIT-4 (8 Hrs.)

Classes and objects: Programmer-defined types Attributes, Rectangles, Instances as return values, Objects are mutable, Debugging

Classes and functions: Time, Pure functions, Modifiers, prototyping versus planning, Debugging

Classes and methods: Object-oriented features, Printing objects, A more complicated example, the init method, the __str__ method, Operator overloading, Type-based dispatch Polymorphism, Debugging

Text 2 : Chapter 15,16,17

UNIT-5 (8 Hrs.)

Modules, Packages and Distribution: Modules and import statement, importing selected symbols, execution of main program, the module search path, module loading and compilation, reloading and unloading, packaging, distributing programs and libraries, installing third party Libraries, GUI Programming

Application: Networked programs using Web Services, Using databases and SQL

Text 1 : Chapter 12,13 ,15

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Tutorials - 10 Marks
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO/PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT

PROGRAM LAB

SEMESTER: V

DIGITAL SIGNAL PROCESSING LAB

Course Code	**18ECL57**	**Credits**	**01**
Hours/Week(L-T-P-S)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**26(P)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core Lab**

PRE-REQUISITES

1. Students should have knowledge of signals & Systems and Digital Signal Processing.
2. Knowledge of basic mathematical concepts.

COURSE OUTCOMES

STUDENTS WILL BE ABLE TO:

CO1: Analyze basic operations of Signal processing and DSP system modeling using MATLAB

CO2: Implement and Analyze discrete signal algorithm using MATLAB

CO3: Design and implement applications of the Fast Fourier transform.

CO4: Design IIR, and FIR filters for band pass, band stop, low pass and high pass filters.

CO5: Program a DSP chip with a variety of real-time signal processing algorithms, such as filtering for noise reduction or digital audio effects.

COURSE CONTENTS

Exp. No	EXPERIMENT
1	Introduction to MATLAB**,** MATLAB Functions, Plotting signals, examples Introduction to TMS320C67XX, Code composer studio, examples Introduction to simulink, FDA tool
	Part-A: Should be implemented Using MATALB/SCILAB/OCTAVE/ and CC Studio
2	LTI System: To find the impulse response of a given system, Solution of difference equation, Verification of Sampling Theorem
3	Circular convolution & Linear convolution, Cross correlation & Autocorrelation
4	DFT: To find the DFT and inverse DFT of a sequence FFT: To find the linear and circular convolution using FFT algorithm
5	To find the 2N point DFT using N point DFT To find the N point DFT of two sequences using single N point DFT (Use FFT algorithm to find DFT)
6	Sectioned convolution: Overlap save and overlap add method for long duration sequences

7	Design and simulation of analog IIR Filters (Butterworth and Chebyshev) Design and simulation of digital IIR Filters (Bilinear transformation, Impulse invariant Transformation)
8	Design and implementation of FIR Filters (LP, HP, BP, BS) by using window techniques
Hardware experiments (Using TMS320Cxxxx)	
9	Linear convolution and Circular convolution
10	LTI System: To find the impulse response of a given system
11	Computation of N point DFT/IDFT
12	Design and implementation of digital FIR Filters

TEXTBOOKS

1. J. G. Proakis and Ingle, “Digital signal processing using MATLAB”, 3rd Edition, Cengage Learning,2014.
2. Sanjit K. Mitra, “Digital Signal Processing”, 4th Edition, Tata McGraw Hill,2014.
3. RulphChassaing, “Digital Signal Processing and Applications with the C6713 and C6416 DSK”, Wiley.

Open ended experiments: (Using MATLAB/Hardware, Preferably Hardware)

1. Radix 4 DITFFT Algorithm
2. Radix 4 DIFFFT Algorithm
3. Implementation of Chirp Z-Transform
4. Implementation of Goertzen algorithm
5. Filtering of noisy signal using FIR filter
6. Design of FIR Filter using Window based method (Kaiser Window)
7. Generating signals of different frequencies and construction of AM wave
8. DTMF detection
9. Verification of Properties of cross correlation
10. Beat Detection Using Onboard LEDs
11. PID Controller
12. μ-Law for Speech Companding

SEMESTER: V

COMMUNICATION SYSTEM LAB - I

Course Code	**18ECL58**	**Credits**	**01**
Hours/Week(L-T-P-S)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**2Hrs/Week**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Lab**

COURSE OUTCOMES

Upon successful completion of this course, the students will be able to

1. Design filters which are the basic building blocks in any communication system
2. Design and demonstrate the applications of op-amp as Multivibrators and Rectifiers
3. Test the R-2R DAC using Op amp
4. Design Analog modulation circuits such as amplitude and frequency modulation.
5. Design various pulse modulation techniques as PAM, PPM, PWM.

COURSE CONTENTS

1. Design a Second order active Low pass filter and High pass filter for a given cut off frequency
2. Design a Second order active BPF and BRF for a given cut off frequency
3. Design and test R-2R DAC using op-amp
4. Design and test the following circuits using IC 555
    a. Astable multivibrator for given frequency and duty cycle
    b. Monostable multivibrator for given pulse width W
    c. 555 timer as Schmitt trigger
5. Test Pre emphasis and De-emphasis
6. Design Amplitude modulation using circuit and demodulation using transistor (Generation and detection
7. To generate AM-Double Side Band Suppressed Carrier (DSB-SC) signal using Ring Modulator.
8. Design Pulse amplitude modulation circuit (PAM)
9. Design Pulse Width Modulation circuit (PWM)
10. Design Pulse Position Modulation circuit(PPM)
11. Generate Frequency modulation using IC 8038/2206

TEACHING METHODOLOGY

- Design of expts- Blackboard teaching
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Record and Observation - 30 Marks
2. Viva -5 marks
3. Lab internals-15marks

SEE:

1. One experiment will be given for conduction.

Write Up:8 marks

Viva Voce: 7 marks

Conduction and Execution: 35 marks

VI SEMESTER

SEMESTER: VI

COMPUTER NETWORKS AND APPLICATIONS

Course Code	**18EC61**	**Credits**	**04**
Hours/Week(L-T-P)	**3-2-0**	**CIE Marks**	**50**
Total Hours	**39(L)+26(T)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES
Basics of electronics, Analog and Digital circuits, Analog and Digital communication, Programming basics

COURSE OUTCOMES

1. Student will be able to understand of the fundamental concepts of basic networking, Protocols, Standards and Layered models
2. Student will be able to understand the basics of UDP,TCP, and socket programming
3. Student will be able to understand basics of a data application (WWW and HTTP)
4. Student will be able to understand basics of a real-time data application (VoIP and protocols)
5. Student will be able to understand basics of internet security

COURSE CONTENTS

UNIT-1 (8 Hrs)

Introduction – Data communications, networks, and network types
Network models – TCP/IPv4, OSI model
Wired LANs - Ethernet and standard ethernet
Wireless LANS – Introduction, 802.11
Connecting devices and VLAN
Network layer – IPv4 addresses, IP
1.1 to 1.3, 2.3 to 2.3, 13.1 and 13.2, 15.1, 15.2, 17.1,17.2, 18.4, 19.1

UNIT-2 (8 Hrs)

Introduction, UDP, and TCP, Client – Server Programming
Services , Port Numbers
User Datagram , UDP Services , UDP Applications
TCP Services , TCP Features , Segment ,A TCP Connection , State Transition Diagram ,Windows in TCP Flow Control , Error Control TCP Congestion Control ,TCP Timers ,Options
Application Programming Interface ,Using Services of the Transport Layer ,Iterative Communication Using UDP , Iterative Communication Using TCP , Concurrent Communication

24.1 to 24.3

UNIT-3 (8 Hrs)

WWW and HTTP
Architecture - Web client, server, URL, and web documents
Non-persistent vs persistent connections, message format, request message, response message, conditional request, cookies, caching and proxy server, HTTP security
26.1.1, 26.1.2

UNIT-4 (8 Hrs)

Multimedia data, Multimedia in the internet, Real-time interactive protocols
Text, Image , Video , Audio
Streaming Stored Audio/Video , Streaming Live Audio/Video , Real-Time Interactive Audio/Video
Rationale for New Protocols ,RTP ,RTCP , Session Initialization Protocol (SIP) , H.323
28.2 to 28.4

UNIT-5(8 Hrs)

Network layer security, Transport layer security, Application layer security, Firewalls
Two Modes , Two Security Protocols , Services Provided by IPSec , Security Association
Internet Key Exchange (IKE) , Virtual Private Network (VPN)
SSL Architecture , Four Protocols
E-mail Security , Pretty Good Privacy (PGP) , S/MIME
Packet-Filter Firewall 1152 32.4.2 Proxy Firewall
32.1 to 32.4

TEXT BOOKS

Text Book - Data Communications and Networking, 5/e By Behrouz A Forouzan, published by McGraw-Hill

TEACHING METHODOLOGY

- Blackboard teaching
- MS pptx slides
- Regular review of students' understanding by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

4. Tool based Assessment - 10 Marks
5. Surprise tests based on GATE questions- 10Marks.
6. Three mid sem examinations, 30 Marks each will be conducted and the average of best of two will be taken.

SEE:

2. Two Questions are to be set from each unit, carrying 20 Marks each.
3. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT
CO1	3	2			2				2				1	2	**2**

SEMESTER: VI

COMMUNICATION SYSTEM II

Course Code:	**18EC62**	**Credits:**	**03**
Hours/Week(L-T-P):	**3-2-0**	**CIE Marks:**	**50**
Total Hours:	**39(L)+26(T)**	**SEE Marks:**	**50**
Exam Hours:	**03**	**Course Type:**	**Core**

PRE-REQUISITES
Basics of Communication System 1

COURSE OUTCOMES

The students will be able to:

1. Design and analyze a Digital communication system
2. Analyze the concept of line coding techniques and their Power spectral density, Inter symbol interference in Digital communication systems.
3. Apply the concepts of signal, Geometric representation of signal and performance of digital communication system in the presence of noise.
4. Compare the performance of digital modulation techniques and their probability of error performance.
5. Describe spread spectrum technology and its applications.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Waveform Coding Techniques: PCM, Quantization noise and SNR, Robust quantization, DPCM, DM, Adaptive delta modulation, Coding speech at low bit rates: Adaptive pulse code modulation,

Applications: Digital Multiplexers,T1 System,M12 Multiplexer

Discrete PAM signals: Unipolar, Polar, Bipolar, Manchester,Polar quaternary formats .Power spectra of Unipolar, Polar, Bipolar, Manchester formats.

Text 1: Ch 5.5.1, 5.2, 5.3, 5.4, 5.5, 5.6, 5.7, 5.8, Ch 6. 6.1, 6.2

UNIT-2 (7 Hrs)

Base-Band Shaping for Data Transmission ISI, Nyquist’s criterion for distortion less base-band binary transmission, correlative coding, eye pattern, base-band M-ary PAM systems, adaptive equalization for data transmission.

TEXT 1:6.3,6.4,6.5,6.6,6.7,6.8

UNIT-3 (8 Hrs)

Detection & Estimation: Model of Digital communication system, Gram-Schmitt Orthogonalization procedure, geometric interpretation of signals, response of bank of correlators to noisy input.

Detection of known signals in noise, correlation receiver, matched filter receiver, detection of signals with unknown phase in noise.

Text 1: Ch. 3: 3.1, 3.2, 3.3, 3.4,3.5,3.7,3.8,3.9

UNIT-4 (8 Hrs)

Digital Modulation Techniques: Digital Modulation formats, Coherent Binary Modulation Techniques: Coherent binary PSK, Coherent binary FSK.

Coherent Quadrature Modulation Techniques: Quadrature phase shift keying, Minimum shift Keying, power spectra of PSK, Power spectra of FSK.

Non-coherent Binary Modulation Techniques: Non coherent Binary FSK, Differential phase shift keying, Comparison of Binary and Quatenary Modulation techniques.

TEXT1: Ch 7. 7.1, 7.2, 7.3,7.4,7.5,7.7

UNIT-5 (8 Hrs)

Spread Spectrum Modulation: Pseudo noise sequences, Notion of spread spectrum, Direct sequence spread Coherent binary Phase shift keying, Probability of Error: Anti jam characteristics.

Frequency hop spread spectrum: Slow frequency hopping, Fast frequency hopping, Applications: Code division Multiple Access, Multipath suppression.

Text 1: Ch 9. 9.1, 9.2, 9.3,9.5, 9.6,9.7

TEXT BOOKS

INFORMATION THEORY AND CODING

Course Code	**18EC63**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES

Engineering Mathematics, Digital Communication

COURSE OUTCOMES

STUDENTS WILL BE ABLE TO:

1. Apply basics of information theory to compute entropy, information rate and study advance algebraic Coding.
2. Illustrate different coding techniques and determine its efficiency.
3. Categorize various channels for information transmission and interpret Shannon's theorem in Continuous channels.
4. Design various Block Codes for error detection and convolutional codes for error correction.
5. Design different codes for Channel performance improvement against burst errors.

COURSE CONTENTS

UNIT-1 (11 Hrs)

Information Theory: Introduction, Measure of information, Information content of message, Average Information content of symbols in Long Independent sequences, Average Information content of symbols in Long dependent sequences, Markoff statistical model for information sources, Entropy and information rate for Markoff sources

Text Book 1: **Chapter 4.1-4.2**

Introduction to Algebra: Groups, fields, Binary Field Arithmetic, Construction of Galois field (2^m), Basic properties of Galois field (2^m), Computations using Galois field (2^m) Arithmetic.

Text Book 3: Chapter 2.1-2.6

UNIT-2 (11 Hrs)

Information theory and Source Coding: Definition of codes, Basic properties of codes, Construction of instantaneous codes, Kraft inequality, McMillan's Inequality, code efficiency and redundancy, Shannon's First theorem, construction of some basic codes, Shannon binary encoding procedure, Shannon-Fano binary encoding method, Huffman's Minimum redundancy code, Coding for sources with memory, Lempel-Ziv coding, Run-Length Encoding(RLE)

Text Book 2: **Chapter 5.1-5.6**

UNIT-3 (10 Hrs)

Information Channels: Joint and Conditional Entropies, Mutual information, Shannon Theorem, Capacity of channels, Symmetric channels, Binary symmetric channel (BSC).

Text Book 2: **Chapter 3.1-3.4.3**

Continuous Channels: Entropy of continuous signals, Maximization of entropy, Mutual information of a continuous noisy channel, Capacity of band limited channels with AWGN and Average power limitation of signals: The Shannon-Hartley law.

Text Book 2: Chapter 4.1-4.3

UNIT-4 (10 Hrs)

Error Control Coding: Linear block codes, matrix description of linear block codes, Error detection and error correction capabilities of linear block codes, Single error correcting Hamming codes, Table lookup decoding using standard array, Binary Cyclic Codes, Algebraic Structure of Cyclic Codes, Encoding using an (n-k) bit shift register, Syndrome Calculation, Error detection and correction.

Text Book 1: Chapter 9.1-9.3.3

BCH , CRC ,Maximum length , majority logical Decodable, Shortened cyclic,Golay and RS codes

Text Book 2:Chapter 7.7-7.13

UNIT-5 (10 Hrs)

Convolution Codes: Connection Pictorial representation , Convolution Encoding -Time domain approach, Transform domain Approach, Structural properties of convolutional codes, State diagrams, Tree and Trellis Diagram, Maximum likely-hood decoding of convolutional codes- The Viterbi Algorithm.

Text Book 2: **Chapter 8**

Coding for Burst Error Correction: Burst and Random Error Correcting Codes, Convolutional Codes for Burst error Correction.

Text Book 2: Chapter 9.1,9.3

OPERATION RESEARCH

Course Code	**18ECH64**	**Credits**	**03**
Hours/Week(L-T-P-S)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**52(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

COURSE OUTCOMES

Students will be able to:

1. Understand the concept, nature, models, benefits, scope and limitations of Operations Research in managerial problems to use the scarce resources (Capitals, staffing and machines).
2. Formulate as L.P.P and derive optimal solutions to linear programming problems by graphical method, Simplex method, Big-M method and Dual Simplex method.
3. Extend the skills in the use of operation research approaches in formulating and solving real time problems like transportation, assignment and game theory.
4. Competent with mathematical and computational modeling of real decision-making problems, including the use of modeling tools and computational tools.
5. Identify the resources required for a project, network techniques, queuing models and generate a plan and work schedule

COURSE CONTENTS

UNIT-1 (11 Hrs)

Introduction: Linear programming, Definition, scope of operations research (O.R) approach and limitations of OR models, characteristics and phases of OR mathematical formulation of L.P. Problems. Graphical solution methods. **Linear Programming Problems:** Introduction, Definitions, simplex method - computational procedure.

Textbook #1: 1.1-1.8,2.1 – 2.5.1, 3.1 – 3.3, 3.7

UNIT-2 (11 Hrs)

Artificial Variable Technique: Two phase method. Big-M-method (Charne's penalty method). Degeneracy-Methods to resolve degeneracy. Special cases- Alternative, unbounded & non-existing solution, Concept of duality, primal &dual correspondence, Dual simplex method.

Textbook #1: 3.10 – 3.11, 3.13, 3.14.3

UNIT-3 (10 Hrs)

Game Theory: Formulations of games, two person-zero sum game, games with and without saddle point, graphical solution (2 x n, m x 2 game), dominance property. **Transportation Problem:** Mathematical Formulation; Matrix form, Definitions, Initial basic feasible solution using different methods. Optimality methods. Minimization problem, unbalanced transportation problem, degeneracy in transportation problems.

Textbook #1: 10.1 – 10.8, 4.1 – 4.2, 4.4 – 4.6,4.8 -4.9

UNIT-4 (10 Hrs)

Assignment Problem: Mathematical Formulation, Hungarian method, Minimal, Maximal & unbalanced assignment problem, traveling salesman (Routing) problem. **Sequencing:** Terminology & notations, Johnson's algorithm, processing of: n-jobs to 2 machines, n jobs 3 machines, n jobs m machines without passing sequence. 2 jobs n machines with passing. Graphical solution.

Textbook #1: 5. – 5.4 (4th method) , 5.6 , 6.1 – 6.5

UNIT-5 (10 Hrs)

PERT-CPM Techniques: Definitions, difference between CPM & PERT. Applications. Network construction, labeling using Fulkerson's '1-J' Rule. Time Estimates and Critical path - Forward & Backward pass computation. Determination of Floats, Slack times & critical path. PERT-critical path, scheduling by project duration, variance under probabilistic models, prediction of date of completion, crashing of simple networks- Optimum duration & Minimum duration cost.
Queuing Theory: Queuing system and their characteristics. The M/M/1 queuing system, steady state performance and analysis of M/M/1 & MIMIC queuing model.

Textbook #1: 15.1 – 15.3, 9.1 – 9.2, 9.3.1- 9.3.2

Text book #2: 11.1 – 11. 5

TEXT BOOKS

1. Operation Research, S. D. Sharma - KedarnathRamnath and Co ,2002.
2. Problems in Operations Research - P.K.Gupta, Manmohan, Sultan Chand Publications,2005

REFERENCE BOOKS

1.Operations Research - An Introduction, Taha H.A. -Low price Edition, ih Edn,2006

2. Introduction to Operation Research, Hiller and Liberman, McGraw Hill. 5th edition 2001.
3. Operations Research: principles and practice: Ravindran, philiphs and Solberg, Wiley India its 2nd edition 2007.
4. Operation Research, Premkumar Gupta, 0 SHira, Schandpub, Newdelhi, 2007.
5. Operation Research, Premkumar Gupta, 0 S. Hira, Schandpub, Newdelhi, 2007.

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class
- Case study

COURSE ASSESSEMENT METHOD

CIE:

- Assignment (Case Study) - 10 Marks
- Surprise tests - 10Marks.
- Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

- Two Questions are to be set from each unit, carrying 20 Marks each.

Students have to answer 5 questions selecting one full question from each unit

PROGRAM ELECTIVE 2

SEMESTER VI

SYSTEM VERILOG

Course Code:-	**18ECE651**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES

- Satisfactory completion of understanding of basics of digital logic circuit design.
- Satisfactory knowledge of Digital Electronic design and its optimization.
- Knowledge of design of digital system using HDL.

COURSE OUTCOMES

Students will be able to:

CO1:- Understand the essentials of Verification language

CO2:- Familiarize with the basic components of System Verilog language.

CO3:- Learn the techniques to write the test benches and implement digital logic circuits for various applications

CO4:-Design and test the logic circuits at different abstraction level

CO5:- Analyze the various system verification techniques for FSM design

COURSE CONTENTS

UNIT-1 (09Hrs)

Introduction to System Verilog: System Verilog origins, Generations of the System Verilog standard, Donations to System Verilog, Key System Verilog enhancements for hardware design. Package definitions, Referencing package contents, Synthesis guidelines, $unit compilation-unit declarations, Coding guidelines, System Verilog identifier search rules ,Source code order, Coding guidelines for importing packages into $unit , Synthesis guidelines , Declarations in unnamed statement blocks , Local variables in unnamed blocks, Simulation time units and precision , Verilog's timescale directive, Time values with time units, Scope-level time unit and precision, Compilation-unit time units and precision

Text1(Chapter 1: 1.1,1.2, Chapter 2: 2.1,2.4)

UNIT-2 (08Hrs)

System Verilog Literal Values and Built-in Data Types: Enhanced literal value assignments, 'define enhancements , Macro argument substitution within strings, Constructing identifier names from macros, System Verilog variables, Object types and data types, System Verilog 4-state variables, System Verilog 2-state variables, Explicit and implicit variable and net data types ,Synthesis guidelines , Using 2-state types in RTL models, state type characteristics ,2-state types versus 2-state simulation ,Using 2-state types with case statements ,Relaxation of type rules, Signed and unsigned modifiers, Static and automatic variables, Static and automatic variable initialization , Synthesis guidelines for automatic variables, Guidelines for using static and automatic variables, Deterministic variable initialization,

Initialization determinism , Initializing sequential logic asynchronous inputs ,Type casting, Static (compile time) casting. Dynamic casting. Synthesis guidelines , Constants . **Text1(Chapter 3: 3.1,3.10)**
UNIT-3 (08Hrs)
System Verilog User-Defined and Enumerated Types: User-defined types, Local typed definitions, Shared typed definitions, Naming convention for user-defined types , Enumerated types ,Enumerated type label sequences., Enumerated type label scope, Enumerated type values, Base type of enumerated types, Typed and anonymous enumerations, Strong typing on enumerated type operations, Casting expressions to enumerated types, Special system tasks and methods for enumerated types., Printing enumerated types. Verilog general purpose always procedural block , System Verilog specialized procedural blocks, Combinational logic procedural blocks ,Latched logic procedural blocks , Sequential logic procedural blocks ,Synthesis guidelines Enhancements to tasks and functions, Implicit task and function statement grouping ,Returning function values , Returning before the end of tasks and functions., Void functions, Passing task/function arguments by name Enhanced function formal arguments ,Functions with no formal arguments ,Default formal argument direction and type ,Default formal argument values., Arrays, structures and unions as formal arguments, Passing argument values by reference instead of copy, Named task and function ends ,Empty tasks and functions . **Text1(Chapter 3: 4.1,4.2,Chapter 6: 6.1 to 6.3)**
UNIT-4 (07Hrs)
System Verilog Procedural Statements: New operators, Increment and decrement operators Assignment operators, Equality operators with don't care wildcards, Set membership operator inside Operand enhancements, Operations on 2-state and 4-state types.. Type casting ,Size casting, Sign casting , Enhanced for loops, Local variables within for loop declarations, Multiple for loop assignments, Hierarchically referencing variables declared in for loops , Synthesis guidelines , Bottom testing do...while loop , Synthesis guidelines, The for each array looping construct, New jump statements — break, continue, return 7.6.1 The continue statement 7.6.2 The break statement , The return statement, Synthesis guidelines , Enhanced block names, Statement labels, Enhanced case statements , Unique case decisions , Priority case statements, Unique and priority versus parallel_case and full_case ,Enhanced if...else decisions Unique if...else decisions ,Priority if decisions **Text1(Chapter 7:7.1 to 7.10)**
UNIT-5 (07Hrs)
Modeling state machines with enumerated types:- Representing state encoding with enumerated types Reversed case statements with enumerated types, Enumerated types and unique case statements, Specifying unused state values, Assigning state values to enumerated type variables, Performing operations on enumerated type variables, Using 2-state types in FSM models, Resetting FSMs with 2-state and enumerated types **Text1(8.1 to 8.3)**

SEMESTER: VI

MACHINE LEARNING FOR PATTERN RECOGNITION

Course Code:	**18ECE652**	**Credits**	**03**
Hours/Week(L-T-P-S)	**3-0-0**	**CIE Marks**	**50**
Total Hours:	**39(L)**	**SEE Marks**	**50**
Exam Hours:	**03**	**Course Type**	**Program Elective**

COURSE OUTCOMES

1. Explain the Machine Learning Framework And Establish the Wide Ranging Applications of Machine Learning
2. Demonstrate the Working of Machine Learning Techniques.
3. Illustrate A Few Algorithms In Machine Learning.
4. Apply Appropriate Machine Learning Techniques For Real Time Applications As Per The Scope Of The Applications Learned.
5. Work in Teams To Implement/Simulate Machine Learning Algorithms.

COURSE CONTENTS

Unit-1 (08 Hrs)

Introduction to Pattern Recognition and **Machine Learning:** Introduction, Pattern Recognition Systems: Sensing, Segmentation and Grouping, Feature Extraction, Classification, Post Processing.
Machine Learning: Introduction, Machine Perception,
The Design Cycle: Data Collection, Feature Choice, Model Choice, Training, Evaluation And Computational Complexity.
Learning and Adaptation: Supervised Learning, Unsupervised Learning, Reinforcement Learning.
Learning Problems: Well-Posed Learning Problems, Perspectives and Issues in Machine Learning. (Text-1-Ch1: 1.1 To 1.5 Text-2-Ch1:1.1 and 1.3)

Unit-2 (08 Hrs)

Linear Models For Regression: Curve Fitting, Linear Basis Function Models: Maximum Likely Hood And Least Squares, Geometry of Least Squares, Sequential Learning, Regularized Least Squares, Multiple Outputs. Bias-Variance Decomposition, Bayesian Linear Regression: Parameter Distribution, Predictive Distribution, Equivalent Kernel. (Text-3-Ch 3: 3.1 To 3.3)

Unit-3 (08Hrs)

Concept Learning And Decision Trees: Concept Learning, Version Spaces And Candidate Elimination Algorithm, Decision Tree Learning: Introduction, representation and the basic decision tree learning algorithm.
(Text-2-Ch-2: 2.1, 2.2 and 2.4&Ch- 3:3.1, 3.2 and 3.4)

Unit-4 (08 Hrs)
Multilayer Neural Networks and Genetic Algorithm: Neural Network Representation, Perceptrons, Multilayer Networks: Feed forward operation and classification and Back Propagation Algorithms and problems. Genetic Algorithms: Introduction, Algorithms, Representation using Tree structure, Genetic Programming example. Models Of Evolution And Learning. (Text-1-Ch-6: 6.1,6.2 and 6.3&Text-2-Ch- 9: 9.2 ,9.5 And 9.6)
Unit-5 (07 Hrs)
Image And Speech Based Machine Learning: Review of Algorithms Related to Image Processing, Speech Recognition, Application of Digital Image Processing Approaches In Machine Learning Environment (Eg. Latest Approaches Like Enterprise Image Processing, Pattern Recognition Approaches Used in AI Etc. Will Be Used). (Case Study).

TEXT BOOKS

1. Richard O.Dude, Peter E. Hart and David G. Stork, " Pattern Recognition And Machine Learning", 2000 2nd Edition.
2. Tom M. Mitchell, "Machine Learning", Mcgraw-Hill Education (Indian Edition), 2013
3. Christopher M. Bishop, "Pattern Recognition And Machine Learning", 2006 Springer Science+ Business Media, Llc

REFERENCE BOOKS

1. Ethen Alpaydin, "Introduction To Machine Learning", 2nd Ed., Phi Learning Pvt. Ltd., 2013
2. EartGose, Richard Johnsonburg And Steve Joust, "Pattern Recognition And Image Analysis," Prentice-Hall Of India,2003.
3. 3. Damodar N. Gujarati ,"Basic Econometrics " Mc Grawhill ,Usa Software For Coding/Modelling : R , Python And Matlab

TEACHING METHODOLOGY

- Lectures, Problem Based Learning
- Discussion
- Demonstration
- Illustration

COURSE ASSESSEMENT METHOD

CIE:

1. Mid Sem Exams (Avg. Of 2 Exams) 30 Marks
2. Laboratory Based Exercises 20 Marks
3. Total 50 Marks

SEE:

1. Two Questions Are To Be Set From Each Unit, Carrying 20 Marks Each.
2. Students Have To Answer 5 Questions Selecting One Full Question From Each Unit

SEMESTER: VI

APPLIED DSP

Course Code	**18ECE653**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES

- Digital Signal Processing Course

COURSE OUTCOMES

Upon successful completion of this course the students will have developed following skills/abilities:

1. Integrate computer-based tools such as Code Composer Studio for DSP applications.
2. Determine and select data types for DSP algorithms in consideration with truncation and quantization errors.
3. Design & analysis of the system to perform multi-rate signal processing and evaluate the performance to meet expected system specifications using MATLAB.
4. Design of adaptive filters and filter banks for processing of discrete time signals and perform spectral analysis of the signals and analyze Time frequency Expansion.
5. Demonstrate an understanding of contemporary implementation issues such as computational complexity, hardware resource limitations as well as cost of DSP systems or DSP Processors by reviewing recent technical articles.

COURSE CONTENTS

UNIT-1 (10-Hrs)

Digital Signal Processing and Applications with the C6713

Introduction to DSP Development System, Programming Examples Using C Code, Architecture and Instruction Set of the C6x Processor, Compiler/Assembler/Linker Shell Programming Examples to Test the DSK Tools

Text3: Ch 1.1 to 1.8, 2.3, Ch 3

UNIT-2 (10-Hrs)

Data types and representation

Numbering System: Fixed Point, Floating Point, Truncation error Quantization of Filter Coefficients, Round-off Effects in Digital Filters Programming Examples Using C, Assembly, and Linear Assembly, DFT implementation example

Text2: Ch 9.4 to 9.6 Text3: 3.17 to 3.21

UNIT-3 (10-Hrs)

Multirate Digital Signal Processing
Multi Rate Digital Signal Processing Fundamentals, Down-sampling, Up-sampling and Sampling Rate Conversion, Multi Stage / Multi Rate Implementation of Digital Filters, · Efficient Implementation of Multi Rate Systems. Application of Multirate DSP: Digital to Analog Conversion **Text1: Ch 6, Text2: Ch 11**
UNIT-4 (11-Hrs)
Digital Filter banks, Trans-multiplexers and Adaptive Filters DFT Filter Banks for Signal Decomposition, Maximally decimated DFT Filter banks and trasmultiplexers, Introduction to adaptive filters Application of Transmultiplexers to Digital Communications modulation **Text1: Ch 7, Text2:Ch13, Text3: Ch7,**
UNIT-5 (11-Hrs)
Time frequency Expansion Short Time Fourier Transform (STFT), Gabor Transform, Wavelet Transform, Recursive Multi resolution Decomposition Image processing application as example. **Text1: Ch 9**
TEXT BOOKS
1. Modern Digital Signal Processing by Roberto Cristi, Brooks Cole, 2003 2. Digital Signal Processing, by Proakis and Manolakis, Prentice Hall 2007 (Fourth edition) 3. Digital Signal Processing and Applications with the C6713 and C6416 DSK, by RulphChassaing, A John Wiley & Sons, Inc., Publication, 2005
TEACHING METHODOLOGY
• Blackboard teaching and PowerPoint presentations • Tool based teaching using Matlab and Code Composer Studio & DSK (TMS320C6716)
COURSE ASSESSMENT METHOD
CIE: 1. Mini Project - 10 Marks 2. Surprise Test - 10Marks. 3. Three mid examinations, 30 Marks each will be conducted and Average of best of two will be taken. **SEE:** 1. Two Questions are to be set from each unit, carrying 20 Marks each. Students have to answer 5 questions selecting one full question from each unit

SEMESTER: VI

ANTENNA THEORY AND DESIGN

Course Code	**18ECE654**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

COURSE OUTCOMES

Students will be able to

1. study the basics of different types of antennas and their performance parameters along with their radiation pattern.
2. Analyze the radiation characteristics of different types of antennas and improve the bandwidth.
3. Analyze the working of different types of Microstrip antenna, estimate the losses present and design for a particular application.
4. Analyze the working of different types of antennas used in personal communication and study the radiation effects on human body.
5. Analyze the working of smart antenna and ways to achieve different beam forming techniques and apply them for real-time applications.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Reconfigurable Microstrip Antennas (*Jennifer T. Bernhard*) Introduction, Substrate Modification for Reconfigurability, Conductor Modification for Reconfigurability, Enabling Reconfigurability, Considerations for Reconfiguration Mechanisms, Future Trends in Reconfigurable Microstrip Antenna Research and Development.

UHF passive RFID tag Antennas: Introduction, Application requirement, Approaches, Fabrication.

Simulation using Matlab/HFSS

Text 4: Ch. 6: 6.1 to 6.5; Ch. 9: 9.1 to 9.4.1.

UNIT-2 (8 Hrs)

Defected Ground Structure for Microstrip Antennas Introduction, Fundamentals of DGS, DGS for controlling Microstrip Antenna Feeds and Front-End Characteristics, DGS to Control/Improve Radiation Properties of Microstrip Patch Antennas, DGS for Reduced Mutual Coupling between Microstrip Array Elements and Associated Improvements, Conclusion.

Text 4: 12.1 to 12.5

Regularly shaped Broadband Microstrip patch Antennas: RMSA's, parametric study of RMSA's, Effect of width. Effect of height, Effect of probe diameter, effect of Ground plane, effect of loss tangent, effect of cover, higher order modes, Orthogonal feeds for dual polarization

Simulation using Matlab/HFSS

Text 5: 2.1 to 2.2.3

UNIT-3 (8 Hrs)

Microstrip Antennas: Introduction, Basic characteristics, Feeding methods, methods of analysis, Rectangular patch, Transmission line model, Fringing effect, Effective length, Design, Conductance, input resistance. Circular patch, resonant frequencies and design, Quality factor, bandwidth and efficiency.

Simulation of passive devices using HFSS, Matlab

Text 1: Ch14: 14.1,14.1.1,14.1.2,14.1.3,14.2,14.2.1,14.3,14.3.2,14.3.3,14.4

UNIT-4 (8Hrs)

Printed UWB Antennas: Introduction, Antenna with reduced ground plane effect, slim UWB antenna, Diversity Antenna.

Low profile Antennas and personal communication Antennas: Introduction, Microstrip Arrays, Leaky wave Antennas, Fundamental Limits on Antenna size, Planar Inverted F Antennas, Radio Frequency Identification Antennas, Human Body Effect on Antenna performance, Radiation Hazards

Text 4:Ch 10: 10.1 to 10.3 (Guha)

Text 2: Ch 11: 11.1,11.3,11.5,11.6.4,11.6.5,11.9,11.10

UNIT-5 (7Hrs)

Smart Antennas: Introduction, need for smart antennas, overview, Smart Antenna configuration, Space division multiple Access, Architecture of a smart antenna system, Benefits and drawbacks, Basic principle, Mutual coupling effects.

Text 4: Ch 4: 4.1 to 4.9

TEXT BOOKS

1. C.A.Balanis,"Antenna Theory and Design",3rd edition, John Wiley and Sons,2005.
2. W.L Stutzman and G.A.Thiele,"Antenna Theory and Design", John Wiley and sons,2nd edition,1998

4. DebatoshGuha,Yahia M MAntar,"Microstrip and Printed Antennas New Trends and Techniques", Wiley, 2011.
5. Girish Kumar,K.P.Ray, "Broadband Microstrip Antennas",Artech House Inc,2003

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (if needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

- Two Surprise Tests of 10 Marks each. Best of two tests will be taken.
- Tool based assignments covering the syllabus for 10 Marks
- Three internals of 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

- Final examination of 100 Marks will be conducted and will be evaluated for 50 Marks.

CO-PO-PSO-BT MAPPING

SEMESTER: VI

REAL-TIME OPERATING SYSTEM

Course Code	**18ECE655**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES

Computer Concepts and C Programming.

COURSE OUTCOMES

Students will be able to

1. Interpret the need of basics of Operating system, process and multi thread management.
2. Analyze the concept of deadlock situations, process scheduling and synchronization and different approaches of memory management.
3. Interpret the difference between OS and RTOS, concept of task and the role played by the scheduler of a real-time operating system.
4. Interpret inter process communication and other RTOS components.
5. Analyze the concepts of Exceptions and Interrupts with examples.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Introduction to operating systems, System structures: What operating systems do; Computer System organization; Computer System architecture; Operating System structure; Operating System operations; Process management; Memory management; Storage management; Protection and Security; Distributed system; Special-purpose systems; Computing environments

Process Management: Process concept; Process scheduling; Operations on processes; Inter process communication

Multi-threaded Programming: Overview; Multithreading models; Thread Libraries; Threading issues.

Text book 1: Chapter 1 (1.1-1.12) , Chapter 3 (3.1-3.4), Chapter 4 (4.1-4.4)

UNIT-2 (8 Hrs)

Process Scheduling: Basic concepts; Scheduling Criteria; Scheduling Algorithms; Multiple-processor scheduling; Thread scheduling. **Deadlocks :** Deadlocks; System model; Deadlock characterization; Methods for handling deadlocks; Deadlock prevention; Deadlock avoidance; Deadlock detection and recovery from deadlock. **Memory Management:** Memory management strategies: Background; Swapping; Contiguous memory allocation; Paging; Structure of page table; Segmentation. **Text book 1: Chapter 5 (5.1- 5.5) , Chapter 7 (7.1- 7.7) , Chapter 8 (8.1 to 8.6)**
UNIT-3 (8 Hrs)
Introduction to Real-Time Operating Systems: Introduction, Defining an RTOS, The Scheduler, Schedulable Entities, Multitasking, The Context Switch, The Dispatcher, Scheduling Algorithms, Key Characteristics of an RTOS, Real-Time Service Timeline, Real-Time Standards **Tasks:** Introduction, Defining a Task, Task States (Ready / Running / Blocked States) and Scheduling, Task Operations, Task Structure, Task Synchronization, Communication and Concurrency **Text1: 4.2, 4.3, 4.4 (4.4.1 to 4.4.5), 4.5, 4.6, 4.7 , 5.1, 5.2, 5.3, 5.4, 5.5, 5.6**
UNIT-4 (8Hrs)
IPC 1: Semaphores – Definition, Binary, Counting and Mutex Semaphores, Semaphore Operations and Semaphore uses, Message Queues – Definition, Message Queue States, Message Queue Content, Message Queue Storage, Message Queue Operations, Message Queue Use **IPC 2**: Pipes – Definition, Pipe Control Blocks, Pipe States, Pipe Operations, Uses of Pipes, **Other RTOS Services**: TCP/IP Protocol Stack, File System Component, RPC Component, Command Shell, Target Debug Agent, Component Configuration. **Text1: 6.2 (6.2.1 to 6.2.3), 6.3(6.3.1 to 6.3.4), 6.4, 7.2, 7.3, 7.4, 7.5, 7.6 (7.6.1 to 7.6.3), 7.7, 8.1, 8.2, 9.1 9.2, 9.3**
UNIT-5 (7Hrs)
Exceptions and Interrupts: Introduction, What are Exceptions and Interrupts, Applications, A closer Look at Exceptions and Interrupts, Classification, Priorities and Processing of Exceptions, Installing Exception Handlers, Loading and Invoking Exception Handlers, Nested Exceptions and Stack Overflow, Exception Handling, The Nature of Spurious Interrupts. **Text1: 10.1, 10.2, 10.3, 10.4 , 10.5, 10.6**

TEXT BOOKS

1. Abraham Silberschatz, Peter Baer Galvin, Greg Gagne, Operating System Principles ,7th edition, Wiley-India, 2006

CO5	2	1	1									2				3

PROGRAM LAB

SEMESTER: VI			
	VLSI DESIGN LAB		
Course Code	**18ECL67**	**Credits**	**01**
Hours/Week(L-T-P)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**26(P)**	**SEE Marks**	**50**

COURSE OUTCOMES
Students will be able to
1. Study the usage of VLSI CAD tool as an industry requirement.
2. Design inverter for extracting its parameters. .
3. Design MOSFET based amplifiers for extracting its parameters.
4. Design Current Mirror circuits as per the functionality specifications.

5. Design full custom layouts of inverters, common source and common drain amplifier circuits.

COURSE CONTENTS

Conduct the DC, AC and Transient Analysis for a given circuit

1. Draw the schematic of an Inverter and conduct the following experiments.
   i. DC Analysis
   ii. Transient Analysis
2. Draw the schematic of an Inverter and conduct the following experiments and evaluate Noise Margin, Overall Capacitance, Slew rate and Power.
3. Draw the schematic of an Inverter and conduct the experiment for evaluating Propagation delay, Rise time and fall time using Parametric Analysis.
4. Draw the schematic of an Inverter and conduct the experiment for evaluating Propagation delay, Rise time and fall time using Manual Method.
5. Draw the schematic of a Common Source Amplifier and perform the following:
   i. DC Analysis
   ii. Transient Analysis for a given gain.
   iii. AC analysis.
6. Draw the schematic of a Common Drain Amplifier and conduct the following:
   i. DC Analysis
   ii. Transient Analysis.
   iii. AC analysis
   iv. Input and output impedance
7. Draw the schematic of Single Stage Current mirror and match the currents in the circuit. Prove the working of Current Mirror using DC and Transient Analysis.
8. Draw the schematic of Two Stage Current mirror and match the currents in the circuit. Prove the working of Current Mirror using DC and Transient Analysis.
9. Draw the schematic of a Differential Amplifier and perform the following
   i. Analyze the operating conditions
   ii. Transient Analysis for a given gain.
   iii. AC analysis.
10. Draw the schematic of a Single Stage Op-amp and perform the following
    i. Analyze the operating conditions
    ii. Transient Analysis for a given gain.
    iii. AC analysis.
11. Draw the schematic of a Two Stage Op-amp and perform the following
    i. Analyze the operating conditions
    ii. Transient Analysis for a given gain.
    iii. AC analysis.
12. Layout of Inverter, Common Source Amplifier and Common Drain Amplifier.

CO-PO-PSO MAPPING

SEMESTER: VI

COMMUNICATION SYSTEM LAB II

Course Code	**18ECL68**	**Credits**	**01**
Hours/Week(L-T-P)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**3H/W**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES

Fundamentals of Electromagnetics and Microwave Engineering.
Basic knowledge of Digital and Analog communication.

COURSE OUTCOMES

STUDENTS WILL BE ABLE TO:

CO1: Design and analyze the different digital modulation and demodulation systems

CO2: Analyze the propagation of waves in a waveguide and estimate the different performance parameters.

CO3: Analyze the different types of losses in a fiber optic link and estimate the different performance parameters.

CO4: Design and analyze the radiation characteristics of different types of antennas and estimate the gain and directivity.

CO5: Analyze the characteristics of different microwave devices (both waveguide and microstrip version) and estimate their performance parameters.

COURSE CONTENTS

1. Design and analysis of Time Division Multiplexing of two or more band limited signals.
2. Design of ASK generation & detection system.
3. Design of FSK generation & detection system.
4. Design of PSK generation & detection system.
5. Study of DPSK generation & detection system.
6. Study of QPSK generation & detection system.
7. Study of PCM generation & detection system using codec chip.
8. Analysis of different types of losses present in a Fiber optic communication system for both Analog and digital links and estimation of numerical aperture.
9. Estimation of power & electronic tuning range in a Reflex Klystron Oscillator operating in X band.
10. Determination of Guide wavelength and frequency using slotted line carriage in a microwave test bench operating in X band.
11. Determination of Gain and Directivity of a waveguide type rectangular Horn Antenna operating in the X band
12. Determination of Gain and Directivity of a Paraboloidal Reflector Antenna operating in the X band.
13. Design and analysis of standard dipole antenna (printed dipole antenna) and finding the gain & Directivity operating in the S band.
14. Determination of gain & directivity of micro strip patch antenna operating in the S band.
15. Design of a printed Yagi Antenna operating in the S band and estimating the gain & directivity.
16. Determination of coupling and isolation characteristics of strip line or micro strip line directional coupler.
17. Design of a micro strip ring resonator and estimation of Bandwidth and Quality factor operating in the S band.
18. Determination of power division & isolation characteristics of a Wilkinson 3dB power divider.
19. Determination of power division and Isolation characteristics of Waveguide Tees (E plane Tee,H plane Tee, Magic Tees) using a Microwave Test bench.

Note: Simulation of Experiments 1,2,3,4,5,11,12,13,14,15,16,17,18,19 need to be carried out using a suitable tool such as TINA/Multi Sim/HFSS/MATLAB by students and shown as Assignments.

VII SEMESTER

SEMESTER: VII			
ARM PROGRAMMING AND OPTIMIZATION			
Course Code :	**18EC71**	**Credits:**	**03**
Hours/Week(L-T-P):	**3-0-0**	**CIE Marks:**	**50**
Total Hours:	**39**	**SEE Marks:**	**50**
Exam Hours:	**03**	**Course Type:**	**Core**

PRE-REQUISITES
Basics of microcontroller and microprocessors

COURSE CONTENTS
UNIT-1 (8 Hrs)
Programming in C for ARM: Introduction, Data Path Architecture, Registers, Modes, Exceptions Overview of C Compilers and optimization, basic C data types, C looping structures, register allocation, function calls, pointer aliasing, structure arrangement, bit fields, unaligned Data and Endianess, division, floating point, inline functions and inline assembly, portability issues Reference: Text 1 RBT Level: L1,L2
UNIT-2 (8 Hrs)
Digital Signal Processing on ARM: Representing a digital signal, Introduction to DSP on the ARM, FIR filters: Realization of filters on ARM7 and Cortex M3, IIR Filters: Realization of filters on ARM7 and Cortex M3, CMSIS DSP Library. Reference: Text 1 RBT Level: L2,L2
UNIT-3 (8 Hrs)
Memory Protection Unit: Over view of the MPU's, MPU registers, setting up the MPU, Memory barrier and memory configuration, Using sub-region disable, Consideration when using MPU, Other usages of MPU. **Reference: Text 1** **RBT Level:L2,L3**
UNIT-4 (8 Hrs)
Firmware: Firmware and Boot loader **Embedded Operating Systems:** Fundamental Components, Simple Operating System Reference: Text 1 RBT Level: L2,L3
UNIT-5 (7 Hrs)
Writing and Optimizing ARM Assembly Code: Writing assembly code, profiling and cycle counting, instruction scheduling, register allocation, conditional execution, looping constructs, Bit manipulation, efficient switches. Handling unaligned data. **Reference: Text 1** **RBT Level: L2,L3**
TEXT BOOKS
ARM System Developers Guide, Andrew N Sloss, Dominic Symes, Chris Wright, 2008, Elsevier, Morgan Kaufman publishers, ISBN-13:9788181476463
REFERENCE BOOKS
1. The definitive Guide to the ARM Cortex- M3 & M4 Processors, Joseph Yiu, 3rd Edition, 2014, Newnes (Elsevier), ISBN: 978-93-5107-175-4. 2. ARM System on Chip Architecture, Steve Furber, 2nd Edition, 2001, Pearson Education Limited, ISBN-13:9780201675191. 3. Technical reference manual for ARM processor cores, including Cortex M series, ARM 11, ARM 9 & ARM 7 processor families.
TEACHING METHODOLOGY

- Blackboard teaching
- MS PPTx slides
- Regular review of students’ understanding by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Tool based Assessment - 10 Marks
2. Surprise tests based on GATE questions- 10Marks.
3. Three mid sem examinations, 30 Marks each will be conducted and the average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO/ PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT

SEMESTER: VII

WIRELESS COMMUNICATION

Course Code:	**18EC72**	**Credits**	**03**
Hours/Week(L-T-P-S):	**3-0-0**	**CIE Marks**	**50**
Total Hours:	**39**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES

1. Knowledge of Antenna and Microwaves
2. Knowledge of computer network concepts
3. Understanding of basic electrical science

COURSE OUTCOMES
At the end of course , the students will be able to 1. Acquire the knowledge of frequency reuse concept by making use of allotted bandwidth. 2. Apply knowledge of mathematics, probability theory, and statistics to model analyze wireless communication 3. Understand of wireless communication systems at the physical layer level. 4.Acquire knowledge with the state of the art technologies like GSM, CDMA and personal Communication systems. 5.Familiar with the technology used in the successive generation of standards used in wireless Communication system

COURSE CONTENTS
UNIT-1 (08Hrs)
Introduction to Wireless Communication Systems: Examples of Wireless Communication Systems, Paging Systems, Cordless Telephone Systems, Cellular Telephone Systems, Comparison of Common Wireless Communication Systems, Trends in Cellular Radio and Personal Communication Systems. **The Cellular Concept- System Design Fundamental:** Introduction, Frequency Reuse, Channel Assignment Strategies, Handoff Strategies, Interference and System capacity, Trunking and Grade of Service, Improving Coverage& capacity in Cellular Systems. *Text1: Ch 1 ,1.4,1.5, Ch 3*
UNIT-2 (08Hrs)
Mobile Radio Propagation: Large Scale Path Loss: Introduction to Radio Wave Propagation, Free Space Propagation Model, Relating Power to Electric Field, The Three Basic propagation Mechanisms, Reflection, Ground Reflection (Two-Ray) Model, Diffraction, Scattering, Practical Link Budget Design Using Path Loss Models, Outdoor propagation Models, Indoor Propagation Models, Signals Penetration into Buildings, Ray Tracing and Site Specific Modeling. *Text: Ch 4*
UNIT-3 (08Hrs)
Mobile Radio Propagation: Small –Scale Fading and Multipath: Small-Scale Multipath Propagation, Impulse Response Model of a Multipath Channel, Small-Scale Multipath Measurements, Parameters of Mobile Multipath Channels, Types of Small-scale Fading. **Speech Coding** :Characteristics of Speech Signals, Quantization Techniques, Adaptive Differential Pulse Code Modulation, Frequency Domain Coding of Speech, Vocoders, Linear Predictive Coders, Choosing Speech Coders for Mobile Communications, The GSM Codec, The USDC Codec, Performance Evaluation of Speech Coders *Text: Ch 5. 5.1 to 5.5, Ch. 8*
UNIT-4 (08Hrs)
Multiple-Access (MA) Schemes: Introduction to FDMA,TDMA,SDMA, Packet radio, capacity of cellular system, Introduction to wireless Networks, Difference between Wireless and Fixed Telephone Networks, Public Switched telephone Networks, Limitations in Wireless networking, Merging Wireless networks and PST *Text: Ch 9, Ch 10, 10.1, 10.2*

UNIT-5(07Hrs)

Wireless Systems and Standards: Global System for Mobile(GSM), GSM services and Features ,GSM system Architecture, GSM Radio Subsystem, GSM channels type, Examples of GSM call, Frame structure for GSM, Signal Processing in GSM , CDMA Digital Cellular system, Frequency and channel specifications ,Forward CDMA channel, Reverse CDMA channel,IS-95 with 14.4 kbps speech coder

Text:Ch11.11.3,11,4

TEXT BOOKS

1. Theodore S.Rappaport, “Wireless Communications-Principles and practice”, Pearson Education, 2^{nd} Edition, 2002

SEMESTER: VII

POWER ELECTRONICS

Course Code	**18EC73**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

PRE-REQUISITES
Students should have the knowledge of analog electronics, signals and systems and embedded controllers

COURSE OUTCOMES

Students will be able to :

1. Interpret the basic operations of various power semiconductor devices and their applications
2. Analyze the working of a converter and determine the various performance parameters.
3. Analyze the different commutation techniques for the control of power.
4. Analyze the different modes of operation of Choppers and study their performance parameters.
5. Analyze the different configurations of inverters and interpret the different performance parameters.

COURSE CONTENTS

UNIT-1 (7 Hrs)

Introduction: Power semiconductor devices, applications of power electronics, control characteristics, types of power electronic circuits, peripheral effects.

Power BJTs: Switching characteristics, switching limits, base-drive control.

Text1: Ch1, 1.1, 1.3, 1.4, 1.5, 1.7 Ch8: 8.1,8.2

UNIT-2 (8 Hrs)

Thyristor: Introduction, Thyristor characteristics, Two-transistor model of Thyristor, di/dt and dv/dt protection circuit, Thyristor firing circuit and Uni-junction Transistor.

Controlled rectifiers: Introduction, principle of phase controlled converter operation, single- phase semi Converters, full converters and dual converters.

Text1: Ch4: 4-1,4-2,4-3,4-5,4-6,4-11,4-12 Ch 5, 5.1 to 5.5

UNIT-3 (8Hrs)

AC Voltage Controllers: Introduction, principle of ON-OFF and phase control, single-phase bidirectional controllers with resistive loads.

Commutation Techniques: Introduction, natural commutation, forced commutation: self-commutation, impulse commutation, resonant pulse commutation, complementary commutation

Text1: Ch 6, 6.1 to 6.4, Ch 7, 7.1 to 7.3

UNIT-4 (8 Hrs)

DC Choppers: Introduction, principle of step-down and step-up choppers step down chopper with RL loads, performance parameters. Chopper classification, analysis of impulse commutated thyristor chopper (only qualitative analysis). **Text1:** Ch9, 9.1 to 9.6 & 9.8

UNIT-5 (8 Hrs)

Inverters: Introduction, principle of operation, performance parameters, single phase bridge inverters, three phase inverters, voltage control of single phase inverters, current source inverter, variable DC link inverter.
Text 1: Ch10, 10.1 to 10.7 and 10.11

TEXT BOOKS

SEMESTER: VII

ENTREPRENEURSHIP DEVELOPMENT, MANAGEMENT and IPR

Course Code :	**18ECH74**	**Credits:**	**3**
Hours/Week(L-T-P):	**3-0-0**	**CIE Marks:**	**50**
Total Hours:	**39**	**SEE Marks:**	**50**
Exam Hours:	**03**	**Course Type:**	**Core**

COURSE OUTCOMES

At the End of the course the students are able to

1. Recognize the importance of entrepreneurship and its role in economic development of the country.
2. Identify various schemes of Central and State Governments and their agencies available to promote MSME.
3. Ascertain the need of managerial skills for an entrepreneur and understand the different facts like planning, organizing, staffing etc.
4. Appreciate the essentiality of communication, coordination and control in managing the enterprise.
5. Appraise the IP rights like patents, industrial design, trademark, copyrights for effective protection and utilization of innovations.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Entrepreneurship: Introduction, Importance of entrepreneurship, entrepreneur, characteristics, Types, entrepreneurial process, role of entrepreneurs in economic development, problems faced by entrepreneurs, scope in India

Make in India: Plans and policies, Sectors, Government Initiatives, Investment Opportunities, Ease of doing Business.

Text: 1, Chapter 5.1-5.10

UNIT-2 (8 Hrs)

Small scale industry: Definition of MSMEs as per MSME act, characteristics of small enterprises, need and advantages of small enterprises, Steps in setting up of small enterprises.

Text 1:Chapter 6.2,6.3,6.5,6.6,6.8

Supporting agencies and Institutional support-State schemes, TECSOK, KIADB, KSSIDC, KSFC, National Schemes- MSME-DI, NSIC, SIDBI

Text: 1 Chapter 7.2,7.3

UNIT-3 (8 Hrs)

Introduction to management - nature and characteristics of management, levels of management, roles of management, Functional areas and scope of management

Text: 1 Chapter 1.3,1.4,1.5,1.9,1.11,1.12

Planning- Nature, steps in planning, types of plans

Text: 1 Chapter 2.3,2.5,2.7

Organizing and Staffing- Purpose and Nature, types of Organization, Staffing, process of recruitment and selection

Text: 1 Chapter 3.3,3.4,3.5,3.17,3.19,3.20

UNIT-4 (8 Hrs)

Directing and controlling- Leadership and leadership styles, Qualities of good leader, Motivation, Importance of motivation,

Communication-Process of communication, Types of communication

Coordination- need, requirements, techniques

Controlling- Controlling process, types of control, control techniques

Text: 1 Chapter 4.3,4.5,4.6,4.10,4.11,4.12,4.13

UNIT-5 (7 Hrs)

Intellectual Property Rights-Introduction to IPR, Types of IPRs, Indian IPR scenario, Legal use of IP **Patents**-Introduction and history of patent, Criteria for patent, types of patents, Indian patent act, patents for computer software, business models, incremental innovation, patent infringement.

Trademarks-role of trademark, Trademark- a marketing tool, trademark rights, types, trademark act, trademark registration in India.

Copyrights- copyright protection in India, enforcement measures, copyright act.

Text: 2 Chapter 5,6,7,8

TEXT BOOKS

1. Entrepreneurship and Management by S Nagendra and V S Manjunath ,Sanguine Technical Publications
2. Managing Intellectual Property by Vinod V. Sople, PHI, 3rd Edition, 2012

REFERENCE BOOKS

1. Intellectual Property-Copyrights, trademarks and patents by Richard Stim, Cengage learning,2011
2. Management Fundamentals -Concepts, Application, Skill Development Robert Lusier –Thomson.

SEMESTER: VII

SATELLITE COMMUNICATION

Course Code	**18ECE751**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES
Fundamental Course on Engg Electromagnetics, Microwave and antennas

COURSE OUTCOMES

1. Students will be able to identify the fundamentals of orbital mechanics, and performance of communication system.
2. Students will be able to analyze the different types of subsystems present in a satellite.
3. Design a communication link for a satellite to meet the given performance parameters.
4. Analyze the different access technologies and error control techniques for satellites.
5. Design a satellite constellation for Navigation and GPS system considering different performance parameters.

COURSE CONTENTS

UNIT-1 (8Hrs)

Introduction: History, Overview

Orbital Mechanics and Launchers: Orbital mechanics, Look angle Determination, Orbital perturbations, Orbit determination, Launches and Launch Vehicles, Orbital effects in communications Systems performance

Text: Ch.1:1.1 to 1.4,Ch.2:2.1 to 2.6

UNIT-2 (8Hrs)

Satellite: Satellite subsystems, Attitude and orbit control systems(AOCS), Telemetry, Tracking, Tracking, Command and Monitoring, Power Systems, Communications subsystems, Satellite antennas, Equipment Reliability and space qualification tests.

VSAT System: Introduction, Overview of VSAT systems, Network Architecture VSAT systems, Network Architecture VSAT Earth Station Engineering

Text: Ch.3:3.1 to 3.7, Ch.9:9.1 to 9.3, 9.6

UNIT-3 (8Hrs)

Satellite Link Design: Introduction, Basic Transmission Theory, System Noise Temperature and G/T Radio, Design of Downlinks, satellite Systems using Small Earth Stations, Uplink Design, Design for Specified C/N: Combining C/N and C/I values in Satellite Links, System Design Examples *Text: Ch.4:4.1 to4.8*

UNIT-4 (8Hrs)

Multiple Access: Introduction, Frequency Division Multiple Access, Intermodulation, Intermodulation Example, Calculation of C/N with Intermodulation, Time Division multiple access, Demand Access Multiple Access (DAMA), Code Division Multiple Access (CDMA)

Error Control for Digital Satellite Links: Implementation of Error Detection on Satellite Links

Text Ch6:6.1, 6.2, 6.3, 6.5, and 6.8 Ch.7:7.6

UNIT-5 (7rs)

Low Earth Orbit and Non-Geo-stationary satellite Systems: Introduction, Orbit Considerations, Coverage and Frequency Considerations, Delay and Throughput Considerations, Operational NGSO Constellation Design-Iridium, Teledesic

Ch.10:10.1 to 10.4, 10.6

Satellite Navigation and the Global Positioning System: Radio and Satellite Navigation, GPS position Location Principles, GPS receivers and Codes

Text: *Ch.10:10.1 to 10.4, 10.6, Ch* 12:12.1, 12.2, 12.3

TEXT BOOKS

1. Charles Bostian, Jeremy Allnutt, Timothy Pratt, “Satellite Communications”, John Wiley & Sons-II Edition.

REFERENCE BOOKS

1. Dennis Roody “Satellite Communications”, Mc Graw Hill. II Edition

TEACHING METHODOLOGY

- Black board teaching
- PowerPoint presentations (if needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Two Surprise Tests, 10 Marks each. Best of two tests will be taken.
2. Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Final examination, of 100 Marks will be conducted and will be evaluated for 50Marks.
2. Two Questions are to be set from each unit, carrying 20 Marks each.
3. Students have to answer 5 questions selecting one full question from each unit

SEMESTER: VII

IP NETWORKING

Course Code	**18ECE752**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES
Basics of electronics, Analog and Digital circuits, Analog and Digital communication, Programming basics

COURSE OUTCOMES
1. Students will be able to understand how to develop client and server programs 2. Students will be able to understand DNS basics 3. Students will be able to understand Network management / SNMP fundamentals 4. Students will be able to understand SDN fundamentals 5. Students will be able to understand IPv6 fundamentals

COURSE CONTENTS
UNIT-1 (8 Hrs)
The Client-Server Model, UDP Echo Server, Sequential and Concurrent Servers, Socket API The Socket Abstraction and Socket Operations, Socket options, TCP Connections, Obtaining and Setting the Host Name, Library Functions Related to Sockets. Examples (Client, Server) T1 Ch20 and Ch21
UNIT-2 (8 Hrs)
DNS Introduction, Names For Computers, Flat Namespace, Hierarchical Names, Delegation Of Authority For Names Subset Authority, Internet Domain Names, Top-Level Domains, Name Syntax And Type, Mapping Domain Names To Addresses, Domain Name Resolution , Efficient Translation ,Caching: The Key To Efficiency Domain Name System Message Format, Compressed Name Format, Abbreviation Of Domain Names , Inverse Mappings, Pointer Queries, Object Types And Resource Record Contents ,Obtaining Authority For A Subdomain Server Operation And Replication, Dynamic DNS Update And Notification , DNS Security Extensions (DNSSEC) T1 Ch 23
UNIT-3 (8 Hrs)
Network Management Introduction, The Level Of Management Protocols, Architectural Model, Protocol Framework , Examples of MIB Variables, The Structure Of Management Information, Formal Definitions Using ASN.1 , Structure And Representation Of MIB Object Names , Network Management Protocol SNMP Message Format, An Example Encoded SNMP Message , Security In SNMPv3 T1 Ch27
UNIT-4 (8 Hrs)
SDN Introduction ,Routes, Paths, And Connections, Traffic Engineering And Control Of Path Selection Connection-Oriented Networks And Routing Overlays ,SDN: A New Hybrid Approach Separation Of Data And Control, The SDN Architecture And External Controllers, SDN Across Multiple Devices Implementing SDN With Conventional Switches, Open Flow Technology, Open Flow Basics

Specific Fields In An Open Flow Pattern, Actions That Open Flow Can Take, Open Flow Extensions And Additions Open Flow Messages ,Uses Of Open Flow
T1 Ch 28.1- 28.16

UNIT-5 (7 Hrs)

Relationship Between Ipv4 And Ipv6,Ipv6 Migration, The Ipv6 Addressing Scheme Ipv6 Colon Hexadecimal Notation,Ipv6 Address Space Assignment, Embedding Ipv4 Addresses In Ipv6 For Transition
Ipv6 Unicast Addresses And /64,Ipv6 Interface Identifiers And MAC Addresses,Ipv6 Multicast And Anycast Addresses
Ipv6 Link-Local Addresses,Ipv6 Datagram Format,Ipv6 Base Header Format
T1 Ch 1.11,1.12,5.14,5.15,5.16,5.17,5.18,5.19,5.21.9,5.21.10,7.7.2,7.7.3

TEXT BOOKS

Text book 1 (T1) –Internetworking with TCP/IP VolumeOne,6/E Douglas E. Comer, PHI
Important Note – This course covers Ipv4 protocol only (Unit 1-4)

TEACHING METHODOLOGY

- Blackboard teaching
- MS pptx slides
- Regular review of students' understanding by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Tool based Assessment - 10 Marks
2. Surprise tests based on GATE questions- 10Marks.
3. Three mid semexaminations, 30 Marks each will be conducted and the average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

SEMESTER: VII

OPTICAL FIBER COMMUNICATION

Course Code	**18ECE754**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core Elective**

PRE-REQUISITES

1. Fundamentals of Electromagnetic theory
2. Principles of Communication Systems

COURSE OUTCOMES

Students will be able to

1. Study different components in an optical fiber communication system.
2. Analyze physics of optical sources and detectors
3. Design optical receivers and study power launching-coupling in optical fibers.
4. Design optical fiber transmission systems for given power and signal rise time.
5. Analyze applications of optical fiber communication systems in optical networks.

COURSE CONTENTS

UNIT-1 (08 Hrs)

Overview of optical fiber communication: Advantages of optical fiber communication, Basic principles, Fiber modes and configuration, step index and graded index structures, Fiber materials, Fiber fabrication, Mechanical properties of fibers, Fiber optic cables.

Signal Degradation in optical fibers: Attenuation, Signal distortion in optical Waveguides, Pulse broadening in graded index waveguides, Mode Coupling and Design optimization of single mode fibers.

Text 1: Ch 2.2 to 2.10 and 3.1 to 3.5

UNIT-2 (08 Hrs)

Optical sources: Basic characteristics of light sources for communication, LED sources and LASER diodes sources, Hetero junction structure.

Optical Detectors: Physical principles of photo diode, PIN photo diodes and AVALANCHE photo diodes, Detectors and their response time.

Text 1:Ch 4.1 to 4.3 and 6.1 to 6.3

UNIT-3 (08Hrs)

Power launching and coupling: Source of fiber power launching, Lensing schemes for Coupling improvement, fiber to fiber joints, LED coupling to single mode fibers, Fiber Splicing, optical fiber connectors.

Optical receiver operation: Fundamental receiver operation, Digital receiver Performance calculation, Pre amplifier types, Analog receiver.

Text 1: Ch 5.1 to 5.6 and 7.1 to 7.5

UNIT-4 08 Hrs)

Analog systems: Overview of analog links, Carrier to noise ratio, Multi-channel Transmission techniques.

Digital Transmission systems: Point to point links, System considerations, Link power Budget, Rise time budget, Line coding for optical fiber links multiplexing, and Error Correction.

Text 1:Ch 8.1 to 8.3 and 9.1 to 9.3

UNIT-5 (07 Hrs)
Advanced systems and techniques: Operational principles of Wavelength division multiplexing, passive components, Optical amplifiers, Local area networks, SONET/SDH Networks, Photonic switching, and non-linear optical effects. *Text 1: Ch 10.1 to 10.2 and 12.1 to 12.5 &Ch 11*
TEXT BOOKS
1. Gerd Keiser, "Optical fiber communication", MC Graw Hill, 3rd Edition, 2000.
REFERENCE BOOKS
1. John Gowar, "Optical communication systems", PHI,2001 2. D.C Agarwal, Wheeler "Fiber optic communication". Chand (S.) & Co Ltd ,India, 2005
TEACHING METHODOLOGY
• Black board teaching • PowerPoint presentations (if needed) • Regular review of students by asking questions based on topics covered in the class
COURSE ASSESSEMENT METHOD
CIE: 1. Two Surprise Tests, 10 Marks each. Best of two tests will be taken. 2. Three internals, 30 Marks each will be conducted and the Average of best of two will be taken. **SEE:** 1. Final examination, of 100 Marks will be conducted and will be evaluated for 50Marks. 2. Two Questions are to be set from each unit, carrying 20 Marks each. 3. Students have to answer 5 questions selecting one full question from each unit
CO-PO-PSO MAPPING

SEMESTER: VIII

INTERNET OF THINGS

Course Code	**18ECE755**	**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES

1. Basic knowledge of Electronics and Logic design
2. Basic knowledge of Microprocessors, Microcontrollers and Interfacing
3. Programming in C language

COURSE OUTCOMES

1. Students will understand the fundamentals and applications of Internet of Things
2. Students will get exposure to the aspects of Communication and Protocols associated with IoT
3. Students will know the methodologies and tools involved in the design of IoT
4. Students will understand aspects of hardware and software associated with development of IoT
5. Students will get exposure to the basics of aggregation and analysis of shared data

COURSE CONTENTS

UNIT-1 (8 Hrs)

Introduction to IOT: Introduction to Internet of Things- Definition and Characteristics of IoT, Sensors, Actuators, Physical Design of IoT – IoT Protocols, IoT communication models, IoT Communication APIs, IoT enabled Technologies – Wireless Sensor Networks, Cloud Computing, Embedded Systems, IoT Levels and Templates, Domain Specific IoTs – Home, City, Environment, Energy, Agriculture and Industry.

Textbook #1: 1.1-1.5, 2.1-2.10.

UNIT-2 (8 Hrs)

IoT and M2M: Software defined networks, network function virtualization, difference between SDN and NFV for IoT, Basics of IoT System Management with NETCOZF, YANG- NETCONF, YANG and SNMP NETOPEER.
Textbook #1: 3.1-3.4, 4.1-4.6.

UNIT-3 (8 Hrs)

IoT Physical devices and End-points: Basic building blocks of an IoT device, Raspberry Pi, Linux on Raspberry Pi, Raspberry Pi Interfaces (Serial, SPI, I2C), Programming Raspberry Pi with Python (Controlling LED, Interfacing switch, Interfacing Light sensor).

Textbook #1: 7.1-7.6

UNIT-4 (8 Hrs.)

Controlling Hardware: Connecting LED, Buzzer, Switching High Power devices with transistors, Controlling AC Power devices with Relays, Controlling servo motor, speed control of DC Motor, unipolar and bipolar Stepper motors.
Textbook #2: 9.1-9.6, 10.1, 10.3, 10.5, 10.6

UNIT-5 (7 Hrs)

IoT Physical Servers and Cloud Offerings: Introduction to Cloud Storage models and communication APIs Webserver – Web server for IoT, Cloud for IoT, Python web application framework.

Textbook #1: 8.1-8.4

TEXT BOOKS

1. “Internet of Things: A Hands-on Approach”, Arshdeep Bahga, Vijay Madisetti, Universities Press, 2015.
2. “Raspberry Pi Cookbook, Software and Hardware Problems and Solutions”, Simon Monk, Oreilly, 2014.

REFERENCE BOOKS

1. “Designing the Internet of Things”, Adrian McEwen, Hakim Cassimally, Wiley Publication.

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE

1. Assignment - 10 Marks
2. Surprise tests - 10Marks.
3. 3 mid-sem exams (30 Marks each) will be conducted and the Average of best two will be taken.

SEE

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

SEMESTER: VII

DATA COMPRESSION

Course Code	**18ECE756**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES
Information theory and Coding

COURSE OUTCOMES

1. To provide students with contemporary knowledge in Data Compression and Coding
2. To equip students with skills to analyze and evaluate different Data Compression and Coding methods
3. Analyze the operation of a range of commonly used Coding and Compression techniques
4. Identify the basic software and hardware tools used for data compression
5. Identify what new trends and what new possibilities of data compression are available.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Introduction: Compression Techniques, Modeling and Coding

Mathematical Preliminaries for Lossless Compression: Overview , A Brief Introduction to Information, Models, Coding, Algorithmic Information Theory

Mathematical Preliminaries for Lossy Coding: Overview, Introduction, Distortion Criteria, Information Theory Revisited, Rate Distortion Theory, Models

UNIT-2 (8 Hrs)

Huffman Coding: Overview, The Huffman Coding Algorithm, Adaptive Huffman Coding, Golomb Codes, Rice Codes, Tunstall Codes, Applications of Huffman Coding

Arithmetic Coding: Overview, Introduction, Coding a Sequence, Generating a Binary Code, Comparison of Huffman and Arithmetic Coding, Applications

UNIT-3 (8 Hrs)

Dictionary Techniques: Introduction, Static Dictionary, Adaptive Dictionary, Applications

Lossless Image Compression : Overview, Introduction, CALIC, JPEG-LS, Multi-resolution Approaches, Facsimile Encoding

Scalar Quantization: Overview, Introduction, The Quantization Problem, Uniform Quantizer, Adaptive Quantization, Non-uniform Quantization

UNIT-4 (8 Hrs)

Vector Quantization: Overview, Introduction, Advantages of Vector Quantization over Scalar Quantization

Wavelet-Based Compression: Overview, Introduction, Wavelets, Multi-resolution Analysis and the Scaling Function, Implementation Using Filters, Compression, Embedded Zero-tree Coder, Set Partitioning in Hierarchical Trees, JPEG 2000

UNIT-5 (7 Hrs)

Audio Coding: Overview, Introduction, MPEG Audio Coding, MPEG Advanced Audio Coding

Video Compression: Overview, Introduction, Motion Compensation, Video Signal Representation, ITU-T Recommendation H.261

LITERATURE

Text Books:

Introduction to Data Compression, Khalid Sayood, Morgan Kaufman

Reference Books:

1. A concise introduction to data compression, David Salomon, Springer
2. Data compression: The Complete Reference ,David Salomon, G. Motta, D. Bryant, Springer

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

4. Assignments /Tutorials - 10 Marks
5. Quiz/Mini Projects - 10Marks.
6. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

- Two Questions are to be set from each unit, carrying 20 Marks each.
- Students have to answer 5 questions selecting one full question from each unit

SEMESTER: VII

ADHOC WIRELESS NETWORKS

Course Code	**18ECO761**	**Credits**	**03**
Hours/Week(L-T-P-S)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39(L)**	**SEE Marks**	**50**
Exam Hours	**3**	**Course Type**	**Open Elective**

PRE-REQUISITES
1. Students are expected to have the basics of data communication.

COURSE OUTCOMES
Students will be able to
1. Compare ad-hoc wireless networks with cellular network and gain knowledge on their applications
2. Analyze the issues in designing different layers of ad-hoc wireless networks
3. Design protocols for different layers of adhoc wireless networks.
4. Analyze existing routing and transport protocols and modify them for adhoc wireless networks.
5. Evaluate the quality of service of a network and examine the network security.

COURSE CONTENTS
UNIT-1 (10Hrs)
AD HOC NETWORKS And MAC Protocols: Introduction, Issues in Ad hoc wireless networks, Ad hoc wireless internet. Issues in designing a MAC protocol for Ad hoc wireless Networks, Design goals of a MAC protocol for Ad hoc wireless Networks, Classification of MAC protocols *Text 1: Ch 5- 5.1,5.2,5.3 Ch 6-6.1,6.2.6.3,6.4*
UNIT-2 (11Hrs)
MAC PROTOCOLS: Contention - based MAC protocols with scheduling mechanism, MAC protocols that use directional antennas, Other MAC protocols. *Text1:Ch6 -6.5,6.6,6.7,6.8,6.9*
UNIT-3 (11Hrs)
Routing Protocols For Ad Hoc Wireless Networks: Introduction, Issues in designing a routing protocol for Ad hoc wireless Networks, Classification of routing protocols, Dynamic Source Routing Protocol, Adhoc On-Demand Distance Vector Routing Protocol, Associativity based Routing *Text 1: Ch7- 7.1,7.2,7.3,7.5.1,7.5.2,7.5.5*
UNIT-4 (10Hrs)
Transport Layer Protocols For Ad Hoc Wireless Networks: Introduction, Issues in designing a transport layer protocol for Ad hoc wireless Networks, Design goals of a transport layer protocol for Ad hoc wireless Networks, TCP over ADHOC wireless network *Text 1: Ch9-9.1,9.2,9.3,9.4,9.5,9.6*
UNIT-5 (10Hrs)
SECURITY: Security in wireless Ad hoc wireless Networks, Network security requirements, Issues & challenges in security provisioning, network security attacks and key management
QUALITY OF SERVICE IN AD HOC WIRELESS NETWORKS: Introduction, Issues and challenges in providing QoS in Ad hoc wireless Networks, Classification of QoS solutions. *Text1:Ch9- 9.7,9.8,9.9,9.10,9.11* *Ch10-10.1,10.2,10.3*
TEXT BOOKS

1. **“Ad hoc wireless Networks”**, C. Siva Ram Murthy & B. S. Manoj,Pearson Education, 2nd Edition, reprint 2005.

REFERENCE BOOKS

1. **“Ad hoc wireless Networks”**, Ozan K. Tonguz and Gianguigi Ferrari,Wiley
2. **“Ad hoc wireless Networking”**, Xiuzhen Cheng, Xiao Hung, Ding-Zhu Du, Kluwer Academic publishers.

TEACHING METHODOLOGY

- Black board teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Assignment /Case Study - 10Marks
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

Two Questions are to be set from each unit, carrying 20 Marks each.

Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSOMAPPING

CO/ PO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT
CO1	2	2	2	1		1						1		2		2

SEMESTER: VII

AVIONICS

Course Code	**18ECO762**	**Credits**	**04**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours:	**52(L)**	**SEE Marks**	**50**
Exam Hours :	**03**	**Course Type**	**Open ELECTIVE**

PRE-REQUISITES

Basics of electronics and aircraft science.

COURSE OUTCOMES

1. Students will understand the need of avionics for both military and civil aviation.
2. Students will be able to interpret the communication, surveillance concepts involved in avionics.
3. Students will be able to illustrate the navigation system involved in avionics.
4. Students will get a summary of avionics which integrates electronics and aviation in both manned and unmanned air vehicles.
5. Students will be able to analyze the various electronic systems/subsystems involved in an aircraft.

COURSE CONTENTS

UNIT-1 (10Hrs)

Introduction to Avionics: Importance and role of avionics, avionic environment, Choice of Units
Text 1: Ch 1.1 to 1.3

UNIT-2 (10 Hrs)

Surveillance Systems: Air traffic control, Primary radar, Secondary radar, Replies, Various system modes, error checking, Transponders of ATCCRB & Mode S, Collision avoidance, Lightning detection, Weather radar. *Text 2: Ch 5.1 to 5.18*

UNIT-3 (11 Hrs)

Airborne Communications Systems: VHF AM Communications, VHF Communications hardware, High frequency communications, ACARS, SELCAL, Digital Communications and Networking, VHF Digital communications, Data link Modes. *Text 2: Ch 6.1 to 6.10*

UNIT-4 (11 Hrs)

On-board Communications: Microphones, Digital communications, Transmission lines, Digital data bus systems ARINC 426, MIL STD 1553, ARINC 629, Commercial standard digital bus, Fiber optic communication. *Text 2: Ch 7.1 to 6.11*

UNIT-5 (10 Hrs)

Navigation System: Introduction and Basic Principles , Inertial Navigation , Aided IN system and Kalman Filters , Attitude Heading Reference System , GPS Global Positioning System , Terrain Reference System
Unmanned Air Vehicles: Importance of Unmanned air vehicles, UAV avionics. *Text 1: Ch 6.1 to 6.6and Text 2 : 10.1 to 10.3*

TEXT BOOKS

4. **Collinson RPG,** Introduction to Avionics, Third Edition, Kluwer Academic Publishers, Chapman & Hall.
5. **Albert Helfrick**, Principals of Avionics 2nd Edition, Avionics Communication Inc.

REFERENCE BOOKS

1. **Moir, I. and Sea bridge**, Civil avionics systems, AIAA Education series, 2nd Edition

2. **Moir, I. and Sea bridge** Military avionics systems (aerospace), Publisher: Wiley-Blackwell (24 February 2006), ISBN-10: 0470016329,ISBN-13: 978-0470016329

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Tutorials - 10 Marks
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

SEMESTER: VII

FORECASTING PERSPECTIVE USING R

COURSE CODE	**18ECO763**	**CREDITS**	**03**
HOURS/WEEK(L-T-P)	**3-0-0**	**CIE MARKS**	**50**
TOTAL HOURS	**39(L)**	**SEE MARKS**	**50**
EXAM HOURS	**03**	**COURSE TYPE**	**Open Elective**

PRE-REQUISITES
Familiarity with Statistics and C language

COURSE OUTCOMES
The student will be able to 1. Acquire the Forecasting Perspective 2. Analyze the different parameters of Forecasting using the Forecasting Toolbox 3. Apply different regression models for forecasting 4. Apply time series decomposition for seasonal forecasting 5. Realize various models using time series decomposition

COURSE CONTENTS
UNIT-1 (8 Hrs)
Getting Started: Introduction to Forecasting , Time Series Graphics and Concepts **T1: 1.1-1.9, 2.1-2.11**
UNIT-2 (8 Hrs)
Basic Forecasting Tools: Forecasting Toolbox: Simple Forecasting Methods, Time Series Adjustments & Transformations and Residual Diagnostics, Evaluating Forecast Accuracy and Prediction Intervals **T1:3.1-3.8**
UNIT-3(8 Hrs)
Linear Models: Simple and Multiple Regression Models , More on Regression and Forecasting with Regression Models **T1: 5.1-5.9**
UNIT-4 (8 Hrs)
Time Series Decomposition and Exponential Smoothing: Seasonal decomposition methods and examples, Simple Exponential Methods, Holts Trends Methods, Taxonomy of Exponential Smooth Models and ETS models. **T1:6.1, 6.3-6.5, 7.1-7.7**
UNIT-5 (7 Hrs)
Arima Models and Neural Network Models for Time Series: Introduction to Arima, Stationarity, and Differencing, Simple Neural Networks in Forecasting. **T1: 8.1-8.9, 11.3**
TEXT BOOKS
1. Forecasting: Principles and Practice, 2nd edition by Rob J Hyndman & George Athanasopoulos (2018)
REFERENCE BOOKS

3. Forecasting Methods and Applications by Spyros Makridakis, Steven C Wheelwright, Rob J Hyndman, Third Edition.
4. Practical Time Series Forecasting with R, A hands on Guide by Galit Shmueli, Kenneth C Lichtendahl Jr, Second Edition.

TEACHING METHODOLOGY

- PowerPoint Presentation
- R Tutorials on Certain Topics

COURSE ASSESSEMENT METHOD

CIE:

1. Tool based Assessment - 20 Marks
2. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

SEMESTER: VII			
INTRODUCTION TO DATA ANALYTICS			
Course Code	**18ECO764**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39 Hrs**	**SEE Marks**	**50**
Exam Hours	**3 Hrs**	**Course Type**	**Open Elective**

PRE-REQUISITES
Signal Analysis and Processing

COURSE OUTCOMES
At the end of the course, the student will be able to 1. Understand state- of-the art big data platforms and data analytic techniques and Analyse data using statistical techniques. 2. Identify real world applications that can be tackled with techniques from machine learning and Neural Networks. 3. Perform Time-series data analysis using recurrent model, autoregressive models. 4. Use different optimization techniques, predominantly used in data analytics. 5. Design and implement efficient data analytic solutions for real world applications.

COURSECONTENTS
UNIT-1 (06 Hrs)
Introduction: Wearables and big data- potential challenges, intelligent data analysis, analytic processes and tools, Analysis v/s Reporting; **Statistical concepts:** properties of an attribute: Mean, Median, Mode; Range, Variance, Standard Deviation; Expectation and Variance, probability distributions, sampling distributions, measures of similarity and dissimilarity, multi-dimensional vector spaces.
UNIT-2 (06 Hrs)
Data pre-processing and visualization: Data pre-processing: types of error and error handling, filtering, data transformation, data merging; Data Visualization: - plots and projection methods- 2D and 3D scatter diagram, principle component analysis, histogram, spectral analysis-amplitude, phase spectra, cosine and sine transform
UNIT-3 (06 Hrs)
Introduction to Machine Learning: Differentiating algorithmic and model based frameworks, Regression-least squares, Ridge regression, Lasso regression, K Nearest Neighbor regression and classification Linear Discriminant Analysis, logistic regression
UNIT-4 (06 Hrs.)
Supervised and Unsupervised Techniques: Classification-Naïve Bayesian classifier, Back propagation neural network, decision trees, support vector machine, fuzzy decision trees; Clustering- K Nearest Neighbor, K-Means, Fuzzy C Means, Deep learning concepts
UNIT-5 (06 Hrs)

Time-series data analysis: Auto-covariance and autocorrelation, finite state machines, recurrent model, autoregressive models

Optimization methods: Search by gradient descent, simulated annealing, Genetic algorithms

Contemporary issues: Implementation of the current Problem and Analysis of the Same. May be Carried out individually or Maximum of Group Size is Two.

TEXT BOOKS

LIST OF EXPERIMENTS (09Hrs)

- Programming with Data analytic tools: Waikato Environment for Knowledge Analysis(WEKA), R Tool, python and SPSS using R for Introductory Statistics
- Creating and customizing applications to analyse data.
- Exploring the data and pre-processing the data using WEKA tool Data Visualization
- Apply Regression and different classification techniques for classifying the given data:
  i) I Linear regression, ii) Logistic regression, iii) Neural networks,
  iv) SVM, v) Decision tree, vi) Naïve Bayes
- Apply various clustering techniques to cluster the data:
  i) K Nearest Neighbour, ii) K-Means
  iii) Fuzzy C Means, iv) Self-organizing map
- Apply Deep learning for extracting complex patterns from big data.
- Apply various associative rule mining algorithms

SEMESTER: VII

DATA COMMUNICATION NETWORK LAB

Course Code	**18ECL77**	**Credits**	**01**
Hours/Week(L-T-P)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**26(P)**	**SEE Marks**	**50**

PRE-REQUISITES

- Knowledge of C Programming
- Basic Networking

COURSE OUTCOMES

Student will be able to:

1. Apply the principles of computer networks
2. Analyze the functionality of layered network architecture.
3. Apply different protocols to design and implement in wired/wireless networks.
4. Compare different routing algorithms
5. Analyze and implement error control coding techniques.

COURSE CONTENTS

1. Simulate a three nodes point-to-point network with duplex links between them. Set the queue size vary the bandwidth to find the number of packets dropped.
2. Simulate a four node point-to-point network, and connect the links as follows: n0-n2, n1-n2 and n2-n3. Apply TCP agent between n0-n3 and UDP n1-n3. Apply relevant applications over TCP and UDP agents to determine the number of packets sent by TCP/UDP
3. Simulate an Ethernet LAN using N nodes .Set multiple traffic nodes and determine collision across different nodes.
4. Simulate an Ethernet LAN using N-nodes(6-10), change bandwidth and compare the throughput
5. Simulate simple BSS and with transmitting nodes in wire-less LAN. Determine the performance with respect to transmission of packets.
6. Simulate transmission of ping messages over a network topology and capture the Round Trip Time.
7. Simulate a 6 node network to implement dynamic routing algorithm and verify its functionality.
8. Implement a method of cyclic data transmission using UDP protocol.
9. Implement using C, the error detecting code CRC for 16 bits.
10. Implement using C ,Hamming Code generation for error detection and correction
11. Simulate a wireless network to test Destination-Sequenced Distance-Vector Routing (DSDV) protocol.
12. Simulate a 7 node network to verify Link State routing protocol?

TEXT BOOK

1. Behrouzs Forouzan, “Data communication and networking”, TMH, 4th Edition, 2006.

REFERENCE BOOKS

1. Bhushsan Trivedi “Data Communication and Network ,” Oxford Higher Education, 1st edition , 2016

TEACHING METHODOLOGY

- Black board teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the Lab

COURSE ASSESSEMENT METHOD

CIE:

1. Regular review of the students work in the lab and recording the work done on a day to day basis in Record and observation.
2. Conduction Exam for the students to assess the quality of the work done in the lab. We do modify the network setup, calculation to make sure students have understood the tool.
3. Viva voce examination to analyze the student's involvement in the experiment.
4. Record and Observation carries 30 marks
5. Execution carries 15 marks
6. Viva Voce carries 5 marks
7. Total CIE is foe 50 marks.

SEE:

1. One question is set to related to each experiment. We do modify the network setup, calculation to make sure students have understood the tool.
2. Write up is awarded 8 marks
3. Execution of the program is awarded 35marks.
4. Viva voce examination for the students is awarded with 7 marks
5. Total marks for SEE is 50 marks

SEMESTER: VII

POWER ELECTRONICS LAB

Course Code	**18ECL78**	**Credits:**	**1**
Hours/Week(L-T-P-S)	**0-0-2**	**CIE Marks**	**50**
Total Hours	**26Hr/week**	**SEE Marks**	**50**
Exam Hours	**3**	**Course Type:**	**Core**

PRE-REQUISITES

A Fundamental course on Basic Electronics, Analog Electronic circuits and Linear Integrated circuits is necessary to understand this subject.

COURSE OUTCOMES

Students will be able to:

1. Design and analyze the voltage versus current characteristics of power semiconductor devices viz. MOSFET, IGBT, SCR, DIAC and study their performance parameters.
2. Analyze the different types of power electronic circuits and their performance based on the variation in input voltage and firing angle.
3. Analyze the generation of firing pulses and use them in switching of different semiconductor devices.
4. Analyze the working of AC/DC Motors, their protection circuitry, driving mechanism and Evaluation of performance parameters associated with them.
5. Design and Analyze the working of DC power supply circuits and study their voltage and current behavior.

COURSE CONTENTS

LIST OF EXPERIMENTS

1. Design and analysis of static characteristics of SCR and determination of the breakdown voltage, latching and holding current.
2. Analysis of Static Characteristics of DIAC).
3. Design and analysis of static Characteristics of MOSFET and determination of trans-conductance and output resistance.
4. Design and analysis of static Characteristics of IGBT and determination of Trans- conductance and output resistance.
5. Design and analysis of Half and Full Wave rectifier using RC Triggering.
6. Design and analysis of AC voltage Controller and determination of rms voltage and current for different firing angles.
7. Determination of the speed of the Universal motor and study the voltage versus speed characteristics for different values of firing angles.
8. Determination of the speed of the Induction motor and study the voltage versus speed characteristics for different values of firing angles.
9. Determination of the speed of the DC Motor Using 1phase Half Controlled semi converter and estimate the speed for different values of firing angle.
10. Study the characteristics of stepper motor controller for a specified count and observe the angle of rotation in clockwise and anticlockwise direction.
11. Determination of output and rms voltage of SCR Based Voltage Commutated DC – Chopper Circuit for

specified value of the firing angle.

12. Analysis of a series inverter circuit for varying firing angle and frequency at the input.
13. Analysis of a Forced Commutation and observe the voltage across the capacitor and the output.
14. Analysis of an Auxiliary Commutation(CLASS-D) circuit and observe the output voltage and Turn off times.
15. Analysis of a Parallel inverter circuit for varying firing angle and frequency at the input.
16. Analysis of RC Half and Full Wave controlled rectifier using UJT Firing Circuits and observe the output voltage for different values of firing angle.
17. Analysis of Single phase PWM inverter for different value of firing angle and modulation index by considering different types of output waveform and observe the rms output voltage in each case.
18. Design Based Experiment
    i. Design of DC-Power Supply
    ii. Design Based Experiment-1-Phase AC Voltage Controller With R-Load
    iii. Design Based Experiment 1-Phase C Voltage Controller With RL-Load

SEMESTER: VII

INTERNSHIP/MINI-PROJECT/SELF-STUDY

Course Code	**18ECP79**	**Credits**	**02**
Hours/Week(L-T-P-S)	**0-0-0**	**CIE Marks**	**50**
Total Hours	**45(P)**	**SEE Marks**	**50**

PRE-REQUISITES

- Knowledge of Electronics and Communication subjects
- Knowledge of modern tools
- Knowledge of programming languages

COURSE OUTCOMES

CO 1: Students will be able to consolidate the literature search to identify and formulate the engineering problem.
CO 2: Students will be able to gain additional skills and education, networking opportunities, mentorship from an Internship.
CO 3: Students will be able to engage in independent study to arrive at an exhaustive list of available engineering tools that may be used for solving the identified engineering problem.
CO 4: Students will be able to perform the budget analysis of the project through resources utilization and identify the community that shall benefit through the solution to the identified engineering problem and also demonstrate concern for the environment.
CO 5: Students will be able to analyze and interpret results of experiments conducted on the designed solution to arrive at valid conclusions.
CO 6: Students will be able to abide by the norms of professional ethics

COURSE ASSESSEMENT METHOD

1. The student group details regarding Internship/mini-project are taken from students with the synopsis approved from their internal guide.
2. CIE and SEE is conducted for 50 marks.
3. CIE is conducted in 2 phases for a total of 50 marks and each phase carries 25 marks.
4. Demonstration of mini-project is must for both CIE and SEE.
5. Phase 1 evaluation is done by panel member along with internal guide for 25 marks.
6. Phase 2 evaluation is done by panel member along with internal guide for 25 marks and is conducted in slots.
7. CIE marks of the students is updated in SMS.
8. SEE timetable is prepared and is conducted for 50 marks.

VIII SEMESTER

SEMESTER: VIII

LTE AND BEYOND 5G

Course Code	**18EC81**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core**

COURSE OUTCOMES

Students will be able to

1. Study the basic technologies for deploying 4G
2. Study the different access and scheduling technologies for implementing 4G
3. Study the different spectrum standardization schemes and challenges for 5G
4. Study the basic architecture and beam forming techniques for supporting 5G
5. Study the different MIMO techniques with channel modelling

COURSE CONTENTS

UNIT-1 (8 Hrs)

Introduction to 4G

LTE – 4G Key Enablers for LTE 4G – OFDM, SC-FDE, SC-FDMA, Channel Dependent Multiuser Resource Scheduling, Multi-Antenna Techniques, Flat IP Architecture, LTE Network Architecture.

Text1: Ch1: 1.4.1 to 1.4.5

UNIT-2 (8 Hrs)

Introduction to 4G OFDMA and SC-FDMA

LTE – 4G OFDMA and SC-FDMA – Multiple Access for OFDM Systems, OFDMA, SCFDMA, Multiuser Diversity and Opportunistic Scheduling, OFDMA and SC-FDMA in LTE, OFDMA system Design Considerations

Text1: Ch4: 4.1 to 4.6

UNIT-3(8 Hrs)

Drivers for 5G

Evolution of LTE Technology to Beyond 4G – Pillars of 5G – Standardization Activities -Use cases and Requirements – System Concept – Spectrum and Regulations: Spectrum for 4G – Spectrum Challenges in 5G – Spectrum Landscape and Requirements – Spectrum Access Modes and Sharing Scenarios

Text2: Ch12: 12.1 to 12.3

Text3: Ch1: 1.3,1.5

UNIT-4 (8 Hrs)

5G **Architecture and Millimeter Wave Communication**

5G Architecture: Software Defined Networking – Network Function Virtualization – Basics about RAN Architecture – High-Level Requirements for 5G Architecture – Functional Architecture and 5G Flexibility – Physical Architecture and 5G Deployment Millimeter Wave Communication: Channel Propagation – Hardware Technologies for mmW Systems – Deployment Scenarios – Architecture and Mobility – Beam forming – Physical layer Techniques

Text2: Ch3: 3.1 to 3.3; Ch6: 6.2 to 6.5

UNIT-5 (7 Hrs)

Massive Multiple-Input Multiple –Output Systems

MIMO in LTE – Single-user MIMO – Multi-user MIMO – Capacity of Massive MIMO – Pilot Design of Massive MIMO – Resource Allocation and Transceiver Algorithms for Massive MIMO – Fundamentals of Baseband and RF Implementation in Massive MIMO – Channel Models

Text2: Ch8: 8.1 to 8.6

TEXT BOOKS

3. Jonathan Rodriquez, Fundamentals of 5G Mobile Networks, Wiley, 2015 , ISBN: 978-1118867525

REFERENCE BOOKS

1. Patrick Marsch, Omer Bulakci, Olav Queseth and Mauro Boldi, 5G System Design – Architectural and Functional Considerations and Long Term Research, Wiley, 2018, ISBN: 978-1119425120

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

- Two Surprise Tests, 10 Marks each. Best of two tests will be taken.
- Three internals, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

- Final examination, of 100 Marks will be conducted and will be evaluated for 50 Marks.

CO-PO-PSO MAPPING

CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT

CO4	1	2	2	3										2		
CO5	2	1	2	2										3		

PROGRAM ELECTIVE - 4

SEMESTER: VIII

CRYPTOGRAPHY AND NETWORK SECURITY

Course Code	**18ECE821**	**Credits**	**03**
Hours/Week(L-T-P-S)	**3-0-0-0**	**CIE Marks**	**50**
Total Hours	**39**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core Elective**

COURSE OUTCOMES

Students will be able to

1. Recognize the essential components and principles of cryptography;
2. Describe the fundamental principles and application of symmetric encryption and cryptographic hashing to provide an improved cyber security measure.
3. describe the fundamental principles and application of asymmetric and public-key encryption and a Public-Key Infrastructure (PKI) to provide an improved cyber security measure;
4. Implement the application of cryptographic techniques and protocols to protect the transmission and storage of information, provide confidentiality, integrity, protected message exchanges, data origin authentication, entity authentication and non-repudiation; Identify and explain key management, digital signatures and digital certificates
5. Describe network security applications, password management, Firewall, IDS, Web security, Email security, and malicious software etc.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Overview: Services, Mechanisms and attacks, OSI security architecture, Model for network security.
Classical Encryption Techniques: Symmetric cipher model, Substitution techniques, Transposition techniques, Rotor machine, Steganography.

Block Ciphers and DES (Data Encryption Standards): Simplified DES, Block cipher principles, DES, Strength of DES, Block cipher design principles, Block cipher modes of operation.

UNIT-2 (8 Hrs)

Public Key Cryptography and RSA: Principles of public key cryptosystems, RSA algorithm, Key management, Diffie-Hellman key exchange, Elliptic curve arithmetic, Elliptic curve cryptography, PKI Infrastructure
Message Authentication and Hash Functions: Authentication requirements, Authentication functions, Message authentication codes, Hash functions, Security of hash functions and MAC's.

Digital Signature and Authentication Protocol: Digital signature, Authentication protocols, Digital signature standard. Kerberos, X.509 authentication service, Kerberos encryption technique.

UNIT-3(8 Hrs)

Electronic Mail Security: Pretty good privacy, S/MIME, Data compression using ZIP, Radix-64 conversion, PGP random number generator.
Transport Level Security: Web Security Considerations, Secure Socket layer, Handshake Protocol and Cryptographic Computations, Transport layer Security, HTTPS

UNIT-4 (8 Hrs)

Wireless Network Security: Wireless Network Threats, Wireless Security Measures, Mobile Device Security, IEEE 802.11 Wireless LAN Overview, IEEE.802.11i Wireless LAN Security

UNIT-5 (7 Hrs)

Intruders: Intruders, Intrusion detection, Password management
Firewalls: Firewall design principles, Trusted systems.

SEMESTER: VIII

ERROR CONTROL CODING

Course Code	**18ECE822**	**Credits**	**03**
Hours/Week	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39 Hrs**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core Elective**

PRE-REQUISITES
Mathematics III , Linear algebra, Information theory and coding

COURSE OUTCOMES

Upon Completion of the course students will be able to

1. Students will be able to apply the knowledge of linear algebra for various codes.
2. Students will be able to design linear block codes and cyclic codes.
3. Students will be able to analyze the basics of error control codes.
4. Students will be able to apply various algorithms to design the encoder and decoder circuit of error control codes.
5. Students will be able to illustrate the characteristic features and capability of different error control codes.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Introduction to linear algebra: Groups, Fields ,Binary Field Arithmetic, Construction of Galois Field GF (2^m) and its basic Properties, Computation using Galois Field GF (2^m) Arithmetic, Vector spaces and Matrices.Text1 Ch-2 :2.1-2.6

Linear Block Codes: Reed – Muller codes, The (24, 12) Golay code,

Text1 ch4-4.3 and 4.6

UNIT-2 (8 Hrs)

BCH codes: Binary primitive BCH codes, Decoding procedures, Implementation of Galois field Arithmetic, Implementation of Error correction, , q – ary Linear Block Codes, Primitive BCH codes over GF (q),Decoding of BCH The Berlekamp – Massey algorithm, Zieler decoder method of decoding

Text1 Unit III- Ch 6- 6.1, 6.2. 6.8, ch 7-7.1-7.4

UNIT-3 (8 Hrs)

Majority logic decodable codes: One – Step Majority logic decoding, one – step Majority logic decodable Codes, Two – step Majority logic decoding, Multiple – step Majority logic decoding. Text1 ch-8.1-8.4

UNIT-4 (8 Hrs)

Turbo Codes, Encoder Structure, Interleaving and its types, Iterative decoding for turbo codes, MAP algorithm for turbo codes. Low Density Parity check codes, properties, Tanner graph representation, Galleger LFPC codes. Reference book 3 ch7-7.1, 7.2,7.7,7.8, ch8-8.1,8.2,8.3

UNIT-5 (7 Hrs)

Burst Error correcting Codes: Burst and Random error correcting codes, Concept of Inter – leaving, cyclic codes for Burst Error correction – Fire codes, Convolutional codes for Burst Error correction. Text1 ch 20 , 20.1-20.5

TEXT BOOKS

1. "Error Control Coding" Shu Lin & Daniel J. Costello, Jr. Pearson / Prentice Hall, Second Edition, 2004.

REFERENCE BOOKS

1. "The theory of error correcting codes" F.J. Mac Williams and N.J.A. Slone, North Holland, 1977
2. "Error control Coding" , Peter Sweeney,John Wiley and sons 2002
3. "Essentials of Error control coding", Jorge Castiñeira Moreira, Patrick Guy Farrell

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class
-

COURSE ASSESSEMENT METHOD

CIE:

1. Assignments- 10 Marks
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO, BT MAPPING

SEMESTER: VIII

AUTOMOTIVE ELECTRONICS

Course Code	**18ECE823**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core Elective**

COURSE OUTCOMES

CO 1: Students will get exposure to the key terminology and parameters of the Automotive industry

CO 2: Students will get exposure to the functioning of important mechanical sub-systems of the Automobiles

CO 3: Students will be able to interpret the role played by electronics in improving the performance and safety in different sub-systems of the Automobiles

CO 4: Students will analyse the steps involved in the implementation of electronic systems forth Automotive sub-systems

CO 5: Student will understand the standards and evolution of technologies in the use of electronics in the modern-day Automotives

COURSE CONTENTS

UNIT-1 (8 Hrs)

Automotive Systems, Design cycle and automotive industry overview:

a. Overview of Automotive industry. Role of technology in Automotive Electronics and interdisciplinary design. Tools and Processes.

b. Introduction to modern automotive systems and need for electronics in automobiles and application areas of electronic systems in modern automobiles

c. Spark and Compression Ignition Engines: Ignition

d. systems, Fuel delivery systems, Engine control functions, Fuel control, Electronic systems in Engines

e. Automotive transmissions: Transmission fundamentals.

f. Vehicle braking fundamentals: Vehicle dynamics during braking, hydraulic brake system components, Introduction to antilock braking systems

g. Steering Control: Steering system basics, Fundamentals of electronically controlled power steering: type, electronically controlled hydraulic systems and Electric powers steering systems. Passenger Safety and Convenience occupant protection systems.

g. Overview of Hybrid Vehicles,

ECU Design Cycle :V-Model development cycle , Components of ECU, Examples of ECU on Chassis, Infotainment, Body Electronics and cluster

UNIT-2 (8 Hrs)

Automotive Sensors and Actuators:

Systems approach to control and instrumentation: Concept of a system, Analog and Digital systems, Basic measurements systems, Analog and digital signal processing, Sensors, Sensor characteristics, Sensor response, Sensor error, Redundancy of sensors in ECUs, Smart Nodes , Examples of sensors : Accelerometers, wheel speed sensors, brake pressure sensors, Steering wheel angle, Vehicle speed sensor, Throttle position sensor, Temperature sensor, Mass air flow (MAF) rate sensor, Exhaust gas oxygen concentration sensor, Crankshaft

RPM sensor, Actuators: Solenoids, various types of electric motors, and piezoelectric force generators, Examplesforactuators:Relays,solenoidsandmotors.SensorsinAirbagsystem,ElectronicEngineControl System
UNIT-3 (8 Hrs)
Microcontrollers/Microprocessors in Automotive domain, Communication protocols, Infotainment systems: **A) Microcontrollers/Microprocessors in Automotive domain** a. Critical review of microprocessor, microcontroller and digital signal processor development (overview of development within the automotive context (Architecture of 8/16 bit microcontrollers with emphasis on Ports, Timer/Counters, Interrupts. Watchdog timers, PWM) b. Criteria to choose the right microcontroller/processor for various automotive applications c. Understanding various architectural attributes relevant to automotive applications d. Automotive grade processors ex: Renesas, Quorivva, Infineon e. Understanding and working on tool chains for different processors f. Development of control algorithm for different automotive subsystems Look-up tables and maps, Need of maps, Procedure to generate maps, Fuel maps/tables, Engine calibration, Torquetable. **B) Communication protocols** a. Overview of Automotive communication protocols: CAN, LIN , Flex Ray, MOST, Ethernet. b. Communication interface with ECUs Interfacing techniques and interfacing with infotainment gadgets c. Relevance of Protocols such as TCP/IP for automotive applications d. Wireless LANs standards such as Bluetooth, IEE802. 11x communication protocols for automotive e-applications. **Infotainment Systems**: Application of Telematics in Automotive domain, Global Positioning Systems (GPS)
UNIT-4 (8 Hrs)
Automotive Control Systems and Model Based Development: **A) Automotive Control System & Model Based development:** Control system approach in Automotive: Analog and Digital control methods, modelling of linear systems, System responses. Modeling of Automotive Systems simple examples. **B) Model based Development:** Introduction to MATLAB, Simulink and SIMSCAPE tool boxes. Model-Based Design for a small system - Motor Model, Generator Model, Controller Model Sim Drive line Intro Simulink Simulations, Explore the system response using different control methods .
UNIT-5 (7 Hrs)
Safety Systems in Automobiles and Diagnostic Systems: **A) Active Safety Systems:** ABS, TCS, ESP, Brake assist etc. **B) Passive Safety Systems:** Airbag systems, Advanced Driver Assistance Systems (ADAS): Combining computer vision techniques as pattern recognition, feature extraction, learning, tracking, 3D vision, etc. to develop real-time algorithms able to assist the driving activity. Examples of assistance applications: Lane Departure Warning, Collision Warning, Automatic Cruise Control, Headlights Control, Connected Cars technology and trends towards Autonomous vehicles.

C) **Functional Safety:** Need for safety systems, safety concept, safety process for product lifecycle

D) **Diagnostics:** Fundamentals of Diagnostics: Basic wiring system and Multiplex wiring system, Preliminary checks and adjustments, Self-diagnostic system. Fault finding and corrective measures, Diagnostic procedures and sequence, On board and off board diagnostics in Automobiles, OBDII, Concept of DTCs

SEMESTER: VIII

MULTIMEDIA COMMUNICATION

Course Code	**18ECE824**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39 Hrs**	**SEE Marks**	**50**
Exam Hours	**3 Hrs**	**Course Type**	**Core Elective**

PRE-REQUISITES

1. DSP
2. Digital Communications
3. Basic Networking

COURSE OUTCOMES

Students will be able to

1. Learn the various categories of Multimedia and Networks
2. Analyze and select the network and signal form for various multimedia applications
3. Analyze and apply compression schemes for different Multimedia
4. Gain knowledge of various standards used for Compression, Multiplexing and Networks
5. Evaluate the Security aspects of Multimedia communications

COURSECONTENTS

UNIT-1 (8 Hrs)

Multimedia Communication: Introduction, Multimedia Information Representation, Multimedia Networks, Multimedia applications and Networking Terminology

Textbook #1: 1.1-1.5

UNIT-2 (8 Hrs)

Multimedia Information Representation: Introduction, Digitization principles, Text,Image ,Audio, Video

Text and Image compression: Introduction, Compression principles, Text compression, Image compression

Textbook #1: 2.1, 2.2,2.3,2.4,2.5,2.6, 3.1-3.4

UNIT-3 (8 Hrs)

Audio and Video compression: Introduction, Audio compression – DPCM, Adaptive DPCM, Linear Predictive Coding, Code -Excited LPC, Perceptual coding, MPEG Audio Coders.

Video compression – Principles, H.261, H.263,MPEG, MPEG1,MPEG2,MPEG4 (Coding Principles).

Textbook #1: 4.1-4.3

UNIT-4 (8 Hrs.)

Standards for Multimedia Communication: Introduction, Reference models, Standards related to Interpersonal communications, Standards related to Interactive applications over the Internet, Standards for Entertainment applications

Textbook #1: 5.1-5.5

UNIT-5 (7 Hrs)

Application Support Functions: Introduction, ASN.1 (Introduction) Security, Data Encryption, Non-repudiation, Authentication, Public Key certification authorities

Textbook #1:13.1,13.3-13.7

TEXT BOOKS

1. "Multimedia communication – applications, networks, protocols and standards" Fred Halsall, Pearson education, 2007.

REFERENCE BOOKS

"Fundamentals of Multimedia", Li and Drew, Pearson education, 2004.

TEACHING METHODOLOGY

- Black board teaching
- Power Point presentations
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE

1. Assignment / Project - 10Marks
2. Surprise tests -10Marks.
3. 3 mid- sem exams (30 Marks each) will be conducted and the Average of best two will be taken.

SEE

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

CO-PO-PSO MAPPING

CO	PO 1	PO 2	PO 3	PO 4	PO 5	PO 6	PO 7	PO 8	PO 9	PO 10	PO 11	PO 12	PSO 1	PSO 2	PSO 3	BT

SEMESTER: VIII

LOW POWER VLSI DESIGN

Course Code	**18ECE825**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39 Hrs**	**SEE Marks**	**50**
Exam Hours	**3 Hrs**	**Course Type**	**Core Elective**

COURSE OUTCOMES

Students will be able to

1. Interpret and describe the sources of power dissipation in digital IC systems and study the impact of power on system performance and reliability
2. Interpret power and performance management techniques in Digital VLSI Design
3. Analyse the effect of voltage scaling, power gating and other power reduction approaches for different design abstraction levels
4. Apply probabilistic analysis to characterize dynamic power estimation.

COURSECONTENTS

UNIT-1 (8 Hrs)

Introduction: Need for low power VLSI chips, Sources of power dissipation on Digital Integrated circuits. Emerging Low power approaches, Physics of power dissipation in CMOS devices. Degrees of Freedom, Device & Technology Impact on Low Power: Dynamic dissipation in CMOS, Transistor sizing & gate oxide thickness, Impact of technology Scaling, Technology & Device innovation.

UNIT-2 (8 Hrs)

Power Optimization at Logic level: Gate reorganization, signal gating, logic encoding, state machine encoding, pre-computation logic. Low power Clock Distribution: Power dissipation in clock distribution, single driver Vs distributed buffers, Zero skew Vs tolerable skew.

UNIT-3 (8 Hrs)

Low power Architecture & Systems: Power & performance management, switching activity reduction, parallel architecture with voltage reduction, flow graph transformation, low power arithmetic components.

UNIT-4 (8 Hrs.)

Leakage Power minimization Approaches: Variable-threshold-voltage CMOS (VTCMOS) approach, Multi-threshold-voltage CMOS (MTCMOS) approach, Power gating, Transistor stacking, Dual-Vt assignment approach (DTCMOS).

UNIT-5 (7 Hrs)

Power Estimation: SPICE circuit simulation, Gate level Simulation, Architectural level analysis, Data correlation analysis in DSP systems, Monte-Carlo simulation.

Power analysis: random signals, probabilistic techniques for signal activity estimation, propagation of static probability in logic circuits, gate level power analysis using transition density.

SEMESTER: VIII

BIOMEDICAL DIGITAL SIGNAL PROCESSING

Course Code	**18ECE831**	**Credits**	**03**
Hours/Week (L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours:	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES

- Basics of digital signal processing
- Basics of signals and systems

COURSE OUTCOMES

The students are able to,

1. Analyze and interpret various bio signals using different signal processing techniques.
2. Design and development of different filters and different signal conversion techniques.
3. Design of signal averaging techniques for biomedical signal.
4. To apply and analyze data reduction and QRS detection techniques for biomedical signal.
5. Analyze different biomedical signal using latest technologies.

COURSE CONTENTS

UNIT-1 (8-Hrs)

Introduction to Biomedical Signals: The nature of Biomedical Signals, Examples of Biomedical Signals, Objectives and difficulties in Biomedical analysis.

Electrocardiography: Basic Electrocardiography, ECG lead systems, ECG signal Characteristics, Analog filters, ECG amplifiers and QRS detector.

(Text-1,1.1-1.5,2.1-2.4)

UNIT-2 (8-Hrs)

Signal Conversion: Simple signal conversion systems, Conversion requirements for biomedical signals, Signal conversion circuits *(Text-1)(3.1-3.4)*

Integer Filters: Basic design concept, low pass filters, High pass filters, Band pass and Band reject filters, effect of filter cascade. *(Text-1)(7.1-7.5)*

UNIT-3 (8 Hrs)

Adaptive Noise Cancelling: Principal noise canceller model, 60-Hz adaptive cancelling using a sine wave model, other applications of adaptive filtering. *(8.1-8.3)*

Signal Averaging: Basics of signal averaging, signal averaging as a digital filter, a typical average, software for signal averaging, limitations of signal averaging. *(Text-1) (9.1-9.5)*

UNIT-4 (8-Hrs)

Data Compression Techniques: Turning point algorithm, AZTEC algorithm, Fan algorithm, Huffman coding.

ECG QRS detection: Power spectrum of the ECG, Band pass filtering techniques. Differentiation technique, Template matching techniques, QRS detection algorithm.*(Text-1)(10.1-10.4)(12.1-12.5)*

UNIT-5 (7-Hrs)

ECG analysis Systems: ECG interpretation, ST segment analyzer, Portable arrhythmia monitor.

(Text-1)(13.1-13.3)

SEMESTER: VIII

BIOMEDICAL SENSORS AND MEASUREMENTS

Course Code	**18ECE832**	**Credits**	**03**
Hours/Week(L-T-P-S)	**3-0-0**	**CIE Marks**	**50**
Total Hours:	**39(L)**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Core Elective**

PRE-REQUISITES

- Biomedical Instrumentation

COURSE OUTCOMES

The students are able to

1. Understand the purpose of measurement, the methods of measurements, errors associated with measurements.
2. To Know the principle of transduction, classifications and the characteristics of different transducers
3. To know the different bridges for measurement.
4. To know the different display and recording devices.

COURSE CONTENTS

UNIT-1 (08-Hrs)

SCIENCE OF MEASUREMENT: Measurement System – Instrumentation - Classification and Characteristics of Transducers - Static and Dynamic - Errors in Measurements and their statistical analysis – Calibration - Primary and secondary standards.

UNIT-2 (08-Hrs)

DISPLACEMENT, PRESSURE, TEMPERATURE SENSORS 6+6 Strain Gauge: Gauge factor, sensing elements, configuration, and unbounded strain gage. Capacitive transducer - various arrangements, Inductive transducer, LVDT, Passive types: RTD materials & range, relative resistance vs. temperature characteristics, thermistor characteristics, Active type: Thermocouple - characteristics.

UNIT-3 (08 Hrs)

PHOTOELECTRIC AND PIEZO ELECTRIC SENSORS 6+6 Phototube, scintillation counter, photo multiplier tube (PMT), photovoltaic, photo conductive cells, photo diodes, phototransistor, comparison of photoelectric transducers. Optical displacement sensors and optical encoders. Piezoelectric active transducer-Equivalent circuit and its characteristics.

UNIT-4 (07-Hrs)

SIGNAL CONDITIONING CIRCUITS 6+6 Functions of signal conditioning circuits, Preamplifiers, Concepts of passive filters, Impedance matching circuits, AC and DC Bridges - wheat stone bridge, Kelvin, Maxwell, Hay, Schering

UNIT-5 (08-Hrs)

DISPLAY AND RECORDING DEVICES 6+6 Digital voltmeter – Multi meter – CRO – block diagram, CRT – vertical & horizontal deflection system, DSO, LCD monitor, PMMC writing systems, servo recorders, photographic recorder, magnetic tape recorder, Inkjet recorder, thermal recorder.

SEMESTER: VIII

VLSI SYSTEM DESIGN

Course Code	**18ECE833**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39 Hrs**	**SEE Marks**	**50**
Exam Hours	**3 Hrs**	**Course Type**	**Core Elective**

PRE-REQUISITES
Digital Logic Design

COURSE OUTCOMES

At the end of the course, the student will be able to

1. Clear understanding of fundamental concepts of MOS transistors and able to design simple logic gates using CMOS logic style.
2. Able to calculate power and delay of simple CMOS circuits, understand fabrication processes and their impact on the circuit performance.
3. Able to design and validate combinational and sequential circuits using different logic styles.
4. Able to design VLSI circuits at sub-system abstraction level.
5. Able to use modern EDA tools to design VLSI circuits

COURSECONTENTS

UNIT-1 (10 Hrs)

MOS Transistor Theory:

I-V Characteristics, C-V Characteristics, Non ideal I-V effects of MOS Transistors.

CMOS Logic

Basic gates, Compound Gates, Transmission Gates based combinational and sequential logic design

UNIT-2 (8 Hrs)

CMOS Circuit characterization and Performance Estimation:

DC transfer Characteristics of CMOS inverter, Circuit characterization and performance estimation: Delay estimation, Logical effort and Transistor Sizing. Power Dissipation: Static & Dynamic Power Dissipation.

UNIT-3 (8 Hrs)

CMOS Fabrication and Layout:

CMOS Process Technology N-well, P-well process, Stick diagram for Boolean functions using Euler Theorem, Layout Design Rule

UNIT-4 (8 Hrs.)

CMOS Combinational Circuit Design

Static CMOS, Ratioed Logic, Cascode voltage Switch Logic, Dynamic circuits, Pass Transistor Circuits

UNIT-5 (7 Hrs)

CMOS Sequential Circuit Design

Conventional CMOS Latches and Flip Flops, Pulsed Latches, Resettable and Enabled Latches and Flip Flops

TEXT BOOKS

1. Neil CMOS VLSIA Circuits and System.

REFERENCE BOOKS

1. Jan M. Rabacy, Anantha Chandrakasan, BorivojeNikolic, : Digital Integrated Circuits: A Design Perspective:, 2014, Third Edition, Prentice Hall India, New Jersey, US.

Payvadosi, Ai Niknejad, Chenming Hu, "FinFET Modelling for IC Simulation and Design", 2015, Academic Press, Elsevier.

TEACHING METHODOLOGY

- Blackboard teaching
- PowerPoint presentations (If needed)
- Regular review of students by asking questions based on topics covered in the class

COURSE ASSESSEMENT METHOD

CIE:

1. Tutorials/Assignments - 10 Marks
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

i. Two Questions are to be set from each unit, carrying 20 Marks each.
ii. Students have to answer 5 questions selecting one full question from each unit

LIST OF CHALLENGING EXPERIMENTS

1.
i. Cadence EDA Tool Demo & Hands on - Schematic
ii. Basic Cell structure (NMOS & PMOS) using conventional MOS
iii. Verification with different corners
iv. Design and Analysis of CMOS circuits(Analysis: Power, Delay, NM, PDP, Design: Sizing)

2.
i. Cadence EDA Tool Demo & Hands on Layout & Post Layout Simulation
ii. Basic Cell layout (CMOS)
iii. Fingering and folding
iv. Standard cell design for different technology node

3.
i. Adder Design using conventional CMOS
ii. Multiplier using conventional CMOS
iii. Memory design (SRAM /DRAM /CAM).

4.
i. ALU Design using conventional CMOS
ii. Simple Processor Design using conventional CMOS

WIRELESS SENSORS NETWORKS

Course Code	**18ECE834**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39 Hrs**	**SEE Marks**	**50**
Exam Hours	**3 Hrs**	**Course Type**	**Core Elective**

COURSE OUTCOMES

- Understand the fundamentals of wireless sensor networks
- Understand the application of WSN to critical real time scenarios.
- Analyze various critical parameters in deploying a WSN
- Study the various protocols at various layers and its differences with traditional protocols.
- Interpret the issues pertaining to sensor networks and the challenges involved in managing a sensor network.

COURSECONTENTS

UNIT-1 (8 Hrs)

Introduction: Fundamentals of wireless communication technology, the electromagnetic spectrum radio propagation, characteristics of wireless channels, modulation techniques, multiple access techniques, wireless LANs, PANs, WANs, and MANs, Wireless Internet.

UNIT-2 (8 Hrs)

Introduction to adhoc/sensor networks: Key definitions of adhoc/ sensor networks, unique constraints and challenges, advantages of ad-hoc/sensor network, driving applications, issues in adhoc wireless networks, issues in design of sensor network, sensor network architecture, data dissemination and gathering.

UNIT-3 (8 Hrs)

MAC Protocols : Issues in designing MAC protocols for adhoc wireless networks, design goals, classification of MAC protocols, MAC protocols for sensor network, location discovery, quality, other issues, S-MAC, IEEE 802.15.4.

UNIT-4 (8 Hrs.)

Routing Protocols: Issues in designing a routing protocol, classification of routing protocols, table-driven, on-demand, hybrid, flooding, hierarchical, and power aware routing protocols.

UNIT-5 (7 Hrs)

QoS and Energy Management : Issues and Challenges in providing QoS, classifications, MAC, network layer solutions, QoS frameworks, need for energy management, classification, battery, transmission power, and system power management schemes.

VLSI TESTING

Course Code	**18ECE835**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39**	**SEE Marks**	**50**
Exam Hours	**03**	**Course Type**	**Program Elective**

PRE-REQUISITES

- Basic knowledge on Digital electronics
- Basic knowledge of Fundamentals of VLSI

COURSE OUTCOMES

Students will be able to:

CO1: Apply the Techniques to improve the Testability of VLSI Circuits

CO2: Apply functional timing and verification methods at various design abstractions of VLSI circuits

CO3: Able To Identify The Design For Testability Methods for Combinational And Sequential CMOS Circuits

CO4: Utilize Logic Simulation Methods, Bist and Boundary Scan Techniques In Testing VLSI Circuits

CO5: Able to solve the verification problems to serve the VLSI industries.

COURSE CONTENTS

UNIT-1 (8 Hrs)

Faults in digital circuits: Failures and Faults, Modelling of faults, Temporary Faults. (Text 1)

Logic Simulation: Applications, Problems in simulation based design verification, types of simulation, The unknown logic values, compiled simulation, event-driven simulation, Delay models, Element evaluation, Hazard detection, Gate-level event-driven Simulation. (Text 2)

UNIT-2 (8 Hrs)

Test generation for Combinational Logic circuits: Fault Diagnosis of digital circuits, Test generation techniques for combinational circuits, Detection of multiple faults in Combinational logic circuits. (Text 1)

Testable Combinational logic circuit design: The Read-Muller expansion technique, Three level OR-AND-OR design, Automatic synthesis of testable logic. (Text 1)

UNIT-3 (8 Hrs)

Testable Combinational logic circuit design: Testable design of multilevel combinational circuits, Synthesis of random pattern testable combinational circuits, Path delay fault testable combinational logic design, Testable PLA design. (Text 1)

Test generation for Sequential circuits: Testing of sequential circuits as Iterative combinational circuits, state table verification, Test generation based on Circuit Structure, Functional Fault models, test Generation based on Functional Fault models. (Text 1)

UNIT-4 (8 Hrs)

Design of testable sequential circuits: Controllability and observability, Ad-Hoc design rules for improving testability, design of diagnosable sequential circuits, the scan-path technique for testable sequential circuit design, Level Sensitive Scan Design (LSSD), Random Access Scan Technique, Partial scan, testable sequential circuit design using Nonscan Techniques, Cross check, Boundary Scan. (Text 1)

UNIT-5 (7 Hrs)

Built-In Self Test: Test pattern generation for BIST, Output response analysis, Circular BIST, BIST Architectures. (Text 1)

Testable Memory Design: RAM Fault Models, Test algorithms for RAMs, Detection of pattern- sensitive faults, BIST techniques for RAM chips, Test generation and BIST for embedded RAMs. (Text1)

TEXT BOOKS

Text Book:

CELLULAR MOBILE COMMUNICATION

Course Code	**18ECE836**	**Credits**	**03**
Hours/Week(L-T-P)	**3-0-0**	**CIE Marks**	**50**
Total Hours	**39 Hrs**	**SEE Marks**	**50**
Exam Hours	**3 Hrs**	**Course Type**	**Core Elective**

COURSE OUTCOMES

At the end of the course, the students will be able to:

1. Apply the understanding of statistical characterization of urban mobile channels to compute the performance for simple modulation schemes.
2. Demonstrate the limitations of GSM, GPRS and CDMA to meet high data rate requirements and limited improvements that are needed.
3. Analyze the call process procedure between a calling number and called number for all scenarios in GSM or CDMA based systems.
4. Test and validate voice and data call handling for various scenarios in GSM and CDMA systems for national and international interworking situations.

COURSECONTENTS

UNIT-1 (8 Hrs)

Cellular Concept: Frequency Reuse, Channel Assignment Strategies, Interference and System Capacity, Power Control for Reducing Interference, Trunking and Grade of Service, Improving Capacity in Cellular Systems. **Mobile Radio Propagation**: Large Scale path Loss- Free Space Model, Three basic propagation mechanisms.
Text-1: 3.1, 3.2, 3.3, 3.5, 3.5.1, 3.5.3, 3.5.4, 3.6, 3.7, 4.1, 4.2, 4.4

UNIT-2 (8 Hrs)

Mobile Radio Propagation: Small-Scale Fading and Multipath: Small scale Multipath Propagation, Impulse Response Model of a Multipath Channel, Small-Scale Multipath Measurements, Parameters of Mobile Multipath Channels, Types of Small-Scale Fading, Statistical Model for Multipath Fading Channels (Clarke's Model for Flat Fading only).
Text Book - 1: 5.1.1, 5.2, 5.3.1, 5.3.2, 5.4, 5.5, 5.7.1

UNIT-3 (8 Hrs)

System Architecture and Addressing: System architecture, The SIM concept, Addressing, Registers and subscriber data, Location registers (HLR and VLR) Security-related registers (AUC and EIR), Subscriber data.
Text Book - 2: 3.1, 3.2, 3.3, 3.4, 3.4.1, 3.4.2, 3.4.3,

Air Interface – GSM Physical Layer: Logical channels, Physical channels, Synchronization- Frequency and clock synchronization, Adaptive frame synchronization.
Text Book - 2: 4.1, 4.2, 4.3, 4.3.2

UNIT-4 (8 Hrs)

GSM Roaming Scenarios and Handover: Mobile application part interfaces, Location registration and location update, Connection establishment and termination, Handover.
Text Book – 2: 6.1, 6.2, 6.3, 6.4 (Up to 6.4.1).

Services: Classical GSM services, Popular GSM services: SMS and MMS.
Text Book – 2: 7.1, 7.2

UNIT-5 (7 Hrs)

CDMA Technology – Introduction to CDMA,CDMA frequency bands, CDMA Network and System Architecture, Mobile-Services Switching Center and Visitor Location Register, CDMA Channel concept, Forward Logical Channels, Reverse logical Channels, CDMA frame format, CDMA System Operations(Initialization/Registration), Call Establishment, CDMA Call handoff.

Text Book – 3: 6.1, 6.2, 6.3, 6.4

TEXT BOOKS

1. Theodore Rapport, ―Wireless Communications – Principles and Practice‖, Prentice Hall of India, 2nd Edition, 2007, ISBN 978-8-120-32381-0.

COURSE ASSESSEMENT METHOD

CIE:

1. Tutorials/Assignments - 10 Marks
2. Surprise tests - 10Marks.
3. Three mid examinations, 30 Marks each will be conducted and the Average of best of two will be taken.

SEE:

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

DEPARTMENT OF AERONAUTICAL ENGINEERING

KNOWLEDGE • CHARACTER • UNITY

SYLLABUS, SCHEME OF TEACHING AND EXAMINATION FOR SEMESTER III & IV AS PER NEP

2021 SCHEME

Vision and Mission of the Department

Vision

- To develop technically competent Aeronautical Engineers of the highest academic standards to meet the national and global requirements of industry and society.

Mission

- To impart quality education in Aeronautical Engineering through top-class teaching – learning process, well-designed curricular& co-curricular activities and state-of-the-art infrastructure
- To inculcate ethical values and develop innovative ideas to meet ever changing global requirements through industry-institute interaction and interdisciplinary research.

Program Outcomes

Engineering Graduates will be able to:

1. **Engineering knowledge**: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
2. **Problem analysis**: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
3. **Design/development of solutions**: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
4. **Conduct investigations of complex problems**: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
5. **Modern tool usage**: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modelling to complex engineering activities with an understanding of the limitations.
6. **The engineer and society**: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

7. **Environment and sustainability**: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
8. **Ethics**: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
9. **Individual and team work**: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
10. **Communication**: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
11. **Project management and finance**: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
12. **Life-long learning**: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Program Specific outcomes (PSOs)

In addition to the above outcomes, the undergraduates of NMIT Aeronautical Engineering programme shall demonstrate the following capability defined by the two PSOs.

1. **PSO1**: Graduates will be able to design and analyze various aircraft materials and structures.
2. **PSO2**: Graduates will be able to develop solutions for various aerodynamic, propulsion and control systems used in aircrafts.

Program Educational Objectives (PEOs)

1. **PEO-1** Graduates will be successful professionals in the field of Aeronautical Engineering and allied areas.
2. **PEO-2** Graduates will exhibit skills to work individually and as part of the team with ethics.
3. **PEO-3** Graduates will pursue higher studies, research and adapt to a world of constantly changing technologies

CREDIT SYSTEM

In credit system, students are assessed in two parts

1. Continuous Internal Evaluation (CIE).

2. Semester End Examination (SEE).

CIE will be conducted by the subject teacher all through the semester; which includes mid-term tests, weekly/ fortnightly class tests, assignments, quiz, seminar, projects etc. The breakup of CIE and SEE is as follows:

THEORY	**Marks Allotment**
Continuous internal evaluation (CIE)	
Mid-Sem Exam (MSE-1)	30 Marks
Mid-Sem exam (MSE-2)	30 Marks
Mid- Sem exam (MSE-3)	30 Marks
Assignment, Mini Projects, Quiz, Case study, Seminar, Tutorials, Experimental work Learning component-1 and Learning component-2 Any two assessments for 10 marks each	10+10 Marks
Semester End Exam (SEE)	50 Marks
Grand total	100 Marks
PRACTICALS	
Continuous internal evaluation (CIE)	15 Marks
Records and continuous assessments	30 Marks
Viva-voce on each experiments	5 Marks
Semester end Exam (SEE)	50 Marks
Grand total	100 Marks

SEE will be conducted at the end of the semester, on dates to be fixed at the college level A grade is basically a qualitative measure (alphabet) giving the performance of a student in a Subject such as Outstanding(S), Excellent (A), Very good (B), Good(C), Average (D), Poor (E), and Fail/Unsatisfactory (F), based on the raw marks obtained by the student (includes both CIE & SEE)

GRADE POINT SCALE

Grade	S	A	B	C	D	E	F
Grade Point	10	9	8	7	05	04	00
Marks Obtained out of 100	≥ 90	75-89	60-74	50-59	45-49	40-44	<40

There will be no re-examination for any course in the credit system, to take care of student who has failed. Student would require re-register for the course when it is offered again (either in a main or supplementary SEM) and fulfill the Passing Standards laid down to earn the specified credits.

PASSING STANDARDS

CIE	50 Marks	≥40%(i.e.20 Marks)
SEE	50 Marks	≥40%(i.e.20 Marks)

A Student will not be allowed to take up SEE, if the CIE will be less than 40%.

A Student will be put in Not Eligible (NE) status which will amount to F grade in the course in the following cases,

- Not allowed to take SEE for not fulfilling minimum attendance requirement.
- Not allowed to take SEE for not fulfilling the minimum CIE requirement
- Absent for SEE.
- There shall be no re-examination for any course in the credit system to take care of such students:
  - Who have absented themselves from attending CIE or SIE without valid reasons or
  - Who have failed (secured 'F' grade) to meet the minimum passing standards prescribed for CIE and / or SEE or
  - Who have been detained for attendance or
  - Who have withdrawn ('w' grade)

Such students shall be required to re-register for the course(s) for study and go through CIE and SEE again and obtain a grade equal to or better than 'E'.

Grade point average is a credit index used for calculating Semester Grade Points Average (CGPA), both of which are important performance indices. SGPA& CGPA are calculated as below:

SGPA= ∑ (Subject Credit X Grade Point) for all the subjects registered in the current semester /∑ (subject credit) for all the subjects registered in the current semester (Excluding Transitional Grades I, X).

CGPA= ∑ (Subject Credit X Grade Point) for all the subjects registered up to the end of the current semester /∑ (Subject Credit) for all the subjects registered but excluding subjects with 'F' grade up to the end of the current semester (Excluding Transitional Grades I, X).

Vertical Progression

It would also be necessary to lay down uniform minimum standards for the vertical progression of students from current academic year to the next academic year. This would be helpful in facilitating the mobility of students from one college to another and also in avoiding any confusion among the students. The prescribed standards foe vertical progressions are,

- A student can carry a maximum of 4(four) 'F' grades/ four subject of the current year of study to become eligible for admission to the next year of studying.
- Should have passed all the first and second semester courses to become eligible for the admission for fifth semester and carry a maximum of four subjects of second year.
- Should have passed all courses of first to fourth semesters to become eligible for the admission for seventh semester and can carry a maximum of four subjects of third year.
- **Minimum standard for CGPA=5.0 at each academic year**.

III - Semester											
Sl. No.	Subject Code	Subject Name	Course Type	Teaching Dept.	Teaching Hours/week			Examination			Credits

SEMESTER-III

ENGINEERING MATHAMEATICS - III				
Course Code	21MAT31		**Credits**	3
Hours/Week (L-T-P)	2-2-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Model and use the appropriate numerical, analytical method to solve ordinary and partial differential equations
2. Adopt and apply the methods of solving differential equations learnt, to different engineering problems
3. Analyse , fit appropriate function to the data given by interpolation of least square process
4. Interpolate extrapolate and predict the data obtained by survey or experiments and from real life situations
5. Use variation methods to model the situation and apply methods to solve integral equations

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Tutorial classes on topics covered
- Unit tests on covered topics

COURSE CONTENTS

UNIT-1 (08 HOURS)

Numerical methods to solve ordinary differential equations

Taylor's series method for 1st and 2nd order IVP, 4th order Runge-Kutta method for 1st order IVP, simultaneous equations, 2nd order IVP, Milne's predictor and correctormethod1st and 2nd order IVP. Finite difference for BVP of 2nd order.

UNIT-2 - (08 HOURS)

Analytical methods to solve ordinary differential equation

Laplace Transforms: Introduction, transforms of standard functions, Inverse Laplace transforms, Solution to initial value problems related to first and second order Ordinary differential equations

Fourier Transforms: Complex Fourier transforms, Cosine and Sine transforms, Inverse Fourier transforms, Solution of differential equations using Fourier Transforms. Power series method, Frobeniuos method. Self-Study: Convolution Theorem for Fourier and Laplace transforms.

UNIT-3 - (08 HOURS)

Methods to solve partial differential equations

Finite Difference method: Schmidt method for heat, wave equation, cranks Nicholson for heat equations, Laplace equations- SOR, ADI method. Fourier series of periodic functions with period $2l$, Fourier series solution of heat and wave equations. Self-Study: Application problems.

UNIT-4 - (08 HOURS)

Interpolation, curve fitting and Numerical integration

Interpolation: Newton's divided difference formulae, Lagrange's formula, Cubic spline. Numerical Differentiation: Newton's forward and backward formulae, Lagrange's Interpolation. Numerical Integration**:** Trapezoidal, Simpson's1/3rd and 3/8th, Weddle's rule, Gaussian Quadrature method. Fitting Fourier series: Harmonic analysis. Self-Study: Quadratic spline, Fitting non-linear curves by least square method.

UNIT-5 - (07 HOURS)

Calculus of Variation and Numerical methods to solve integral equations

Functional, Euler's equation, Solution to Euler's equation, geodesics, isoperimetric problems, Rayleigh Ritz method, Galerkin's method, Point collocation method. Solutions of integral equations: Fredholm equations, quadrature method and Cubic spline method to solve integral equations. Self-Study: Simpson's 1/3rd rule for solving integral equations.

INTRODUCTION TO AIRCRAFT ENGINEERING				
Course Code	21AE32		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the history and configurations of aircraft
2. Explain the various types of airfoils and wings
3. Analyse the performance of aircrafts
4. Analyse structural components of aircraft
5. Understand various design parameters of aircrafts

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (10 HOURS)

History and Aircraft Configurations
Early development of Airplanes, biplanes and monoplanes, Developments in materials, structures and propulsion over the years, types of flight vehicles, Classifications-Components of an airplane and their functions.
Environments: Design Motivation, Atmosphere and its character, pressure measurement, standard atmosphere, use of standard atmosphere.

UNIT-2 - (10 HOURS)

Aerodynamics, Airfoils and Wings: Design Motivation, Basic aerodynamics, Aerodynamics
Application, Viscous flow, airfoil characteristics , wings, High lift device, Aircraft lift, Aircraft Drag and Drag polar, Mach number effect, Aircraft analysis example.

UNIT-3 - (10 HOURS)

Performance: Design Motivation, equation of motion, propulsion, drag curve, lift to drag ratio, power curves, curve shifts, glides, cline range and endurance, take off and landing, turns, V-notation energy height and specific excess Power.

UNIT-4 - (10 HOURS)

Structures and Sizing: Design Motivation, Types of stress, loads, structural layout, materials, component sizing, structural sizing examples, weight estimates, FEA, Internal layout, structural weight, geometry constraints, mission analysis, sizing equations, weight fraction method, weight and balance mission analysis and sizing examples, aerodynamics cost.

UNIT-5 - (08 HOURS)

Design: Introduction, design method, example, Brief history of aircraft design, conceptual design introduction, 12 activities, custom faces, design synthesis, geometry modeling and engineering drawing, Aerodynamic analysis, Constraint analysis, Mission analysis, weight analysis sizing, cost analysis, optimization, performance case study(F-16).

AERO THERMODYNAMICS				
Course Code	21AE33		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply the basic concepts of thermodynamics and heat -work interaction
2. Illustrate the laws and principles of thermodynamics and its applications
3. Analyze and examine the properties of entropy.
4. Analyze the performance of gas turbines

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Videos and animation
- Tutorial classes on problems

COURSE CONTENTS

UNIT-1 - (10 HOURS)

Fundamental Concepts:
Systems; Thermodynamic state, path, process; Zeroth Law and temperature measurement; definition of work and its limitations. Thermodynamic definition of work - examples, signs convention. Heat and work transfer in flow, expressions for displacement work in various processes through p-v diagrams; Heat- definition, units and sign convention

UNIT-2 (08 HOURS)

First law of thermodynamics:
Introduction, First law of thermodynamics- for a closed system undergoing a cycle, for a change in state of a closed system; Joules experiment, Enthalpy, Specific Heat, PMMK-1, Limitations of first law; Problems. First law of thermodynamics for open system-Principle of conservation of mass, Steady flow energy equation, unsteady flow process.

UNIT-3 (10 HOURS)

Second Law of Thermodynamics:
Introduction, Thermal energy reservoir, Heat Engine, Heat Pump, Kelvin plank Statement, Clausius statement- Equivalence; Carnot Cycle, reversed Carnot Cycle, Carnot's first theorem, Carnot Second theorem, Carnot third theorem, Efficiency and C.O.P in terms of temp., Problems.
Entropy: Clausius inequality; Statement, proof, application to a reversible cycle. Entropy; definition, a property, change of entropy, principle of increase in entropy, entropy as a quantitative test for irreversibility, calculation of entropy using Tds relations, entropy as a coordinate. Available and unavailable energy.

UNIT-4 - (10 HOURS)

Gas Turbine
Introduction, Types of gas turbines-Constant volume and constant pressure; Gas turbine cycles-Closed cycle and Open cycle; Analysis of Brayton cycle: Optimum pressure ratio concept, Effect of blade friction: Methods of improving turbine efficiency, Problems.

UNIT-5 - (10 HOURS)

Jet propulsion:
Introduction: Airbreathing Engines-Turbojet- Thrust equation, Turboprop, turbofan and turbo shaft construction and working principle, Problems on Thrust and SFC. Performance comparison of each with P-V, T-S diagram; Ram Jet, Scram jet and pulsejet construction and Working: Comparison between Subsonic, supersonic and Hypersonic engines.

TEXT BOOKS

Sl. No.	Title of the Book	Name of the Author	Name of the Publishers	Edition and Year

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

FLUID MECHANICS				
Course Code	21AE34		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify fluid properties and distinguish between different types of manometers understanding.
2. Apply principles of dimensional analysis and similitude to simple engineering problems and describe buoyancy force.
3. Discuss the continuity equation and flow visualization techniques
4. Analyze the forces and energy for the fluid flow in a conduit and compare the different flow measuring devices.
5. Evaluate the losses and viscous effects in the flow through pipes.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Tutorial classes

COURSE CONTENTS

UNIT-1 - (09 HOURS)

Fluids: Introduction, Types of fluid, Properties of fluids.
Fluid Statistics: Fluid pressure at a point, Pascal's law, pressure variation in a static fluid, absolute, gauge, atmospheric and vacuum pressures, simple manometers and differential manometers. Total pressure and center of pressure on submerged plane surfaces; horizontal, vertical and inclined plane surfaces, curved surface submerged in liquid.

UNIT-2 - (09 HOURS)

Buoyancy: Buoyancy, center of buoyancy, meta-centre and meta-centric height, conditions of equilibrium of floating and submerged bodies, determination of Meta-centric height experimentally and theoretically.
Dimensional Analysis: Introduction, derived quantities, dimensions of physical quantities, dimensional homogeneity, Rayleigh's method, Buckingham's π theorem, dimensionless numbers, similitude, types of similitude.

UNIT-3 - (10 HOURS)

Fluid Kinematics: Types of fluid flow, continuity equation in 2D and 3D (Cartesian Co-ordinates only), velocity and acceleration, Flow net: its characteristics and utility. Fundamentals of flow visualization stream tube, timelines, flow visualization techniques, Plots of fluid flow data: profile plot, vector plot, and contour plot.

UNIT-4 - (10 HOURS)

Fluid Dynamics: Introduction equation of motion, Bernoulli's equation from first principles and also from Euler's equation, limitations of Bernoulli's equation.
Fluid Flow Measurements: Venturimeter, orifice meter, pitot-tube, vertical orifice, V-Notch and rectangular notches.

UNIT-5 - (10 HOURS)

Flow through pipes: Minor losses through pipes. Darcy's and Chezy's equation for loss of head due to friction in pipes. HGL and TEL.
Laminar flow and viscous effects : Reynolds's number, critical Reynold's number, laminar flow through circular pipe-Hagen Poiseille's equation, laminar flow between parallel and stationary plates. Boundary layer concept, displacement, momentum and energy thickness

BASICS OF AEROSTRUCTURE				
Course Code	21AE35		**Credits**	3
Hours/Week (L-T-P)	3-2-0		**CIE Marks**	50
Total Hrs	50		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Summarize and interpret the concepts of simple and compound stresses and related strain in structural members
2. Solve and predict the effects of force and moments (shear Force and Bending Moment) on beams
3. Analyse the Bending Stresses and shear stress in Beams due to bending
4. Analyse the statically determinate and indeterminate structures.
5. Solve and analyze the problems on deflection of beam and torsion effect on shaft

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (08 HOURS)

Stresses and Strains:
Introduction to Stress and strain, Types of stress and Strain, Stress Strain Diagram of Ductile, Brittle, Visco- Elastic, Linear & Non-linear Elastic materials. Bars with varying sections, Bars of composite sections, Simple problems. Thermal stresses, Elastic constants and its relation, volumetric stains, Simple problems. Compound Stresses: Methods of Determining stresses in oblique sections, Principal planes and stresses, Simple problems, Construction of Mohr's circle, simple problems.
Derivation of Equilibrium equations, strain- displacement relation, compatibility conditions and boundary conditions. Plane stress and Plane strain problems in 2D elasticity.

UNIT-2 - (08 HOURS)

Shear Force and Bending Moment Diagram:
Introduction to shear force, Bending moment, Types of Beams and loads, Sign convention for shear force and bending moment, Shear force and bending moment diagram for various beams. Relation between shear force and bending moment. Bending Stresses and shear stress in Beams: Introduction, Pure Bending and Simple Bending, Expression of Bending stress, Neutral axis and Moment of resistance, bending stress in symmetrical sections- simple problems. Introduction to shear stress, shear stress distribution for different section simple problems.

UNIT-3 - (10 HOURS)

Analysis of beams and truss:
Introduction to Deflection and slope, Finding Deflection and slope of a beam subjected to various loads, Relation between slope, Deflection and radius of curvature, Simple problems. Fixed & Continuous beam analysis - Clapeyron's Three Moment Equation. Analysis of plane truss – Method of joints – Method of sections, Plane frames. Torsion of Shafts: Introduction to torsion, Derivation of shear stress produced in a circular shaft subjected to Torsion, Expression of Torque in terms of polar moment of Inertia, Power transmitted by shaft, simple problem

UNIT-4 - (08 HOURS)

Column and struts:
Introduction to columns and struts, Failure of a column, Expression of crippling load when (a) both ends are hinged (b) One end of the column is fixed and the other end is free (c) both ends are fixed (d) One end is fixed and the other end is hinged. Simple problems to be solved used Euler's formula and Rankine formula. Column with initial curvature - Eccentric loading – South well plot – Beam column. Thick and Thin cylinders: Thin cylinders subjected to internal pressure. Stresses in a thin cylinder subjected to internal pressure, Expression of circumferential stress and hoop stress, Simple problems Thick Cylinder: Lame's theorem, Stresses in a thick cylinder, Simple problems to be solved.

UNIT-5 - (08 HOURS)

Energy Methods: Strain Energy due to axial, bending, shear and torsional loading - Castigliano's theorem - Maxwell's Reciprocal theorem, Unit load method - application to beams, trusses, frames, rings, etc.
Theory of Failures: Maximum principal stress theory, Maximum principal strain theory, Maximum shear stress theory, Maximum strain energy theory, Maximum shear strain Energy theory. Graphical representation of theories for two-dimensional stress system, Application to aircraft structural problems.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

1. Three internal assessments for 30 Marks each.
2. Two Learning Activities for10 Marks each.

Semester End Examination (SEE)

3. Semester end examination for 100 Marks

AEROSTRUCTURES LAB

List of experiments

1. Tensile and compression test of metallic specimens using Universal Testing Machine
2. Bending and torsion Test of metallic specimens
3. Impact tests on metallic Specimen.
4. Hardness test of metallic specimen
5. Deflection of beams with various conditions.
6. Shear test of riveted joint and bolted joints
7. Column test – south well plot
8. Symmetrical and unsymmetrical bending of beams
9. Combined loading of beams
10. Measurement of stresses in thin walled vessel
11. Fatigue test

Course Assessment Method:

Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks
Scheme of Examination: Student will be asked to conduct two experiment

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

COMPUTER AIDED AIRCRAFT DRAWING LAB				
Course Code	21AEL37		**Credits**	1
Hours/Week (L-T-P)	0-0-2		**CIE Marks**	50
Total Hrs	24		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1 Plot the orthographic views of engineering components
2. Use suitable thread forms, Fasteners and riveted joints for engineering applications.
3. Design propeller and hub assembly using advanced modelling tools.
4. Design wing assembly, fuselage and engine mounts using advanced modelling tools.
5. Design of landing gear assembly using advanced modelling tools

TEACHING METHODOLOGY

●Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

PART -A

1. Orthographic Views: Conversion of pictorial views into orthographic projections of simple machine parts with or without section. (Bureau of Indian Standards conventions are to be followed for the drawings) Hidden line conventions. Precedence of lines.
2. Thread Forms: Thread terminology, sectional views of threads. ISO Metri(Internal & External) BSW (Internal & External) square and Acme. Sellers thread, American Standard thread.
3. Fasteners: Hexagonal headed bolt and nut with washer (assembly), square headed bolt and nut with washer (assembly) simple assembly using stud bolts with nut and lock nut.
4. Riveted Joints: Single and double riveted lap joints, butt joints with single/doublcover straps (Chain and Zigzag, using snap head rivets).

PART -B

1. Design of propeller and hub assembly
2. Design of wing assembly
3. Design of Engine Mounts
4. Design of fuselage assembly
5. Design of landing gear

Course Assessment Method:
Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks
Scheme of Examination: Student will be asked to conduct any one experiment from Part A & B

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

CO5	3	2	2		3				2	2			2	1

PROGRAM ELECTIVE-A

UAV DESIGN				
Course Code	21AEE361		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-
1. Identify types of UAVs and its applications
2. Describe the aerodynamics and stability of UAV
3. Identify suitable Propulsion system, and materials for UAVs
4. Explain Mission Planning and Control of UAV

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class
- Video and animation

COURSE CONTENTS

UNIT-1 - (08 HOURS)

Introduction: Aviation History and Overview of UAV systems, Classes and Missions of UAVs, Definitions and Terminology, UAV fundamentals, Examples of UAV systems-very small, small, Medium and Large UAV

UNIT-2 - (08 HOURS)

The Air Vehicle Basic Aerodynamics: Basic Aerodynamics equations, Aircraft polar, the real wing and Airplane, Induced drag, the boundary layer, Flapping wings, Total Air-Vehicle Drag
Performance: Overview, climbing flight, Range and Endurance – for propeller driven aircraft, range- a jet-driven aircraft, Guiding Flight

UNIT-3 - (08 HOURS)

Stability and Control: Overview, Stability, longitudinal, lateral, dynamic stability, Aerodynamics control, pitch control, lateral control, Autopilots, sensor, controller, actuator, airframe control, inner and outer loops, Flight-Control Classification, Overall Modes of Operation, Sensors Supporting the Autopilot.

UNIT-4 - (08 HOURS)

Propulsion: Overview, Thrust Generation, Powered Lift, Sources of Power, The Two-Cycle Engine, The Rotary Engine, The Gas Turbine, Electric Motors, Sources of Electrical Power
Loads and Structures Loads, Dynamic Loads, Materials, Sandwich Construction, Skin or Reinforcing Materials, Resin Materials, Core Materials, Construction Techniques

UNIT-5 - (07 HOURS)

Mission Planning and Control: Air Vehicle and Payload Control, Reconnaissance/Surveillance Payloads, Weapon Payloads, Other Payloads, Data-Link Functions and Attributes, Data-Link Margin, Data-Rate Reduction, Launch Systems, Recovery Systems, Launch and Recovery Tradeoffs

Course Code	21AEE362		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain the fundamentals of rocket propulsion and trajectories
2. Describe the solar system.
3. Describe the trajectory, motion of rockets, satellite launch and satellite orbits.
4. Outline the Satellite Applications and interplanetary mission

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (08 HOURS)

Earth and Atmosphere: The Planet Earth; Earth's Gravitational Field; Earth as an Ellipsoid; Peer- shaped Earth; Ellipticity of the Earth; The Geoid and Its Importance; Thermal Structure of the Atmosphere; Atmospheric Density Variation; Van-Allen Radiation Belt; The Ionosphere.

UNIT-2 - (07 HOURS)

Solar System: Motion and Rotation of the Planets; Geocentric and Heliocentric Systems; Sidereal and Synodic Periods; Ecliptic Plane and the Zodiac; Direct and Retrograde Motions; Configuration and Phases of Interior Planets; Configurations of Exterior Planets; Asteroids; Comets; Meteors, Meteorites and Tektites; Micrometeorites; The Milky Way, the Galaxies and the Universe.

UNIT-3 - (08 HOURS)

Trajectory and rocket: Mass ratio and propellant mass fraction, equation of motion of an ideal rocket. Motion of rocket in a gravitational field, simplified vertical trajectory, burnout velocity and burn out height, step rockets, ideal mission velocity and losses effect of launch angle, factors causing dispersion of rockets in flight, dispersion of finned rockets, stability of flight.

UNIT-4 - (08 HOURS)

Satellite Launch and Satellite Orbits: Orbits and Trajectories; Conic Sections; Kepler's Laws of Satellite Motion; Orbital Velocity of Satellites; Orbital Periods; Eccentric Elliptical Orbits; Effect of Injection Conditions; Perturbation of Orbits; Effect of Earth's Rotation; Low Earth Orbits; Geostationary Satellites; Sun- synchronous Satellites. Parking Orbit; Transfer Trajectory; Impulsive Shot; Launching of Interplanetary Spacecraft.

UNIT-5 - (08 HOURS)

Satellite Applications and interplanetary mission: Satellite for metrological, communication, navigational and geodetic applications, atmospheric sounding rocket, satellitefor geophysical and interplanetary studies, parking orbit, transfer trajectory, impulsive shot, launching of interplanetary space craft.

Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain the typical operations of airports from a management perspective
2. Identify the economic, political and social role of airports
3. Discuss the airport financial management
4. Explain and defining capacity, factors affecting capacity and delay

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)

COURSE CONTENTS

UNIT-1 - (08 HOURS)

Airports and Airport Systems: Introduction: Airport management on an international level; The national plan of integrated airport systems; The nation's airport system plan; The rules that govern airport management; Organizations that influence airport regulatory policies; A historical and legislative perspective: Introduction the formative period of aviation and airports, Airport growth: World War-II and the postwar period airport modernization: The early jet age.

UNIT-2 - (08 HOURS)

Components of the airport

The components of an airport, the airfield. Navigational aids (NAVAIDS) located on airfields; Air traffic control and surveillance facilities located on the airfield; Weather reporting facilities located on airfields; Security infrastructure on airfields; Airspace and air traffic control: Brief history of air traffic control; The basics of air traffic control; Current and future enhancements to air traffic control; Airport terminals and ground access: The historical development of airport terminals; Components of the airport terminal; Airport ground access

UNIT-3 - (08 HOURS)

Airport operations and financial management

Airport operations management: Introduction, pavement management, aircraft rescue and firefighting (ARFF); Snow and ice control, safety inspection programs. Bird and wildlife hazard management; Airport security: Security at commercial service airports, security at general aviation airports; the future of airport security

UNIT-4 - (08 HOURS)

Airport financial management

Airport financial accounting, revenue strategies at commercial airports, pricing of airport facilities and services, variation in the sources of operating revenues, rise in airport financial burdens, airport funding, grant programs, airport financing, private investment sale of the airport.

UNIT-5 - (07 HOURS)

Airport capacity and delay

Defining capacity, factors affecting capacity and delay, estimating capacity, analytical estimates of delay: The queuing diagram; The future of airport management: Introduction, restructuring of commercial air carriers, new large aircraft and small aircraft transportation systems.

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the basics of jet propulsion
2. Explain the need of inlet duct and nozzle in jet engines
3. Explain the need of turbine jet in aircraft engines
4. Describe the working principle of rocket engines

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Video and animation

COURSE CONTENTS

UNIT-1 - (08 HOURS)

Basic theory of jet propulsion:
Introduction, Principle of operation of propulsive engine, Equation of thrust, Comparison between gas turbine engine and reciprocating engine, Relation between pressure, velocity and thrust in a jet engine, Classification of propulsive engine and Types of air breathing engine, ideal and real gas turbine cycle, Turbo prop, turbo fan, turbo shaft, turbojet, ramjet, scramjet , pulse jet, Advantages, Disadvantages & Application of different types of Air breathing engines.

UNIT-2 - (08 HOURS)

Inlet ducts, compressors:
Inlet Ducts: Inlet duct-purpose, Function of inlet-duct, Types of inlet –duct, Ram effect and efficiency, Effects on pressure, velocity and temperature of airflow, Compressors
Compressor-purpose, Constructional features,Materials of Construction, principles of operation of axial flow compressor and centrifugal flow compressor, Functions of impellers, diffuser, and rotor blades. Stator blade, inlet guide vane, Advantages and disadvantages of centrifugal and axial flow compressor, Compressor choking, stalling and surging..

UNIT-3 - (08 HOURS)

Turbine, jet nozzle :
Turbines:: Turbine and its action, constructional details of turbine. Materials of construction, general arrangement of turbo-prop and turbo-shaft engines, Type of turbines and their functions, Turbine disc, nozzle, guide vane, Principle and operation of- impulse, reaction turbines, Brief description of turbine blade to disc attachment, Blade creep, **Jet Nozzle:** Jet exhaust- purpose, 1-D flow basics, Simple flows; Nozzle flow, nozzle design, nozzle operating characteristics for isentropic flow, nozzle flow and shock waves. Nozzle characteristics of some operational Engines. Rayleigh flow and Fanno flow.

UNIT-4 - (08 HOURS)

Chemical Rockets: Conservation of momentum, generation of thrust, Rocket performance parameters,The rocket equationApplication and Classification of Solid Propellant Rocket Motors; Propellants and Characteristics;Propellant Burning Rate;Combustion fundamentals,Propellant Grains and Grain Configurations, Grain Design.

UNIT-5 - (07 HOURS)

Liquid Propellant and their Properties; Liquid Propellant Feed Systems; Injectors; Thrust Chamber Shapes and Characteristic Length, Design of liquid rocket; Hybrid Propellant Rocket Motors; Gaseous Propellant Rocket Motors and Reaction Control Systems, Design of Hybrid Rocket.

TEXT BOOKS

Sl. No.	Title of the Book	Name of the Author	Name of the Publishers	Edition and Year

Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply temperature measurement concepts
2. Use metallurgical techniques for research
3. Use statistical techniques for research and thesis work

●Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
●Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (08 HOURS)

Measurement of Cutting Forces: Strain gauge and piezoelectric transducers and their characteristics. Dynamometer construction, Bridge circuits. Instrumentation and calibration. Displacement and strain measurements by photo elasticity. Holography, interferometer, Moir techniques, strain gauge rosettes

UNIT-2 - (08 HOURS)

Temperature Measurement: Circuits and instrumentation for different transducers viz, bimetallic, expanding fluid, electrical resistance, thermister, thermocouples, pyrometers. Flow Measurement: Transducers for flow measurements of Non-compressible and compressible fluids. Obstruction and drag methods. Vortex shredding flow meters. Ultrasonic, Laser Dopler and Hotwire anemometer. Flow visualization techniques, Shadow graphs, Schlieren photography. Interferometer.

UNIT-3 - (08 HOURS)

Metallurgical Studies: Optical and electron microscopy, X-Ray diffraction, Bragg's Law and its application for studying crystal structure and residual stresses. Electron spectroscopy, electron microprobe. Surface Measurements: Micro hardness, roughness, accuracy of dimensions and forms. 3-D co-ordinate measuring machines

UNIT-4 - (08 HOURS)

Experiment design & data analysis: Statistical methods, Randomized block design, Latin and orthogonal squares, factorial design. Replication and randomization. Data Analysis: Deterministic and random data, uncertainty analysis, tests for significance: Chi-square, student's't' test. Regression modeling, direct and interaction effects. ANOVA, F-test. Time Series analysis, Autocorrelation and autoregressive modeling

UNIT-5 - (07 HOURS)

Taguchi Methods: Experiment design and planning with Orthogonal arrays and linear graphs. Additive cause effect model. Optimization of response level. Identification of Design and noise factors. Performance evaluation and Optimization by signal to noise ratios. Concept of loss function and its application

SEMESTER- IV

ENGINEERING MATHEMATICS -IV				
Course Code	21MAT41		**Credits**	4
Hours/Week (L-T-P)	2-2-0		**CIE Marks**	50
Total Hrs	50		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Concepts of random variables, probability distributions and sampling can be applied to problem solving.
2. Probability distributions can be used for testing of hypothesis of testing and model situations arising in analysis of data
3. Different techniques of testing hypothesis and random variables can be applied to model engineering problems
4. Concepts of correlation and regression can be applied to analyse and predict data.
5. Concepts of linear algebra can be applied to different physical situations.

TEACHING METHODOLOGY

●Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
●Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (10 HOURS)

Probability and Random Variables
Probability: Definition, sum and product Rule, Conditional Probability. Random variable -: Probability distribution- discrete and continuous, probability density function, cumulative density function, mean and variance, expectation. Joint distribution - discrete and continuous, marginal distribution, expectation, covariance.
Self-Study: Baye's Theorem- proof and problems

UNIT-2 - (10 HOURS)

Probability Distributions and Sampling
Probability Distribution: Binomial, Poisson, Normal distribution, exponential distribution, uniform distribution. Theory of Sampling: Population and sample, sampling with and without replacement, sampling distribution of means and variance, confidence intervals for mean.
Self-Study: Weibull and Gamma distribution

UNIT-3 - (10 HOURS)

Testing Hypothesis
One tailed and two tailed test, testing of large samples, significance level, testing small samples using t – test, χ^2 test for goodness of fit, F-test and Analysis of variance for one factor experiments.
Self-Study: Test of significance for difference of means

UNIT-4 - (10 HOURS)

Correlation and Regression
Correlation, Karl Pearson's coefficient of correlation, Rank correlation, Spearman's rank correlation coefficient, Regression lines, multiple regressions. Mathematical models for time series: Graphical curve fitting, least square curve fitting,
Self-Study: Angle between regression lines, relation between correlation coefficient and lines of regression.

UNIT-5 - (10 HOURS)

Linear Algebra
Vector spaces- Introduction, subspaces, Linear combinations, linear dependence, basis and dimension, linear Transformation, matrix representation of linear transformation, Eigen values and Eigen space, Eigen values by Rutishauser method, inner products, orthogonal vectors, Gram Schmidt Orthogonalization process
Self- Study: Characteristic and minimal polynomial, Block matrices

FUNDAMENTALS OF AERO-PROPULSION

Course Code	21AE42		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-
1. Review the basic thermodynamic principles and illustrate the working principles of gas turbine engines
2. Outline the importance of subsonic, supersonic inlets, combustion chamber and nozzles for jet engines
3. Evaluate the operating characteristics of compressors and turbines in terms of blade shapes, angles, and direction of rotation
4. Describe the fundamentals of ramjet and rocket propulsion.

TEACHING METHODOLOGY

●Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
●Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (08 HOURS)

Introduction: Review of thermodynamic principles, Review of thermodynamics of ideal gases, enthalpy, isentropic flow, atmospheric models,Introduction to gasdynamics- I stagnation enthalpy, stagnation temperature, stagnation pressure Introduction to gasdynamics-II shock waves.
Fundamentals of Gas Turbine Engines: Illustration of working of gas turbine engine – The thrust equation – Factors affecting thrust – Effect of pressure, velocity and temperature changes of air entering compressor – After burner arrangements for thrust augmentation.– Performance parameters of aircraft engines,Ramjets, scramjets, Turbojets, turbofans,Turboprops, modern trends in aircraft design.

UNIT-2 - (08 HOURS)

Parametric Cycle Analysis of Ideal Engines : Engine cycle analysis and basic assumptions. Applications to (i) Ramjet, (ii) Turbojet with and without after burner, (iii) Turbo fan Engine, optimum by pass ratio (iv) Turbo-Prop Engine Cycle analysis of real engines.
Inlets, Nozzles and Combustion Chambers for Jet Engine: Internal flow and Stall in subsonic inlets – relation between minimum area ratio and eternal deceleration ratio – diffuser performance – supersonic inlets – starting problem on supersonic inlets – shock swallowing by area variation – . real flow in nozzles and nozzle efficiency – losses in nozzles – equilibrium flow and frozen flow in nozzles- two phase flow in nozzles – ejector and variable area nozzles - interaction of nozzle flow with adjacent surfaces – thrust reversal- classification of combustion chambers – combustion chamber performance – effect of operating variables on performance – flame stabilization

UNIT-3 - (08 HOURS)

Compressors: Principle of operation of centrifugal compressor – Work done and pressure rise – Velocity diagrams – Diffuser vane design considerations – Concept of pre-whirl– Rotation stall – Elementary theory of axial flow compressor – Velocity triangles– degree of reaction – Three dimensional – Air angle distributions for free vortex and constant reaction designs – Compressor blade design – Centrifugal and Axial compressor performance characteristics.

UNIT-4 - (08 HOURS)

Introduction to Turbines: Types of turbines-Principle of operation of axial flow turbines– limitations of radial flow turbines- Work done and pressure rise – Velocity diagrams – degree of reaction – constant nozzle angle designs – performance parameters of axial flow turbine– turbine blade cooling methods – stage efficiency calculations – basic blade profile design considerations – matching of compressor and turbine.

UNIT-5 - (07 HOURS)

Ramjet Propulsion: Operating principle – Sub critical, critical and supercritical operation –Combustion in ramjet engine – Ramjet performance – Sample ramjet design calculations – Introduction to scramjet – Preliminary concepts in supersonic combustion – Integral ram- rocket
Fundamentals of Rocket Propulsion: Thrust equation and specific impulse, vehicle acceleration, drag, gravity losses, multi-staging of rockets. Classification of chemical rockets, performance of solid and liquid propellant rockets.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix

AIRCRAFT MATERIALS & MANUFACTURING				
Course Code	21AE43		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the basics of manufacturing processes, patterns, properties of moulding sands, gating and risers.
2. Explain the process of moulding, cores, special moulding processes and melting furnaces.
3. Explain the importance of various materials for aircraft structures and engines.
4. Describe the importance of Metal Alloys, Super alloys and heat treatment process, Polymers, Polymeric Materials, Plastics, Ceramics, Glass and composite materials in aerospace applications.
5. Identify the applications of High Energy Materials for rockets and missiles

TEACHING METHODOLOGY

●Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT-1 (08 HOURS)

Aircraft Engineering Materials

Engineering materials Steels, Solid solutions, Binary phase diagrams, study of iron, iron carbon phase diagram, heat treatment, annealing, normalizing, hardening and tempering of Aluminum and steel, Non-Ferrous metals and Alloys: Structure and properties of copper and its alloys, Aluminum and its alloys, Titanium and its alloys.

UNIT-2 (08 HOURS)

Casting, Welding and Inspection Techniques

General principles of various casting processes Sand casting, die-casting, centrifugal casting, investment casting, Shell molding types; Principles and equipment used in arc welding, gas welding, resistance welding, solid, laser welding, and electron beam welding, soldering and brazing techniques. Need for NDT, ultrasonic testing, Radiographic testing, Flight-testing.

UNIT-3 - (08 HOURS)

Sheet Metal Processes in Aircraft Industry

Sheet metal operations: shearing, punching, super plastic forming; operations in bending like stretch forming spinning drawing. Riveting, types and techniques, equipment, fasteners, integral tanks, Jigs and Fixtures,

UNIT-4 - (07 HOURS)

Conventional and Modern Manufacturing Processes

General working principles, applications and operations of lathe, shaper, milling machines, grinding, drilling machine, computer numeric control machining. Working principles and applications of abrasive jet machining, ultrasonic machining, Electric discharge machining and electro chemical machining, laser beam, electron beam, plasma arc machining. Rapid prototyping, Additive manufacturing process.

UNIT-5 (08 HOURS)

Aircraft Composites

Introduction, Physical metallurgy, Wrought aluminum alloys, Cast aluminum alloys, Production of semi-fabricated forms, Aerospace applications, Plastics and rubber, Introduction to fiber reinforced plastics, glass and carbon composites; Fibers and resins; Characteristics and applications, Classification of aircraft materials; Materials used for aircraft components, Application of composite materials, Super alloys, emerging trends in aerospace materials.

ADVANCED AEROSTRUCTURE				
Course Code	21AE44		**Credits**	4
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyze aircraft structural design and bending in unsymmetrical sections
2. Analyze the shear flow in open and closed sections
3. Compute the buckling of plates, joints and fittings.
4. Formulate stress in wings fuselage and structure of aircraft.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (10 HOURS)

Introduction to Aircraft Structural Design: conceptual design – Detailed design – Airworthiness- certification. Design criteria – Safety Factor – Design life criteria – Analysis method – Life Assessment procedures – Design Principle.
Unsymmetrical Bending: Bending stresses in beams of unsymmetrical sections – Bending of symmetric sections with skew loads

UNIT-2 (10 HOURS)

Shear Flow in Open Sections: Thin walled beams, Concept of shear flow, shear centre, Elastic axis. With one axis of symmetry, with wall effective and ineffective in bending, unsymmetrical beam sections.

UNIT-3 (10 HOURS)

Shear Flow in Closed Sections: Bredt – Batho formula, Single and multi – cell structures, approximate methods and Shear flow in single &multicell structures under torsion. Shear flow in single and multi-cell under bending with walls effective and ineffective.

UNIT-4 - (10 HOURS)

Buckling of Plates: Rectangular sheets under compression, Local buckling stress of thin walled sections, Crippling stresses by Needham's and Gerard's methods, Thin walled column strength. Sheet – stiffener panels. Effective width, inter rivet and sheet wrinkling failures.
Introduction to Post Buckling, Joints and Fittings: Introduction to Post Buckling: post buckling of structures, concepts of effective width - General theory for the design of fittings, Estimation of fitting design loads, design of riveted, bolted and welding joints, post buckling of structures, and concept of effective width.

UNIT-5 - (08 HOURS)

Stress Analysis in Wing and Fuselage: Procedure – Shear and bending moment distribution for semi cantilever and other types of wings and fuselage, thin webbed beam. With parallel and non-parallel flanges, Shear resistant web beams, Tension field web beams (Wagner's).

Hours/Week (L-T-P)	3-0-2		**CIE Marks**	50
Total Hrs	50		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Review basic fluid mechanics and description of fluid motion
2. Discuss airfoil characteristics
3. Analyze the pressure distribution for incompressible inviscid flow over the airfoil\
4. Discuss the flow over circular cylinders, airfoils
5. Discuss to carry out the Aerodynamic Testing

TEACHING METHODOLOGY

●Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
●Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (10 HOURS)

Review of Basic Fluid Mechanics: Continuity, momentum and energy equation, units and dimensions, Types of flow, compressibility, and Mach number regimes.
Description of Fluid Motion: Euler and Lagrangian descriptions, Control volume approach to continuity and momentum equations, Path lines, Streamlines and Streak lines, Angular velocity, Vorticity, Circulation, Stream function, Velocity potential and Relationship between them.

UNIT-2 - (10 HOURS)

Airfoil Characteristics: Airfoil section geometry and wing plan form geometry, Fundamental aerodynamic variables, Aerodynamic forces and moments and pressure coefficient. Centre of pressure, calculation of airfoil lift and drag from measured surface pressure distributions, typical airfoil aerodynamic characteristics at low speeds

UNIT-3 - (10 HOURS)

Two-Dimensional Inviscid Incompressible Flows: Bernoulli's equation, Pitot-tube measurement of airspeed, condition on velocity for incompressible flow. Governing equations for Irrotational, incompressible flow: Laplace equation and boundary conditions. Two-dimensional source, sink and doublet flows and vortex flow and combinations of elementary flows.

UNIT-4 - (10 HOURS)

Flow Over Circular Cylinders: Non-lifting flow over a two-dimensional circular cylinder, Lifting flow over a two-dimensional circular cylinder, Kutta-Joukowski theorem and generation of lift, D'Alembert's paradox. Incompressible Flow Over Airfoils: Kelvin's circulation theorem and the starting vortex, vortex sheet, Kutta condition, Classical thin airfoil theory for symmetric and cambered airfoils

UNIT-5 - (08 HOURS)

Introduction to Aerodynamic Testing: Principles of wind tunnel flow simulation, open and closed circuit wind tunnels, and Major features of low speed, transonic and supersonic wind tunnels, smoke and tuft flow visualization techniques, Pressure and Aerodynamic load measurements on a model, total drag determination of two-dimensional bodies using wake survey at low speeds

4	High Speed Wind Tunnel Testing	Pope A. and Goin, KL	John Wiley & Sons Inc	99th edition 1965

AERODYNAMICS LABORATORY

List of Experiments

1. Calibration of a subsonic wind tunnel
2. Smoke flow visualization studies
   i. On a two-dimensional circular cylinder at low speeds.
   ii. On a two dimensional airfoil at different angles of incidence at low speeds.

3. Tuft flow visualization on a wing model at different angles of incidence at low speeds.
4. Surface pressure distributions and calculation of aerodynamic coefficients.
    i. On a two-dimensional circular cylinder at low speeds
    ii. On a two-dimensional symmetric airfoil at different angles of incidence.
    iii. On a two-dimensional cambered airfoil at different angles of incidence.
5. Measurement of a typical boundary layer velocity profile on the tunnel wall
6. Measurement of Aerodynamic Loads and Moment using three-component balance.
    i. Over a rectangular wing with symmetrical airfoil
    ii. Over a rectangular wing with cambered airfoil
7. Calculation of total drag using Pitot-static probe wake survey
    i. Of a two-dimensional circular cylinder at low speeds.
    ii. Of total drag of a two-dimensional airfoil at low speeds.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.

2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3								3	3				3
CO2	3	3	3						3	3				3
CO3	3	2	3						3	2				2
CO4	3	3	3						3	3				3
CO5	3	3	3						3	3				3

AERO STRUCTURAL DESIGN LAB				
Course Code	21AEL47		**Credits**	1
Hours/Week (L-T-P)	0-0-2		**CIE Marks**	50
Total Hrs	13		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

List of experiments

1.Study of structural components of Aircraft
2. Deflection of beams with various end conditions.
3.Verification of Maxwell's Reciprocal theorem & principle of superposition
4.Column – Testing
5.South – well's plot
6.Calibration of Photo Elastic Materials
7.Determination of stresses using photo elastic materials
8.Creep testing of Materials
9. Measurement of stresses in thin walled vessels.
10. Fatigue Testing of materials.
11.Vibration of beams

Course Assessment Method:
Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks
Scheme of Examination: Student will be asked to conduct two experiment

PROGRAM ELECTIVE-B

AIRWORTHINESS AND CERTIFICATION				
Course Code	21AEE461		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1.Explain the Airworthiness requirements for different categories of aircrafts
2.Discuss the various certifications, technical log book
3.Explain the procedure for development, test flight and certification
4. Explain the procedure for training and their licenses, inspection, and approved materials.
5.Discuss the accident investigation procedures

TEACHING METHODOLOGY

●Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT-1 (08 HOURS)

Introduction to aircraft rules as far as they relate to airworthiness and safety of aircraft. Airworthiness requirements for civil and military aircraft CAR, FAR, EASA and ICAO, regulations, Defense standards. Military standards and specifications

UNIT-2 (08 HOURS)

Privileges and responsibilities of various categories of AME license and approved persons. Knowledge of mandatory documents like certificate of Registration, certificate of Airworthiness - conditions of issue and validity. Export certificate of Airworthiness. Knowledge of Log Book, Journey Log Book, Technical Log Book, etc.

UNIT-3 (08 HOURS)

Procedure for development and test flights and certification. Certificate of Flight release, Certificate of Maintenance, Approved Certificates
Technical Publications, Aircraft Manual, Flight Manual, Aircraft Schedules. Registration, Procedure, Certification, Identification and Marking of Aircraft.

UNIT-4 (07 HOURS)

Modifications, concessions, airworthiness directives, service bulletins. Crew training and their licenses, approved inspection, and approved materials, identification of approved materials. Bonded and quarantine stores. Storage of various aeronautical products like rubber goods, various fluids.

UNIT-5 - (08 HOURS)

Accident investigation procedures. Circumstances under which C of A is suspended. ICAO and IATA regulations, Chicago and Warsaw conventions. Familiarization of recent issues of Advisory Circulars. Civil Aviation Requirements Section 2 - Airworthiness.

TEXT BOOKS

1. The Indian Aircraft Act and the Rules
2. Manual of Civil Aviation
3. DEF STANDARD 970
4. Gran E L, Statistical Quality Control, McGraw Hill
5. Civil Airworthiness Requirements

REFERENCE BOOKS

1. Aeronautical Information Circulars (relating to Airworthiness)
2. Advisory Circulars - DGCA
3. Civil Aircraft Airworthiness Information and Procedures (CAP 562)
4. Civil Aviation Requirements Section 2 - Airworthiness.

MECHANISM AND MACHINE THEORY				
Course Code	21AEE462		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify various mechanisms and its degrees of freedom
2. Analyze gears, gear train to produce desired motion
3. Determine the suitability of flywheel, governor and gyroscope for industrial applications.
4. Design of cams and followers
5. Distinguish between static & dynamic balancing of rotating masses

TEACHING METHODOLOGY

●Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT-1 (08 HOURS)

SIMPLE MECHANISMS

Introduction: Kinematic, link, pair, constraint motion- Definition and its classification, types of joints, kinematic chain, Grubbler's criteria, Mechanisms, machines and structures, degrees of freedom, simple problems.

Fundamentals of mechanisms: Inversions: Inversions of 4 bar chain, single slider and double slider crank chain. Pantograph, Geneva, Ratchet and Pawl mechanisms.

Straight line motion mechanisms: Peaucellier Mechanisms, Scotch Russell, Hart mechanism, watt mechanism Steering Gear mechanism: Davis and Ackermann steering gear mechanism

UNIT-2 (08 HOURS)

THEORY OF GEAR AND GEAR TRAINS

Gear: Introduction, types of gears, terminology of gears, Fundamental law of gearing, Gear tooth forms, Interference, determination of minimum number of teeth to avoid interference, simple problems.

Gear trains: Introduction, types of Gear trains, sun and planet gear trains, Epicyclic gear train, Torques in Gear train, simple problems.

UNIT-3 (08 HOURS)

GOVERNORS AND GYROSCOPE

Types of governors; force analysis of Watt, Proell, Porter and Hartnell governors. Controlling force, stability, sensitiveness, isochronism, effort and power. (Only definitions).

GYROSCOPE: Vectorial representation of angular motion, basic definitions, gyroscopic couple. Effect of gyroscopic couple on a plane disc, an aero plane and a naval ship.

UNIT-4 (07 HOURS)

CAMS: Introduction, types of cams and followers, Procedure for drawing cam profile. Follower motion: uniform velocity, uniform acceleration and deceleration, SHM and cycloid motions, problems to be solved using the above said types of motions.

UNIT-5 - (08 HOURS)

BALANCING OF ROTATING MASSES:

Static and dynamic balancing, Balancing of single rotating mass by balancing masses in same plane and in different planes. Balancing of several rotating masses by balancing masses in same plane and in different planes.

TEXT BOOKS

1. Theory of Machines, by J Rattan, McGraw Hill Publication.
2. Theory of Machines, by J K Gupta,, S Chand Pvt Ltd.
3. Theory of Machines, by Sadhu Singh, Pearson Education.

REFERENCE BOOKS

1. Theory of Machines by Thomas Bevan, CBS Publication 1984.
2. Mechanisms and Dynamics of Machinery by J. Srinivas, Scitech Publications, Chennai, 2002

FLIGHT SCHEDULING AND OPERATIONS				
Course Code	21AEE463		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50

Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Discuss the Network Flows and Integer Programming Models
2. Understand the Aircraft Routing and Management of Irregular Operations
3. Explain the Significance of flight scheduling
4. Discuss the Fleet Assignment, Crew and Manpower Scheduling
5. Discuss the Gate Assignment and Aircraft Boarding Strategy

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)

COURSE CONTENTS

UNIT-1 - (08 HOURS)

Network Flows and Integer Programming Models: Complexity of airline planning, operations and dispatch- need for optimization-role of operations research and simulation. Networks- definitions, network flow models- shortest path problem, minimum cost flow problem, maximum flow problem, multi-commodity problem. mathematical formulation- decision variables, objective function, constraints, and methods of solution.

UNIT-2 - (08 HOURS)

Fleet Assignment, Crew and Manpower Scheduling: Purpose of fleet assignment. Fleet types, fleet diversity, and fleet availability-performance measures, Formulation of the fleet assignment problem- decision variables, objective function, constraints, and solution. Scenario analysis, fleet assignment models. Crew scheduling process-significance. Development of crew pairing- pairing generators-mathematical formulation of crew pairing problem methods of solution. Crew rostering- rostering practices. The crew rostering problem-formulation solutions.

UNIT-3 - (08 HOURS)

Manpower scheduling- modeling, formulation of the problem, solutions
Flight Scheduling: Significance of flight scheduling: The route system of the airlines- point-to-point flights, hub and spoke flights. Schedule construction-operational feasibility, economic viability. Route development and flight scheduling process- load factor and frequency- case study

UNIT-4 - (08 HOURS)

Aircraft Routing and Management of Irregular Operations: Goal of aircraft routing- maintenance requirements, other constraints. Routing cycles, route generators. Mathematical models of routing- decision variables, objective functions, alternatives, constraints-flight coverage and aircraft available. Example problems and solutions. The problem statement, the time band approximation model-formulation of the problem-the scenarios- solution

UNIT-5 - (07 HOURS)

Gate Assignment and Aircraft Boarding Strategy: Gate assignment-significance- the problem-levels of handling-passenger flow, distance matrix mathematical formulation, solution. Common strategies for aircraft boarding process, mathematical model, interferences, model description, aisle interferences

ASTRONOMY AND ASTROPHYSICS				
Course Code	21AEE464		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the history of astronomy and luminosity of stars
2. Explain the life cycle of stars through HR diagram
3. Understand the origin of sun and planets
4. Describe Origin and Nature of Asteroids, Meteors, Comets and Galaxies
5. Outline the characteristics of milky way galaxy and Big Bang concepts

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (08 HOURS)

History of Astronomy and Apparent Luminosity of Stars: Ptolemy's astronomical work, Copernican heliocentrism and Tychonian system, Luminosity (Apparent and Absolute) of stars, Magnitude scale, and Luminosity measurement: 1) Visual Method 2) Photographic method and 3) Photoelectric method.

UNIT-2 - (08 HOURS)

Stellar Evolution (HR diagram): Life cycle; Stellar Processes (Nuclear) and spectral classification of Stars O, B, A, F, G, K, M.

UNIT-3 - (08 HOURS)

Sun and Planets Origin of the solar system: Internal structure and surface features of sun, Sun spots and Magnetic field on the sun and Solar activity. Surface features of planets, Atmospheres and Magnetic fields of Planets and their moons.

UNIT-4 - (08 HOURS)

Asteroids, Meteors, Comets and Galaxies: Asteroids: Discovery and designation, Origin, Nature and Orbits of Asteroids. Meteors: Meteor showers and sporadic meteors. Comets : Periodic comets, Brightness variation in Comets. Gas production rates, dust and ion tails.

UNIT-5 - (07 HOURS)

Galaxies: Milky Way Galaxy & Galaxies beyond Structure of the Milky Way Galaxy What are galaxies? Different types of galaxies. Hubble's classification. Structure, size & mass of the Milky Way galaxy. Position of our Sun and its motion around the galactic centre. Cosmology The expanding universe. Cosmological models: Big Bang and Steady State models. Dark matter

AIRCRAFT MAINTENANCE AND REPAIR				
Course Code	21AEE465		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify and apply the principles of function and safe operation to aircraft as per FAA. Understand general airframe structural repairs, the structural repair manual and structural
2. Understand the nature of airframe structural component inspection, corrosion repair and control programme. non-destructive inspection
3. Understand aircraft component disassembly, reassembly and troubleshooting
4. Know about aircraft adhesives, sealants, bonding techniques, repair procedures and the types and detection of defects in aircraft composite materials
5. Identify, install, inspect, fabricate and repair aircraft sheet metal and synthetic, material structures.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (08 HOURS)

MAINTENANCE OF AIRCRAFT STRUCTURAL COMPONENTS Equipments used in welding shop and their maintenance - Ensuring quality welds - Welding jigs and fixtures - Soldering and brazing – laser welding. Sheet metal repair and maintenance: Selection of materials; Repair schemes; Fabrication of replacement patches; Tools - power/hand; Repair techniques; Peening - Close tolerance fasteners; Sealing compounds; forming/shaping; Calculation of weight of completed repair; Effect of weight - change on surrounding structure. Sheet metal inspection - N.D.T. Testing. Riveted repair design - Damage investigation - Reverse engineering.

UNIT-2 - (08 HOURS)

PLASTICS AND COMPOSITES IN AIRCRAFT Review of types of plastics used in airplanes - Maintenance and repair of plastic components - Repair of cracks and holes - various repairs schemes - Scopes. Cleaning of fibre reinforced plastic (FRP) materials prior to repair; Break test - Repair Schemes; FRP/honeycomb sandwich materials; laminated FRP structural members and skin panels; Tools/equipment; Vacuum-bag process. Special precautions – Autoclaves

UNIT-3 - (08 HOURS)

AIRCRAFT JACKING, ASSEMBLY AND RIGGING Airplane jacking and weighing and C.G. Location. Balancing of control surfaces - Inspection maintenance. Helicopter flight controls. Tracking and balancing of main rotor.

UNIT-4 - (08 HOURS)

REVIEW OF HYDRAULIC AND PNEUMATIC SYSTEM Trouble shooting and maintenance practices - Service and inspection - Inspection and maintenance of landing gear systems. - Inspection and maintenance of air-conditioning and pressurization system, water and waste system. Installation and maintenance of Instruments - handling - Testing - Inspection. Inspection and maintenance of auxiliary systems - Rain removal system - Position and warning system - Auxiliary Power Units (APUs).

UNIT-5 - (07 HOURS)

SAFETY PRACTICES Hazardous materials storage and handling, Aircraft furnishing practices - Equipments. Trouble shooting. Theory and practices.

ABILITY ENHANCEMENT COURSE-II

INTRODUCTION TO PYTHON PROGRAMMING				
Course Code	21AEC491		**Credits**	2
Hours/Week (L-T-P)	1-0-1		**CIE Marks**	50
Total Hrs	24		**SEE Marks**	50
Exam Hrs	03		**Course Type**	AEC

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Develop and illustrate algorithms to solve simple mathematical problems
2. Write programs using various data types, operators, functions, and modules in Python
3. Distinguish conditional and loop statements in Python and identify data handling functions to solve a given problem
4. Use appropriate data structures in python to represent compound data
5. Apply basic operations on data from/to files, modules and packages in Python. Choose appropriate error and exception handling methods for debugging.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (05 HOURS)

Algorithmic Problem Solving Algorithms, building blocks of algorithms, notation, algorithmic problem solving, simple strategies for developing algorithms.
Illustrative problems: find minimum in a list, insert a card in a list of sorted cards, guess an integer number in a range, Towers of Hanoi.

UNIT-2 - (05 HOURS)

Data And Expressions Python interpreter and interactive mode; values and types: int, float, Boolean, string, and list; variables, expressions, statements, tuple assignment, precedence of operators, comments; modules and functions, function definition and use, flow of execution, parameters and arguments.
Illustrative programs: exchange the values of two variables, circulate the values of n variables, distance between two points.

UNIT-3 - (05 HOURS)

Control Flow And Functions
Conditionals: Boolean values and operators, conditional, alternative, chained conditional; Iteration: state, while, for, break, continue, pass; Fruitful functions: return values, parameters, local and global scope, function composition, recursion; Strings: string slices, immutability, string functions and methods, string module; Lists as arrays.
Illustrative programs: square root, gcd, exponentiation, sum an array of numbers, binary search, different patterns.

UNIT-4 - (05 HOURS)

Data Structures: Lists, Tuples, Dictionaries
Lists: list operations, list slices, list methods, list loop, mutability, aliasing, cloning lists, list parameters; Tuples: tuple assignment, tuple as return value; Dictionaries: operations and methods; advanced list processing - list comprehension;
Illustrative programs: selection sort, insertion sort, merge sort, histogram

UNIT-5 - (04 HOURS)

Files, Modules, Packages Files and exception: text files, reading and writing files, format operator; command line arguments, errors and exceptions, handling exceptions, modules, packages.
Illustrative programs: word count, copy file.

ETHICS,TECHNOLOGY AND ENGINEERING

Course Code	21AEC492		**Credits**	2
Hours/Week (L-T-P)	2-0-0		**CIE Marks**	50
Total Hrs	24		**SEE Marks**	50
Exam Hrs	03		**Course Type**	AEC

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the morals, value s and ethics in work
2. Describe engineering ethics and various moral values
3. Explain and follow safety, risk and risks at work place
4. Describe and solve global Issues at work place

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (06 HOURS)

Human Values Morals, values and Ethics – Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT-2 - (06 HOURS)

Engineering Ethics Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles - Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories

UNIT-3 - (06 HOURS)

Engineering As Social Experimentation Engineering as Experimentation – Engineers as responsible Experimenters – Codes of Ethics – A Balanced Outlook on Law. Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

UNIT-4 - (04 HOURS)

Global Issues Multinational Corporations – Environmental Ethics – Computer Ethics – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Moral Leadership –Code of Conduct – Corporate Social Responsibility.

UNIT-5 - (04 HOURS)

Safety, Responsibilities And Rights

Safety and Risk – Assessment of Safety and Risk – Risk Benefit Analysis and Reducing Risk - Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) – Discrimination.

BUSINESS COMMUNICATION				
Course Code	21AEC493		**Credits**	2
Hours/Week (L-T-P)	2-0-0		**CIE Marks**	50
Total Hrs	24		**SEE Marks**	50
Exam Hrs	03		**Course Type**	AEC

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Comprehend the role of business communication in organization
2. Describe the techniques of writing letters and reports
3. Understand the importance of presentation skills in organization
4. Present well during meetings and conferences

TEACHING METHODOLOGY

●Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
●Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (05 HOURS)

Introduction
Role of communication – defining and classifying communication – purpose of communication –process of communication – characteristics of successful communication – importance of communication in management – communication structure in organization – communication in crisis.
Oral communication
What is oral Communication – principles of successful oral communication – barriers to communication –two sides of effective oral communication – effective listening – non – verbal communication

UNIT-2 - (05 HOURS)

Written communication
Purpose of writing – clarity in writing – principles of effective writing – approaching the writing process systematically: The 3X3 writing process for business communication: Pre writing – **Writing** – Revising – Specific writing features – coherence – electronic writing process
Business letters and reports
Introduction to business letters – writing routine and persuasive letters – positive and negative messages- writing memos – what is a report purpose, kinds and objectives of reports- writing reports.

UNIT-3 - (05 HOURS)

Presentation skills
Presentation skills: What is a presentation – elements of presentation – designing a presentation. Advanced visual support for business presentation- types of visual aid Negotiations skills: What is negotiations – nature and need for negotiation – factors affecting negotiation –stages of negotiation process – negotiation strategies

UNIT-4 - (05 HOURS)

Employment communication
Introduction – writing CVs – Group discussions – interview skills Impact of Technological Advancement on Business Communication, Communication networks – Intranet – Internet – e mails – SMS – teleconferencing – videoconferencing

UNIT-5 - (04 HOURS)

Group communication
Meetings – Planning meetings – objectives – participants – timing – venue of meetings– leading meetings. Media management – the press release- press conference – media interviews Seminars – workshop – conferences. Business etiquettes.

TEXT BOOKS

Sl. No.	Title of the Book	Name of the author/s	Name of the publisher	Edition and year
1	Business communication essentials	Bovee, C.L. & Thill	Boston Pearson	2014

REFERENCE BOOKS

Sl. No.	Title of the Book	Name of the author/s	Name of the publisher	Edition and year
2	The goof-proofer: How to avoid the 41 most embarrassing errors in your speaking and writing	Manhard, S. J.	New York, NY: Simon & Schuster. ISBN: 0-684-83826-5.	1998

UAV FLYING SKILLS				
Course Code	21AEC494		**Credits**	3
Hours/Week (L-T-P)	1-0-1		**CIE Marks**	50
Total Hrs	26		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-
1. Apply the concept of Flight dynamics for building UAV
2. Assemble and Program the UAV
3. Perform Testing and Control operations on the flight simulator
4.Implement UAV for real world applications

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT-1 - (05 HOURS)

Introduction to Aerial Vehicles
Definitions of Drone, UAV, RPA, Quad copters -Basic Components and Categories – Principles of Flight - Flight Maneuvers – Airframes - Creating a Frame: Materials, Different Frame Shapes – Building Airframes - Flight dynamics - Applications - Future potential - Comparison with other aerial vehicles

UNIT-2 - (05 HOURS)

Hardware Anatomy of UAV
Power Train – Propellers, Motors- Total Lift - Electronic Speed Controllers – Flight Battery – Radio transmitter and receiver – Flight Controller – GPS, Compass, Camera Assembling for Quad copter, payload, Connectors, Mounting of Propellers and Powering up.

UNIT-3 - (05 HOURS)

Real World Applications and Case Studies
Beneficial Drones, Aerial Photography, Mapping and Surveying, Precision Agriculture, Search and Rescue, Infrastructure Inspection, Conservation. Case Studies: Agriculture Weed Classification, Micro drone surveillances.

UNIT-4 - (06 HOURS)

Drone flight simulator and fly a Drone in simulator training & live training for various applications.

UNIT-5 - (05 HOURS)

Assembly of UAVs and Flight Test

*Continuous Internal Evaluation ** Semester End Examination # L- Lecture, T- Tutorial, P- Practical, S-Self Study
PC-Program Core PE-program Elective OE-Open Elective

Semester-3
Program Elective- A

Sl. No.	Subject Code	Subject Name
1.	18AEE361	Flight Scheduling and Operations
2.	18AEE362	Introduction to Space Science and Technology
3.	18AEE363	Mechanical Measurements & Metrology
4.	18AEE364	Airport Planning & Management
5.	18AEE365	Environmental Science and Technology
6.	18AEE366	Non-Conventional Energy Resources
7	18AEE367	Introduction to Python programming
8	18AEE368	Introduction to Robotics
9	18AEE369	Rapid Prototyping

Semester-4
Program Elective- B

Sl. No.	Subject Code	Subject Name
1.	18AEE461	Airworthiness & Certification
2.	18AEE462	Turbomachinery
3.	18AEE463	Computer Integrated Manufacturing
4.	18AEE464	Unmanned Aerial Vehicle and its Applications
5.	18AEE465	Wind Tunnel Techniques
6.	18AEE466	Design of Machine Elements
7	18AEE467	Fundamentals of Astronomy and Astrophysics
8	18AEE468	Introduction to Aero acoustics
9	18AEE469	Introduction to Artificial intelligence and machine learning

Semester-5
Program Elective –C

Sl. No.	Subject Code	Subject Name
1.	18AEE551	Fuels and Combustion
2.	18AEE552	Control Engineering
3.	18AEE553	Non Destructive Testing
4.	18AEE554	Industrial Aerodynamics
5.	18AEE555	Industrial Engineering & Management
6.	18AEE556	Total Quality Management
7.	18AEE557	Experimental techniques and data analysis
8.	18AEE558	Robust Technology

Semester-6
Program Elective-D

Sl. No.	Subject Code	Subject Name
1.	18AEE651	Optimization Techniques
2.	18AEE652	Rockets & Missiles
3.	18AEE653	Finite Element Methods
4.	18AEE654	Hypersonic Vehicle Design
5.	18AEE655	Guidance, Navigation and Control
6.	18AEE656	Aero Engine Design
7.	18AEE657	Aviation Management
8.	18AEE658	System Engineering and Analysis

Semester 7
Program Elective -E

Sl. No.	Subject Code	Subject Name
1.	18AEE761	Heat and Mass transfer
2.	18AEE762	Fatigue and Fracture
3.	18AEE763	Plates and shells
4.	18AEE764	Launch Vehicle dynamics
5.	18AEE765	Advanced Aerodynamics
6.	18AEE766	Reliability Engineering
7.	18AEE767	Satellite Design
8.	18AEE768	Experimental stress analysis

Semester 8
Program Elective- F

Sl. No.	Subject Code	Subject Name
1.	18AEE821	Design of Gas Turbine
2.	18AEE822	Missile Technology
3.	18AEE823	High Temperature Materials
4.	18AEE824	Avionics & Instrumentations
5.	18AEE825	Smart Materials & Nano Technology
6.	18AEE826	Helicopter Engineering
7.	18AEE827	Wind Engineering
8	18AEE828	Flight Testing

Semester 7
Open elective-II

Sl. No.	Subject Code	Subject Name
1.	18AEO761	Mechanics of Flight
2.	18AEO762	Maintenance, Overhaul & Repair of Aircraft Systems
3.	18AEO763	Introduction To Astrophysics And Space Environment
4.	18AEO764	Introduction to Rockets & Missiles
5.	18AEO765	Aerospace Materials
6.	18AEO766	Introduction to Aerospace Engineering
7.	18AEO767	Introduction to Aerial Robotics
8.	18AEO768	Elements of Aerospace Propulsion
9.	18AEO769	Introduction to Jet Engines

SEMESTER-III

ENGINEERING MATHAMEATICS - III				
Course Code	18MAT31		**Credits**	4
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Concepts of Fourier theory and transforms can be adopted to problem solving, analyzing physical situations relevant to periodic and aperiodic functions
2. Fourier theory and transforms can be applied to model engg. Problem
3. Numerical methods can be adopted for solving equations, interpolate and extrapolate data using, finite differences and matrices
4. Numerical methods can be adopted to differentiate, integrate function
5. Numerical methods can be applied to model physical situations and interpret solutions

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Tutorial classes on topics covered
- Unit tests on covered topics

COURSE CONTENTS

UNIT -1 (08 HOURS)

Errors and approximations – Floating and fixed point numbers, Inherent, Percentage, Truncation, Round-off errors, Absolute and Relative errors, Approximation of series.
Solution of algebraic and transcendental equations- Iteration method, Aitken's Δ^2 method for acceleration of convergence. Secant method, Newton Raphson method for simple root

UNIT -2- (10 HOURS)

Finite differences and interpolation – forward, backward and central difference operators, construction of difference table, Newton's forward and backward difference interpolation, Sterling and Bessel central difference formulae, Newton's divided difference and Lagrange's interpolation formula, Numerical differentiation with Newton's forward and backward difference interpolation.

UNIT -3- (10 HOURS)

Numerical differentiation using Newton's forward, backward and Lagrangian interpolation
Numerical integration- Newton Cotes formula, Trapezoidal, Simpson's 1/3rd and 3/8th rule, Weddle's rule, Gauss-Legendre Quadrature method.

UNIT -4- (10 HOURS)

Fourier series: Euler's formulae, Dirichlet's conditions for Fourier series expansion, change of interval, Even and odd function, half range series, Practical harmonic analysis.**Fourier Transforms**: Definition, Complex Fourier transforms, Cosine and Sine transforms, Inverse Fourier transforms.

UNIT -5- (10 HOURS)

Laplace Transforms: Definition, Transforms of standard functions (derivation and problems), Transforms of $e^{at} f(t)$, $t^n f(t)$, $\frac{f(t)}{t}$, Laplace transforms of derivatives and integrals, Laplace transforms of periodic functions, unit step function (no derivations), Dirac delta function . Inverse Laplace transforms, convolution theorem (no proof), solution of 1st and 2nd order ODE using Laplace transforms.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1.Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.

2.Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix

INTRODUCTION TO AIRCRAFT ENGINEERING & DESIGN				
Course Code	18AE32		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1.Describe the history and configurations of aircraft
2. Explain the various types of aircraft configurations, structures and materials
3.Describe the basics of aircraft propulsion and stability
4..Explain various aircraft systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

HISTORY AND AIRCRAFT CONFIGURATIONS

Early development of Airplanes, biplanes and monoplanes, Developments in materials, structures and propulsion over the years, types of flight vehicles, classifications-Components of an airplane and their functions.

UNIT -2 (08 HOURS)

BASICS OF FLIGHT

Structures of the Atmosphere - Temperature, pressure and altitude relationships, Evolution of Aerodynamics forces and moments-center of pressure - aerodynamic center – pressure coefficients, Aerofoils and its nomenclature, speed of sound, Mach number, concepts of aircraft stability and control.

UNIT -3 (07 HOURS)

BASICS OF AIRCRAFT STRUCTURES AND DESIGN

General types of construction, Monocoque, semi-monocoque and geodesic constructions, typical wing and fuselage structure. Metallic and non-metallic materials. Use of Aluminium alloy, titanium, stainless steel and composite materials- V-n diagram and load factor. Phases of conceptual design of an aircraft.

UNIT -4 (08 HOURS)

BASICS OF PROPULSION

Introduction to aircraft power plants – classification – principle of operation , Characteristics of piston, turboprop, turbofan and turbo shaft engines, use of propeller and jets for thrust production- Comparative merits and demerits , Principle of operation of rocket, types of rocket and typical applications.

UNIT -5 (08 HOURS)

AIRCRAFT CONTROL, COMMUNICATION & NAVIGATION SYSTEMS

Conventional control, powered control- Basic instruments for flying-Typical systems for control actuation & Modern control systems.

Need for communication system on aircraft, working principle of communication system. Basics of navigation system, Principle of operation of radar

AERO ENGINEERING THERMODYNAMICS				
Course Code	18AE33		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply the basic concepts of thermodynamics and heat -work interaction
2. Illustrate the laws and principles of thermodynamics and its applications
3. Analyze and examine the properties of entropy, Ideal gases and real gases.
4. Describe the concepts of pure substances
5. Analyze the performance of gas power cycles and IC Engines

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Videos and animation
- Tutorial classes on problems

COURSE CONTENTS

UNIT -1- (10 HOURS)

Fundamental Concepts:
Systems; Thermodynamic state, path, process; Zeroth Law and temperature measurement; definition of work and its limitations. Thermodynamic definition of work - examples, sign convention. Heat and work transfer in flow, expressions for displacement work in various processes through p-v diagrams; Heat- definition, units and sign convention

UNIT -2 (08 HOURS)

First Law of Thermodynamics:
Joules experiments, equivalence of heat and work. Statement of the First law of thermodynamics, extension of the First law to non - cyclic processes, energy, energy as a property, modes of energy, pure substance; definition, two-property rule, Specific heat at constant volume, enthalpy, specific heat at constant pressure.
Extension of the First law to control volume; steady state-steady flow energy equation, important applications, analysis of unsteady processes such as film and evacuation of vessels with and without heat transfer.

UNIT -3 (10 HOURS)

Second Law of Thermodynamics:
Devices converting heat to work; (a) in a thermodynamic cycle, (b) in a mechanical cycle. Thermal reservoir. Direct heat engine; schematic representation and efficiency. Devices converting work to heat in a thermodynamic cycle; reversed heat engine, schematic representation, coefficients of performance. Kelvin - Planck statement of the Second law of Thermodynamics; PMM I and PMM II, Clausius statement of Second law of Thermodynamics, Equivalence of the two statements; Reversible and Irreversible processes; factors that make a process irreversible, reversible heat engines, Carnot cycle, Carnot principles.
Entropy: Clasius inequality; Statement, proof, application to a reversible cycle. Entropy; definition, a property, change of entropy, principle of increase in entropy, entropy as a quantitative test for irreversibility, calculation of entropy using Tds relations, entropy as a coordinate. Available and unavailable energy.

UNIT -4- (10 HOURS)

Pure Substances & Ideal Gases: Mixture of ideal gases and real gases, ideal gas equation, compressibility factor use of charts. P-T and P-V diagrams, triple point and critical points. Sub-cooled liquid, Saturated liquid, mixture of saturated liquid and vapour, saturated vapour and superheated vapour states of pure substance with water as example. Enthalpy of change of phase (Latent heat). Dryness fraction (quality), T-S and H-S diagrams, representation of various processes on these diagrams.

Thermodynamic relations

Maxwell's equations, Tds relations, ratio of heat capacities, evaluation of thermodynamic properties from an equation of state.

UNIT -5- (10 HOURS)

Gas Power Cycles: Efficiency of air standard cycles, Carnot, Otto, Diesel cycles, P-V & T-S diagram, calculation of efficiency.

IC Engines:

Actual and theoretical PV diagrams of two stroke and four stroke IC engines. Performance of IC engines, Heat Balance sheet calculations. Introduction to dynamometer

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3							3	3				**3**
CO2	3	3							3	3				3
CO3	3	3							3	3				3
CO4	3	3							3	3				**3**
CO-5	3	3							3	3				3

SOLID MECHANICS				
Course Code	18AE34		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Summarize and interpret the concepts of simple and compound stresses and related strain in structural members
2. Solve and predict the effects of force and moments (shear Force and Bending Moment) on beams
3. Analyse the Bending Stresses and shear stress in Beams due to bending
   Solve and analyze the problems on deflection of beam and torsion effect on shaft
4. Outline the failure theories for structural members of materials of all the composition

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Tutorial classes on problems

COURSE CONTENTS

UNIT -1- (10 HOURS)

Stresses and Strains: Introduction to Stress, Types of stress, Strain, Types of Strain, Modulus of Elasticity, True Stress, True Strain, Simple problems, Stress Strain Diagram of Ductile, Brittle, Visco- Elastic, Linear & Non-linear Elastic materials, Bars with varying sections, Bars of composite sections, Simple problems, Thermal stresses, Simple problems, Elastic constants and its relation, volumetric stains, Simple problems.

Compound Stresses: Methods of Determining stresses in oblique sections, Principal planes and stresses, Simple problems, Construction of Mohr's circle, simple problems

UNIT -2- (10 HOURS)

Shear Force and Bending Moment Diagram: Introduction to shear force, Bending moment, Types of Beams and loads, Sign convention for shear force and bending moment, Shear force and bending moment diagram for various beams. Relation between shear force and bending moment.

UNIT -3- (08 HOURS)

Bending Stresses and shear stress in Beams: Introduction, Pure Bending and Simple Bending, Expression of Bending stress, Neutral axis and Moment of resistance, bending stress in symmetrical sections, Section modulus, Section modulus for various shapes of the beam section. Introduction to shear stress, shear stress distribution for different section

UNIT -4- (10 HOURS)

Deflection of Beams: Introduction to Deflection and slope, Finding Deflection and slope of a beam subjected to various loads, Relation between slope, Deflection and radius of curvature, Simple problems to be solved for the beams experiencing various loads.

Torsion of Shafts: Introduction to torsion, Derivation of shear stress produced in a circular shaft subjected to Torsion, Expression of Torque in terms of polar moment of Inertia, Power transmitted by shaft, simple problem.

UNIT -5- (10 HOURS)

Column and struts: Introduction to columns and struts, Failure of a column, Expression of crippling load when (a) both ends are hinged (b) One end of the column is fixed and the other end is free (c) both ends are fixed (d) One end is fixed and the other end is hinged. Simple problems to be solved used Euler's formula and Rankine formula.

Theory of Failures: Maximum principal stress theory, Maximum principal strain theory, Maximum shear stress theory, Maximum strain energy theory, Maximum shear strain Energy theory. Graphical representation of theories for two-dimensional stress system (No problems).

Thick and Thin cylinders: Thin cylinders subjected to internal pressure. Stresses in a thin cylinder subjected to internal pressure, Expression of circumferential stress and hoop stress, Simple problems Thick Cylinder: Lame's theorem, Stresses in a thick cylinder, Simple problems to be solved.

FLUID MECHANICS				
Course Code	18AE35		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify fluid properties and distinguish between different types of manometers understanding.
2. Apply principles of dimensional analysis and similitude to simple engineering problems and describe buoyancy force.
3. Discuss the continuity equation and flow visualization techniques
4. Analyze the forces and energy for the fluid flow in a conduit and compare the different flow measuring devices.
5. Evaluate the losses and viscous effects in the flow through pipes.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Tutorial classes

COURSE CONTENTS

UNIT -1- (09 HOURS)

Fluids: Introduction, Types of fluid, Properties of fluids.
Fluid Statistics: Fluid pressure at a point, Pascal's law, pressure variation in a static fluid, absolute, gauge, atmospheric and vacuum pressures, simple manometers and differential manometers. Total pressure and center of pressure on submerged plane surfaces; horizontal, vertical and inclined plane surfaces, curved surface submerged in liquid.

UNIT -2- (09 HOURS)

Buoyancy: Buoyancy, center of buoyancy, meta-centre and meta-centric height, conditions of equilibrium of floating and submerged bodies, determination of Meta-centric height experimentally and theoretically.
Dimensional Analysis: Introduction, derived quantities, dimensions of physical quantities, dimensional homogeneity, Rayleigh's method, Buckingham's π theorem, dimensionless numbers, similitude, types of similitude.

UNIT -3- (10 HOURS)

Fluid Kinematics: Types of fluid flow, continuity equation in 2D and 3D (Cartesian Co-ordinates only), velocity and acceleration, Flow net: its characteristics and utility. Fundamentals of flow visualization stream tube, timelines, flow visualization techniques, Plots of fluid flow data: profile plot, vector plot, and contour plot.

UNIT -4- (10 HOURS)

Fluid Dynamics: Introduction equation of motion, Bernoulli's equation from first principles and also from Euler's equation, limitations of Bernoulli's equation.
Fluid Flow Measurements: Venturimeter, orifice meter, pitot-tube, vertical orifice, V-Notch and rectangular notches.

UNIT -5- (10 HOURS)
Flow through pipes: Minor losses through pipes. Darcy's and Chezy's equation for loss of head due to friction in pipes. HGL and TEL. **Laminar flow and viscous effects** : Reynolds's number, critical Reynold's number, laminar flow through circular pipe-Hagen Poiseille's equation, laminar flow between parallel and stationary plates. Boundary layer concept, displacement, momentum and energy thickness

FLIGHT SCHEDULING AND OPERATIONS				
Course Code	18AEE361		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Discuss the Network Flows and Integer Programming Models
2. Understand the Aircraft Routing and Management of Irregular Operations
3. Explain the Significance of flight scheduling
4. Discuss the Fleet Assignment, Crew and Manpower Scheduling
5. Discuss the Gate Assignment and Aircraft Boarding Strategy

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)

COURSE CONTENTS

UNIT -1- (08 HOURS)

Network Flows and Integer Programming Models: Complexity of airline planning, operations and dispatch- need for optimization- role of operations research and simulation. Networks- definitions, network flow models- shortest path problem, minimum cost flow problem, maximum flow problem, multi-commodity problem. mathematical formulation-decision variables, objective function, constraints, and methods of solution.

UNIT -2- (08 HOURS)

Fleet Assignment, Crew and Manpower Scheduling: Purpose of fleet assignment. Fleet types, fleet diversity, and fleet availability-performance measures, Formulation of the fleet assignment problem- decision variables, objective function, constraints, and solution. Scenario analysis, fleet assignment models. Crew scheduling process-significance. Development of crew pairing- pairing generators- mathematical formulation of crew pairing problem methods of solution. Crew rostering- rostering practices. The crew rostering problem-formulation solutions.

UNIT -3- (08 HOURS)

Manpower scheduling- modeling, formulation of the problem, solutions
Flight Scheduling: Significance of flight scheduling: The route system of the airlines-point-to-point flights, hub and spoke flights. Schedule construction-operational feasibility, economic viability. Route development and flight scheduling process- load factor and frequency- case study

UNIT -4- (08 HOURS)

Aircraft Routing and Management of Irregular Operations: Goal of aircraft routing-maintenance requirements, other constraints. Routing cycles, route generators. Mathematical models of routing- decision variables, objective functions, alternatives, constraints- flight coverage and aircraft available. Example problems and solutions. The problem statement, the time band approximation model-formulation of the problem-the scenarios- solution

UNIT -5- (08 HOURS)

Gate Assignment and Aircraft Boarding Strategy: Gate assignment-significance- the problem-levels of handling-passenger flow, distance matrix mathematical formulation, solution. Common strategies for aircraft boarding process, mathematical model, interferences, model description, aisle interferences

INTRODUCTION TO SPACE SCIENCE AND SPACE TECHNOLOGY				
Course Code	18AEE362		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain the fundamentals of rocket propulsion and trajectories
2. Describe the solar system.
3. Describe the trajectory, motion of rockets, satellite launch and satellite orbits.
4. Outline the Satellite Applications and interplanetary mission

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

Earth and Atmosphere: The Planet Earth; Earth's Gravitational Field; Earth as an Ellipsoid; Peer- shaped Earth; Ellipticity of the Earth; The Geoid and Its Importance; Thermal Structure of the Atmosphere; Atmospheric Density Variation; Van-Allen Radiation Belt; The Ionosphere.

UNIT -2- (07 HOURS)

Solar System: Motion and Rotation of the Planets; Geocentric and Heliocentric Systems; Sidereal and Synodic Periods; Ecliptic Plane and the Zodiac; Direct and Retrograde Motions; Configuration and Phases of Interior Planets; Configurations of Exterior Planets; Asteroids; Comets; Meteors, Meteorites and Tektites; Micrometeorites; The Milky Way, the Galaxies and the Universe.

UNIT -3- (08 HOURS)

Trajectory and rocket: Mass ratio and propellant mass fraction, equation of motion of an ideal rocket. Motion of rocket in a gravitational field, simplified vertical trajectory, burnout velocity and burn out height, step rockets, ideal mission velocity and losses effect of launch angle, factors causing dispersion of rockets in flight, dispersion of finned rockets, stability of flight.

UNIT -4- (08 HOURS)

Satellite Launch and Satellite Orbits: Orbits and Trajectories; Conic Sections; Kepler's Laws of Satellite Motion; Orbital Velocity of Satellites; Orbital Periods; Eccentric Elliptical Orbits; Effect of Injection Conditions; Perturbation of Orbits; Effect of Earth's Rotation; Low Earth Orbits; Geostationary Satellites; Sun- synchronous Satellites. Parking Orbit; Transfer Trajectory; Impulsive Shot; Launching of Interplanetary Spacecraft.

UNIT -5- (08 HOURS)

Satellite Applications and interplanetary mission: Satellite for metrological, communication, navigational and geodetic applications, atmospheric sounding rocket, satellite for geophysical and interplanetary studies, parkin**g** orbit, transfer trajectory, impulsive shot, launching of interplanetary space craft.

MECHANICAL MEASURMENTS & METROLOGY				
Course Code	18AEE363		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Illustrate concept of standards, system, methods of measurements, error, quality etc.,
2. Interpret measurement of variables like force, torque and pressure
3. Outline the fundamentals of thermocouple, pyrometers and strain measurement
4. Describe Metrology Standards and Systems of Limits, Fits and Tolerances
5. Identify the basic standards of measurement, limits, fits, tolerances, comparators and screw threads

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)

COURSE CONTENTS

UNIT -1- (09 HOURS)

Introduction to Measurement System:
Definition, Requirements and Significance of measurement system, Methods of measurements, Generalized measurement systems, Definition and basic concepts of Accuracy, Precision, Calibration, threshold, sensitivity, hysteresis, repeatability, linearity, System response, delay, Errors in measuring instruments.
Transducers: Definition, Classifications of transducers, Mechanical transducers, Electrical transducers, piezoelectric transducers, Electronic transducers, Radio-frequency identification (RFID).

UNIT -2 (07 HOURS)

Measurement of Force, Torque and Pressure:
Introduction, Analytical Balance, Platform Balance, Proving Ring, Types of Dynamometers, Use of Elastic Members in Pressure Measurement, Mc- Leod Gauge, the Bridgman Gauge, Thermal Conductivity Gages - Pirani Thermal Conductivity Gage, Thermocouple Vacuum Gage.

UNIT -3- (08 HOURS)

Temperature Measurements and Strain Gage:
Introduction, Electrical Resistance thermometer, Thermoelectric Effects, Thermocouple, Laws of Thermocouples, Thermocouple materials and construction.
Optical Pyrometers and Radiation Pyrometers, Mechanical Strain Gages, Optical Strain Gages, and Electrical Resistance Strain Gages – Unbonded type,
Bonded Type and Piezo resistive strain gages Preparation and Mounting of strain Gages, Gage Factor, Strain Measurement using wheatstone bridge, Calibration of Strain Gages

UNIT -4- (07 HOURS)

Metrology Standards and Systems of Limits, Fits and Tolerances:
Introduction, objectives of metrology, Standards of Length – International Prototype meter, Imperial Standard Yard, Wavelength standard, Subdivision of standards – Line Standard and End Standard, Calibration of End bars (Numerical), Slip Gauges, Wringing Phenomena,

Indian Standards (M-81, M-112), Numerical Problems on Building of Slip Gages.
Introduction, Limit System, Definition of Limits, Concept of Limits of Size and Tolerance, Definition of Fit, Types of Fit and their designation, Special Types of Fit.
Definition of Tolerance, Unilateral and Bilateral Tolerance, Concept of Interchangeability and Selective Assembly.

UNIT -5- (07 HOURS)

Metrology Standards and Systems of Limits, Fits and Tolerances:
Introduction, objectives of metrology, Standards of Length – International Prototype meter, Imperial Standard Yard, Wavelength standard, Subdivision of standards – Line Standard and End Standard, Calibration of End bars (Numerical), Slip Gauges, Wringing Phenomena, Indian Standards (M-81, M-112), Numerical Problems on Building of Slip Gages.
Introduction, Limit System, Definition of Limits, Concept of Limits of Size and Tolerance, Definition of Fit, Types of Fit and their designation, Special Types of Fit.
Definition of Tolerance, Unilateral and Bilateral Tolerance, Concept of Interchangeability and Selective Assembly.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will

be considered.
1 Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2.Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1														
CO2	3	3		1								1		2
CO3	3	2		1		1								3
CO4	3	3				1								2
CO-5	3	3										2		2

AIRPORT PLANNING & MANAGEMENT				
Course Code	18AEE364		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain the typical operations of airports from a management perspective
2. Identify the economic, political and social role of airports
3. Discuss the airport financial management
4. Explain and defining capacity, factors affecting capacity and delay

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)

COURSE CONTENTS

UNIT -1- (08 HOURS)

Airports and Airport Systems: Introduction: Airport management on an international level; The national plan of integrated airport systems; The nation's airport system plan; The rules that govern airport management; Organizations that influence airport regulatory policies; A historical and legislative perspective: Introduction the formative period of aviation and airports, Airport growth: World War-II and the postwar period airport modernization: The early jet age.

UNIT -2- (08 HOURS)

Components of the airport

The components of an airport, the airfield. Navigational aids (NAVAIDS) located on airfields; Air traffic control and surveillance facilities located on the airfield; Weather reporting facilities located on airfields; Security infrastructure on airfields; Airspace and air traffic control: Brief history of air traffic control; The basics of air traffic control; Current and future enhancements to air traffic control; Airport terminals and ground access: The historical development of airport terminals; Components of the airport terminal; Airport ground access

UNIT -3- (08 HOURS)

Airport operations and financial management

Airport operations management: Introduction, pavement management, aircraft rescue and firefighting (ARFF); Snow and ice control, safety inspection programs. Bird and wildlife hazard management; Airport security: Security at commercial service airports, security at general aviation airports; the future of airport security

UNIT -4- (08 HOURS)

Airport financial management

Airport financial accounting, revenue strategies at commercial airports, pricing of airport facilities and services, variation in the sources of operating revenues, rise in airport financial burdens, airport funding, grant programs, airport financing, private investment sale of the airport.

UNIT -5- (07 HOURS)

Airport capacity and delay

Defining capacity, factors affecting capacity and delay, estimating capacity, analytical estimates of delay: The queuing diagram; The future of airport management: Introduction, restructuring of commercial air carriers, new large aircraft and small aircraft transportation systems.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.

2.Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3								3	3				
CO2	3								3	3			2	
CO3	3								3	3			3	
CO4	3								3	3			2	

ENVIRONMENTAL SCIENCE AND TECHNOLOGY				
Course Code	18AEE365		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the scope and importance of ecosystem
2. Classify the natural and mineral resources.
3. Explain the biodiversity and biotic resources of India.
4. Describe the Environmental pollution, control technologies and environmental policy, legislation & EIA
5. Describe environmental policy, legislation & EIA

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Videos and animation

COURSE CONTENTS

UNIT -1- (08 HOURS)

Ecosystems: Definition, Scope and Importance of ecosystem. Classification, structure, and function of an ecosystem, Food chains, food webs, and ecological pyramids. Flow of energy, Biogeochemical cycles, Bioaccumulation, Bio magnification, ecosystem value, services and carrying capacity, Field visits.

UNIT -2- (08 HOURS)

Natural Resources: Classification of Resources: Living and Non-Living resources, **water resources:** use and over utilization of surface and ground water, floods and droughts, Dams: benefits and problems. **Mineral resources:** use and exploitation, environmental effects of extracting and using mineral resources, **Land resources:** Forest resources

UNIT -3- (08 HOURS)

Biodiversity and Biotic Resources: Introduction, Definition, genetic, species and ecosystem diversity. Value of biodiversity; consumptive use, productive use, social, ethical, aesthetic and optional values. India as a mega diversity nation, Hot spots of biodiversity. Field visit. Threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts; conservation of biodiversity: In-Situ and Ex-situ conservation. National Biodiversity act.

UNIT -4- (08 HOURS)

Environmental Pollution and Control Technologies: Environmental Pollution: Classification of pollution, Air Pollution: Primary and secondary pollutants, Automobile and Industrial pollution, Ambient air quality standards. Water pollution: Sources and types of pollution, drinking water quality standards. Soil Pollution: Sources and types, Impacts of modern agriculture, degradation of soil. Noise

Pollution: Sources and Health hazards, standards, Solid waste: Municipal Solid Waste management, composition and characteristics of e-Waste and its management. Pollution control technologies: Wastewater Treatment methods: Primary, secondary and Tertiary. Overview of air pollution control technologies, Concepts of bioremediation.

Global Environmental Problems and Global Efforts: Climate change and impacts on human environment. Ozone depletion and Ozone depleting substances (ODS). Deforestation and desertification. International conventions / Protocols: Earth summit, Kyoto protocol, and Montréal Protocol.

UNIT -5- (07 HOURS

Environmental Policy, Legislation & EIA: Environmental Protection act, Legal aspects Air Act- 1981, Water Act, Forest Act, Wild life Act, Municipal solid waste management and handling rules, biomedical waste management and handling rules, hazardous waste management and handling rules. EIA: EIA structure, methods of baseline data acquisition. Overview on Impacts of air, water, biological and Socio-economical aspects. Strategies for risk assessment, Concepts of Environmental Management Plan (EMP).

Towards Sustainable Future: Concept of Sustainable Development, Population and its explosion, Crazy Consumerism, Environmental Education, Urban Sprawl, Human health, Environmental Ethics, Concept of Green Building, Ecological Foot Print, Life Cycle assessment (LCA), Low carbon life s

NON-CONVENTIONAL ENERGY RESOURCES				
Course Code	18AEE366		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify various non-conventional energy resources.
2. Explain the significance of solar thermal energy
3. Outline the applications of energy from geothermal and biomass
4. Describe the principle of working, performance thermo-electrical and thermionic conversions
5. Describe Bio-mass as part of non-conventional energy

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Video and animation

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction: Various non-conventional energy resources- Introduction, availability, classification, relative merits and demerits. Solar Cells: Theory of solar cells. solar cell materials, solar cell array, solar cell power plant, limitations.

UNIT -2- (08 HOURS)

Solar Thermal Energy: Solar radiation, flat plate collectors and their materials, applications and performance, focusing of collectors and their materials, applications and performance; solar thermal power plants, thermal energy storage for solar heating and cooling, limitations

UNIT -3- (08 HOURS)

Geothermal Energy: Resources of geothermal energy, thermodynamics of geo-thermal energy conversion-electrical conversion, non-electrical conversion, environmental considerations. Magneto-hydrodynamics (MHD): Principle of working of MHD Power plant, performance and limitations. Fuel Cells: Principle of working of various types of fuel cells and their working, performance and limitations

UNIT -4- (08 HOURS)

Thermo-electrical and thermionic Conversions: Principle of working, performance and limitations. Wind Energy: Wind power and its sources, site selection, criterion, momentum theory, classification of rotors, concentrations and augments, wind characteristics. performance and limitations of energy conversion systems

UNIT -5- (07 HOURS)

Bio-mass: Availability of bio-mass and its conversion theory. Ocean Thermal Energy Conversion (OTEC): Availability, theory and working principle, performance and limitations. Wave and Tidal Wave: Principle of working, performance and limitations. Waste Recycling Plants

INTRODUCTION TO PYTHON PROGRAMMING				
Course Code	18AEE367		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Develop algorithmic solutions to simple computational problems
2. Execute by hand simple Python programs.
3. Structure simple Python programs for solving problems.
4. Decompose a Python program into functions.
5. Represent compound data using Python lists, tuples, dictionaries.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Hands on sessions

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction to Python: Python variables, Python basic Operators, Understanding python blocks. Python Data Types, Declaring and using Numeric data types: int, float etc.

UNIT -2- (08 HOURS)

Python Program Flow Control Conditional blocks: if, else and else if, Simple for loops in python, For loop using ranges, string, list and dictionaries. Use of while loops in python, Loop manipulation using pass, continue, break and else. Programming using Python conditional and loop blocks.

UNIT -3- (08 HOURS)

Python Complex data types: Using string data type and string operations, Defining list and list slicing, Use of Tuple data type. String, List and Dictionary, Manipulations Building blocks of python programs, string manipulation methods, List manipulation. Dictionary manipulation, Programming using string, list and dictionary in-built functions. Python Functions, Organizing python codes using functions.

UNIT -4- (08 HOURS)

Python File Operations: Reading files, Writing files in python, Understanding read functions, read(), readline(), readlines(). Understanding write functions, write() and writelines() Manipulating file pointer using seek Programming, using file operations. Database Programming: Connecting to a database, Creating Tables,INSERT, UPDATE, DELETE and READ operations, Transaction Control,Disconnecting from a database, Exception Handling in Databases.

UNIT -5- (07 HOURS)

Python packages: Simple programs using the built-in functions of packages matplotlib, numpy, pandas etc. GUI Programming: Tkinter introduction, Tkinter and PythonProgramming, Tk Widgets, Tkinter examples. Python programming with IDE.

INTRODUCTION TO ROBOTICS				
Course Code	18AEE368		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the principles mobility and DoF of robots
2. Identify open and closed loop systems
3. Select suitable laser range finders, communication and Bayesian Networks
4. Describe autonomy of robots in terms of multi robot coordination

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Mechanics

Introduction, motivation, mobility and degrees-of-freedom, manipulator kinematics, vehicle kinematics

UNIT -2 (08 HOURS)

Control

Open vs. closed loop control, analog and discreet linear models, optimal and adaptive control methods

UNIT -3 (08 HOURS)

Perception

Laser-range Finders and Odometry, Computer Vision, Localization

UNIT -4 (08 HOURS)

Artificial Intelligence

Communication, logic, Bayesian Networks,

UNIT -5 (07 HOURS)

Autonomy

Simultaneous localization and mapping, Robot architectures, multi robot coordination

RAPID PROTOTYPING				
Course Code	18AEE369		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the principles of rapid prototyping
2. Classify liquid based and solid based rapid prototyping systems
3. Identify powder based rapid prototyping systems
4. Select materials for rapid prototyping systems
5. Describe the concepts of reverse engineering and new technologies

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (06 HOURS)

INTRODUCTION- History – Development of RP systems – Applications in Product Development, Reverse Engineering, Rapid Tooling, Rapid Manufacturing- Principle – Fundamental – File format – Other translators – medical applications of RP - On demand manufacturing – Direct material deposition - Shape Deposition Manufacturing..

UNIT -2 (08 HOURS)

LIQUID BASED AND SOLID BASED RAPID PROTOTYPING SYSTEMS- Classification – Liquid based system - Stereolithography Apparatus (SLA), details of SL process, products, Advantages, Limitations, Applications and Uses. Solid based system - Fused Deposition Modeling, principle, process, products, advantages, applications and uses - Laminated Object Manufacturing

UNIT -3 (08 HOURS)

POWDER BASED RAPID PROTOTYPING SYSTEMS -Selective Laser Sintering – principles of SLS process, principle of sinter bonding process, Laser sintering materials, products, advantages, limitations, applications and uses. Three Dimensional Printing – process, major applications, research and development. Direct shell production casting – key strengths, process, applications and uses, case studies, research and development. Laser Sintering System, e-manufacturing using Laser sintering, customized plastic parts, customized metal parts, e-manufacturing - Laser Engineered Net Shaping (LENS).

UNIT -4 (07 HOURS)

MATERIALS FOR RAPID PROTOTYPING SYSTEMS - Nature of material – type of material – polymers, metals, ceramics and composites- liquid based materials, photo polymer development – solid based materials, powder based materials - case study.

UNIT -5 (07 HOURS)

REVERSE ENGINEERING and NEW TECHNOLOGIES- Introduction, measuring device- contact type and non-contact type, CAD model creation from point clouds-preprocessing, point clouds to surface model creation, medical data processing - types of medical imaging, software for making medical models, medical materials, other applications - Case study.

SOLID MECHANICS LAB				
Course Code	18AEL37		**Credits**	1
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyze the tensile, shear and compression characteristics of metallic specimens using Universal Testing Machine
2. Examine the torsion and bending strengths of metallic specimens.
3. Determine the impact strength of metallic specimen using Izod and Charpy testing machines
4. Analyze the hardness and fatigue properties of metallic specimen Carry out the Fatigue test of metallic specimen

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

List of experiments

1. Tensile test of metallic specimens using Universal Testing Machine
2. Shear test of metallic specimens using Universal Testing Machine Compression tests of metallic specimens using Universal Testing Machine
3. Torsion Test of metallic specimens
4. Bending Test on metallic specimens.
5. Izod impact test on metallic Specimen.
6. Charpy impact test on metallic Specimen.
7. Hardness test of metallic specimen using Brinell hardness testing machine
8. Hardness test of metallic specimen using Rockwell hardness testing machine
9. Hardness test of metallic specimen using Vickers testing machine
10. Fatigue test of metallic specimen

COURSE ASSESSMENT METHOD

Record: 30 marks

Test: 15 marks

Viva-voce: 05 marks

SEE - Final Exam: 50 Marks

Scheme of Examination: Student will be asked to conduct two experiment

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3							3	2			3	
CO2	3	3		2					3	2			3

FLUID MECHANICS LAB				
Course Code	18AEL38		**Credits**	1
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Obtain the necessary practical skills & real time knowledge that helps them in long run to gain the abilities necessary to tackle the fluid mechanics problems
2. Apply scientific method for analyzing the qualitatively & quantitatively to solve the problem situations
3. Apply scientific method for analyzing the qualitatively & quantitatively to solve the problem situations
4. Compute the performance single stage and Multi stage centrifugal pup
5. Compute the performance of reciprocating pumps

List of experiments

1. Determination of Coefficient of Friction of flow in a pipe.
2. Determination of Minor Losses in Flow through pipes.
3. Determination of Force developed by impact on jets on Vanes.
4. Calibration of Orifice Plate
5. Calibration of Venturimeter
6. Calibration of Rotameter
7. Calibration of Nozzle
8. Performance testing of pumps Single stage centrifugal pump
9. Performance testing of multi stage centrifugal pump
10. Performance testing of Double acting Reciprocating pump.
11. Performance test on a two stage Reciprocating Air compressor.

Course Assessment Method:
Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks
Scheme of Examination: Student will be asked to conduct two experiment

Program Outcomes – Articulation matrix:

AEROTHERMAL ENGINEERING LAB				
Course Code	18AEL39A		**Credits**	1
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyze the performance of diesel and petrol engines
2. Analyze the characteristics of fuels/Lubricates used in IC Engines
3. Determine the heat transfer phenomena predict the relevant coefficient using implementation
4. Determine the emissivity of grey surface
5. Analyse the performance of heat exchangers

List of experiments

Part-A

1. Determination of Flash Point and Fire Point of various fuels / lubricants.
2. Determination of viscosity of various fuels / lubricants
3. Valve Timing diagram of four stroke engine.
4. Performance and heat Balance Test on 4 – stroke Diesel Engine.
5. Morse Test on Multi-cylinder Petrol Engine

Part-B

1. Determination of Thermal conductivity of metal rod
2. Determination of Thermal conductivity of composite wall.
3. Determination of effectiveness on a metallic fin (natural & Forced)
4. Determination of emissivity of a grey surface.

COURSE ASSESSMENT METHOD

Record: 30 marks

Test: 15 marks

Viva-voce: 05 marks

SEE - Final Exam: 50 Marks

Scheme of Examination: Student will be asked to conduct one experiment from each part.

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3							3	3				**3**
CO2	3	3							3	3				**3**
CO3	3	3							3	3				**3**
CO4	3	2							2	2				**3**
CO-5	3	3							3	3				**3**

SEMESTER- IV

ENGINEERING MATHEMATICS -IV				
Course Code	18MAT41		**Credits**	4
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Concepts of Numerical methods can be applied to problem solving, finding Eigen values, solving ODE and PDE
2. Physical situations can be modeled and solutions can be obtained by Numerical methods
3. Concepts of random variables, probability distributions and sampling can be applied to problem solving
4. Probability distributions can be used for testing of hypothesis of testing and model situations arising in analysis of data
5. Concept of functional and variational techniques can be applied to Engg. Problems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (10 HOURS)

Solution of ODE- Taylor's series method, 4th order Runge - Kutta method, Milne's predictor and corrector method.

Solution of PDE – Schmidt method to solve heat equation, explicit method for wave equation, Numerical solution of Laplace equation.

UNIT -2- (10 HOURS)

Eigen values and Eigen vectors- Largest Eigen value by Power method, Rutishauser's method Jacobi method for symmetric matrices, Given's and House Holder's method to reduce symmetric matrix to tridiagonal matrix

UNIT -3- (10 HOURS)

Random variable - discrete and continuous, probability distribution- discrete and continuous, probability density function, cumulative density function, mean and variance, expectation.

Joint distribution - discrete and continuous, marginal distribution, expectation, covariance, rank correlation. Binomial, Poisson, Normal distribution

UNIT -4- (10 HOURS)

Sampling theory - Population and sample, sampling with and without replacement, sampling distribution of means, sample variance. Unbiased estimate, reliability, confidence intervals for mean statistical hypothesis, testing of hypothesis, Type I and II errors, one tailed, two tailed tests, test for significance level of large and small samples, t - test, χ^2 – test for goodness of fit

UNIT -5- (08 HOURS)

Calculus of Variation: Introduction, Functional, Euler's equation, Solution to Euler's equation, geodesics, isoperimetric problems, Rayleigh Ritz method, Galerkin's method, Hamilton's principle.

TEXT BOOKS

SL.NO	Title of the Book	Name of the author/s	Name of the publisher	Edition and year
1	Numerical methods for scientific and Engg Computation	M K Jain, S R K Iyengar, R K Jain	New age	6th edition 2012.
2	Introductory methods of numerical analysis	S S Sastry	PHI India	5th edition, 2012
3	Probability and statistics,	Murray R Spiegel, J Schiller, Alu Srinivasan	Schaum's outline series	3rd Edition,2010
4	Higher Engg. Mathematics	Dr. B S Grewal	Khanna publications	42nd edition 2012

MATLAB Programming for evaluation of LA2 component

1. Largest Eigen value by power method
2. Solution of differential equations with constant coefficients of second order
3. Solution of simultaneous differential equations
4. Linear regression coefficients by least square method drawing straight lines

Coefficient of correlation between two samples

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.

2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)
1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	2	2		1	1									
CO2	2	2		1	1									
CO3	2	2		1	1									
CO4	2	2		1	1									
CO5	2	2		1	1									

AERODYNAMICS -I				
Course Code	18AE42		**Credits**	4
Hours/Week (L-T-P)	4		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Review basic fluid mechanics and description of fluid motion
2. Discuss airfoil characteristics
3. Analyze the pressure distribution for incompressible inviscid flow over the airfoil\
4. Discuss the flow over circular cylinders, airfoils
5. Discuss to carry out the Aerodynamic Testing

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (10 HOURS)

Review of Basic Fluid Mechanics: Continuity, momentum and energy equation, units and dimensions, Types of flow, compressibility, Mach number regimes.
Description of Fluid Motion: Euler and Lagrangian descriptions, Control volume approach to continuity and momentum equations, Pathlines, Streamlines and Streaklines, Angular velocity, Vorticity, Circulation, Stream function, Velocity potential and Relationship between them.

UNIT -2- (10 HOURS)

Airfoil Characteristics: Airfoil section geometry and wing planform geometry, Fundamental aerodynamic variables, Aerodynamic forces and moments and pressure coefficient. Centre of pressure, calculation of airfoil lift and drag from measured surface pressure distributions, typical airfoil aerodynamic characteristics at low speeds

UNIT -3- (10 HOURS)

Two-Dimensional Inviscid Incompressible Flows: Bernoulli's equation, Pitot-tube measurement of airspeed, condition on velocity for incompressible flow. Governing equations for irrotational, incompressible flow: Laplace equation and boundary conditions. Two-dimensional source, sink and doublet flows and vortex flow and combinations of elementary flows.

UNIT -4- (10 HOURS)

Flow Over Circular Cylinders: Non-lifting flow over a two-dimensional circular cylinder, Lifting flow over a two-dimensional circular cylinder, Kutta-Joukowski theorem and generation of lift, D'Alembert's paradox.**Incompressible Flow Over Airfoils**: Kelvin's circulation theorem and the starting vortex, vortex sheet, Kutta condition, Classical thin airfoil theory for symmetric and cambered airfoils

UNIT -5- (08 HOURS)

Introduction to Aerodynamic Testing: Principles of wind tunnel flow simulation, open and closed circuit wind tunnels, and Major features of low speed, transonic and supersonic wind tunnels, smoke and tuft flow visualization techniques, Pressure and Aerodynamic load measurements on a model, total drag determination of two-dimensional bodies using wake survey at low speeds

AIRCRAFT STRUCTURE - I				
Course Code	**18AE43**		**Credits**	4
Hours/Week (L-T-P)	3+2+0		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Outline the types of loads experienced by aircraft structure and materials used for aircraft structures.
2. Apply different methodologies to analyze statically determinate and indeterminate structures under various loading conditions
3. Develop different methodologies available to analyze the aircraft structures in the form of beams & columns under different loading conditions
4. Solve aircraft structural problems by applying the concepts of theory of elasticity and failure theory.
5. Discuss about the theory of failure of aircraft structure

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (10 HOURS)

Loads on Aircraft: Structural nomenclature – Types of loads – load factor – Aerodynamics loads – Symmetric maneuver loads – Velocity diagram – Function of structural components.
Materials for Aircraft Structures: Metallic and non-metallic materials, Use of Aluminum alloy, titanium, stainless steel and composite materials. Desirable properties for aircraft application **Mechanical Properties of Material:** Stress-Strain - Tensile properties – Compression properties – Shear properties– Bending properties – Creep and relaxation properties –Fatigue properties - Fracture properties

UNIT -2- (10 HOURS)

Statically Determinate and Indeterminate Structures: Analysis of plane truss – Method of joints – Method of sections, Plane frames, Fixed & Continuous beam analysis - Clapeyron’s Three Moment Equation. Introduction to 3D Truss, Introduction to Composite beam

UNIT -3- (10 HOURS)

Energy Methods: Strain Energy due to axial, bending, shear and torsional loading - Castigliano’s theorem - Maxwell’s Reciprocal theorem, Unit load method - application to beams, trusses, frames, rings, etc.**Columns**: Columns with various end conditions – Euler’s Column curve – Rankine’s formula - Column with initial curvature - Eccentric loading – South well plot – Beam column

UNIT IV (10 HOURS)

Theory of Elasticity: Concept of stress and strain**,** derivation of Equilibrium equations, strain-displacement relation, compatibility conditions and boundary conditions. Plane stress and Plane strain problems in 2D elasticity and Airy’s Stress function

UNIT -V(08 HOURS)
Failure Theory: Maximum stress theory – Maximum strain theory – Maximum shear stress theory – Distortion theory – Maximum strain energy theory – Application to aircraft structural problems

AIRCRAFT SYSTEM AND INSTRUMENTS				
Course Code	18AE44		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain the principles of flight control
2. Describe Aircraft Fuel and Hydraulic Systems
3. Classify aircraft communication and radar systems
4. Explain application of instrument system used in aircraft
5. Describe the Principles of data acquisitions systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Flight Control Systems: Primary and secondary flight controls. Flight control linkage system. Conventional Systems, Power assisted and fully powered flight controls. Power control unit – Mechanical, Electro-hydraulic. Advanced actuation concepts. Fly-by-wire system: - basic concept and features. Pitch and Roll rate: - command and response. Control Laws Cooper Harper scale. Redundancy and failure survival. Common mode of failures and effects analysis.

UNIT -2 (08 HOURS)

Aircraft Fuel and Hydraulic Systems: Characteristics of aircraft fuel system. Gravity feed and pressure. A generalized fuel system. Fuel pumps-classification. Fuel control unit. Engine starting sequence. Starting and Ignition systems. Engine oils and a typical lubricating system. Hydraulic fluid. Hydraulic system and components. Study of typical workable system. Power packs. Hydraulic actuators. Pneumatic system and components. Use of bleed air. Emergency lowering of landing gear and braking. Shock absorbers - Retraction mechanism

UNIT -3 (08 HOURS)

Aircraft Communication and Radar systems: Useful definitions, communication principles, communication system, role of communication in management, barriers in communication, how to overcome the barriers, rule of effective communication**.** Operation principle of an airborne radar. Radar altimeter and multimode radar.

UNIT -4 (08 HOURS)

Introduction to instrumentation: Functional elements of a measuring instrument, International Standards, Typical application of instrument system on aircraft, Classification of instruments, Calibration. Functional elements of a measuring instrument, International Standards, Typical applications of instrument system on aircraft. Classification of instruments. Calibration.

Aircraft Instruments: Instruments displays, panels & layouts. Instrumentation grouping. Navigation instruments, Radio instruments. Hydraulic and Engine instruments

UNIT -5 (07 HOURS)
Air Data Instruments: Principles of data acquisitions, Data multiplexing, Data recording devices, Basic air data system and probes. Mach meter, Air speed indicator, Vertical speed indicator. Barometric pressure sensing. Altimeter. Air data alerting system, angle of attack sensing, stall warning, Mach warning, altitude alerting system. **Gyroscopic Flight Instruments:** The gyroscope and its properties. Limitations of a free gyroscope. Drift. Gyroscopic flight. Instruments -Pneumatic, and Electric. Direction indicator, Turn and Bank Indicator. **Engine& other system Instruments:** Study of various types of engine instruments- RPM, Measurement of Force, Torque, Temperature, Fuel flow, Fuel quantity, Vibrations

AIRCRAFT MATERIALS & MANUFACTURING				
Course Code	18AE45		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the basics of manufacturing processes, patterns, properties of moulding sands, gating and risers
2. Explain the process of moulding, cores, special moulding processes and melting furnaces.
3. Explain the importance of various materials for aircraft structures and engines.
4. Describe the importance of Metal Alloys, Super alloys and heat treatment process, Polymers, Polymeric Materials, Plastics, Ceramics, Glass and composite materials in aerospace applications.
5. Identify the applications of High Energy Materials for rockets and missiles

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT -1 (08 HOURS)

Aircraft Engineering Materials

Engineering materials Steels, Solid solutions,Binary phase diagrams, study of iron, iron carbon phase diagram, heat treatment, annealing, normalizing, hardening and tempering of Aluminum and steel, Non-Ferrous metals and Alloys: Structure and properties of copper and its alloys, Aluminum and its alloys, Titanium and its alloys.

UNIT -2 (08 HOURS)

Casting, Welding and Inspection Techniques

General principles of various casting processes Sand casting, die-casting, centrifugal casting, investment casting, Shell molding types; Principles and equipment used in arc welding, gas welding, resistance welding, solid, laser welding, and electron beam welding, soldering and brazing techniques. Need for NDT, ultrasonic testing, Radiographic testing, Flight-testing.

UNIT -3 (08 HOURS)

Sheet Metal Processes in Aircraft Industry

Sheet metal operations: shearing, punching, super plastic forming; operations in bending like stretch forming spinning drawing. Riveting, types and techniques, equipment, fasteners, integral tanks, Jigs and Fixtures,

UNIT -4 (07 HOURS)

Conventional and Modern Manufacturing Processes

General working principles, applications and operations of lathe, shaper, milling machines, grinding, drilling machine, computer numeric control machining. Working principles and applications of abrasive jet machining, ultrasonic machining, Electric discharge machining and electro chemical machining, laser beam, electron beam, plasma arc machining. Rapid prototyping, Additive manufacturing process.

UNIT -5 (08 HOURS)

Aircraft Composites

Introduction, Physical metallurgy, Wrought aluminum alloys, Cast aluminum alloys, Production of semi-fabricated forms, Aerospace applications, Plastics and rubber, Introduction to fiber reinforced plastics, glass and carbon composites; Fibers and resins; Characteristics and applications, Classification of aircraft materials; Materials used for aircraft components, Application of composite materials, Super alloys, emerging trends in aerospace materials.

PROGRAM ELECTIVE-B

AIRWORTHINESS AND CERTIFICATION				
Course Code	18AEE461		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1.Explain the Airworthiness requirements for different categories of aircrafts
2.Discuss the various certifications, technical log book
3.Explain the procedure for development, test flight and certification
4.Explain the procedure for training and their licenses, inspection, and approved materials.
5.Discuss the accident investigation procedures

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction to aircraft rules as far as they relate to airworthiness and safety of aircraft. Airworthiness requirements for civil and military aircraft CAR, FAR, EASA and ICAO, regulations, Defense standards. Military standards and specifications

UNIT -2 (08 HOURS)

Privileges and responsibilities of various categories of AME license and approved persons. Knowledge of mandatory documents like certificate of Registration, certificate of Airworthiness - conditions of issue and validity. Export certificate of Airworthiness. Knowledge of Log Book, Journey Log Book, Technical Log Book, etc.

UNIT -3 (08 HOURS)

Procedure for development and test flights and certification. Certificate of Flight release, Certificate of Maintenance, Approved Certificates
Technical Publications, Aircraft Manual, Flight Manual, Aircraft Schedules. Registration, Procedure, Certification, Identification and Marking of Aircraft.

UNIT -4 (07 HOURS)

Modifications, concessions, airworthiness directives, service bulletins. Crew training and their licenses, approved inspection, and approved materials, identification of approved materials. Bonded and quarantine stores. Storage of various aeronautical products like rubber goods, various fluids.

UNIT -5- (08 HOURS)

Accident investigation procedures. Circumstances under which C of A is suspended. ICAO and IATA regulations, Chicago and Warsaw conventions. Familiarization of recent issues of Advisory Circulars. Civil Aviation Requirements Section 2 - Airworthiness.

TEXT BOOKS
1. The Indian Aircraft Act and the Rules 2. Manual of Civil Aviation 3. DEF STANDARD 970 4. Gran E L, Statistical Quality Control, McGraw Hill 5. Civil Airworthiness Requirements
REFERENCE BOOKS'
1. Aeronautical Information Circulars (relating to Airworthiness) 2. Advisory Circulars - DGCA 3. Civil Aircraft Airworthiness Information and Procedures (CAP 562) 4. Civil Aviation Requirements Section 2 - Airworthiness.

TURBOMACHINERY				
Course Code	18AEE462		**Credits**	3
Hours/Week (L-T-P)	3+1+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the working principle of various turbo machines and energy transfer between fluid and rotor using governing equations.
2. Interpret the performance curves of various turbines and compressors
3. Discuss about air flow compressor
4. Analyze problems related to axial flow and centrifugal compressors.
5. Solve problems related to centrifugal pumps.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction: Definition of turbomachines, parts of turbomachines, Comparison with positive displacement machines, Classification, Dimensionless parameters and their significance, Effect of Reynolds number, Unit and specific quantities, model studies on Turbomachines. Efficiencies of turbo machines. Problems.

Thermodynamics of fluid flow: Static and Stagnation states-Incompressible fluids and perfect gases, overall isentropic efficiency, stage efficiency (their comparison) and polytrophic efficiency for both compression and expansion processes. Reheat factor for expansion process

UNIT -2 (08 HOURS)

Energy exchange in Turbomachines: Euler's turbine equation, Alternate form of Euler's turbine equation, Velocity triangles for different values of degree of reaction, Components of energy transfer, Degree of Reaction, utilization factor, Relation between degree of reaction and Utilization factor, Problems.

General Analysis of Turbomachines: Radial flow compressors and pumps-general analysis, Expression for degree of reaction, velocity triangles, Effect of blade discharge angle on energy transfer and degree of reaction, Effect of blade discharge angle on performance, Theoretical head – capacity relationship, General analysis of axial flow pumps and compressors, degree of reaction, velocity triangles, Problems**.**

UNIT -3 (08 HOURS)

Axial flow Compressors: Expression for pressure ratio developed in a stage, work done factor, efficiencies and stalling. Problems.

UNIT -4 (08 HOURS)

Centrifugal Compressors: Stage velocity triangles, slip factor, power input factor, Stage work, Pressure developed, stage efficiency, surging and problems.

UNIT -5 (07 HOURS)
Centrifugal Pumps: Classification and parts of centrifugal pump, different heads and efficiencies of centrifugal pump, Minimum speed for starting the flow, Maximum suction lift, Net positive suction head, Cavitation, Need for priming, positive displacement pumps- gear pumps and multi piston pumps. Problems **(Note:** Since dimensional analysis is covered in Fluid Mechanics subject, questions on dimensional analysis may not be given. However, dimensional parameters and model studies may be given more weightage.**)**

Course Code	18AEE463		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the basic concepts of CIM systems
2. Discuss high volume production systems, automated flow line and line balancing in manufacturing
3. Identify the suitable automation techniques in shop floor control and develop effective automation systems for various industrial applications.
4. Illustrate the Computerized Manufacturing Planning System AND THE use of CNC machine. Illustrate the robots for industrial manufacturing units.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Computer Integrated Manufacturing Systems: Introduction, Automation definition, Types of automation, CIM, processing in manufacturing, Production concepts, Mathematical Models-Manufacturing lead time, production rate, components of operation time, capacity, Utilization and availability, Work-in-process, WIP ratio, TIP ratio, Problems using mathematical model equations.

UNIT -2 (08 HOURS)

High Volume Production System: Introduction Automated flow line symbols, objectives, Work part transport continuous, Intermittent, synchronous, Pallet fixtures, Transfer Mechanism-Linear-Walking beam, roller chain drive, Rotary-rack and pinion, Rachet & Pawl, Geneva wheel, Buffer storage, control functions-sequence, safety, Quality, Automation for machining operation.

Analysis of Automated Flow Line & Line Balancing: General terminology and analysis, Analysis of transfer Line without storage upper bound approach, lower bound approach and problems, Analysis of Transfer lines with storage buffer, Effect of storage, buffer capacity with simple problem, Partial automation-with numerical problems, flow lines with more than two stages, Manual Assembly lines, line balancing problem.

UNIT – 3 (08 HOURS)

Minimum Rational Work Element: Work station process time, Cycle time, precedence constraints. Precedence diagram, Balance delay methods of line balancing-largest Candidate rule, Kenbridge and Wasters method, Ranked positional weight method, Numerical problems covering all above methods and computerized line balancing.

Automated Assembly Systems: Design for automated assembly systems, types of automated assembly system, Parts feeding devices-elements of parts delivery system-hopper, part feeder, Selectors, feedback, escapement and placement analysis of Multi-station Assembly Machine analysis of single station assembly.

Automated Guided Vehicle System: Introduction, Vehicle guidance and routing, System management, Quantitative analysis of AGV's with numerical problems and application.

UNIT -4 (08 HOURS)

Computerized Manufacturing Planning System: Introduction, Computer Aided Process Planning, Retrieval types of process planning, Generative type of process planning, Material requirement planning, Fundamental concepts of MRP inputs to MRP, Capacity planning.
CNC Machining Centers: Introduction to CNC, elements of CNC, CNC machining centers, part programming, fundamental steps involved in development of part programming for milling and turning.

UNIT -5 (07 HOURS)

Robotics: Introduction to Robot configuration, Robot motion, and programming of Robots end effectors, Robot sensors and Robot applications.

UNMANNED AERIAL VEHICLE AND IT'S APPLICATIONS				
Course Code	18AEE464		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify types of UAVs and its applications
2. Describe the aerodynamics and stability of UAV
3. Identify suitable Propulsion system, and materials for UAVs
4. Explain Mission Planning and Control of UAV

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class
- Video and animation

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction: Aviation History and Overview of UAV systems, Classes and Missions of UAVs, Definitions and Terminology, UAV fundamentals, Examples of UAV systems-very small, small, Medium and Large UAV

UNIT -2 (08 HOURS)

The Air Vehicle Basic Aerodynamics: Basic Aerodynamics equations, Aircraft polar, the real wing and Airplane, Induced drag, the boundary layer, Flapping wings, Total Air-Vehicle Drag
Performance: Overview, climbing flight, Range and Endurance – for propeller driven aircraft, range- a jet-driven aircraft, Guiding Flight

UNIT -3 (08 HOURS)

Stability and Control:Overview, Stability, longitudinal, lateral, dynamic stability, Aerodynamics control, pitch control, lateral control, Autopilots, sensor, controller, actuator, airframe control, inner and outer loops, Flight-Control Classification, Overall Modes of Operation, Sensors Supporting the Autopilot.

UNIT -4 (08 HOURS)

Propulsion: Overview, Thrust Generation, Powered Lift, Sources of Power, The Two-Cycle Engine, The Rotary Engine, The Gas Turbine, Electric Motors, Sources of Electrical Power
Loads and Structures Loads, Dynamic Loads, Materials, Sandwich Construction, Skin or Reinforcing Materials, Resin Materials, Core Materials, Construction Techniques

UNIT -5 (07 HOURS)

Mission Planning and Control: Air Vehicle and Payload Control, Reconnaissance/Surveillance Payloads, Weapon Payloads, Other Payloads, Data-Link Functions and Attributes, Data-Link Margin, Data-Rate Reduction, Launch Systems, Recovery Systems, Launch and Recovery Tradeoffs

WIND TUNEL TECHNIQES				
Course Code	18AEE465		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1 Describe Buckingham Theorem and similarity parameters and apply for non-dimensional numbers and scaling effects respectively
2. Classify the wind tunnels and discuss about layouts and design parameters
3. Perform various Calibration methods to calibrate wind tunnel
4. Outline the various wind tunnel measurements
5. Discuss the various method of flow visualization techniques

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction to Aerodynamics: Types of flows, Basic principles of wind tunnel.
Principles of Model Testing: Buckingham Theorem – Non-dimensional numbers. Scale effect – Geometric Kinematic and Dynamic similarities.

UNIT -2 (08 HOURS)

Wind Tunnels:
Classification – special problems of testing in subsonic, transonic, supersonic and hypersonic speed regions – Layouts – sizing and design parameters.

UNIT -3 (08 HOURS)

Calibration of Wind Tunnels:
Test section speed – Horizontal buoyancy – Flow angularities – Turbulence measurements – Associated instrumentation – Calibration of supersonic tunnels.

UNIT -4 (08 HOURS)

Wind Tunnel Measurements:
Steady and Unsteady Pressure and velocity measurements – Force measurements – Three component and six component balances – Internal balances – Principles of Hotwire Anemometer.

UNIT -5 (07 HOURS)

Flow Visualization
Smoke and Tuft grid techniques – Dye injection special techniques – Optical methods of flow visualization.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Stress Concentration: Definition, Reason for occurrence, Methods to reduce, Stress concentration factor. Design of stress concentrated members subjected to various loads. Design for Variable Loading: Types of variable/Cyclic loads Mean & amplitude Stresses, Fatigue Failure, Endurance Limit & Strength, SN Diagram. Goodman and Soderberg criterion, **Modifying factors:** Size effect, surface effect, Reliability, stress concentration effects etc. Problems on design of members for finite & infinite life in members subjected to individual & combined loading.

UNIT -2 (08 HOURS)

Shafts: Types, Design of solid & hollow shaft on strength and rigidity basis with steady loading subjected to pure torsion. Design of shafts carrying pulleys & gears (Combined loading). ASME Code for shaft design.

Springs: Types of Springs, terminology – Stresses in Helical coil springs of circular and non-circular cross sections. Concentric springs, springs under fluctuating loads, - Energy stored in springs, torsion.

UNIT – 3 (08 HOURS)

Riveted Joints: Types, Design of longitudinal & circumferential joint for various types, Simple Riveted Brackets.

Welded joints: Types, Strength of Butt, parallel, transverse welds, eccentrically loaded welded joint subjected to torsion & Bending moment.

UNIT-4 (08 HOURS)

Helical Gears: Terminology, Forces analysis, formative/virtual number of teeth, Beam strength of helical gear tooth. Lewis Equation and form factor, Design for strength, Dynamic Load and wear load.

Worm Gears: Terminology, Forces analysis, efficiency of worm and worm gear, worm gear strength, Thermal capacity of worm gear SETS

UNIT -5 (07 HOURS)
Sliding Contact bearings: Journal bearing-Terminology, Bearing Modulus, Minimum oil film thickness. Coefficient of Friction, Summerfield number, Heat generated & Dissipated. Design of journal bearing using Petroff's, McKee's equation and Raymond & Boyd charts, tables. Footstep & collar Bearing. **Rolling contact bearings:** Types & classification, Terminology- Life, Static & dynamic load capacity, equivalent load, Load-life relationship, Design – finding Life, selection from manufacturer's catalogue.

FUNDAMENTALS OF ASTRONOMY AND ASTROPHYSICS

Course Code	18AEE467		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the history of astronomy and luminosity of stars
2. Explain the life cycle of stars through HR diagram
3. Understand the origin of sun and planets
4. Describe Origin and Nature of Asteroids, Meteors, Comets and Galaxies
5. Outline the characteristics of milky way galaxy and Big Bang concepts

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

History of Astronomy and Apparent Luminosity of Stars: Ptolemy's astronomical work, Copernican heliocentrism and Tychonian system, Luminosity (Apparent and Absolute) of stars, Magnitude scale, Luminosity measurement: 1)Visual Method 2) Photographic method and 3) Photoelectric method.

UNIT -2 (08 HOURS)

Stellar Evolution (HR diagram): Life cycle; Stellar Processes (Nuclear) and spectral classification of Stars O, B, A, F, G, K, M.

UNIT -3 (08 HOURS)

Sun and Planets Origin of the solar system: Internal structure and surface features of sun, Sun spots and Magnetic field on the sun and Solar activity. Surface features of planets, Atmospheres and Magnetic fields of Planets and their moons.

UNIT -4 (08 HOURS)

Asteroids, Meteors, Comets and Galaxies: Asteroids: Discovery and designation, Origin, Nature and Orbits of Asteroids. Meteors : Meteor showers and sporadic meteors. Comets : Periodic comets, Brightness variation in Comets. Gas production rates, dust and ion tails.

UNIT -5 (07 HOURS)

Galaxies: Milky Way Galaxy & Galaxies beyond Structure of the Milky Way Galaxy What are galaxies? Different types of galaxies. Hubble's classification. Structure, size & mass of the Milky Way galaxy. Position of our Sun and its motion around the galactic centre.

Cosmology The expanding universe. Cosmological models: Big Bang and Steady State models. Dark matter

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)
1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3	2										1	1
CO2	3	3	2										1	1

CO5	3	3	2										1	1

INTRODUCTION TO AEROACOUSTICS				
Course Code	18AEE468		**Credits**	3
Hours/Week (L-T-P)	3+0+0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the principles of aero acoustics
2. Explain transmission of sound through various media
3. Describe noise measuring techniques
4. Understand acoustic insulation and methods of controlling noise.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction – Basic acoustic principles – acoustic terminology and definitions –plane waves – harmonic solution – velocity of sound in inviscid fluids – relationship between wave length, particle velocities, acceleration – energy density – acoustic intensity – reference standards and measurement.

UNIT -2 (08 HOURS)

Transmission-Transmission of sound through one, two, and three media. Transmission through pipes – branched and un-branched resonators – Transmission loss reflection at plane surface-standing waves and standing wave apparatus, spherical waves – radiation – simple source – hemispherical source – radiating piston – pressure intensity distribution – beam width and directivity index – sound absorbing materials.

UNIT -3 (08 HOURS)

Noise Measurement Techniques-Noise measurement: Decibel scale – relationship between pressure, intensity and power – sound level meter, noise analyser and graphic level recorder – measurement in anechoic and reverberation chambers, machinery noise control. Environmental noise control: Human reaction to sound – definitions of speech interference level, perceived noise level, phon and sone etc, hearing loss – principles of noise control –control at source, during transmission and at receiver – protection of receiver.

UNIT -4 (08 HOURS)

Acoustic Insulation Acoustic insulation – acoustic materials – acoustic filter and mufflers – plenum chamber – noise criteria and standards –noise and number index guide lines for designing quieter equipments – machinery noise such as pumps, rotating machines, reciprocating machines etc.

UNIT -5 (07 HOURS)

Methods of Control of Noise- Methods of control of noise using baffles, coverings, perforations etc. Transmission through structures –control vibration by damping and other methods. Principles of noise control in an auditorium – requirements of a good auditorium.

INTRODUCTION TO ARTIFICIAL INTELLIGENCE AND MACHINE LEARNING				
Course Code	18AEE469		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the concepts of data science,AI and ML
2. Apply the concepts of Artificial Intelligence and Machine Learning
3. Develop the knowledge to understand, represent and visualise the data that form the foundation to AI and ML
4. Apply different ML algorithms to different situations in Aerospace Industry

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction to Data Science and AI & ML, Data Science, AI & ML, Essential Concepts in AI and ML Data Understanding, Representation and Visualisation

UNIT -2- (08HOURS)

Machine Learning: Linear Methods, Linear Regression, Multiple Linear Regression, Non-Linear Regression, Clustering, Forecasting models, Perceptron and Neural Network, Decision Trees, Support Vector Machines.

UNIT -3- (08 HOURS)

Probabilistic Models, Dynamic programming and Reinforcement Programming, Evolutionary Algorithms, Time Series Models, Deep Learning, Emerging Trends in ML, Unsupervised Learning

UNIT -4- (08 HOURS)

Foundations for AI, AI Basics , AI Classification, Supervised Learning, Feature Engineering Regression, Model Selection, Model Performance , Ranking

UNIT -5- (07 HOURS)

Introduction to ML with R and using Python, Python and R for Artificial Intelligence, Machine Learning, and Data Science, AI/ML in aerospace industry

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1.Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.

2.Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	2	2							2	2				
CO2	3	3							2	2				
CO3	3	3							2	2				
CO4	3	3							2	2				

COMPUTER AIDED AIRCRAFT DRAWING LAB				
Course Code	18AEL47		**Credits**	1
Hours/Week (L-T-P)	0+0+3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1 Plot the orthographic views of engineering components

2. Use suitable thread forms,Fasteners and riveted joints for engineering applications.
3. Design propeller and hub assembly using advanced modelling tools.
4. Design wing assembly,fuselage and engine mounts using advanced modelling tools.
5. Design of landing gear assembly using advanced modelling tools

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

PART -A

1. Orthographic Views: Conversion of pictorial views into orthographic projections of simple machine parts with or without section. (Bureau of Indian Standards conventions are to be followed for the drawings) Hidden line conventions. Precedence of lines.
2. Thread Forms: Thread terminology, sectional views of threads. ISO Metri(Internal & External) BSW (Internal & External) square and Acme. Sellers thread, American Standard thread.
3. Fasteners: Hexagonal headed bolt and nut with washer (assembly), square headed bolt and nut with washer (assembly) simple assembly using stud bolts with nut and lock nut.
4. Riveted Joints: Single and double riveted lap joints, butt joints with single/doublcover straps (Chain and Zigzag, using snap head rivets).

PART -B

1. Design of propeller and hub assembly
2. Design of wing assembly
3. Design of Engine Mounts
4. Design of fuselage assembly
5. Design of landing gear

Course Assessment Method:

Record: 30 marks

Test: 15 marks

Viva-voce: 05 marks

SEE - Final Exam: 50 Marks

Scheme of Examination: Student will be asked to conduct any one experiment from Part A & B

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3	2		3				2	2			2	1
CO2	3	3	2		3				2	2			2	1
CO3	3	2	2		3				2	2			2	1
CO4	3	2	2		3				2	2			2	1
CO5	3	2	2		3				2	2			2	1

MANUFACTURING PROCESS LAB				
Course Code	18AEL48		**Credits**	1
Hours/Week (L-T-P)	0+0+3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Make use of mould boxes to prepare mould cavities with or without patterns
2. Develop models using taper turning, step turning and thread cutting using lathe machine
3. Develop models using facing, drilling and boring using lathe machine
4. Prepare models using shaping and milling machine tools in producing V, rectangular and dovetail grooves

List of experiments

1. Preparation of moulds using patterns or without patterns.
   a. Split pattern,
   b. Match plate pattern
2. Preparation of models using lathe involving Plain turning,
   a. Taper turning,
   b. Step turning,
   c. Thread cutting,
   d. Facing,
   e. Knurling,
   f. Drilling,
   g. Boring,
3. Shaping operation
   a. Cutting of V Groove
   b. dovetail
   c. Rectangular groove
4. Milling operation and Gear cutting

Course Assessment Method:

Record: 30 marks

Test: 15 marks

Viva-voce: 05 marks

SEE - Final Exam: 50 Marks

Scheme of Examination: Student will be asked to conduct two experiments

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3			3				3	2			2

AEROSPACE STRUCTURAL DESIGN LAB				
Course Code	18AEL49		**Credits**	1
Hours/Week (L-T-P)	0+0+3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply simple design calculations and produce gear teeth using milling machine

2. Analyse the structural components of Aircraft
3. Examine the Photo Elastic Materials
4. Determination of stresses using photo elastic materials
5. Examine the Fatigue Testing of materials and Vibration of beams

List of experiments

1. Study of structural components of Aircraft
2. Deflection of beams with various end conditions.
3. Verification of Maxwell's Reciprocal theorem & principle of superposition
4. Column – Testing
5. South – well's plot
6. Calibration of Photo Elastic Materials
7. Determination of stresses using photo elastic materials
8. Creep testing of Materials
9. Measurement of stresses in thin walled vessels.
10. Fatigue Testing of materials
11. Vibration of beams

Course Assessment Method:

Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks
Scheme of Examination: Student will be asked to conduct two experiment

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3			3				3	2		3	2

CO4	3	2			2				3	3		2	3	
CO5	3	3			3				3	3		2	3	

SEMESTER-V

AIRCRAFT PERFORMANCE				
Course Code	18AE51		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe aerodynamic characteristics, engine performance and effects of flight altitude on aircraft performance.
2. Predict and analyze the performance of an airplane for accelerating and Non-accelerating cases
3. Determine the range and endurance of propeller and jet driven airplane
4. Describe the different aircraft maneuvers

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction: The evolution of the airplane and the performance, a short history. The standard atmosphere, The Drag polar, source of aerodynamic force-lift, drag and moments, aerodynamic coefficients, Variation of lift, drag and moment coefficient with angle of attack and Mach number, Components of drag, Aerodynamic center, Equilibrium conditions, Variation of thrust, power and SFC with velocity and altitudes for air breathing engines

The Equations of Motion Steady Unaccelerated Flight: Introduction, Four forces of flight, General equation of motion, Power available and power required curves. Thrust available and thrust required curves. Conditions for power required and thrust required minimum. Thrust available and maximum velocity, Power available and maximum velocity, Altitude effects on power available and power required; thrust available and thrust required

UNIT -2- (08 HOURS)

Steady Performance – Level Flight, Climb &Glide: Equation of motion for steady level flight, Performance of airplane in level flight. Maximum speed in level flight, Climb Performance: Equation of motion for Rate of climb- graphical and analytical approach - Absolute ceiling, Service ceiling, Time to climb – graphical and analytical approach , climb performance graph (hodograph diagram); maximum climb angle and rate of climb Gliding flight, Range during glide, minimum rate of sink and shallowest angle of glide.

Fundamental Airplane Performance Parameters: Thrust – to – weight ratio, Wing loading, Drag polar, and lift-to – drag ratio. Minimum velocity: Stall and High lift devices, Nature of stall – flow separation, High lift deices, Aerodynamic relations associated with lift-to-drag ratio.

UNIT -3- (08 HOURS)

Range and Endurance: Propeller driven Airplane: Physical consideration, Quantitative formulation, Breguet equation for Range and Endurance, Conditions for maximum range and endurance.

Jet Airplane: Physical consideration, Quantitative formulation, Equation for Range and Endurance, Conditions for maximum range and endurance, Effect of head wind tail wind.

UNIT -4- (08 HOURS)

Aircraft Performance in Accelerated Flight: Take-off Performance: Calculation of Ground roll, Calculation of distance while airborne to clear obstacle, Balanced field length
Landing Performance and Accelerated Climb: Calculation of approach distance, Calculation of flare distance, Calculation of ground roll, ground effects. Acceleration in climb.

UNIT -5- (07 HOURS)

Maneuver Performance: Turning performance: Level turn, load factor, Constraints on load factor, Minimum turn radius, Maximum turn rate. Pull-up and Pull-down maneuvers: (Turning rate, turn radius). Limiting case for large load factor. The V-n diagram. Limitations of pull up and push over.

AERODYNAMICS – II				
Course Code	18AE52		**Credits**	04
Hours/Week (L-T-P)	4		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain two-dimensional panel methods and incompressible flow over finite wings
2. Analyze subsonic linearized flow and outline the effects of compressibility and viscous flow over the airfoils
3. Identify and describe the applications of finite wing theory and flow over bodies of revolution.
4. Illustrate the effects of swept wings and high-lift systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (10 HOURS)

Introduction to Two-Dimensional Panel Methods: Non-lifting flows over arbitrary bodies, source panel method, lifting flows over arbitrary bodies, vortex panel method, some examples

Incompressible Flows over Finite Wings: Downwash, Induced drag, vortex filament, the Biot-Savart Law, Prandtl's lifting line theory and its limitations, Elliptic lift distribution.

UNIT -2- (10 HOURS)

Subsonic linearized flow over airfoils: Full velocity potential equation, linearized velocity potential equation and boundary condition, Prandtl-Glauert compressibility correction.

Effects of Compressibility: Basics of speed of sound, Mach waves, Normal shock waves, Oblique shock waves, Expansion fan, Prandtl – Meyer expansion, Critical Mach number; Drag- divergence Mach number, Sound Barrier, Transonic area rule.

UNIT -3- (10 HOURS)

Applications of Finite Wing Theory: Simplified horseshoe vortex model, Formation flight, Influence of downwash on tail plane, ground effects.

Bodies of Revolution: Introduction to slender body theory, Cylindrical coordinates, boundary conditions, Pressure coefficient, Subsonic flow past an axially symmetric body at zero incidence and solution for a slender cone.

UNIT -4 (10 HOURS)

Swept Wings and High-Lift Systems: Introduction to sweep effects, swept wings, pressure coefficient, typical aerodynamic characteristics, Subsonic and Supersonic leading edges. Introduction to high-lift systems, flaps, leading-edge slats and typical high - lift characteristics.

UNIT -5 (08 HOURS)

Viscous Flows: Derivation of Navier-Stokes equation for two-dimensional flows, boundary approximations, laminar boundary equations and boundary conditions, Blasius solution, qualitative features of boundary layer flow under pressure gradients, aspects of transition to turbulence, turbulent boundary layer properties over a flat plate at low speeds.

Hours/Week (L-T-P)	4		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyze aircraft structural design and bending in unsymmetrical sections
2. Analyze the shear flow in open and closed sections
3. Compute the buckling of plates, joints and fittings.
4. Formulate stress in wings fuselage and structure of aircraft.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (10 HOURS)

Introduction to Aircraft Structural Design: conceptual design – Detailed design – Airworthiness- certification. Design criteria – Safety Factor – Design life criteria – Analysis method – Life Assessment procedures – Design Principle.

Unsymmetrical Bending: Bending stresses in beams of unsymmetrical sections – Bending of symmetric sections with skew loads

UNIT -2 (10 HOURS)

Shear Flow in Open Sections: Thin walled beams, Concept of shear flow, shear centre, Elastic axis. With one axis of symmetry, with wall effective and ineffective in bending, unsymmetrical beam sections.

UNIT -3 (10 HOURS)

Shear Flow in Closed Sections: Bredt – Batho formula, Single and multi – cell structures, approximate methods and Shear flow in single & multicell structures under torsion. Shear flow in single and multi-cell under bending with walls effective and ineffective.

UNIT -4- (10 HOURS)

Buckling of Plates: Rectangular sheets under compression, Local buckling stress of thin walled sections, Crippling stresses by Needham's and Gerard's methods, Thin walled column strength. Sheet – stiffener panels. Effective width, inter rivet and sheet wrinkling failures.

Introduction to Post Buckling, Joints and Fittings: Introduction to Post Buckling: post buckling of structures, concepts of effective width - General theory for the design of fittings, Estimation of fitting design loads, design of riveted, bolted and welding joints, post buckling of structures, and concept of effective width.

UNIT -5- (08 HOURS)

Stress Analysis in Wing and Fuselage: Procedure – Shear and bending moment distribution for semi cantilever and other types of wings and fuselage, thin webbed beam. With parallel and non-parallel flanges, Shear resistant web beams, Tension field web beams (Wagner's).

Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Review the basic thermodynamic principles and illustrate the working principles of gas turbine engines
2. Outline the importance of subsonic, supersonic inlets, combustion chamber and nozzles for jet engines
3. Evaluate the operating characteristics of compressors and turbines in terms of blade shapes, angles, and direction of rotation
4. Describe the fundamentals of ramjet and rocket propulsion.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction: Review of thermodynamic principles, Principles of aircraft propulsion, Types of power plants, Basics of heat transfer; conduction, convection, radiation, diffusion mass transfer basic concepts and governing equations.

Fundamentals of Gas Turbine Engines: Illustration of working of gas turbine engine – The thrust equation – Factors affecting thrust – Effect of pressure, velocity and temperature changes of air entering compressor – Methods of thrust augmentation – Characteristics of turboprop, turbofan and turbojet – Performance characteristics.

UNIT -2- (08 HOURS)

Subsonic and Supersonic Inlets for Jet Engines: Internal flow and Stall in subsonic inlets – Boundary layer separation – Major features of external flow near a subsonic inlet – Relation between minimum area ratio and eternal deceleration ratio – Diffuser performance – Supersonic inlets – Starting problem on supersonic inlets – Shock swallowing by area variation – External declaration – Models of inlet operation.

Combustion Chambers and Nozzles: Classification of combustion chambers. Important factors affecting combustion chamber design. Combustion process. Combustion chamber performance. Effect of operating variables on performance. Flame tube cooling. Flame stabilization. Use of flame holders. Theory of flow in isentropic nozzles. Convergent nozzles and nozzle choking. Nozzle throat conditions. Nozzle efficiency. Losses in nozzles. Over expanded and under. expanded nozzles. Ejector and variable area nozzles. Interaction of nozzle flow with adjacent surfaces. Thrust reversal.

UNIT -3- (08 HOURS)

Compressors: Principle of operation of centrifugal compressor – Work done and pressure rise – Velocity diagrams – Diffuser vane design considerations – Concept of pre-whirl– Rotation stall – Elementary theory of axial flow compressor – Velocity triangles– degree of reaction – Three dimensional – Air angle distributions for free vortex and constant reaction designs – Compressor blade design – Centrifugal and Axial compressor performance characteristics.

UNIT -4- (08 HOURS)

Introduction to Turbines: Types of turbines-Operating Principle-Design consideration – Velocity triangles– degree of reaction - performance parameters – Basics of blade design principles.

UNIT -5- (07 HOURS)

Ramjet Propulsion: Operating principle – Sub critical, critical and supercritical operation – Combustion in ramjet engine – Ramjet performance – Sample ramjet design calculations – Introduction to scramjet – Preliminary concepts in supersonic combustion – Integral ram-rocket

Fundamentals of Rocket Propulsion: Types and Classification of rockets Operating principle – Specific impulse of a rocket – Rocket nozzle classification – Rocket performance considerations.

AVIATION SAFETY MANAGEMENT AND ACCIDENT INVESTIGATIONS				
Course Code	18AEH55		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Build and implement aviation safety management programs in aviation related organizations.
2. Explain the importance of human factor and thereby build human factor training for their organization to reduce accidents and incidents occurring because of human factor.
3. Formulate and implement aviation safety management programs and to prepare accident and incedent reports.
4. Plan and schedule maintenance activities for the aircrafts.
5. Understand and maintain the airport certification manual and to conduct airport and helipad inspection program.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Videos and animation

COURSE CONTENTS

UNIT -1- (08 HOURS)

INTRODUCTION-Aviation safety -Meaning -Need -Economic of Aviation Safety -Safety Vs Mission -Randomness of Damage and Injury -Zero Accident Rate -Accident causes -Multiple Vs Single Cause -Aircraft Accident -Aircraft Mischap -Aircraft Incident -Building Aviation Safety Program -Prevention Methodology -Risk Management

UNIT -2- (08 HOURS)

HUMAN FACTORS IN AVIATION SAFETY-Theory of Risk -Changing the Behaviour of the risk takers -Attitudes -Discipline -Punishment -Protection of Safety -Motivating Safe Behaviour -Human factors difficulties -Training invlovling human factors -Human Performance Concerns -Human Performance Factors.

UNIT -3- (08 HOURS)

AVIATION SAFETY PROGRAM ELEMENTS-Internal Reporting Systems -Information Distribution systems -Aviation Safety Committees -Aviation Safety Inspection Programs -Aviation safety program Evaluation -Flight Operation Safety Inspection -Safety Inspection report Format -Aviation Safety Education and Training -Aviation Safety Awards Programs -Accident Preparation and Investigation.

UNIT -4- (08 HOURS)

AIRCRAFT MAINTENANCE SAFETY-Aircraft Discrepancies -Delayed and Deferred Descrepancies -Training -Configuration Control -Maintenance Engine Runs and Taxiing -Maintenance Test Flights -maintenance Analysis -Tool Control -Hazarodous Waste Disposal -Bogus parts -Technical Data -maintenance Inspections -Flight Line Practices -Maintenance Safety Programs -Maintenance Safety Inspections.

UNIT -5- (07 HOURS)

AIRPORTS AND HELIPORTS-Airport Certification Manual -Airport Emergency Plan -Airports/Heliports criteria -Airfield Criteria -Airspace Criteria -Foreign Object Control -Bird Hazards -Snow and Ice Removal -Fuel Handling -Vehicle Control -Airport and Heliport Safety Inspections.

PROPULSION LAB				
Course Code	18AEL57		**Credits**	01
Hours/Week (L-T-P)	0-0-3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the construction and working principle of aircraft piston engine and jet engines.
2. Analyze forced convective heat transfer over flat plate.
3. Examine the nozzle flow and fuel injection characteristics
4. Predict the performance of a propeller and determine heat release by combustion of fuel
5. Sketch the velocity profile of free jet at variable positions of pitot tube

List of experiments

1. Study of an aircraft piston engine. (Includes study of assembly of sub systems, various components, their functions and operating principles)
2. Study of an aircraft jet engine (Includes study of assembly of sub systems, various components, their functions and operating principles)
3. Study of forced convective heat transfer over a flat plate.
4. Cascade testing of a model of axial compressor blade row.
5. Study of performance of a propeller.
6. Determination of heat of combustion of aviation fuel.
7. Study of free jet
8. Measurement of burning velocity of a premixed flame.
9. Fuel-injection characteristics
10. Measurement of nozzle flow.

COURSE ASSESSMENT METHOD

Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks
Scheme of Examination: Student will be asked to conduct two experiment

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO-1	PSO-2
CO-1	3				3				3	3				3
CO-2	3	3	2		3				3	3				3

AERODYNAMICS LAB				
Course Code	18AEL58		**Credits**	1
Hours/Week (L-T-P)	0-0-3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify the different types of wind tunnels and aerodynamic loads.
2. Analyze the pressure distribution of symmetrical and unsymmetrical airfoil and 2D cylinder.
3. Examine flow visualization of airfoil and bluff bodies at different angle of attacks
4. Analyze the boundary layer and velocity profile on the wind tunnel wall.

List of experiments

1. Calibration of a subsonic wind tunnel
2. Smoke flow visualization studies on a two-dimensional circular cylinder at low speeds.
3. Smoke flow visualization studies on a two dimensional airfoil at different angles of incidence at low speeds
4. Tuft flow visualization on a wing model at different angles of incidence at low speeds: identify zones of attached and separated flows.
5. Surface pressure distributions on a two-dimensional circular cylinder at low speeds and calculation of pressure drag.
6. Surface pressure distributions on a two-dimensional symmetric airfoil at zero incidences at low speeds.
7. Surface pressure distributions on a two-dimensional cambered airfoil at different angles of incidence and calculation of lift and pressure drag.
8. Calculation of total drag of a two-dimensional circular cylinder at low speeds using Pitot-static probe wake survey.
9. Calculation of total drag of a two-dimensional cambered airfoil at low speeds at incidence using Pitot static probe wake survey.
10. Measurement of a typical boundary layer velocity profile on the tunnel wall (at low speeds) using a Pitot probe and calculation of boundary layer displacement and momentum thickness.

COURSE ASSESSMENT METHOD

Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks
Scheme of Examination: Student will be asked to conduct two experiment

COMPOSITE MATERIAL LAB				
Course Code	18AEL59		**Credits**	1
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Perform hand layup and filament winding of composite material
2. Use hand injection moulding for manufacture of composite materials
3. Explain various materials,resins and catalyst used for manufacture of composite materials.
4. Perform vacuum bagging method of composite materials and NDT tests.

List of Experiments

1. Composite Hand Layup procedure
2. Filament Winding of composite material
3. Hand Injection Moulding of composite material
4. Composite Beam deflection analysis
5. NDT tests for composite materials
6. Vacuum Bagging Method of composite material
7. Different Types of Materials, Resin & Catalyst
8. Demonstration on use of autoclave and hydraulic press for manufacturing of composite materials.

COURSE ASSESSMENT METHOD

Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks
Scheme of Examination: Student will be asked to conduct two experiment

PROGRAM ELECTIVE – C

FUELS AND COMBUSTION				
Course Code	18AEE551		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Determine and analyze the fuel properties
2. Describe the fuel treatment process.
3. Understand the use of alternative fuels in aerospace applications
4. Analyze the combustion performance of fuel systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

Fuel Properties: Fuel Properties, Relative Density, API Gravity, Molecular Mass, Distillation Range, Vapor Pressure, Flash Point, Volatility Point, Viscosity, Surface Tension, Freezing Point, Specific Heat, Latent Heat, Thermal Conductivity, Combustion Properties of Fuels, Calorific Value, Enthalpy, Spontaneous-Ignition temperature, Limits of Flammability, Smoke Point, Luminometer Number, Smoke Volatility Index, Pressure and Temperature Effects, Sub atmospheric Pressure, Low Temperature, High Temperature.

UNIT -2- (07 HOURS)

Fuel Treatment: Introduction, Types of Hydrocarbons, Paraffins, Olefins, Naphthenes, Aromatics, Production of Liquid Fuels, Removal of Sulfur Compounds, Contaminants, Asphaltenes, Gum, Sediment, Ash, Water, Sodium, Vanadium, Additives, Gum Prevention, Corrosion Inhibition/Lubricity Improvers, Anti-Icing, Antistatic–Static Dissipators, Metal Deactivators, Antismoke.

UNIT -3- (07 HOURS)

Alternative Fuels aerospace applications: Hydrogen, Methane, Propane, Ammonia, Alcohols, Slurry fuels, Synthetic fuels, Fuels Produced by Fischer–Tropsch Synthesis of Coal/Biomass, Biofuels, Alternative fuel Properties, Combustion and Emissions Performance, Fischer–Tropsch Fuels, Biodiesel Fuels, Highly Aromatic (Broad Specification) Basic Considerations: Introduction to Gas turbine Combustor, Basic Design Features, Combustor Requirements, Combustor Types and parts, Fuel Preparation, Atomizers, liner wall-cooling Techniques, combustor stability limits, combustor exit temperature traverse quality (pattern factors), Combustors for Low Emissions

UNIT -4- (07 HOURS)

Combustion Fundamentals: Deflagration, Detonation, Classification of Flames, Physics of combustion Chemistry, Flammability Limits, Global Reaction-Rate Theory, Weak Mixtures, Rich Mixtures, Laminar Premixed Flames, laminar and turbulent flame burning velocity, measurement techniques for flame velocity, Factors Influencing Laminar Flame Speed, Equivalence Ratio, Initial Temperature, Pressure, Laminar Diffusion Flames, Turbulent Premixed Flames, Flame Propagation in Heterogeneous Mixtures of Fuel Drops, **Fuel Vapor and Air Combustion flame characterization:** Droplet and Spray Evaporation, Heat-Up Period, Evaporation Constant, Convective Effects, Effective Evaporation Constant, Spray Evaporation, Ignition

UNIT -5- (07 HOURS)

Combustion Performance: Combustion Efficiency, the Combustion Process, Reaction-Controlled Systems, Burning Velocity Model, Stirred Reactor Model, Mixing-Controlled Systems, Evaporation Controlled Systems, Reaction- and Evaporation-Controlled Systems. Flame Stabilization & Fuel Classification: Definition of Stability Performance, Measurement of Stability Performance, Bluff-Body Flame holders, Stabilization, Mechanisms of Flame Stabilization, Flame Stabilization in Combustion Chambers, Classification of Liquid Fuels, Aircraft Gas Turbine Fuels, Engine Fuel System, Aircraft Fuel Specifications and Classification of Gaseous Fuels.

TEXT BOOKS

Sl.no	Title of the Book	Name of the Author	Name of the Publisher	Edition and Year

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1.Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.

2.Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO-1	PSO-2
CO-1	2	2							2	2				2
CO-2	2	2							2	2				2
CO-3	2	2							2	2				2
CO-4	2	2							2	2				2

CONTROL ENGINEERING				
Course Code	18AEE552		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Classify the open and closed loop systems and various types of controllers and their applications
2. Apply mathematical models for mechanical, electrical, hydraulic and thermal control systems to obtain transfer functions
3. Sketch block diagrams and signal flow graphs, to obtain transfer functions
4. Predict the stability of a control system employing nyquist, polar, bode and root locus plots as stability criteria.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction: Concept of automatic controls, open and closed loop systems, concepts of feedback, requirement of an ideal control system. Types of controllers – Proportional, Integral, Proportional Integral, Proportional Integral Differential controllers.

UNIT -2- (07 HOURS)

Mathematical Models: Transfer function models, models of mechanical systems, models of electrical circuits, DC and AC motors in control systems, models of thermal systems, models of hydraulic systems. Analogous Systems: Force-voltage analogy and force-current analogy.

Transient and Steady State Response Analysis: Introduction, first order and second order system response to step, ramp and impulse inputs, concepts of time constant and its importance in speed of response.

UNIT -3- (08 HOURS)

Block Diagrams and Signal Flow Graphs: Transfer Functions definition, function, block representation of system elements, reduction of block diagrams, Signal flow graphs: Manson’s gain formula.

UNIT -4- (08 HOURS)

Frequency Response Analysis: Polar plots, NyQuest Stability Criterion, Stability Analysis, Relative stability concepts, phase and gain margin, M & N circles. System stability: Roth’s-Hurwitz Criterion.

Frequency Response Analysis using Bode Plots: Bode attenuation diagrams, Stability Analysis using Bode plots, Simplified Bode Diagrams.

UNIT -5- (08 HOURS)

Root Locus Plots: Definition of root loci, general rules for constructing root loci, Analysis using root locus plots.

Control Action and System Compensation: Series and feedback compensation, Physical devices for system compensation.

NON DESTRUCTIVE TESTING				
Course Code	18AEE553		**Credits**	~~3~~
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the basic concepts and principles of NDT methods.
2. Explain magnetic particle inspection and liquid penetrant inspection techniques.
3. Discuss the principle and applications of electrical and ultrasonic testing techniques
4. Identify the applications of radiography and other techniques in NDT

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction: Basic Principle, NDT techniques, importance, Advantages & Disadvantages and applications of NDT.

Liquid penetrant Inspection: Introduction, principles of penetrant inspection, Characteristics of a penetrant, Water washable system, Post emulsification system, solvent removable system, surface preparation and cleaning, penetrant application, development, advantages and disadvantages, range of applications.

UNIT -2 (07 HOURS)

Magnetic Particle Inspection: Introduction, magnetization, methods, continuous and residual methods, sensitivities, demagnetization, Magnetic particles, applications, advantages and disadvantages.

UNIT -3- (07 HOURS)

Electrical Test Methods (Eddy Current Testing): Introduction, principle, conductivity of a material, Magnetic properties, coil impedance, lift off factor and edge effects, skin effect, inspection frequency, coil arrangements, inspection probes, types of circuit, display methods, application of eddy current techniques.

UNIT -4- (07 HOURS)

Ultrasonic Testing: Introduction, Nature of sound, wave velocity and length. Generation of ultrasound, characteristics of an ultrasonic beam, sound waves at interfaces, sound attenuation, Inspection techniques identification of defects, immersion testing, surface conditioning, application of ultrasonic testing.

UNIT -5- (07 HOURS)

Radiography: Introduction, uses, limitation. Principle, radiation sources, production od X rays, ray spectra, radiation sources, shadow formation Exposure factor, Viewing and interpretation of radiographs, radiation hazard, protection against radiation, measurement of radiation received by personnel.

Advanced NDT techniques: Optical inspection, Neutron radiography, laser induced ultrasonic, acoustic emission, Thermography, laser Doppler vibrometer and holography, digital image correlation.

Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Classify winds and discussing properties of atmosphere
2. Identify various wind energy collectors
3. Discuss vehicle aerodynamics, power requirements
4. Describe building aerodynamics and predict flow induced vibrations

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

Atmosphere: Types of winds, Causes of variation of winds, Atmospheric boundary layer, Effect of terrain on gradient height, Structure of turbulent flows.

UNIT -2- (07 HOURS)

Wind Energy Collectors: Horizontal axis and vertical axis machines, Power coefficient, Betz coefficient by momentum theory.

UNIT -3- (07 HOURS)

Vehicle Aerodynamics: Power requirements and drag coefficients of automobiles, Effects of cut back angle, Aerodynamics of trains and Hovercraft.

UNIT -4- (07 HOURS)

Building Aerodynamics: Pressure distribution on low-rise buildings, wind forces on buildings. Environmental winds in city blocks, Special problems of tall buildings, Building codes, Building ventilation and architectural aerodynamics.

UNIT -5- (07 HOURS)

Flow Induced Vibrations: Effects of Reynolds number on wake formation of bluff shapes, Vortex induced vibrations, Galloping and stall flutter.

Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Recall the history and describe the various management functions
2. Identify the role of staffing, work-study, incentives, health and safety in management.
3. Apply techniques of decision-making, customer involvement, work-study, incentive schemes and process improvement.
4. Describe the various management behavioral technique.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introduction: Historical perspective, contribution of Taylor, Henry Fayol, Gilbert, Charles Babbage, HL Gantt and others to the evolution of management science in the Indian context. Ownership of Industries Proprietorship, partnership, joint stock companies, public and private undertakings, co-operative organizations.

Management Functions: Planning, corporate objectives, policies, strategies need for planning, responsibilities and types of plans, modern type of planning, selection of alternatives and process of decision-making, case studies. Organization: Basic requirement, types, structures and merits, Departmentation, vertical and horizontal, formal and growth, span of control, authority and responsibility, centralization and decentralization informal organizations, case studies.

UNIT -2- (07 HOURS)

Staffing: Appraisal of needs, executive development schemes, performance appraisal and managerial mobility. Directing. Types of instructions and characteristics of good order, communication flow of instructions motivation and leadership. Controlling: process of control, requirements of effective controlling, controlling techniques.

Work study, Incentives, Health and Safety: Method study and time study, Foundations of work-study, Job evaluation systems, Multi skilling, Incentive schemes, Training and Development, Safety Regulations and safe practices.

UNIT -3- (07 HOURS)

Management and Behavioral Approach: Contribution of Elton Mayo and skinner and others to behavior sciences. Skills of a manager at various levels in an organization and inter-related systems, understanding past behavior, predicting future behavior, directing, changing And controlling behavior.

Motivation and Behavior: Maslow's hierarchy of needs, pretense of needs and satisfaction of needs, goal oriented behavior, integration of organizational goals and needs of employee. Hawthorn's studies and its findings theory X and theory Y, immaturity theory, motivation hygiene theory.

UNIT -4- (08 HOURS)

Process Management: Definition of process management. Major process decisions-process choice, vertical integration, resource flexibility, customer involvement, capital intensity, relationships between decisions, service operation relationships between decisions, service operation relationships, economics of scale and gaining focus. Designing process-process rearranging and process improvement.

UNIT -5- (08 HOURS

Management of Technology: Meaning and role of technology-primary areas of technology management, management of technology and its role in improving business performance. Creating and applying technology-R and D stages and technology fusion. Technology strategy. Implementation guidelines.

Course Code	18AEE556		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the basic concepts of TQM and its benefits
2. Identify the tools and technique of TQM
3. Choose the framework to evaluate the performance excellence of organization and human resource practices.
4. Recognize the areas for building quality improvement through QFD and FMEA

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1- (08 HOURS)

Overview of TQM: Introduction-Definition, Basic Approach, Contribution of Gurus – TQM framework, Historical Review, Benefits of TQM, TQM organization.

Leadership, Customer Satisfaction and Employee Involvement: Characteristics of quality leaders, Customers satisfaction, Customer perception of quality, Feedback, Using customers' complaints, Employee involvement -Introduction, Teams, Cross functional teams, Quality circles, Suggestion system, Benefits of employee involvement.

UNIT -2- (07 HOURS)

Human Resource Practices: Scope of Human Resources Management, leading practices, designing high performance work systems-work and job design, Recruitment and career development, Training and education, Compensation and recognition, Health, safety and employee well-being, performance appraisal.

UNIT -3- (07 HOURS)

Tools and Techniques in TQM: 7 basic tools of quality control, Kaizen, Re-engineering, 6 sigma, Benchmarking, Definition and Process of benchmarking, 5S.

Quality Management Systems: Quality management systems, ISO-9000 series of standards.

UNIT -4- (08 HOURS)

Building and Sustaining Total Quality Organizations: Making the commitment to TQ, Organizational culture and Total Quality, Change management, sustaining the quality organization.

Product Acceptance Control: Product acceptance control through IS 2500 part 1 and part 2.

UNIT -5- (08 HOURS)

Quality Function Deployment and Failure Modes Effects Analysis: Introduction to QFD and QFD process, Quality by design, Rationale for implementation of quality by design, FMEA, Design FMEA and process FMEA.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO-1	PSO-2
CO-1	3					3	3	2	2	2	3	2		
CO-2	3					2	2	2	2	2	2	2		
CO-3	3					3	3	2	2	2	3	3		
CO-4	3					2	3	2	2	2	2	2		

EXPERIMENTAL TECHNIQUES AND DATA ANALYSIS				
Course Code	18AEE557		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand force measurement and temperature measurement systems
2. Carryout metallurgical studies using advanced tools for various applications
3. Apply suitable experimental techniques and analyze the data
4. Apply taguchi methods for various research.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Laboratory experiments will be conducted to understand the concepts

COURSE CONTENTS

UNIT -1- (08 HOURS)

Measurement of Forces: Strain gauge and piezoelectric transducers and their characteristics. Dynamometer construction, Bridge circuits. Instrumentation and calibration. Displacement and strain measurements by photoelasticity. Holography, interferometer, Moir techniques, strain gauge rosettes

UNIT -2- (08 HOURS)

Temperature Measurement: Circuits and instrumentation for different transducers viz, bimetallic, expanding fluid, electrical resistance, thermister, thermocouples, pyrometers. Flow Measurement: Transducers for flow measurements of Non-compressible and compressible fluids. Obstruction and drag methods. Vortex shredding flow meters. Ultrasonic, Laser Dopler and Hotwire anemometer. Flow visualization techniques, Shadow graphs, Schlieren photography. Interferometer

UNIT -3- (08 HOURS)

Metallurgical Studies: Optical and electron microscopy, X-Ray diffraction, Bragg's Law and its application for studying crystal structure and residual stresses. Electron spectroscopy, electron microprobe. Surface Measurements: Micro hardness, roughness, accuracy of dimensions and forms. 3-D co-ordinate measuring machines.

UNIT -4- (08 HOURS)

Experiment design & data analysis: Statistical methods, Randomized block design, Latin and orthogonal squares, factorial design. Replication and randomization. Data Analysis: Deterministic and random data, uncertainty analysis, tests for significance: Chi-square, student's't' test. Regression modeling, direct and interaction effects. ANOVA, F-test. Time Series analysis, Autocorrelation and autoregressive modeling

UNIT -5- (07 HOURS)

Taguchi Methods: Experiment design and planning with Orthogonal arrays and linear graphs. Additive cause effect model. Optimization of response level. Identification of Design and noise factors. Performance evaluation and Optimization by signal to noise ratios. Concept of loss function and its application

ROBUST TECHNOLOGY				
Course Code	18AEE558		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe matrix theory
2. Apply linear system theory
3. Apply Fixed-Structure Filter and Controller Synthesis
4. Describe frequency domain concepts and robust stability performance

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Laboratory experiments will be conducted to understand the concepts

COURSE CONTENTS

UNIT -1- (08 HOURS)

An Introduction to Matrix Theory

Matrix Operations, Matrix Decompositions (Jordan, Schur, Singular Value), Nonnegative, Positive Definite Matrices, Matrix Norms, Generalized Inverses • Kronecker Calculus, The Matrix Exponential

UNIT -2- (08 HOURS)

Linear System Theory

Controllability, Observability, Stabilizability, Detectability , Lyapunov Functions, Lyapunov Equations, H_2Norm: Deterministic Formulation, H_2 Norm: Stochastic Formulation ,Matrix Differentials and Optimization Theory

UNIT -3- (08 HOURS)

Fixed-Structure Filter and Controller Synthesis

The Standard Problem , The Linear-Quadratic Regulator Problem (LQR) , Analysis of the Algebraic Riccati Equation , Static Output Feedback Controllers , Least Squares Estimation Theory , The Kalman Filter and The Observer Riccati Equation , The Linear-Quadratic-Gaussian Problem (LQG) , Full-Order Dynamic Compensation and the Separation Principle , PI Control, Model Following

UNIT -4- (08 HOURS)

Frequency Domain Concepts

Frequency Domain Properties of the LQR and LQG Problems , Guarantees of Phase and Gain Margins , The Return Difference Equali

UNIT -5- (07 HOURS)

Robust Stability and Performance

The H Norm ,H Performance Measure , Internal Stability , The Multivariable Nyquist Criterion Sensitivity/Complementary Sensitivity, MIMO Performance Specifications, Nominal Performance , Robust Performance, The Small Gain Theorem, The Complex Structured Singular Value, Necessary and Sufficient Conditions for Robust Stability, μ-Analys.

SEMESTER-VI

AIRCRAFT STABILITY & CONTROL				
Course Code	18AE61		**Credits**	4
Hours/Week (L-T-P)	4		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain static longitudinal stability and its effect on airframe components.
2. Analyze the static directional stability and its effect on CG location
3. Identify static lateral stability and dynamic longitudinal stability in aircrafts
4. Formulate the dynamic derivatives involved in the aircraft stability and control
5. Predict the dynamic lateral and directional stability of aircraft

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT -1 (10 HOURS)

Static Longitudinal Stability: Historical perspective, Aerodynamic Nomenclature, Equilibrium conditions, Definition of static stability, Definition of longitudinal static stability, stability criteria, Contribution of airframe components: Wing contribution, Tail contribution, and Fuselage contribution.

Static Longitudinal Stability and Control-Stick Fixed: Introduction, Trim condition. Static neutral points. , Elevator power, Elevator angle versus equilibrium lift coefficient, Restriction on forward C.G. range

UNIT -2- (10 HOURS)

Static Longitudinal Stability and Control-Stick Free: Introduction, Hinge moment parameters, Control surface floating characteristics and aerodynamic balance, Estimation of hinge moment parameters, The trim tabs, Stick-free Neutral point, Restriction on aft C.G. Static

Directional Stability and Control: Introduction, Definition of directional stability, Static directional stability rudder fixed, Contribution of air frame components, Directional control. Rudder power, Stick-free directional stability, Requirements for directional control, Rudder lock, Dorsal fin. One engine inoperative condition.

UNIT -3- (10 HOURS)

Static Lateral Stability and Control Introduction, definition of Roll stability. Estimation of dihedral effect, Effect of wing sweep, flaps, and power, Lateral control, Estimation of lateral control power, Aileron control forces, Balancing the aileron. Coupling between rolling and yawing moments. Adverse yaw effects. Aileron reversal.

UNIT -4- (09 HOURS)

Estimation of Dynamic Derivatives: Aerodynamic force and moment representation, Derivatives due to change in forward speed, Derivatives due to the pitching velocity, Derivatives due to the time rate of change of angle of attack, Derivatives due to rolling rate, Derivatives due to yawing rate.

UNIT -5- (09 HOURS)
Dynamic Lateral and Directional Stability: Definition of Dynamic longitudinal stability: types of modes of motion: long or phugoid motion, short period motion. Factors affecting period and damping of oscillations. Effect of wind shear. Cooper-Harper Scale, Dutch roll and Spiral instability. Auto- rotation and spin. Roll-Pitch- Yaw Inertial coupling.

ADVANCED PROPULSION				
Course Code	18AE62		**Credits**	3
Hours/Week (L-T-P)	3-2-0		**CIE Marks**	50
Total Hrs.	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyze the thermodynamic cycles of air breathing propulsion systems.
2. Design and evaluate diffusers, combustors and nozzle performance parameters
3. Apply fundamental concepts of scramjet propulsion system to estimate the performance parameters of combustors
4. Design and estimate the performance parameters of Nuclear rocket engine
5. Explain electric and ion propulsion concepts.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT -1 (08 HOURS)

Thermodynamic Cycle Analysis Of Air-Breathing Propulsion Systems: Air breathing propulsion systems like Turbojet, turboprop, ducted fan, Ramjet and Air augmented rockets – Thermodynamic cycles – Pulse propulsion – Combustion process in pulse jet engines – inlet-charging process – Subcritical, Critical and Supercritical charging.

UNIT -2- (08 HOURS)

Ramjets And Air Augmented Rockets: Preliminary performance calculations – Diffuser design with and without spike, Supersonic inlets – combustor and nozzle design – integral Ram rocket.

UNIT -3- (08 HOURS)

Scramjet Propulsion System: Fundamental considerations of hypersonic air breathing vehicles – Preliminary concepts in engine airframe integration – calculation of propulsion flow path – flow path integration – Various types of supersonic combustors – fundamental requirements of supersonic combustors – Mixing of fuel jets in supersonic cross flow – performance estimation of supersonic combustors.

UNIT -4- (08 HOURS)

Nuclear Propulsion: Nuclear rocket engine design and performance – nuclear rocket reactors – nuclear rocket nozzles – nuclear rocket engine control – radioisotope propulsion – basic thruster configurations – thruster technology – heat source development – nozzle development – nozzle performance of radioisotope propulsion systems.

UNIT -5- (07 HOURS)

Electric And Ion Propulsion: Basic concepts in electric propulsion – power requirements and rocket efficiency – classification of thrusters – electrostatic thrusters – plasma thruster– Fundamentals of ion propulsion – performance analysis – ion rocket engine.

AIRCRAFT MAINTENANCE & PRACTICE				
Course Code	18AE63		**Credits**	3
Hours/Week (L-T-P)	3-2-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the various Aircraft maintenance practices
2. Identify various tools used in aircraft maintenance
3. Identify various materials used in aircrafts
4. Describe NDT and welding process used in aircraft maintenance
5. Illustrate the methods of harnessing Electrical cables and connectors in aircraft.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Aircraft maintenance practices: Standard maintenance practices-aircraft maintenance practices-general purpose tools-measuring tools-torque wrenches and torque loading practice.

UNIT -2- (08 HOURS)

Tools: Aircraft fastening devices-bolts and screws, nuts and washers, locking devices and springs, engineering drawings and diagrams, bearings and gears.

UNIT -3- (08 HOURS)

Aircraft materials: Aircraft materials-ferrous, nonferrous and composite/non-metallic. Corrosion and corrosion control and protection.

UNIT -4- (08 HOURS)

Nuclear Propulsion: Nuclear rocket engine design and performance – nuclear rocket reactors – nuclear rocket nozzles – nuclear rocket engine control – radioisotope propulsion – basic thruster configurations – thruster technology – heat source development – nozzle development – nozzle performance of radioisotope propulsion systems**.**

UNIT -5- (07 HOURS)

Aircraft miscellaneous: Electrical cables and connectors, usage of electrical instruments and equipment, testing and calibration methods, pipes, hoses and control cables, aircraft weight and balance control, quality system and procedures.

Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand Peculiarities of space environment and its description
2. Describe Basic Concepts and the General N-Body systems
3. Explain the concepts of Satellite Injection and Satellite Perturbations
4. Illustrate the Interplanetary Trajectories
5. Explain the concepts of Ballistic Missile Trajectories

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Space Environment: Peculiarities of space environment and its description, effect of space environment on materials of spacecraft structure and astronauts, manned space missions, effect on satellite lifetime.

UNIT -2- (08HOURS)

Basic Concepts and the General N-Body: The solar system, reference frames and coordinate systems, terminology related to the celestial sphere and its associated concepts, Kepler's laws of planetary motion and proof of the laws, Newton's universal law of gravitation, the many body problem, Lagrange-Jacobi identity, the circular restricted three body problem, libration points, the general N-body problem, two body problem, relations between position and time

UNIT -3- (08 HOURS)

Satellite Injection and Satellite Perturbations: General aspects of satellite injection, satellite orbit transfer, various cases, orbit deviations due to injection errors, special and general perturbations, Cowell's method and Encke's method, method of variations of orbital elements, general perturbations approach.

UNIT -4- (08 HOURS)

Interplanetary Trajectories: Two-dimensional interplanetary trajectories, fast interplanetary trajectories, three dimensional interplanetary trajectories, launch of interplanetary spacecraft, trajectory estimation about the target planet, concept of sphere of influence, Lambert's theorem

UNIT -5- (07 HOURS)

Ballistic Missile Trajectories: Introduction to ballistic missile trajectories, boost phase, the ballistic phase, trajectory geometry, optimal flights, time of flight, re-entry phase, the position of impact point, influence coefficients.

COMPUTER AIDED DESIGN, MODELING & ANALYSIS LAB				
Course Code	18AEL67		**Credits**	01
Hours/Week (L-T-P)	0-0-3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Model and analyse symmetric and unsymmetric Aerofoil Geometry
2. Model and Analyse 2D Convergent- Divergent Nozzle and 3Dserpentine inlet duct.
3. Analyse Sandwich Beam, 3D Wing and bulk head
4. Perform Structural Modeling and Stress Analysis of a Simply Supported Rectangular Plate Uniformly Compressed in one Direction with a Cut- Out in Center

List of experiments

PART A

1. Geometric Modeling and Mesh Generation of symmetric Aerofoil Geometry.
2. Geometric Modeling and Mesh Generation of unsymmetric Aerofoil Geometry
3. Computations and Analysis of 2-D Incompressible and Inviscid Flow over symemtric and unsymmetric Aerofoil.
4. Geometric Modeling, Mesh Generation and flow analysis of 2-D Convergent-Divergent Nozzle.
5. Generation of body fitting hexagonal mesh and flow analysis of serpentine inlet duct

PART B

1. Structural Modeling of Sandwich Beam of Rectangular Cross-Section and Analyses for Stresses.
2. Structural Modeling of a Three Dimensional Wing.
3. Structural Modeling and Stress Analysis of a Fuselage Bulk Head.
4. Structural Modeling and Stress Analysis of a Simply Supported Rectangular Plate Uniformly Compressed in one Direction.
5. Structural Modeling and Stress Analysis of a Simply Supported Rectangular Plate Uniformly Compressed In one Direction with a Cut- Out in Center.

COURSE ASSESSMENT METHOD

Record: 30 marks

Test: 15 marks

Viva-voce: 05 marks

SEE - Final Exam: 50 Marks

Scheme of Examination: Student will be asked to conduct two experiment

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO-1	PSO-2
CO-1	3	3	3		3				3	2			3	3

Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Calculate the deflections of simply supported beams and cantilever beams
2. Apply maxwell reciprocal theorem and superposition theorem for simply supported beam and cantilever beam respectively
3. Find the buckling load of the column for fixed and hinged conditions by applying South Well's theorem
4. Analyze shear failure of bolts and riveted joints
5. Examine frequency spectrum analysis of cantilever beam.

List of experiments

1. Deflection of a Simply Supported Beam.
2. Verification of Maxwell's Reciprocal Theorem.
3. Determination of Young's Modulus using strain gauges.
4. Poisson Ratio Determination
5. Buckling load of slender Eccentric Columns and Construction of South well Plot
6. Shear Failure of Bolted and Riveted Joints
7. Bending Modulus of sandwich Beam
8. Verification of Superposition Theorem
9. Determination of fundamental frequency of a cantilever beam and harmonics and Frequency spectrum analysis for a cantilever beam.
10. Shear centre for open section

COURSE ASSESSMENT METHOD

Record: 30 marks

Test: 15 marks

Viva-voce: 05 marks

SEE - Final Exam: 50 Marks

Scheme of Examination: Student will be asked to conduct two experiment

FLIGHT PHYSICS LAB				
Course Code	18AEL69		**Credits**	01
Hours/Week (L-T-P)	0-0-3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyse the performance of an aircraft propeller and fluid structure interaction over a wing
2. Design the control surface and study theperformance of uavblades using weight base design concept.
3. Simulate the marphing technologyof wing and analyse aero acoustic over an aircraft
4. Understand biomimetics on natural flight

List of experiments

1. Study of performance of propeller on engine power development
2. Study the various types of propeller on performance of aircraft
3. Study the function of control surface
4. Design the control surface for aircraft using modelling tools
5. Study the performance of UAV blades and use the weightbase design concept.
6. Analyze the fluid structure interaction over wing
7. Study the aero acoustics over the aircraft
8. Simulate the morphing technology of wing and analyze aircraft performance.
9. Study about biomimetics on natural flight

COURSE ASSESSMENT METHOD

Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks

Program Outcomes – Articulation matrix

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO-1	PSO-2
CO-1	3	3	3		3				3	2			3	2
CO-2	3	3	3		3				3	2			3	2
CO-3	3	3	3		3				3	2			3	2
CO-4	3	3	3		3				3	2			3	2
CO-5	3	3	3		3				3	2			3	2

PROGRAM ELECTIVE-D				
OPTIMIZATION TECHNIQUES				
Course Code	18AEE651		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Define and use optimization terminology, concepts, and understand how to classify an optimization problem.
2. Understand how to classify an optimization problem
3. Apply the mathematical concepts formulate the problem of the systems
4. Analyze the problems for optimal solution using the algorithms.
5. Interpret the optimum solution

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction: Statement of optimisation problem, Design vector, Design constraints, Objective function, Classification of optimisation problems based on :constraints, nature of design variables, nature of the equations involved Single variable optimisaton: Necessary and sufficient conditions, Multivariable optimization with no constraints: Necessary and sufficient conditions, Semidefinite case, Saddle point, Multivariable optimization with equality constraints, Solution by direct substitution, Lagrange Multipliers, Interpretation of Lagrange multipliers, Multivariable optimization with inequality constraints: Khun Tucker conditions (concept only)

UNIT -2- (08HOURS)

Nonlinear Programming: One-Dimensional Minimization Methods Introduction, Unimodal Function, Elimination methods: unrestricted search, fixed step size, accelerated step size, Exhaustive search: dichotomous search, interval halving method, Fibonacci method, golden section method, Interpolation methods: Quadratic and cubic interpolation method, direct root method, Newton method, Quasi-Newton method, secant method.

UNIT -3- (08 HOURS)

Nonlinear Programming: Direct search methods: Classification of unconstrained minimization methods, rate of convergence, scaling of design variables, random search methods, univariate method, pattern directions, Powell's method, Simplex method.

UNIT -4- (08 HOURS)

Nonlinear Programming: Indirect Search (Descent) Methods: Gradient of a function, Steepest decent method, Fletcher Reeves method, Newtons method, Davidon-Fletcher-Powell method.

UNIT -5- (07 HOURS)

Integer Programming: Introduction, Graphical representation, Gomory's cutting plane method: concept of a cutting plane, Gomory's method for all-integer programming problems, Balas' algorithm for zero–one programming, Branch-and Bound Method.

TEXT BOOKS				
SL.NO	**Title of the Book**	**Name of the author/s**	**Name of the publisher**	**Edition and year**
1	Engineering Optimization Theory and Practice	S. S. Rao	John Wiley & Sons	Fourth Edition 2009

REFERENCE BOOKS'				
SL.NO	**Title of the Book**	**Name of the author/s**	**Name of the publisher**	**Edition and year**
1	Optimisation Concepts and Applications in Engineering	D. Belegundu, T.R. Chanrupatla	Cambrige University Press	2011
2	Engineering Optimization: Methods and Applications	Ravindran, K. M. Ragsdell, and G. V. Reklaitis	Wiley, New York	2nd ed, 2006.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1.Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.

2.Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3			3						2	2	1	1
CO2	3	3			3						2	2	1	1
CO3	3	3			3						2	2	1	1
CO4	3	3			3						2	2	1	1
CO5	3	3			3						2	2	1	1

ROCKETS & MISSILES				
Course Code	18AEE652		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify various ignition systems and types of igniters used in rockets
2. Understand Aerodynamics of Rockets and Missiles
3. Apply the phenomenon of Motion of rockets and missiles in Space and Gravitational field.
4. Analyse the staging and control phenomenon of rockets
5. Classify various types of materials used in manufacture of rockets and missiles.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Rockets System: Types of Ignition System in rockets and types of Igniters – Igniter Design. Consideration of liquid Rocket Combustion Chamber, Injector Propellant Feed Lines. Propellant Tanks Outlet and Helium Pressurized and Turbine feed Systems– Propellant Slash and Propellant Hammer–Elimination of Geysering Effect in Missiles– Combustion System of Solid Rockets.

UNIT -2- (08HOURS)

Aerodynamics Of Rockets And Missiles : Airframe Components of Rockets and Missiles – Forces Acting on a Missile While Passing Through Atmosphere– methods of Describing Aerodynamic Forces and Moments – Lateral Aerodynamic Moment – Lateral Damping Moment and Longitudinal Moment of a Rocket – lift and Drag Forces – Drag Estimation – Body Upwash and Downwash in Missiles.

UNIT -3- (08 HOURS)

Motion in Space and Gravitational Field: One Dimensional and Two Dimensional rocket Motions in Free Space and Homogeneous Gravitational Fields–description of Vertical, Inclined and Gravity Turn Trajectories– Determination of range and Altitude Simple Approximations to Burnout Velocity.

UNIT -4- (08 HOURS)

Staging And Control: Rocket Vector Control – Methods – Thrust termination – SITVC – Multistaging of rockets – Vehicle Optimization – Stage Separation Dynamics – Separation Techniques

UNIT -5- (07 HOURS)

Materials Used For Rockets and Missiles: Selection of Materials –Special Requirements of Materials to Perform under Adverse Conditions.

FINITE ELEMENT METHODS				
Course Code	18AEE653		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply the concepts of FEM, theory of elasticity and solving techniques for various engineering problems
2. Solve Two and Three dimensional Element problems
3. Analyze higher order elemental problems
4. Solve Heat transfer problems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction: Basic Concepts, Background Review: Stresses and Equilibrium, Plane stress, Plane strain, Potential energy and Equilibrium. Rayleigh - Ritz Method, Galerkin's Method, Simple applications in structural Analysis. Construction or discrete models - sub domains and nodes - simple elements for the FEM - Simplex, complex and multiples elements Polynomial selection -illustrative examples Elements and shape functions and natural coordinates, Use of local and natural coordinates, compatibility and convergence requirements of shape functions

UNIT -2- (08HOURS)

Fundamentals of Finite Element Method: Construction of shape functions for bar element and beam element, Bar elements, uniform bar elements, uniform section, mechanical and thermal loading, varying section, truss analysis, Frame element, Beam element, problems for various loadings and boundary conditions

UNIT -3- (08 HOURS)

Analysis of Two and Three dimensional Elements: Shape functions of Triangular, Rectangular and Quadrilateral elements, different types of higher order elements, constant and linear strain triangular elements, stiffness matrix Four-Noded Tetrahedral Element (TET 4), Eight-Noded Hexahedral Element (HEXA 8), Tetrahedral elements, Hexahedral elements: Serendipity family, Hexahedral elements: Lagrange family.

UNIT -4- (08 HOURS)

Theory of Isoparametric Elements and Axisymmetric: Isoparametric, sub parametric and super-parametric elements, characteristics of Isoparametric quadrilateral elements, structure of computer program for FEM analysis, description of different modules, pre and post processing, Axisymmetric formulation finite element modeling of triangular and quadrilateral element.

UNIT -5- (07 HOURS)

Field Problems: Heat transfer problems, Steady state fin problems, 1D heat conduction governing equation, Derivation of element matrices for two dimensional problems, Dynamic consideration- Formulation Hamilton's principle, Element mass matrices

HYPERSONIC VEHICLE DESIGN				
Course Code	18AEE654		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand Mission objectives, needs, requirements and constraints.
2. Solve problems related to thermal design and balance.
3. Analyze and understand the basic launch vehicle consideration, selection process, Navigation & Telecommunication, systems.
4. Understand the fundamentals of spacecraft design management

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Space Mission Analysis and Design Process: Space mission life cycle, Mission objectives, Mission needs, Mission requirements and constraints, Space environment and survivability, Space logistics and reliability, Orbital debris.

UNIT -2- (08HOURS)

Spacecraft Configuration And Structural Design: Design requirements, Design process, Material solution, Analysis, Design verification, Impact protection, Configuration, The future of space structure.

UNIT -3- (08 HOURS)

Thermal Control Of Spacecraft: Thermal environment, Thermal balance, Thermal analysis, Thermal design, Thermal technology, Thermal design verification, Satellite thermal design.

UNIT -4- (08 HOURS)

Spacecraft Attitude, Control and Instrumentation: Basic launch vehicle consideration, Launch system selection process, determining the spacecraft design envelope, Attitude requirements, kinematics, measurements, estimation and dynamics, Space control system, Telecommunication, Onboard systems, Science instruments, Navigation

UNIT -5- (07 HOURS)

Spacecraft Design Management: Vehicle design and mission concept, System engineering, Product assurance, Spacecraft integration and test, Spacecraft reliability and quality assurance, Small satellite engineering and application, Cost.

GUIDANCE, NAVIGATION AND CONTROL				
Course Code	18AEE655		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand basics of control systems
2. Analyse the control systems and guidance/control of launch vehicles
3. Design and analyse Auto-pilot for Aerospace vehicles
4. Describe the concepts of navigation and guidance
5. Analyze the aerospace vehicle systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction to Control System: open loop and closed loop control system-Transfer function poles and zeroes-block diagram-representation-block diagram reduction-signal flow graph Mason's gain formula-Characteristics equation-concept of stability-stability of feedback systems-Routh's stability Criteria.

UNIT -2- (08HOURS)

Time Domain Analysis: Transient and Steady State Response-Time domain Specifications Second Order system- Impulse and Step Response-Steady State error analysis.

UNIT -3- (08 HOURS)

Frequency Domain Analysis: Closed Loop Frequency Response-Bode Plot-Polar Plot-Gain Margin-Phase Margin-Nyquist Stability Criteria-Stability Analysis from Bode Plot Fuzzy Logic Neural Control-Robust Control.

UNIT -4- (08 HOURS)

Introduction to the concepts of navigation guidance and control: General principles of early conventional navigation systems. Geometric concepts of navigation. Reference frames. Direction cosine matrix, Euler angles, Transformation of angular velocities, Quaternion representation in co-ordinate transformation. Comparison of transformation methods

UNIT -5- (07 HOURS)

Modeling of Aerospace vehicles, Linear system analysis, Stabilization and Control of space crafts, Missile control systems and Autopilots, Launch vehicle flight control systems. Longitudinal and lateral autopilots for aircraft. Radar systems command and housing guidance systems.

Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Utilize the fundamental principles of fluid mechanics and thermodynamics to analyze aircraft engines.
2. Understand the common gas turbine aircraft propulsion systems and be able to determine the applicability of each
3. Identify aircraft engine systems for specified cruise conditions at the preliminary design level
4. Analyze and perform preliminary aero thermal design of turbo machinery components.
5. Analyze and perform preliminary design of terrestrial gas turbine systems, including alternative cycles.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction: Introduction to Aircraft Engine System, Design Concept, Fundamentals of thermodynamics, fluid mechanics and aerodynamics for a turbine engine from an analytical and theoretical perspective Conservation, Equilibrium Combustion, Equilibrium Combustion with STANZAN 7, Review of Gas Dynamics Examples, Thermodynamics of jet engines

UNIT -2- (08 HOURS)

Jet Engine: Aero thermodynamics of jet engines, Ramjets, Gas turbine engines, Engine/aircraft performance.

UNIT -3- (08 HOURS)

Static Sections: Inlets, combustors & nozzles, Inlets, Combustors, Nozzles.

UNIT -4- (08 HOURS)

Dynamic Section: axial compressors, single and multi-staging, instabilities, efficiency, centrifugal compressors, axial turbines, cooling and performance, matching compressor & turbine, examples, design considerations.

UNIT -5- (06 HOURS)

Advavce Concepts: Intro to terrestrial gas turbines, Terrestrial systems, Combined cycles, Advanced cycles, TBCC Engine, Pulse Detonation Engine.

AVIATION MANAGEMENT				
Course Code	18AEE657		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-
1. Describe history of aviation
2. Understand airport infrastructure and various air transport services
3. Identify the institutional framework of DGCA
4. Understand the role of controlling air traffic

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Introduction- history of aviation – organisation, global, social & ethical environment – history of aviation in india – major players in the airline industry - swot analysis of the different airline companies in india – market potential of airline industry in india – new airport development plans – current challenges in the airline industry - competition in the airline industry – domestic and international from an indian perspective.

UNIT -2- (08 HOURS)

Airport infrastructure and management - airport planning – terminal planning design and operation – airport operations – airport functions – organisation structure in an airline - airport authority of india - comparison of global and indian airport management – role of aai -airline privatisation - full privatisation - gradual privatisation – partial privatisation

UNIT -3- (08 HOURS)

Air transport services various airport services - international air transport services – indian scenario – an overview of airports in delhi, mumbai, hyderabad and bangalore – the role of private operators – airport development fees, rates, tariffs

UNIT -4- (08 HOURS)

Institutional framework 8 role of DGCA - slot allocation – methodology followed by ATC and DGCA -management of bilaterals – economic regulations

UNIT -5- (06 HOURS)

Controlling role of air traffic control - airspace and navigational aids – control process – case studies in airline industry – mumbai delhi airport privatisation – navi mumbai airport tendering process – 6 cases in the airline industry
.

SYSTEM ENGINEERING AND ANALYSIS				
Course Code	18AEE658		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the system design requirements, architecture, functional requirements
2. Describe the system requirements documents as per the requirement analysis.
3. Understand the system reliability, maintainability, usability issues.
4. Carry out the system reliability analysis

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

Fundamentals of systems engineering and system architecting of aeronautical system, system engg. Standards, requirements analysis, functional analysis and allocation, preliminary system architecture

UNIT -2- (08HOURS)

Systems analysis, system design, and the basics of test and evaluation, Introduction to combat systems

UNIT -3- (08 HOURS)

System development phases (Conceiving, Designing, Implementing and Operating).

UNIT -4- (08 HOURS)

Techniques of system design and assessment for operational feasibility, including Reliability, mai (including human factors and human performance), Supportability, and Producibility. System Effectiveness estimation.

UNIT -5- (07 HOURS)

Reliability analysis and management (basic tools and methods of reliability for developing complex systems including electronic components, mechanical components, and software), redundancy, graceful degradation, fault tolerance, MTBF.

TEXT BOOKS				
SL.NO	**Title of the Book**	**Name of the author/s**	**Name of the publisher**	**Edition and year**
1	The Engineering Design of Systems: Models and Methods	Buede D.M.	Publisher: John Wiley & Sons Inc	Second edition 1995
2	System Analysis Design and Development	Charles S. Wasson	Wiley Series in System Engineering and Management.	
REFERENCE BOOKS'				
1	Principles of Planned Maintenance	Clifton R H.	McGraw Hill, New York	
2	Reliability Engineering	Srinath L S.	Affiliated East-West Press Limited, New Delhi,	2002.

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1.Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.

2.Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	2	2												1
CO2	3	3												1
CO3	3	3												1
CO4	3	3												1

MAJOR PROJECT PHASE-I				
Course Code	18AEP610		**Credits**	1
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Identify and define the problem for the project work
2. Apply the knowledge acquired to analyze and estimate the cost and time
3. Examine and use appropriate tools to solve the defined problem in a team
4. Develop an end product and prepare a technical report/paper

COURSE ASSESSMENT METHOD

Project work: Based on the ability/abilities of the student/s and recommendations of the mentor, a single discipline or a multi disciplinary project can be assigned to an individual student or to a group having not more than 4 students. In extraordinary cases, like the funded projects requiring students from different disciplines, the project student strength can be 5 or 6.

CIE procedure for Project Work Phase - 1:

The CIE marks shall be awarded by a committee consisting of the Head of the concerned Department and senior faculty members of the Department, one of whom shall be the Guide. The CIE marks awarded for the project work phase-1, shall be based on the evaluation of the project in terms of Report (covering Literature Survey, Problem identification, Objectives and Methodology), project presentation skill and question and answer session in the ratio 50:25:25..

SEE Procedure for project Work Phase-1

The SEE marks shall be awarded by senior examiners (internal & External). The students have to present/demonstrate the project work carried out. SEE marks awarded for the project work phase -1. The marks will be awarded for the students based on Report (covering Literature Survey, Problem identification, Objectives and Methodology), project presentation skill and question and answer session in the ratio 50:25:25.

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3	3	3	3	2	2	3	3	3	3	3	3	3
CO2	3	3	3	3	3	2	2	3	3	3	3	3	3	3
CO3	3	3	3	3	3	2	2	3	3	3	3	3	3	3
CO4	3	3	3	3	3	2	2	3	3	3	3	3	3	3

SEMESTER-VII

VIBRATION & AEROELASTICITY				
Course Code	18AE71		**Credits**	**4**
Hours/Week (L-T-P)	4-2-0		**CIE Marks**	50
Total Hrs	48		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Formulate the mathematical models for undamped and damped mechanical vibrations Systems.
2. Determine and interpret the characteristics of linear vibration mechanical systems
3. Predict the frequency response for mechanical vibration systems under loading conditions
4. Evaluate the natural frequencies of different DOF Systems using various numerical techniques.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT -1 (10 HOURS)

Single degree of freedom systems -Introduction to simple harmonic motion, D'Alembert's principle, free vibrations – damped vibrations –forced vibrations, with and without damping – support excitation – transmissibility – vibration measuring instruments.

UNIT -2- (10 HOURS)

Multi degrees of freedom systems-Two degrees of freedom systems - static and dynamic couplings - vibration absorber- principal coordinates- principal modes and orthogonal conditions - Eigen value problems - Hamilton's principle - Lagrangean equations and application.

UNIT -3- (10 HOURS)

Continuous systems-Vibration of elastic bodies - vibration of strings – longitudinal, lateral and torsional vibrations

UNIT -4- (08 HOURS)

Approximate methods-Approximate methods - Rayleigh's method - Dunkerlay's method – Rayleigh-Ritz method, matrix iteration method.

UNIT -5- (10 HOURS)

Elements of aeroelasticity-Vibration due to coupling of bending and torsion - aeroelastic problems - collars triangle – wing divergence - aileron control reversal – flutter – buffeting. – Elements of servo elasticity.

CFD IN AEROSPACE ENGINEERING				
Course Code	18AE72		**Credits**	4
Hours/Week (L-T-P)	3-0-2		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the basic concepts and principles of CFD
2. Apply Governing Equations for CFD
3. Apply Discretization of Conservation Equations & Simulation of Turbulence
4. Use the Solution of Linear Equation System and Application Examples of CFD

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Videos and animation
- CFD problems will be solved using analysis tools like ANSYS for better understandings of the topics.

COURSE CONTENTS

UNIT -1- (10 HOURS)

Basic Thoughts and Equations: Basic philosophy of CFD, The Governing equations of fluid dynamics and its significance, Flux vector representation of the governing equations, Classification of PDEs and its nature, Discussion about Elliptic, Parabolic and Hyperbolic PDEs..

UNIT -2 (10 HOURS)

Basics of Numerical Computation & Grid Generation Techniques: Basics of Numerics: Different discretization techniques, Finite difference approximation, Explicit and implicit approaches, Discussion about consistency, stability and convergence, Errors and stability of numerical schemes. Grid Generation: Need for grid, Various grid generation techniques, Transformation of equations. Modern aspects of grid generation

UNIT -3 (10 HOURS)

Some Simple CFD Techniques and Their Applications: The Lax-Wendroff technique, The MacCormack's technique, The relaxation technique, Aspects of numerical dissipation an dispersion; Artificial viscosity, The Alternating-Direction-Implicit (ADI) technique, The pressure correction technique, Incompressible Couette flow numerical solution by means of an Implicit method and by the Pressure Correction Method.

UNIT -4 (10 HOURS)

Some Advanced CFD Techniques: The Beam and Warming method, Approximate factorization technique for multidimensional problems, Upwind schemes, Flux vector splitting. Wave based flux methods: The Riemann approach, Total Variation Diminishing (TVD) schemes. Flux limiters, Multigrid methods, Artificial compressibility method, Entropy condition.

UNIT -5 (08 HOURS)

Introduction to Finite Volume Techniques and Some Aspects of Modern CFD: Introduction to finite volume techniques, Methodology, Solution to simple problems, Modern aspects of CFD, Parallel processing, Introduction to turbulence modelling, Ideas about RANS, DNS and LES for turbulence simulations

COMPOSITE MATERIALS & STRUCTURES				
Course Code	18AE73		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1.Understand the manufacturing process of various aircraft materials and theories of failures.
2.Apply the characterization methods for various engineering materials
3. Analyze and apply theories of structures for engineering problems
4.Solve problems related to thin walled structures
5.Apply classical plate theory and circular cylindrical theories for plates & shells

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation
- Laboratory visits and hands on sessions on manufacturing of composite materials.

COURSE CONTENTS

UNIT -1- (8 HOURS)

Introduction to Composite Materials
Definition, classification of composite materials, classification of reinforcement - particulate, short fiber,
whiskers, long fibers composites. matrix materials – metals, ceramics, polymers (including thermoplastics and thermosets), Carbon-Carbon Composites.

Metal Matrix Composites:
MMC with particulate and short fiber reinforcement, liquid and solid-state processing of MMC – stir casting, squeeze casting. Properties of MMCs, Applications of Al, Mg, Ti based MMC.

UNIT -2 (08 HOURS)

Processing of Polymer Matrix Composites: Thermoset Polymers, Hand layup Process, Vacuum Bagging Process, Post Curing Process, Filament winding, Pultrusion, Pulforming, Autoclave Process.
Processing of Polymer Matrix Composites: Thermoplastic Polymers, Extrusion process, Injection Moulding Process, Thermo-forming process.
Post Processing of Composites – Adhesive bonding, drilling, cutting processes

UNIT -3 (08 HOURS)

Micromechanics: Introduction – advantages and application of composite materials – types of reinforcements and matrices – micro mechanics – mechanics of materials approach, elasticity approach- bounding techniques – fiber volume ratio – mass fraction – density of composites. Effect of voids in composites, discussion of Failure theories

UNIT -4- (08 HOURS)

Macromechanics: Generalized Hooke's Law – elastic constants for anisotropic, orthotropic and isotropic materials – macro mechanics – stress-strain relations with respect to natural axis, arbitrary axis – determination of in plane strengths of a lamina – experimental characterization of lamina.

UNIT -5- (7 HOURS)

Introduction to Design of Composite Structures: Elements of design, objectives of design, design drivers, material selection factors w.r.t fibers, matrix, advantages of composite material in stiffened structures, types of stiffeners, different types of joints.

Applications of Composites Materials:

Automobile, Aircrafts, missiles, Space hardware, Electrical and electronics, marine, recreational and Sports equipment, future potential of composites.

ENTERPRENEURSHIP DEVELOPMENT & IPR				
Course Code	18AEH74		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Recognize the importance of entrepreneurship and its role in economic development of the Country.
2. Identify various schemes of Central and State Governments and their agencies available to promote MSME and process of setting up the same.
3. Identify & select various projects to become entrepreneur by conducting feasibility studies in respect of market, finance, technical & social
4. Prepare project report for starting an enterprise in line with guidelines proposed by planning commission for appraising to various statutory authorities and financial institutions.
5. Appraise of IP rights like patents, industrial design, trademark, copyrights for effective protection and utilization of their innovations.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Case studies on entrepreneurship and IPR

COURSE CONTENTS

UNIT -1- (8 HOURS)

Introduction-meaning and importance of entrepreneurship, entrepreneur, types, characteristics entrepreneur process, role of entrepreneurs in economic development, problems faced by entrepreneurs, scope in India.

UNIT -2- (8 HOURS)

Micro, Small and medium enterprises-Definition of MSMEs as per MSME act, characteristics of small enterprises, need and advantages of small enterprises, Steps in setting up of small enterprises, Institutional support to MSMEs-State supporting agencies-TECSOK, KIADB, KSSIDC, KSFC, National Schemes-MSME-DI, NSIC, SIDBI

UNIT -3- (8 HOURS)

Preparation of Project reports- control variables in project, project lifecycle, project report, need, project identification, project selection, components of project report, formulation of report, planning commission guidelines, project appraisal, feasibility study-market, financial, technical and economic, PERT and CPM, errors in report

UNIT -4- (7 HOURS)

Introduction to IP- What is Intellectual Property (IP)?, Historical background of IP, Economic value of IP, Motivation to IP development, IP system strategy, Emerging issues, IPR governance, Institutions for administering the IP system, IP rights and marketing regulations, IPR protection, protecting consumers and protecting competition,
IP management framework, Drivers of IP management, IP value chain, IP management framework, IP strategies, Strategic considerations, managing trademarks.

UNIT -5- (8 HOURS)

Intellectual Property Rights-What are IPRs?, Types of IPRs, Indian IPR scenario, Legal use of IP, Global vs Indian IPR landscape, TRIPS and its implications
Patents-What is a patent, history of patent, Criteria for patent, types of patents, Indian patent act, patents for computer software, business models, incremental innovation, patent infringement
Trademarks-role, as a marketing tool, trademark rights, types, use of trademarks, trademark act, trademark registration in India Copyrights-meaning, copyright protection in India, enforcement measures, copyright act.

PROGRAM ELECTIVE-E				
HEAT AND MASS TRANSFER				
Course Code	18AEE751		**Credits**	3
Hours/Week (L-T-P)	3-1-0		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Understand the fundamentals of heat transfer
2. Solve problems related to variable thermal conductivity in extended surfaces
3. Analyze the Basic Relations in Boundary Layers and free convection heat transfer
4. Solve problems related to forced convection and mass transfer
5. Apply the concepts of radiation heat transfer and heat exchangers in real time engineering problems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT -1- (08 HOURS)

Introductory Concepts and Definitions: Modes of heat transfer: Basic laws governing conduction, convection, and radiation heat transfer; Thermal conductivity; convective heat transfer coefficient; radiation heat transfer, combined heat transfer mechanism. Boundary conditions of 1st, 2nd and 3rd kind

Conduction: Derivation of general three dimensional conduction equation in Cartesian coordinate, special cases, Derivation on 3-D conduction in Cartesian coordinate system and application of Cartesian, cylindrical and spherical coordinate systems to problems.

UNIT -2- (07 HOURS)

Variable Thermal Conductivity: Derivation for heat flow and temperature distribution in plane wall. Heat transfer in extended surfaces of uniform cross-section without heat generation, Long fin, short fin with insulated tip and without insulated tip and fin connected between two heat sources. Fin efficiency and effectiveness. Numerical problems. **One-Dimensional Transient Conduction:** Conduction in solids with negligible internal temperature gradient (Lumped system analysis) Numerical Problems.

UNIT -3- (07 HOURS)

Concepts And Basic Relations In Boundary Layers: Flow over a body velocity boundary layer; critical Reynolds number; general expressions for drag coefficient and drag force; thermal boundary layer; general expression for local heat transfer coefficient; Average heat transfer coefficient; Nusselt number. Flow inside a duct- velocity boundary layer, hydrodynamic entrance length and hydro dynamically developed flow; flow through tubes (internal flow discussion only). Numericals based on empirical relation given in data handbook.

UNIT -4- (07 HOURS)

Forced Convections: Applications of dimensional analysis for forced convection. Physical

significance of Reynolds, Prandtl, Nusselt and Stanton numbers. Use of various correlations for hydro dynamically and thermally developed flows inside a duct, use of correlations for flow over a flat plate, over a cylinder and sphere. Numerical problems.
Free Or Natural Convection: Application of dimensional analysis for free convection- physical significance of Grashoff number; use of correlations of free convection in vertical, horizontal and inclined flat plates, vertical and horizontal cylinders and spheres, Numerical problems.

UNIT -5- (07 HOURS)

Radiation Heat Transfer: Definitions, concept of a black body, Kirchoff's law, Lambert's Cosine Law, Stefan-Boltzman's law, Plank's distribution law, Wein's displacement law, configuration factor. Radiation heat exchange between two parallel plates, radiation shielding, radiation heat exchange in an enclosure.
Mass transfer: Introduction to mass transfer, definition and terms used in mass transfer ,Ficks law of diffusion ,mass transfer coefficient.

FATIGUE AND FRACTURE				
Course Code	18AEE752		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Apply mathematical knowledge to define fatigue behaviors
2. Analyze the load histories and cumulative damage due to fatigue.
3. Distinguish the safe life and fail safe design philosophies
4. Apply the principles of failures

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation
- Videos and animations related to fatigue and fracture of aircraft components

COURSE CONTENTS

UNIT -1- (08 HOURS)

FATIGUE OF STRUCTURES

S.N. curves - Endurance limits - Effect of mean stress, Goodman, Gerber and Soderberg relations and diagrams - Notches and stress concentrations - Neuber's stress concentration factors - Plastic stress concentration factors - Notched S.N. curves.

UNIT -2- (07 HOURS)

STATISTICAL ASPECTS OF FATIGUE BEHAVIOUR

Low cycle and high cycle fatigue - Coffin - Manson's relation - Transition life - cyclic strain hardening and softening - Analysis of load histories - Cycle counting techniques - Cumulative damage - Miner's theory - Other theories.

UNIT -3- (08 HOURS)
PHYSICAL ASPECTS OF FATIGUE AND FRACTURE Phase in fatigue life - Crack initiation - Crack growth - Final Fracture - Dislocations - fatigue fracture surfaces - Strength and stress analysis of cracked bodies - Potential energy and surface energy - Griffith's theory - Irwin - Orwin extension of Griffith's theory to ductile materials - Effect of thickness on fracture toughness - stress intensity factors for typical geometries
UNIT -4- (08 HOURS)
FATIGUE DESIGN AND TESTINIG Safe life and Fail-safe design philosophies - Importance of Fracture Mechanics in aerospace structures - Application to composite materials and structures.
UNIT -5- (08 HOURS)
FUNDAMENTALS OF FAILURE ANALYSIS Common causes of failure. Principles of failure analysis. Fracture mechanics approach to failure problems. Techniques of failure analysis. Service failure mechanisms - ductile and brittle fracture, fatigue fracture, wear failures, fretting failures, environment induced failures, high temp. failure. Faulty heat treatment and design failures, processing failures (forging, casting, machining etc.),

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1.Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.

2.Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3											3	
CO2	3	3											3	
CO3	3	3											3	

PLATES AND SHELLS				
Course Code	18AEE753		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	36		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain classical plate theory and boundary conditions
2. Explain the various method of solution for different geometry of plates
3. Discuss the various approximate methods to vibration analysis in plate.
4. Describe the basic concepts of shell type of structures

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

UNIT -1- (07 HOURS)

Classical Plate Theory: Classical Plate Theory – Assumptions – Differential Equation – Boundary Conditions

UNIT -2- (07 HOURS)

Plates of Various Shades: Navier's Method of Solution for Simply Supported Rectangular Plates – Leavy's Method of Solution for Rectangular Plates under Different Boundary Conditions. Governing Equation – Solution for Axisymmetric loading – Annular Plates – Plates of other shapes.

UNIT -3- (07 HOURS)

Eigen Value Analysis: Stability and free Vibration Analysis of Rectangular Plates.

UNIT -4- (08 HOURS)

Approximate Methods: Rayleigh – Ritz, Galerkin Methods– Finite Difference Method – Application to Rectangular Plates for Static, Free Vibration and Stability Analysis

UNIT -5- (07 HOURS)

Shells: Basic Concepts of Shell Type of Structures – Membrane and Bending Theories for Circular Cylindrical Shells.

LAUNCH VEHICLE DYNAMICS				
Course Code	18AEE754		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the Environment and Mission Design Interpret measurement of variables like force, torque and pressure
2. Explain the Trajectory of a Rocket
3. Explain the Astrodynamics, Atmospheric Entry, Attitude Determination and Control
4. Describe the Configuration, Structural Design and Communications

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation.
- Animation and videos

COURSE CONTENTS

UNIT -1- (09 HOURS)

Environment and Mission Design

Earth environment, launch environment, atmosphere, space and upper atmosphere; earth-bound orbits, lunar and deep space missions, advanced missions, launch vehicle selection, launching and deployment

UNIT -2 (07 HOURS)

Trajectory of a Rocket

Mass ratio and propellant mass fraction; equation of motion of an ideal rocket; motion of a rocket in a gravitational field; simplified vertical trajectory; burn-out velocity and burn-out height; step-rockets; ideal mission velocity and losses; effect of launch angle; factors causing dispersion of rockets in flight; dispersion of finned rockets; stability of flight.

UNIT -3- (08 HOURS)

Astrodynamics

Orbits and trajectories, Kepler's laws, orbital velocity and periods, eccentric elliptical orbits; effect of injection conditions, effect of earth's rotation, perturbation analysis; parking orbit, transfer trajectory, impulsive shot; rendezvous; recent interplanetary missions

UNIT -4- (08 HOURS)

Atmospheric Entry, Attitude Determination and Control

Entry flight mechanics, entry heating, entry vehicle design, aero-assisted orbit transfer; concepts and terminology of attitude determination, rotational dynamics, rigid body dynamics, disturbance torques, passive attitude control, active control, attitude determination, system design considerations.

UNIT -5- (06 HOURS)

Configuration, Structural Design and Communications

Design drivers and concepts, mass properties, structural loads; power sources, design drivers and practice, command subsystems, redundancy and autonomy, radio communications, tracking

ADVANCED AERODYNAMICS				
Course Code	18AEE755		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the Supersonic Flow and its characteristics
2. Describe the Hypersonic Flow: Similarity laws, Oblique shock relations, Simple wave expansion relations, Hypersonic performance
3. Describe the Hodograph method for mixed subsonic-supersonic flow
4. Explain the unsteady wave motion of small amplitude and Flow of Real Gases

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Laboratory experiments will be conducted to understand the concepts

COURSE CONTENTS

UNIT -1- (08 HOURS)

Supersonic flow: Linearization of the Equations.The General Solution for Linearized Supersonic Flow. Geometrical Interpretation of the General Solution. Flow Past a Wave-Shaped Wall. Supersonic Airfoils.Reflection and Intersection of Waves

UNIT -2- (08 HOURS)

Hypersonic Flow: Similarity Laws for HypersonicFlow. Oblique Shock Relations for Hypersonic Flow. Simple-Wave Expansion Relations for Hypersonic Flow. Hypersonic Performance of Two-Dimensional Profiles. Hypersonic Performance of Bodies of Revolution.

UNIT -3- (08 HOURS)

Transonic flow: The Transonic Similarity Law. Applications of the Transonic Similarity Law. Flow in Throat of Converging-Diverging Nozzle. Transonic Flow Past a Wavy Wall. Flow at Mach Number Unity. Slopes of Force Coefficients at M, = 1. Transonic Flow Past Wedge Nose.

UNIT -4- (08 HOURS)

Unsteady Motion: Equations of Motion. Waves of Small Amplitude. Simplified Physical Analysis of Pressure Pulse. Characteristic Curves. 1D flow with heat addition, 1D flow with friction.Unsteady 1-D shockwaves: Moving Normal Shock Waves. Reflected Shock Wave, Wave Propagation.

UNIT -5- (07 HOURS)

Flow of Real Gases: Differential and Integral equations for laminar boundary layer. Flow with Prandtl number unity. Differential and Integral equations for turbulent boundary layer. Shock Boundary Layer Interaction in supersonic flow and Transonic flow. Normal shocks in Ducts.

RELIABILITY ENGINEERING				
Course Code	18AEE756		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	PE

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Develop various systems applying reliability networks
2. Evaluate the reliability of simple and complex systems.
3. Estimate the limiting state probabilities of repairable systems.
4. Apply various mathematical models for evaluating reliability of irrepairable systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)

COURSE CONTENTS

UNIT -1- (08 HOURS)

BASIC PROBABILITY THEORY: Elements of probability, probability distributions, Random variables, Density and Distribution functions- Binomial distribution- Expected value and standard deviation – Binomial distribution, Poisson distribution, normal distribution, exponential distribution, Weibull distribution. Definition of Reliability: Definition of terms used in reliability, Component reliability, Hazard rate, derivation of the reliability function in terms of the hazard rate. Hazard models – Bath tub curve, Effect of preventive maintenance. Measures of reliability: Mean Time to Failure and Mean Time Between Failures

UNIT -2- (08 HOURS)

NETWORK MODELING AND EVALUATION OF SIMPLE SYSTEMS: Basic concepts- Evaluation of network Reliability / Unreliability – Series systems, Parallel systems- Series-Parallel systems, partially redundant systems- Examples. Network Modeling and Evaluation of Complex systems: Conditional probability method tie set, Cutset approach- Event tree and reduced event tree methods- Relationships between tie and cutsets- Examples

UNIT -3- (08 HOURS)

TIME DEPENDENT PROBABILITY: Basic concepts- Reliability function f(t). F(t), R(t) and h(t) – Relationship between these functions. Network Reliability Evaluation Using Probability Distributions: Reliability Evaluation of Series systems, Parallel systems – Partially redundant systems- determination of reliability measure- MTTF for series and parallel systems – Examples

UNIT -4- (08 HOURS)

DISCRETE MARKOV CHAINS: Basic concepts- Stochastic transitional probability matrix- time dependent probability evaluation- Limiting State Probability evaluation- Absorbing states – Examples Continuous Markov Processes: Modeling concepts- State space diagrams- Unreliability evaluation of single and two component repairable systems

UNIT -5- (07 HOURS

FREQUENCY AND DURATION TECHNIQUES: Frequency and duration concepts, application to multi state problems, Frequency balance approach. Approximate System

Reliability Evaluation: Series systems – Parallel systems- Network reduction techniques- Cut set approach- Common mode failures modeling and evaluation techniques- Examples

SATELLITE DESIGN				
Course Code	18AEE757		**Credits**	3
Hours/Week (L-T-P)	3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain satellite configuration
2. Describe Satellite Structural Design
3. Describe electric power and hardware of satellite
4. Use Attitude Determination, control system and software's (ADACS)
5. Select satellite Propulsion and Deployment Mechanism

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed)
- Laboratory experiments will be conducted to understand the concepts

COURSE CONTENTS

UNIT -1- (08 HOURS)

Satellite Configuration Design

Space mission, Types, Space Environment, Launch Vehicle Configuration, Vehicle selection, Classification and design parameters, Configuration of Satellite, Satellite composition, Mounting Restrictions and integration constrains(payload, attitude determination and control subsystem communication subsystem, Platform command and Data handling subsystem, Power subsystem, Thermal subsystem, structures and mechanisms subsystem, System aspects of the satellite configuration) Configuration Development process

UNIT -2- (08 HOURS)

Satellite Structural Design

Definition and Function, structural requirement primary, secondary and tertiary structure, design procedure used materials, developing structural modules, Iterative process of design development, preliminary analysis-strength analysis cases, design of fastening studs and small sat/lv, Interface bolts, preliminary sizing of structural module, Detailed structure description: base plate, mounting plate, basis unit case, upper frame, lower frame, Rotation Mechanism, Locking and Releasing Mechanism, Fasting and Mounting Elements Launch Vehicle adapt.

UNIT -3- (08 HOURS)

Electric Power Subsystem and Spacecraft Hardware

Required Orbit Average Power (OAP), Battery Capacity and Battery System Design, Battery Capacity, Battery Choice, Solar Arrays Configuration beta angle vs. time, solar cells and cell lay down computer characteristics and selection, Frequency Allocation, Modulation types, Acceleration of Gravity velocity, Period, Position of Spacecraft as a function of time. Space elevation, slant range, CPA , Ground Range, Pointing to a Target on the ground from the space craft, Ballistic coefficient and on orbit life, computing the projection of the Sun on planes on the spacecraft.

UNIT -4- (07 HOURS)
Attitude Determination, control system and software's(ADACS) ADACS Performance Requirements flow down, Description of the most common ADACS systems, Gravity Gradient Stabilization, Pitch Bias Momentum Stabilization, 3-Axis Zero Momentum Stabilization, Magnetic Spin Stabilization **The ADACS Components** Reaction Wheels and Sizing the Wheels, Torque Coils or Rods Momentum Unloading, Star Trackers, GPS Receivers, Other ADACS Components, The ADACS Computer and Algorithms, ADACS Modes, Attitude Control System Design Methodologies, Integration and Test, On orbit Checkout.
UNIT -5- (08 HOURS)
Satellite Propulsion and Deployment Mechanism Deployment mechanisms- Deployment Devices, Hinges, deployable booms, Large Deployable Antennas, Restraint Devices- The Explosive Blot Cutter, Electric Burn Wires, Solenoid Pin Pullers, Paraffin Pin Pushers, Motorized Cams and Doors, Separation System, Dampers, Fluid Dampers, Magnetic Dampers, Constant Speed Governor Dampers, Choosing The Right **Mechanism, Testing Deployable.** Propulsion- The Basics, Propulsion Systems, Cold Gas Propulsion System, Hydrazine Propulsion System, Other Propulsion Systems, Propulsion System Hardware, Propulsion Maneuvers, Maneuvers for Spacecraft in a constellation, Maintaining and getting to Station, Other Propulsion Requirements.

EXPERIMENTAL STRESS ANALYSIS

Course Code	18AEE758		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Program Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Explain various phenomenon and properties associated with light and photo elastic materials
2. Identify the principles and uses of different strain measuring instruments
3. Apply the concept of photo elasticity for the calculation of stress in the given component under different loading conditions
4. Illustrate the use of different methods of calibration and compensation to improve the accuracy of strains being measured.

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Regular review of students by asking questions based on topics covered in the class

COURSE CONTENTS

UNIT -1 (08 HOURS)

EXTENSOMETERS AND DISPLACEMENT SENSORS

Principles of measurements, Accuracy, Sensitivity and range of measurements, Mechanical, Optical, Acoustical and Electrical extensometers and their uses, Advantages and disadvantages, Capacitance gauges, Laser displacement sensors

UNIT -2- (08HOURS)

ELECTRICAL RESISTANCE STRAIN GAUGES

Principle of operation and requirements, Types and their uses, Materials for strain gauges, Calibration and temperature compensation, cross sensitivity, Wheatstone bridge and potentiometer circuits for static and dynamic strain measurements, strain indicators, Rosette analysis, stress gauges, load cells, Data acquisition, six component balance

UNIT -3- (08 HOURS)

PHOTOELASTICITY

Two dimensional photo elasticity, Photo elastic materials, Concept of light - photoelastic effects, stress optic law, Transmission photoelasticity, Jones calculus, plane and circular polariscopes, Interpretation of fringe pattern, Calibration of photoelastic materials, Compensation and separation techniques, Introduction to three dimensional photo elasticity.

UNIT -4- (08 HOURS)

BRITTLE COATING AND MOIRE TECHNIQUES

Relation between stresses in coating and specimen, use of failure theories in brittle coating, Moire method of strain analysis.

UNIT -5- (07 HOURS)

NON – DESTRUCTIVE TESTING

Fundamentals of NDT, Acoustic Emission Technique, Radiography, Thermography, Ultrasonics, Eddy Current testing, Fluorescent Penetrant Testing,

SIMULATION LAB				
Course Code	18AEL77		**Credits**	1
Hours/Week (L-T-P)	0+0+3		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Develop generic initial solutions for engineering problems using MATLAB/SIMULINK software
2. Apply various analytical modeling techniques to obtain the differential equation describing the system and to solve the same using MATLAB/SIMULINK environment
3. Analyze the performance parameters of an aircraft
4. Calculating Air Speed from a Pitot-static tube , Simulating a bomb drop from an aircraft

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

COURSE CONTENTS

PART -A

1. Falling sphere with viscous drag – Investigate velocity versus time plot; &simulate the fall.
2. Frequency response for a spring-mass damper system; simulation of the oscillations.
3. Simulation of landing run.
4. Simulation of glide.

PART -B

1. Simulation of range of an aircraft
2. Simulate a bomb drop from an aircraft on a moving tank for pure – pursuit motion.
3. Simulate an Air Speed Indicator to read air speeds for the pressures read from a Pitot-static tube, with compressibility corrections.
4. Simulate a point take-off from a runaway.

Course Assessment Method:

Record: 30 marks

Test: 15 marks

Viva-voce: 05 marks

SEE - Final Exam: 50 MarksScheme of Examination: Student will be asked to conduct any one experiment from Part A & B

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2

Exam Hrs	03		**Course Type**	Core

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Analyze the Aircraft Jacking Up and Levelling procedure Apply
2. Analyze flow test, pressure test, functional test
3. Perform Control System Rigging check
4. Develop Brake Torque Load Test on wheel brake units, Maintenance and rectification of snags in hydraulic and fuel systems

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics

LIST OF EXPERIMENTS

1. Aircraft "Jacking Up" procedure
2. Aircraft "Levelling" procedure
3. Aircraft "Symmetry Check" procedure
4. "fuel flow measurement
5. "Pressure Test" to assess hydraulic External/Internal Leakage
6. "Functional Test" to adjust operating pressure
7. "Pressure Test" procedure on fuel system components
8. "Brake Torque Load Test" on wheel brake units
9. Maintenance and rectification of snags in hydraulic and fuel systems

Course Assessment Method:
Record: 30 marks
Test: 15 marks
Viva-voce: 05 marks
SEE - Final Exam: 50 Marks
Scheme of Examination: Student will be asked to conduct any two experiments

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	3	3	2	3				3	3				2
CO2	3	3	3	2	3				3	3				2
CO3	3	3	3	2	3				3	3				2
CO4	3	3	3	2	3				3	3				2
CO5	3	3	3	2	3				3	3				2

OPEN ELECTIVE-II

MECHANICS OF FLIGHT				
Course Code	18AEO761		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Open Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Describe the basic components and various types of aircraft configurations.
2. Discuss the basics of aerodynamics and structure
3. Outline the working of various power plants used in aircraft and mechanical systems involved in aircraft
4. Explain the Aircraft performance, Stability and Control

TEACHING METHODOLOGY

- Blackboard teaching/Power Point presentation
- Videos and animations

COURSE CONTENTS

UNIT -1- (8 HOURS)

Introduction to Aircraft: Types of Aircrafts- Lighter than Air/ Heavier than Air aircrafts Conventional Design configurations based on power plant location, Wing vertical location, intake location, tail unit arrangements, landing gear arrangements. Unconventional configurations- Biplane, variable sweep, canard layout, twin boom layouts, span loaders, blended body wing layout, STOL and STOVL Aircraft, stealth Aircraft. Advantages and disadvantages of these configurations.

UNIT -2- (8 HOURS)

Basic of Aerodynamics and Structures: Airfoil Nomenclature, Types of airfoil, Wing section-Aerodynamic Center, Aspect Ratio, Effects of lift, drag speed, air density on drag. Forces on the airplane, Airflow over wing section, Pressure Distribution over a wing section, Generation of Lift, Drag, Pitching Moments, Types of Drag, Lift curve, Drag Curve, Lift/ Drag Ration Curve, Factors affecting lift and drag, Center of pressure and its effects. Basic components of an Aircraft, structural members, Aircraft Axis system, Aircraft Motions, Control surfaces and high lift devices

UNIT -3- (8 HOURS)

Introduction to Propulsion System: Principles of aircraft propulsion, Types of power plants, basic components in power plants - inlet, compressor, combustion chamber, turbine and nozzle. Types of fuel - Illustration of working of air breathing engines

UNIT -4- (08 HOURS)

Aircraft Mechanical Systems: Types of Mechanical Systems, Environmental control systems (ECS), Pneumatic systems, hydraulic systems, Fuel systems, Landing gear systems, Engine Control systems, Ice and rain protection systems, Cabin pressurization and air conditioning systems, steering and brakes systems auxiliary power unit.

UNIT -5- (07 HOURS)

Stability and Control: Degree of stability- Lateral, Longitudinal and Directional stability and controls of Aircraft. Effects of flaps and Slats on Lift Coefficients, Control tabs, stalling, Landing, Gliding Turning, Speed of Sound, Mach Numbers, Shock Waves.

Aircraft Performance and Maneuvers: Power Curves, Maximum and minimum speeds of horizontal flight, effects of changes of Engine Power, Effects of Altitude on Power Curves, Forces acting on an Airplane during a turn, loads during a Turn, correct and incorrect angles of Bank, Aerobatics, Inverted Maneuvers, Maneuverability.

TEXT BOOKS

SL.NO	Title of the Book	Name of the author/s	Name of the publisher	Edition and year
1	Fundamentals of Flight	Shevell	Pearson Education	2nd Edition
2	Mechanics of Flight	A.C Kermode `	Pearson Education	5th Edition

REFERENCE BOOKS'

SL.NO	Title of the Book	Name of the author/s	Name of the publisher	Edition and year
1	Flight without Formulae	A.C Kermode	Pearson Education	10th Edition
2	Aircraft systems: Mechanical, Electrical & Avionics subsystems integration	lan Moir	Allen Seabridge	1997
3	Gas Turbine Technology	Treager, S	McGraw Hill	1997

COURSE ASSESSMENT METHOD

Continuous Internal Evaluation (CIE)

Three internals tests (each 30 marks) are conducted, average of best two performances will be considered.

1. Minimum two Assignments/Model making - evaluated through rubrics for 10 marks. Average of two will be considered.
2. Tutorial classes and assessment are carried out/Surprise quiz tests are conducted and evaluated for 10 marks. Average of these two will be considered.

Semester End Examination (SEE)

1. Two Questions are to be set from each unit, carrying 20 Marks each.
2. Students have to answer 5 questions selecting one full question from each unit

Program Outcomes – Articulation matrix:

PO	1	2	3	4	5	6	7	8	9	10	11	12	PSO1	PSO2
CO1	3	2							3	2			3	3
CO2	3	2							3	2			3	3
CO3	3	2							3	2			3	3
CO4	3	2							3	2			3	3

MAINTENANCE, OVERHAUL & REPAIR OF AIRCRAFT SYSTEMS				
Course Code	18AEO762		**Credits**	3
Hours/Week (L-T-P)	3-0-0		**CIE Marks**	50
Total Hrs	39		**SEE Marks**	50
Exam Hrs	3		**Course Type**	Open Elective

COURSE OUTCOMES

Course outcomes: After completion of the course, students will be able to-

1. Comprehend the fundamentals of maintenance and certification
2. Acquire the knowledge of documentation for maintenance.
3. Understand the Aircraft Maintenance, safety and trouble shooting
4. Understand hanger maintenance of aircrafts

TEACHING METHODOLOGY

- Blackboard teaching/PowerPoint presentation (if needed) /Flipped Classes for specified topics
- Videos and animation

COURSE CONTENTS

UNIT -1- (8 HOURS)

Fundamentals of Maintenance & Certification Types of maintenance, Redesign, Failure rate pattern, Other aintenance considerations. Aviation industry certification requirements, Type certificate (FAA form 8110.9), Airworthiness certificate (FAA form 8100-2), Aviation maintenance certifications, General, Airframe, Power plant, Avionics courses.

UNIT -2- (8 HOURS)

Documentation for Maintenance Manufacturers documentation, Airplane maintenance manual, Fault insulation manual, Illustrated parts catalogue, structural repair manual, wiring diagram manual, Master minimum equipment, Federal Aviation regulation (FAR), Advisory circulars, Airworthiness direction ATA document standards, Technical policies and procedure manuals (TPPM)

UNIT -3- (8 HOURS)

Aircraft Management Maintenance Structure, Role of aviation management, Line supervi management, Management areas of concern in an airlines, Manager of overhaul shops, maintenance control centre flight line (preflight & post flight), Aircraft Logbook, Maintenance skill requirements

UNIT -4- (8 HOURS)
